Although his mother-tongue was Persian (cf. the utterances in Persian ascribed to him in Ibn al-Tāhir, ed. Keller, p. 130 and Tabari, iii. 1063 *infra*), Tāhir is said, like his descendants, to have been well versed in the Arabic language and culture. His letter written in 306 (821—822) to his son 'Abd Allāh on his appointment as governor of Diyār Rabi'a [q.v.] became celebrated even among his contemporaries; cf. *Kitāb Baghdad*, ed. Keller, p. 36 *sqq.* (German transl., p. 17 *sqq.*); Tabari, (ii. 1046 *sqq.*; Ibn al-Athir, vi. 258 *sqq.*, Russian transl. by A. Schmidt, *Bulletin de l'Univ. de l'Asie Centrale*, viii., 1925, p. 129 *sqq.*

(W. BARTHOLO)

TĀHIR 'OMAR [See ZĀHIR 'OMAR.]

TĀHIR WAHID, MUHAMMAD, IMĀD AL-DAWLĀ, a Persian poet of Kaxwin, who was the secretary of the two Prime Ministers Mirzā Taqī al-Dīn Muhammad and Khalīfā Sulṭān; in 1055 (1645—6) appointed historiographer to Shāh 'Abbās II, he became minister in 1101 (1689—90) in the reign of Sulaimān; afterwards he retired into private life and died most probably in 1110 (1698—99) aged 90. The British Museum has five MSS. of his historical works. The *Asch-kad* (Bombay 1277, not paginated) says that his poems were mainly admired because of the rank of the author.

Bibliography: Hammer, *Gesch. Rösch. Pers.*, p. 380 (fragments transl.); Rieu, *Catalogue of Persian Mss.*, p. 189—190; E. G. Browne, *A History of Persian Literature in Modern Times* (Cambridge 1924), 258, 264; Ivanow, *Descriptive Cat. of the Bengal (Calcutta) 1924*, p. 371; Ethé, *Grundriss d. iran. Philologie*, ii. 312, 342.

(CL. HUART)

BĀBĀ TĀHIR, a mystic and poet who wrote in a Persian dialect. According to Ridā Kālī Khān (sixth century), who does not give his source, Bābā Tāhir lived in the period of Dailāmī rule and died in 401 (1010). Among his quatrains there is an enigmatical one: "I am that sea (*bahr*) which entered into a vase; that point which entered into the letter. In each *alf* ('thousand', i.e. of years?) arises an *alf-badd* (a man upright in stature like the letter *alf*). I am the *alf-badd* who has come in this *alf*". Mahdī Khān in the *J. A. S. Bengal* has given an extremely curious interpretation of this quatrain: the letters *alf-bd* have the value 215, the same as the letters of the word *daryā* (Persian equivalent of the Arabic *bahr* "sea") and those of the name of the poet Tāhir. If we add *alf-bd* (215) to *alf* (111) we get 326 (the same value by the way as the Persian word *hazār*, "thousand"; if we spell it *hā, sā, alif, ʿā*). In this way the phrase "an *alf-badd* come into the *alf*" would give the date (326) of the birth of Bābā Tāhir who may well have lived till 401.

In spite of the ingenuity of this explanation, it is nevertheless true that the only historical evidence that we possess about Bābā Tāhir is that of the *Rihāt al-Sudūr* (c. 601 [1204], *G. M. S.*, p. 98—99), the author of which "had heard" when the Saljuq Sultan Tughril entered Hamadān (in 447 = 1055), Bābā Tāhir addressed an ad-

monition to him ("O Turk, how you going to act towards the Muslims?") which much impressed the conqueror. The anecdote suggests for the death of Bābā Tāhir a date later than 447 but is in no way contradictory to the statement that Bābā Tāhir flourished under the Dailāmīs, i.e. under the Būyids and their relatives, the Kākūyids, whose rule in Hamadān lasted till the expedition of Ibrāhīm Yavānī in 435. Bābā Tāhir may well have been the contemporary of Avicenna (Abū Sīnā) who died at Hamadān in 428 (1037), but the legends which make him a witness of the execution of the mystic 'Ain al-Kuḍāt of Hamadān in 533 and the contemporary of Naṣīr al-Dīn Tūsī (d. 672) are pure inventions.

The sources sometimes call Bābā Tāhir Hamadānī (cf. the Arabic MS. 1903 of the Bibl. Nat. Paris, the *Sarandīb*, etc.), sometimes Lurī (Lūrī). This latter form — in place of Lur [q.v.] — is somewhat puzzling: does it mean some other connection than of origin between Bābā Tāhir and Luristān? It is certainly well to remember that in the 11th century there were very close links between Hamadān and Luristān and the poet may have spent his life between the two places. In Khurramābād there is a quarter bearing the name of Bābā Tāhir (cf. Edmonds, *Geogr. Journ.*, June 1922, p. 443). The association of Bābā Tāhir with Luristān in the beliefs of the Ahl-i Ḥaqīq [see below] is also significant. In the quatrains of Bābā Tāhir (cf. nos. 102, 200, 274 of the *Diwān*), Mount Alwand [q.v.] overshadowing Hamadān is frequently mentioned. The tomb of Bābā Tāhir lies on a little hill to the northwest of the town in the Bun-i bāsr quarter; beside the tomb of Bābā Tāhir are those of his faithful Faṭīma [see below] and Mirzā 'Alī Naḳī Kawtharī (sixth century); the building is a humble one and of no interest. The tomb is mentioned in the *Nuzhat al-Kulūb* (740 = 1340), *Gibb. Mem. Ser.*, p. 75; cf. the photograph in Minorsky, *Matériaux*, Moscow 1911, p. xi. and Williams Jackson, *A visit to the Tomb of Bābā Tāhir at Hamadān*, in *A Volume presented to E. G. Browne*, Cambridge 1922, p. 257—260.

The stories one hears in Mīzandarān about B. Tāhir's connection with that province have no foundation and may have been brought by immigrants from Luristān (the Lak). Besides, all the nomads of Persia like to claim B. Tāhir as a compatriot.

The language of Bābā Tāhir. Since all the facts and traditions connect the poet with Hamadān and Luristān, it is reasonable to expect to find in his dialect traces of a dialect of this region of Persia. But as this dialect was very close to Persian and as so many different mouths have been trying to render more comprehensible the verses transmitted orally, there is little hope of reestablishing the text in its dialectic purity. It is not an improbable suggestion that B. Tāhir simply wanted to imitate the dialects of these adepts. In our own day a Kurd Christian claims to have made verses in the Gūrānī dialect, quite distinct from his own in order to "transmit the message" to the Ahl-i Ḥaqīq (Dr. Sa'īd Khān, in the *Moslem World*, Jan. 1927, p. 40).

The country between Hamadān and Khurramābād still has many dialects, but that of Bābā Tāhir is not connected with any definite one and seems to borrow from all. The closeness of the present

text of B. Tāhir to literary Persian is undeniable; on the other hand changes like *nām* > *nūm* "name", *dattam* > *dastum* ("my hand"), *raftam* > *raftum* ("I have gone"), *dār* > *dīr* (cf. Huart, xiv = *Diwān*, No. 82) are typical of the Lur dialects; the stems *šāfi* "to speak", *kar* "to do" are common to the Kurdish and central dialects; the forms *mi-kar-ū* "he does" and *āy-ā* "he comes" recall particularly the Gūrān spoken much further to the west. For certain peculiarities (*dāram* > *dārem*) we only find analogies at Kāzvin (near Shirāz).

Hadam's detailed analysis has plainly proved this mixture of dialects (*Dialektgemisch*) in the quatrains, at least as we know them now. The term "Muhammadan Pahlavi" proposed by Huart (1885) for the language of Hābā Tāhir has not been accepted by scholars.

The metre of the quatrains of Hābā Tāhir and of his ghazals is almost exclusively *ḥazaj muraḥḥat* *maḥḥaf* *u* --- | *u* --- | *u* --- which has made the new editor call the quatrains *da-ḥaf* (disticha) instead of *rubāʿi*, the last term being too closely associated with the metre *ḥazaj maḥḥaf maḥḥaf* *u* --- | *u* --- | *u* ---. The authenticity of some regular *rubāʿi* attributed to B. Tāhir seems doubtful. The metre of B. Tāhir is also found in popular songs (Mirzā Dīfār [Korach], *Gramm. Pers. Faylha*, Moscow 1901, p. 308).

HĀBĀ TĀHIR—poet. Down to 1927, all that was known of his poems was a rather small number found for the most part in anthologies of the xviiith and xixth centuries. Huart's researches produced in 1885, 59 quatrains and in 1908, another 28 and one *ghazal*. E. Heron Allen only found 3 new quatrains (they are moreover very doubtful). Lessertynski (who used the Berlin manuscripts) has translated 80 quatrains and one *ghazal* (a different one from Huart's). Finally Husain Wahid Dastgirdi Isfahānī, editor of the Persian review *Armāghān*, published in 1306 (1927) at Tihān a *Diwān* of B. Tāhir containing 296 *do-beit* and 4 *ghazals* of this poet; as an appendix the editor gives 62 *do-beit* found in the "different collections" and the 3 *rubāʿi* added by Heron Allen. The quatrains of the *Diwān* are arranged in the alphabetical order of the rhymes. The editor unfortunately gives no details of the manuscript of the *Diwān* reproduced in his edition. The new quatrains several of which mention Tāhir's name, the mountains of Alwand and Meymand (?) etc., confirm the characteristics already known of Hābā Tāhir, while making them a little more banal by the inevitable repetitions. The dialectic flavour of most of the quatrains is in favour of their authenticity, although the imitation of the peculiarities of the language of B. Tāhir would really not be a very difficult matter. The question of the authenticity of the quatrains of B. Tāhir certainly arises, as it did in the case of those of 'Omar Khayyām. Żukowski says that the quatrains of B. Tāhir are found in the *Diwān* of Mullā Muḥammad Šāfi Māzandarāni (xvth cent. A. H.). A certain Šāfir Beg Muḥammad, a modern poet of Hamadān, claimed to be the author of several "Kurdi (Pahlavi)" quatrains attributed to B. Tāhir; cf. *Diwān*, p. 21.

The choice of subjects in Hābā Tāhir is very restricted, but the poet's work bears the stamp of a distinct personality. We give an analysis of the 59 quatrains published by Huart to enable the reader to judge. As usual it is difficult to draw

a rigid distinction between the expression of mystical and that of profane love; 34 quatrains are almost equally divided between two categories of lyric poetry. Two quatrains are simple hymns to God. The rest is more individual and characteristic. B. Tāhir often refers to his life as a wandering dervish-kalandar, without a roof above his head, sleeping with a stone for a pillow, continually harassed by spiritual anxieties (Nos. 6, 7, 14, 28). Cares and melancholy torment him; the "flower of grief" alone flourishes in his heart; even the charms of spring leave him still unhappy (34, 35, 47, 54). B. Tāhir professes the philosophy of the true Šāfi, confesses his sins, implores pardon for them, preaches humility, invokes nirvana (*fanā*) as the only remedy for his misfortunes (1, 13, 45, 50, 58). One human failing is especially characteristic of Hābā Tāhir: his eyes and his heart do not readily detach themselves from the things of this world; his rebellious heart burns within him, leaves him no rest for a moment and the poet cries in anguish: "Art thou a lion, a panther, O my Heart, thou who art continually struggling with me. If thou faltest into my hands, I shall spill thy blood to see what colour thou art, O my heart" (3, 8, 9, 26, 36, 42).

Hābā Tāhir's psychology shows striking contrast to that of 'Omar Khayyām. Hābā Tāhir shows no trace of the hedonism of the latter (d. 517 [1123 ?]) nor of his serenity in face of the changes brought by death, while 'Omar Khayyām lacks the mystic fire of Hābā Tāhir (cf. Christensen, *Critical Studies in the Rubāʿiyyāt of 'Omar-i Khayyām*, Copenhagen 1917, p. 44).

What pleases in Hābā Tāhir is the freshness of his sentiments which Šāfi routine had not yet stereotyped, the spontaneity of his images, the naiveté of his language, when expressing terror. A new Fitzgerald might make of Hābā Tāhir a worthy rival to 'Omar Khayyām.

HĀBĀ TĀHIR—mystic. The Persian dervishes with whom Żukowski talked about Hābā Tāhir knew that he was the author of 22 metaphysical treatises (cf. also Riḍā Kāfi Khān) but it is only from Etché and Blochet that we have learned in Europe of the existence in Oxford and Paris of commentaries on the maxims of B. Tāhir. The complete treatise [*al-Kalimāt*] [*al-ḥikm*] ("The brief sayings") has now been published in the edition of the *Armāghān*. This treatise consists of 368 Arabic maxims divided into 23 *sab* dealing with the following subjects: knowledge (*ilm*); gnosis (*maʿrifā*); inspiration and penetration (*ilḥām*, *firās*); reason and the soul (*qalb*, *nafs*); this world and the beyond (*dunyā*, *ʿālam*); the musical performance (*ṣawā*) and the *dhikr*; sincerity and spiritual retreat (*ikhṭā*, *ʿirfā*) etc.

Here are a few specimens of these maxims: No. 86: "Real knowledge is the intuition after which the knowledge of certainty has been acquired" (*al-ḥikmāt al-muḥḥidat ba'da 'ilmi l-yaqīn*); No. 96: "Ecstasy (*waḥd*) is the loss (of the knowledge) of existing things and is the existence of lost things"; No. 368: "he who has been the witness of predestination (coming) from God remains without movement and without volition"; No. 300: "he whom ignorance has slain has never lived, he whom the *dhikr* has killed will never die".

The "Brief Sayings" seem to have enjoyed considerable popularity among the Šāfis. The Persian editor mentions the following commentaries

on this treatise: the Arabic commentary attributed to 'Ain al-Qudāt al-Hamadāni (d. in 533 but often associated in legends with Bābā Ṭāhir); another Arabic commentary by an unknown author; the Arabic and Persian commentaries by Mallāḥ Sulṭān 'Alī Gunābādī: the Persian commentary was printed in 1326 (1906) but is very rare. The editor of the *Amārahān* expresses the hope of being one day able to publish the "Brief Sayings" accompanied by one of the commentaries.

The Arabic manuscript 1903 of the Bibl. Nat. contains the first 8 chapters of the maxims of Bābā Ṭāhir in an abridged form (fol. 100^b—105^b), as well as a commentary on them (fol. 74^a—100^a) entitled *al-Futūḥāt al-rabbāniya fi l-ḥikmah al-Hamadāniya*.

The manuscript seems to be in the hand of the author of the commentary, Dīān Beg al-'Azīz, who began his work in Shawwāl 889 and ended it on 20th Sha'bān 890 (1485). The commentary was written at the request of a certain Shaikh Abū 'I-Bakā who had possessed the *l-ḥikmah* of Bābā Ṭāhir since 853. He had let them fall into the well of Zamzam at Mecca but the manuscript was miraculously recovered. The 'ulamā' had dissuaded Abū 'I-Bakā from writing a commentary on the text on account of its profundity and obscurity. Finally Abū 'I-Bakā engaged Dīān Beg to accomplish this task. The commentary deals with the text of the maxims of Bābā Ṭāhir word by word.

Bābā Ṭāhir — a saint. As is the case with the majority of the mystical poets ('Alī, Djalāl al-Dīn Rūmī, Ḥafīz), there are numerous legends of the life and miracles of Bābā Ṭāhir. It is related that when Bābā Ṭāhir had asked the students of the madrasa of Hamadān to show him the way to acquire knowledge, the students as a joke told him to spend a winter night in the frozen water of a tank. Bābā Ṭāhir carried out the advice and next morning found himself enlightened and exclaimed: *Amāna Kurdiyan wa-afāḥu 'Arabīyan* ("last night I was a Kurd and this morning I have become an Arab"). This story was heard by Żukowski in Teherān and by Heron Allen's informant at Bāghīr; it is widely current in Hamadān (cf. the preface to the *Dīwān*, p. 17 and the manuscripts from Hamadān). This Arabic utterance is found in the preface to the *Mathnawī* of Djalāl al-Dīn Rūmī, where however it is referred to an unknown (mystic?) ancestor of Ibn Akhlī, a Turk of Usmiya. In the *Nafahāt al-Uṣṣ* of Djalāl, ed. Nassau Lees, p. 362—363, the phrase is attributed to Abū 'Abd Allāh Bābūnī.

Other pious legends represent Bābā Ṭāhir as making the snow on Mount Alwand melt by the ardour of his spiritual fire, tracing with the point of his great toe the solution of an astronomical problem which had been put him, etc. (Żukowski, Heron Allen, Leszczynski, preface to the *Dīwān*, manuscripts from Hamadān).

Gobineau, *Trois ans en Asie*, Paris 1859, p. 344, already knew that the adepts of the Ahl-i Ḥaqq sect were in the habit of "praising exceedingly and giving pride of place to the names of famous Sāfīs, notably of Bābā Ṭāhir whose poems in the Lur dialect are highly esteemed, and of his sister Bibi Fatima" etc. The discovery of the religious work *Sarunḡām* has enabled us to locate Bābā Ṭāhir in the theogony of the sect. The Ahl-i Ḥaqq believed in 7 manifestations of the divinity (the

first, that of Khāwandigār was in pre-eternity, the second is that of 'Alī, the third that of Bābā Khoshin, the fourth that of Sulṭān Isḥāq [q. v.]). Each of these manifestations was accompanied by a retinue of 4 angels, each of whom had special duties. Bābā Ṭāhir is regarded as one of the angels of Bābā Khoshin and the incarnation of Arrā'īl and Nuṣair. The mystic stage to which the period of Bābā Khoshin generally corresponds is the *marifa*. The events of this cycle take place in Luristān and Hamadān. The manuscript of the *Sarunḡām* recounts the visit of the "King of the World" to Bābā Ṭāhir in Hamadān. Bābā Khoshin is meant by the "King of the World" but the legend seems to be inspired by memories of the episode of Tughrīl, related in the *Rūḥ al-Sudūr*. Bābā Ṭāhir and Faṭima Lārā ("the thin") of the tribe of Bārā Shāhi (living in the Gūrān country), who was in his service, fed the whole army of the King with a *ṣār-yak* of rice. The latter tempts Bābā Ṭāhir with all the treasures of the world but he only desires the "beauty of the King". Faṭima wants to follow the king of the World; she lays her head on her knees and gives up the ghost. The King consoles Bābā Ṭāhir for his loss and promises that on the day of the Last Judgement he will reunite him to Faṭima so that they shall be like Lailā and Majnūn. 13 poetical fragments (mutilated but in the style of Bābā Ṭāhir) are so scattered through the text (cf. *Ministry*, p. 29—33, 99—103; these facts have been utilised by Leszczynski, *op. cit.*, p. 18—25). Faṭima Lārā, who is mentioned in the text is buried beside Bābā Ṭāhir. According to the custodians of the tomb of Bābā Ṭāhir, she is not to be confused with another Faṭima also buried in the same *Buḡa* (?). Gobineau and A. V. W. Jackson mention the sister of Bābā Ṭāhir, Bibi Faṭima or Faṭima Lailā. Azād-i Hamadāni (*Dīwān*, p. 16—21) speaks of the tomb of the *ḥāya* "nurse" of Bābā Ṭāhir: everyone seems to endeavour to translate into the language of everyday life the mystic relations of Bābā Ṭāhir to Faṭima.

The quatrain already quoted at the beginning of this article (*alif, alif-kadd*) may reflect some high aspiration of Bābā Ṭāhir.

Bibliography: The manuscripts containing the quatrains of Bābā Ṭāhir are as follows: Asiat. Soc. Bengal, pers. N^o. 923, Catal. Ivanow, p. 424 (a *waḥḥ* of 1000 [1592]); Preuss. Staatsbibl., Catal. Pertsch, p. 727, N^o. 697 (written in 1820 and used by Leszczynski); 56 quatrains; Bibl. Nat. de Paris, pers. 174, Cat. Blochet, ii. 290—292 (collection made by Bakḥāḥ 'Alī Karābāghī, dated 1260 [1844]); 174 quatrains and a *ghosāl*. In the library of the mosque of Sipāhsālār in Tīhrān, Żukowski found a manuscript, *Ḥafāṣ-i Bābā Ṭāhir bi inḍimām-i ash'arāsh*, but the title did not correspond to the contents of the manuscript. The manuscripts of the mystical treatises of Bābā Ṭāhir are as follows: Bibl. Nat. de Paris, Arab 1903 (Blochet, *o. l.*, ii. 291) and the Oxford MS. Ethé, *Cat. Pers. MSS. Bodleian Lib.*, N^o. 1298, fol. 302^b—343. The anthologies which mention the poet are: 'Alī Kulī Khān Walīh, *Kiṭāb al-ḥikmah*, 1161 (1748), cf. Leszczynski, p. 10; Luṭf 'Alī beg, *Atashkade*, 1193 (1779), Bombay 1277, p. 247 (25 quatrains); 'Alī Ibrāhīm-abbā, *Shuhuf-i Ibrāhīm*, 1205 (1791), unique MS. in the Preuss. Staatsbibl., Pertsch, p. 627, N^o. 663 (utilised by Żukowski and

Leszczyński); Rīdā Kulī Khān, *Maḥjma' al-fayāḥ*, Tihān 1295, i. 326 (10 quatrains); Rīdā Kulī Khān, *Riyāḥ al-urīḥ*, Tihān 1303, p. 102 (24 quatrains); 57 quatrains of Bābā Ṭāhir were published at Bombay in 1297 and 1308 (with those of 'Umar Khayyām); 32 quatrains (with the *Munāẓẓāt* of Anṣārī) at Bombay 1301; 27 quatrains (with those of Khayyām) at Tihān 1274; the *ghazal* of Bābā Ṭāhir is given in the appendix to the *Divān* of Shams-i Maḥrībī, Tihān 1298, p. 158, in the appendix to the *Munāẓẓāt* of Anṣārī etc. The *Divān* of Bābā Ṭāhir (cf. text) with the *Kalimat-i ḥifz*, a preface by the editor, a biography by Maḥmūd 'Irfān, a description of the tomb of Bābā Ṭāhir by 'Arād-i Ḥamadān etc. were published as a supplement to the 8th year of the magazine *Armaghān*, Tihān 1306 (1927), p. 1—124. — Huart, *Les quatrains de Bābā Ṭāhir 'Uryān en pehlvi musulman*, *J. A.*, series viii, vol. vi, Nov.—Dec. 1885, p. 502—545; Żukowski, *Kość i B. Ṭāhir*, *Głoski Zap.*, 1900, xiii, p. 104—108 (bibliography, 3 anecdotes, 2 new quatrains one of which = No. 146 of the *Divān*), cf. also *Zap.*, ii, p. 12; E. Heron Allen, *The Lament of Bābā Ṭāhir*, London 1902 (text of 62 quatrains, transl. by the editor and a verse transl. by Elisabeth Curtis Brenton); E. G. Browne, *A Liter. Hist. of Persia*, i. 83—87, ii. 259—261; Mirzā Mahdī Khān (Kaukab), *The quatrains of B. Ṭāhir*, *J. A. S. Bengal*, 1904, No. 1, p. 1—29 (new edition of the quatrains of Heron Allen [+ 1 quatrain] with important corrections and a very interesting commentary); Huart, *Nouveaux quatrains de Bābā Ṭāhir*, in *Spiegel Memorial Volume*, ed. J. J. Modi, Bombay 1908, p. 290—302 (28 quatrains and 1 *ghazal*) completing the collection of 1885 recently discovered: in an extract from the *Kaḥḥāl al-fuḥar* of which the original is in the Muḥammadiya mosque (Fāṭih) of Constantinople, in the *Divān* of Maḥrībī and in an album (*ḡunḡ*). This second collection of quatrains published by Huart contains very irregular pieces, the translation of which is not certain; Minorsky, *Materiali* (*Matériaux pour servir à l'étude des croyances de la secte persane dite les Ahl-i Haqq ou 'Ahl-i Ilāhī'), vol. xxxiii. of the *Trudy Leningr. Instituta*, Moscow 1912, p. 29—33 (transl. of the passages from the *Sarandūm*), p. 99—103 (Persian text of the intercalated poems and notes); G. L. Leszczyński, *Die Rubā'iyāt des Bābā Ṭāhir 'Uryān oder Die Gottestränen des Herren*, aus d. west-medischen [sic?] Originale, Munich 1920 (biographical and bibliographical, verse transl.); K. Hadank, *Die Mundarten v. Khunīr etc.*, in *Kord.-pers. Forsch.*, v. O. Mann, series iii, vol. i, Leipzig 1926, introduction, p. xxxvii—lv. (complete study of the question of the language of Bābā Ṭāhir, bibliography).

(V. MINORSKY)

ṬĀHIRIDS, a dynasty in Khorāsān, founded by Ṭāhir b. al-Ḥusain [q. v.]. The foundation of the rule of the Ṭāhirids was later considered to date from the appointment of Ṭāhir as commander of the army of the Caliph Ma'mūn in 194 (810) and therefore the duration of their rule was put at 65 years (till the deposition of Muḥammad b. Ṭāhir in 259 [873]; cf. the biography of Faḍl b. Sahl [q. v.] in Ibn Khallikān No. 540, ed. de Slane, p. 577; transl., ii. 473 [where we have wrongly

*six and fifty']). Ṭāhir was succeeded in Khorāsān by his son Ṭāḥa, d. 213 (828); after him reigned 'Abd Allāh b. Ṭāhir [q. v.] till 230 (844) and Ṭāhir b. 'Abd Allāh till Raddab 248 (862), both of whom are described as able rulers. The capital of the dynasty was Nishāpūr (Arabic: Naisābūr); from the time of 'Abd Allāh their territory comprised Ray and Kirmān, in addition to Khorāsān proper and the lands east of it as far as the Indian frontier and northward to the boundary of the Caliph's empire. Although the Ṭāhirids were nominally only governors for the caliphs, their authority was so firmly established in Khorāsān that the province could not be given to any other. After the death of 'Abd Allāh the Caliph al-Wāthiq appointed Ishāq b. Ibrahim al-Mayālī governor of Khorāsān, but this appointment was cancelled before the departure of the new governor and Ṭāhir b. 'Abd Allāh confirmed in office in succession to his father (Sūli, MS. in the Publ. Libr. in St. Petersburg, f. 18^v 199). At the same time from 237 to 253 (851—867) another of 'Abd Allāh's sons, Muḥammad, held the office of military commandant (*qāḥil ḡharḡ*) and deputy of the Caliph in Baghdad. He declined an offer to go to Khorāsān on the death of his brother Ṭāhir, as he knew that the latter had intended his son Muḥammad to succeed him; Muḥammad b. Ṭāhir was therefore appointed governor of Khorāsān by the Caliph Mustafā (Ya'qūbī, ed. Houtama, ii. 604). Muḥammad b. Ṭāhir, in contrast to his predecessors, is described as a frivolous and pleasure-loving prince; his lands gradually passed to the Saffārid [q. v.] Ya'qūb b. Laith to whom Muḥammad himself had to surrender in his capital in 259 (873). Muḥammad b. Ṭāhir, who lived till 296 (908—909) (Ibn al-Athīr, viii. 42) does not seem to have returned to Khorāsān, although he was liberated after the defeat of Ya'qūb at Dair al-Aḳīl in 262 (876) and thereupon and once again in 271 (885) appointed governor of Khorāsān. His brother Husain b. Ṭāhir continued the struggle with the Saffārids without much success. The last military commandant of Baghdad of the Ṭāhirid family was 'Ubad Allāh b. 'Abd Allāh who died in Shawwāl 300 (May 913); according to 'Arīb, p. 40, he was 81 years of age but Ibn al-Athīr says he was only born in 223 (838); until his death he was regarded as Shaikh of the Khuzā'a tribe (Ibn Khallikān, transl. de Slane, ii. 80, not in the text p. 382, nor in Wüstenfeld's edition No. 366). His son Muḥammad b. 'Ubad Allāh was for a period commandant of the eastern half of Baghdad and was dismissed from office in 301 (913—914); cf. 'Arīb, p. 45.

The Ṭāhirids seem to have occupied a unique position among the rulers of their time on account of their high education and literary activities (in Arabic). In the *Fihrist* (p. 117) a special chapter (*Al Ṭāhir*) is devoted to the Ṭāhirids: many of them, from Ṭāhir b. al-Ḥusain to 'Ubad Allāh b. 'Abd Allāh are celebrated as poets and authors. According to 'Abd Allāh b. Ṭāhir the "wisdom" (*ḥikm*) of the Ṭāhirids was particularly manifested in his nephew Manṣūr b. Ṭāḥa, the governor of Merv, Amul and Khwārizm, and author of several works. According to a statement of little credibility in Dawlatshāh (ed. Browne, p. 30), 'Abdallāh is said to have disapproved of Persian literature and to have ordered Persian books to be burned and destroyed.

(W. BARTHOLD)

TĀHMĀN b. 'AMR AL-KILĀBĪ was a minor Arabic poet whose collected poems have by accident been preserved, while more important collections have been irretrievably lost. The time when he lived is fairly accurately known, as he was captured by the Ḥārūrī leader Nadjda b. 'Amr al-Ḥanaṣī on one of his expeditions and employed as a guide. During the night he tried to escape, took one of the best camels and went away. He was however pursued on horses and recaptured. As a punishment for theft the Ḥārūrī imposed the punishment of having the right hand cut off. When he later came to the caliph 'Abd al-Malik he recited to him his most celebrated poem, in which he deplors the loss of his hand and asks the caliph for the payment of the ransom as he had acted only as a loyal subject and had not deserved the punishment imposed upon common criminals. However, according to another account, he did not lose his hand at all and the poem was made solely for the purpose to save his hand when he deserved such punishment. He had been at a winshop and when drunk had robbed the owner of the money taken by this illegal traffic by breaking open the box in which he kept the money. In this account he is brought before the caliph al-Walid and not 'Abd al-Malik. That he lived to the time of al-Walid is confirmed by another poem (p. 82, a) where he praises this ruler and the Banū Umayya in general. As also other accounts and verses make allusion to the loss of his hand, the second account appears to be due to an interpolator who was not acquainted with these verses. Tāhmān was sensitive about the loss of his hand and he always kept it wrapped up. One day a man of the clan of Abū Rabbā b. 'Abd, as he was at the watering trough, threw the garment covering his hand back. Tāhmān bore the grudge till he surprised the man kneeling at some work and struck him with his sword thinking he had killed him, though he had only wounded him. He fled to the Yaman to the tribe of al-Ḥārith b. Ka'b and found asylum among the Banū 'Abd al-Maḍān, one of the noblest Yamanite clans, and sent from there some verses expressing his delight at having avenged the insult. He also had another quarrel in which he killed a man of the tribe of Qhānī on account of a woman; then he ran away and stayed two years in the South of the Yamāma, hiding during the day, robbing the people during the night. His plight however was so wretched that when some of his clansmen of Kilāb passed he asked them in some verses to obtain pardon for him from the governor of al-Madīna. A man named Šudāy b. Kaṣa went to al-Madīna and obtained the pardon and paid the blood-money to the relations of the slain Qhānawī. From all these scattered accounts we may arrive at the conclusion that he lived in the second half of the first century of the Hījra. Several of the fragmentary poems are simply love poems, several upon Ḥārithī, i.e. South-Arabian women, composed during his stay in the Yaman. The short *diwān* probably formed part of the collection of poems made by Abū Sa'īd al-Sukkarī under the title: *Kiṭāb Luḡat al-'Arab*, 'Book of the Arab Robbers'. A German translation exists

by O. Rescher, but as it is privately printed; I do not know the date of publication. The Arabic text is published in W. Wright, *Opuscula Arabica*, Leyden 1859, p. 76—89. Verses of Tāhmān are cited occasionally in other works, sometimes only as being by one of the 'Robbers'. In the *Lisān al-'Arab* he is cited only four times (iii. 492; ii. 132; xi. 298; xiii. 43, 432); Bakrī, ed. Wüstenfeld, p. 413; Yāqūt and al-Kāṣī in places to be found from the indices.

Bibliography: cited above.

(F. KERNKOW)

TĀHMĀSP I, second ruler of Persia of the Saffawī dynasty, eldest son of Šāh Ismā'īl I born in 919 (1514); he ascended the throne at the age of ten years (930 = 1524) and was of course the plaything of the Kizilbash chiefs. He defeated the Uzbeks in 934 (1527) near Turbet-i Šaikh Djam. Summoned to Baghdat by the rebellion of Dhu 'l-Fakār of the Kurd tribe of the Mūslū, who was supported by the Kalhur Kurds and claimed to be under Turkish suzerainty (936 = 1530), he found him murdered by his brothers. He next went to Herāt which the Uzbeks had been besieging for 18 months, but the latter withdrew on his approach. In 940 (1534) the Ottomans occupied Mesopotamia and Tabriz. Sulṭān Sulaimān went to Sultāniya, then crossed the mountains to the south to occupy Baghdat; four years later he occupied Wān. The Persians had all the time been on the defensive. In 1541 the great Moghul Humāyūn, son of Bābur, driven from his throne by a rebellion, took refuge with Tāhmāsp. The magnificent festivities held on this occasion are commemorated in a wall-painting in the pavilion of Čihil-Sutūr in Isfahān, but Humāyūn was worried by the Šāh's insisting on his adoption of the Šī'a.

A rebellion of his brother Ilkhān-Mirzā in 954 (1547) who was supported by the Turks gave Tāhmāsp no rest; an Ottoman army occupied Ādharbāydjān and Isfahān; Ilkhān however quarrelled with his allies, the campaign led to nothing and the pretender was later captured and put to death. In 961 (1554) an armistice was concluded with the Turks and the peace signed the following year. Bāyard, son of Sulṭān Sulaimān, took refuge in Persia after his rebellion (963 = 1556) but he was handed over after two years' negotiations and Tāhmāsp ordered or allowed him to be put to death for a sum of 400,000 pieces of gold.

The last years of his reign were marked by Uzbek invasions of Khorāsān and a famine followed by plague (919 = 1571). Tāhmāsp died in 984 (1576), poisoned by the mother of a certain Haidar, chief of the Ustādjīn tribe. His reign had lasted 52 and a half years. He wrote his autobiography, publ. by P. Horn, *Dinkwārdigheiten*, Z. D. M. G., xlv, 1890, p. 363—649, transl. Strassburg 1891; it stops at the year 969 (1561) when Bāyard was handed over to the Turks. Copies of official letters addressed by him to contemporary sovereigns are found in various MSS. of the British Museum (Rieu, *Catalogue*, N^o. 390, 530, 809, 984). In his reign Persia was visited by Anthony Jenkinson, English Ambassador (1562) and Vincentio d'Alessandri, Venetian Ambassador (1571).

Tahmāsp II, third son of Shāh Husain, proclaimed heir-presumptive during the siege of Isfahān by the Afghāns (1135 = 1722), escaped at the head of 600 men and tried without success to raise troops in Kāzwin. He made a treaty with Peter the Great who had just occupied Resht and Baku (the treaty led to nothing), held out at Farahābād in Māzandaran, with the support of Fath 'Alī Khān, chief of the Kādjār, and was joined there by the future Nādir Shāh, who then took the name Tahmāsp Kulī Khān (the Khān, servant of Tahmāsp) and brought him 5,000 men, Afghār and Kurds. After the assassination of Fath 'Alī Khān near Meshhed by Nādir, the latter was appointed commander-in-chief of the Persian troops, took Meshhed and Herāt, won a signal victory over the Afghāns at Mīhman-Dūst, near Dāmghān in 1141 (1729). Leaving Tahmāsp at Dāmghān, Nādir won a further success at Murde-Khart, entered Isfahān where Tahmāsp, whose father had been massacred by the Afghāns before their departure, followed him and found his mother there, where she had lived seven years disguised as a slave without being recognised. Tahmāsp rewarded his general for his services by giving him the governorship of Khōrāsān, Sījāsān, Kirmān and Māzandarān with the title Sultān. Nādir struck coins in his own name and paid his troops with them. Fired by the victories of his lieutenant, Tahmāsp wished to take command of the army, undertook unsuccessfully the siege of Erīwān and was defeated by the Turks at Kōreghān, near Hamadān in 1144 (1731); in the following year he concluded peace by ceding Transcaucasia, but retained Tabriz and the country S.E. of it. Nādir protested against the conclusion of the treaty, marched on Isfahān, seized Tahmāsp and sent him to be imprisoned in Khōrāsān putting on the throne a son of the Shāh, aged eight months, under the name of Shāh 'Abbās III; this son dying, Nādir (q.v.) had himself proclaimed ruler of Persia in 1148 (1736). In the course of the campaign in India, the son of Nādir, Rīdā Kūll, put Tahmāsp to death along with the greater part of his family at Sebzwār (1151 = 1739).

TAHMŪRATH, the second king of the Pishdādī dynasty in the Persian epic cycle.

The name Takhmō-arupa (*Avesta*), Takhmōrup (*Bundahish*) is compounded of *takhmā* ("strong, courageous") (cf. Rustam < Rostahm) + *arupa* (or *arupī*) (cf. Christensen, p. 140), "a certain animal of the dog family", cf. Bartholomae, *Altir. Wört.*, p. 1532, who, however, expresses doubts as to the real meaning of the name (Darmesteter, *Avesta*, ii, p. 583, interprets it "of sturdy shape"; cf.

Sanskrit *rūpa*?). Later forms are Takhmūraf, Takhmūras. The transcription into Arabic characters Takhmūraf (sometimes Takhmūrah) reflects an intermediate stage in the evolution of the final *p > f > ḥ > r*; the emphatic Arabic *f* seems to show retroactive influence of the *r*; cf. the forms Takhmāsp, and Tīhrān. In the *Shah-nāma* the Mandaitan Takhmūraf appears under the name Zairānayatā Takhmūraf.

As Windischmann points out, Takhmūraf is one of the most puzzling characters in the Iranian epic. Syncretistic imagination has been very much at work on the person of this king and each period has added some new features to his character. According to the majority of the sources, Takhmūraf is the son of Wiwandjshān (Avestan Vivahvant, Pahl. Vivanghō, who is the grandson or the great grandson of Hushang). The brothers of Takhmūraf are his successors Vīm = Djāmshēd, Spitūr (Spityura) and Nars. The *Shah-nāma* alone makes the order of reigns the same as the order of generations, by making Takhmūraf the son of Hushang and the father of Djāmshēd. The Muslim sources mention a son of Takhmūraf who according to Ibn al-Fakih was called Fāris (eponym of the Persians), according to the *Nuzhat al-Kulūb* (ed. Le Strange, p. 112): Lashkar; according to Herbelot's sources: Kahrāmān.

In the *Avesta* Takhmūraf has the epithet *mainorant* (*mainorant*), usually explained (cf. Hames and the *Majmil*, p. 166) as "armed" but according to Bartholomae, *Altir. Wört.*, p. 228 and 1651, having the sense of "watchful", "wide awake". Firdawsi does not mention this epithet unless he alludes to it when he says that Takhmūraf saddled (*sir*) Ahriman to serve as a steed for him.

According to the *Avesta*, *Yasht*, 19, 28, Takhmō Urupa "subdued all the demons and rode Ahri-Maiyu whom he transformed into a horse, for 30 years, from one end of the earth to the other" (transl. Darmesteter). The victory of Takhmūraf over Ahriman was won on the day Khordād of the month of Farvardin and this event is celebrated each year by the faithful who should make a special cake for the occasion (according to a Pahlavi treatise in West, *Pahlavi Texts*, iv, p. 314). The Persian *Khwāyār* (Spiegel, *Einführung*) which gives Mōbad-i Dīhlawī as its authority is full of curious details (absent in Firdawsi and elsewhere). Every day Takhmūraf, mounted on Ahriman, went three times round the world and three times covered the road from Mt. Alburz to the bridge Cinvad. Ahriman felled by mace blows from Takhmūraf lived only on the sins of men. By promises of honey and silk garments (on these impure things, cf. Spiegel, *Einführung*, ii. 153, 158) Ahriman persuaded the wife of Takhmūraf to ask her husband if in the course of his rounds he was ever afraid. Takhmūraf confessed that he was always afraid that Ahriman might throw himself from the summit of Alburz to the foot. Learning Takhmūraf's weak spot, Ahriman threw him and swallowed him. The angel Surōsh announced the disappearance of Takhmūraf to Djāmshēd and tells him what two things delight Ahriman, praises (or song) and sodomy (cf. Marquart in *Handel Amerya*, Vienna 1916, p. 100). Djām played on these passions and when Ahriman prepared to accede to his proposals, Djām slipped his hand into his entrails and pulled out his brother's body. Ahriman pursues Djām but the latter on the advice

of Sərōš abstains from looking him in the face and Ahriman thus impotent returns to hell. Djam purifies Tāhmūrath and builds an (*ajrōšān*) for him. The hand of Djam which had touched Ahriman became covered with leprosy. During a dream he learns that his malady can be cured. Hence the institution of the *dakhma* and the use of the *goms*, are connected in the *Ardešyār* with the death of Tāhmūrath. The *Muḡmil* expressly says that Tāhmūrath died a natural death.

The exploits of Tāhmūrath also earned him the epithet of *daband*, cf. the *Šāh-nāma*, the *Muḡmil* and the Persian *Ardešyār*. According to the Aogemide (*Avesta*, tr. Darmesteter, iii. 165), Tāhmūrath made a steed of Ganī-Mainyō, the demon of demons, and extorted from him the 7 kinds of writing. The *Minoḡharat* (tr. West, Ch. xxi. 32) explains that it was the seven alphabets hidden by Ahriman that were brought to light. Firdawsi does not seem to be aware of the ambiguity of his language, which here suggests the demoniacal origin of the alphabets, while, according to him, they were taught to Tāhmūrath by the *dev* whom he had subdued after their rebellion. Firdawsi speaks of "about 30 alphabets" (*mandik-i st*) but only mentions six by name, the *rūmi*, the *fāsi*, the *fārsi*, the *seghdi*, the *itali* and the *pahlavi*.

On this tradition there was in time superimposed the legend of the measures taken by Tāhmūrath to save the books at the Deluge. As Windischmann has already pointed out, this act of Tāhmūrath's connects him with the Babylonian Xisouthros (Berosius, *Frag. Hist. Græc.*, ed. Müller, ii. 501). Hamza, ed. Guttwaldt, p. 197, says that in 350 (961) there was found at Dīsi (Isfahān) in the building called Sārwaīh or Sārōya a hoard of 50 bales of skins covered with unknown writings. (Ibn Rusta transcribes the name Sārō; this is also the name of the citadel of Hamadān, of the capital of Fārsān, of the tributary of the Dīaghātū and of the town of Sārōj near Bīredjīk). In this connection Hamza under 357 (962) quotes the story of the astronomer Abū Ma'shar (d. 272 = 885), according to which a similar find of manuscripts written on the *līz* of the white poplar (*līzandān*) had previously been made at Sārōya. On this occasion one of the manuscripts written "in old Persian script" could be deciphered. One of the old kings of Persia in it related that 231 years and 300 days before the Deluge, Tāhmūrath had known the date of its happening. As a true friend of knowledge and of scholars, he ordered his engineers to find the safest place to erect a building which was called Sārōya. Scientific works of different kinds including astronomical tables were put in it (but the Deluge, cf. al-Bīrūnī, did not come beyond the frontier of Hulwān).

There are several other traditions connected with Tāhmūrath. The reference is very old in the *Bundahish*, ch. xvii. 4, according to which in the time of Tāhmūrath "the people regularly passed on the back of the bull Sarsaok from (*Karshvar* [mod. Pers. Kashvar] central) Khvantras to the other regions". One night in the middle of the sea, the wind blew into the water the sacred fire which had also been placed on the back of Sarsaok, but the fire broke into three parts which shone so brightly that the people were able to cross the sea. This myth is symbolical of the peopling of the 6 *karshvar* of the periphery and of the origin of the three great pyres.

To Tāhmūrath (Hamza, p. 29—30) is attributed the building of Babylon, of the citadel (*kūhandū*) of Marw, of Kardādād (one of the 7 cities of Madā'in; another reading has: Kardābād; in the *Muḡmil al-Tawārīkh*: *Girdābād-i buzurgtarin*), of the two suburbs of Isfahān: Mihirū (Marbin, cf. Ibn al-Fakīh, p. 265) and Sārōya (formerly Kūk). According to Tabari, Tāhmūrath founded the town of Sībūr, and Mas'ūdī places there the residence of Tāhmūrath. To this list Herbelot's sources add Niniveh and Amid.

In the *Šāh-nāma*, Tāhmūrath is represented as the great initiator in the exploitation of the animal kingdom: from him dates the weaving of wool, the domestication of wild animals, of birds of prey, the rearing of horses and other animals for riding, of watch-dogs and of cocks and hens (cf. also the *Muḡmil* and the *Ardešyār*).

Along with Tāhmūrath the *Šāh-nāma* mentions his wise and pious minister (*dastūr*) Šōdāsp, whose name looks like a wrong reading for Būdāsp (Boddhisatva, Buddha). Blochet (*Études sur le Gnosticisme*, p. 28) has endeavoured to show from the system of writing Pahlavi the possibility of the substitution of *ghā* in place of *dāt* in the sense of demon. Tabari, i. 175 says that in the first year of the reign of Tāhmūrath, Būdāsp appeared who preached the doctrine of the Šābi'a [q. v.] and almost all the Muslim historians repeat this (cf. Windischmann and Christensen). Some writers (Mas'ūdī, *Tanbih*, B. G. A., viii. 90) even suggest that before Zardusht the Persians professed the Sabaeen religion preached by Būdāsp. According to Hamza, Yūdāsp (read Būdāsp) instituted fasting on the occasion of a famine in the time of Tāhmūrath. The same writer says that Tāhmūrath was tolerant in religious matters and in his reign idolatry had increased. This legend is exactly contrary to what the *Dinkart* (vii. 1, 19) says, that Tāhmūrath put down idolatry and caused the worship and adoration of the Creator to increase.

Tāhmūrath has no equivalent in Indian mythology. Windischmann and Spiegel have sought to unravel the Indo-European (Iranian?) from the Semitic elements in this complex character. To the former belong the genealogy of Tāhmūrath, his struggle with Ahriman etc. Are the elements dealing with the deluge, the saving of the books etc. Semitic? Windischmann, relying on the second element of the name Tāhmūrath (*urupa*), even suspected an animal origin for him (*Targitaos*) connecting him with certain Babylonian mythological figures.

An original theory has been advanced by Christensen, *op. cit.*, p. 136, 142: he says that it was after the separation of the Iranians from the Indians that Hūshang and Tāhmūrath, both keeping traces of the type of the "first man" and the "first king", were inserted in the mythological framework where they took a place before Yim, the Indo-Iranian type of the first man, and after Gayō-mard, the pre-anthropomorphic giant, who became the prototype of the human race. Christensen then proposes to assimilate Hūshang and Tāhmūrath to the personages of Scythian legend (Herodotus, iv. 5—7): Targitaos, the first man and his son Arpoxais, "eponym of the Scythian tribe Rpa" (*Arpa > Urupa; Christensen thinks he recognises this element in the toponymy of many places in nearer Asia which were the scene of Scythian migrations). Hence the genealogy, Tāhmūrath, son of Hūshang,

given by Firdawst is perhaps in keeping with the tradition, while the three generations introduced between Tahmurath and Hushang would only be misreadings of the name Vivanghān.

Later sources rationalised the legend; according to a Pārsi priest (Darmesteter, *Et. Iran.*, ii, 74), the victory of Tahmurath over Ahriman simply means his victory "over the impure desires of the flesh". Mirkhond seems to wish to substitute for the revolt of the *divs*, one of the nobles of the kingdom.

The later evolution of the story of Tahmurath in Muslim lands is very curious. According to E. Blochet the ware with a woman's head, al-Burāk, [q. v.], on whom at the *mī'rāj* Muḥammad traversed the world, is derived from Ahriman in the legend of Tahmurath. The name of Burāk is, he says, connected with the Persian word *būra* (*būrag*) which are actually used in the *Rivāyat* and Firdawst. On a Sāsānian vase in Vienna (cf. Arnoeth, *Monumente d. K. R. Münz- und Antiken-Cabinette in Wien*, 1850, *Die antiken Gold- und Silbermonumente*, pl. vi-vii) are figures of a man mounted on a monster with a bearded human head having some resemblance to the winged Assyrian bulls. Blochet thinks he recognises in these figures different phases in the exploit of Tahmurath. On the other hand, the same scholar has shown how Tahmurath, having passed through the avatar of the Muslim *ajinn* Samhūras or Shamhūras (metathesis of *h* and *w*?) has come to be confused with the complex figure of St. George. The figure of Samhūras is found in an old manuscript *Dafā'ih al-bāghīyah* (Bibl. Nat. Paris, Pers. fonds, N^o 174); in the accompanying text we are told that this spirit is the "great spirit of the atmosphere" and that his residence (*maḥḥa*) is in the island (sic!) of Ba'albak. He is represented as a warrior fully equipped (*mubārī*) killing a dragon with a blow from a sword in such a way that the dragon (*abḍakā*) is cut in two while seizing with his teeth the chest of the horse. Wherever two armies meet ready for battle, God orders this spirit to go to the space between them and it is he who gives his aid to the side which God desires to assist!

The name Tahmurath, frequent in the modern period among Pārsis, seems to be unknown in Muhammadan Persia. Since the xvth century it has been very popular among the Christian princes of Georgia (in the form *Tamuraz*). This curious fate of the name may be explained by the influence of the *Shirwānshāh* [q. v.] who were related to the Georgians and often bear names from the Iranian epics.

Bibliography: The principal sources mentioning Tahmurath are: *Avesta*, *Yasht*, Chap. 15, 11 and 19, 23; *Afrin-i Zartušt*, § 2; *Bundahish* (West, *Pahlavi texts*, i, Oxford 1880), Chap. 17, 4; 31, 2-3; 34, 4; *Dīn-i Mānīg-i Khirad* (West, *ibid.*, iii, 1885), Chap. 27, 21; *Rivāyat pārsi* on Tahmurath is found in Spiegel, *Einleit. in die traditionellen Schriften d. Parsen*, ii, Vienna 1860, p. 158-159 and 317-326 (197 Persian distichs; there is a prose version in a MS. of Munich; cf. Bartholomae, *Cat.*, p. 141); *Shāh-nāma*, ed. Mohl, i, p. 40-46; ed. Vullers, i, p. 202; Tabari, i, 174-175; Mas'adi, *Murūf*, ed. Barbier de Meynard, ii, 111; iii, 252; iv, 44, 49; Hamza Isfahānī, ed. Gottwaldt, p. 13, 25, 29-30, 197 (transl. p. 9, 17, 20, 151); Bīrūnī, *al-Āthār al-bāghiya*, ed. Sachau, p. 24;

Mudmil al-Tawārīkh, J. A., 1841, xi, 154, 166, 279, 292, 390, 413; Thā'libī, *Gharar Akhbār Mulk al-Fars* (before 412), ed. Zotenberg, p. 7-9. For the minor sources cf. Windischmann and Christensen, p. 192-203, D'Herbelot, *Bibl. Orientale*, "réduite et augmentée" ed. of 1783, v, p. 451-456, s. v. Tahamurath, where are quoted the later additions from poems like *Tahmurath-nāma* and *Kahramān-nāma* [MS. Turkish of the Bibl. Nat. de Paris, N^o 321, 343 and 344; Kahramān is the son of Tahmurath], cf. Mohl, introd. to his edition of the *Shāh-nāma*, i, p. 74-76; there is no article Tahmurath in the original edition of d'Herbelot, Paris 1697, although the *Tahmurath-nāma* is quoted there s. v. Malik-al-bahr ā propos of the steed of Siyāmak, son of Kayūmarth. Windischmann, *Zoroastre. Études orient., vol. xiv, Upsala 1918, p. 131-218; Höflang and Tagmōrow (complete analysis of all the sources). (V. MINORSKY).

TAHRIF (A.), corruption of a document, whereby the original sense is altered. It may happen in various ways, by direct alteration of the written text, by arbitrary alterations in reading aloud the text which is itself correct, by omitting parts of it or by interpolations or by a wrong exposition of the true sense. The Muslims found occasion to deal with this conception in connection with those passages in the Kur'an where Muḥammad accused the Jews of falsifying the books of revelation given them, i.e. the Thora, *harrafā* [cf. *Kōz'An*, vol. ii, 1066]. This accusation was really the only way of escape for Muḥammad out of a dangerous situation, when he came into closer contact with the Jews in Medina. He had from the beginning appealed to the evidence of the "peoples of a scripture", i.e. the Jews and the Christians, as he was firmly convinced that the contents of the Old and New Testament coincided with what he preached on the basis of his revelations. But his ideas of incidents and laws in the Old Testament contained such misunderstandings that they naturally provoked criticism and ridicule from the Jews and thus he was put in a false position. If his expositions were contradictory to the old revealed scriptures, his claim to have received them by divine revelation was at stake. But as his consciousness of his prophetic inspiration was unassailable, there was only one thing for him to do, namely to declare that the Jews had maliciously corrupted their sacred books while he himself had given their true content. It was a bold assertion but was made easier for him by the fact that these scriptures were sealed books to his followers, while they believed firmly in the truth of his words. In this connection Muḥammad uses the expression *harrafā* (Sūra ii, 70; iv, 48; v, 16, 45), more rarely the synonym *latū* (iii, 72; iv, 48) or *baddala* the meaning of which is

narrower, "to exchange", "to put in the place of something" (ii. 56; vii. 16). How he pictured this alteration to himself is not clear from his words and perhaps he had no very definite idea of it: he was more concerned with the fact itself than with how it was done. There is a direct charge of having falsified the text in Sūra ii. 73: "Woe to them, who write the Scripture with their hands and say: this comes from Allāh." On the other hand in ii. 72 there seems to be a reference to an alteration in the text while it is being read: "A part of them twist their tongue in the scripture so that you think that it is out of the scripture, but it is not out of the scripture; they say: it comes from Allāh, but it does not come from Allāh"; cf. iv. 48: "they twist with their tongue". In other passages he is content with the accusation that the Jews conceal and suppress all sorts of things in their scripture (Sūra ii. 154, 169). This is expressed in a peculiar fashion in vi. 91 where it is said "you make the scripture of Moses into leaves which you read out and suppress much of it"; which can only mean that in his opinion they removed the passages attesting the truth of his mission from the copies which they used in the disputations. He gives in ii. 156; vii. 16 a specimen of their alterations which is unfortunately not clear; he says that they used another word instead of the word *hitta* which brought a heavy punishment upon them. The examples quoted in ii. 98; iv. 48 are hardly meant as quotations from scripture. Among the suppressed passages, the scriptures make special mention of the law which punishes incontinence with stoning (Ibn Hishām p. 394 sq.) and the descriptions of Muhammad as the expected Prophet (*ibid.*, p. 353). Muhammad naturally extended this charge of *tahrif* to the Christians, of whom he also asserted that they likewise concealed the passages in their holy scriptures which contained evidence of the truth of his mission; cf. the appeal to the "possessors of a scripture" in Sūra ii. 141; iii. 64 and with reference to prophecy of Muhammad's coming. Ibn Hishām, p. 388, although he probably means that Jesus's refusal of the name God and the doctrine of the Trinity (e.g. v. 116) were based on falsifications of the scripture. His whole attitude was so peculiar that his opponents were able with justice to direct a charge of *tahdil* against the Prophet's revelations. It is true that in Sūra x. 16 he vigorously defends himself against the charge brought by his opponents that he had substituted another revelation in place of the one given him, but the not rare abrogations of earlier legal prescriptions (cf. KOR'ĀN) caused him no misgiving and in xvi. 103, Allāh clearly refers to his having occasionally substituted one verse for another, a thing with which his enemies did not forget to reproach the Prophet.

The vague way in which Muhammad in the Kor'an speaks of falsifications of scriptures by the "possessors of a scripture" resulted in the Muhammadan scholars who gradually became better acquainted with the "Old and New Testaments" and were fond of dealing in their polemical works with the charge of *tahrif*, *tahdil* and *taghyir*, coming to hold very divergent views in their opinions of the facts lying at the basis of the charge. Some continued to hold the opinion usual in the early centuries after Muhammad that the Jews had actually altered the text. A vigorous

champion of this view was the Spanish Arab Abū Muhammad 'Alī b. Ḥazm (d. 456 = 1064). Diametrically opposed to this was the view held by others that the texts of the "possessors of a scripture" were intact and that the divergent opinions of Jews and Christians were simply due to erroneous interpretations of the passages concerned. One of the earliest representatives of this view was the Zaidi of the Yemen, al-Ḳāsim b. Ibrāhīm (d. 246 = 860), in his polemical treatise directed against the Christians; among his later followers, special mention may be made of the great historian Ibn Khaldūn. As is usual in such controversies there was also a middle school, for some conceded the actual falsifications of the text by the "peoples of a scripture" but limited them to a minimum. Of these different opinions, the first was decidedly the simplest and most logical, for it was based on the first impression which the words of the Kor'an naturally made and had made in the early days of Islam, but it led to rather serious consequences which gradually came to be appreciated. When one had always to deal with the possibility that the texts of the earlier books of revelation had been falsified, they lost considerably in value and indeed the holders of this theory frequently speak slightly of it and warn against its use. But in this way one came up against a question of apologetics, to which the theologians were devoting themselves with ardour, namely the prophecy of Muhammad's coming as the Prophet to be expected from the Bible (e.g. Deut., xviii. 15), for this naturally presupposed the authenticity of the passage in question. This factor had such an influence that only a minority took seriously the charge of *tahrif* in its strictest form. But in its milder form it continued to play a principal part in Muslim polemics against Jews and Christians, as may be seen for example from Doughty's statement that in his conversations with Arabs he frequently heard this accusation made (*Travels in Arabia*, I. 298; Snouck Hurgronje, *Mekka*, ii. 204).

In the disputations between the different Muslim sects the charge of *tahrif* is also made, as the Shi'is have often insisted that in the orthodox Kor'an all sorts of things have been omitted or inserted with the object of disposing of or refuting evidence of the truth of their doctrine. The orthodox also naturally reply by making the same charge against the Shi'is.

(Fr. Buhl)

TAHSIL is the *nomen actionis* of the second formation of the verb *ḥajala*, and signifies originally, "collection", "obtaining" or "acquiring". In India the use of the word is restricted to the collection of the revenue, and it is applied, in the United Provinces and Madras to a subdivision of a district (called *ta'alluqa*, or, cor-

raptly, *tāhū*, in the Bombay Presidency) with an area of from 400 to 600 square miles, or less in the United Provinces, forming an administrative and fiscal unit. In size the *tahsil* comes between the *pargana* and the *sarkār* of the Mughal empire, and the official in charge of it is designated *tahsildār* (holder of a *tahsil*) and exercises administrative and, except in Madras, magisterial powers. He is immediately subordinate either to a superior officer in charge of a sub-division comprising two or more *tahsil*'s, or to the District Magistrate and Collector.

TAHSIN, MIR MUHAMMAD HUSAIN 'ATK' KHAN, with the *tahalluq* Tahsin, also known by the title *Muraṣṣa' Raḥim*; an Indian author, as it seems, from Ilāwā, son of Mir Bākir Khān, whose *tahalluq* was Shawk. The son of Tahsin, named Kāsim 'Alī Khān, was not only an author, but also a musician. The exact dates of Tahsin's birth and death cannot be fixed; the date of the completion of his most important work, the *Nawāris-i muraṣṣa'*, is ± 1195 (1780). The author was in the service of General Smith, whom he accompanied from Lakhnaw to Calcutta. Later on, Tahsin lived at Patna, then, after his father's death, at Faizābād. His patrons, in the last named place, were successively the Nawwāb Shujā' al-Dawla († 1189 = 1775) — in whose service he continued the composition of his *Nawāris*, which he seems to have begun at Patna — and the following Nawwāb, Āṣaf al-Dawla (1189–1212 = 1775–1797), under whose reign the work was completed. The author has added, to the preface of the *Nawāris*, a *ḥusnā* in honour of Āṣaf al-Dawla. It is said, that the reading of the works of the famous Hindustānī poet Mirzā Muḥammad Rafī Sawdī [† 1195 (1780) at Lakhnaw], induced Tahsin to devote himself to Hindustānī literature also.

Works. (1) *Nawāris-i muraṣṣa'*: a Hindustānī translation, in verse and prose, of a Persian original (named *Ḥiṣṣa-i lahūr Darwish*). This original is ascribed to Amir Khusrāw, but sometimes also to Andjāb or to Muḥammad 'Alī Ma'sūm. The *Nawāris* exhibits an elaborate literary style. This was the reason, why, for didactic purposes, another translation of the *Ḥiṣṣa-i lahūr Darwish* was begun in 1215 (1801) by Mir Amman of Dihli and completed in 1217 (1803); this translation is the well-known *Bāgh u-Bahār*. Editions of Tahsin's *Nawāris* appeared at Bombay (1846), Lakhnaw (1869) and Cawnpore (1874). The *Nawāris* itself has had a literary influence upon another Hindustānī author, 'Aḥmad Allāh, who, as he himself states in the preface of his romantic work *Ḥiṣṣa-i rangin Guṣṭār*, has imitated in that book the style of Tahsin's composition. On the other hand, we find in a manuscript of the India Office (No. 132 of Blumhardt's Catalogue), the Introduction and the tale of the first darwish in Tahsin's translation combined with a Hindustānī rendering of the stories resp. of the third darwish and the king Āṣādhakṣī by another literate, Muḥammad Hādī.

(2) Besides the *Nawāris*, Tahsin wrote in Persian an English grammar, called *Qawālib-i Angriṣī*, and a work, which seems to be historical, named *Tawārīkh-i Kāsim*.

It may be added, that, according to the *Tadhkirah* of Yūsuf 'Alī Khān, Tahsin was also renowned as a calligrapher. Besides this Tahsin, there is also another author of that name, likewise called Muḥammad Husain Khān, of whom a cycle of poems in the praise of the prophet, partly in Persian and partly in Hindustānī, was lithographed at Dihli, under the name *Gulshān-i Na'ī* (1873). There is also a collection of stanzas on Muḥammad, compiled from various sources by one Muḥammad Husain Khān Tahsin (the same?), named *Ḥamān-i Madhī Nabī*, edited at Dihli 1854.

AL-TĀT LI-AMR ALLĀH (OF LI 'LLĀH) 'ABD AL-KARIM B. AL-FAṬL, 'Abbāsīd Caliph, born in 317 (929–930). His father was the caliph al-Mu'izz after whose deposition on 13th Ḥijā 318 (Aug. 5, 974) he was proclaimed Commander of the Faithful. His mother, who survived him, was called 'Uṭb. As Ibn al-Aṭhār justly observes (ix. 56), al-Tāṭ during his reign had not sufficient authority to be able to associate himself with any enterprises worthy of mention. He is only mentioned in history, one may safely say, in connection with certificates of appointment to office, letters of condolence and such like formalities, and his most remarkable feature seems to have been his extraordinary physical strength. The real rulers were at first the Būyids [q. v.] but after the most important of them, 'Aḍud al-Dawla [q. v.] who was the caliph's father-in-law, had died in Shawwāl 372 (March 983) his sons began to quarrel among themselves. In Sha'bān 381 (Oct./Nov. 991) Bahā' al-Dawla [q. v.] who was in financial difficulties and could not pay his troops was persuaded by his influential adviser Abu 'l-Ḥasan b. al-Mu'allim to overthrow the caliph and seize his treasure. At an audience at which the Būyid appeared with a large retinue the unsuspecting Tāṭ was torn from his throne by Bahā' al-Dawla's orders and taken to the latter's house where he was kept a prisoner. He was succeeded as caliph by his cousin Abu 'l-Abbās Ahmad, who took the name al-Kādir [q. v.]. In Rajab 382 (Sept. 992) the ex-caliph was allowed to come to al-Kādir's palace. Here he was well treated. He died on 1st Shawwāl 393 (Aug. 3, 1003).

(K. V. ZETTERSTEEN)

TAIBA [See AL-MADINA.]

TA'IF, a town in Arabia. It lies 75 miles S.E. of Mecca about 5,000 feet above sea level in the mountains of Sarat. Of the country round with its walled gardens Burckhardt says that it is "the most attractive that he had seen since his departure for Lebanon in Syria". The Beduins also describe it as a corner of Syria transported and placed under the inclement sky of the Hijāz and say this marvel is due to the all powerful intercession of Abraham, the friend of Allāh. This healthy and windy site — water sometimes freezes there — was not without attraction for the rich merchants of Mecca. They all aimed at possessing an estate or at least a pied-à-terre there in which to recuperate from the strain of the relaxing climate of Mecca, as their successors do to this day.

TA'IF was the capital of the tribe of Thakāfi [q. v.]. The Qur'ān (xlili. 30) phrase *al-haryāṭin* classes Mecca with TA'IF and suggests a link of importance between them. TA'IF is nowhere else mentioned in the Qur'ān. But it may be said that on the eve of the Hijra, it was regarded as the second city of Western Arabia and ranked next to Mecca. It had an advantage over the latter in the possession of fertile lands. The surrounding valleys supplied its export trade with ample materials, particularly easy to market in a region so unfavourable by nature as the Hijāz: wine, wheat and wood. The special industry of TA'IF was the manufacture of leather in its tanneries, which were so numerous, we are told, as to render the air around foul. It had a girdle of walls built to take machines of war. At the entrance and exit to the sea of sand, TA'IF offered the ships of the desert provisions in the varied produce of its soil and loads in the products of its industry. TA'IF seems to have had particularly close relations with the Yemen, for which it was able to save 3 or 4 stages as compared with its redoubtable rival Mecca. The people of the town were divided into two main groups, in reality, two adverse factions. Their struggles for supremacy paralysed the economic development of the town. The "Ahlāf" were the younger, less aristocratic section. They nevertheless succeeded in securing control of the national sanctuary of al-Lāt. Inferior to their rivals the Banū Mālik in wealth and in territorial possessions, they made up for their disadvantages by a very skilful diplomacy and by a more serious military organization. The best poets, the most respected leaders in TA'IF came from the Ahlāf.

To their habit of living on wheat, the Beduins attributed the cunning and finesse of the TA'IFIS which were proverbial. There was a kind of entente cordiale between Mecca and TA'IF, an entente cemented by matrimonial alliances between Quraysh and Ahlāf. Many Meccans lived, as we have seen, in TA'IF and had estates there. Hardly less numerous were the TA'IFIS in Mecca, *halif* of the great families notably of the Umayyads, the latter almost all landlords in the region of TA'IF. This explains the preponderating part taken by the Thakāfis in the Syrian caliphate.

On the eve of the Hijra, TA'IF was therefore unique among the towns of the Hijāz. Its bracing climate, its fruits, its grapes, the famous *sabb* of TA'IF and other products of the soil suggested Syria rather than the bare landscapes of western Arabia. As to intellectual development, the people of TA'IF seem "to have been notoriously above the average of Beduins and settled tribes". This is

how the acute encyclopaedist al-Jāhiz speaking of Haddjād summed up the fellow-citizens of the great Thakāfi. It is no wonder then that Muḥammad after the check to his mission in Mecca thought of winning over the intelligent citizens of TA'IF. Repulsed again here, the only course left him was to turn to the Anṣār. In their wars with Muḥammad the Quraysh had the military support of the Ahlāf of TA'IF. After the *fatḥ* of Mecca in 8 A.H. immediately after the defeat of the Hawāzin at Hunayn, Muḥammad laid siege to TA'IF, but without success. It was not till a year later that a deputation of TA'IFIS came to discuss at great length in Medina the adhesion of their compatriots to the new religion, which they adopted without enthusiasm.

The expansion of Islam beyond the bounds of Arabia no more benefited their town than it did Mecca. The latter declined while Medina prospered; the latter was at first the residence of the caliph and later under the Umayyads that of the governor general of the Hijāz, under whom TA'IF usually was now reduced to the rank of a sub-prefecture. This decline was at first checked by the initiative of the inhabitants. They succeeded in keeping in their bracing mountains the country resorts not only of the Meccans but also of the new Muslim aristocracy in Medina. Under the Umayyads they gave a further proof of their ability to adapt themselves to new circumstances. The economic decline of TA'IF and the loss of its autonomy coincided with the zenith of the political influence of the Thakāfis. They succeeded in pushing themselves into the highest offices and displayed the most varied talents in them. From the time of Mu'āwiya we regularly find Thakāfi lieutenants beside the Caliph. For a brief period with Ziyād b. Abihī, they were almost expected to get the throne. Under Walid I, when the Arab empire attained its apogee, the greatest man of the reign was not the Quraysh ruler but the Thakāfi Haddjād. They were all able to exploit the historical relations, the intimacy between TA'IF and Mecca, their old connections with the principal Quraysh families, especially with the Umayyads. They discovered in the past an indication of the proper orientation of their political activity.

The Abbāsids and Alids took care not to forget this. Tradition records their hatred of them and associates the Thakāfis with the disfavour that surrounds the Umayyads. From Kербela and the failure of the attempted restoration of the 'Alids they are represented as having been cursed by the Prophet. Combining hatred of the Shi'is with the political feuds of the 'Irāq, the Abbāsīd reaction vented itself with particular bitterness on the memory of the great Thakāfi officers of the Umayyad period. It endeavoured to put the town of TA'IF and its doughty citizens under a ban in history. The plot succeeded marvellously and to this day among the Beduins, the name of the Thakāfi is treated with scorn.

Abbāsīd rule showed itself frankly hostile to the Hijāz, where continued 'Alid risings were fomented (*Kutub al-Aghani*, iii. 94). TA'IF contained the tomb of 'Abdallāh b. 'Abbās, the ancestor of the dynasty who became the patron saint of the town. The possession of this sanctuary, a much frequented object of pilgrimage, did not disarm the hostility of the Abbāsīds who never forgave the population its former Umayyad sympathies and

left the town to decline gradually. It was the exception when we find 'Abbasid princesses taking an interest in Tā'if. The mother of the Caliph Muṭtadid and before her the celebrated Zubaida, wife of Hārūn al-Rashīd, acquired estates there; the latter no doubt in connection with the water-works which she built at Mecca. Along with the adjoining districts of the Sarāf, Tā'if has remained to the present day the fruit and corn market of Mecca.

From the fourth (tenth) century all the geographers who mention Tā'if describe it as *bulāida*, "little town", and even add the epithet "little". Its environs became depopulated and the encyclopaedists like Yāqūt and Bakrī could not find there the sites of the estates and villages mentioned in the time of the Umayyads. Since the establishment of the Ḥasanid amirate in Mecca, Tā'if has as a rule been under the Grand Sharīf. With its walls and its modest citadel, it was intended to defend Mecca against invaders from Naǧd. It only imperfectly played this role, especially in the wars between the Grand Sharīfs and the Wahhābīs under Ibn Sa'ūd. These sectarians captured and sacked it in 1802. It was taken from them in 1813 by Egyptian troops under Ṭaṣūn-Pāshā. Burckhardt, who visited it in the following year, found it half in ruins. In it he ate "very large grapes of most delicious flavour, figs, pomegranates and quinces". The bulk of the inhabitants consisted of Arabs of Thaqīf. "The majority of the rich Meccans had houses there, but most of the foreigners who have chosen it as a place of residence are of Indian origin".

Such still is the composition of its population. According to Philby, who was there at the end of 1918, its population is not over 5,000 but rises to 20,000 during the summer season. In April 1924, Tā'if fell again into the hands of the Wahhābīs in the course of their campaign against Ḥusayn b. 'Alī, ex-king of the Hijāz.

(H. LAMMENS)

TAIM B. MURRA, a clan of the Meccan tribe of Quraysh. Its name, which is born by several other Arab tribes, means "servant" and must therefore be an abbreviation of an ancient theophoric name such as we find in Taimallāh-Taimallāt [q. v.] and in the inscriptions, Taim Manāt, Taim Ruḥā, *Θαυμας* etc. (cf. Wellhausen, *Reste*, p. 7; Lidbarski, *Handbuch d. nordsem. Epigraphik*, p. 385). The Taim b. Murra belonged to the Quraysh al-Baṭī'īh i. e. to the clans which were dominant in Mecca: but in spite of that

they do not seem to have possessed any political influence, while their real relatives, the Maḥmūd [q. v.] b. Yaḥyā b. Murra, rivalled in influence the descendants of Quraysh. The pre-Islamic history of Mecca makes almost no reference to them (cf. the scanty references in Caetani, *Annali dell' Islam*, Index vol. i—ii, p. 1506). The only person of note that they appear to have numbered among them on the eve of Islam is 'Abdallāh b. Lijūd'an, celebrated for his generosity; it was in his house which was still pointed out in the days of Islam that the Quraysh clans formed their alliance (*Sib al-fuḥūl*; cf. Caetani, *Annali*, Introduction, § 147), and he was the patron of the poet Umayyā b. Abī'l-Salt (*Agāthi*, viii, 2—5; cf. Schulthess, *Orientalische Studien, Th. Nöldeke*... *Grundriss*, i, 73 ff.; Goldziher, *al-Huṣūl*, *Z. D. M. G.*, xvi, 7).

The fame of the Taim b. Murra rests entirely on the fact that two of the most celebrated heroes of Islam came from them: — Abū Bakr and Ṭalḥa b. 'Uṭaidallāh.

A brief description of the quarter inhabited by the Taim b. Murra in Mecca is given by al-Azraqī (*Chron. d. Stadt Mekka*, ed. Wüstenfeld, i, 468).

Bibliography: Wüstenfeld, *Genes. Tabellen*, R. 16 (*Register*, p. 447); Ibn Duraid, *K. al-Istīṣṣāḥ*, ed. Wüstenfeld, p. 59 ff.

(G. LEVI DELLA VIDA)

TAIMĀ', an old settlement in a well-watered oasis in northern Arabia, four days' journey south of Dumat al-Djandal; according to Muḥaddas, three from Hīǧr and four from Wādī 'l-Qura. It lies in a depression the length of which Jaussen and Savignac put at 2 miles with a breadth of 500 yards. The subterranean waters collect and burst forth into a well 40—45 feet deep and about 60 feet in diameter, according to the two travellers just named. Taimā' is mentioned in the cuneiform inscriptions and in the Old Testament as an important caravan station (Isaiah, xxi, 14; Jeremiah, xxv, 23; Job, vi, 19). To the Persian period belongs the old Aramaic inscription found by Euting, which throws a light on the important culture of the place. It is mentioned by the old Arabic poets e. g. Imra 'l-Kais, *Ma'allāḥa*, verse 76: "it (the rain storm) does not leave a palm-tree in Taimā' nor a house unless it is built of stone". Like other oases in North Arabia, it was settled by immigrant Jews or Jewish proselytes. Among them was Samaw'al [q. v.], the lord of the citadel of Ablak al-Fard, mentioned by A'ishā and other poets. The Jewish inhabitants were not inclined to be friendly to Muḥammad, but when they learned how their co-religionists in Wādī 'l-Qura had been treated, they voluntarily submitted and were thus allowed to retain their lands on payment of a yearly tribute; but they were expelled from the land, like the other Jews in Arabia, by 'Omar. In the tenth century, Ibn Hawqāl describes it as more thickly populated than Tabūk. Muḥaddas gives a more detailed picture of its situation in a well-watered wide depression with a spring, many wells, some of which have fallen in, fine gardens, and many palm trees with excellent dates; on the other hand he censures the avarice of the inhabitants and laments the lack of distinguished scholars from this town. In the next century al-Bakrī refers to its wealth in dates, figs and grapes. The densely populated town had a wall, a parasang in length running along a brook. Of modern travellers

Euting gives a good description of the town with its narrow streets and houses surrounded by orchards. Of antiquities he found the ruins of temples and a quadrangular building with towers at the corners. Of the citadel of Ablak, the ruins of which, according to Yāqūt, were still visible in his time (see *ABLAK*), he could find no traces; Jaussen and Savignac describe some peculiar round tumuli, the sides of which in the form of stairs led up to a small square building.

Taimā' at the present day shows signs of decay everywhere.

TAIMALLĀH h. THA'LABA, an Arab tribe belonging to the branch of the Bakr b. Nizār (tribes of the 'Adnān) and forming part of the great ethnical group of the Bakr b. Wā'il. Genealogy: Taimallāh b. Tha'laba b. 'Ukaba b. Sa'b b. 'Alī b. Bakr b. Wā'il. We also find it mentioned under the form Taimallāt, which may be the correct name, for a Muslim (or Christian) alteration of the name al-Lāt to that of Allāh is not at all unlikely while the opposite is hardly conceivable. This tribe as usual with so many other tribes of Arabia formed an alliance (*ḥilf*) with the sister tribe of the Banū Nāsi b. Tha'laba, and each of them was closely associated with the Banū 'Idl and the Banū 'Auzā. This confederation bore the name *al-Lakhīm* (the word *lakhīm*, according to the lexicographers signifies the mastoid bone and similar expressions are not unusual to indicate the solidity of an alliance); it was afterwards extended to the Banū Māzin b. Sa'b and even, it appears, to the two great Bakri subdivisions, the Banū Dhahl and the Banū Shaibān. After Islām the Banū Hanifa, another Bakri tribe, also entered the alliance (*al-Mubarrad*, *Kamil*, ed. Wright, p. 276, 1—2; *Naḥḥid*, ed. Bevan, p. 47, 10, 305, 9, 764, 9 and especially 725, 15. Wüstenfeld, mislead probably by the statement in Ibn Kutaiba, *K. al-Ma'arif*, ed. Wüstenfeld, p. 48, thought that the name *al-Lakhīm* referred only to the Taimallāh; cf. also Reiske, *Primas Latinae*, p. 253 note f, 255 note A). The Taimallāh took part with their allies in the wars of the Bakr b. Wā'il against the Tamimīs and we find them specially concerned with the battles of Zabāla, Nihādī, Taiḥal, Djadūd and al-Waḥḥ (the last two fall within the Muslim period). It does not appear, however, that they distinguished themselves by any particular exploits or that they numbered among their leaders any person of note. In the two latter expeditions, the command was held by al-Hawfaḥ b. Sharik and by Abdjār b. Dīḥir, both of the Banū 'Idl. At a more remote period, the Taimallāh had fought with the rest of the Bakris against the Lakhmīd tribes of al-Hira: they are mentioned in the stories of the *Yasaw' Umrā*.

The Taimallāh were Christians, like almost all the Bakr b. Wā'il (cf. Tabari, *Annales*, i. 2032 ult.) but they were early converted to Islām and we find them fighting in the wars of conquest

and the civil wars; one of them for example, Iyās b. 'Abīa, took part in the murder of the Caliph 'Uḥmān (*Naḥḥid*, ed. Bevan, p. 918 sq.). But it was mainly in the history of the eastern provinces that the Taimallāh played a part in the first two centuries of the Hidjra: among the members of this tribe who have made a mark in history the best known is 'Awa b. Tha'laba b. Zafar b. Wādī'a, who is also known as a poet (notice in Ibn Haddād, *Ḥaba*, Cairo 1325, i. 82, quoted from the *Tabaḥḥi al-Shu'arā'* of Dī'il and the *Muḥjam al-Shu'arā'* of al-Marzubān); verses in Yāqūt, *Muḥjam*, ed. Wüstenfeld, i. 830, with reference to two ancient statues at Palmyra) and was governor of Khorāsan; during the civil war of 65 A.H. he valiantly defended Herāt against the troops of Muḥḥ b. al-Zubair, commanded by 'Abdallāh b. Khāzin and held out for a whole year, with the support of all the Bakr b. Wā'il of Khorāsan, until he fell (Tabari, *Annales*, ii. 484—490; Balādhuri, *Futūḥ*, ed. de Goeje, p. 414—415). Another poet of the Taimallāh, Nāḥir b. Tawsi'a (who was called the best poet of the Bakr in Khorāsan) took part in the campaigns of Kutaiba b. Muslim, whom he had once satirised but finally joined. (Cf. Ibn Kutaiba, *K. al-Shi'r*, ed. de Goeje, p. 342 sq.; *Ḥamān*, ed. Freytag, p. 431 sq.; *Naḥḥid*, ed. Bevan, p. 359 sq., 364 sq., 368; Tabari, *Annales*, ii. *passim*; al-Kāfi, *Amālī*, ii. 201 sq., etc.).

There were several other tribes, especially in the south, called Taimallāh or Taimallāt; Ibn al-Kalbi mentions the following: T. b. Asud b. Warāra; T. b. Zahw(?) b. Murr b. al-Ghawth b. Taiy; T. b. Hīkāl... b. Māzin b. al-'Azd; T. b. Rūfida b. Thawr b. Kalb; T. b. 'Amir al-'Ajdār... b. Kalb; T. b. al-Namir b. Kāsi; T. b. Wadm b. Wabbalāt... b. Kalb.

TAIY, a tribe in early Arabia of Yamanite origin. According to the genealogists its ancestor, Djulhuma b. Udad, with the surname of Taiy, was a descendant of Kaḥḥān and a brother of Maḥḥidī and Murra, the ancestor of the large tribe of Kinda. Originally they were at home in that part of the South-Arabian Dīf in which Humāka was situated, on the way between Ḥanā and Mecca. Taiy, as well as 'Azd and other South-Arabian tribes, joined the migration which tradition connects with the break of the dam of Ma'rib. They settled in the Northern part of the Peninsula, near the Shammar-mountain (q. v.) to the South of the desert Nefūd. Mounts Adjā and Salma, S. and S.E. of Ḥā'il, were even called 'the mounts of Taiy', which proves that for centuries the tribe had a claim on that territory. The Djabol 'Awjā, about half way between Ḥā'il and Taimā, as well as Taimā [q. v.] itself, belonged to Taiy.

Through the immigration of Taiy the Muḥjar-tribe of the Banū Asad lost a part of its territory; nevertheless the two tribes fraternised in later times; it is related that they joined their forces and defeated the Banū Yarbū, who belonged to Tamim, at Ridjā al-Taiy.

Sub-tribes or clans of Taiy were: Thu'al, Djadila, Djarm, 'Adi, Ghawth, Ma'n, Nabḥān, as well as the three 'Tha'ālīh Taiy', which by this denomi-

nation were distinguished from the Bakrite Tha'laba, viz. Tha'laba b. Dihl, b. Ruman and b. Djal'a'. In the time of the Djahiliya, Taiy worshipped a God called Fila, who possessed a sanctuary on Mount Adja', which was destroyed, on Muhammad's order, by 'Ali b. Abi Talib aided by 150 Ansar; the expedition captured one of Hatim al-Ta'i's daughters. Another deity of Taiy was Rujla.

At least for some time Taiy was on friendly terms with their relatives the Lakhmids of al-Hira, as may be concluded from the fact that the last Phylarch, al-Nu'man IV, had two wives belonging to Taiy, viz. Far'a bint Sa'd and Zainab bint Aws, both of them from the family Haritha b. Lim. When, however, al-Nu'man fled before the Persian king and sought refuge with the Taiyites, they refused him hospitality, probably, with a view to their friendly relations with the Persians, which apparently were not of an altogether ephemeral nature. For after al-Nu'man's death the Taiyite Iyas b. Kabisa was appointed as Regent in al-Hira (602-611); he commanded the Persian and Arabian army against the Banu Bakr in the battle of Dhu Kar. Tabari and other authors call Iyas one of the *ḥudā*, because he was a Christian.

In 9 A.H. the Taiyites sent an embassy to Muhammad, to which belonged Kaib b. Djahdar who, it is said, was the first to embrace Islam and is reckoned as one of the *ṣaḥāba* (cf. *Ud al-Ghāba*, iv. 210).

The *nishā* of Taiy is *Tā'i*. It is especially the poet Hatim who became famous under the *nishā* al-Ta'i (his *Diwān* was edited by Schulthess); his proverbial liberality is the subject of numerous anecdotes and tales. Other Taiyite poets were: 'Arik al-Ta'i, Zaid al-Khail, Abū Zuhair, a Christian; 'Amr b. Miliḥ, 'Amr b. Saiyir b. Kirwāsh, and, after the rise of Islam, the Khāridjī al-Tirmāh, whose *Diwān* was edited by Krenkow (*G. M. S.*, xxv, 1928). Lexicon and *Diwān* have preserved specimens of the dialect of Taiy: *ḥaḥā* and *fana* for *ḥaḥiya* and *faniya*; *maḥḥa* for *maḥḥiya*; *palla* for *palliya*; *ayin* for *ayin*.

In Syriac 'Taiyites' became a name for 'Arabs' and Muslims.

(H. H. BRAU)

TA'IZZ, an important town in South Arabia, formerly the capital of the Turkish sandjak of Ta'izziya, which according to the provincial law regarding the general administration of wilāyets *Taḥmil-i Weḥdī* (March 15, 1913) included the *kaḥḥas* of 'Udain, Ibb, Mukhā, Kamā'ira, Ka'aba, Hudjariya, and, according to R. Manzoni, also Makhādir, Dhi Sufal, Māwiya, i.e. the whole country between al-Hudaida and the independent lands northeast of 'Aden. The town, which lies in 44° 6' 45" East Long (Greenw.) and 13° 36' 55" North Lat., at 4,500 feet above sea-level, is built on the northern slope of the Djebel Sabr (in al-Hamḍān: Sabir) and has 2-3,000 inhabitants. The Portuguese called the town Teia, the Italians (Ludovico di Barthelemy and Andrea Corsatti) Taesa. It is surrounded by a wall 25-30 feet broad and 9-12 feet high which, like that of San'a', is flanked by towers which stand a further 6-8 feet above the wall and is built of large sundried bricks and covered with an outer

layer of baked tiles. The town wall forms an irregular quadrangle, which stretches from east to west. On the western side of this quadrangle is a polygonal spur of the hill in the south-eastern corner of which rises a steep rock 450 feet high, on the top of which is the citadel al-Kāhira, which is however now in a very ruinous state but was at one time regarded as a strong fortress. Corresponding to this in the north-east angle of the wall is a sharp spur, the top of which is a steep mound. There are five gateways in the town wall; in the east the Bab al-Kabir leads out to the Māwiya—'Aden and Ka'aba—Ibb—Yarim—San'a' roads, in the west the Bab Shakh Mūsā opens on to the road to Mukhā and Hais. The Bab al-Emdagher on the southwest is the gateway to the Hudjariya and Bent 'Alwān, in the south the Bab 'Ain Dumma leads to the Djabal Sabr and connects the hill with the fort of al-Kāhira, and lastly in the south-east we have the Bab al-Khudaira, which is still surrounded by a wall, also leading to the Djabal Sabr. These gates, which are not far from one another, are built in the Arabian style and flanked by two towers which rise above the town-wall and are surmounted by a third which defends the entrance. The town is provided with excellent drinking-water by subterranean pipes from the Djabal Sabr and has a large market. Since the troubles of the sixteenth century it has had a very neglected appearance. The once beautiful houses of stone which, as a rule, have only one storey above ground are for the most part in ruins. Barely 20 are still standing and others have been replaced by wretched huts. The southern quarter of the city has suffered particularly and ruins are scattered all over it. A number of beautiful mosques still testify to the past glory of the capital of the Rasūlids. One of these is the Ashrafiya founded by the Rasūlid al-Malik al-Ashraf Ismā'il b. al-'Abbās (1377-1400 A.D.), a quadrilateral in plan with two minarets and two rows of pillars with 3 domes richly decorated with coloured ornamentation; in the south of the mosque are the tombs of its founder and of his son 'Ali and of two slaves. Behind a grill of fretworked wood lie the three marble sarcophagi which contain the remains of the seven wives of the founder of the mosque; opposite them is a sarcophagus of limestone and brick surrounded by carved woodwork in which lies another of his slaves. The large and splendid mosque of the al-Muḥaffariya lies on the slope of the Djabal Sabr and is also a quadrilateral in shape with three rows of pillars and three great domes and two minarets. Its whitewashed walls make it stand out in striking fashion against the dark volcanic rocks of the hill. The front is pierced by a series of windows with grilles in front and adorned with vaultings which are supported by slender pillars. The surface is decorated with scrolls and interlacings. The well-preserved building, which is still the principal mosque, was not unjustly compared with the St. Maria Rotonda in Rome by the Bolognese traveller Ludovico di Barthelemy, who visited the town in 1508. Other mosques are the still well-preserved mosque of 'Abd al-Hādī and in the west outside the town wall the mosque of Shakh Mūsā, in the east the well preserved and splendid mosque of Shakh Afzal and his family of the first period of the Turkish conquest, from which period also dates the Makhḍabiya mosque in the south, the high

lying part of Ta'izz, which was built by an Abyssinian slave of Husain Pasha. It is a quadrangular building without a minaret, with a large court in the centre, in a peculiar mixture of Byzantine and Arabic style, richly ornamented with inscriptions, which are written on the doors of inlaid wood and on the walls and pillars. On the left side are large water-basins which were made for the ritual ablutions, but are now used for the hospital laundry. The mosque of Sharaf al-Din is destroyed except for the minaret; it was founded by the Imām Sharaf al-Din b. Imām Muṭahhar and like the Ashrafiya stands in the high-lying southern part of Ta'izz.

Ta'izz is richly provided with gardens, fields and meadows. The most beautiful, in the centre of the town, belongs to Sulaimān Pasha and is called Birkat Husainiya. In its midst stands a kiosk which contains a fine large room; before it is a large oval basin with a spring. In the garden also is the high *ḥabba* (mausoleum) of Husain Pasha, who is buried here. The gardens are amply supplied with water by aqueducts from the Djabal Ṣabr. The same plants and trees are grown here as in Ṣan'a' and Rawḍa except the nut-tree; the date-palm does not do very well. Bananas flourish exceedingly. The plain around Ta'izz is well tilled; the slopes of the Djabal Ṣabr north-east of Ta'izz are covered with little groves of tamarisk and carob trees, with many little hamlets near them. The Djabal Ṣabr itself is like a botanical garden, on the lower slopes of which grow almost all kinds of fruits, tamarinds, quinces, citrons, vines and on the higher slopes all kinds of aromatic plants in addition to the usual trees and shrubs. Cultivation is carried up to the highest points of the hill and barley and *ḥaḍra* flourish especially. The true wealth of the country however lies in the extensive plantations of *ḥaṭ* [q. v.] (*celastrum edulis* Forsk.), the aphrodisiac of which the people of Yemen are so fond. Glaser says the site of Ta'izz is exceedingly unhealthy and the climate malarial. Ta'izz has good caravan connections with Zabīd, Yarīm, Ibb and Ṣan'a', as well as with 'Aden and under Turkish rule used to have a weekly postal connection with al-Hudaida. The railway planned in 1912 to connect al-Hudaida with Ṣan'a' and the interior was intended to include a line al-Hudaida-Zabīd-Ta'izz-Ibb-Yarīm-Ṣan'a' but has never been constructed as a result of the Italo-Turkish war and the Great War.

Local tradition says that Ta'izz was founded in the pre-Muḥammadan period. It connects the Djabal Dabāt 'Alī N.E. of Ta'izz with the son-in-law of the Prophet, afterwards Caliph. The mountain which now has two peaks is said to have once been a solid mass. When 'Alī, engaged in the conquest and conversion of the Yemen, came to Ta'izz, its inhabitants showed themselves extremely hostile to him and the teaching of the Qur'ān. 'Alī laid siege to the town and took up his quarters on the summit of the hill which bears his name. The siege dragged on on account of the stubborn resistance of the inhabitants; 'Alī's envoys to the heads of the town talked to deaf ears and only received abuse, indeed, one embassy was ill treated and beaten by the inhabitants. 'Alī was so enraged at this that he took his celebrated sword and struck the summit of the hill such a blow that he made the long deep cleft which is still to be seen. Although not a tent was shaken in 'Alī's

camp and no man was injured, the houses in Ta'izz were all overthrown and even the most solid collapsed. Ambassadors thereupon came to 'Alī from Ta'izz who declared 'Alī a prophet and adopted Islām.

This story is of course quite unhistorical. The peculiar form of the hill has given rise to the legend. Several other places are also connected with 'Alī, for whom the people of Yemen have a particular fondness. For example, according to Glaser, on the Djabal al-Dīr (near Rubāḥ on the road to Ḍamar) on the roadside (probably at the highest point) 'Alī's footprint (*riḡl 'Alī*) is shown on a rock and close beside it, but to the left of the road, is a rock which seems to have been perforated, called *ḡarbat 'Alī*. Another legend is connected with the vicinity of Ta'izz, namely that of the Seven Sleepers, the scene of whose sleep Ibn al-Muḍāwir puts in a grotto of the Djabal Ṣabr. The South Arabian version of this legend says that the seven sons of a king were taken to king Dūḡayānīs al-Ḥuḍayr as hostages. When the king went to war, the hostages escaped and went into Mā Ḥumaid (near Ṭhaḥad) and did not reappear till they came out on the top of the Ḳaryat al-Miṣḥ on the Djabal Ṣabr where they lived. Dūḡayānīs sought them without being able to discover them. They lived there for 310 years and slept the whole time. They then awakened and it seemed to them as if only a single day had passed. They found some of the money that they had had with them and sent one of their number into the town to buy food. Wicked men seized him and found the money in his possession. They thought that he had found a hidden treasure and took him before the authorities; no one knew him in the place and as he had no home in the town he was thought to be mad and released. He returned to the cave and remains there still. Winds are now said to blow out of the cave. Glaser visited the spot on November 20, 1887. The Mosque of the Seven Sleepers (*Aḡāḥ al-Kāḥf*) is a very fine one, has wonderful wooden columns and a very good roof. The sanctuary proper is in the north-west corner of the mosque and is a simple walled space in the shape of a prism, on the right side of which there is a hole which the Arabs call *Maḡḥāra* (cave). Glaser investigated it very closely without tracing a current of air or any considerable orifice. He thought it probable however that the rocks were not close together so that a slight current of air blows through them. Saiyids live near the Maḡḡid. The place which Botta erroneously calls *Aḡ al-Kāḥf* was visited by him in 1837. At the foot of the Djabal Ṣabr near Ta'izz there was pointed out to him the entrance to the cave, from which the Seven Sleepers had made their way through the whole hill. It is not probable that Ta'izz was in existence in the pre-Muḥammadan period. The capital of this area was Sawwā and later Djabā, neither of which is far from Ta'izz. According to the *Djāḡān-nuḡā* of Ḥādḡdī Khalifa, Ta'izz was founded by the Ayyūbīd al-Malik al-'Azīz Saif al-Islām Zahr al-Dīn Abū 'I-Fawāris Tuḡtekin who came to the Yemen in 578 (1182—1183). According to Glaser, Ta'izz was built for the most part out of the material of the adjoining little town of Ṭhaḥad on the left bank of the Wādī Ṣāla. Ta'izz, according to his investigations, was called *Uḍayn* 5—600 years ago, but only the foundations of the walls of this

date survive; the walls themselves are of recent erection. The village of 'Udama lies 3–4 miles almost due east of Ta'izz on the slopes of the Djabal Šabr like Ta'izz itself. It is said to have been originally the residence of the kings until Ismā'il Mulk, a celebrated Sunnī saint, to whom many miracles are ascribed as patron of Ta'izz, built a mosque and his tomb on the mound of al-Kāhira, where the citadel later arose and the town grew up, so that the latter also like Mukhā, Bēt al-Fakih, Luḥaiya etc. owes its origin to a saint. On the other hand as a result of enquiries made in 1887 of Kādi Yahyā in Ta'izz, Glaser says that Ta'izz is older than Thā'ad, which was only founded under the Rasūlids or even later in the seventh century A.H. Ta'izz, he was told, existed under the name 'Udama as early as 133 (750–751 A.D.) and the town used to be much larger. How far this is true cannot be definitely ascertained. Yāhūt (d. 1229) already describes Ta'izz as a large and famous Yemen fortress and 'Udama as a suburb of Ta'izz. Ibn al-Muḍāwir (wrote about 630 = 1232–1233) calls Ta'izz a strong fortress and residence of the king of the country. Ibn Baṭṭuta who visited Ta'izz in 1332 A.D. describes this residence of the Yemen rulers as one of the finest and largest towns in the country and its inhabitants as arrogant, proud and uncultured. Of its three quarters one was inhabited by the ruler and his servants and Mamluks and nobles; the second called 'Udama was occupied by the military and officers, the third by private citizens; in the last was the great bazaar called al-Muḥallib. The town prospered exceedingly as the capital of the Rasūlids. Five educational buildings were founded by them in Ta'izz; viz. two by al-Malik al-Manṣūr 'Umar (1209–1250 A.D.), a third by his successor al-Malik al-Faḍl Muḍāhid (called the Muḍāhidīya), a fourth by al-Malik al-Aḥraf Ismā'il (1377–1400 A.D. the Ashrafiya) and a fifth by al-Malik al-Ma'āyad Dāwūd (1296–1321 A.D.) who left a library of 100,000 volumes and is buried in the maḍraza. The fortress does not seem to have been very strongly built, for in 1392 A.D. a part of the castle collapsed and killed two people. In 1516 Ta'izz was taken by Ḥusain al-Kurdi, the admiral and general of the Egyptian Mamlūk Sulṭān Qansūh al-Ghūrī, in 1545 by the Turks and in 1567 it passed to the Imāms of Ṣan'ā'. The French physician De la Grélandière, who passed through Ta'izz in 1712 describes it as a famous old town with fine walls built by the Turks. The citadel had 30 cannons and was used as a state prison. Under the rule of the Imāms of Ṣan'ā' who succeeded the Turks in 1635 the town had therefore recovered from all the blows it had suffered.

Later Ta'izz passed to the powerful tribe of Dhū Muḥammad who held it till Ibrāhīm Pasha took it from them and it was under Egyptian rule from 1835 to 1840. When the Turks began to reconquer the Yemen in 1871 Ta'izz fell to them on October 28 and they were able to hold it till the great general rising of the Yemenis under the Imām Aḥmad al-Dīn in 1892. The fortress was only temporarily in Zaidī hands, for the Turks reconquered it in 1893 and held it till the conclusion of peace in 1918. With the withdrawal of the Turks from the Yemen, Ta'izz has again passed under the rule of the Imāms of Ṣan'ā'.

(A. GROHMANN)

TAKASH (Turkish pronunciation: Tekesh) = IL-ARSLAN, king of Khwārizm [q.v.] 567–596 (1172–1200), of the fourth and most glorious dynasty of Khwārizmshāhs [q.v.], was, before his accession governor of Dīwand on the lower course of the Sīr-Daryā [q.v.]; he had to fight for his throne with his younger brother Sulṭān Shāh, and in the struggle at first Takash and then his brother received the support of the Kara-Khitai [q.v.].

When the fight was finally decided in favour of Takash, Sulṭān Shāh succeeded with the help of the Kara-Khitai in establishing himself in Merw, Sarakhs and Tis and held this territory till his death in 589 (1193), being sometimes at peace and sometimes at war with his brother. The capital of Khorāsān, Nishāpur, had already been taken by Takash in Rabī' I or Rabī' II 583 (1187); Takash's eldest son Malik Shāh was governor there. After the death of Sulṭān Shāh, Malik Shāh was transferred to Merw and his brother Kuṭb al-Dīn Muḥammad appointed his successor in Nishāpur. Of greater importance was the destruction of Saljuq rule in Persian Irāk ('Irāk 'Adjamī) by the victory over Sulṭān Tughlī II in 590 (1194). This victory raised Takash from the status of a local dynast to a ruler of a great power and henceforth he called himself on his coins no longer Khwārizmshāh but 'Sulṭān, son of the Khwārizmshāh'. Persian Irāk with al-Ray and

Hamadhān passed into the possession of Takash, who appointed his son Yūnus governor of Hamadhān; later he handed over Hamadhān to the ruler of Adharbāydjān, Abū Bakr, as his vassal, who sent his brother and ultimate successor Ōsbeḡ thūthir. In 592 (1196) an army of the Caliph Nāṣir was defeated at Hamadhān; the Caliph had demanded that Takash should vacate the conquered territory and retire to the east but Takash wanted not only to retain his conquests but to get Khūzistān also from the Caliph. Takash, like the Salḡjaks before him, including Tughrūl II, is said to have demanded that the Caliph should hand over to him the secular power in Baghdad itself and be content with a nominal sovereignty over the Muslim world. This dispute was not decided on this occasion, but was continued under Takash's successor, Muḥammad.

We know still less about the fighting between Takash and the Kara Khitai. The most important event in these wars, the capture of Bukhārā by Takash, is placed by Ibn al-Athīr (ed. Tornberg, xii. 88 sqq.) in the events of the year 594 (1198); there is however a document relating to it in the collection of state-papers made by Muḥammad b. Mu'ayyad al-Baghdādī of the years 576—579. In any case, the success was but a transitory one and in spite of his position of great power in the Muslim world Takash remained a vassal of the Kara-Khitai till his death.

Bibliography: Cf. especially G. M. S., xiv/l. (Hamd Allāh Karwīnī), p. 491—493; xvi/l. (Djūwainī), p. 17—46; New Series, ii. (Rāwandī), p. 375—399; Ibn al-Athīr, ed. Tornberg, index; W. Barthold, *Turkistan v epochān mongol'skogo vladavitsya*, ii. 361—374; do., *Turkistan down to the Mongol Conquest*, G. M. S., New Series, v., p. 337—349. — On the collection of state-papers mentioned above cf. *Catal. Lugd.*, i. 169 sqq.; excerpts in Barthold, *op. cit.*, i. 73 sqq. (W. BARTHOLD).

TAKBIR (A.), infinitive II from the root *k-b-r* in the denominative sense: to pronounce the formula *Allāh akbar*. It is already used in this sense in the Qur'ān (e.g. Sūra lxxiv. 3; xvii. 111 with Allāh as the object). On the different explanations of the elative *akbar* in this formula cf. *Liebn*, s.v. and the Qur'ānic elative *akram* also applied to Allāh (Sūra xcvi. 3) and a'la (Sūra xcii. 20; lxxxvii. 1).

The formula, as the briefest expression of the absolute superiority of the One God, is used in Muslim life in different circumstances, in which the idea of Allāh, his greatness and goodness is suggested. When Muḥammad had learned by supernatural means of the death of Nadjāshī in Abyssinia, he proclaimed the news to those around him, arranged them in rows on the Musallā and had him, a *takbīr* pronounced four times (Bukhārī, *Djānū'is*, bāb 4, 55, 61). On other occasions also Muḥammad is said to have called the *takbīr* four or five times over a funeral bier (Muslim, *Djānū'is*, trad. 72). The fourfold *takbīr* remained or became usual at the ṣalāt for the dead (Shāṭibī, *Kiṣāb al-Tanbīh*, ed. A. W. T. Juynboll, p. 47 sq.). The *Adhān* (q.v.) is also opened with a fourfold *takbīr*.

The Prophet is said to have uttered very frequently the *takbīr* during the Ḥajj, at the beginning of (Aḥmad b. Hanbal, *Muḥammad*, ii. 144), during (Bukhārī, *Djānū'is*, bāb 132, 133; but not too loudly, *op. cit.*, bāb 131) and at the end of

the journey (Ibn Hanbal, ii. 53, at the sight of the Ka'ba (Ibn Hanbal, iii. 320), at the Black Stone (Ibn Hanbal, i. 264), between Mīna and 'Arafa (Bukhārī, *Ḥodūd*, bāb 86), on Ṣafā and Marwa (Ibn Hanbal, iii. 320) etc.

The *takbīr* is prescribed by the law at the beginning of the ṣalāt (the so-called *takbīrat al-ihṣān*); during the ṣalāt it is five times repeated.

TAKDİR. [See *QADAR*].

TAKHTADJI, lit. "woodcutter", the name of an Anatolian sect with Shi'a tendencies. The Takhtadji, like the Čepni or Četni (cf. F. Babinger in *Z.D.M.G.*, lxxvi [1922], 141 and F. Taeschner, *ibid.*, p. 282 sqq.) who are mentioned as early as the end of the xivth century, the Zeibeks [q.v.] and all the sub-sects comprised under the name Kizilbash, form a separate element in the population of Anatolia, as regards ethnography and religious history, the origin of which has not yet been satisfactorily explained. As to the Takhtadji, they are mainly found in Western Asia Minor; they are settled in villages and engage in cattle-rearing, agriculture, wood-cutting etc. They seem to have got their name *takhtadji* from their activities as woodmen. The origin of the Takhtadji is obscure. While F. von Luschan in his *Reisen in Lykien, Milyas und Kibyratis*, Vienna 1889, ch. xiii., thinks, mainly as a result of cranial measurements, that they are remnants of the original inhabitants of the country, G. Jacob has suggested (cf. *Islam*, ii. 232 sqq.) that the Takhtadji are the remnants of the brotherhood of the *ḡawṣiyya* (cf. F. Cumont in Pauly-Wisowa s.v. *Dendrophori*, also H. C. Maue, *Die Vereine der Fabri, Centenarii und Dendrophori im Römischen Reich*, Frankfurt a.M. 1896, Programm). These two views have little in their favour; the Takhtadji are rather Persian settlers from Persia at the end of the xvth century to western Anatolia, who were adherents of the Safawid sect [q.v.]. Of them we know that they were widely dispersed over Asia Minor even before the rise of Shāh Ismā'īl (cf. F. Babinger, *Scheich Bedr ed-Din*, Leipzig and Berlin 1921, p. 91 sqq.). In favour of this view is the striking similarity in customs and practices of the Takhtadji and of the Safawiye in the time of Shāh Ismā'īl. They are said to drink wine, eat pork and have ceremonies which recall baptism and communion. The women go, and have always gone unveiled, among them. Persians and Christians, but not Turks, are welcome guests among them and the Shi'a names 'Alī and Ismā'īl are especially popular among them; cf. W. Heffening, in *Der Neue Orient*, iv., Berlin 1919, p. 264 sqq. It is also noteworthy that the Takhtadji, according to the report of the Austro-Hungarian Consul of Adalia, Tibor v. Pözl (cf. *Osterr. Monatschrift für den Orient*, xli., Vienna 1915, p. 506 and F. Babinger in *lit.*, xii. [1921], 103), lived outside the authority of the Turkish government, and "until quite lately were regarded as Persian subjects according to old tradition." All these indications suggest a former very close connection with the Safawid kingdom. According to the same authority, the Takhtadji are specially numerous in the sandjak of Teke (around Adalia), spend the winter on the coast and in summer go with their

herds back to the mountains, where they dwell in tents and wretched huts and live by cattle-rearing.

TAKI KĀSHI, TAKI AL-DIN MUHAMMAD B. SHARAF AL-DIN HUSAINI KĀSHĀNI, a Persian biographer, a native of the town of Kāshān, died in 1016 (1607). He wrote in 985 (1577-78) the *Khulāṣat al-Aḥbār wa-Zubdat al-Aḥbār*, and wrote the preface to the *Divān* of Muṣṭafāham, who was a poet of the time of Shāh Ismā'īl I and of Tahmāsp I.

TAKI AL-DIN. (See AL-MUẒAFFAR).

TAKIYA (A.), caution, fear (see *Glossarium* to Tahart, s.v. *t-ḥ-a*) or *kitmān*, "disguise", is the technical term for dispensation from the requirements of religion under compulsion or threat of injury.

Muhammad himself avoided suffering in the cause of religion in dogmatics by doctism (Sūra iv. 156) and in everyday life by the *hiḍra* and by allowing in case of need the denial of the faith (Sūra xvi. 108), friendship with unbelievers (iii. 27) and the eating of forbidden foods (vi. 119; v. 5). This point of view is general in Islam. But, as he at the same time asserted the proclamation of his mission to be a duty and held up the heroic example of the old saints and prophets as a model (lxiv. 7; v. 71; iii. 40 etc.), no definite general rule came to be laid down, not even with the separate sects. Minor questions, which are very fully discussed, are whether *takiya* is a simple permitted alleviation (*rakhṣa*) or a duty, whether it is valid in private interest or in that of the community.

The *takiya* was not rejected even by the extreme wing of the strict Khāridjīs [q.v.] although among the Azrakīs in the related question of divine worship when danger threatens (*ṣalāt al-ḥawf*), it is often given as an example that one should not interrupt the *ṣalāt* even if his horse or his money be stolen from him during it. The advice is quite old: "God gave the believers freedom of movement (*wasṣa'a*) by the *takiya*; therefore conceal thyself!" The principle adopted by the Iḥādīs however was that "the *takiya* is a cloak for the believer: he has no religion who has no *takiya*" (Djama'iyyi; see *Bibl.*, xiii. 127 sq.).

Among the Sunnī authorities the question was not such a burning one. Nevertheless Tahart says on Sūra xvi. 108 (*Tafsīr*, Bulāḡ 1323 sqq., xxiv. 122): "If any one is compelled and professes unbelief with his tongue, while his heart contradicts him, to escape his enemies, no blame falls on him, because God takes his servants as their hearts believe". The reason for this verse is unanimously said to have been the case of 'Ammār b. Yāsir, whose conscience was set at rest by this revela-

tion when he was worried about his forced worshipping of idols and obsequiation of the Prophet. It is more in the nature of theoretical speculation, when in this connection the question of *hiḍra* is minutely investigated, that in certain circumstances e.g. threat of death, a Muslim who cannot live openly professing his faith may have to migrate "as God's earth is wide". Women, children, invalids and one who is tied by considerations for them, are permitted *wasṣa'a* ("commivance"); but an independent individual is not justified in *takiya* nor bound to *hiḍra*, if the compulsion remains within endurable limits, as in the case of temporary imprisonment or flogging which does not result in death. The endeavour, however, to represent the *takiya* as only at most permitted and not under all circumstances obligatory, as even some Sunnīs endeavour to hold on the basis of Sūra ii. 191, has resulted in the invention of admonitory traditions, e.g. *ra'ī al-ḥ' al-mudārāt* "to be good friends with unbelievers is the beginning of actual unbelief". To prove that steadfast martyrdom is a noble thing, the story is told of the two Muslim prisoners of Musailima, one of whom allowed himself to be forced to acknowledge the anti-prophet, while the other died for the Prophet. The latter is reported to have said: "The dead man has departed in his righteousness and certainty of belief and has attained his glory, peace be with him! But God has given the other an alleviation, no punishment shall fall upon him".

The *takiya* is of special significance for the Shī'a. Indeed it is considered their distinguishing feature, not however always with justice, as Nāṣir al-Dīn Tūsī in the *Talḥīq al-Muḥaqqat* protests against Rāst (see at the foot of his *Muḥaqqat Afḥār al-Mutakaddimin wa'l-Mutakhalḥīn*, Cairo 1305, p. 182, on 1). The peculiar fate of the Shī'a, that of a suppressed minority with occasional open not always unheroic rebellions, gave them even more than the Khāridjīs occasions and examples for extreme *takiya* and its very opposite; even the Ismā'īlīs, usually masters in the art of disguising their creed, made the challenge to their leaders: "He who has 40 men at his disposal and does not seek his rights is no Imām". The Zaidīs give as the number of helpers which removes the necessity of *takiya* from the Imām, that of those who fought at Badr. It is a common polemical charge of the Saenīs, quoted from the writings of the Shī'īs themselves, that the latter, as followers of fighting martyrs, are not justified in *takiya*, while the Twelvers in particular, while representing the Imāms as examples compelling one to resoluteness, appeal on the other hand to the conduct of 'Alī during the reign of the three first Caliph and to the *ḥabīb* of the Mahdī as the typical *takiya*. Belief is expressed by heart, tongue and hand; a theory of probabilities developed with considerable dialectic skill calculates under what real or expected injuries, "the permitting of what is pleasing to God and the forbidding of what is displeasing to God" is permitted. Observance with the heart is absolutely necessary. But if it is probable to any one (*law ḡhalaba 'alā ṣannihī*) or if he is certain that an injury will befall him, his property or one of his co-religionists, then he is released from the obligation to intercede for the faith with hand or tongue.

In Shī'ī biographies concealment is a regular feature; we are told that the hero broke the laws

of religion like the prohibition of wine under compulsion and not at all in an excusable way. But since for them also Muhammad is the Prophet, and since as among the Sannia a Prophet may not practice taqiya in matters of his office, because otherwise one could not be certain of the revelation, we have, in view of the double example of the Imāms, in the code of morals for the ordinary pious men of the Shi'a, the following sayings of 'Alī in juxtaposition: "It is the mark of belief to prefer justice if it injures you, and injustice if it is of use to you"; and as an explanation of Sūra alix. 13: "He among you who is most honoured before God is the most fearful (of God)", that is he who uses the taqiya most (*atqatun* = *at-taqatun* [*taqiyatun*]); and it is also said: "The *hikmah* is our *qibla*", but at the same time the *qibla* chapters are to be read with the implied understanding that the fighting is primarily against other Muslims. It is also to be noted that the taqiya of the Shi'a is not a voluntary ideal (cf. Kh. Khāsāt, *Kawāfāt al-Djannāt*, Teherān 1306, iv. 66 sq.), but one should avoid a martyrdom that seems unnecessary and useless and preserve oneself for the faith and one's co-religionists.

Lastly the taqiya is based on the intention and so we continually find the appeal made to the *niya* in this connection. The validity of the profession of faith as an act of worship is not only settled by the correct formulation of the intention to do it, but this is the essential of it, so that it alone counts, if under compulsion a profession of unbelief is made with the lips or worship performed along with unbelievers. God's rights alone can be injured by the taqiya. He has the power to punish the constraint, and only in certain circumstances will a slight portion of the punishment fall upon the constrained. The wiles used in this connection especially in oaths with mental reservations give however ample opportunities to injure one's fellow-creatures.

The moral dangers of taqiya are considerable, but it may be compared with similar phenomena in other religions and even among mystics. The ethical question whether such forced lies are not still lies, such a forced denial of the faith not still a denial, is not put at all by the one "who conceals himself", as he is not in a state of confidence which would be broken by lies or denial.

TAQLID (A.), "to hang something around the neck or on the shoulders", used as a technical term in the following three meanings:

1. *Taqīd* is the name of the custom originating in Arab paganism and surviving in the ancient practice of Islām and in Fiḥ, of hanging certain objects around the neck of the animals to be slain (*hady*) as a sacrifice in the sacred territory of Mecca (*haram*) (as *ḥilāḥ*, plur. *ḥilāl*). The *ḥilāl* are mentioned along with the *hady* in Qur'an v. 2 and 98 among the customs of the pilgrimage instituted by Allāh. The object of this rite was, along with the *izār* (branding by an incision in the skin), to mark the animal for sacrifice in the *haram* and to give it a kind of *ihram* (q.v.) which may be supposed to be analogous to that of the pilgrim. Connected with this, although not identical, is the custom of the pilgrim having round his neck and that of his steed on the return journey from Mecca the bark of certain plants, which is also called *ḥilāḥ* (an isolated form of the tradition regarding it gives this for the journey thither and mentions hair as the necklet for the return journey); this custom is still found in Islām but is usually opposed or ignored in the Fiḥ. The *ḥilāḥ* on the sacrificial animal is quite unlike this, for it consists of one or both shoes of the pilgrim or in default of them of a piece of leather; the animal so marked goes through all the essential ceremonies of the *ḥajj* along with the pilgrims including the sojourn in 'Arafa and is slain in Minā. One tradition records this with all details of the Prophet; although it is quite possible that Muḥammad did so, the tradition as well as those still to be mentioned can at most only be regarded as evidence of the practice of early Islām. The latter was not unanimous as to what consequences the sending of a sacrificial animal to Mecca and its *taqlid*, without the person concerned at the same time performing the *ḥajj*, had for him, a practice which may be specifically Muslim and foreign to Arab paganism. There is a group of traditions which — usually claiming to be based on a corresponding practice of the Prophet — impose upon the sender the obligations of the *ihram* from the time of the assumption of the *taqlid* by himself or down to the time of slaying the animal, but the traditions are far more numerous which — some with an obvious polemical intention — say that the Prophet did not assume the *ihram* in this case (thus the superscription and the bias of the tradition in al-Bukhārī, *Adḥā*, bāb 15, is strongly against the practice of observing the *ihram*, the existence of which term is quite evident from the text of the tradition); finally there is also an intermediate *ḥadīth* which leaves the assumption of the *ihram* to the choice of the individual (al-Nasā'ī, *Ḥadīth*, bāb 70). In the fully developed *fiḥ* there is no longer any place for this *ihram* and it is ignored (al-Shā'irī simply rejects it without troubling to refute it; *Kitāb al-'Amm*, ii. 183); it must have dropped out of use quite early; besides 'Abd Allāh b. 'Abbās who — without historical authority — appears as the great authority for the assumption of this *ihram*, 'Umar and 'Alī, also wrongly given in

this connection, and 'Abd Allāh b. 'Umar who is also quoted in support of the opposite view, this opinion is only ascribed to Kaïs b. Sa'd b. 'Uthāda, Ibrāhīm al-Nakha'ī, 'Aṣā' and Muḥammad b. Sirīn; the brief reference to "others" does not mean much. In Sa'id b. al-Musayyib we have the essential alleviation but it still retains a main feature of the *iḥrām*, that one thing only, sexual intercourse, is forbidden on the Friday night. A further proof of the close connection between *iḥrām* and *taqlid* is the view reported of Saḥyān al-Thawrī, Aḥmad b. Ḥanbal, Ishāk and others, that the pilgrim to Mecca becomes *muhrim* by putting on the *taqlid* alone, and the allied view that the *taqlid* put on by a pilgrim binds him to adopt the *iḥrām*; Mālik b. Anas says that it is at least undesirable for the Mecca pilgrim to separate the *taqlid* from the assumption of the *iḥrām*. The *Fikḥ* regards the hanging on of a *ḥilā'a* (two sandals, one sandal or a piece of leather) as desirable (*mustaḥabb*) in the case of camels or cattle or according to the Shāfi'is, Ḥanbalis and Aḥlī Thawr and Dāwūd in the case of smaller beasts also; of the Ḥanafis and Mālikis who do not allow it, the Mālikis entirely refuse to allow small animals to be used for sacrifices (*hady*). After the animal is slaughtered the *ḥilā'a* is dipped in its blood. When the pilgrims no longer brought the sacrificial animals with them from home and the market for them was instituted in Minā, the *taqlid* fell with oblivion.

In conclusion, we may note that a leather neck band, also called *ḥilā'a*, on the camel to avert the evil eye, especially if a bell hang from it, is suggested in one tradition.

Bibliography: Lane, *Arab-Engl. Lexicon*, s. v.; for the traditions: Wensinck, *Handbook*, s. v. Victims; Mālik b. Anas, *al-Muwatta'* in both recensions; al-Zurkāni, *Kommentar zum al-Muwatta'* and al-Thawrī, *Sharḥ Ma'āni al-Āthār*, lithogr. 1300, i. 439; the *Fikḥ*-works; Gaudesroy-Demombynes, *Le Pèlerinage à la Mecque*, p. 279—285 (a very thorough treatment of the custom in paganism and Islām, although differing in minor points from the sketch given above).

2. *Taqlid* also means installation in a military office, which was done by girding on a sword; it then comes to mean investiture with any administrative office, including that of *ḥāḍi*.

Bibliography: Lane, *Arab-Engl. Lexicon*, s. v.; Sprenger, *Dictionary of the Technical Terms (Bibliotheca Indica)*, p. 1178.

3. *Taqlid* lastly means "clothing with authority" in matters of religion; the adoption of the utterances or actions of another as authoritative with faith in their correctness without investigating reasons (the derivation of the technical use from *ḥilā'a* is wrong). In this sense *taqlid* is the opposite of *istiḥkād* (q. v.). The historical beginnings of the *taqlid* coincide with the formation of the juristic *Madhāhib* (cf. MADHĀH), which in part at least arose through adhesion to particularly notable jurists. Al-Shāfi'ī in his *Riḍā'a*, 8, 18, uses the word in a sense very close to the later technical use, but al-Thawrī still uses it of the recognition of traditions or their use for the deduction of precepts of *fiqh*. When definite conceptions had been formed recognising the *muḥtadid* i. e. the person qualified for independent derivation of *fiqh* rules from the sources, and at the same time the

conviction of the cessation of unlimited *istiḥkād* from the third century on, and of the other kinds of *istiḥkād* correspondingly later, all later scholars or laymen were at once bound to acknowledge *taqlid* as regards earlier authorities. According to the general orthodox Muslim view, everyone is now and has been for centuries bound to what has been authoritatively laid down by his predecessor, no one may any longer consider himself qualified to give a verdict of his own in the field of *fiqh*, independent of that of the earlier *muḥtadid*. All later persons are called *muḥtadid* i. e. those who have to exercise *taqlid*. This obligation to *taqlid* is defended by saying that the *fiqh* only in the early centuries of Islām had possessed the real perspicuity and sufficient learning to deduce *fiqh* from sources and to form an opinion of their own about it, while this was quite beyond the powers of later generations, a view which is only a part of certain aspects of the history of the philosophy in orthodox Islām.

The *taqlid* has contributed to maintain the differences between the separate *madhāhib* but is not to be held responsible for the deadening of the stimulus to the development of *fiqh* in later times.

While it is the unanimous view that the layman as well as the scholar is bound to *taqlid*, it is occasionally demanded of the scholar that he should be aware of the correctness of the *istiḥkād* of his *muḥtadid*. If there are several *muḥtadids*, as is actually the case, the *muḥtadid* may follow any one of these he pleases (presuming of course that he remains within the bounds of the *ijmā'* i. e. does not choose a *muḥtadid* whose teachings are no longer recognised by the *ijmā'*; the obligation to *taqlid* is also based on the *ijmā'*); according to Aḥmad b. Ḥanbal and Ibn Shurāih, he has to decide to whom the preference is to be given and to follow him (this divergence of opinion is really confined to terminology). In theory the *muḥtadid* can make a new choice of a *muḥtadid* with each question that arises for him, but in practice he usually joins once and for all the *madhāhib* of one of the four recognised *muḥtadids*. There are a fair number of cases of transference from one *madhāhib* to another (cf. Goldziher, *Vorlesungen über den Islām*, p. 25; 2nd ed., p. 48—50); opinions are divided as to whether such a transfer is admissible in theory (cf. Juynboll, *Handleiding*, 3rd ed., p. 22). It very often happens that on a particular question the more convenient rules of another *madhāhib* are followed; the *fiqh* books themselves occasionally hint at the possibility of *taqlid*, but in such a case it is demanded that the business should be carried through to its conclusion, in keeping with the laws of the particular *madhāhib* once it has been chosen.

This all holds of *taqlid* in questions of *fiqh*; with regard to the *ashyāt*, the fundamental questions of dogma, e. g. the existence of Allāh, besides the opinion that *taqlid* is obligatory or that it is admissible, we also have the view that it is inadmissible, as on these questions knowledge is demanded which cannot be obtained by *taqlid* alone. It was the school of the Ash'aris which gave this originally Mu'tazilī view wide dissemination in Islām (cf. Goldziher, *Vorlesungen*, p. 123 and 136, note 10; 2nd edition, p. 121 sq. and 327, note 72).

The principle of *taqlid* in law has not been enforced in orthodox Islām without opposition; even

in later generations there have been scholars who held that there must always be a *muftakid*, like Ibn Dāḥik al-Id (d. 702 = 1302) or al-Sayyidī (d. 911 = 1505) or some who were inclined to claim for themselves unlimited *iftikāh*, like al-Djauzī (d. 478 = 1085) and the already mentioned al-Sayyidī, and even some who held that *iftikāh* was obligatory for later scholars and condemned the system of *taklīd*, like Dāwūd b. 'Alī, Ibn Ḥarm and other authorities of the Zābirīs, and some Hanbalīs like Ibn Taimiyya and Ibn Kāyim al-Djauzī, who are already on the border of orthodoxy. The Wahhābīs, whose views go back to these Hanbalīs, beginning with their founder Ibn 'Abd al-Wahhāb reject *taklīd* (cf. the Hantah-Wahhābī works and propagandist pamphlets printed at the Manār press in Cairo and al-Shawkānī's brochure entitled *al-ḥawāṣi al-muṣṭafā 'adillat al-iftikāh wa 'l-taklīd*, which deals particularly with the *iftikāh-taklīd* question). Like the Hanbalīs, their extreme opposites, the modernists in Islām, for whom the Hanbalīs, it is true, paved the way, reject *taklīd* and demand and exercise a new *iftikāh* which in its lack of restrictions far surpasses even the most liberal of the early period of legal development (cf. Hartmann, *Die Krisis des Islām*, and the writings of the different modernist schools, some of the most important of which are quoted in the article *SHAR'Ā*). For reasons similar to those of the Hanbalī-Wahhābīs the Ibāḍīs also rejected *taklīd*. Lastly the Shī'īs reject the orthodox doctrine of *taklīd*; according to the Twelvers, during the period when the "hidden Imām" is concealed, there are *muftakids* who have to guide the faithful as his agents; as these have thus living teachers always in view in religious matters, *taklīd* towards a dead man is forbidden (cf. C. Frank, in *Islamica*, ii. 171 sqq.).

Bibliography: in addition to the works quoted above: Lane, *Arab-Engl. Lexicon*, s. v. and Sprenger, *Dictionary of the Technical Terms* (Bibliotheca Indica), p. 1178 (not wholly reliable); on the terminology; the *Uṣūl*-works; Juynboll, *Handleiding*, 3rd ed., p. 23 sqq. and note 13; Snouck Hurgronje, *Verbreide Geschiedenis*, ii., passim.

TAKLĪF is imposing a regulation or constraint upon any one; it requires an action in which there is difficulty and trouble (Lane, *Suppl.*, p. 3002; *Liṣān*, xi. 218: *amarahu bi-mā yashkūnu 'alaihi*). The verb is used in several forms seven times in the Qur'ān (ii. 233, 286; iv. 86; vi. 153; vii. 40; xlii. 64; lxi. 7) to express that Allāh does not require of any one what is beyond his capacity (*wuṣ'*). Technically it means the necessity which lies on the creatures of Allāh to believe and act as He has revealed to them. It is therefore defined legally by the majority of canonists as the requiring (*ilzām*) of an action in which is difficulty and trouble. On this definition, it applies only to things necessarily required and to things forbidden (*al-wājib*, *al-ḥarām*). But some canonists define it as an assertion of a belief that the action is one of the legal rulings (*al-ahkām al-shar'iyya*). On this definition, *taklīf* applies also to the recommended (*al-mundūb*), the disliked (*al-makrūh*) and the permitted (*al-mubāḥ*). Further, there is dispute as to who is *mukallaf*, i. e. under this divine requirement. It is accepted that every sane, human adult (*āḥil, insān, bāligh*) is thus *mukallaf* (Juynboll, *Handbuch*, p. 69). But the *jinn* are also under this *taklīf* so far as

the prophethood of Muḥammad is concerned; he was sent to the *jinn* and the other prophets were not. Similarly of the angels, although this applies only to their acts of obedience, as faith (*īmān*) exists of necessity (*ḥarūrī*) in them. Yet some assert that as their created nature is obedience, the prophetic mission of Muḥammad to them was only to glorify them (*li-taḥṣin*; cf. al-Baidjari on the *Kifāya* of al-Faḍlī, ed. Cairo 1315, p. 13). Some further extend this *taklīf* of the prophetic mission of Muḥammad even to inanimate things (*al-ḥayāt*), on the ground that in some of the miracles (*mu'jizat*) of Muḥammad reason was created in some inanimate things to the point that these believed in him. Another matter of controversy as to *taklīf* is the allowability of Allāh's requiring of a creature that which the creature has not power to do (*taklīf wa lā quṣṣa*). The Maturīdites asserted, in the language of the Qur'ān as above, that the creature is not required to do what is not in his capacity (*mā laisa fi wuṣ'ihī*; *Aḥkām* of al-Nasafi, ed. Cairo 1321 with commentary of al-Taftāzānī, p. 103). Al-Idjī in his *Mawāḥiṣ* (ed. Būlak 1266, p. 535 middle, 537 middle), as an Ash'arite, brings the question back under the general ruling that Allāh's will and action cannot be limited in any way; nothing is incumbent upon him and nothing is evil that proceeds from him. It is a general agreement of the Muslim people (*al-Umma*) that Allāh does not do an evil thing (*ḥabīb*) and does not leave undone a necessary thing (*wājib*). He adds that the Ash'arites put it that the *ḥabīb* and the *wājib* have no relationship to Allāh at all, while the Mu'tazilites hold that what would be *ḥabīb* from Him he does not do and what is incumbent on Him he does. See, further, in the passages cited above, long scholastic discussions of these points by al-Taftāzānī and al-Idjī.

(D. B. MACDONALD)

TĀKORONNĀ, a name given in Muslim Spain to the mountain massif of the south of Andalusia, now called *Serranía de Ronda*. This is undoubtedly a double of the Berber word which is frequently found in North African names, *tākronā*. Different writers have given different vocalisations of Tākoronnā: they may be found collected with references in a valuable note by W. Marçais and Abderrahmān Guiga, *Textes arabes de Tākronā* [in Tunisia], i., Paris 1925, p. viii, note 1. Cf. also Yāqūt, *Muṣṣam*, s. v. *SHIRAZ*; Ibn Bashkuwāl, *al-Sila*, ed. Codex, B. A. H., p. 185 and 302; Ibn 'Abd al-Mun'im al-Hinayā, *al-Kawf al-miṣr*, s. v. — Dozy, after thinking of explaining this name by a combination of the Berber prefix *tā-* and the Latin *corena*, wisely abandoned this etymology, which could hardly be defended (*Hist. des Mus. d'Esp.*, i., p. 343, note 2, and iv., p. 339; cf. also *Recherches*, ii. 43, note 1). In any case, according to the same authorities none of the proposed etymologies is satisfactory.

The capital of the district of Tākoronnā, later the capital of the little independent kingdom of the Banū Ifrān till its annexation to the kingdom of Seville, was Ronda; cf. the article Ronda for a resumé of the history of the region during the Muslim occupation.

(E. LEVI-PROVENÇAL)

TAKRIT (popular pronunciation **TIKRIT**, cf. **Yāḳūt**), a town on the right bank of the Tigris to the north of Samarra (according to Streck the distance is a day's journey) and at the foot of the range of the Djabal Hamrin. Geographically this is the northern frontier district of the 'Irāk. The land is still somewhat undulating; the old town was built on a group of hills, on one of which beside the river, stands the modern town. To the north is a sandstone cliff 200 feet above the level of the river, on which still stand the ruins of the old citadel. The traces of the old town stretch to the west of these two hills in a large circle, which shows that Takrit was once of considerable extent.

It has been suggested that the name may be recognised in a tablet of the time of Nebuchadnezzar (Strassmeyer, quoted by Streck, *ib.*, p. 311.) but the first certain mention is that of Ptolemy (v. 18, 19) who calls it *Birtha* (*Yāḳūt*, i. 861, in giving the latitude and longitude also refers to Ptolemy). Ammianus Marcellinus calls it *Virta*. Indeed the hill of the citadel is still known as *Burtha*. In Syriac literature the town is called *Teghrith*. From the fourth century it was the see of a Jacobite bishop until, in 1155, the diocese was combined with that of al-Mawsil (Assemani, *Bibliotheca Orientalis*, I. 174, 465). The Arab writers attribute its foundation to the Sāsānian king Šābūr, son of Ardashīr; the town is said to have been called after a Christian woman named Takrit bint Wā'il; several legends are connected with its foundation (*Yāḳūt*, *loc. cit.*; Abu 'l-Fidā', *Taḥṣin al-Buldān*, ii. 288). Before Islām the town was temporarily occupied by the Arab Christian tribe of the *lyād* (al-Bakrī, *Muḍjam*, i. 46); they were driven from it, but the *lyād* remained for a long time afterwards in the neighbourhood (Hamānī, *Djāmirat al-'Arab*, p. 180) and in the period of the conquest the soldiers of the *lyād* in the garrison of Takrit secretly assisted the Arabs (cf. *Yāḳūt*). The first Muslim capture of the town seems to have been effected in the year 16 by 'Abd Allāh b. al-Mu'tam who was sent out by Sa'īd b. Abi Waḳḳās. Then in 20 A.H., the town again surrendered by agreement; tradition ascribes this second occupation to al-Nusair b. Daism or to his deputy 'Uḳba b. Furḳād or to Mas'ūd b. Hurāith b. al-'Abdjar. The last named was the first governor and built the *djāmi'* mosque there (*Yāḳūt*, *loc. cit.*; al-Balādhuri, p. 248—249).

Down to the middle of the tenth century, the Arab geographers reckoned Takrit as belonging administratively to al-Djazīra (Ibn Khordādhbeh, p. 94; Ibn Rusta, p. 106; Ibn al-Fakīh, p. 129; Kūḍāma, p. 245, 250; Isṭakhārī, p. 72, 77; Ibn Ḥawḳal, p. 156; Mas'ūdī, *Kitaḥ al-Tanbih*, p. 36), but from the time of al-Maḳḍisī (p. 54, 115) the town is more often regarded as belonging to the 'Irāk (excepting by Idrīsī and Dimashī). In the early centuries of Islām the town was almost exclusively Christian. Ibn Ḥawḳal and Mas'ūdī (*op. cit.*, p. 155) mention the al-Khaḍra' church there, and there is still a ruin of this name in the south of the town. There were also other Christian buildings (like the monastery of Sa'āba on the opposite bank (*Yāḳūt*, ii. 673) and the Dair Mār Yuhannā, *Yāḳūt*, ii. 701). The name of the great Muslim sanctuary al-Arba'in, a quarter of an hour west of the old town, seems to indicate that it was formerly the site of a Christian building. Two

vaulted chambers decorated with stucco are still standing; the building goes back to the xiiith century. Takrit was celebrated for its manufactures of woollen goods (Maḳḍisī). In the xiiith and xivth centuries it is described as a large town (Ibn Djabair, p. 223; Ibn Battūta, ii. 133). Ḥamd Allāh Mustawfī says it is a town of average size. Idrīsī (transl. Jaubert, ii. 147) mentions the al-Dajjal canal which ran from the Tigris near Takrit and went on to Baghdad; this is probably identical with the Nahr al-Ishāki, dug, according to Abu 'l-Fidā', in the reign of al-Mutawakkil (cf. also Ḥadīdī Khalifa, *Djāhā-namā*, p. 434). Traces of this canal, which according to Ewliyā Celebi was cleaned out by Murād Paṣṣa in 1654 (quoted by von Hammer, *Wiener Jahrbücher*, 1821, vol. xiii. 235), are still visible.

Takrit never played an important part in history. In the eleventh century it belonged to almost independent lords until the Salḡūḳ Tughril Beg took advantage of the death of its lord to seize it (Ibn al-Aḥfir, ix. 448). From 1149 the town was part of the territory of the Begteginids and in 1190 it passed to the 'Abbāsīd Caliphs. It was the birth-place of Salāḍīn, whose father Naḍīm al-Dīn Aiyūb had been appointed commandant of the town under the Salḡūḳ. When the conqueror Tīmūr took it, it was in the possession of Arab brigands (Sharaf al-Dīn, transl. Pétis de la Croix, ii. 141—154). In the following centuries it remained a small place; Christians are mentioned in it for the last time by Tavernier (*Voyages*, ii. 87). Under Turkish rule, Takrit was a *sandjak* in the *vilāyet* of Raḳḳa (*Djāhā-namā*, p. 434), but after the reforms of the xixth century it was reduced to a *nāhiya* of the *paṣā* of Samarra (in the *vilāyat* of Baghdad). In the xixth century the population was probably never more than 4,000—5,000 souls. All travellers have been poorly impressed by it; the majority of the inhabitants of the present day make their living by navigating keleks, which change crews there. From the archaeological point of view Takrit seems to be promising. Herzfeld found there pottery of an interesting type belonging to the Sāsānian period and to the early centuries of Islām.

(J. H. KRAMERS)

TAKRÜR, Taculor (French Toucouleur), is the name given to the population of negro stock which inhabits the greater part of the lowlands of Senegalese Futa and the larger part of Bundu. The first of these countries lying on either side of the river Senegal but more on the left bank, includes from west to east the provinces of Dimār, Tōro, Lāo, Yirlābe or Irlābe, Bāeya, Ngenār or Ganār and Damga. Bundu lies west of the lower Faleme. Taculor colonies are also found in different parts of West Africa, especially at Kayes (on the upper Senegal), at Nyōro (in Sudanese Sahel), at Segu (on

the Niger), at Pandjagara (eastern Māina), at Dingiral (east of Fūta Djallon); these colonies were founded in the middle of the sixteenth century by natives of Senegalese Fūta who had followed the fortunes of the conqueror al-Hājjī 'Umar. They are also found between the Niger and Chad, particularly at Sokoto [q.v.]; these last are descended from other natives of Senegalese Fūta who had accompanied 'Uthmān Fōdjo on the conquest of the Hausa country at the beginning of the sixteenth century.

The word "Tuculor" is a slight corruption of the pronunciation among the Wolof of the Lower Congo of the name of the people in question. Among them the word assumes the form *Tokoror* or *Takaler*. We find it in the narratives of the early travellers and on old maps with the spelling "Toucoum" or "Toucourogne". The Arabs wrote it *Takrūr* and have made the ethnic *Takrūrī* from it, plural *Takrūrī*, which is applied by the Moors of the right bank of the Senegal to the Tuculors. It seems that at one time *Tokoror* or *Takrūr* was the name of a town near the river Senegal, as well as the name of the kingdom of which it was capital, which corresponded practically to Senegalese Fūta and lastly it was the name of the people of this kingdom. There is still a place called by this name (*Tokoror*) not far from Gede in the Tōro or district of Podor near the arm of the Senegal which is called the "marigot de Doné", this corresponds to the position assigned by al-Bakrī, Idrīsī and other Arab geographers of the middle ages to the town of *Takrūr*. In time Arab writers and following them the Sudanese chroniclers who wrote in Arabic extended the application of the word *Takrūr* to the whole of the Muslim Sūdān, from the Atlantic up to (but not including) the valley of the Nile and have made *Takrūrī* a synonym of Sudanese. This is why the European atlases have for long borne south of the Sahara, the inscription "Tekrur or Sudan". But this extension of the name is not in keeping with the facts, and *Takrūr* or *Tokoror* strictly means the true home of the Tuculors, i.e. Senegalese Fūta.

There is not absolute certainty about the origin of the present Tuculors, who seem to form a very mixed population. They are probably in part the descendants of the old autochthons of Senegalese Fūta, who are probably of the same stock as the Wolof and the Sérer; in part the descendants of the old negro autochthons of modern Mauritania and the Hodh (Hawd) who must have been of the same stock and migrated southwards when the southern Sahara began to dry up; partly the descendants of the Sarakollé (or Soninke) and of the Mandingoes (or Malinke) who came at a remote epoch and settled round the commercial centres of ancient *Takrūr*, and partly, descendants of Fula negro serfs called *Rimālibe*, belonging to the Fula of Termes (in the N. E. of Nyōro) who came with their masters to Senegalese Fūta before the sixteenth century; these Fula remained shepherds and settled in the highlands, while their negro serfs devoted themselves to agriculture in the valley of the river.

Whatever may be the origin of the Tuculor, they cannot, as has been said, be regarded as Fula half-breeds. Of course such half-breeds are found among them but as a whole the Tuculors are negroes of pure stock. The only thing they have in common with the Fula is the language

which is clearly a negro idiom related to the Wolof and very closely to the Sérer, probably borrowed by the Fula from the old negro autochthons of Termes and the adjoining districts. The Tuculors give to the Fula dialect which they speak the name of *Fulār*, and sometimes describe themselves as *Halfulārēn*, i.e. those who speak *Fulār*. The Fula has certainly been the mother-tongue of the Tuculors for a long time, although we cannot tell whether they already spoke it before the arrival of the Fula in Senegalese Fūta. In any case we know from a reference in al-Bakrī that in the sixteenth century the hippopotamus was known by its Fula name (*ngāhu*) to the people on the banks of the Senegal in the country of Fūta.

The Tuculors are in general agriculturists, but they have a natural fondness for fighting. In the sixteenth century, they successfully resisted the domination of the Fula in Senegalese Fūta, who from 1559 to 1775 exercised supremacy there under the leadership of the *zatigi* or *saligi* or *slatigi* (the "siratiques" of the early travellers) belonging to the Fula dynasty of Denianke. At the latter period they for long resisted the French conquest. They played a considerable part in 'Uthmān Fōdjo's conquests in the Hausa country in 1800 and in those of al-Hājjī 'Umar in the Mandingo country, the Bambara lands and the Māina, from 1848 to 1864, furnishing these conquerors, both natives of Tōro, with their best officers and finest troops. Since then they have enlisted in large numbers in the Senegal tirailleurs and have contributed to the black army of France a very large number of soldiers of great bravery and N. C. O.'s of a high order.

They include within their ranks professional castes which are perhaps of a different origin from the rest of the population, but are now at any rate completely incorporated with the rest and speak the same language. Such are for example the *Subalbe* (sg. *Tyuballe*) fishermen and sailors, the *Lambe* (sg. *Labbe*) joiners and basket-makers, the *Burnābe* (sg. *Burnābye*) potters, the *Wailube* (sg. *Bailo*) smiths, the *Walabe* (sg. *Galābe*) shoe-makers, the *Mabube* (sg. *Mabbe*) weavers, the *Wambūbe* (sg. *Bambūbye*) musicians, the *Wawube* (sg. *Gawbe*) bards or troubadours, the *Woubé* (sg. *Gowé*) and the *Dyūwambe* (sg. *Dyūwande*) courtiers etc.

The Tuculors are all Muhammadans and were among the earliest peoples of the Sūdān to be converted to Islām. This religion penetrated to Senegalese Fūta towards the end of the first half of the sixteenth century, at the beginning of the Almoravid movement and under its influence. Al-Bakrī says that the first ruler of this region to embrace Islām and spread it around him was a certain *Wār-Dyābī* or *Wār-Dyābē* or a third form *Wār-Ndyāli* (the variants in the manuscripts give these different forms), who died in 1041—1042 A. D.; his son *Lebbi* in 1056 supplied a contingent to the Almoravid leader *Yahyā b. 'Umar*, of the Berber tribe of *Lamtuna*, in his war with the Berber tribe of the *Goddāla*. Local tradition on the other hand gives the name of the first to spread Islām in Senegalese Fūta as *Abū Dardai*, who is sometimes confused with *Ndyadyan-Nāyāl*, the missionary of Djolof. In any case the Tuculors have never ceased to profess Islām since their conversion. In the period of domination of the pagan Fula, religious was added to nationalist

sentiment to stimulate the Tukulors to cast off the yoke of the Denianke kings. Tukulor was synonymous with Muslim as Fula was with pagan.

It was the *Torébe* section (sg. *Torédo*) among the Tukulors that always showed itself the most devoted and ardent Muslims. Sulaimān Bāl, who succeeded in casting off the suzerainty of the Fula kings, and in establishing in Senegalese Fūta in 1775–1776 shortly before his death, a Tukulor theocratic monarchy, belonged to this section. 'Uthmān Fōdjo and al-Hādīdī 'Umar were also *Torébe*.

Politically Takrūr or Senegalese Fūta has successively consisted of: 1, a series of provinces more or less independent of one another (before the ninth century of our era); 2, a kind of kingdom ruled by princes who came from Hodh (Hawd) via Tagant and were known as Dyāgo (ixth–xth century); 3, a more or less direct dependency of the Sarakollé kingdom of Dyāra (Sihel) under the government of Tukulor princes or Sarakollé governors (xth–xiiith centuries; this is the period of the Fula immigrations from Termes and the conversion of the Tukulors to Islam); 4, a dependency of the same Sarakollé kingdom, which was now in turn a vassal of the Mali or Manding empire (xiiith–xvth century); 5, still a dependency of this same kingdom, but the latter was now under the suzerainty of the empire of Gao or of the Songoi (beginning of the xvth century to 1558); 6, an independent kingdom ruled by the Fula dynasty of Denianke who were pagans, i.e. Koli Tengella and his successors (1559–1775); 7, an independent theocratic Muslim federation, the power being in the hands of Tukulors (1776–1858); 8, a series of Tukulor principalities separated from one another and gradually coming under French protectorate (1858–1890); 9, a series of provinces annexed to the colony of Senegal (1890 onwards).

The theocratic Tukulor state of Senegalese Fūta, founded in 1776, was ruled by a chief of a religious character, called *almāmi* (from the Arabic *al-imām*), elected by the notables and frequently destined by them to a very brief reign. The first *almāmi* of Fūta was 'Abd al-Kādir (1776–1805). He had 33 successors, some of whom had several reigns, like Yūsufu who had nine. The *almāmi* Muḥammad Birān, elected for the first time in July 1841 signed a treaty of friendship with France on Oct. 7 of the same year. In the reign of Sibawaihi (1854–1856) a fort was built at Podor in Tōro by the governor of Senegal, Faidherbe, who now set himself the task of leading the separate provinces of Fūta to leave the confederation and acknowledge French suzerainty. Under the *almāmi* Muḥammad (1858–1859), the French protectorate was accepted by the Dimār who became independent of Fūta. In 1859 the *almāmi* Muḥammad Birān, who was then reigning for the fifth time, abandoned his rights over Tōro and Damga, which were next year placed under French protectorate and the confederation of Fūta now comprised only the Lāo, Yirlābe, Bōseya and Ngenār. On Oct. 24 1877, the *almāmi* Muḥammad Aḥmadu ceded to France the provinces of Lāo and Yirlābe and finally in 1881, the governor Brière de l'Isle obtained from the *almāmi* Sire Bāhs Lih, the recognition of French suzerainty over what remained of the Fūta federation: the Bōseya and Ngenār. This was the last *almāmi*. He died in 1890 and on his death the seven provinces which had composed

the Tukulor state of Senegalese Fūta were annexed to the French colony of Senegal.

The Tukulors of Bundu had formed in their country a similar state, which made an alliance with France in the middle of the sixth century. The *almāmi* Buhakar Sa'ada who was then reigning in Bundu vigorously supported the governor Faidherbe in his struggle against al-Hādīdī 'Umar especially in 1857 and 1859.

It was in 1801 that a Tukulor, a native of Tōro, 'Uthmān, son of a certain Muḥammad called Fōdjo, i.e. the "learned", having raised an army among his compatriots of Senegalese Fūta and strengthening it with soldiers recruited in Mūsina, Liptako and Songoi, taking as an excuse the exactions of the king of the province of which the shepherds of Göber had complained, preached a holy war against the Hausa, seized Tsāwa, capital of Göber, then Sokoto, Katsēna, Zinder, Kāno, Zaria and other Hausa towns and founded between the Niger and Chad an empire the capital of which he made at Waro, near Sokoto, and whose boundaries he extended to Nupe in the southwest and Adamāwa in the southeast. He even invaded Bornu but was driven out again by the celebrated Kānemi, in 1810. He died in 1815 as a result of a kind of fit of mystic mania. His brother 'Abdullāhī assumed the government of the western part of the empire with Gando as capital, and his son Muḥammad Bello, that of the central part, called the kingdom of Sokoto; as to Adamāwa, it became practically independent. Muḥammad Bello, who reigned from 1815 to 1837, had to fight against the greater part of his subjects who rebelled against Tukulor domination and returned to paganism; he had also to fight against Bornu. He was a notable scholar and wrote in Arabic a number of historical and religious works. In 1828 he received with consideration the explorer Clapperton. He was succeeded by his brother 'Aḥkī (1837–1843) who was distinguished by his rigid puritanism and forbade dancing and music in his kingdom. 'Alī (1843–1855) who received Barth was the son of Muḥammad Bello; he allowed the royal power to slip from his hands into those of the governors of the various provinces, and the five last Tukulor kings of Sokoto never succeeded in recovering it: Aḥmadu (1855–1866), 'Alīyū Karamī (1866–1867), Aḥmadu, second of the name (1867–1872), Abūbakarī (1872–1877) and Moyās (1877–1904). The last named offered no resistance to the British troops under Sir Frederick Lugard who occupied Sokoto in 1904 and put an end to Tukulor rule in the Hausa country by re-establishing the authority of the native princes.

The other Tukulor empire of the sixth century founded by al-Hādīdī 'Umar had a shorter duration. Born at Alo'ar, in Tōro about 1797, 'Umar Tal in 1820 went to Mecca where he performed the rites of the pilgrimage and acquired the title of *al-Hādīdī* (the pilgrim) and received investiture as *khalīfa* for the Sūdān of the Tidjāniya brotherhood. On his return he spent a considerable time in Sokoto with his compatriot Muḥammad Bello, who gave him a daughter in marriage. In 1838 he established himself in Fūta Djallon, then in view of the hostility of the chiefs of this region took up his residence in the south of the Manding country at Dingirai where he built a fortress and raised an army, the principal con-

lingents of which he brought from Senegalese Fula. Preaching the holy war against the infidels, he conquered Mandingo and Bambak, marched against the Bambara and Kaarta, destroyed their kingdom and victoriously entered Nyōro in 1854. Then turning against Khāso, which had placed itself under French protection and had a French post established at Medina, the capital, by the governor Faidherbe, he laid siege in 1857 to the capital and the French garrison. Paul Holle who commanded the fort of Medina with a handful of men held out for three months. Just when, having neither food nor ammunition left, Paul Holle was going to blow up the fort with its defenders, Faidherbe, who had been waiting for the waters of the Senegal to fall, appeared with his troops before Medina, and routed the army of al-Hādīdj 'Umar. The latter went to Bundu where he had to fight the almāmi Būbakar Sa'ada, then went to Senegalese Fula, a part of whose population he forced to follow him to Nyōro. Having thus reconstituted his army, he marched against the Bambara of Ségou and took this town in 1861. He then turned his attention to the Fula of Māsina, who although Muslims had assisted the pagan Bambara, took their capital Hamdallahi and seized their king Ahmadu-Ahmadu, whom he beheaded in 1862. He then proceeded to sack Timbuktu, after which besieged by the rebel Fula he was brought to bay in a cave, where he was smoked to death in 1864.

One of his sons, Ahmadu, whom he had left in Ségou wished to succeed him, but he found rivals in his brothers and other relations installed at Dingirai, Nyōro and Bandyagara (Māsina). The empire founded by his father was divided into four kingdoms, all at variance with one another. Ahmadu tried to get rid of his brothers and of several of his brother's lieutenants by having them assassinated but he did not succeed either in gaining absolute power or in putting down the continual rebellions which his cruelty and capidity provoked among the Bambara and Fula. After professing a desire to negotiate with France, he committed acts of deliberate hostility and the French authorities decided to put an end to a tyranny which all the natives hated. Agibu, brother of Ahmadu and king of Dingirai, had joined the French. Colonel (later General) Archinard took Ségou on 6th April 1890, Nyōro on Jan. 1, 1891 and Bandyagara on April 26, 1893, thus destroying the Tuculor empire of the Western Sūdān and putting to flight Ahmadu; he sought refuge with Moyāou, king of Sokoto and died in Hausaland in 1898.

(M. DELAFOSSE)

TALĀT' b. RUZZIK AL-MALIK AL-SĀLIH, Fa-
timid wazīr (495—556 = 1101—1161). The events immediately attendant on the treacherous murder of the 12th Fatimid caliph al-Zāhir (1154) called him forth, at the request of the ladies of the royal household, from his governorship at Ushūlūnain to play the rôle of strong man essential in the circumstances. Success crowned his march on Cairo with his followers from Upper Egypt. Then, following the deposition of 'Abbās, he was appointed wazīr to the child caliph al-Fā'iz in 549 (1154) with the title of *al-Sāliḥ al-'Iḥā*. His traitorous predecessor in office, 'Abbās, had fled with his wealth to Palestine and had there fallen into the hands of the Crusaders. Talāt' treated with the latter for the surrender of their prisoner, paying it is said about 10,000 dinārs (Ibn Iyās, i. 66). The exchange was effected and 'Abbās and his son Naṣr were cruelly tortured and crucified in Cairo. Talāt', as might have been expected of such a general, maintained a rigorous control of affairs. In his leisure hours he manifested a penchant for versification, which even obtruded itself in the style of his military despatches. Specimens of his poetry are quoted by Ibn Khallikān (i. 658). He seems to have been a liberal patron of Art and Letters, although he was not above grinding the peasantry with his taxes. The ruins of the mosque which he built may still be seen near the Ḥāb al-Zawīla in Cairo, bearing witness to his zeal for the faith. He was ever a strong supporter of the Imā'īlians. On the death of the little caliph in his eleventh year (1160), and the accession of another child, his cousin al-'Aḍid, the last of the Fatimids, Talāt' continued as wazīr and married his daughter to the caliph. Although virtually ruler of the country, it was only a question of time before his political enemies undermined his power. The restrictions he put on the royal harem, for one thing, earned for him the hatred of the caliph's aunt, whose intrigues led to the wazīr's assassination. Even as he lay dying his dominating spirit manifested itself in his ordering the lady to be put to death before his eyes. His death took place on the 10th Ramaḍān 556 (Sept. 1161). He was ultimately buried in the cemetery of the Karāfa. There is a story in Abū Sāliḥ's Chronicle (fol. 89b) that an aged Christian monk in Upper Egypt had foretold to Talāt', when he was still a provincial governor, that he would attain the highest rank in the state. When the prophecy was fulfilled the wazīr is said to have made a grant of land to the monastery. Whatever else he may have been, he was certainly a valiant warrior. He did his utmost by diplomacy, bribery and attack to drive the Crusaders from Palestine, but without success, chiefly due to the collapse of his negotiations with the orthodox Muslim ruler of Damascus. With his dying breath he is said to have regretted his failure to re-capture Jerusalem from the Franks. Amalric is said to have invaded Egypt during his wazirate.

(J. WALKER)

TALĀḤ (A.), repudiation of a wife by a husband, a form of divorce, effected by his pronouncing the words *anti ḥaliḥ*. The root idea of the verb *ṭalaha* is: to be freed from a tether etc. (of a camel), to be repudiated by a man (of a wife; in this sense also *ṭalaba*), hence *ṭalaha*, to release (a camel) from a tether, to repudiate (a wife); *ḥaliḥ* means a camel untethered or a woman repudiated by a man (cf. Lane, *Arab. Etyl. Lexicon* s.v.).

I. The right to a one-sided dissolution of a marriage belonged to the man exclusively, among the pre-Muḥammadian Arabs. Long before Muḥammad this *ṭalāḥ* was in general use among the Arabs and meant the immediate definite abandonment by the man of all rights over his wife, which he could insist upon as a result of his marriage. Cf. Th. W. Juynboll, *De mohammedaanse bruidgast* (Diss. Leyden), p. 42—64, who corrects the view held by W. Robertson Smith, *Kinship and marriage in early Arabia*, 2nd ed., p. 112 199, and J. Wellhausen, *Die Ehe bei den Arabern* (Nachrichten v. d. Königl. Ges. d. Wiss., Göttingen 1893), p. 452 199.

II. The Qur'ān lays down regulations which go into the *ṭalāḥ* with comparative thoroughness. From their fullness, and still more from the many admonitions to observe them exactly, it is evident that Muḥammad was here introducing new rules which had been previously quite unknown to his contemporaries. Muḥammad found particularly repulsive the apparently not uncommon exploitation in his milieu of the wife by the *wali* as well as by the husband, which took place especially in connection with the *ṭalāḥ*. The first Muslim regulation about the *ṭalāḥ* seems to be the prohibition to use it for extortions from the woman: Sūra iv. 24 (of the years 3—5, on the whole chronology, which is here given in further detail, cf. Noldeke-Schwally, *Geschichte des Qurans*; the preceding verse 23 is directed against encroachments by the relatives of the deceased and by the *wali*): "If ye be desirous of exchanging one wife for another and have given one of them a certain sum (as *mahr*, or bridal gift) make no deduction from it; would ye take it by manifest slander and sin? (25) How could ye take it when ye have had intercourse together and they (the wives) have received a binding promise from you?" (Here Muḥammad recognises the *ṭalāḥ* as such as legitimate). The next passage which deals with the *ṭalāḥ* introduces an important innovation by the Prophet, namely the period of waiting (*idda*), which is on the one hand intended to leave no doubt about the real paternity of a child born from the divorced woman and on the other to give the man an opportunity of atoning for a too hurried pronouncement of the *ṭalāḥ* by withdrawing it; thus it is laid down in Sūra ii. 228: "The women who have been given the *ṭalāḥ* shall wait three *ḥurūḥ* (this expression which is variously explained means in any case phenomena connected with menstruation); it is not permitted to them to conceal what

Allāh creates in their bodies, if they believe in Allāh and the last day; their husbands have the full right to take them back during this period, if they desire to make atonement; they have to demand the same good treatment to which they were bound but the men are a step above them; and Allāh is powerful and wise" (the man is here given the right to take back the wife during the period of waiting even against her will). But this right now given to the man for the first time was very soon abused; the wife was taken back near the end of the period of waiting and a new *ṭalāḥ* at once pronounced over her so that she was permanently in a state of waiting, in order to induce her to purchase her freedom by giving back the *mahr* or making some other financial sacrifice; verse 229 was therefore revealed. "If the man has twice pronounced the *ṭalāḥ*, he may still keep his wife if he treat her kindly or let her go in a seemly fashion; it is not permitted to you to take away anything of what ye have given them . . . (In an interpolation the *ḥurūḥ*, the amicable purchase of her freedom by the woman in contrast to the extortions condemned above, is declared permitted). 230 If he pronounces the *ṭalāḥ* over her for the third time, it is not permitted for him to take her again unless she has married another husband; if the latter pronounce the *ṭalāḥ* over her, it is no sin for the two to return to one another if they think they can observe Allāh's commands; these are the commands of Allāh which make clear to those who have knowledge" (it is probable that the second part of verse 230 was induced by a concrete case in which a thrice divorced woman who had married another husband and received the *ṭalāḥ* from him also, desired to marry her first husband again). A further extension made necessary by the practice, which was intended to prevent abuses of the right of taking back the wife during the period of waiting, is given in verse 231: "If ye give women the *ṭalāḥ* and they reach their time, retain them with you kindly or let them go kindly; but do not keep them to harm them with hostile intent; he who does so only injures himself; make not a jest of Allāh's words!" (here it is forbidden to take back the wife under a show of reconciliation, and to keep her simply with the object of making her life uncomfortable and forcing her to purchase her release by the payment of a sum of money; the perhaps contemporary verse 232 contains warning admonitions to the *wali's* of divorced women). Later than Sūra ii. 228, which is presupposed, but still before the year 5 are the regulations of Sūra lxx. 1: "O Prophet, when ye pronounce the *ṭalāḥ* over women, do it with regard to their period of waiting (the meaning, not quite clear, of the Arabic expression seems to be that the *ṭalāḥ* is to be pronounced in such a way that the period of waiting can be easily calculated i.e. not during menstruation), and calculate the time exactly and fear Allāh your Lord; put them not out of your houses and they are not to depart of their own accord, unless they have manifestly done something shameful (i.e. committed adultery); these are the commands of Allāh and whose transgresseth them injures himself alone; thou knowest not whether Allāh after this may not bring about a change (in the attitude of the man to the woman so that he may take her back). 2. When they have reached their time, then either help them

with kindness or separate from them with good feeling, and take upright people from among you as witnesses and bear witness before Allāh. This is a caution for him who believes in Allāh and the last day 3. (further exhortations to observe the precepts). 4. If your wives can no longer expect a menstruation or have not yet had one and ye are in doubt (as a result, about the period of their waiting) their period of waiting shall last three months and if they are pregnant, the period shall be until they are delivered; Allāh will make his commands easy to him that feareth him. 5. (further exhortations). 6. Let them live where ye live, in keeping with your means and oppress them not by making their lives unpleasant; if they are pregnant, maintain them till they are delivered..." (here follow rules for the divorced woman while she is nursing); (in these verses certain obligations are laid upon men regarding the housing and maintenance of their wives during the period of waiting; this completes the work of protecting the woman against financial exploitation by the man in connection with the *talāq*, which Sūra iv. 24 had begun). Sūra xxxiii. 48 belongs to the end of the year 5: "O believers! when ye marry believing women and then pronounce the *talāq* over them before ye have consummated the marriage, ye have not to make them wait a period; provide for them and dismiss them in a suitable fashion." The general rule here given is stated more fully in Sūra ii. 237: "It is no sin for you if ye pronounce the *talāq* over your wives before ye have consummated the marriage or made a settlement (as bridal gift) upon them; provide fairly what is needful for them, the well-to-do according to his fortune and the impoverished according to his means; this is a duty for those who do what is right. 238. If ye pronounce the *talāq* over them before ye have consummated the marriage and have already made a settlement upon them (as *mahr*) ye shall give them half of what ye have settled unless they withdraw their claim, or he withdraws who has to decide about the contract of marriage (i.e. the husband); that you should withdraw your claim is nearer to the fear of God; forget not generosity to one another; Allāh sees what ye do" (this rule also seems to owe its origin to a concrete case in which doubts had arisen; on the legal significance of the withdrawal from the promise of marriage, which here appears as a *talāq* before consummation, cf. Juynboll, *op. cit.* p. 73).

In addition there are Sūra xxxiii. 28 (of the end of the year 3) and Sūra lxi. 5 (of the late Medina period in which Muḥammad threatens his own wives with the *talāq* as well as Sūra ii. 226 sq., where the *talāq* is mentioned in connection with the *ihā'*).

III. The *talāq* is treated hardly less fully in the Ḥadīth than in the Qur'ān. Besides numerous traditions which simply repeat the well-known precepts of the Qur'ān and therefore need not be dealt with here, there are also some which further develop the doctrine of *talāq*. A group of ḥadīths which endeavour to limit as much as possible the *talāq*, deserves particular attention: "Among permitted things the *talāq* is the most hated by Allāh"; two arbiters appear who are to negotiate between husband and wife; the wife cannot demand from the husband that he should pronounce the *talāq* over another wife on her account; Allāh

punishes the woman who seeks the *talāq* from her husband without sufficient reason. Sūra lxi. 1 is unanimously interpreted to mean that it is forbidden to pronounce the *talāq* during the woman's period of menstruation; such a *talāq* is regarded as a sin and error (*dhafā'*, contrary *ḥukm*) but its validity is not disputed; the man who has pronounced it should however withdraw it and if he insists on a divorce should pronounce a *talāq* in keeping with the rules. A question not yet conceived in the Qur'ān is that of the effect of a *talāq* pronounced three successive times; the traditions are divided regarding this; alongside of the approval of such a thing, there is the strongest disapproval, sometimes it is even held to be invalid; in the same direction points the ḥadīth that down to the caliphate of 'Omar such a *talāq* was considered to be a single one and that 'Omar was the first to introduce into jurisprudence his view that it was a threefold one, in order to restrain people by the fear of the undesirable consequences of this abuse. The traditions further mention as a third requirement for the *talāq* which is to be *ḥukm* i.e. in keeping with the prescriptions of the Qur'ān and of the Prophet, that the man in the period of purity in which he pronounces it, must have had no intercourse with the woman. The so-called *taḥlīl* which consists in marrying a thrice divorced woman and at once pronouncing the *talāq* over her, simply with the object of enabling her to remarry her first husband (cf. Sūra ii. 230) is strongly disapproved of and even cursed. In general the woman is only considered "permitted" (*ḥalāl*) for the first husband when the second marriage is actually completed. To check frivolous pronouncement of the *talāq*, a *talāq* pronounced in jest is considered legal and binding. As, on the other hand, the *talāq* means the dissolution of the marriage, a *talāq* pronounced before the conclusion of the marriage is of no importance. Whether a woman who has thrice received the *talāq* has a claim during the period of waiting on her husband for lodging and maintenance is not evident from the Qur'ān; the earliest differences of opinion are enshrined in a group of traditions, some of which completely deny any such claim, some of which recognise it only for lodging and some for maintenance also.

Talāq between slaves is not regulated in the Qur'ān; the ḥadīth gives the slave also the right to the *talāq* but (in analogy with other legal enactments) only twice and similarly puts the period of waiting of a slave-woman at two *ḥur'*-periods. Anyone who becomes a convert to Islām and has more than four wives is bound to keep four and pronounce the *talāq* on the others. If he has married two sisters, he must pronounce the *talāq* on one of them. Finally it should be mentioned that according to tradition, Muḥammad at once gave the *talāq* to women who took their refuge with Allāh before him and is said to have induced 'Abd Allāh b. 'Omar to separate from his wife by a *talāq* out of consideration for his father's dislike of her.

IV. The oldest jurists (down to the beginning of the formation of the *madhāhib*), some of whom go back to the time of the origin of the traditions, develop the doctrine of *talāq* on the lines indicated above; the most important views to be mentioned here are the following. The doctrine of *talāq* al-

sunna and its three requirements is further developed; it is ascribed among others to 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. 'Umar, al-Dahhāk, Hammād, Ibrāhīm al-Nakha'i, 'Ikrima, Mujaḥhid and Muḥammad b. Sūri (such attributions to the oldest authorities must be regarded as unhistorical; they only become certainly historic with Ibrāhīm al-Nakha'i); this is also true of what follows); it is even applied to the case when a woman is pregnant; for this 'Abd Allāh b. Ma'sūd, Ḍabir b. 'Abd Allāh, Hammād, al-Ḥasan al-Baṣrī and Ibrāhīm al-Nakha'i are given as authorities. The *ṭalāq* pronounced three times in immediate succession is considered a sin but as three valid, by the overwhelming majority, including 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. 'Umar, Hammād, al-Ḥasan al-Baṣrī, Ibrāhīm al-Nakha'i, al-Zuhri; sometimes the view is even described as the only prevailing one, against which no contradictory opinion exists; but at a somewhat later date there were nevertheless champions of the view that the *ṭalāq* of this kind is to be considered as only once valid. While according to the view of the majority, among whom are mentioned 'Abd Allāh b. 'Abbās and al-Dahhāk, the wife becomes *ḥarām* for the man after a threefold *ṭalāq* and can only marry him again after completing and dissolving a marriage with another man, these consequences, according to a view recorded of Mujaḥhid (among others), who follows Ṭabarī, and which goes back to a divergent interpretation of Sūra II, 229 f., come into force after a twofold *ṭalāq*, if the man does not withdraw it, but "allows the woman to go". That the second marriage must be actually consummated if the woman is to be *ḥalāl* again to the first man, is unanimously demanded e.g. by 'Abd Allāh b. 'Abbās, 'Abd Allāh b. al-Muḥarrak, 'Abd Allāh b. 'Umar, Ibrāhīm al-Nakha'i, Sa'id b. al-Musayyib, al-Zuhri. The validity of the *ṭalāq* pronounced in jest, is expressly affirmed by 'Abd Allāh b. Ma'sūd, Hammād, Ibrāhīm al-Nakha'i and is regarded as generally recognised. The principle is unanimously affirmed that in ambiguous expressions the opinion of the speaker decides, but there is much difference of opinion as to whether certain expressions are to be considered ambiguous or not, and also whether the *ṭalāq* pronounced under pressure or under the influence of intoxication is valid or not. Here it is a question of the application of principles, important in other cases also, in a field, which on account of its practical importance had a great influence on its development. The validity of the *ṭalāq* pronounced before the consummation of the marriage is denied in agreement with the tradition of 'Abd Allāh b. 'Abbās, 'Alī, 'Ikrima, Mujaḥhid, Sa'id b. al-Musayyib etc. The *ṭalāq* pronounced on condition the marriage is consummated (if I marry thee, thou art divorced) is on the other hand recognised as valid by 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. 'Umar, Ibrāhīm al-Nakha'i, al-Zuhri while others deny it. Any *ṭalāq* pronounced before the consummation of the marriage is irrevocable (cf. Sūra II, 238; xxxiii, 48); authorities for this are 'Abd Allāh b. 'Abbās, Hammād, Ibrāhīm al-Nakha'i, al-Zuhri etc. (this rule is undoubtedly in the spirit of the Qur'an; cf. Sūra xxxiii, 48). The different views found in the *fiqh* regarding the claims of the thrice divorced woman to lodging and maintenance are also found here: according to 'Abd Allāh b.

'Abbās, al-Ḥasan al-Baṣrī and 'Ikrima she has no claim at all, according to al-Zuhri (who however also appears among the advocates of the first view but probably wrongly) only to lodging. According to 'Abd Allāh b. Ma'sūd, Hammād, Ibrāhīm and 'Umar to lodging and maintenance. 'Abd Allāh b. 'Umar, Sa'id b. al-Musayyib and al-Zuhri allow the slave only the possibility of the twofold *ṭalāq*, whether in respect of a female slave or a free woman.

According to 'Abd Allāh b. Ma'sūd and Ibrāhīm al-Nakha'i on the other hand the deciding factor is the status of the woman as a slave, so that every husband of a slave, whether slave or free-man, has only the possibility of a twofold *ṭalāq*. The Qur'anic expression *ḥurū* (Sūra II, 228 f.) is sometimes interpreted as menstruation and sometimes as the period of purity; among the representatives of this former view are 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, al-Dahhāk, Hammād, Ibrāhīm al-Nakha'i, 'Ikrima, 'Umar and the *Irāqīs*; as adherents of the latter view 'Abd Allāh b. 'Umar, al-Zuhri (the first view is also wrongly attributed to him) and the Medinese are mentioned; 'Alī and Sa'id b. al-Musayyib appear in both groups. Less important differences of opinion are associated with the interpretation of different Qur'anic expressions in Sūra II, 228 and lxx, 1, 2, 4. There is unanimity on the point that the man has the right to withdraw the *ṭalāq* even against the will of the woman. This is expressly stated, for example by 'Abd Allāh b. 'Abbās, al-Dahhāk, al-Ḥasan al-Baṣrī, Ibrāhīm al-Nakha'i, 'Ikrima and Mujaḥhid.

V. The teachings of the *Fiqh* on *ṭalāq*, which can be briefly summarised as follows, are based on the above. The husband has the right to pronounce the *ṭalāq* on his wife even without giving the reasons, but his pronouncing it without good grounds is considered *makrūh* (reprehensible) and by the Hanafis even as *ḥarām* (forbidden); the *ṭalāq al-bid'a* also, i.e. one in which the requirements of the *ṭalāq al-sunna* (cf. above) are not observed is regarded as *ḥarām*; the validity of the *ṭalāq* is not in any way affected thereby. To be able to pronounce the *ṭalāq* the husband must have attained his majority and be *compos mentis*; the *ṭalāq* of a minor is regarded as valid only by one tradition of Ahmad b. Hanbal; the guardian acts for the legally disqualified husband. The *ṭalāq* is a personal right which the husband must exercise in person or through a mandatory specially appointed by him; he may even entrust this mandate to his wife, who can then pronounce the *ṭalāq* on herself. The *ṭalāq* presupposes a valid marriage; the *ṭalāq* pronounced on condition that the marriage is carried through (cf. above) is invalid according to the Shāfi'is and Hanbalis but valid according to the Hanafis and Mālikis (according to the latter however, not if it is expressed in quite general terms, e.g. "every woman that I marry, is divorced.")

The *ṭalāq* pronounced in delirium or by a lunatic is invalid. The *ṭalāq* of an intoxicated man has given rise to lively discussions in all the *madāhib*; in the case of culpable intoxication it is regarded as valid by the majority. The *ṭalāq* pronounced under pressure is valid according to the Hanafis, but not according to the Mālikis, Shāfi'is and Hanbalis.

Words referring unambiguously and directly to the *ṭalāq* bring it into operation, whatever may have been the intention of the speaker who uttered

them: if the speaker uses unambiguous circumlocutions, the Hanbalis, Hanafis and Shāfi'is demand also a corresponding intention, while the Mālikis pay no heed to the intention. In the case of ambiguous expressions or gestures the intention of the speaker is the only deciding factor. There is a great difference of opinion among the *madhāhib* on all these questions, when it comes to the individual case. The question of the validity of a conditionally pronounced *talāq* (apart from the above mentioned case) is also much disputed; the Hanafis and Shāfi'is make such a *talāq* come into operation on the fulfilment of the condition; the Mālikis regard it, according to the nature of the condition, as sometimes at once effective and sometimes void.

The woman's period of waiting begins at once after the *talāq* unless it is a question of a *talāq* before consummation of the marriage, which is always definite: in this case the woman does not need to have a period of waiting and has only a claim to half the bridal gift, if it was already fixed (if it was already paid, she has to pay back half of it) or to a gift at the discretion of the man, the so-called *maw'at* (cf. Sūra ii. 237). A distinction has further to be made between a revocable and a definite *talāq*. In the first case the marriage is still considered legally in existence with all its consequences and the woman has a claim upon the man for lodging and maintenance for the whole period of waiting; on the other hand the man has the right to revoke the *talāq* throughout the period of waiting. If he allows the period to pass without exercising this right, the marriage is definitely dissolved at its expiry. If the bridal gift was not yet paid, it is now due unless some later date was agreed upon for its payment. If a reconciliation then takes place between the two parties and they wish to marry again, they must draw up a new contract of marriage with a new bridal gift.

With a definite *talāq* on the other hand, the marriage is at once finally dissolved (with the single exception that a definite *talāq* pronounced by a man during his mortal illness does not abolish the wife's rights of inheritance: so the Hanafis, Mālikis and Hanbalis with *ihkāt al-ṭalāq* on details, while the Shāfi'is consider the opposite view the better). The woman has however in this case also to pass the period of waiting, during which she cannot conclude a new marriage; during this period she has a claim on the husband for lodging, but for maintenance only if she is pregnant. The husband's payment of the bridal gift is the same as in a revocable *talāq*. The conclusion of a new contract of marriage between the former partners is impossible, unless the woman has in the meanwhile lived with another man in a regularly completed marriage (cf. Sūra ii. 230); but even this way out is only open to them twice.

The third *talāq* is considered definite among freemen (cf. Sūra ii. 229 29.) and the second among slaves; it is a matter of indifference whether the separate repudiations were announced in one marriage or in several, not separated by *tahllil*. In mixed marriages between freemen and slaves the status of the man is decisive according to the Mālikis, Shāfi'is and Hanbalis, and of the woman according to the Hanafis.

The period of waiting for a woman is three *ḥurūṣ* (cf. Sūra ii. 228) i.e. according to the Mālikis and Shāfi'is three periods of purity, and

according to the Hanafis three menstruations; if she is pregnant, the period lasts till her confinement (cf. *ibid.*). For a slave woman the period of waiting is in the first case two *ḥurūṣ* and in the second a month and a half; if she is pregnant, the period of waiting again lasts till her confinement.

Sexual intercourse with a not definitely divorced woman during the period of waiting is not permitted according to the Hanafis and the better known view of the Mālikis; according to the Mālikis, Shāfi'is and the other Hanbali view, it is forbidden. In keeping with the views of the first class, it is regarded by them as revoking the *talāq* in every case; according to the Mālikis only if the man intends to do so, while the Shāfi'is only regard an utterance by the man as revoking the *talāq*.

VI. The Shī'a rules concerning *talāq* only differ in unimportant details from the Sunnī with which we have so far dealt. In a more strict interpretation of Sūra lxx. 2 the production of two legal witnesses is regarded as absolutely necessary for the validity of a *talāq*, while the Sunnīs dispense with them. All circumlocutions, ambiguous expressions and gestures are neglected, whatever may have been the intention of the speaker.

VII. As an institution of family law, the *talāq* has in practice to follow lines strongly dictated by the principles of Muslim law. The very frequent pronunciation of the *talāq*, often on the most worthless grounds and three times in succession has brought about the following usage: if the couple wish to marry one another again after the third *talāq*, they seek a suitable individual who is ready for a certain reward to go through the ceremony of marriage with the woman and at once repudiate her; the woman is then again *ḥalāl* for her first husband and he who undertakes this *tahllil* is therefore called *muhallil*. For this purpose a minor or a slave is used by preference. Nothing can be urged against the validity of such a procedure providing that at the conclusion of the intervening marriage the word *tahllil* is not used; its permissibility is defended by the Hanafis but disputed by the Mālikis and Shāfi'is; the Hanbali Ibn Taimiyya regarded the *tahllil* in general as invalid and attacked it in a special work (cf. Brockelmann, *G. A. L.*, ii. 155, 38) but he seems to be practically alone in this view.

The conditional pronunciation (*talāq*) of the *talāq* may have different objects: a man may pronounce such a *talāq*, for example, to drive his wife or himself to something or to refrain from something by threatened separation, or to give force to some statement made by him. In India, the Straits Settlements and a large portion of the Dutch East Indies, this *talāq* of the *talāq* has become a regular custom at the conclusion of a marriage; it is hardly ever omitted and serves to impose upon the man certain obligations towards his wife, on the non-fulfilment of which the marriage is dissolved by the *talāq*. Cf. Snouck Hurgronje, *De Atjehers*, i. 382 199.; *Verspreide Geschiedenis*, iv/1. 300 19.; iv/1. 370; Juynboll, *Handleiding tot de kennis van de mohammedaanse wet*², p. 207 199.

On the practice of the *talāq* as it has developed in different countries under the influence of the Shī'a and under native customary law, cf. for example, for North Africa: Ubach and Rackow, *Sitte und Recht in Nordafrika*, p. 37, 97, 194.

277, 379; for Egypt: Lane, *Manners and customs of the modern Egyptians*, chap. iii. and iv.; for Transjordan: A. Janssen, *Costumes des Arabes au pays de Moab*, i. 3; for Northwest-arabia: do., *Costumes des Égyptiens*, § 4; for the Dutch East Indies the literature quoted by Jeynboill, *Handleiding*, p. 207, note 3; and ethnological works and travels in general.

Turkey with the introduction of the Swiss civil code in 1926 is so far the only Muhammadan state that has abolished the *talaḥ*.

Divorce.

(J. SCHACHT)

TALAḤĀN (TALĤĀN; Samʿānī, *Ansāb*, i. 363^b), name of two towns in Persia.

1. A town in Tukhāristān, between Balkh and Merw al-Rūdī, three days' march from the latter. Situated in a plain, but quite close to the mountains (an arrow-shot, *zhaltwa*), it was the largest town of the province and had a large market; it was divided into several parts by two rivers: Khuttal-āb (correction of de Goeje) and Bar-āb. It was destroyed in 617 (1220) by Čingiz-Khān; ruins near Čāḡatū.

2. A town in Dailām, between Kāzwin and Abhar, capital of a district of the same name including several small towns. The birthplace of the famous minister, *ṣāhib* Ismāʿīl b. ʿAbbād, whose father Abū ʿI-Ḥasan ʿAbbād b. al-ʿAbbās, had the ethnic name of Talaḥānī. The inhabitants were suspected of sharing in the heresies of the Ismāʿīlis. Near it there is one of the two sources of the river Shāh Rūdī, tributary of the Safīd-Rūdī, as well as the source of two streams, the Karah-Rūdī and the Bih-Rūdī.

(CL. HUART)

TALAVERA, the name of several places in Spain; the Arabic form is *Talāḥira*. They are the following: 1. Talavera de la Reina, a town of 10,600 inhabitants, the *Cacerobriga* of the Romans, on a fertile plain on the banks of the Tagus about 100 miles below Toledo, at the entrance to the Sierra de Gredos: Towers dating from the period of Arab occupations may still be seen there: "the Torres Albarranas". The Arab geographers boast of the solidity of the *ḥiṣṇ* of this town; 2. ca. 30 miles south of the latter: Talavera la Vieja, the ancient *Augustobriga*; 3. Talavera la Real, a little village

on the south bank of the Guadiana, 12 miles above Badajoz.

Bibliography: al-Idrīsī, *Sifat al-Andalus*, ed. and transl. Dozy and de Goeje, text, p. 187, transl., p. 227; Yāqūt, *Muʿjam al-Buldān*, ed. Wüstenfeld, s. v.; Fagnan, *Extraits inédits relatifs au Maghreb*, p. 92.

(E. LÉVI-PROVENÇAL)

TALBIYA (A.), infinitive of form II of the verb *labba*, which is formed from the term *labbaika* to mean "to pronounce the formula *labbaika*" etc. *Labbaika* is connected — and probably rightly — by the Arab lexicographers with *labān* which means "offering devoted service" as *labbaika* does "at your service". According to the native grammarians *labba* is a "frequentative" dual. It is difficult to say what is the significance of the element *ai* in this and similar forms like *sa'daika*. The explanation from the Hebrew proposed by Dozy (*Des Israélites de Mekka*, Haarlem 1864, p. 120) may be said to be now generally abandoned.

The formula is used in various forms and on different occasions. The *talbiya* of the Prophet is said to have been: *Labbaika allāhumma labbaika labbaika lā ʾḥarīka laka imma ʾl-ḥamda wa ʾl-ni-mata laka wa ʾl-mulka lā ʾḥarīka laka* (Bukhārī, *Ḥadīḥ*, B. 26), but shorter forms are given like: *labbaika allāhumma, labbaika wa-sa'daika* etc. It is usually referred to Allāh, in Ḥadīḥ also to Muḥammad, or to his helpers but only its briefest form *labbaika* (e. g. Bukhārī, *Kaḥmūlāt*, B. 4; Muslim, *Zakāt*, Tr. 32; Tirmidhī, *Sifat al-Ḥayyāt*, B. 36) and *yā labbaika* (Muslim, *Djihad*, Tr. 76). It is also placed in the mouths of pious men of the past like Adam and Nūḥ. According to a tradition in Muslim (*Ḥadīḥ*, Tr. 22) the heathen in Muḥammad's time used it in a false form. The *talbiya* is especially pronounced on the *ḥajj* (*q. v.*), at an early stage at the *ihram* which Muḥammad and others assumed with the formula *labbaika bi-ḥajjīn wa-umrat* (Bukhārī, *Ḥadīḥ*, B. 34) or *labbaika bi-umrat wa-ḥajjīn* (Tirmidhī, *Ḥadīḥ*, B. 11) or with the exclusive mention of the *ḥajj* (Bukhārī, *Ḥadīḥ*, B. 35). At the beginning of the *umra* ʿAḥḥa is said to have used the formula *labbaika bi ʾl-umrat* (Abū Dāwūd, *Manāḥik*, B. 23).

The *talbiya* is continually pronounced during the *ḥajj* up to the lapidation (e. g. Ahmad b. Hanbal, i. 114) and in a loud voice (Ahmad b. Hanbal, v. 192).

On the question whether the *talbiya* is obligatory or *sunna*, see al-Nawawī on Muslim, *Ḥadīḥ*, Tr. 22.

(A. J. WENSINCK)

TALHA b. ʿUBAIDALLAH, companion of the Prophet, one of the ten *mushāḥḥira*, i. e. those to whom the Prophet had promised Paradise. He belonged to the Quraysh clan of the Banū Taim b. Murra (*q. v.*); his genealogy was: Talha b. ʿUbadallāh b. ʿUthmān b. ʿAmr b. Ka'b b. Sa'd b. Taim b. Murra and his *ḥanya*, Abū Muḥammad, from his son, celebrated for his piety and one of the first readers of the Qurʾān; both father and son were killed in the battle of the camel in 36 A.H. Talha was one of the earliest converts to Islam. According to tradition he had suffered along with Abū Bakr the threats and ill-treatment of the Quraysh. He went with Muḥammad on the Hijra and was henceforth one of his councillors and most intimate friends. At the battle of Badr, having been sent out to spy the movements of the Meccan caravan,

he was unable to return in time to take active part in the battle but was allowed to share the spoil equally with the other *muhājirūn*. In the unfortunate battle of Uhud, Talha particularly distinguished himself by his bravery: using his body as a shield to defend the Prophet in the retreat, he received numerous wounds and one blow cut the tendons of two fingers which remained paralysed. This exploit gained him a prestige during the lifetime of the Prophet and after his death and a place in the veneration of Muslims which the blots on his later career never destroyed. Talha also took part in the other expeditions organised by Muhammad; on the death of the latter his relations with the first two Caliphs seem to have been rather cool; he is said to have hesitated for a long time before recognising Abū Bakr and 'Umar. The latter in the turn were careful not to give high office to the powerful Companion whose ambition they had probably reason to fear. This did not prevent him from amassing immense wealth as a result of the Muslim conquests, in estates in Arabia and the 'Irāq and in specie: tradition tells us that his generosity was in keeping with his fortune. His prestige and his financial position made him a person of the first importance in the caliphate of 'Umar. That he along with al-Zubair and 'Ali was one of the instigators of the murder of this Caliph, as Caetani has held (*Annali dell' Islām*, v. 42—46), cannot be proved and it seems all the less likely as Talha was away when the murder took place in Medina (cf. *R. S. O.*, iv. 1060—1061); in any case he was a candidate for the succession and was bitterly disappointed when it fell to 'Uthmān. Thrown into opposition, Talha took advantage of the discontent soon aroused by 'Uthmān's rule to try once more to get the caliphate. The real character of the movement which cost 'Uthmān his life is difficult to understand at the present day, since the records of it are obscure and biased, but it seems certain that Talha was one of the chief actors in the drama, especially in its last days when the long discussions between 'Uthmān on the one hand and Talha, al-Zubair and 'Ali on the other, were abruptly broken off and the Caliph killed in his house by the mob. Talha thought his dream was about to be realised and it even seems that he was near being proclaimed Caliph when 'Ali was proclaimed in his stead. Here again tradition in spite of the mass of details which encumber it is not at all clear. 'Ali probably relied on the more turbulent elements which gained the upper hand in these troubled times while Talha (and al-Zubair who was working in accord with him, although for his own ends) seeking to take a middle course was thrust aside. In any case he found himself forced to recognise the new master; but immediately afterwards he fled from Medina with al-Zubair and reached Mecca where he joined 'A'isha — she being the enemy of 'Ali as she had been of 'Uthmān — who seems to have urged Talha's claims to the caliphate (perhaps on account of their ties of blood: they both belonged to the *Tamīm b. Marra*). The three allies went to Basra where they — Talha especially — relied on finding many partisans; they announced that they wished to avenge 'Ali's murder of 'Uthmān for which they disclaimed any responsibility. We know the unfortunate end of their enterprise; the defeat in the battle of the Camel (*yaum al-djmal*, *djmalā*

ii, 36) in which Talha and al-Zubair lost their lives and 'Ali won the 'Irāq, which however he could only hold for a few years. Talha's family however did not suffer by the fall of their head; his heirs entered into possession of his fortune and continued to enjoy a high position; many of them are known as traditionists, but they completely abandoned politics.

Talha was a brave warrior and a noble and generous character, so far as we can judge from the statements of tradition; he was ruined most likely by the fault, which is common to parvenus, of not being able to moderate his ambition. The unexpected successes of his career made him see no bounds to its possibilities; the qualities necessary to enable him to realise them were apparently lacking to him.

The judgment that should be passed on the conduct of Talha (as well as on that of al-Zubair and 'A'isha) has always been a very delicate question for Muslim orthodoxy. They decided it in the conciliating spirit that has always characterized them: Talha and his allies are sinners of good faith and their previous merits are sufficient to wipe out their faults. Many traditions even say that Talha repented before his death and that 'Ali for his part declared himself reconciled to his adversary. It is only the extreme Shi'is who have not renounced "cursing those lacking in faith" (*la'nat al-nakithin*).

Bibliography: Ibn Sa'd, III/i. 152—161, and the other sources for the biography of the companions. The texts relative to Talha are collected and translated in Caetani, *Annali dell' Islām*, ix. 380—399 (cf. also in the same work the indexes to vols. I—II, III—V, and to vols. VIII and IX, the years 35 and 36 A. H.); cf. also G. Levi Della Vida, *R. S. O.*, vi. 434—449 (for the rebellion against 'Ali).

(G. LEVI DELLA VIDA)

TALIK. [See ARABIA, i. 387*.]

TALISH, a district and people in the north of the Persian province of Gilān [q. v.], which since the peace of Gulistan (12/24th Oct. 1813) has belonged to Russia. The name according to Marquart, *Osteuropäische und Ostasiatische Streifzüge*, Leipzig 1903, p. 278 sq., is first found in the form T'alish in the Armenian translation of the romance of Alexander, Ch. 194 = II. 19, p. 76 (ed. C. Müller). In the history of the Arab conquest (Balādhuri, ed. de Goeje, p. 327; al-Jahiri, I. 2805) the country is called al-Tailasān; according to al-Aḡma'ī in Yaḡnī, III. 571, 19, the Persian pronunciation was Talishān (apparently a plural form). According to I. 812, 13, Talashān (so vocalised) was a district (*amāl*) of the province of Gilān. According to the itinerary given by Muḥaddasī (*B. G. A.*, III. 373) from Sālūs (on the frontier between Ṭabaristān and Gilān) to Shemākhā [cf. *shimākhā*], the last town belonging to Gilān was Kūhān-rūdh, 4 days' journey south of the Kur [q. v.]; Hamd Allāh Kāzwīnī (*G. M. S.*, xxiii. 180 ult.) mentions a village Tālīsh on the road between Sulṭāniya and Ardabil, 6 farsakhs from the latter town; the corresponding district (*wilāyat*) was called Tawālīsh (p. 162, 12). Before the wars between Russia and Persia, Talish seems to have been of no particular importance; under Persian rule it was governed by a special Khān and the capital was, as it still is, the town of Lenkoran. The narrow strip of land between the hills or "alps"

of Talish and the Caspian Sea has a very much moister climate than the plain lying to the north of it (the rainfall in Lenkoran is 52 inches, in Baku 10), belongs geographically to Gilān, is equally fertile and unhealthy and has a more varied fauna (including the tiger). The people, called by the Russians "Talishi" or "Talışinci", call themselves "Talış"; they are found to the north as far as the Mughan steppes, where the Talish lead a nomadic life and to the south up to about 30 miles south of the Russian frontier. The number of Talish living on Russian territory is 75,824 according to the last census (1922). Like the people of Gilān, the Talish are Shi'is; their dialect differs very little from that of Gilān.

(W. BARTHOLO)

TALISMAN. [See ZAME'IL.]

TALKHİŞ, an Arabic *maḥjar* meaning to make a précis, means in the official language of Turkey a document in which the most important matters are summed up for presentation to the Sultan. The officials who had these papers prepared and presented them to the Sultan were the grand vizier and the *Shaikh al-Islām*. On account of its change of significance, *talkhīsh* is included among the *ghalāt-i maḥḥūra*, cf. Muhammad Hafid, *al-Durar al-muntakhabat al-maḥḥūra fi l-lugh al-ghalāt al-maḥḥūra* (1221 A.H., p. 115).

(J. H. KRAMERS)

TALKHİSDJI, or in the official style, **TALKHİŞI**, was the individual appointed to prepare the précis called *talkhīsh* [q. v.] and to take it to the palace where it was handed over to the chief of the eunuchs. The *Talkhīsdji* was therefore an official of the grand vizier's department; in addition to preparing the *talkhīsh*, he took part in several official ceremonies. The *talkhīsdji* of the *Shaikh al-Islām* was not — at least in the later period — in direct communication with the palace; documents presented by him had to pass first of all through the hands of the *Re'is Efendi* and of the grand vizier.

(J. H. KRAMERS)

TALUT is the name of king Saul of the Bible in the *Kur'an* (ii. 248, 250). The name is explained as early as *Tha'labi* from the height (*tal*) of Talut. Talut recalls Djalut (Goliath), an assonance of pairs of names, like Hārit-Mārit, Hābil-Kābil, Vādjudi-Mājudi (Goldziner). Djalut itself is explained from the Hebrew מלח (Horovitz).

In the *Kur'an* (ii. 247—253) the following is told of Talut. After the time of Moses Israel demanded a king. God appointed Talut king but the people did not find him worthy of the throne. Talut was distinguished for the greatness of his knowledge and for his great physique also; it was a sign of his fitness to rule that angels brought back the ark (*al-hūt*) with the *sakina* and with what remained of the people of Moses and Aaron. Talut tested his people at a river; whoever drank from it did not follow him. Israel took the field

against Djalut; David slew Djalut and became king.

The more or less confused memories of the Biblical story in this version are obvious. The first book of Samuel relates that Israel demanded a king (viii.) but no respect was shown to the new king (x. 27; xi. 12). The sacred ark which Muhammad regards as a token of Saul's worth was recaptured in the Bible before his accession. The test by drinking water is made in the Bible, not by Saul but by Gideon (Judges, vii. 5—7).

Nöldeke sees in this *Kur'anic* story an effort by Muhammad to arouse the Muslims to courage and obedience by examples from Jewish history. Later Muslim tradition (*Tabari*, *Tha'labi*; *al-Kisa'*) often mentions that the number of the faithful who fought by Muhammad's side in the battle of Badr was that of those who passed Talut's test by water.

Muslim legend has more to say, explains every feature of the *Kur'an* story, and adds many new details. Later writers (*Tabari*, *Tha'labi*, *Ibn al-Athir*) also know the name Saul, son of Kish, (شاول بن كيش). In explanation of the name

Talut, we are told that at this time the future king of Israel was to be recognised by his height (*Tha'labi*); Samuel set up a measure, but no one in Israel reached its height, except Talut. As a miracle which took place to show the rightness of their choice, we are told that when Talut went to consult Samuel (*Shamwil*) about his lost she-asses, the coronation oil began to boil. *Tabari's Tafsir* mentions inspiration as another token. In explanation of the story in the *Kur'an*, that Talut appeared unworthy to the people, it is said that Saul was descended from Benjamin, that is neither from Judah, the tribe of kings, nor from Levi, the tribe of priests (*Tha'labi*). On the ark, the token of Talut's worthiness, Muslim legend has much that is marvellous to tell. This sacred ark had been handed down from the time of Adam from generation to generation through Ima'il to Kejdar. Kejdar gave it to Jacob. Within the ark were kept the *sakina*, the hearts of the prophets, the tables of the law, the rod of Moses, Aaron's turban and rod (*Tha'labi*). This ark had fallen into the hands of Djalut, the king of the Amalekites. When plagues fell upon the Amalekites, they sent back the ark on the advice of a captured Jew. Two cattle led by angels brought the ark to Talut and returned. According to another legend, the angels themselves brought it to Talut between heaven and earth. The people were then convinced of Talut's worthiness.

Talut's relations with Da'ud are fully described. Talut promised his daughter and one third of the kingdom to whoever should kill Djalut. Nevertheless he next demanded a nuptial gift of 200 slain giants. When the affections of the people turned to Da'ud, Talut wanted to slay his son-in-law. Warned by his wife, Da'ud put a wine-skin in his bed and Talut stabbed it. Da'ud on one occasion was saved by a spider spinning a web at the entrance to a cave. Da'ud showed his magnanimity by once leaving four (in *Ibn al-Athir*: two) arrows besides Talut; on another occasion he took from Talut, his cup, his jar, his arms, a piece of his garment and hair from his beard.

Saul's raising of the dead (I Sam. xviii) is completely transformed in Muslim legend. Some-

times it is Joshua and sometimes Samuel that is called up. Talut learns that there is only atonement for him, he must fight with all his family and die for Allah. Talut abdicates and suffers with his sons the "death on the path of Allah".

(BERNHARD HELLER)

TAMATTU'. [See IHRAM, MUTA']

TAMGRŪT, the principal town in the Wādī Dar'a (Dra [q. v.]), in the south of Morocco and the site of the mother-sāwiya of the religious brotherhood of the Nāṣiriya [q. v.]. It is a fair-sized town with houses of red clay, surrounded by groves of palm and fruit trees, on the left bank of the Wādī Dar'a, which is here 120 to 250 feet broad but of no depth and runs between hills about 300 yards apart. Tamgrūt is surrounded by low walls pierced by 4 gates: in the north, Fumm (class. *fam* = mouth) al-Sak, in the N.E., Fumm Ta'urrit, in the S.W., Bāb al-Riḥ and to the east, Fumm al-Sār. An important market is held there on Saturdays.

The sāwiya of Tamgrūt, which owes all its importance to the Shaikh Muḥammad b. Nāṣir, was founded in 983 (1575—1576) by a member of a Marabout family of the Wādī Dar'a, Abū Ḥafṣ 'Umar b. Aḥmad al-Anṣārī from the sāwiya of Saiyid al-Nās. It was the fame as mystics of two holy men who lived in the sāwiya of Tamgrūt, Saiyid 'Abd Allāh b. Ḥusain and Saiyid Aḥmad b. Ibrāhīm, that incited the Ṣūfī novice Muḥammad b. Nāṣir, born at Ighlān in 1015 (1603), to settle there. On the death of Saiyid Aḥmad b. Ibrāhīm, he became head of the sāwiya, and founded his order there, directly based on the teaching of al-Shādhilī [q. v.]. He died here in Ṣafar 1085 (May 1674) and his descendants from father to son without interruption have since been heads of the sāwiya of Tamgrūt. The latter contains the tombs of Muḥammad b. Nāṣir and his successors together in a mausoleum, rebuilt in 1869 after a fire and surmounted by a pyramidal cupola of green tiles, with a *ḡūmār* with three golden balls on top. It is also said to contain a very fine library, but it is unfortunately still impossible to attempt to catalogue it.

The sāwiya of Tamgrūt and the holy men who lived in it have formed the subject of a monograph by Aḥmad b. Khālid al-Nāṣirī al-Silāwī [q. v.], author of the *Kitaḥ al-Ittiḥād*, entitled *Taṣaf al-muḥṭarī* & *'l-Naṣab al-dīfārī* (2 vols., lith. Fās n. d. [1309]). Tamgrūt was the birthplace of Abū 'l-Ḥasan al-Tamgrūtī, a noted official of the Sa'dian court.

AL-TAMGRŪTĪ, ABŪ 'L-ḤASAN 'ALĪ b. MUḤAMMAD b. 'ALĪ b. MUḤAMMAD, a Moroccan writer, a native of Tamgrūt [q. v.], died at Marrākush in 1003 (1594—1595) and was buried in the sanctuary of Ḥādī 'Iyād. He held an official position at the court of the Sa'dian Sultān Abū 'l-Abbās Aḥmad al-Manṣūr al-Dhahabī (986—1012 = 1578—1602). He was placed by this ruler in charge of the embassy to Sultān Murād III in Constantinople along with another court dignitary Abū 'Abd Allāh Muḥammad b. 'Alī al-Fishālī, d. 1021 (1612—1613). Al-Tamgrūtī prepared an account of his journey (*riḥla*) which he called *al-Nafahat al-miḥiya fi 'l-Sifarat al-turkiya*: it was afterwards used as one of his sources by the author of the *Nuḥat al-Ḥādī*, al-Ifrānī (or Ufrānī, [q. v.]). It contains interesting information about the court of Marrākush at the end of the xvth century. An edition, with a translation, of al-Tamgrūtī's work had been announced by H. de Castries, before his death in 1927.

(E. LÉVI-PROVENÇAL)

TAMIM b. MURR, an Arab tribe; their genealogy (Wüstenfeld, *Geneal. Tabellen*, K. L.) Tamim b. Murr b. Udd b. Ṭabikha b. al-Yās b. Muḥar, puts them among the Muḥarī tribes where they take first place; indeed their name is often used as a synonym of the whole Muḥarī branch in contrast to the Kaïs and the Raḥī'a. Of the two latter, the Raḥī'a are most closely related to them, which is not apparent in the systematic genealogies (where on the contrary the Kaïs are descended from the Muḥar while the Raḥī'a are not), but from expressions like the dual *al-Dhaffān* (*Lisān al-'Arab*, x. 373) meaning the Tamim and the Bakr b. Wa'il together (the latter being the principal group of the Raḥī'a). In any case, the Tamim are much nearer geographically as well as historically to the Kaïs and Raḥī'a than the Kināna [q. v.] with whom the traditional genealogy closely connects them.

The Greek and Latin writers, who describe the Arabian Peninsula, having left no reference to the Tamim, we are dependent on native tradition for their early history, the beginnings of which are as usual related with a number of legendary details (the tomb of the eponymous Tamim at Marrān, Ibn Kṭāiba, *al-Ma'ārif*, ed. Wüstenfeld, p. 37; Yāqūt, *Mu'jam*, iv. 479; birth and ad-

ventures of his sons Zaidmanāṣ, 'Amr and al-Hārith, Ibn Duraid, *Kit. al-Ishṭīṣāṣ*, p. 5 etc.) the true character of which it is impossible to ascertain, nor to distinguish what is fantastic fiction from what might be a mythical travesty of historical events. At the period when their history becomes better known to us, i. e. from the sixth century A. D., the Tamīm appear as a very large tribe, whose vast territory occupies a great part of the eastern coast of Arabia: nearly all Najd, a part of Bahrain and a part of al-Yamāma. To the south their lands stretched as far as the steppes of al-Dahna' and to the northeast to the banks of the Euphrates; their neighbours in the north were the Asad, the Bahila and Ghatafan [q. v.] on the southwest; within their own territory they were much mixed with parts of the tribes of the 'Abd al-Kais and the Hanifa (especially on the east and south coast) and with Bakr and Taghlib in the north. Essentially nomads, they never had any towns in the proper sense: Hadjar, al-Aḥṣā' and al-Djarā' (is the last the *Gerra* of classical authors? Cf. Sprenger, *Die alte Geographie Arabiens*, p. 132) are mentioned by the sources as places which they frequented on the occasions of markets and fairs but they were not their owners (cf. Hamdāni, *Djaṣirat al-'Arab*, p. 136; Nöldeke, *Gesch. d. Perser und Araber*, p. 56) although they are said to have occasionally seized and held them for a time (cf. the *Ṣāḥib Hadjar*, Mundhir b. Sāwā who negotiated with Muḥammad belonged to the Tamīm group of the Banū Dārim not, as the sources allege, to the 'Abd al-Kais, cf. Ibn Hadjar, *Iḡāṣa*, Cairo, vii. 135, who quotes Ibn al-Kallāb, *Djamharat al-Ansāb*, Brit. Mus. MS., p. 65^a); their relation with these towns was probably that of Beduins harassing and holding to ransom the settled population, alternately at peace and at feud with them. The very imperfect development of the culture of the Tamīm is seen in their forms of worship, about which our information is extremely meagre. We know of the general Arabian worship of al-Ilāt, Manāt, and al-'Uzzā among the Tamīm only from the occurrence of the names of these deities in proper names and in oaths; that of the sun, Shams (in the dialectic variant *shams*) from a brief note in Yaḥyā (Mu'jam, iii. 19); the worship of Shams is said to have been common to the tribes descended from Uḍl: Tamīm, Dahb, 'Ukl, Taim 'Adi, Thawr under the leadership (*adana*) of the Tamīm tribe of the Ibn Aws b. Mukhāshin. The fact that they lived beside the Christian tribes of Bakr and Taghlib ought to have favoured the spread of Christianity among the Tamīm (cf. Cantani, *Annali dell' Islam* A. D. 9, § 3), but it does not actually seem to have met with much success. The only Tamīm group known to have been completely converted to Christianity is a part of the 'Ibād of al-Hira, the best known member of which is the poet 'Adi b. Zaid [q. v.], but these were a clan who had abandoned their native territory and completely altered their manner of life and their relations with the rest of the tribe.

The extent of the territory inhabited by the Tamīm early accelerated their division into numerous groups and subdivisions, each of which finally attained the importance of an autonomous tribe. This is what explains how the tribe never had a very strong feeling of solidarity so that the two Tamīm poets Djarir and Farazdaq, members of

different clans, were able in their poetical duels to insult in the most atrocious manner each other's clans. Indeed we find sometimes one and sometimes another of the Tamīm groups involved in wars and alliances in which the other groups took no part or even were on the other side. On the other hand events of special importance often induced these groups to combine their forces but always in the form of an alliance (*ḥilf*), in which each kept its autonomous character (e.g. *Naṣā'id*, ed. Bevan, p. 699, 752, for the alliance between the B. Yazbū' and the B. Nahshal). The famous genealogist Abū 'I-Yaḥyā Sulaim b. Djaḥf (d. 190 A. H.) seems to have devoted a special work to the alliances of the Tamīm among themselves (if, as seems certain, one should read in the *Fihrist*, p. 94, 24, *Kitāb ḥilf Tamīm ḥaḍīḥa ḥaḍīḥa* instead of *ḥaḍīḥa*, an absurd reading which the commentary on the text p. 44 explains in an even more absurd fashion). The principal branches of the Tamīm are the Zaidmanāṣ and 'Amr, the principal sub-group of the latter being the 'Anḥar, while the former is divided into Sa'd and Malik; to the Sa'd belong the Miṣḥar and 'Uḥayrīd, to the Ḥanzala and Dārim, who are again subdivided; from the Ḥanzala are descended the Yazbū', one of the most important clans, including among others the Riyāḥ and the Kulāib (Djarir's clan); from the Dārim the Nahshal and the Mudḡḡah' (al-Farazdaq's clan).

It is of course impossible here to follow out the vicissitudes of the various Tamīm clans, whose doings make up the history of the tribe in the pre-Islamic period. The information which we possess on this subject is very full and surpasses in quantity all that we have about the other Arab tribes. This is due in the first place to the large number of celebrated poets among the Tamīm whose verses formed, as usual, the nucleus around which historical traditions gathered as they were collected in later times by the philologists commenting on them. It is particularly to the zeal and erudition of Abū 'Ubayda [q. v.] and cf. also AYYAM AL-'ARAB that we owe the preservation of the greater part of the historical references to the Tamīm *ayyam*. Others are due to Ibn al-Kallāb [q. v.]. We owe this historical matter mainly to the great commentary on the *Naṣā'id* of Djarir and al-Farazdaq (ed. by A. A. Bevan, Leyden 1905-1912).

The *Kitāb al-Aghāni* and to a less extent the sections relating to the *ayyam al-'Arab* in the *Iḡāṣa* of Ibn 'Abd Rabbihi (vol. iii.) and the *Kāmil* of Ibn al-Athīr (vol. i.) also preserved a certain amount of early Tamīm history which can be supplemented from other historical and philological texts. It would be difficult and would take too much time to try to arrange the chronological and historical sequence of the battles of the Tamīm from the confused mass of details supplied by tradition (for the difficulties of the chronology of the *ayyam* cf. above ii., p. 654): an exhaustive study of this subject, which has not been made since Caussin de Perceval, might however succeed in getting some kind of order, starting from those happenings in which the kings of Persia and al-Hira take part, whose chronology is known and comparing the results thus obtained with the series of genealogies which for this period are sufficiently reliable. Two facts may be gathered from all the stories: on the one hand the continual rivalry between the Tamīm and their neighbours Bakr b. Wa'il (and especially their subdivision 'Amir b.

Sa'ā'a): on the other their relations with the kings of Persia who, having brought the Bakr and Taghlib under their influence, endeavoured to extend their authority over the Tamim also whose presence was a continual threat to their communications by land with the east coast of Arabia and Yemen. Tradition retained the memory of two episodes in the relations of the Sāsānians with the Tamim: Shapur II's expedition to Hadjar Nöldeke, *Geogr. der Perser und Araber*, p. 56) and the sanguinary punishment inflicted on the Tamim by the representative of Khusrav II Parwēz, when they attacked a Persian caravan which was crossing their land from the Yemen to Ctesiphon (*Yasum al-Musāḥḥar*; Nöldeke, *Geogr. d. Perser und Araber*, p. 256 ff.). These are episodes of little importance, inevitable incidents in the colonial policy of the Sāsānians which no doubt were frequently repeated in the course of centuries. They alternated with periods of peace during which the kings of Persia and their vassals the Lakhmids of al-Hira endeavoured to attach the Beduin tribes to themselves by means of concessions, one of which at least is recorded by tradition, the *ridāfa*, a group of privileges of a military and fiscal nature. The Yarbū' were granted it in the time of Mundhir III (d. 544 A.D.) and it was he who, wanting to deprive them of it to give it to the other Tamim clan of the Dārim, was the cause of the battle of Tikhfa (Rothstein, *Die Dynastie der Lakhmiden*, p. 112—113; 133; *Naḥḥīd*, p. 66, 299).

The list of battles which follows, taken from the index to the *Naḥḥīd* (in the edition of which will also be found parallel passages from other authors), is only intended to refer the reader to the sources and to show the tribes with which the Tamim were on friendly or hostile relations:

Irāb (Yarbū' against Taghlib); Akrun (Dārim against 'Aba); Uwāra (Dārim against the king of al-Hira 'Amr b. Mundhir); Iyād (Yarbū' against Shaibān); Tiya (Sa'd b. Tamim against 'Amr b. Tamim); Dhābala (Tamim and Dhubyān against 'Amir and 'Aba); Hawmal (Yarbū' against Shaibān, commanded by Bisām b. Kais); Dhū Tuluḥ (Yarbū' against Lahzām and Shaibān); Dhū Naḥḥāb (Yarbū' against 'Amir); Rahrahān (Dārim against 'Amir); Raḡhūm (Yarbū' against Kilāb); Zubāla (Tamim against Bakr); Shāyitān (id.); Sarā'im (Yarbū' against 'Aba); Tikhfa (cf. above); Ghābit (Mālik and Yarbū' against Shaibān); Ghāwī (Yarbū' against Ghāḥḥān); Farūḳ (Sa'd against 'Aba); Kūshāwa (Yarbū' against Shaibān); Kulāb 2nd (Sa'd and Ribāb against Maḥḥibī); Marrūt (Yarbū' against Kūshair); Mulāik (Sa'd against 'Amir); Nibāḥ (Minkar against Bakr); Nisār (Tamim and 'Amir against Ribāb and Asad); Watidāt (Nahhal against Hilāl); Waḳīt (Dārim against Lahzām).

Islām found the Tamim, like the other eastern tribes outside the range of direct influence. It was only after Muḥammad's victory over the neighbouring tribes and after the supremacy of the Medinese theocracy had been imposed on Central Arabia that the Tamim saw the advantage of an alliance with Islām. They sent an embassy to Medina in the year 8 and made a treaty of friendship with Muḥammad but, it seems, without becoming converts. They were therefore the first to reassert their complete independence on the death of the Prophet. The part which the Tamim played in the *ridāfa* is notable for the share in it taken

by the prophetess Sadjāh [q. v.] whose true character is unfortunately unknown, distorted as it is by a biased tradition. In any case the vigorous campaign of Khalid b. al-Walid brought the Tamim back to the bosom of Islām and the conquests which followed immediately afforded an outlet for their warlike tendencies (cf. Caetani, *Annali dell' Islām*, index to vols. i—ii.). The bulk of the Tamim warriors naturally went in the direction of Persia and, settling at first in the two great camps of Kufa and Bagra, later went to Khorāsān where in the 'Abbāsid period they formed the majority of the Arab population. In spite of the fact that the historical record of the conquests goes back for the most part to Saif b. 'Omar [q. v.], himself a Tamimi, and liable to exaggerate the exploits of the Tamim in the conquests (cf. *Annali dell' Islām*, 12 A.H., § 356, note 2), it cannot be denied that the latter continued to display as Muslims the same warlike spirit that had distinguished them during the Djabiliya. It was no doubt also to their character as true Beduins, — rebels against all authority by nature — that was due their active participation in all the rebellious movements of the Omayyad period. If they only played a small part in the struggle between Kais and Kalb, which was really quite foreign to them they distinguished themselves all the more as Kharijīs [q. v.]: it is among the Tamim that we find the most fanatical of these rebels at the beginning of the movement. The chief of the Azāriqa, Kaṭāt b. al-Fudjā'a [q. v.] and the most of his followers were Tamim. We find them equally numerous among the followers of the 'Abbāsid *dāwā* in Khorāsān. Finally we may note the success at a later period of one of the tribe, Ibrāhīm b. al-Aghlab, a descendant of the Sa'd b. Zaidmanāt, who founded the African dynasty of the Aghlabids [q. v.].

The grammarians and lexicographers have preserved for us a number of peculiarities of the Tamimi dialect which will be found in the works quoted in the article KAIS 'AHLAN and also in Vollers, *Volksprache und Schriftsprache im alten Arabien*, p. 8—23; Ahmad b. Fāris, *al-Sūḥbī*, Cairo, 1328, p. 24 *sq.* Many of these peculiarities are also found in the dialects of other tribes, e.g. the *kashkashā*, which other texts attribute to the Rab'a, the *'ana'na* which is also recorded of the Kais, the use of *i* for *a* in the prefix of the imperfect, etc. Other peculiarities are: the *ḥ* of the *nisha* pronounced like *ḥ*, "the letter between *ḥāf* and *kāf* etc". It would be imprudent to try to found on these statements, which are due merely to casual and sporadic observations and not the result of a systematic study of the different dialects, any generalisations about the character of the Tamimi dialect. What is certain is that it formed with the dialect of the Kais and Bakr the eastern group of dialects of ancient Arabia, clearly differentiated from the dialects of the west (cf. Vollers, *op. cit.*, p. 4 *sq.*). The Tamim were further reputed to be in poetry and eloquence the depository of the true *'Arabiya*: we find among them, as has already been mentioned, some of the most illustrious poets of all old Arabic literature: Aws b. Hattar, Salāma b. Djandal, Sulāik b. Salaka, 'Abda b. Tabih, 'Adī b. Zaid, Mālik et Mutammim b. Nuwaira, al-Mukhallab; in the Omayyad period besides Djarir and al-Farazdaq, al-Ba'ith, Kuthayyir, Thābit Kūṭub, Aws b. Maghira, al-'Adjdādī, Ruba, etc.

TAMIM b. AL-MU'IZZ, brother of the fifth Fāṭimid caliph al-'Aziz, is said to have been born c. 337 (948—949). He was noted in his day for his liberality and interest in *belles lettres*. A prince of culture and elegance with a reputation amongst his contemporaries as a poet of refinement and skill. He missed nomination as heir apparent, his brother al-'Aziz being preferred to him. Al-'Aziz seems to have been very fond of him, judging from his grief at the latter's death, which is stated to have taken place at Cairo in Dhū 'l-Ḥiǧ'a 374 (April 985). After the funeral prayers in the Karāfa Cemetery, his body was laid in the palace vault. But opinion differs as to the precise year of his demise. Ibn Taghribirdī dates this event in 368 A.H. Specimens of his verse are supplied by Ibn Khallikān in his Biographical Dictionary.

(J. WALKER)

TAMIM b. AL-MU'IZZ, fifth ruler of the Saḥāḥīja family of the Banū Ziri, who reigned in eastern Barbary from 454—501 (1062—1108). He was born at Ṣāḥra-Man-Sūriya near al-Kairawān. Ibn 'Idhārī described him as a man of tall stature and handsome appearance, and gives some curious details about his way of living. He was a very highly cultured man and reckoned among the most distinguished poets who have occupied a throne.

He was 23 in 445 (1053) when al-Mu'izz, his father, appointed him governor of al-Mahdiyya [q. v.]. It was just after the appearance of the Banū Hilāl Arabs, who had already inflicted one or two severe defeats on the troops of al-Mu'izz and occupied a considerable part of Ifrīqiya. Four years later, in 449 (1057), al-Mu'izz left Kairawān, his capital, where his position was untenable and took refuge in al-Mahdiyya with Tamim who received him with deference. Tamim henceforth conducted the business of the state alone and on the death of al-Mu'izz (454—1062), he was officially recognized as sovereign. In the very difficult circumstances under which he came to power, Tamim showed very remarkable energy and ability. From the town of al-Mahdiyya, which was practically all his dominion, he set himself to regain all the cities of Ifrīqiya which former governors, Arab emirs, or mere adventurers had made into independent principalities. He had to fight against his relatives, the Banū Hammād of the Kal'a who were endeavouring to take advantage of the difficulties of the old kingdom of al-Kairawān. To this end he availed himself of the rivalries among the different groups of Arabs and gained the assistance of the most powerful, the Banū Riyāḥ. With the help of this alliance which was not without its dangers, he was able to foil the Hammādid al-Nāṣir's plans against al-Mahdiyya.

His activities, otherwise, seem to have been mainly directed against the towns of the coast. He sent many expeditions against them, the success of which could at best be ephemeral. He was able to retake Sūs, forced the Banū Khurāsān of Tunis to submit, failed before Gabes, then took it, laid waste the suburbs of Sfax and then entered it. His base al-Mahdiyya was itself much threatened. The Arabs besieged it closely in 1084.

Tamim's effort against the coast-towns is explained by the aims which sent him to the sea while the land was slipping from him. Following his father in this respect, he tried to prevent the conquest of Sicily by the Normans. Having failed, he intensified his piratical raids. On the Christian side, this produced an alliance of Genoese and Pisans who on Aug. 6, 1087 succeeded in occupying al-Mahdiyya and sacked it. In 1104 the Romans (?) made another attack on the town which ended disastrously for them.

Four years later (1108), Tamim died at the age of 78 and was buried in the Kaṣr al-Sayyida at Mornat.

(G. MARÇAIS)

TAMIM AL-DĀRĪ, a companion of the Prophet. His *nishā* al-Dārī is said to be derived from the clan of the Banū 'l-Dār (for 'Abd al-Dār, according to Wellhausen, *Skizzen und Vorarbeiten*, IV, 108, note 4), a section of the tribe of Lakhm [q. v.]. Al-Nawawī however (*Tahdhīb al-Aṣmā'*, ed. Wüstenfeld, p. 178) gives him the *nishā* of al-Dairī, said to be derived from the convent (*dair*) in which he was a monk before his conversion to Islam. His genealogy was: Tamim b. Awa b. Khālid b. Sawād (var. Sūd) b. Djaḥsh b. Dārā' (var. Dhira', Wida') b. 'Adī b. al-Dār b. Hānīl b. Ḥabīb b. Numāra b. Lakhm (Wüstenfeld, *Gen. Tabellen*, 5—25; cf. Tabari, ed. de Goeje, III, 2542, 2545; Ibn Sa'īd, VII/II, 129—130 etc.). From Palestine, where he lived with his tribe, Tamim came to Muhammad at the head of ten of his relatives after the Khaibar campaign in 7 A.H. (Ibn Hishām, *Str.*, ed. Wüstenfeld, p. 777) or, what is more probable, after the Tabūk campaign in 9 A.H. which brought the Muslim army up to the frontiers of Syria (Ibn Sa'īd, I/II, 75, following al-Wākidī and Ibn al-Kalbī): the first statement may be due to some confusion that has arisen from the fact that Muhammad allotted to the Banū 'l-Dār the revenue from part of the lands taken at Khaibar (Wākidī, transl. Wellhausen, p. 287). Tamim embraced Islam and settled in Medina. The fact that he had been a Christian, like most of the Arabs of Syria, enabled him to advise the

Prophet on details of public worship which were adopted by him from the Christians, among them the use of oil-lamps in the mosque (cf. Clermont-Ganneau, *R.H.R.*, lxxxi. [1920], 247 sqq. = *Recueil d'Archéologie Orientale*, viii. 216 sqq.: *La lampe et l'encens dans le Coran*). He is said to have been the first narrator of religious stories (ḥaṣṣ: cf. Goldziher, *Mus. Stud.*, ii. 161 infra; Nawawī, *Tuhfah al-Aminā*, p. 178) and it is really to this literary genre of the *fiṣṣa* (q.v.) that belong the stories of the end of the world and the coming of Antichrist (*al-Dajjāl* [q.v.]) and of the Beast (*al-Djannā*), which Tamīm communicated to Muḥammad and the latter published on his authority. Tamīm is said to have seen the two apocalyptic monsters with his own eyes and spoken with them in an island situated at the end of the world, where the tempest had thrown him on a voyage on the Syrian seas. On this island *al-Dajjāl* and *al-Djannā* are kept to await the day when they will be let loose on the world. This legend of Tamīm must have arisen at quite a remote period for it is already found with all its details in the earliest collections of ḥadīth: Muslim, Abū Dāwūd, al-Tirmidhī, Ibn Maḡā, Ahmad b. Hanbal (see the references by Wensinck, *A Handbook of early Muhammadan Tradition*, Leyden 1927, p. 50 s.v. *Dajjāl*). At a later period, the legend is located after the death of Muḥammad and put in a different setting: it is no longer as a result of a shipwreck that Tamīm comes to learn the mysteries of the other world; he is carried during the night from his house by a djinn and passes through a series of unknown countries, peopled with all kinds of fantastic beings, and after experiencing a number of weird and perilous adventures in which the meeting with *al-Dajjāl* and *al-Djannā* is only an episode, he is taken by an angel on a cloud and brought back to his home. His wife who had thought him dead and married again is in a most difficult position. The question laid before the Caliph 'Umar was referred by him to 'Alī who said that the Prophet had foreseen all that would happen to Tamīm and left the wife free to choose between the two husbands; she prefers to go back to Tamīm. This form of the legend which combines the two common motives of a journey to the realms of fable and the supposed dead man returning, was very widely diffused and it is known in Turkish, Malay and Spanish versions. A recension of the Arabic text to which these versions go back was published by R. Basset (*Les aventures merveilleuses de Tamīm al-Dārī*, in *Le Giornale della Società Italiana*, v. [1891], 3-26) from a manuscript in Algiers (to the MSS which he mentions in Paris, Oxford, Leyden and Tunis may be added those of the India Office, No. 1044 viii., and Berlin, 9069, 9070, 9105-9122. The text has also been printed in Cairo in a popular form). It is of course impossible to fix the date at which the legend took shape: Basset notes that al-Dimashqī (d. 727) gives a résumé of it in a form very like that of our texts (*Adjāib al-Barr wa'l-Bahr*, ed. Mehren, p. 149).

Another incident of quite a different kind has contributed to the fame of Tamīm al-Dārī. When he met Muḥammad he is said to have asked him to give him as a fief (*ḥaṣṣa*, cf. 173X) for himself and his descendants the district in which he lived with his family at Hebron al-Khail [q.v.]. The Prophet granted the request, although Palestine

was still under the Byzantines, and the grant was confirmed by a document which Tamīm produced at the Arab conquest of Palestine which secured him and the heirs of his brother Nu'aim (Tamīm had only a daughter) the possession of the districts of Ḥabrūn (var. Ḥibrā), al-Marjūn (var. Marjūn, Marjūn, al-Ruṭūm, Marjūn; perhaps the last is the correct form and in it should be recognised the word *al-marjūl* = *μαργάριον* with the usual substitution of *n* for *l* as in *Djibril*, *Djibrin* etc.), Bait 'Ainūn and Bait Ibrāhīm; this estate remained in the family till quite a recent period and at the present day the keepers of the *ḥaram al-Khail* claim to be descended from Tamīm al-Dārī. The significance of this gift is a double one. In the first place it is evidence of the supernatural powers of the Prophet and on the other, it is the earliest reference to a regular grant of an *ḥiṣṣa*. The text of the deed which was drawn up by 'Alī (although some sources say Mu'awiya b. Abī Sufyān) was handed down in two versions of which the first, the shorter one, only mentions Ḥibrā and 'Ainūn and is signed only by 'Alī (Ibn Sa'd, i. 21, 22, 3; Abū Yūsuf, *Kitāb al-Kharāj*, Bulak 1302, p. 132), while the other, a longer one, begins with the formula: *ḥiṣṣa mā anṣa* (var. *ḥiṣṣa*) *Muḥammad*... gives the four places mentioned above and is signed by the three first Caliphs, Abū Bakr, 'Umar and 'Uthmān, as witnesses. It is the latter text which was in the possession of the Dārīyūn, who guarded it jealously and always produced it when threatened with spoliation by the local authorities. When Ibn Faḍl Allāh al-Umari saw it on the occasion of a visit which he paid to the sanctuary of Hebron in 743 (*Maṣālik al-Aḥqār fī Mamālik al-Amṣār*, Cairo 1342, i. 172-175), it was written on an old piece of skin which had been a part of one of 'Alī's shoes; the letters, in old Cufic characters, which were almost entirely obliterated and only a few faint traces left, but a certificate (*ḥukūda*) of the Caliph al-Mustaḍī (566-575) confirmed its authenticity and gave a copy of the text; the document was wrapped in a rich covering of silk and kept in an ebony casket. Muḍjir al-Dīn al-'Uṭaimī who saw the document about 150 years later (cf. al-Umari, *al-Uni al-djaili*, Cairo 1283, p. 428-429; the book was written in 900-901) gives practically the same information but the *ḥukūda* according to him was from the caliph al-Mustandjīd (555-566). Later, under Ottoman rule, the Dārī Taḡī al-Dīn gave the document to Sulṭān Murād who put it in his library and as a reward gave the Taḡī al-Dīn a post as *ḥāḍi* in Cairo. The Murād in question can only be Murād III (982-1003 = 1574-1595) or Murād IV (1032-1049 = 1623-1640) for the incident is recorded by one of the scholars of the *Kitāb al-Iḥṣān* of Ibn Duraid (ed. Wüstenfeld, p. 226b.), a certain Muḥammad b. 'Umar who (p. 218a) says he was a descendant of the historian Muḥibb al-Dīn b. al-Shiḥna (d. 890 = 1485) (cf. the preface, p. v.; Wüstenfeld is wrong in thinking he was his grandson). The longer version is also given in Yāqūt, *Mu'jam al-Buldān*, ed. Wüstenfeld, ii. 195; Ibn 'Asākir, *Ta'rikh Dimashq*, Damascus 1331, lii. 344-357, who also gives the shorter version in the very full and detailed biography which he devotes to Tamīm on which al-Kalkashandī relies entirely (*Suḥb al-Aḥḍā*, Cairo 1337, xlii. 118-122).

The apocryphal character of the document scarcely needs to be proved (cf. Caetani, *Annali*

dell' Islām, ii. 288—291 (9 A.H., § 69, note 1, § 70, note 2); Krenkow, *Islamica*, I. [1925], 529—532: the existence of the two versions is sufficient to show that the text is a complete fabrication. But the fraud must be old; not only is the document given in Abū Yūsuf, al-Wāḳidī, Ibn al-Kalbi (cf. above) which takes us to the end of the second century A.H. but we could take it back to the end of the first century if we can believe the anecdote recorded by al-Balādhurī (*Futūḥ*, ed. de Goeje, p. 129, 13—14) from Ibn al-Kalbi (it is given also in the *Djāmharat al-Ansāb*, Escorial MS., f. 70 *ab*), according to which the Caliph Sulaimān b. 'Abd al-Malik, when passing by the fiefs of the Dāriyūn was careful not to stop there "for fear of bringing God's curse upon him". This is clearly an allusion to the document, which in the shorter version threatens with the curse of God any one who in any way infringes the *ḥaḥḥa* granted by the Prophet. Besides, there is another tradition according to which Muḥammad had only promised to Tamīm to grant his family the *ḥaḥḥa* of Hebron and the document was only drawn up after the conquest in the name of Abū Bakr (Ibn Sa'd, i/ii. 75, following Ibn al-Kalbi: the story of course naturally passed into later writers). Although Wellhausen (*Shiiten u. Verarbeiten*, iv. 126, note 1) considers this tradition to be a "spätere Korrektur", it seems on the contrary to be the older. It is easy to believe that the Muslims at their conquest of Palestine found the sanctuary of Abraham at Hebron occupied by a section of the Christian tribe of Lakhm, who perhaps exploited it by making charges to pilgrims who came to visit it; the *nisba* al-Dārī would not be an ethnic especially as, except for the family of Tamīm and other individuals mentioned in the story of the embassy to Muḥammad, we have no knowledge of a tribe of al-Dār; it could very well refer to the Dār "the sanctuary" (on this meaning of the word *dār* cf. the article KUṢAYY). These Lakhmids, converted to Islām, were probably able to keep the guardianship of the *ḥaram Ibrahimī*, which became sacred to the Muslims as it had previously been for Jews and Christians, and based their claim on an alleged grant made by Muḥammad to their chief Tamīm whose fame was gradually extended until he was made one of the inspirers of the eschatological beliefs and liturgical institutions of the young faith of Islām. It might even be asked if the traditions associated with the figure of Tamīm al-Dārī are based on any historical figure or if his personality is not completely legendary. Clermont-Ganneau in his article quoted above refers to his *Archaeological Researches*, ii. 463—464 (which are not accessible to me) for the "analogies which the grant of Hebron made to Tamīm al-Dārī presents with that of the same town made in similar conditions to the Caleb of the Bible". But the Calebites received Hebron (Joshua, xv. 13; cf. Judges, i. 10) on the occasion of the general distribution of southern Palestine among the families of the tribe of Judah of which they were clients; there is then no analogy with the grant made to Tamīm in quite special circumstances.

Tradition knows practically nothing of the life of Tamīm after the death of Muḥammad; it only narrates that he left Madīna after the murder of 'Uthmān in 35 and that he returned to his native land where he died at the end of the caliphate of 'Alī (40 A.H.).

(G. LEVI DELLA VIDA)

TAMMŪZ, the tenth month in the Syriac calendar. Its name is derived from that of the fourth Jewish month with which it roughly coincides. It corresponds to July in the Roman calendar and like it has 31 days. According to al-Birūnī, in Tammūz the lunar stations 8 and 9 rise and 22 and 23 set; the days on which one rose and the other, 14 days apart from it, set were the 10th and 23rd. According to al-Kāzwinī on the other hand, stations 7 and 8 rise, 21 and 22 set, on the 4th and 17th respectively. In the year 1300 of the Seleucid era (989 A.D.) according to al-Birūnī the stars of the stations mentioned by al-Kāzwinī rose and set on the 9th and 23rd.

Bibliography: al-Birūnī, *Aḥḥār*, ed. Sachau, p. 60, 70; 347—350 (in the English translation the pagination of the Arabic text is given at the side); al-Kāzwinī, *Aḥḥār al-Maḥḥāḥ*, ed. Wüstenfeld, I. 44 sq., 49, 78 sq. (German transl. Ethé, p. 93 sq., 101 sq., 160 f.); Ginzel, *Handbuch d. math. u. techn. Chron.*, I., 1906, p. 263 sqq.

(M. FLEISSNER)

AL-TANĀSĪ, MUḤAMMAD B. 'ABD ALLĀH B. 'ABD AL-DJALIL ABŪ 'ABD ALLĀH, Maghribī author of the 12th century, lived at the court of the Zaynīd rulers of Tlemcen whose historiographer he became and died in Djamāda II 899 (Feb. 1494). Besides several small works now lost and *fatwas* given by al-Wanḥarī in his *Mf'yār*, we have from the pen of al-Tanāsī a history of his patrons, *Naṣṣ al-Durr wa 'l-Iḥyān fī Ṣaraf Banī Zaynūn*, ed. and partly transl. by Burgès, *Histoire des Beni Zayan, rois de Tlemcen*, Paris 1852 and *Complément de l'histoire des Beni Zayan, rois de Tlemcen, ouvrage du shāikh... al-Tanāsī*, Paris 1887. It is, in the fashion of the period, not only a chronicle but also an anthology of poetry, literature, moral sayings and anecdotes.

Bibliography: Ahmad Bāḥ, *Nail al-Iḥḥādī*, Fās 1317, p. 353; Ibn Maryam, *Barā'id*, Algiers 1326 (1908), p. 248 sq.; Brockelmann, *G.A.L.*, ii. 241; Ben Cheneb, *Idjazz*, Paris 1907, p. 154, § 105.

(E. LEVI-PROVENÇAL)

TANĀSUKH, transmigration, metempsychosis; a belief widespread in India and among several sects of the Muslim world. Muhammadan authors who deal with it attribute it to the Indians rather than to the Pythagoreans.

Shahraṣṭānī in his article on the "people of metempsychosis" takes the word in a wide sense: to him it means the doctrine of the successive lives and rebirths of the world. The Indians, he says, are of all nations that which believes most in metempsychosis. They tell the story of the phoenix and then say it is the same with the universe; after a certain number of revolutions, the celestial spheres, the stars, all come back to the same point and the life of the universe is repeated. The length of this period of revolution is 30,000 years according to some and 360,000 according to others. Mas'ūdī (*Murūūj*, i. 163) also talks of this great revolution and gives the cycle a duration of 70,000 years: This idea was known

to the Greek astronomers who called it the "great year".

In another sense *tanāwūt* means the diffusion and distribution of the divine spirit among the beings of our world. The Ghulāt, who were extreme Shi'is admitted, says Shahrastānī, *tanāwūt* and the descent or incarnation (*ḥulūl*) of all or part of the divine principle in certain men. Belief in this kind of *tanāwūt* is found among many peoples, who received it from the Mazdaki Magi, Brahmins of Indian, philosophers and Sāhāra. Ḥudjwiri is acquainted with a sect of Sūfis whom he calls *Ḥulūlīs*; they assert that there is only a single spirit, eternal and divine, which is diffused and passes into different bodies. This view, says Ḥudjwiri, is that of many Christians, although they do not confess it, of the generality of Indians, Tibetans, Chinese, and it is found among the Shi'is, Karmāṭians and the Ismā'īlīs. There are four degrees of metempsychosis: *nashā*, *maṣā*, *faṣā* and *raṣā*.

In the popular sense, of passing from one body to another, the belief in metempsychosis is held by several Shi'is sects. Among the Mu'tazilīs, according to Shahrastānī, the disciples of Ahmad b. Ḥa'it taught that God first created beings in a kind of Paradise; then those who were guilty of some disobedience were sent by Him into our world in the form of men or animals according to the gravity of their sins; they then migrate from form to form until the effects of their sins have ceased.

The Ismā'īlīs did not admit the passage of the soul into the bodies of animals; but they did admit successive lives in which the souls are active in the world of birth and death until they have recognised the *ḥulūl*; they then rise to the world of light.

The Nuṣayrīs believe that the sinner of their religion will return to the world as a Jew, Saunī Muslim or Christian; the infidels who have not known 'Alī become camels, mules, asses, dogs or other similar animals. There are seven degrees of metempsychosis, according to the Nuṣayrīs; the faithful soul which has passed through the seven degrees rises into the stars from which in the beginning it had descended. Anz and Dussaud have connected this theory with the doctrine of the ascension of the soul through the seven heavens which originating on the Babylonian soil spread into Persian beliefs and then into those of the Neo-Platonists and the Gnostics. The Druses have taken some of their popular beliefs from the Nuṣayrīs, although their founder Ḥamza was opposed to them; they believe that the souls of the enemies of 'Alī will enter the bodies of dogs, monkeys and swine. The Kurds and the Yazidīs believe in transmigration into the bodies of men and animals and in successive existences separated by an interval of 72 years. According to Saiyid Sharif Djuṣṣānī (*Tarīfāt*) the *tanāwūt* is the passing of the soul to a new body without intervals on account of the inclination of the spirit for the body.

Al-Samarḳandī quotes curious legends about *maṣā* (a variant of *nashā*), according to which the monkey, the pig and other animals are descended from people who have been metamorphosed. The star Suhail and the planet Zuhra (Venus) are in the same way said to have been a king and a princess punished by God for their crimes and

placed — somewhat illogically — among the stars. Finally we may mention the stories of metamorphosis found in the *1001 Nights* and other tales.

CARRA DE Vaux)

AL-TANĀWUTI, the *nishā* of many spiritual shaikhs of the Abāḍīs [q.v.]. To the fifth (eleventh) century belongs:

Abū Ya'qūb Yūsuf b. Muḥammad al-Tanāwuti who often appears in later tradition. His son Ismā'īl but still more his grandson Abū Ya'qūb Yūsuf b. Ismā'īl had the reputation of being very devout and miraculously gifted. The most important bearer of the name is the last-named's son:

Abū 'Ammār 'Abd al-Kāfi al-Tanāwuti, fellow-pupil and friend of Abū Ya'qūb Yūsuf b. Ibrāhīm al-Sadrāt al-Wardjālānī. He came of a wealthy family and had an allowance of 1,000 dinārs a year for his studies in Tunis, of which he gave half to his teachers. His interest in learning, particularly in Arabic philology, was so keen that he did not even stop to read the letters that accompanied the paternal remittances. When he opened them, as he was about to return home, he read in one of the death of his father and in another of the death of his mother. His principal teacher in theology was Abū Zakariyya Yahyā b. Abī Bakr al-Wardjālānī [q.v.] who also taught Abū Ya'qūb. Abū 'Ammār lived principally in Wargla (Wardjālān). In the spring he roamed with his herds far to the south among the oases of Mzab. His co-religionists revere him as one of the renewers of their religion (*muhayy al-dīn*). On the question of the verdict on the Caliph 'Alī, always a fundamental one with the Abāḍīs, he inclined to leniency. On the other hand he shared the general bitterness of the Berbers against the immigrant Arab Beduins [cf. *III. 1*]. He declared that the property they had acquired in the Maghrib was lost (*ghāṣb*) and, like his friend Abū Ya'qūb, he received a painful impression of the Beduins of the Hidsa on a pilgrimage to Mecca so that their consciences troubled them as to whether they who in the Maghrib carefully avoided any, even business, intercourse with the Arabs, could purchase from them in the Hidsa; they consoled themselves with the reflection that the Hidsa had belonged to the Arabs from the very beginning. — Among the writings of Abū 'Ammār are noted *al-Mudjib fi Tahsil al-Su'āl*, a "Refutation of all enemies of truth", i.e. one of those *farq* books in which the Abāḍīs used carefully to show that they were distinct from all other schools; also *Ṣarḥ al-Djāhālūt*, but particularly the *Sira* in which Masqueray recognised "le rôle des clercs", a fundamental work for the spiritual organisation of the 'anzāl leaders and their *ḥaṣṣa* disciples. A long illness prevented

Abū 'Ammār from ever answering a list of queries from 'Abd al-Wahhāb b. Muḥammad b. Ghālib b. Numair al-Anṣārī regarding the Abāḍīs teaching regarding their differences from other sects. A reply was only given after his and 'Abd al-Wahhāb's deaths by Abū Ya'qūb al-Wārdjānī and is contained in the latter's *Kitāb al-Dalīl*. According to this Abū 'Ammār died before 370 (1174). — His teaching was continued, notably by Abū Ya'qūb Yūsuf b. Muḥammad al-Tanāwutī, the younger, whose name is identical with that of the individual first named in this article.

'Adī b. al-Lu'lu' al-Tanāwutī, who lived for a time on the island of Djerba, is said to have been the first man in Wargla to be killed by the invading Arabs. His brother was the father of Umm al-Mu'min, a woman revered for her miracles. As in the cases above named, the brothers Yaḥyā and Abū 'I-Rabī' Sulaimān b. Aiyūb b. Muḥammad b. Abī 'Amr al-Tanāwutī are of interest to the biographers on account of their piety and miracles upon which they love to dilate.

(R. STROTHMANN)

TANGA (or TANGĀ), the name of the small silver coin which formed the main currency of the Mongol world from the end of the viiith/ixth to the beginning of the xth/xith century. It varied in weight from 20 to 35 grains (1.3—1.95 grammes) and was struck by the later Khāns, the Khāns of the Golden Horde, the earlier Khāns of the Crimea and the early Tīmūrids. The Russians borrowed the denomination and the name in the form *denga* at the end of the xivth century from the Mongols: *dengas*, latterly of copper, were struck in Russia down to the first half of the xviiith century. The word *tanga* has survived in Central Asia as the name of a small silver coin of about 50 grains (3.25 grammes) which was struck till last century by the Shāhs of Persia, the Khāns of Khokand and the Emirs of Bukhārā. Tanga is to be connected with the Turki word *tangāz*, an official mark, a die (cf. *SIKKA*) and not with the Indian *tanba* [q. v.].

(J. ALLAN)

TANGIER, the ancient *Tingit*, Arabic *TANĠĠA* (old ethnic: *Tandjī*; modern ethnic: *Tandjāwī*), a town in Morocco, situated on the Strait of Gibraltar, 7 miles to the east of Cape Spartel [q. v.] at the point where the Atlantic coast begins. The town dominates a magnificent bay terminated on the East by Cape Malabata (Rās al-Manūr) and on the West by the citadel (*ḥaḥba*) and its slopes, at times fairly steeply, towards the sea. The town is divided into a number of quarters within the walls and others without. The former, fourteen in number, form the town properly speaking (*Madīna*, popularly *Māḍina*). Amongst the principal extramural quarters are those of Sidi Bū-Knādil (Saiyidī Abū Kanādīl), Marḡān (a large plateau 1,300 yards long, situated to the West

of the town along the sea), ed-Darādīb (al-Darādīb, that is "the slopes"), Ḥasnūna, Sūq al-Barī, Sūq al-Salfī, "the poplars", or San Francisco), al-Maḥallī (al-Maḥallī), es-Suwānī (al-Suwānī, the noria) etc. In the immediate vicinity of Tangier are the villages of Sharf and Tandja al-Bāliya, peopled by rustics of the tribe of Faḥḥ of Tangier. There are a comparatively small number of mosques in the town; there are seven Khutba mosques and six of less importance. The chief one, which had been transformed into a church at the time of the Portuguese occupation was the object of several restorations after being won back for the faith in 1684. The town in the strict sense is surrounded by a rampart more than 2,000 yards in length, built in stone, which dates in large measure from the time of the Portuguese occupation (1471—1661); it was later restored at different times. Several gates are pierced in it; most of them are recent. On either side of the rampart towers (*ḥorǧ*) are still standing; amongst them may be mentioned the *ḥorǧ al-na'īm*, Irish tower, the *ḥorǧ dūr al-burūd* (the York Castle of the English period), the *ḥorǧ al-salām*, with 29 bronze cannon of European origin. The principal monument of the town is the Sharīfian palace, which is situated in the East part of the citadel. It is here that the government of the town has been located for several centuries. The English during their occupation called it the Upper Castle. The present palace was built on the ruins of this Upper Castle by the Pasha Aḥmad b. 'Alī b. 'Abd Allāh al-Tamīmī al-Rifī before the year 1743, in which he was killed in a battle near al-Ḥaṣr al-Kabīr (Alcazar quivir, q. v.).

Tangier has now a rather mixed population amounting to about 50,000 inhabitants of whom 30,000 are Muslims, 12,000 Jews and a European colony in which the Spanish element was the dominant one until quite recently. From the nineteenth century, the town was the residence of the representatives of foreign countries at the court of the Sultāns of Morocco. This role of diplomatic capital of the Sharīfian Empire has given Tangier a character of its own. It is now the capital of the international zone which bears its name; the status of this zone has been recently defined.

The most varied legends are told about the origin and foundation of Tangier. There is not space to recall them here. The site was known to and first inhabited by the Phoenicians, and after that by Punic colonists. Tangier figures in the *Periplus* of Hanno (530 B.C.). It seems that the town was the capital of different petty native kings of whom the chief one was Bokkus I (c. 105 B.C.). In the reign of Bokkus III (in 38 B.C.) it was formed into a republic and was declared by Rome a free city until in the reign of Claudius (42 B.C.) it was raised to the rank of *Colonia*, with the name of *Julia Traiecta* and became the capital of the province of *Mauritania Tingitania*. In the year 291 at the time of the administrative reform of Diocletian, when Mauritania Tingitania was joined to the diocese of Baetica, Tangier became the residence of a *Comes*, and of a *Prætor* for civil administration. Tangier passed thereafter under Byzantine rule, but the residence of the representative of the Emperor of Constantinople was at Ceuta.

It was at the beginning of the eighth century that Tangier became Muslim; it was captured by

the celebrated Mūsā b. Nuṣair, who entrusted its government to one of his lieutenants, Ṭarīk b. Zayd al-Lalīḡhī, who concentrated close to the town the forces which were to carry out from Ceuta the first Muslim landing in Spain in the year 711. During the period of the governors nominated by the Caliphs of the East, Tangier became the capital of Morocco as far as the Grand Atlas, whence the expression *al-Sūs al-Adnā*, in opposition to *al-Sūs al-Aẓḡā* [q. v.]. The first governor who thus had Tangier as his residence was 'Umar b. 'Ubaid Allāh al-Murādī in the year 732. Soon afterwards, in the very suburbs of Tangier the revolt of Maṣāra broke out. Maṣāra was a Berber who, under cover of the Kharijī movement, desiring to rid Morocco of the Arab yoke, managed to win over to his cause a great number of followers and marched upon Tangier which he seized in the year 740. The troubles which he fomented lasted until 785.

It is at Tangier that the historians make the fugitive Idrīs I, who was to become master of all the country, land on his arrival from the East. Finding the position of this town not sufficiently central, he seems never to have thought of making it his capital and Tangier now lost its rank as the first town in Morocco, which it never regained. It fell at the time of the Idrisid partition of 829 to al-Kāsim, soon displaced by his brother 'Umar, who died in 835. All the North-West of Morocco had passed into the hands of this prince, and his descendants kept it from father to son in an almost independent manner for more than a century. It was not until 949, that Tangier was annexed to the possessions of the Umayyad Caliphs of Spain who appointed a governor, charged at the same time with the administration of Morocco, which had been reduced to the state of a vassal province of Cordova. It was thus that at the beginning of the 11th century the Idrisid 'Alī b. Hammūd was appointed governor of Tangier by the Caliph Sulaimān al-Musta'in bi 'llāh, before fomenting the rebellion which brought him to the throne of Cordova in 1016. All the revolts at the end of the Umayyad Caliphate thus had their repercussions on Tangier and also on the neighbouring Ceuta and the Berbers of the country, ever on the alert to what was taking place on the other side of the Strait, placed at their head two governors of the tribe of the Barghawāta [q. v.], Rikā Allāh at Tangier and Saḡkūt at Ceuta; under the quite nominal suzerainty of the Hammūdids of Spain.

Tangier was taken by the Almoravids in the year 470 (1077). It was there that the celebrated al-Ma'tamid [q. v.] disembarked in the year 1090. He was the last 'Abbāsid of Seville, and had been exiled to Morocco by Yūsuf b. Tāshīn. On the fall of the Almoravid dynasty the town passed at once under the Almohad domination. The first Caliph, 'Abd al-Ma'mīn b. 'Alī [q. v.], seized it in the year 542 (1147). During the whole of the period of the dynasty it remained a flourishing town, and a port which was much frequented on account of its proximity to Spain.

Tangier, like the rest of North-West Morocco, did not at once recognize the new Marinid dynasty, on the fall of the Almohad dynasty. While Ceuta passed under the rule of the local princes of the family of the Banu 'l-'Azāfi, Tangier took as its chief Abu 'l-Hadīdj Yūsuf b. Muḥammad Ibn al-Amīr al-Hamḍānī who was killed in the year

665 (1266-1267) after having declared himself first the vassal of the Hafsids of Ifrikiya, then of the 'Abbāsids of the East. In 672 (1274) Tangier was taken by assault by the Marinid Sultān Abū Yūsuf Ya'qūb b. 'Abd al-Hakīm after a three months' siege. During the following century the town passed once more through an obscure period, and became involved in different rebellions, which mark the last period of the Marinid Empire.

It was in the first half of the 17th century that Tangier attracted, for the first time since its conversion to Islam, the covetousness of the Christian states of Europe. The Portuguese, masters of Ceuta since 1415, attempted by land to seize Tangier in 841 (1437). But this attempt remained without result as did those of 1458 and 1464. Finally they occupied the town on the 28th August 1471, during the reign of Alfonso V.

The occupation of Tangier by the Portuguese extended from 1471 to 1661, almost two centuries. Like the other Portuguese possessions in Morocco, Tangier passed nominally to Spain in 1581 under Philip II after the union of Portugal to the crown of Spain but it kept its own administration and its Portuguese garrison. This state of affairs lasted until 1643. After a revolution, Tangier again accepted the authority of the new Portuguese sovereign of the House of Braganza John IV.

In the year 1661, Tangier passed from the hands of the Portuguese into those of the English on the occasion of the marriage of Charles II to the Infanta Catherine of Braganza, the Portuguese possession being part of the dowry of the princess. An English squadron, commanded by the Lord Sandwich, came to take possession of the town and a garrison disembarked there at the end of November of the same year while the garrison and almost all the Portuguese population returned to their native land.

Before the passage of the town of Tangier to the Crown of England, the Portuguese had only been able to maintain themselves in the place with difficulties of all kinds. Numerous skirmishes with *Mudjāhidīn*, under the stimulus of a leader of a holy war, a member of the tribe of the Banū Gurfat, al-Khaḡir (the Moroccan form of al-Khidr) Ghailān b. 'Alī, had harassed them without cessation on the outskirts of the town, and they were almost forced on many occasions to abandon their possession of it. It continued to be the same under English rule. The governor, the Earl of Peterborough, tried at first to conclude a truce with the *Mudjāhidīn* by paying a sum of money but this truce was only respected during the years 1663-1664, after a check that the Muslims had suffered under the ramparts of the town. Hereafter the pact was broken and on the 3rd of May 1664, the new governor, the Earl of Teviot, fell into an ambush near Tangier and was killed with more than 400 of his soldiers.

The English, however, managed later to win over to their cause the chief Ghailān, who had set up as a pretender against the new 'Alawid Sultān Mawlay al-Raḡhū [q. v.]. An alliance was signed in 1666 between him and the governor Baron Bellasaye, but after being held in check by the troops of al-Raḡhū, Ghailān was forced to cease all activity in the north of Morocco. Up to the death of this chief in 1673, the English enjoyed a respite in Tangier and they made use of it to carry out a great scheme of fortification and the con-

struction of a mole. But the expense which these works necessitated along with other causes helped to make the occupation of Tangier very unpopular in England. Thus it was under very favourable conditions that the 'Alawid Sulṭān Mawlay Ismā'il decided to lay siege to the town. This siege lasted not less than six years. An army was gathered together to blockade Tangier and the attacks on the advanced position of the system of defences were successful from the year 1678. As the siege became more and more severe, the English decided to evacuate the town after blowing up the mole and the most important fortifications. On February 6th, 1684 the garrison and the English population embarked with the last governor, Lord Dartmouth, and Tangier became once more a Muslim town.

The Moroccan governor, who was appointed to the command of Tangier, named Abu 'I-Ḥasan 'Alī b. 'Abd Allāh al-Tamīmī al-Rifī, at once proceeded to rebuild the town which had been left in ruins by the English. He, and after him his son, became sufficiently powerful throughout the district to be able soon to withstand Mawlay 'Abd Allāh, the successor of Mawlay Ismā'il, and to give an asylum to the pretenders to the dynasty. In later times also, the governors of Tangier who nearly all belonged to the same family had no hesitation in occasionally throwing off the authority of the sulṭāns. The history of the relations of these governors with the makhzen is the history of Tangier until the sixteenth century.

On August 6th, 1844 Tangier was bombarded by a French squadron under the command of the Prince de Joinville. Eight days afterwards the Moroccan forces were routed at the battle of Isly.

It is unnecessary to quote here the successive agreements come to between the European powers and Morocco which ended in the elaboration and adoption of the statute under which Tangier and its zone are at present ruled, along with the zone of Spanish influence and the zone of French influence in Morocco. A railway from Tangier to Fās and to Rabāt has been open since the year 1927.

Bibliography: A good monograph on Tangier with documents, statistics, illustrations and maps has been published under the title of *"Tanger et sa zone"* being volume vii, of the collection *"Villes et tribus du Maroc"*. Documents et renseignements publiés par la Section Sociologique de la Résidence Générale de la République Française au Maroc, Paris 1921. The *"Archives Marocaines"*, Paris 1904—1920 also contain a number of documents on Tangier. For the Portuguese occupation the principal contemporary source is the *"História de Tanger"* of D. Fernando de Meneses, Lisbon 1732. Tangier has been the subject of many descriptions by travellers (chiefly English) in the sixteenth century. A list of them can be found in Playfair's *Bibliography of Morocco*, London 1892. In conclusion, the Arabic dialect spoken by the citizens of Tangier has been the subject of a masterly study by William Marçais, *Textes arabes de Tanger*, Paris 1911, based on the works of Läderitz, Meisner, Blanc, Marchand and Kampffmeyer. These texts besides their linguistic interest contain valuable information about society and native life in Tangier.

(E. LEVI-PROVENÇAL)

TANKA, (Sanskrit *paṇḍa*, a weight of silver = 4 māyas); an Indian coin. When Mahmūd of Ghazna conquered northwestern India and struck bilingual coins for the convenience of his Hindu subjects, *ṭanka* was used in the Nigart legend as the translation of *dirham* in the Arabic legend. Shams al-Dīn Iltutmish, Sulṭān of Dehli (1210—1235 = 607—633) introduced a heavy silver coin of 175 grains (= 11.3 grammes) and gave it the name of *tanka* (although *ṭola* would have been more accurate); a gold *tanka* of the same weight was first introduced by Nāṣir al-Dīn Mahmūd (1246—1265 = 646—664). These two coins were henceforth to be the standard coins of India. The gold *tanka* was last struck by Muḥammad al-Dīn Muḥarrir (1421—1433 = 824—837) except for a few rare pieces of the Sūris. The coin itself was again struck by Akbar but was now known as the *muhr* [q.v.]. The silver *tanka* became gradually debased after the reign of Muḥammad b. Tughlak, being practically copper ("black *tanka*") under the Lōdīs. In the great reform of the coinage by Sher Shāh (1539—1545 = 946—952) it was restored to its original fineness and weight but was now called the rupee (*rupiya*). As the rupee, the denomination was taken over by Akbar and has continued the monetary unit of India to the present day. Akbar transferred the name *tanka* to copper coinage; his *tanka* was a piece of 2 dāms (640 grains = 41.5 grammes); he also struck a copper coin called the *ṭanki* which was $\frac{1}{10}$ of a *tanka* (64 grains = 4.15 grammes).

Silver and more rarely gold *ṭankas* were also the currency of the various contemporaries of the Sulṭāns of Dehli, in Bengal, Gujjarat, Malwa and the Deccan. The word still survives in Bengali in the form *ṭakā* and is the regular Bengali word for the rupee; in Southern India the name is still in use on the Portuguese coins of Goa where it is the equivalent of anna.

Bibliography: E. Thomas, *Chronicles of the Pathan Kings of Dehli*, London 1871; S. Lane-Poole, *Catalogue of Coins of the Sultans of Dehli in the British Museum*, London 1883, p. xix—xxvii. (J. ALLAN)

TANRI (T.), Heaven; God. In the eastern dialects the vocalisation is usually palatal: Čaghṭai, *ṭāngri* (written تينگری) and similar forms in the other dialects. The trisyllabic forms in Telet (*ṭānāra*) and in the Altai dialect (*ṭānari*) are worthy of note; the Kasan dialect has alongside of *ṭāngri* (god) a word *tāri* = image of a saint, Ikon (we may here mention the proper name *Tāri-kirdi*, where *tāri* of course means God). Ottoman Turkish has a non-palatal vocalisation (*tanrı*) as has Yakutic which has also in addition a trisyllabic form (*ṭānara*).

For the lexicographical material cf. Pavet de Courteille, *Dictionnaire Turco-Oriental*, s. v.; W. Radloff, *Vernach eines Wörterbuches der Türk-dialekte*, III. 823, 1043 sq., 1047 sq., 1065; O. Böhtlingk, *Über die Sprache der Jakuten: Jakutisch-deutsches Wörterbuch*, p. 90; H. Vambergy, *Etymologisches Wörterbuch der Turko-Tatarischen Sprachen*, p. 168 sq.; and lastly al-Kāshghari (*Diwān Lughat al-Turk*, Constantinople 1333—1335, III. 278 sq.), who says: "*ṭāngri* means God; the infidels however call heaven *ṭāngri* and likewise everything that impresses them, e.g. a high mountain or a large tree. They worship such things

and they call a wise man *tängrikän*". This word *tängrikän* appears also as an old Turki title (cf. Radloff, *Wörterbuch*, iii. 1048; F. W. K. Müller, *Uigurica*, p. 47: *tängrikän* = ruler). With the meaning "God" (in the Manichaean system) we find *tängrikän* for example in the Manichaean confession of sins (*Chuan-tuan-ist*, ed. A. von le Coq, 1911, p. 10). The word *tängrik* (i.e. *tängri* with the pronominal suffix of the first person) seems to be used in the Turfan texts in the titles of princesses or queens (cf. F. W. K. Müller, *Uigurica*, p. 48, who compares the modern usage of *khanim* and *kigane*). We may here give a few derivatives of *tängri*: *tängrik* (in the Manichaean confession of sins, cf. *J. R. A. S.*, 1912, p. 289, 299) = preacher, chosen one (lit. man of God); *kuman*, *tehrilik* = "divine"; *Uigur*, *tengrilik* = "pious". The Mongol *tägr* (God) is a loanword from the Turkish (for this form cf. *Bibl. Buddhica*, xii. 51).

The etymologies proposed for the Turkish word (e.g. by Vambery and Barbier de Meynard, s.v.) are of no value. In most modern Central Asian dialects of Turkish *tängri* has the two meanings "God" and "Heaven"; in Ottoman Turkish on the other hand the (rather obsolete) word has apparently only the meaning "God". For idiomatic combinations of *tänri*, e.g. *tänri devağeyi* = thousand-footed, cf. the Dictionaries of Radloff and Barbier de Meynard (s.v.).

To define the conceptions implied by the word *tängri* so far as the beliefs of Turkish paganism is concerned, it will be advisable to deal first with the old Turkish inscriptions and then with the material collected in modern times from Teleut and Altai shamanism.

In the inscriptions *tänri* almost always appears as a divine power: it is by his will that the king attains to power; the king himself is "like *tänri*" and "born of *tänri*" (*tänriñiz tändridä bolmış*) and installed by *tänri* (*tänri yarattmış*). *Tänri* protects the Turkish people, secures their continuance as a nation and gives the Turkish chiefs victory over their foes: in this quality of special protector of the Turks he is described as *Türk tändri*. Alongside of the God of Heaven we find a certain power over the fate of the people and the individual conceded to the spirits of earth and water (*yır-sub*); the highest deity however is *Tänri*.

There are however some passages where the term *tänri* does not imply any real personality. The "blue heaven above" (*göl kök tändri*) is created like the "dark earth below" (*asra yagış yır*) and mankind. Who created them is not stated. An important passage (V. Thomsen, *Inscriptions de l'Orkhon*, p. 112) records that a rising of the Oghuz took place "because heaven and earth were in confusion". Here we have clearly the influence of Chinese ideas of the nature of the universe, the theory which de Groot called "Universalism". This need not surprise us because the Turkish chiefs who had the Orkhon inscriptions prepared lived within the area of Chinese cultural influences.

On the conception of *tänri* in modern Turkish shamanism (i.e. mainly among the Teleut and Altai Turks) cf. H. Vambery, *Die primitive Kultur der Turko-Tatarischen Völker*, 1879, p. 150 sqq.; W. Radloff, *Aus Sibirien*, 1884, ii. 1 sqq. and the texts collected by Radloff in the first volume of his *Proben der Volksliteratur der türkischen*

Stämme Süd-Sibiriens. This paganism as might be expected, did not remain entirely free from foreign, e.g. Christian and Buddhist influences; when, for example, in a shaman's conjuration we find the expressions *Pyrkan Tengri* and *Pyrkan Kan* (Radloff, *Aus Sibirien*, ii. 33, 44), it is natural to recognise in *Pyrkan* the Mongol (also old Turkish) word *Burkhan* = Buddha. That the pagan Turkish creation myth shows traces of Jewish, Christian and Buddhist influences was noted by Radloff himself (*op. cit.*, ii. 5 sq.). When it is said that the evil spirit *Erik* created a heaven for himself, like the god of heaven, one is tempted to think of Zoroastrian influence (the "counter-creations" of Ahriman).

According to Turkish shamanism the most powerful god, *Tengere Kaira Kan*, created the heavens and also the evil spirit *Erik*, the good spirits, mankind and the earth. The form *tengere* (following the orthography in Radloff) corresponds to the Teleut *Tändri* and Altai *Tändri*. *Kaira Kan* must be identical with the Altai *Kairakhan* (cf. Radloff, *Wörterbuch*, ii. 22), a word used to describe gods and spirits; *Tengere Kaira Kan* is therefore the "god of heaven".

There are seventeen different regions in heaven arranged in succession one above the other; there the good spirits live. The highest of these minor deities are *Bäl Ulgön*, *Kysagan Tengere* and *Mergen Tengere*. The gods of heaven are not directly appealed to like the spirits of earth and of water but through the intermediary of the spirits of ancestors, i.e. a shaman (*šam*) is required for the purpose. In a Teleut shaman's prayer (Radloff, *Volksliteratur*, i. 238) the heavens above are appealed to as the Creator. In an Altaic myth (Radloff, *ibid.*, i. 61 sqq.) a hero seeks the hand of the daughter of the god of heaven; *Tämän Ökdä*.

When it is said of the thunderstorm in the dialect of Kasan: "The old man of the heavens (*tänri babai*) is thundering", this is a relic of old pagan ideas (cf. Radloff, *Wörterbuch*, ii. 1425; iii. 1047; iv. 1564).

Speaking generally one may say that, apart from foreign influences, so far as they can be eliminated, in the Turkish conception *Tänri* is regarded as the heavens as an element and also as the spirit ruling in heaven. This spirit was probably originally conceived as a kind of force, a something which would be called *mana* in modern ethnology. The conception of a personal god of heaven must have developed out of this.

When Turkish tribes took over other religions the word *tängri* became the name for the god or higher beings of these religions. The meaning "heaven" was naturally driven into the background. To convey the conception of heaven the word *kök* (Ottoman *göl*) was used, which is originally the name of a colour (cf. Radloff, *Wörterbuch*, ii. 1220). In old Turkish we also find *kök kailä*, the blue ether (*Uigurica*, p. 8, 18; Radloff, *Wörterbuch*, ii. 240).

In Buddhist old Turkish texts *tängri* corresponds to the Sanskrit *deva* "god"; in Buddhist mythology, a conception which is better conveyed by the word "angel" because this being lacks several qualities which to us are necessarily associated with the idea of "god". The feminine equivalent *debi* is given by *tängri khatun*; *tängri kës* is Turkish for *devakanyä* (divine maiden, *apsaras*). The king of the gods (*devaräjä*) *Indra*

is *tängri* like *Khormuda*; Brahma is called *Aerua tängri*. These beings have thus Iranian names, Ohrmazd and (perhaps) Zarwān. The goddess Cē is called *Kut Tängri Khātuni* or (without *Khātun*) *Kut Tängri*. The name *Kut Tängri* seems also to be given to Kubera (e.g. Müller, *Uigurica*, p. 45). In a collection of dhāraṇas for travellers, the *Tilastvutik* (ed. by W. Radloff and A. v. Staël-Holstein, St. Petersburg 1910 = *Bibl. Buddhica*, xii.), we find a *deva* named *Tängriḍām*, whom Radloff takes for Kubera so that the latter has therefore another Turkish name. But this is doubtful, for in one passage (p. 22) of this work, Kubera (*Kupir*) is mentioned by name and *Tängriḍām* is mentioned soon after as a different deity, but it must be allowed that in the text there are elsewhere illogicalities (cf. e.g. Turkish text, p. 23 *sq.*). For Kubera in this work cf. also p. 97, note 2; Buddha himself is often called *Tängri Tängri*. The god of heaven (*devaleka*) is called in Turkish *Tängri Yir* and the *Vaimānika* gods, as a rule peculiar to jaina mythology, but also found e.g. in the *Tilastvutik*, are called *Waimanuki-tängri*.

The Manichaean Turkish terminology which is influenced by Buddhist (cf. *Chuvastuanift*, ed. A. v. Le Coq, Berlin 1911, p. 5; *J. R. A. S.*, 1911, p. 278) shows the word in the following use: *Tängri* corresponds here to the Iranian *Yasid* (or *Bag*); in the first place this means the highest principle of the Manichaean system and secondly the subordinate spirits of light or gods (*yaruk tängri*) in contrast to the demons (*yaklar*). The first man is called *bish tängri*, five-god (from his five components known from the Manichaean myth: ether, wind, light, water and fire). The name *tängri* is also given to the five elements, e.g. *ot tängri* = god of fire. *Tängri* is found with the meaning "heaven" (e.g. *Chuvastuanift*, p. 16 = *J. R. A. S.*, 1911, p. 291, l. 167). Paradise is called *Tängri Yir*. This Manichaean terminology corresponds pretty well to the Buddhist. One or two peculiarities may still be pointed out: the occurrence of the already mentioned term, *tängrikān* (*Chuvastuanift*, p. 10; *J. R. A. S.*, 1911, p. 281, l. 22), in the name of a deity (*Aerua Tängrikān*) translated by von Le Coq (*J. R. A. S.*, loc. cit.) "Aerua the Lord" and the peculiar combination *Arāḥon Yir Tängri*, the "archon earth-god", in which perhaps the word *tängri* is used for one of the powers of darkness (cf. *J. R. A. S.*, 1911, p. 303, note 31).

In Christian Turkish usage is *Tängri* = God; *Tängri-Oghl* = "Son of God" and *Mähkka Tängri* = the God Messiah. In the Christian fragments published by F. W. K. Müller in *Uigurica* we also have the word *Tängriḍām*, which we frequently find in Buddhist Turkish; it occurs twice in these Christian texts and seems here to mean simply "God". The Kuman usage gives nothing worthy of special remark.

As regards the earlier Muslim Eastern Turkish texts, the Arabic and Persian terms (*Allāh*, *Khūdā*) naturally begin to compete with the Turkish *Tängri*. In the *Kudatuh Bilik*, so far as I am aware the Arabic name for God is of rare occurrence (practically only in Arabic quotations). The conception of God is however not exclusively conveyed by *Tängri* in this text but other Turkish words e.g. *Bayat* are used. The word *Tängri* occurs here also with the addition of *ta'ala*. In the *Bahar-*

nāma *Tängri* seems to be the usual word for the Deity, except in quotations; here also, following the Arabic usage, we sometimes find *Tängri ta'ala* (e.g. p. 408, ed. Ilminksky). That the word *Tängri* is disappearing in Eastern Turkish also before Arabic and Persian terms is perhaps to be deduced from Shaw's remark (*A Sketch of the Turkish Language*, ii, 69).

Proper names like *Tängribirdi*, *Tängrikull* may be modelled on Persian names like *Kāndādā* and *Khādābanda*. (V. F. BUCHNER).

TÄNSIN, of whom Shaikh Abu 'l-Faḍl said: "A singer like him has not been in India for a thousand years", was a native of Gwāliyar, and was at first in the service of Rām Cand the Baghela, Rājā of Pannā, who is said to have given him on one occasion ten million *tanhas*. Ibrāhīm Sūr vainly endeavoured to entice him to Agra, but Akbar, in 1562, sent a mission to Rām Cand at Kālingjar to induce Tänsin to come to his court, and Rām Cand, not daring to refuse the request, sent him with his musical instruments and many presents to the imperial court. On the first occasion of his performing there Akbar gave him 200,000 rupees. Most of his compositions are written in Akbar's name, and his melodies are still popular in Hindūstān. He had two sons, Täntarag Khān, also a singer at Akbar's court, and Bilās, whose son-in-law, Lāl Khān, was one of the best singers at the court of Shāh Jahan. Gwāliyar was famous for its musicians, and produced no fewer than eleven of the eighteen singers at Akbar's court.

(T. W. HAIG)

TANTĀ, an important town in the Egyptian Delta between the Rosetta and Damietta branches of the Nile, capital of the Gharbiya province, and a busy railway junction, of unprepossessing appearance, about 75 miles from Alexandria. Its Coptic name of **TANTAΘO** has assumed in Arabic the forms *Tandiā*, *Tantā* and *Tantā*. Formerly it was an episcopal city. Nowadays the place is famous for the tomb and mosque of the most celebrated of the Muslim saints in Egypt, Ahmad al-Badawi (q.v.). Throughout the year no fewer than three *Mawālid* or birthdays of this Saint are made the occasion of great fairs to which pilgrims flock from all parts. The presence of a large native population and the extreme veneration with which the spot is regarded have made it a centre of fanaticism. Tantā is one of those places where the worship of a Muslim Saint had displaced that of an earlier Coptic one.

The present town is built on one of those numerous mounds of accumulated mud-hut debris so characteristic a feature of the Egyptian landscape. The Ahmadiya mosque, which was rebuilt under 'Abbās I, is the principal building of any historic importance. It is now the second largest religious establishment in the country. A library, begun in 1898, contains about 9,000 volumes including over 1,000 MSS. The number of professors attached to the Tantā institute is over 100; the

students numbering about 2,600. Besides large Government Schools, there is a well-equipped American Mission Hospital. But the health of the people is not improved by the existence of an evil-smelling, muddy canal flowing through the town.

(J. WALKER)

AL-TANĀWĪ, MUHAMMAD 'AIYĀD (with his full name: AL-SHAKEH MUHAMMAD B. SA'D B. SULAIMĀN 'AIYĀD AL-MARHŪMĪ AL-TANDITĀ' AL-SHĀFI'Ī), an Arabic scholar of the sixteenth century, born in 1225 (1810) at Nidjrid (a small village near Tanja in Egypt), died Oct. 29, 1861 in St. Petersburg. His father, a travelling merchant, was born in Mahallat Marhūm, hence his *nisba*: *al-Marhūmī*. At the age of six he went to a *maktāb* in Tanja. At 13, he moved to his uncle in Cairo and studied at al-Azhar. Of his teachers the celebrated Ibrāhīm al-Bādjūrī (d. c. 1276; Brockelmann, *G. A. L.*, ii. 487) had a particular influence on him (see the ode dedicated by Tanāwī to him, *Z. D. M. G.*, iv. 245—246). He also studied with the poet Ḥasan al-'Aṭfār (d. c. 1250; Brockelmann, *op. cit.*, ii. 473, No. 1). Many of his fellow-students later became famous. His friend Rifā'a al-Tanāwī (Brockelmann, ii. 481, No. 6) sent to Paris as Imām of the first scientific mission (1825—1831) by Muhammad 'Alī was one of the founders of the new literary movement. Ibrāhīm al-Dasūki (1811—1883) was Lane's first tutor (Brockelmann, ii. 478, No. 4). After his father's death in 1243 (1827) al-Tanāwī had to stay two years in Tanja, where he continued his studies and gave lectures. Returning to Cairo he joined the teaching staff of the Azhar mosque; here he was one of the first to discuss literary and poetical texts. He had been a teacher for a time in an English school. F. Fresnel was the first to make his fame known in Europe (cf. *J. A.*, 3rd Ser., v., 1828, p. 60 sq.). Many young scholars after him studied with al-Tanāwī (G. Weil, Dr. Pruner, A. Perron, R. Frähn, son of the founder and first director of the Asiatic Museum in St. Petersburg). The latter brought his reputation to Russia and in 1840 (1256) al-Tanāwī was summoned to St. Petersburg as teacher of Arabic in the "Institut des Langues Orientales". In 1848 he was appointed Extraordinary Professor in the University and in 1854 ordinary. His teaching had hardly any permanent influence in Russia; his method was not adapted to the European University system. Of his pupils (1840—1842) the most noted was the Finn G. A. Wallin (1811—1852), the noted Arabian traveller, afterwards Professor in Helsingfors, who corresponded with him regularly till his death (see K. Tallquist, *Bref och Dagbokenanteckningar af G. A. Wallin*, Helsingfors 1905). A severe illness forced al-Tanāwī to go on leave in 1861 and in the same year he died. His tomb with inscriptions in Russian and

Arabic still exists in the Tatar cemetery in Leningrad.

His literary activity before he moved to St. Petersburg was almost exclusively confined to the old fashioned scholarship. He composed many *naẓm*, *ḥaṣṣ*, *ḥāshiya* and *ḥikāma* which exist in MS. in Cairo and Leningrad (University Library). Among his original productions of the same kind were his *Luḥūḥ al-Ṭarab fī Naẓm Buḥār al-'Arab* (in private hands in Cairo) and his *Urduḥna* with his own commentary, *Muḥṭaḥa 'l-Allāh 'alā Maṭālib al-'Arab fī 'Ulūm al-Ṭarab wa 'l-Djāwāb 'al-Hiṣāb* (Leningrad, MS. Or., 820). To the Russian period belongs his useful *Traité de la langue arabe vulgaire*, Leipzig 1848, which, besides the exercises, contains many letters and verses from his own pen (cf. Fleischer's observations, *Z. D. M. G.*, i., 1847, p. 212—213; iii., 1849, p. 474—475). His acquaintance with European literature and his command of French enabled him to make interesting critical observations (cf. *J. A.*, 4th Ser., ix., 1847, p. 351—354; *Mélanges Asiatiques*, St. Petersburg, i., 1851, p. 474—495; ii., 1855, p. 466—486). Many articles in Arabic from his pen are in the manuscripts left by him (e.g. on the Egyptian festivals, MS. Or., 838, ff. 50—60; a collection of stories and anecdotes in the popular Arabic of Egypt, MS. Or., 745; *Comptes-rendus de l'Académie des Sciences*, 1926, p. 23—26; an Arabic translation of Sa'di's *Gulistan* begun by him, *Comptes-rendus de l'Académie des Sciences de Russie*, 1924, p. 102 sqq.); an autograph copy of his work *Tuḥfat al-Aḥbāb wa 'l-Aḥbār Bilād Rūḥiyya* of 1266 (1850) has been found in Constantinople (see Keschner, *Z. S.*, iii., 1924, p. 252; *Comptes-rendus de l'Académie des Sciences*, 1927, p. 181 sqq.).

His inestimable claim to fame in his large collection of manuscripts (c. 150) which passed after his death to the University Library (cf. C. Salemann and V. Rosen, *Indices alphabetici codicum manuscriptorum persicorum turcicorum arabicorum qui in Bibliotheca Imperialis Litterarum Universitatis Petropolitanae adservantur*, St. Petersburg 1888). Many manuscripts were copied or collated and corrected by him (cf. *Zapiski*, vi. 384—388). The collection contains few old manuscripts but has many unique and valuable copies, almost all from Egypt (s. e.g. *Zapiski*, xxii. 283 sqq.; *Zapiski* 2, i. 291 sqq.; *Comptes-rendus de l'Académie des Sciences*, 1924, p. 101 sq.).

Bibliography: al-Tanāwī's autobiography (to his settlement in Russia) was published by Kosegarten with a German translation, *W. Z. K. M.*, vii., 1850, p. 43—63, 197—200; important corrections to it are given by G. Gottwaldt, in *Z. D. M. G.*, iv., 1850, p. 243—248. The European articles are too scanty and inaccurate (Brockelmann, *G. A. L.*, ii. 479; Huart, *Littérature arabe* 2, p. 420; Cheikho, *La littérature arabe au XIXe siècle*, ii. 59); more important are the recent Arabic biographies by Ahmad Tamir, in *Maḥallat al-Maḥṣa' al-'Ulmi al-'Arabi*, iv., 1924, p. 358—391 (corrections by Ign. Kratschkovsky, *ibid.*, iv. 562—564) and Muḥibb al-Dīn al-Khatīb, in *al-Zahrā*, i., 1343, p. 417—428 (with picture), p. 554. — A description of his manuscripts in Leningrad and his biography is being prepared by Ign. Kratschkovsky. (IGN. KRATSKHOVSKY)

AL-TANUKHĪ, ABU 'ALĪ AL-MUḤASSIN, an Arab writer, was born in 939 or (according to Yāqūt) in 940—941 A. D., the son of a learned kāfī in Basra, and received his early education

there, from al-Šūlī [q.v.] and Abu 'l-Faraj al-Iṣṣāhānī [q.v.] and others. He chose a judicial career and rose to be *qāḍī*, first in Baghdad and then in Ahwāz; as a result of a change in the vizierate in Baghdad his office was taken from him in 969–970 and his property confiscated. He was not allowed to follow his profession for three years. During this period he seems to have lived mainly in Baghdad but also made a journey to Egypt. Then he was restored to office but fell into disfavour with the Būyid 'Adud al-Dawla [q.v.] (981–982) and is even said to have spent some time in prison because he had posed contempt on al-Shāfi'ī and his followers. He suffered many more hardships and much persecution before he died in Baghdad in 994.

The following are given as Tanūkhī's works: A *Diwān* which no longer survives, and three collections of anecdotes: *Kitaḥ Nizām al-Muḥādara wa-Akhḥār al-Mudhākara*, *al-Mustadīr min Fa'alāt al-Adwād* and, by far his best known book, *al-Faraj ḥad al-Shidda* (not composed before 984). This is a collection of proverbs, anecdotes and sayings on the theme "joy follows sorrow". Mada'inī [q.v.] a century and a half before had written a work similar in title and substance and Ibn Abī 'l-Dunyā and the *qāḍī* Abu 'l-Ḥusain after him had published similar collections. Tanūkhī used these works and other literary sources but also drew upon oral traditions for his new compilation. He owed many a story to his father and his teachers; and was also able to draw upon his own experiences; but the bulk of the contributions not taken from literary sources were given him by secretaries and judges. The work begins with a brief introduction dealing with literary history in which Tanūkhī discusses critically the works of his predecessors. Then come the separate stories, most of which are introduced by a brief reference to their sources, divided into 14 chapters from the point of view of matter or form. While Ibn Abī 'l-Dunyā's work was intended to be edifying in tone, Tanūkhī's collection was lighter and wittier. It found a wide welcome, was much read and copied and in later times played a part in Persian, Turkish and Jewish literature.

Bibliography: A. Wiener, *Die Faraj ḥad al-Shidda-Literatur*, in *IL*, iv, 1913, p. 270–298, 387–420, esp. 393–413 (full bibliography: p. 393, note 2 and p. 398, note 1; also Yāqūt, *Iṣṣāhān al-Aṭib*, ed. Margoliouth, vol. vi, p. 251–267); *al-Faraj ḥad al-Shidda*, 2 parts, Cairo 1903–1904. (R. PARET)

TANZIL. [See WAHY.]

TANZIMĀT, or rather TANZIMĀT-i KHAIRIYE ("beneficent legislation" from the expression: *tanẓīm amr* = "to draft a law") is the term used to denote the reforms introduced into the government and administration of the Ottoman empire from the beginning of the reign of Sulṭān 'Abd al-Majīd and inaugurated by the charter generally called the *ḥatt-ı ıshrāf* of Gālkhanē. The expression *tanẓimāt khairiye* is first found in the latter years of the reign of Mahmūd II. The other end of the period of the *tanẓimāt* is put about 1880, when the absolute rule of 'Abd al-Ḥamid II began.

The *tanẓimāt* are the continuation of the work of Sulṭāns Selīm III and Mahmūd II, undertaken to save the Ottoman state which had become enfeebled internally and externally. Mahmūd II had succeeded,

by getting rid of the feudal system at home and the reactionary element of the janissaries, in centralising and consolidating his power in home affairs but he had been unable to avoid the loss of Greece and Egypt. His work however was not yet constructive. This was reserved for his successors or rather for the great statesmen of his successors, for, since the sulṭāns themselves proved incapable of directing the reforms, the task of carrying them through became more and more the work of a reform party among the Turkish officials themselves. In the period from 1839 to the end of the Crimean War, the soul of the reforms was Muṣṭafā Kāshid Pasha (y.e., d. 1858), who was six times grand vizier; in the second period inaugurated by the charter called *ḥatt-ı ısmayīl* from Feb. 1856 the activities of the reformers were directed by 'Ali Pasha (y.e., d. 1871) and Fu'ād Pasha (y.e., d. 1869); the great figure in the third period (from 1871) was Midhāt Pasha (y.e., d. 1883).

The *ḥatt-ı ıshrāf* of Gālkhanē was not distinguished by any new ideas; in it the Sulṭān announced that henceforth he wished the honour and property of all his subjects to be secure, that the farming out of the taxes (*iltizām*) should be abolished and that recruiting for the army should be done in a more regular fashion; all criminals were to be tried in public and it was expressly laid down that all subjects, to whatever religion they belonged (*zhī-i ıslām wa-mill-i ṣā'ira*) should be equal before the law, without exception. To draw up the necessary legal enactments, the council of reform already in existence (*majlis-i aḥkām-i 'adliye*) was to be increased by a certain number of members. Although, in the preamble to the document, it was said that the former prosperity of the Ottoman state was due to respect for the Qur'ān, at the end it is stated that the new measures mean a complete change in ancient principles (*nizāl-i 'atika*). In fact the aim of Kāshid Pasha in drawing up the *ḥatt* had been as much to give satisfaction to the European powers, whose intervention in the domestic affairs of Turkey had become more and more serious (solution of the Greek crisis; agreement with Muhammad 'Alī), as to re-establish confidence in the home government. For the moment this double aim was achieved. But as soon as the attempt was made to carry out the reforms, numerous difficulties were met with. This was in the nature of things. The new institutions were based on the administrative systems of European states, notably France, and in introducing them problems and distinctions were created in the state which, under the old system, had never presented themselves in so threatening a form. Four groups of interests had to be dealt with: 1. the civilian officials and military officers who in the old order had been the slaves of the Sulṭān; 2. the free Muslim subjects of whom the 'ulamā were the most notable section; 3. the non-Muslim subjects, the rayas (*ra'īya*) and 4. the foreign interests. The consolidation of the first two groups offered least difficulty; religion united them and Mahmūd II and 'Abd al-Majīd had renounced their rights as sovereign over the lives and property of the officials; the ending of the feudal system by Mahmūd II had also been favourable to the combination of the Muslim elements. But to give the Christian and Jewish subjects equal rights to the Muslims

threatened to deprive the former of the considerable autonomy which they had enjoyed since the time of Mahammad the Conqueror; the attempts to deprive the Muslim ecclesiastics of their rights of jurisdiction and administration and the problems raised by the enrolment of non-Muslims in the army soon showed that the latter themselves did not regard the granting of equal rights as an unmitigated benefit and at the same time accentuated the hostilities and differences already existing between the different non-Muslim communities, differences often more serious than those between them and the Muslims. Lastly the foreign group, although numerically weak, with the liberties and privileges granted by the capitulations occupied a position which was all the stronger because foreign powers took advantage of it, not only for their own profit but also to make themselves the protectors of non-Muslim subjects in their struggles to keep their privileges (France by virtue of the capitulations; Russia by virtue of the treaty of Kütük Kainardji). The realisation of the reforms was bound to be in great part illusory so long as the privileged position of the foreigners, known as extra-territoriality, continued to exist in striking opposition to the centralisation of power which was the aim of the reforms. It is for this reason that the great difficulties of the tanzimât centred round the problem of the *rayas* (insurrections in Crete, Bosnia, Herzegovina, Lebanon and Bulgaria) and the intervention of the Powers (among them the Holy See) which was always the result. It was for this reason also that there was formed in Turkey itself a considerable party which regarded the tanzimât as dangerous to the empire. But the path once taken by Rashid Pasha could not be abandoned, because the old institutions themselves no longer offered guarantees. It was rare however, to hear serious objections from the religious point of view; the Shaikh al-Islâm was present at the reading of the *hatt-i sherif*, although it does not appear that he sanctioned by a *fatwa* the different laws which were promulgated as a result of it. The reforming ministers themselves always refused on the other hand to repeal definite sections of the *shari'a* such as that of capital punishment for apostasy from Islam or the non-validity of the evidence of a non-Muslim before a tribunal, although they were quite ready to pass any measures to which the *shari'a* did not refer.

The tanzimât were thus carried through in a very troubled atmosphere. A grand vizier could hardly ever carry through a programme peacefully; there were sudden falls from power often followed by equal unexpected returns to office. Thus Rashid Pasha was no less than six times grand vizier between 1846 and 1858 although the Sultân 'Abd al-Madjid was rather in favour of the reforms. The same changes in office took place under 'Abd al-Aziz, much more capricious than his predecessor; Midhat Pasha was grand vizier for three weeks in 1873 and for the second time for seven weeks (Dec. 19, 1876-Feb. 5, 1877). There were also periods when foreign intervention suddenly called for new efforts; this was notably the case during the deliberations which preceded the peace conference in Paris. Turkey's allies then wanted the Sultân to bind himself by an international agreement to carry out the reforms which were still in abeyance. The result was the *hatt-i humâyûn* of February 1856, which was nominally a spontaneous act of the

Sultân. In article 9 of the Treaty of Paris of March 30, 1856 the contracting Powers take note of the declaration by expressly stipulating that it would not give them the right of interfering in the interior administration of the empire. Now the *hatt-i humâyûn* is simply a more detailed confirmation of the promises made in 1839 regarding the equality of treatment of non-Muslim subjects; in it is particularly laid down that mixed tribunals shall be instituted for lawsuits between Muslims and non-Muslims and that the laws relating to them shall be codified as soon as possible. One further important point in this act is the right conceded to foreign powers to possess landed property in Turkey. The intervention of European powers did not cease, however, after 1856; thus in 1859 they demanded an enquiry into the European provinces. In 1867 the Ottoman government was again taken to task by the Powers; but they were not agreed among themselves as to the steps to be taken: while Russia demanded an extreme system of decentralisation, France encouraged the Porte to try a policy of fusing together the different categories of subjects. It was the latter view that prevailed for the moment; the opening of the lycée of Ghazala Serây for teaching French was one of the consequences. After 1870, foreign pressure became weaker on account of events in Europe (Franco-Prussian War); it is just this period that is marked by a strong tendency to decentralisation in Turkey, but of a kind which pleased neither the Powers nor the *rayas*. This policy had a certain amount of success, as for example the strengthening of Ottoman power in Tripolitania and Tunisia. The reaction was not long in being felt. The insurrections of 1875 in the Slav provinces resulted in "a European conference" at Constantinople in 1876 and in the following year came the disastrous war with Russia which separated Rumania and Serbia from the Ottoman Empire and created an almost independent Bulgaria (Treaty of Berlin, July 13, 1879). The act by which Turkey had tried to anticipate this intervention was the promulgation of the Ottoman Constitution on December 23, 1876, the day of the first meeting of the European Conference. But this remedy, already regarded very suspiciously by the new Sultân 'Abd al-Hamid, did not gain the success anticipated; the author of the constitution, Midhat Pasha, was banished two months later and soon the constitution was completely ignored by the Sultân. In the long "Hamidian" period which followed the War with Russia, the reforms were not, however, completely suspended; the laws of 1879 affecting the judiciary in particular in a way completed the legislation of the tanzimât.

We now give a rapid survey of the different reforms. The grand Council of Justice, also called the council of the Tanzimât, underwent several transformations in 1854, 1861 and lastly in 1868, when its activities were definitely divided into administrative and judicial functions — i.e. into a Council of State (*shûrâ-yi devlet*) which retained its form till 1918 and a High Court of Justice (*divân-i ahkâm-i adliye*). Immediately after 1839, Rashid Pasha had introduced a new system of administration in the provinces on the French model and abolished the *iltizam*. This proved to be too much centralised and in 1852 the powers of the governors had to be again extended; the

farming out of the taxes had again to be introduced because levying them directly did not bring enough into the treasury. The law relating to the wilâyets of 1864, completed in 1871 by another law, completed the system of provincial administration which lasted till 1918. This law of 1864 was further remarkable because it provided for each province new tribunals, different from the courts of the *kâdîs*, although the judges were very often 'ulamâ'.

Even before 1864 there had been created at Constantinople and several large provincial towns a commercial court and a mixed court (for law-suits between Ottomans and strangers); these two courts were amalgamated in 1860, but it was not till the legislation of 1875 and 1879 that all the non-religious tribunals were put under the Ministry of Justice. The first common law was the Commercial Code of 1850, based for the most part on French law, as were the Penal Code of 1858, the Code of Maritime Commercial Law of 1863, and the Code of Commercial Procedure of 1861. The Civil Code or *Medjelle* of 1869 on the other hand is an attempt at codification of the law of property and the law of guarantees according to the *Hanafi Madhhab*. This codification carried out by a council under the presidency of Ahmed Djewdet Pasha is not to be considered however as being obligatory in use; it is rather a manual for judges who have not studied Muslim law. The law regarding the execution of judgments and the Code of Civil Procedure, both of 1879, were not recognised by the foreign missions, so that they were never applied in mixed suits.

Legislation for the different non-Muslim communities was an extremely complicated task. The "Organic regulations" which in 1860 were published for the large communities had the tendency to give more power to the lay element in the administration, to the detriment of ecclesiastical authority. The communities in general kept their judicial autonomy. The Porte had frequently to deal with disputes within the communities and differences between the Roman Catholics and the Eastern sects "united" with the Holy See. Here again the European Powers had every opportunity to intervene, especially Russia in the question of the primacy of the Gregorian Armenian Church in Turkey and in that of the schism of the orthodox Bulgars who were recognised as an autonomous community in 1870. The enrolment of non-Muslims in the army, decided upon in 1855, when the *harâkî* was officially abolished, remained a dead letter during the tanzimât. It was replaced by an exemption tax (*hakef*).

In foreign relations all the attempts to obtain the abolition of the capitulations which had been begun at the Paris Congress remained fruitless. A slight change in principle was effected on the occasion of the law of 1873, which granted foreigners the right to possess real estate.

From 1845 a council had been instituted to elaborate reforms in education (*medjlis-i me'arif*). The President was Fu'ad Pasha and later Djewdet Pasha. In this field the tradition of religious instruction had to be combated. The creation of a university, in 1845, could not at first have any direct consequences and the creation of the secondary (*rüşdiye*) school and primary (*idâdiye*) presented considerable difficulties. Lastly the opening of the Lycée of Ghazala Saray in 1868 where

French was to be the language of instruction, meant the introduction of a foreign culture and was vigorously opposed. It was not till towards the end of the nineteenth century that these measures began to bear fruit.

The period of the tanzimât was comparatively poor in measures of an economic nature. The finances of the state were all the time in a deplorable condition, aggravated more and more by the foreign loans (from 1854) and by Sultan 'Abd al-'Azîz's extravagance. The international control of the national debt which was the result was not, however, taken in hand till after the financial catastrophe of 1879. The decree of 25th Maharram 1299 (Dec. 20, 1881; cf. Young, v. 69) established the International Council of the Ottoman Debt.

The following table of the more important legislative measures of the tanzimât gives the sources as far as possible. The references to the collection of laws, *Düstûr*, which contains the legislation down to 1886 are taken from Young, *Corps de Droit Ottoman* (Oxford 1905—1906), which gives most of the texts in a French translation. Where the text is not given the reference has been put in brackets. Most of the other references have been taken from Engelhardt, *La Turquie et les tanzimat*, Paris 1884. Although the statements in this book are not very accurate, they may help to complete the general survey of the reforms especially in the first period.

The period of the tanzimât also saw an intellectual effort in the Turkish Muslim element, which laid the foundations for the new Turkish culture. It was in this period that Shukri, Nâmiî Kemal and Ahmad Wefik worked, who created a new Turkish literary language. To it also belongs Ahmad Djewdet Pasha, famous as an historian, man of letters and legislator (cf. Fâtime 'Aliye, *Ahmad Djewdet Pasha wa-Zenân*, Constantinople 1332). Ziya Gökalp, the theorist of the modern Turkish nationalism, also recognises the high importance which the period had for the development of Turkish thought (cf. *Türkîyat-ı Eskiye*, Ankara 1339, p. 6; and Halide Edib, *Memoirs*, London 1926, p. 238 sq.).

Bibliography: The Turkish texts of the legislative measures are given in the *Düstûr*. French translations are given in Aristarchi Bey, *Législation Ottomane*, Constantinople 1873—1874, supplement in 1878; G. Young, *Corps de droit ottoman*, vol. I.—vii., Oxford 1905—1906; A. Heideborn, *Droit public et administratif de l'Empire Ottoman*, Leipzig 1908; a Greek translation, *Kônines Oikoumenes*, was utilised by Young. For foreign relations cf. Gabriel Effendi Noradounghian, *Recueil d'Actes internationaux de l'Empire Ottoman*, tome II.—iv., Paris 1900—1903.

The Turkish historical sources on the tanzimât are not abundant: Ahmad Lutfi, *Ta'rikh* (Constantinople 1290—1328), vol. vi.—viii., covering the years 1255—1265; Othman Nuri, *'Abd al-Hamid (khan) wa-Dewr-i Saltanat*, vol. I., Constantinople 1327; there is no monograph on the tanzimât. — European works: Ed. Engelhardt, *La Turquie et les tanzimat*, vol. I.—II., Paris 1884; Chertier, *Les réformes en Turquie*, Paris 1868; A. Ubicini, *Lettres sur la Turquie*, Paris 1855; do., *La constitution ottomane*, Paris 1879; Millingen, *La Turquie sous le règne d'Abdul Aziz*, Paris 1868; Rosen, *Geschichte*

TARAB. [See MÜSİKİ.]

TARABULUS or **ATRABULUS**, the Greek Tripolis, a town in Syria near the coast of the Mediterranean, north of Djubail. It lies partly on and partly beside a hill at the exit of a deep ravine through which flows a river, the Nahr Qadisha (Arabic Abū 'Alī). West of it stretches a very fertile plain covered with woods, which terminate in a peninsula on which lies the part of al-Minā. The harbour is protected by a series of rocky islets lying in front of it and by the remains of an old wall. The old Phoenician name of the town, which is first mentioned in the Persian period, is unknown; its Greek name came from its division into three quarters each separated by walls, the Tyrian, Sidonian and Aradian. The old town lay on the site of the present port. It was protected by its situation and the defences of the quarters and was very difficult to take, but was constantly threatened by the danger of being cut off on the land side from all connection with the outer world and even from supplies of drinking-water. This was shown when Mu'awiya in the caliphate of 'Uthmān sent a body of troops under the leadership of an Ardi named Šufyān b. Mu'jib thither, who built a fort in order to cut off the town completely. The inhabitants were reduced to such straits that they sent to the Byzantine emperor and begged him to send ships with all speed to their assistance. The emperor did so and the Tripolitans succeeded in boarding the ships by night and thus escaped. To populate the empty town, Mu'awiya made a considerable number of Jews (Balādihuri; Ya'qūbī says Persians) settle there. Mu'awiya is said to have sent thither annually some troops under an 'Amīl, who, when navigation stopped, withdrew again except for the 'Amīl and a handful of men. The geographer Ya'qūbī (278 = 891) mentions the wonderful harbour which could hold one thousand ships. Fifty years later, Istakhri calls Tarābulus the harbour of Damascus and speaks of the extraordinary fertility of the district with its palms and sugar-cane fields and speaks approvingly of the high standards of the people. An excellent description is given by Nāṣir-i Khusrāw (438 = 1047) of the town under the Fātimids. The whole countryside, he says, consists of fields and gardens with sugar-cane, citrons, bananas, oranges, lemons and date-palms; the town was protected on three sides by the sea, on the land side by a wall with a broad ditch. In the centre stood a splendid mosque; the town had 20,000 inhabitants of whom the majority were Shī'is and many villages belonged to it. The garrison of the Sultan was maintained by the tolls paid by the many ships that arrived there while he himself had ships which used to go to the Mediterranean coasts from there.

In the Crusading period a county of Tripoli was created and given to Raymond of Toulouse

but the capital itself had still to be taken from the Muslims. Raymond began the siege in 493 (1101) and to isolate the town more effectively built a fort on a hill on the ravine of Qadisha, called Mons Peregrinus (by the Arabs Sandjil i. e. St. Giles), at the foot of which in course of time a little town arose. He died in 499 (1105) in this fortress without having attained his goal and it was not till July 12, 503 (1109) that the beleaguered town capitulated. Idriṣi, who wrote in 1154, mentions the fortress "built by the Frank Ibn Sandjil", and gives a list of towns and villages belonging to Tarābulus and of the rocky islets off the harbour. In 1170 the town suffered severely from a terrible earthquake. After the fall of Jerusalem in 1187 Tarābulus held out for another century as an important base for the Christians until in 688 (1289) the army of the Mamlūk Sultan al-Manṣūr Kalā'ūn appeared before it and it had to surrender on April 26. This proved a turning point in its history for the Sultan, learning a lesson from the past, built a new Tripolis on the Pilgrims' Hill while the old town was destroyed and sank to be an insignificant little harbour known as al-Minā (from the Greek λιμὴν). Dimishqī who wrote about it c. 1300 A. D. describes the plentiful supply of water in the town — in addition to the running water on all sides, an aqueduct 200 ells long, 70 ells high was built — and the gardens with excellent fruit in plenty. He also mentions the various localities belonging to Tarābulus including Botrys, Būka'ā and the Nusairian hills. Among the kingdoms (*mamlakāt*) divided among the descendants of Saladin was a kingdom of Tarābulus but this division was soon replaced by a division into five provinces, and Tarābulus was put under Damascus as its port. The town is now in a comparatively prosperous condition owing to the remarkable fertility of the surrounding country, the not inconsiderable shipping and the silk industry. Of non-Muslim inhabitants the orthodox Greeks are the most numerous. A series of towers along the seashore recalls the warlike past of the town.

(FR. BÜHL)

TARABZUN, the Turkish form of the name of the town of Trebizond, in Greek Τραπεζούνα. Situated at the southeast corner of the Black Sea on a very hilly coast which is separated from the rest of Asia Minor and Armenia by a high range of mountains, this town, like the population of the country immediately around it, has always led a more or less isolated existence, from which it only emerged in those periods when

its geographical position made it become an important point on the great trade-routes. Trebizond is mentioned for the first time by Xenophon (*Anabasis*, iv. 8) and is said to have been a very early colony of the town of Sinope. In the early centuries of our era it was a frontier town of considerable importance for the Roman Empire but from the time of Justinian it was the town of Neo-Caesarea (Niksar) that became the most important centre in this region. After the Arab conquests had deprived Byzantium of large parts of Armenia, Trebizond became the capital of a theme under military government (Thema Chaldia: Const. Porphyrt., *De Thematisibus*, i. 30) which it remained till the foundation of the empire of the Comneni of Trebizond in 1204. During these centuries the town again acquired great commercial importance and it is in this connection that it became so well known to the Arab authors of the period. They call it Atrābarund or Tarābarunda and they called the Black Sea Bahr Tarābarunda (cf. e.g. Balādhūri, ed. de Goeje, p. 195). To the lands of Islām, Trebizond was an important seaport through which the products of the lands of the Rūm, especially rich cloths, were imported into the northern parts of the Muslim empire; this brought in an enormous revenue to the Byzantine governor of the town (Iṣṭakhrī, *B. G. A.*, i. 188; Ibn Hawkal, *B. G. A.*, ii. 132). Muslim merchants lived in Trebizond and dealt there with Armenians, Greeks and Caucasians (Maʿwūdī, *Murūj al-Dhahab*, ii. 3, 46; Maḳdīsī, *B. G. A.*, iii. 148). Very probably the Muhammadan trade-route went by Kāhikālā, later Erzerūm, and then through Adharbāidjān and Transoxania, because the natural ports of the Muhammadan empire were the coast-towns of the Mediterranean. The conquest of the interior of Asia Minor by the Saldjūks again isolated Trebizond and its communications with Constantinople became more and more difficult, while the new masters of Anatolia had not for the moment any great interest in commerce; they had however possessed a part of the port of Şamsūn since 1194. But the foundation of the empire of the Comneni in 1204 by Alexius Comnenus secured for Trebizond as the capital of the new empire a predominant position. The empire stretched at first over almost all the south coast of the Black Sea but soon suffered considerable losses to the empire of Nicaea and by the capture of Sinope in 1214 by the Sultān ʿIzz al-Dīn Kaiḳobād (cf. *sinūs*). Soon afterwards the Mongol conquests had their effect on Trebizond; Djalāl al-Dīn Khwārizm Shāh after founding his new empire at Tabriz was attacked by the other Muslim rulers and in 627 (1230) was fought the battle of Khilāt in which the Khwārizmians were completely defeated by the forces of Rūm and Syria. The remains of their army took refuge in the territory of Trebizond (Abu ʿl-Farāj Barhebraeus, *Taʾrīkh Muḥḥataṭar al-Dawal*, Bairūt 1890, p. 429 and *Chronicon Syriacum*, ed. Bedjan, p. 467); it appears doubtful whether there was actually an alliance between Djalāl al-Dīn and Trebizond as Fallmerayer (p. 108) says. In any case the emperor of Trebizond very soon afterwards had to recognise the suzerainty of the Sultān ʿAlā al-Dīn Kaiḳobād, whom he had to assist with troops in his struggle against the Aiyūbids (Chalcocondylas *Bk.* ix.: Ibn Bibi, ed. Houtsma, *Récueil de Textes*, etc., iii. 134 sqq. alike reveal this state of dependence).

In 1240, the Mongols put an end to the hegemony of the Saldjūks. Trebizond was spared their invasion but the emperor Manuel had to declare himself a vassal of the Mongol empire (cf. e.g. William of Rubruck, ed. de Bacher, Paris 1877, p. 6; Haktuyt Society edition, London 1900, p. 46). In this period the Arabic sources change the orthography of the town to Tarābarūn or Atrābarūn (cf. especially Dimashki, ed. Mehren, p. 106, 145, 228 and Abu ʿl-Farāj, *Muḥḥataṭar* who writes Tarābarūn: Abu ʿl-Fidā, *Tahwīm al-Buldān*, p. 392—393; Yāqūt, i. 306 keeps the old orthography). After the Mongol conquest the city experienced a new commercial revival; the centre of political power having shifted to Tabriz, Trebizond became the corridor to Asia Minor, through which ran the great trade-route to the Far East which the Mongols had opened. The people of the town did not themselves take part directly in this traffic which was in the hands of Genoese and Venetians but they profited greatly by it, because it, for example, gave them an opportunity to export the products of the city itself (especially linen, silk and woollen goods and the minerals of the adjoining mountains). The Genoese colony in particular, with their own consul at the head, from the second half of the thirteenth century occupied premier place among the foreigners and, supported by its mother city, was sufficiently powerful to obtain extraordinary concessions from the emperors. The centre of their activities was the quarter called Leontocastrum. In proportion as the Mongol power declined (after 1320) the territory of the emperor of Trebizond suffered more and more from the attacks of the Turkomans of Asia Minor, who took possession of the strongholds in the mountains; at the same time civil wars were weakening the empire, while the trade-routes became impracticable. Its neighbours were now the little Turkish states which had replaced the empire of the Saldjūks, Kaşantuni in the west [q.v.] with Sinope, to the south, the dynasty of the Dhu ʿl-Ḳadr and the south-east the Ak-Ḳoyunlu Turkomans. The emperors of Trebizond in this period endeavoured to strengthen their position by marrying princesses of their house to Turkoman princes. This state of affairs lasted until the Ottoman Sultān Bāyazīd I after the capture of Şamsūn in 1396 and his victory over the Ak-Ḳoyunlu became a redoubtable neighbour. Timūr's advance saved Trebizond for the moment; in 1392 the emperor Manuel came to submit to the conqueror and a few years later had to assist him in his preparations against Bāyazīd; the fleet demanded by Timūr was not however required, as, before it was equipped, the battle of Angora took place (1402); a body of soldiers from the city seems however to have taken part in the battle against Bāyazīd (Fallmerayer, p. 229). Timūr's armies withdrew, going to the south of the mountains of Trebizond; this territory with the towns of Armenia and the Caucasus now passed to Khālīl Sultān, nephew of Timūr. It was during the period of Timūr's invasion of Asia Minor that the Spanish envoy Clavijo passed through Trebizond. The revival of Ottoman power once more became dangerous and resulted in the decline of Genoese influence and the rise of that of Venice. Under Murād II, Turkish ships in vain tried to seize Trebizond but after the fall of Constantinople the town was doomed. The emperor Kalo-Johannes then concluded

an alliance with Uzun Hasan to whom he gave his daughter in marriage. David, the successor of Kalo-Johannes endeavoured to extend this alliance to the Christian rulers of the Caucasus and the Muhammadan lords of Kāstāmūni and Karamān [q. v.]. But all these efforts were in vain. In 864 (1460) the Ottoman Sultan Muhammad II set out on his great campaign in Asia Minor which gained him Kāstāmūni and Sinope without a blow being struck. He then turned against Uzun Hasan, took from him the frontier fort of Kōila Hissar or Koyunlu Hissar and concluded a peace with him. He then marched on Trebizond in spite of the attempts of Sara Khānū (Sara Khātan in 'Ashik Pasha Zade), mother of Uzun Hasan, to persuade him to abandon his designs on the town. The Turkish fleet commanded by the grand vizier Mahmūd Pasha had already gone to Sinope. The emperor David was quite ready to capitulate when Mahmūd Pasha [q. v.] appeared with the vanguard of the Turkish army. The Sultan with some difficulty was persuaded to approve of the capitulation, by the terms of which David and all his family were taken to Adrianople; a few years later he was put to death by order of the Sultan. The Turks immediately installed themselves in the town and citadel and only allowed a third of the population to remain in the suburbs. The majority of the rest were carried off to Constantinople. The church of the citadel was converted into a mosque (Orta Djāmi') and also the church of St. Eugenius which was henceforth known as the Yeni Djāmi'; all the country conquered was granted as fiefs to Muslims. Trebizond never again became a town of great importance under the Ottoman empire; it became the capital of an eyālet to which also belonged the town of Bitum (Hādjdji Khalifa, *Djāhān-nūma*, p. 429 sq.). For some time it was the residence of Selim I as crown prince; the mother of the Sultan is buried in the Khātuniye Djāmi'. Trade was conducted mainly by sea; Ewliya Celebi, for example, only visited it from the sea; the road to the interior, to Erzerüm, continued to exist but it had no longer the commercial importance it once had. In 1834 this road was improved by Rashid Pasha, after the route through the Caucasus had been closed by the Russians (Rosen, *Gesch. der Türkei*, I, 214). After the introduction of the wilāyets in the sixteenth century the wilāyet of Tarabzun included the sandjaks of Tarabzun, Şamsün, Lazistan and Gümüsh-Khāne (Cabinet, I, 41); the present wilāyet, as reorganised since the war, is much smaller in area, with 6 kādīs and 356,259 inhabitants (cf. *Türkiye Sānūmeri*, 1926, p. 682). In the Great War, Trebizond was occupied by the Russians in April 1916, but as a result of the Russian revolution and the negotiations at Brest-Litovsk, the Turks had no difficulty in reoccupying the town on Feb. 24, 1918.

The centre of the town of Trebizond has been built on a plateau in the form of a table (hence the name) which runs down to the sea on the north side and terminates on the south in an elevation on which stands an acropolis (Orta Hissar). Above the acropolis again rises the citadel (*Şala*). The latter, called by the Turks Boz Tepe, is bounded on the east and on the west by ditches which have to be crossed by bridges to reach the suburbs. The country all round is mountainous and covered with vegetation. The suburbs, lying along the coast to the west and east of the old

town, have a mainly Christian population while since the Turkish conquest the centre has been Muslim. The eastern suburb is the centre of trade and navigation; the ships moor in the roads and one can hardly speak of a harbour. The population put at 35,000 by Cabinet, has always been very mixed. The Lazes (cf. LAZ), as the principal inhabitants of all the surrounding coast, form a considerable section of it and are mainly boatmen and fishermen. Ewliya Celebi found other aboriginal inhabitants there whom he declares to be the least agreeable section of the populace. The Turkish spoken there shows in its sounds considerable influence of local dialects. The Greeks (8,200 according to Cabinet) and Armenians (6000) form the Christian element. After the Turkish defeat in 1918 and in spite of the recent reoccupation, there arose in all the lands of the Pontus with Trebizond as centre, quite a strong movement, which aimed at reviving the old empire, but the victory of the Angora government put an end to these attempts at independence (cf. in particular, the government publication, *Pontus Mevâlihi*, Angora, 1338 (1922)). A section of the converted Greek population has preserved to the present day certain customs and rites of Christianity (cf. F. W. Hasluck, *The Crypto-Christians of Trebizond*, *Journal of Hellenic Studies*, xli, 199 ff.).

TARAFÄ = 'ABD AL-BAKŪI is unanimously considered by Arab critics one of the foremost poets of the period before Islam and is the author of the longest of the poems known by the name of *Mu'allafāt*. He is at the same time one of the earliest poets of that period of whom poems are preserved. The editors of the *Mu'allafāt* and of his collected poems generally give a full genealogy from which however we can gain with certainty only that he belonged to the section of Bakr of the Wā'il tribes. His father's name is given as al-'Abd b. Sufyān, the name 'Abd being probably only an Islamic abbreviation of some theophoric name like 'Abd Manāt. The

biographies given in Arabic authors are exceedingly unsatisfactory, and generally attempts are made to draw conclusions from his verses. This much seems certain, that he had relations with the court of the kings of al-Hira, especially with king 'Amr b. Hind, who reigned approximately from 554 to 568 of the Christian era. The lands of the poet's tribe lay in South-eastern Arabia, in Bahrain and the Yamäma, which appears also to have been the home of the earliest Arab poets of whom we have any reliable knowledge and it is possible that Arabic poetry, as we know it, spread from this part of the country.

Tarafa is, in a legendary account, brought into contact with the still earlier poet al-Musayyab b. 'Alas, whom he is said to have corrected when he made a mistake in one of his poems. Generally Arab antiquarians describe Tarafa as extraordinarily precocious and argue from a poem (Ahlwardt, N^o. 1) that he was a mere boy, when he composed verses after the death of his father, when his uncles acted unjustly towards his mother Warda. He is also stated to have died very young. The latter is a conclusion arrived at from some verses of al-Khirkik, who is claimed to have been a sister and in the verses in question mentions the age of 26 years. As she is said to have been a daughter of a man named Hiflän it is more probable that her elegy, composed upon another unknown person, was assumed to refer to Tarafa, who may have died at a comparatively early age.

We obtain some light by comparing contemporary history. When 'Amr succeeded his father in 554 A. D. he gave to his brothers certain commands, but slighted his half-brother 'Amr b. Umäma. The latter went to South Arabia accompanied by Tarafa to obtain help from the Yamanite princes. Tarafa had left some camels belonging to (or inherited from) his father in the district where Kābūs, a brother of the king, and 'Amr b. Kāis al-Shaibāni were in command. 'Amr b. Umäma received the support of the Yamanite tribe Murād, the troops being under the command of Hubaira b. 'Abd Yaghūth. When they reached the Yamäma, Hubaira fell ill through drinking from a well and 'Amr b. Umäma sent to him a doctor who applied hot irons clumsily to his stomach in the effort to cure him and almost killed him. Believing that the doctor had acted under instructions of 'Amr, Hubaira had him murdered at a place called Qadib and he and his clansmen returned to the Yaman. The man who had slain 'Amr went with his family to al-Hira expecting a suitable reward from king 'Amr, but instead of this he and his family were burned alive. This event is mentioned by Tarafa in the first poem of his *Diwān* in the recension of Ibn al-Sikkit (not found in Ahlwardt's edition except for a few verses). The poet also claims in the same poem the return of the camels confiscated as being the property of his father who is here called Ma'bad. They were pastured near Tabāla (Ibn al-Sikkit, N^o. 2). In this poem which must be considerably later, he gives full vent to his feelings because the property is not restored and accuses also a man named 'Abd 'Amr b. Bishr, who was not a relation of the king as is generally assumed by the biographers. The latter seems to have benefited from the confiscation. This poem had not the desired effect and Tarafa composed

a violent attack upon the king in which he says that it would be preferable to have a sheep to rule than king 'Amr (this poem has 17 verses in the recension of Ibn al-Sikkit; only 9 verses are found in Ahlwardt, N^o. 7 and App. 17). This appears to have been the climax and from a poem by a sister of Tarafa, whose name Ibn al-Sikkit does not give, it appears that 'Abd 'Amr was to a great extent responsible for Tarafa falling into the hands of the governor of Bahrain (this poem is not in Ahlwardt nor Seligsohn). Ibn al-Sikkit tells us further that the governor was not willing to kill him and the king sent an official who killed the unwilling governor as well as Tarafa.

Against this we must set the tale of the letter. King 'Amr in a celebrated legend is stated to have given to Tarafa and his kinsman al-Mutallammi, after a visit to his court where he treated them with honour, a letter each containing a recommendation for suitable reward by the governor of Bahrain upon their arrival. Such a course of bestowing favours, though unusual, was plausible as the reward might consist of cattle, but al-Mutallammi, becoming suspicious, broke the seal and asked a youth at al-Hira to read the contents. Reading that the letter contained a command for their execution and afraid of his life, he decided to go to Syria and advised Tarafa to open his letter also, but the latter refused to do so, thinking it impossible that the king would dare to have him murdered among his own people. While al-Mutallammi fled to Syria and from there sent his *Hidjā*-poems to the king, Tarafa went to Bahrain and met with a cruel death, being buried alive after having been maimed. I believe that this account has been invented by ancient antiquarians who knew from the poems of al-Mutallammi that he made mention of a letter in his poems, the contents of which are not even known and may have been of an entirely different nature.

Ibn al-Anbārī in the introduction to his commentary on the *Mu'allafāt* claims an uninterrupted chain of authorities down to al-Mutallammi himself, a chain which has every semblance of being genuine, unless we cast suspicion upon Ḥammād al-Rāwiyā (ed. Rescher, p. 1). From the same commentary we learn that Tarafa had already received discourtesy from king 'Amr and his brother Kābūs when he visited the court during the reign of their father (*loc. cit.*, p. 5). I am inclined in consequence to believe that Tarafa never visited the court of king 'Amr at all during his reign, but took sides with his half-brother, 'Amr b. Umäma, went with him to the Yaman, where they stayed for some years, because 'Amr b. Umäma married there and had several children, before he undertook his expedition to the Yamäma (Commentary of Ibn al-Sikkit). This also makes it impossible that Tarafa died at a very early age; he had been at the court of al-Hira before the accession of 'Amr, probably as one of the notables of his tribe and spent several years in South Arabia. Young he may have been in comparison with other *Shāikh*s, but it would be rash to make any definite statements. As regards his religious views we can only say that from his poems we can glean nothing that would point to anything else than the customary pagan fatalism.

As regards his value as a poet we can only repeat the opinion of native critics who are

only undecided whether he is one of the greatest poets of the time of paganism or the greatest of all. His description of the camel in his *Mu'allaf* is justly celebrated and hardly surpassed by any other Arab poet. As regards the genuineness of his poems I must refer the readers to the conclusions of Ahlwardt and Geiger, though I should like to suggest that perhaps more is genuine than these two authorities will admit. If al-Mutalammis, al-A'ah, 'Ubad, the *rawf* of the latter, Simāk b. Harb, Hammād al-Rāwiyā and al-Haithanī b. 'Adī really handed down his poems we may expect that his poems did come down to the time when they were finally commented by grammarians and are preserved with a certain amount of accuracy. The best accounts we have of the poet are contained in the *Diwān* in the recension of Ibn al-Sikkī, where unfortunately the editor has mixed the latter's notes with those of al-A'ah and in the introduction to the *Mu'allaf* by Ibn al-Anbārī.

Ahlwardt, *Bemerkungen über die Echtheit der alten arabischen Gedichte*, Greifswald 1872; G. Jacob, *Studien in arabischen Dichtern*, Berlin 1893. — Verses and fragments of Tarafa are cited in innumerable works; in the *Lisān al-'Arab* he is quoted 264 times according to my index to that work.

(F. KRENKOW)

TARANČI, Eastern Turki word for agriculturists; as the name of a people, applied to the colonists transported by the Chinese government in the middle of the xviii century from Kāshgharia to the Ili valley; cf. Radloff, *Wörterbuch*, iv. 841. The Taranči are said however, even in the Ili valley, to have described themselves as the native population (*Yärläk*, cf. Radloff, ii. 343). They numbered 6,000 families of whom 4,100 were settled on the right and 1,900 on the left bank of the Ili; for further particulars see Radloff, *Aus Sibirien*, ii. 331 sq. According to a census of the year 1834 the number of families had increased to 8,000. Down to the beginning of the rebellions of the Muslims in Kāshgharia the lot of the Taranči is said to have been quite tolerable; but their prosperity was henceforth undermined by frequent requisitions for military purposes. After 1863 the Ili valley also became involved in

the rebel movement; after hard fighting an independent principality of the Taranči arose under Sulḥān Abū T-'Alā or A'la Khān (see article *QULIJA*). In 1871 this was conquered by the Russians and remained under Russian rule till 1882. The Taranči then numbered 51,000 of whom 45,373 went over to Russian territory, when the Ili valley was returned to the Chinese (treaty of St. Petersburg, Feb. 24, 1881). They were settled in the district of Semiryece (*Semiryenetskaya Oblast'*); the leader of these emigrants was a wealthy merchant, Wali Akhūn Yuldashev. The Taranči formed the majority of the population of the town of Džarkent which was founded at this time (in 1911: 16,000 of 25,000). Up to 1887 the lands allotted to the Taranči were several times taken from them for Russian Cossacks and the Taranči moved to other places. The Taranči are valued not only as agriculturists and gardeners but also as artisans and labourers; they are said to be unrivalled in building with clay. According to the census of 1897 they numbered 55,999; for a later date, larger numbers (up to 83,000) are given; the census of 1920 gave 62,303. The prosperity of the Taranči suffered severely with the rising of the Kāsh-Kirghiz in 1916 and the events of the revolution; in 1917 the number of Taranči living in towns in the administrative district of Džarkent was only 6,736 — compared with the previous figure of 16,000 in the town of Džarkent alone, a considerable reduction. In Soviet Russia, the Taranči do not form a political unit; they live in the autonomous republic of Kāshkistan; there is also a Taranči colony in Baitam-'Alī in Turkomeniān. The Taranči along with the Turkomans (Kāshgharlik) who later immigrated from Kāshgharia claimed they were Uighurs by race. This is due to a misunderstanding as the historical Uighurs never came so far west.

The number of Taranči remaining on Chinese territory was about 8,200 at the beginning of the xth century. Measures were taken at that time by the Chinese authorities, not without some success, to induce the Taranči who had emigrated to Russia to return to their original homes.

(W. BARTHOLO)
TARAWIH (A.), plural of the unusual sing. *Tarawha*, the salāts which are performed in the nights of the month of Ramaḍān. Tradition says that Muḥammad held these salāts in high esteem, with the precaution, however, that their performance should not become obligatory (Bakḥārī, *Tarawih*, trad. 3). Umar is said to have

been the first to assemble behind one *ḥārī*, those who performed their prayers in the mosque of al-Madina singly or in groups (*loc. cit.*, trad. 2); he is also said to have preferred the first part of the night for these pious exercises.

Canon law recommends the performance of the *tarāwīḥ* shortly after the *ḡalāt al-ḡiḡā*. They consist of 10 *ḡalāt*'s, each containing 2 *raḡ'a*'s; after every four *raḡ'a*'s a pause is held; hence the name *tarāwīḥ* "pauses". In the Mālikite rite they consist of 36 *raḡ'a*'s. They belong to the *ḡalāt*'s that are *ḡanna* and are as popular as any rite connected with Ramaḡān [q. v.]. Shī'a *ḡiḡā* prefers a thousand supererogatory *raḡ'a*'s throughout the month of Ramaḡān.

In Mekka people assemble in groups varying from 10 to 150 persons, behind one *imām* [q. v.], who acts in this case unofficially, even if he should be an appointed official. The recitation of the Kur'ān has a prominent place in these *ḡalāt*'s. Very busy people may perform even this prayer within a short space of time; other groups abide behind their *imām*'s reciting the Kur'ān once or several times in the nights of Ramaḡān. Even after the *tarāwīḥ* many people stay for pious exercises.

In Atchīn every night large crowds assemble in order to perform the *tarāwīḥ*. Usually, however, it is the *ḡinku* alone who takes the active part in them, the others limiting their part to a disrespectful joining in with the *imām* and the eulogies on the Prophet. The *ḡinku* receives the *ḡakāt al-ḡīr* as a remuneration for his endurance. In his *Arabic New-Year* (*Verh. Ak. Amst.*, new ser., xxv., No. 2) Wensinck traces the rites of Ramaḡān back to pagan times.

(A. J. WENSINCK)

TARĀZ, Arabic name for Talas, a river in Central Asia and the town on it probably near the modern Awliyā Atā [q. v.]. The town was of pre-Muḡammadan, presumably Soghdian origin [cf. soghd.]; Soghdian and Turki were spoken in Tarāz and in Balāshghūn [q. v.] as late as the fifth (eleventh) century (Maḡmūd Kāshgharī, *Divān Luḡāt al-Turk*, i. 31). As a town (*ḡāḡra*) Talas is first mentioned in the report of the embassy of the Greek Zēmarkhōs (*Fragm. Hist. Great.*, iv. 228) in 568. About 630 Talas (Chin. Ta-lo-see) was described by Hsien-Tsang as an important commercial town (*Mémoires sur les contrées occidentales*, transl. by Stan. Julien, Paris 1857, i. 14: "les marchands des différents pays y habitent péle-mêle"). Islām was first introduced there by the campaign of the Sāmānid Ismā'īl b. Aḡmad [q. v.] in Muḡarram 280 (March–April 893): "the emir

and the diḡāns" had to submit; the principal church (*ḡilīḡ-i buzurg*) was turned into a mosque (Nargahkht, ed. Schefer, p. 84). This shows that Christianity had gained a footing in Tarāz earlier than Islām. In the account of the same campaign in Tabarī, iii. 2138, the name of the town is not given: Ismā'īl captures the town of the "king of the Turks". In Ibn al-Aḡḡir (ed. Tornberg, viii. 97) a *diḡān* of the region of Tarāz is mentioned under the year 310 (922–923). Under the Sāmānids Tarāz was an important trading centre on the frontiers of the lands of Islām and of the Turks (*B. G. A.*, ii. 391, 9). Coins were first struck in Tarāz under the Illek-Khāns [q. v.]. In the Mongol period we find alongside of Tarāz the name Yangī first in al-'Omari (*N. E.*, xiii. 234), where Yangī appears as a distinct town from Tarāz or Talas. Under Timūr and his immediate successors (*Zafar-nāma*, Ind. edition, i. 229 where it is wrongly given as Nabkī; ii. 633 where Tarāz is erroneously placed between Akhsikant and Kāshghar; Hāfiḡ-i Abrū [q. v.], Cod. Bodl. Elliot, No. 422, f. 155d; 'Abd al-Razzāḡ Samarkandī, Cod. Univ. Petrop., No. 157, f. 190a) Yangī is frequently mentioned, sometimes in the combination Yangī-Tarāz (so Mirḡ'and, in Barthold, *Uluḡbeg i ego vostoza*, St. Petersburg 1918, text, p. 8). According to Ḥaidar Mirā [q. v.] Yangī was the Mongol name for Tarāz. In Mā wair al-Nahr there were people who came from Yangī originally and were called "Yangīlig". There was no longer a town of Yangī; there were many ruins in the same region but even then it was no longer possible to say with certainty what ruins corresponded to the town of Yangī (or Tarāz) (*Tārīḡ-i Raḡḡdī*, transl. E. D. Ross, p. 364). At the present day no traces of the town of Tarāz are known. (W. BARTHOLO)

TARĪ, a gold coin, a quarter-dīnār. When the Fātimids conquered Sicily in the second decade of the fourth (tenth) century they struck quarter-dīnārs (*rubā'*) there in large numbers. This denomination was new to Muḡammadan coinage and the fact that it was also introduced into Syria by the Fātimids suggests that it was intended to take the place of the Byzantine *tremitis*. The issue of this denomination was continued by the Norman Dukes who succeeded the Fātimids. For the history of the *tarī* as an Italian denomination, which does not concern us here, see the article *tarēno* in E. Martinori, *La Moneta, Vocabolario Generale*, Rome 1915. No satisfactory etymology of the word has yet been given; the one usually given connects it with *dīrkam*. (J. ALAN)

TARĪF, leader of the first Muslim forces to land in Spain in 91 (710). The Arab historians are not agreed as to the origin of this client of the famous general Mūsā b. Nuḡair [q. v.]: some say he was a Berber, others an Arab. Al-Rāzī calls him: Abū Zur'a Tarīf b. Mālik al-Ma'āfir and Ibn Khaldūn: Tarīf b. Mālik al-Nakḡāt. He has also occasionally been confused with the other client of Mūsā b. Nuḡair, Ṭarīḡ b. Ziyād [q. v.].

We know that when Mūsā b. Nuḡair was urged by Count Julian to cross to Spain with an army he consulted his master, the Caliph al-Walīd; the latter ordered him to explore before any expedition the south of the Iberian peninsula with a small contingent of light troops. Mūsā b. Nuḡair therefore sent Tarīf with 400 foot and 100 horsemen, all Berbers. Tarīf with this little force crossed the Straits of Gībraltar and landed on the penin-

sula which since has borne his name (*Djāzirat Tarīf*, now *Tarīfa* [q.v.]). He raided the vicinity of Algeciras (*al-Djāzirat al-Khadra'* [q.v.]) and returned to Africa with rich booty and captives. This first reconnaissance was made in Ramaḍān 91 (July 710). It was followed by the great expedition of Tārik b. Ziyād; and after this we hear no more of Tarīf.

(E. LEVI-PROVENÇAL)

TARIF (A.), explanation, definition, description, from *ʿarafa*, to know; e.g. *tarīf* *ʾayā* *ṣāḥib*, description of St. Sophia; *Kitāb al-Tarīfāt*, book of definitions, a well-known treatise of Sayyid Sharīf Ḍjurdjānī on the explanation of Sūfi terms.

In administrative language, in the feminine form, *tarīfa* or *tarīfa* with a short *i*, the word has the meaning of tariff, tax, price of food, of transport, etc.; e.g. in Turkish: *gumruk tarīfesi*, customs duties; *dimir yol tarīfisi*, railway charges.

In grammar this word means the Arabic definite article *al*, which is called the particle of notification or *ilām* of definition: *ḥarf al-tarīf*, *ilām al-tarīf*.

(B. CARRA DE VAUX)

TARIFA, in Arabic *Djāzirat Tarīf*, 'island of Tarīf', from the name of the client of Mūsā b. Nuṣair, Abū Zurʿa Tarīf [q.v.] who landed there with the first Muslim force at the beginning of the conquest of Spain, a small town in Andalusia on the north shore of the Straits of Gibraltar, at the foot of a mountain range called the Sierra de la Luna, and almost the most southern part of the European continent. Tarifa, with Algeciras (*al-Djāzirat al-Khadra'*; cf. i., p. 277*) and Gibraltār (*Djābal Tārik*; cf. ii., p. 169 iv.) under Muslim rule had always considerable trade with the Moroccan ports on the other side of the Straits. Al-Idrīsī says that it was surrounded by a dry stone wall. A tower (*ḥurūf*) was built in it by orders of ʿAbd al-Rahmān III, in 349 (960) as we know from an Arabic inscription above one of the gates of the *castello* of Tarifa. Tarifa was taken from the Muslims in 1292 by the King of Castile, Sancho IV, and it was in vain that they endeavoured to retake it two years later when it was admirably defended by Gasman el Bueno of Leon.

Bibliography: al-Idrīsī, *Ṣifāt al-Andalus*, p. 176–212; Ibn ʿAbd al-Munʿim al-Himyari, *al-Rawḍ al-miṣṣar fī ʿAdāb al-aḥḥār* (Spain), edition in preparation, No. 77.

(E. LEVI-PROVENÇAL)

TĀRIK b. ZIYĀD b. ʿABD ALLĀH, a Berber chief and leader of the Muslim forces in the conquest of al-Andalus. Ibn Idhārī gives a complete genealogy of him and connects him with the tribe of the Nafza. Idrīsī says he was a Berber of the Zamāta; Ibn Khaldūn calls him Tārik b. Ziyād al-Lalīḥ. Others again say he was a Persian, a native of Hamadān.

After the reconnaissance undertaken by Tarīf

[q.v.] in the south of Spain in Ramaḍān 96 (July 710), Mūsā b. Nuṣair, emboldened by its success, entrusted the command of an expedition on a larger scale to his client Tārik b. Ziyād, then leader of his advance-guard. He sent him to the Peninsula at the head of 7,000 men, for the most part Berbers, who crossed the Straits in small contingents in ships supplied by Count Julian. The crossing was probably effected in Radjab 92 (April–May 711). As his troops landed in Europe, Tārik concentrated them on a hill which took his name, the *Djābal Tārik* (Gibraltar, q.v.), the ancient *Calpe* on which the Almoḥad sovereign ʿAbd al-Muʿmin was later to build the town of *Djābal al-Falāḥ* (555 = 1160). Almost all the Arab chroniclers repeat in connection with Tārik's crossing the story of a vision which he had during the passage which foretold victory. Tārik lost no time in taking Carteia and Algeciras. The Goth king Roderick collected a considerable army to face the invaders in view of the danger that threatened his country.

Tārik then asked Mūsā b. Nuṣair for reinforcements; he sent him 5,000 Berbers in addition to the 7,000 he already had. The references in the Muslim and Christian historians are brief but sufficiently precise regarding the course of the conquest after the decisive battle fought between the Muslims and the Goths at the mouth of the Wādī Bekka (*Rio Barbate*) on the shores of the lagoon of the Janda. Tārik's 12,000 Berbers would not have held out for very long if Mūsā b. Nuṣair, in spite of his reluctance to increase the scale of the conquest, for it was only intended at first to be a simple reconnaissance and *razzia*, jealous of the bold and triumphant progress of his lieutenant had not decided to go himself to Spain, but this time with a purely Arab force. Leaving the government of Africa in the hands of his eldest son ʿAbd Allāh, he crossed to Spain in the early summer of 97 (712). His army numbered over 10,000 men, and in it were many Arabs of note with their Yamanī and Kaysī clients. This army after taking Medina Sidonia and Carmona laid siege to Seville and some months later to Mérida, which did not fall for a year, but a part of the Arab forces had been sent to fight the Goth prince Theodomir in Orihuela. After the surrender of Mérida, Mūsā b. Nuṣair advanced on Toledo and joined Tārik on the way. The latter after the defeat of the Goths had marched on Ecija, then on Toledo, at the same time sending three columns to take Cordova, Archidona and Elvira. At Toledo, Tārik, the Arab historians say, captured fabulous wealth and wrote to Mūsā b. Nuṣair to give him an account of his victory.

The meeting of Tārik and his master is a favourite subject with the historians who say that Mūsā inflicted the worst humiliations on his client. The conquest went on and soon the Muslim troops reached Saragossa and the highlands of Aragon, Leon, the Asturias and Galicia. When Mūsā b. Nuṣair with Tārik returned to Damascus to report their success to the caliph, Muslim Spain with its little nucleus of Berber and Arab soldiers had already practically attained its extreme geographical limits.

(E. LEVI-PROVENÇAL)

TARIQA (pl. *ṭarīq*). This Arabic term, meaning "road, way, path", has acquired two successive technical meanings in Muslim mysticism:

1. In the ninth and tenth centuries A.D. it was a method of moral psychology for the practical guidance of individuals who had a mystic call; 2. after the 11th century, it becomes the whole system of rites for spiritual training laid down for the common life in the various Muslim religious orders which began to be founded at this time.

Muslim mysticism itself in its origins, ideas and tendencies will be examined elsewhere [cf. the article TAṢAWWUF]; here we only deal with its results on society and the organisations which are the development of its practice by groups of devout Muslims.

In the first sense (cf. texts by Ḥunaid, Hallāj, Sarrāj, Kūshairī, Ḥudjwīn), the word *ṭarīqa* is still vague and means rather a theoretical and ideal method (*ṭarīqa*, *ṣulūk* are stronger) to guide each one who has had a call by tracing an *itinerarium mentis ad Deum* leading through various psychological stages (*maḥammāt*, *ahwāl*) of the literal practice of the revealed law (*sharī'a*) to divine reality (*ḥaqīqa*). This bold claim having provoked criticism and even persecution from the canonists, the teachers of mysticism devoted themselves to defining and restraining their activities on more orthodox lines, compiling rules calculated to avert suspicion (*ādāb al-ṭarīqa*), from Salāmī and Maḥḥārī to Ibn Tāḥīr Maḥḥārī (*ṣafwa*) and Ghazālī. In practice, while keeping as the goal direct access (*faṭḥ*) to reality, they gradually abandoned the freedom of musical assemblies (*ṣamā'*) stimulating themselves with the ecstasy of theopathic utterances [cf. *ḤATĪR*], often open to criticism, for regular recitations of litanies founded on the Qur'ān (*dhikr*): thus preparing the adept for a state of mental concentration (*tafakkur*) which he experiences in silence by himself, a state in which the successive perception of lights (*anwār*) differently coloured gradually denudes from its covering of words the "clarity" (of the recited litany) and "substantialises" it in the heart; which then participates in the divine essence of its prayer (*dhikr al-ḥaṣṣ*, *bi-tafakkur*, *nūr al-dhikr* fi 'l-ḥaṣṣ, says Suhrawardī on chap. xxvii. of the *Awārif*, li. 191).

Thus *ṭarīqa* comes finally to mean a common life (*ṣawākana*), founded on a series of special rules in addition to the ordinary observances of Islām: to become an adept (*ṣāḥib*, Pers. *darwish*) the novice (*murīd*, *ḡandūz*) receives initiation (*ba'a*, *taḥlīl*, *ḥadd*) before a hierarchy of witnesses

(*ḥaḥā* *al-saḍḍā* = Pers. *gīr* = Turk. *hāḥ*; *murshid*, *mubaddam*, *naḥīb*, *ḥaḥīfa*, *ṭarṭamān*, Pers. *rind*, *rāḥar* etc.); even if he is of an order allowing a wandering life (*ṣayāḥa*), he has to make periodic retreats (*ṣulā*, *ḥaḥwa*, *arḥāniya* = Pers. *ḥāḥ*) with them in a monastery (*ribā'*, *ṣāwīya* = Pers. *ḥaḥka* = Turk. *tekkiye*) of the order, supported by expiatory alms (*ḥaḥya*), generally built near the tomb of a venerated saint whose anniversary (*maḥlīd*, *urs*) is celebrated and whose blessing is invoked (*ṣayra*, *ḥaḥa*).

In the interior of the monastery the common life of the brethren (*ḥaḥwān* = Turk. *ḥāḥiler*, an Anatolian term of the 13th century; there were only attempts to found convents of sisters in Egypt and Syria in the 13th and 14th centuries) is at the same time distinguished by supererogatory exercises, vigils (*ṣahr*), fasts (*ṣaym*), invocations (*ṭawīd*; e.g. *yā laḥf*, repeated 100 or 1,000 times), litanies (*dhikr*, *ḥāḥ*) especially at certain festivals (a kind of liturgical office for the vigils, *ḥaḥ'a*, *ṣaḥā'ih*, *ḥaḥir*, and by dispensations (*ruḥḥa*), like the collections of alms (*ḥaḥama*, collected in the *ḥaḥḥāl*) and private assemblies (*ḥaḥra*, *waḥḥa*, *ṣaḥa*) in which in addition to litanies, platonic glances (*naḥar ila 'l-murād*), jesting (*miḥḥ*) even going as far as horseplay, dancing (*ṣaḥḥ*) and the rending of garments are allowed.

The actual ritual initiation, identical to that of initiation into trade-guilds of Karmatian origin, as Kahle has observed, was probably borrowed from them in the 13th century (Taschner, *Islām*, vi. 169—172, published a Turkish miniature of the 17th century representing the scene). The diploma of initiation (*iqḥāḥ*) is in use since 1227 (cf. Ibn Abī Usālib'a, *Uyūn al-ḥaḥ*, ii. 250) reproduces the *ṣawād* of the traditionists to give the new initiate his double chain of affiliation (*ṣulā*, *ḥaḥjara*). At the same time he is given a double frock (*ḥaḥḥat al-wīd*, *ḥaḥḥat al-taḥarruk*) to show his twofold taking of an oath ('*ahd al-yad wa 'l-ḥḥidā*' = *taḥlīl* and '*ahd al-ḥaḥḥa*'), his double adopted genealogy, instruction (oral transmission of the rule) and inspiration (individual illumination), to which his vow of obedience entitles him.

The orthodox canonists (*ṣaḥāḥ*) have constantly attacked the innovations (*bid'a*) propagated by the *ṭarīqa*'s: their supererogatory exercises and their dispensations, their special costumes (characteristic headaddresses with strips of colour, *kuḥḥ*, *ṭaḥḥ* etc.), their use of stimulants (coffee, *ḥaḥḥḥ*, opium), their jugglery, their belief in the supernatural efficacy of the *taḥlīl* and the *ḥaḥka*. They have devoted special attention to the critical history of the *ṣawād* of initiation, exposing the lacunae and the improbability of their chains [cf. TAṢAWWUF] and they have protested against the *ṣawād ilḥāmī* (spiritual) which bases the privileges of the order on the apparitions of a holy being, mysterious and immortal, al-Khaḥḥir [q. v.], whom all the orders revere as the "master of the path" (*ṭarīḥa*), since having been the guide of Moses (Qur'ān, xviii. 64—81) he is superior to the law (*sharī'a*) and the prophets and capable of guiding the soul of the mystic to the supreme reality (*ḥaḥḥa*).

In Turkey the government has often persecuted the orders on account of their Shī'a associations; and after a brief truce during which the pan-Islām of 'Abd al-Ḥamīd endeavoured to make use of them, they were dissolved in 1925 for reactionary conspiracy. In the other Muslim coun-

tries in spite of some attempts at reform interesting from the moral (India) or intellectual (Algeria) point of view they are in a state of complete decline. The acrobatics and juggling practised by certain adepts of the lower classes, and the moral corruption of too many of their leaders has aroused against almost all of them the hostility and contempt of the élite of the modern Muslim world.

The *tariqa* however cannot be completely neglected: and although their average moral level is very far below that of the great examples of the first *Sūfiya*, the great part that they have never ceased to play in the everyday life, humble but profound, of the Muslim community, promises important results to those who will undertake a thorough study of their rules and writings. Ethnologists like Tremearne and Westermarck have already shown that several of their rites, incorporated in an Islamic liturgical structure, in which they play an unexpected part, are in reality pre-Islamic survivals (e.g. in the East Indies and in Java) or animistic infiltrations (e.g. *nir* of the Gūlghaniya of Cairo borrowed from the Azande; sacrifices of the *Isawiya* of Meknes, modelled on the *beri* of the Hausa; cf. *R. M. M.*, xlv, 1—52). Comparative folklore and psychology will also have something to learn from the hagiographic history of the saints documentation of the great Muslim orders (cf. *M. R. Baurt*, 1923, i, 259—270 and *Journal de Psychologie*, 1927, p. 163—168).

INTRODUCTION TO THE LIST OF THE TARIQA OF ISLAM.

To get the data in this list into their proper historical setting let us recall briefly that the isolated attempts at a common life in Islam [cf. *TAṢAW-WUF*] only earned their adepts a generic name in 814 (Alexandria, Kūfa) that of *Sūfiya*. After 857 (Maḥādīh) this name begins to be applied in a rather loose way to all who had received a mystic call in the *Irāq* (where some denser nuclei were called *Sālimiya*, *Hallādiyya*); this name was then contrasted for over two centuries with the name *Malūmatīya*, applied to the more active and more strict mystics of Khurāsān, who profess "indifference to censure" and reproach the *Sūfiya* with their aesthetic quietism and their fondness for the *ṣamāʿ*.

For this primitive period, the list below only gives anachronistic names, artificially revived from the thirteenth century by Muslim hagiographers with the names of authentic doctrinal schools, incorrectly described as religious orders and names of heresies imagined by the Imāmī theologians.

After the thirteenth century on the other hand, the list reflects with sufficient accuracy the different foundations of orders the history of which may be briefly summed up as follows: birth among the *Sūfiya-Khāṣṣiya* of a secondary order, the *Kāzā-rūtiya* (1304) and among the *Sūfiya-Djānādiyya* of a larger order, directed by regular superiors (*Qūrdjānī*, *Fārmādī*, *Nassādī*, *Aḥmad Ghazālī*) an order finally divided in the thirteenth century into three: *Khawājagān* (Yūsuf Hamadānī, d. 1140), the *Kubrāwiya* (Kubrā, d. 1221) and the *Kādirīya* (although their founder died in 1166, their rule was not organised till half a century later). To these two last orders, Aḥmad Ibn al-Kāḍī (*Kawā'id Wafīya*, cf. Laleli, MS. 1478) adds: the *Rifā'iya*, *Madaniya* (the future *Shādhiliya*) and *Chishtiya* to form the group of "five primitive *khawājagān*".

Others were soon added: in the thirteenth century

Kalandariya, *Ahmadiya*, *Mawlawiya*; in the sixteenth century *Bektāshīya*, *Nakshabandiya*, *Safawīya*, *Khalwatiya* with their numerous later subdivisions; in the sixteenth century we have the reformation by Dīzālī in the Maghrib and rise of the *Shattāriya* in India and Sumatra; finally in the sixteenth century in the Maghrib we have with the reformation of the *Kādirīya* and of the *Shādhiliya*, the foundation of the *Tidjāniya*, *Darkāwa* and *Sanūsiya*.

None of the great orders is at the present day centralised except the *Sanūsiya* and the *Mawlawiya*; the bond which binds the adepts, being neither perpetual nor exclusive, becomes often extremely loose. As a rule the number of persons affiliated to the brotherhoods in any particular Muslim country is not over 3% of the population, the most widely disseminated orders at present are: the *Kādirīya* (Irāq, Turkey, India, Turkestan, China, Nubia, Sūdān, Maghrib); *Nakshabandiya* (Turkestan, China, Turkey, India, Malaya); *Shādhiliya* (Maghrib, Syria); *Bektāshīya* (Turkey, Albania); *Tidjāniya* (Maghrib, A. O. F.; Tchad); *Sanūsiya* (Sahara, Hijāz); *Shattāriya* (India, Malaya).

Several attempts at the federation of various brotherhoods were made in the Imāmī period; they took the form of a curious syncretist hierarchy associating a permanent body of four universal intercessors: *Rifā'i* (president), *Djilānī*, *Badawī* and *Dawūdī*, with the *abdāl* and the *ḥuṣṣ* of the present hour.

The Muslim orders not all having special articles in the *Encyclopædia*, the list below gives in alphabetical order the names of the principal *tariqa* with a brief note on its origin and its subdivisions, its geographical position and the date (A. D.) of death of its founder. The principal orders are in small capitals and those that still exist are preceded by an asterisk. The capital letters in the list refer to the nine sources used, given below; the numbers given on the right give the number of classification of each *tariqa* according to each source: The symbolic figures of 32 and especially 40 (the number of the *abdāl* who watch over the safety of the world) will be noted.

H = Hudjwiri, *Kashf al-Maḥjūb*, ed. Shukovski, 1926, p. 218—340, and transl. Nicholson, 1911, p. 176—266 (11 names);

U = 'Udja'imī, *Fahraza*, MS. M. Fasi (40 names);

S = Sanīstī, *Saltāt al-mu'in*, MS. in my possession (40 names);

T = Ma'ūm 'Alī Shāh, *Farā'iq al-Haḥā'iq*, lith. Teheran 1319, ii, 136 sqq. (17 names);

O = d'Othson, *Tallem général de l'empire ottoman*, Paris 1788, ii, 294—316 [in Hughes, *Dictionary of Islam*, p. 117; and Brown, *Darwishes*, ed. Rose, 1927, p. 267—271 (32 names)];

G = Gümüşkhānī, *Djāmi' uḥl...*, Cairo 1319, p. 3 sqq. (40 names);

R = L. Rion, *Marabouts et Khawān*, Algiers 1885 (31 names);

F = Malcolm, *History of Persia*, 1815, ii, 271 (5 names);

M = Massignon, *Annuaire du Monde Musulman*, 2nd ed., 1926 (the figures refer to the pages).

U and S, Arabic sources, still unfortunately unedited, are of fundamental importance. H, T, P are Persian. O, G, Turkish, have been compared with *R. M. M.*, ii, 513—517; *Isl.*, vi, 149—169; *M. W.*, 1922, p. 52—56. R, of Algerian origin, has been compared with le Châtelier (*Confréries*

musulmanes du Hadjas, Paris 1887), Depont-Copponi (*Confréries religieuses musulmanes*, Algiers 1897) and Montet (in *E. R. E.*, 1918, p. 719-726) who utilised it.

LIST

- Adhamiya. — O² — artificial Turco-Syrian isnād of the xvth century, referring to a saint († 776).
- AHMADIYA. — U¹⁴ S¹² G⁵ M¹¹⁷ — Egyptian order (Tantā. — Badawī † 1276). Numerous branches: Shīnāwīya, Marāṣika, Kanoṣīya, Anbābiya, Hammūdiya, *Maṣā'ifiya, Sallāmiya, Halābiya, Zahidiya, Shu'ābiya, Tashlyaniya, 'Arabiya, *Safūhiya, Bundāriya, Muslimiya (= Sharunbulāliya), *Baiyūmiya.
- *Aidarūsiya. — U²¹ S²³ G³⁷ — Yemenite branch of the Kubrawiya (xvth century).
- Akbāriya. — G⁷ — = Hātimīya.
- *Alawīya. — G²⁵ — artificial isnād referring to the 4th khalifa¹).
- *Allawīya. — Algerian branch of the Darḳāwa (Mostaganem — Ben Alioua, since 1919).
- *Amirghaniya. — Nubian branch of the Idrisiya — († 1853).
- *Ammāriya. — M⁹⁰ — Algero-Tunisian branch of the Kādīriya (xixth century).
- *Arūsiya. — R⁸ — Tripolitan branch of the Kādīriya (Zliten, xixth century).
- *Ashikīya. — P² — heresy.
- Ashrafiya. — O¹⁹ — Turkish branch of the Kādīriya (İznik) — († 1493) — = Wāhidiya.
- *Awāmīriya. — M⁹⁷ — Tunisian branch of the Isawiya (xixth century).
- *Azūziya. — M⁹⁷ — small Tunisian order (xixth century).
- Bābā'īya. — O¹⁷ — Turkish order (Adrianople) — († 1465).
- Badawīya. — O¹¹ — = Ahmadiya.
- *Bairamiya. — O¹⁸ G²⁰ — Turkish branch of the Safawīya (Angora) — († 1471). Sub-branches: Hamrawīya, Shaikhīya, Khwādja-Himmātiya, Baiyūmiya, G²⁰ — cf. Ahmadiya.
- *Bakkā'īya. — R²³ — Sudanese branch of the Kādīriya († 1505). Branches (Kunta): Fadliya, Al Sidīya.
- Bakriya. — G²² — cf. Siddikīya.
- " — name sometimes given to the Bait al-Bakr (Shuyūkh al-Sūfiya of Cairo since the xvth century).
- " — U²⁰ S¹⁰ (J²⁰ R¹¹) — Syro-Egyptian branch of the Shādhiliya — († 1503).
- " — Egyptian reformed Khalwatiya († 1709).
- *Banzwa. — branch of the Kādīriya in the Dekkan (xixth century).
- *Bektāshīya. — T⁸ O¹⁴ G¹² — Anatolian (since before 1336) and Balkan order (Albanian branch autonomous since 1922; centre at Akçe Hisar).
- *Bibariya. — M²³⁴ — small Sicilian order (in 1924).
- Biṣṭāmiya. — G² — artificial Turkish isnād of the xvth century (cf. Taifūriya).
- *Bū'aliya. — M⁹⁷ — Algero-Egyptian branch of the Kādīriya (xixth century).
- Buḥūrīya. — G²⁰ — not identified.
- *Būnūhiya (= Būniyū). — small order in Southern Morocco (cf. *R. M. M.*, [viii. 141]).
- *BURHĀNĪYA (or Burhāmiya). — U¹³ S²⁰ — Egyptian order (Ibr. Dāsūki † 1277). Branches: Shāhīya, Sharānība.

Dardīriya. — Egyptian branch of the Khalwatiya († 1786).

*DARḲĀWA. — M⁹⁰ — Algero-Moroccan branch of the Džazūliya. — († 1823). Various branches: Būzidiya, Kittāniya, Harṛākiya, 'Allawīya.

Dasūkiya. — G⁷ — = Burhāniya.

Dhahabiya. — T⁸ — Persian name of the Kubrawīya.

Djahriya. — U¹² S²⁰ — Yemenite order (xvth century).

" — M^{261, 267} — orders authorising the dhikr in public, in China and Turkestan (Kādīriya); cf. Khafiya. — (xixth century)².

*Djalāliya-Bukhārīya. — Hindu branch of the Suhrawardiya (Makhḍūm-i-djāhāniyān, † 1383).

DJALWATIYA. — O²⁰ G¹¹ — Turkish branch of the Safawīya (Brusa, Pir Uftada † 1580). Branches: Hāshimīya, Rawshāniya, Fanā'īya, *Hudā'īya.

Djamāliya. — T¹¹ — Persian branch of the Suhrawardiya. — (Ardistāni † xvth century).

" — O³² — Turkish order — Stambul. — († 1750).

*Djarrāhiya. — Turkish branch of the Khalwatiya. — († 1733).

DJAZULIYA. — R⁹ — Moroccan reformed Shādhiliya. — († 1465). Its branches are: Darḳāwa, Hamādīsha, Isawiya, Sharḳāwa, Taibiya.

Djibāwiya = Sa'īliya.

Djilāla. — Moroccan name for the Kādīriya.

Djamāidiya. — H⁴ U³⁰ S⁴ R³ — doctrinal Baghdad school († 909) which was evolved in the Sūfiya in the xth century —, and gave rise to the Khwādjaṅān, Kubrawīya and Kādīriya — name revived in the xvth century for the artificial isnād of a dhikr.

Firdawsiya. — Hindu name of the Kubrawīya.

*Ghawthīya. — U²⁷ S²⁰ — Hindu branch of the Shattāriya (Ghawth, † 1562 at Gwalior).

Gharāliya. — G¹³ — doctrinal school of Gharālī († 1111).

*Ghāziya. — R¹⁴ — branch of the Shādhiliya in South Morocco — († 1526).

*Gūlshāniya. — O²² G¹⁴ — = Rawshāniya.

*Guramar. — Hindu branch of the Kādīriya.

*Hablīya. — R¹³ — branch of Shādhiliya in Taflelt († 1752).

Haddādiya. — G³¹ — not identified.

*Haddāwa. — wandering Moroccan order: at Tagzirt. — (xixth century).

*Hafawīya. — R¹⁷ — Egyptian branch of the Khalwatiya. — († 1749).

Haidariya. — Persian branch of the Kalandariya (xiiith century).

" — = Khāksār. — Persian artisan brotherhood (xixth).

Hakīmiya. — H⁷ — doctrinal school of Haktm Tirmidhi († 898).

Hallādīya. — H¹² U³⁸ S⁵ — doctrinal school of Husain b. Mansūr Hallādī († 922); name revived in the xiiith century for the artificial isnād of a dhikr.

Hamadhāniya. — U⁷ S²¹ — Kashmir branch of the Kubrawīya. — ('Alī Hamadhāni † 1385).

1) Cf. 'Umariya (G²⁹), 'Ulmāniya (G²⁴), 'Abbāsīya (G²⁶), Zaimbiya (G²⁷).

2) Cf. Ghaibīya (G²²), Ḥaḍariya (G²⁰).

- ***Hamādiya**. — Moroccan branch of the *Djārūliya* in the Zerhoun (xviiith century) with sub-branches: *Daghūghiya*, *Ṣādīkiya*, *Riyāhiya*, *Kāsimiya*, — at Meknès and at Salé.
- Hamāwīya**. — G¹⁰ — mixture of *Bairamīya* and *Milāmīya*.
- ***Hanṣaliya**. — R²⁰ — small Orano-Moroccan order. — († 1702).
- * — Chleuh branch of the *Nāṣiriya* — (xixth century).
- Hārīya**. — Hamranian branch of the *Rifā'iya* — († 1247).
- Hāṭimīya**. — doctrinal school of Ibn 'Arabi († 1240).
- Hudā'iya** = *Djalwāṭiya*.
- Hulmāniya**. — H¹¹ — *Hulūfiya* sect of the xth century.
- Hulūfiya**. — H¹¹ — heresy.
- Hurūfiya**. — heresy.
- Ihāfiya**. — heresy.
- ***Idrīsiya**. — M⁴⁴ — branch of the *Khādirīya* settled in 'Asir (xixth century).
- Ighit-Bāghiya**. — O² — Turkish branch of the *Khawwāṭiya* († 1544).
- Ighitshāhiya**. — T⁷ — *Khurāsān* branch of the *Kubrāwīya* (Ishāq Khāṭalānt, † xvth century).
- ***Iṣāwīya**. — R²¹ G²⁶ (?) — Moroccan branch of the *Djārūliya* at Meknès († 1524).
- Ishrākiya**. — doctrinal school of Suhrawardī Hālahi († 1191).
- ***Isma'īliya**. — Nubian order in Kurfān (xixth century).
- Iṭīḥādiya**. — heresy.
- ***Kādirīya**. — U²⁰ S²⁰ T¹² O⁵ G⁷ R⁴ — Baghdad order developed from the school of the *Djunaidīya* ('Abd al-Kādir Djalānt † 1166). — Many branches: in Yemen and Somalia, *Yās'iya* (xivth century), *Mushāri'iya*, *Uṣbiya*; in India, *Banāwa* and *Gurmar*; in Anatolia, *Ashrafīya*, *Hindiya*, *Khulūfiya*, *Nābulsiya*, *Rūmiya* and *Waslatiya*; in Egypt, *Fāridiya* and *Kāsimiya* (xixth century); in Maghrib, *'Ammāriya*, *'Arūsiya*, *Bā'aliya* and *Djilāla*; in western Sūdān, *Bakkā'iya*.
- Kālandarīya**. — U³ S²⁰ — itinerant order founded in Persia (Sāwījī † 1218), spread to Syria and India (xivth century—xvth century) now extinct.
- ***Karrā'iya**. — M⁴⁷ — small Tunisian order (xixth century).
- ***Karrāsiya**. — R²³ — *Shādhiliya* branch in Tafīlet (xixth century).
- Kāssāriya**. — H² — doctrinal school of the ixth century = *Malāmīya*.
- Kāzartīniya**. — Persian order descended from the doctrinal school of the *Khāfiyya*, at Shirāz. — († 1304).
- Khādirīya** (= *Khidiya*). — R²⁷ — Moroccan order (Ibn al-Dabbāgh † 1717) whence are derived the *Amrighaniya*, *Idrīsiya* and *Sanīsiya*.
- Khāfiyya**. — H⁹ U¹⁰ S²¹ — doctrinal school of Ibn Khafīf († 982); name revived in the xivth century for an artificial ismā.
- ***Khāfiya**. — surname of the *Naqshabandiya* in China and Turkestan (xixth century); cf. *Djāhriya*.
- ***Khāliya**. — M⁴⁷ — small Tunisian order (xixth century).
- ***Khawwāṭiya**. — U¹⁰ S¹⁰ T⁷ O¹² G¹⁰ R²⁰ — branch of the *Suhrawardīya* which arose in *Khurāsān* (Zahir al-Dīn † 1397) and spread into Turkey. — Numerous branches: in Anatolia, *Djārūhiya*, *Ighitshāhiya*, *Ushshākiya*, *Niyāziya*, *Sūnābāliya*, *Shamāziya*, *Gūlghaniya* and *Shadja'iya*; in Egypt, *Djāliya*, *Hafnawīya*, *Saba'iya*, *Sāwīya*, *Dardiriya*, *Maghāziya*; in Nubia, in *Hidjāz* and in Somaliland, *Sālihiya*; in Kabylia, *Rahmāniya*.
- ***Khawwāsiya**. — M⁴⁷ — Tunisian order (xixth century).
- Khawwāsiya**. — H³ U²⁰ S²⁰ — doctrinal school of Abū Sa'īd Kharrāz († 899); then artificial Turkish ismā of the xvth century.
- Khawwāsiya**. — U²⁴ S²² — *Hidjāzī* order of Madaniya (Ibn 'Arāḥ † 1556).
- Khawwāsiya**. — T¹⁰ — Persian order descended from the school of the *Djunaidīya* and spread in Turkestan (= *Wasawīya*). — (Yūsuf Hamadhāni † 1140).
- Kubrāwīya**. — U⁶ S²⁰ T⁶ O⁸ — *Khurāsān* order descended from the school of the *Djunaidīya* (Nadīm Kubrā † 1221). Branches: *'Aidarāsiya*, *Hamadhāniya*, *Ighitshāhiya*, *Nūrbakhshīya*, *Nūriya*, *Rukniya*.
- Kūniyāwīya**. — T¹² — doctrinal school of Saḍr Rūmī († 1273), descended from the *Hāṭimīya*.
- Kūshāiriya**. — U²³ S²⁰ — artificial ismā of the xvth century, referring to *Kūshāirī* († 1074).
- Madaniya**. — U²⁷ S⁷ — first name of the *Shādhiliya*.
- * — Tripolitan branch of the *Darqāwa* at Misrata († 1823).
- ***Madāriya**. — U²⁰ S²⁰ — wandering Hindu order (Shāh Madār, † 1438 at Maknagar).
- Maghribīya**. — G²⁹ — perhaps to be identified with the disciples of the Persian poet *Maghribī* († 1406).
- Malāmīya**. — U⁵ S¹⁸ — doctrinal school of *Khurāsān* (ixth—xixth century), opposed to the *Ṣūfiya* of the 'Irāq — name revived in the xvth century for an artificial ismā.
- Malāmīya**. — G²⁶ — (= *Hamawīya*) — branch of the *Bairamīya* of Turkey († 1553).
- Manṣūriya** = *Hallādiya*.
- Marāṭika**. — branch of the *Aḥmadiya* (xivth century).
- Mashṭahīya**. — disciples of the Moroccan saint Ibn Mashṭah († 1226), at first confused with the *Shādhiliya*, then regrouped in the xvth century.
- ***Matbūliya**. — G²⁸ — small Egyptian order († 1475).
- ***Mawlawīya**. — U¹¹ S²³ T² G⁸ O¹⁰ — Anatolian order (Djalāl al-Dīn Rūmī, † 1273 at Kūniya). Branches: *Pūstnāshīniya*, *Iṣhādiya*.
- Miṣriya** = *Niyāziya*.
- Muhammadiya**. — U¹ S¹ — devotional artificial ismā referring to the Prophet without intermediary; utilised in the xvth century by 'Alī Khawwāz and *Shā'rānt*; also used in connection with the recitation of *Dalā'il* of *Djārūlī*.
- Muḥāsibīya**. — H¹ — doctrinal school of Hārith Muḥāsibī († 859).
- Murādiya**. — O³⁰ — Turkish order in Stambul. — († 1719).
- Mushāri'iya**. — U²⁰ S²⁴ — Yemenite branch of the *Kādirīya* (xvth century).
- Muṭāwī'a** = *Aḥmadiya*.
- ***Naqshabandiya**. — U²⁶ S²⁴ T¹⁰ O¹² G¹ R¹⁹ — order in Turkestan, claiming descent from the school of the

- Taifuriya. — Branches in China, Turkestan, Kazan, Turkey, India and Java. — (Bahā' al-Dīn †1388).
- NAKSHABANDIYA. — Khālidīya. — reformed Turkish (sixth century).
- *Nāsiriya. — R¹⁶ — South Moroccan branch of the Shādhiliya, at Tanghrit (xviii century) with Tunisian sub-branch (Shabbliya).
- *NĪMATALLĀHIYA. — T² — the only order of the Persian Shī'a in Kirman: descended from the Kādīriya-Yās'iya. — (†1430).
- Niyāziya. — O²⁰ — Turkish branch of the Khalwatiya (†1693).
- Nubūwiya. — artisan brotherhood in Syria (xiii century).
- Nūr al-Dīniya. — O²¹ = Djarāhiya.
- Nūrbakshīya. — T² — Khurāsān branch of the Kubrawīya (Muhammad Nūrbaksh †1465).
- Nūriya. — H²⁵ — doctrinal school of Nūrī (†907).
- * — U⁹ S²³ — dissenting branch of the Rukniya (xiv century).
- * — heresy.
- Pir-Hādījāt. — T¹⁴ — Afghan order professing to be that of Anṣārī Harawī (†1088).
- *Rahhāliya. — order of Moroccan jugglers (xvii century).
- *RAHMĀNIYA. — R²⁰ — branch of the Khalwatiya in Kabylia. — (1793).
- *Rahhādiya. — R¹² — small Algerian order formed dissenting from the Yūsufiyya (xix century).
- *Rasūlshāhiya. — M²³² — Hindu order of Gujjarat (xix century).
- Rawshaniya. — branch of the Khalwatiya, in Turkey and Cairo (Gulshani †1533).
- Afghan branch of the Suhrawardiya (Bāyazīd Anṣārī, † end of the xvth century).
- *RIFĀ'ĪYA. — U²² S² T⁹ O⁸ G⁴ — South Iraq order — (†1175) — spread from its centre in Basra to Damascus and Siambul. — Syrian branches: Haririya, Sa'diyya, Saiyādiya; — Egyptian: Bāziya, Mālīkiya, and Habbīya (xix century).
- Rukniya. — U⁸ S²² — Baghdad branch of Kubrāwiya ('Alī al-Dawīa Simūnī †1336).
- Rūmīya. — G¹⁴ — Ashrafīya.
- Sab'iyya. — doctrinal school and wandering order of Ibn Sab'īn (†1268).
- *Sa'diyya. — O¹² G¹⁰ — Syrian branch of the Rifā'iyya (Sa'd al-Dīn Dīrbāwī †1335). — Branches: 'Abd al-Salāmiya, Abu 'l-Wafā'iyya.
- Safawīya. — T⁴ — Azēri branch of Suhrawardiya at Ardabil. — (†1334). It gave rise to the sect of the Kābilshāhiya, to the Persian dynasty of the Safawids, and to several Turkish orders.
- Sahlīya. — H⁶ U⁴⁰ S⁴⁰ — doctrinal school (Sahl Tustarī †896); name revived in the xvth century for an artificial isnād.
- Sakātiya. — O⁴ — Turkish artificial isnād of the xvth century. — (Sakātī †867).
- Salāmiya = 'Arūsiya.
- Salīmiya = Sahlīya (in the first sense).
- *Sammāniya. — Egyptian branch of Shādhiliya (xix century).
- *Sanāniya. — M⁰⁷ — minor Tunisian order (xix century).
- *SANDIYA. — R³¹ — military order, descended from the Khādiriya, at Djabub then Cufra, in the oriental Sahara. — (†1859).
- Saāniya. — artisan brotherhood in Syria and Anatolia (xiith—xvth century).
- Saiyāniya. — H¹⁰ — doctrinal school of the xth century.
- *Shābāniya. — G⁰⁷ — Turkish branch of the Khalwatiya at Kastamuni. — (†1569).
- *Shādhiliya. — U¹⁷ S³ T¹⁰ O⁹ G³ R⁶ — order founded by Abū Madyan of Tlemcen (†1197) and 'Alī Shādhilī of Tunis (†1256). — Maghrib branches: Ghāziya, Habbīya, Karāziya, Nāziya, Shaikhīya, Suhailīya, Yūsufiyya, Zarīkiya and Ziyādiya; — Egyptian: Bakriya, Khawāfiyya, Wafā'iya, Djawharīya, Makkiya, Habbīmiyya, Sammāniya 'Alfiyya, Kāsimiyya, 'Arūsiya, Haḍḍāhiya, Kawūkhiyya; — there are some at Stambul, in Rumania, in Nubia and in the Comores.
- Shāhmadāriya = Malang = Madāriya.
- *Shaikhīya. — R²⁴ — name given to the Shādhiliya 'Ulad Sidi Shaikh of Oran (xix century).
- Shamīya. — O²⁷ — Turkish branch of Khalwatiya. — (†1601) = Nūriya-Siwāsiya.
- *Sharḳāwa. — Moroccan branch of the Djazūliya at Bujad (1599).
- Sharḳāwiya. — Egyptian order of the Khalwatiya (xviii century).
- *SHATTĀRIYA. — U²⁴ S²⁸ G²⁴ — Hindu, Sumatra and Javanese order ('Abdallāh Shattār †1415 or 1428)¹. — Branches: Ghawthiyya, 'Ubaikīya.
- Shūdhīya. — wandering Spanish order of the xiii century based on the Sab'iyya.
- Shiddīkiya. — U⁴ S² R¹ — artificial isnād referring to the second Khalifa (invented by 'Alī 'Ilāh, xiii century).
- Sinān-Ummīya. — O²⁸ — Turkish order (†1668).
- Suhailīya. — R¹² — Algerian branch of Shādhiliya (xix century).
- *SUHRAWARDIYA. — U¹³ S¹¹ T¹ O⁷ G⁹ R⁵ — Baghdad order founded by 'Abd al-Kāfir Suhrawardī (†1167) and 'Umar Suhrawardī (†1234) who were called "Shiddīkiya" — descendants of the second Khalifa; found in Afghanistan and in India. — Branches: Djalāliya, Djamīliya, Khalwatiya, Rawshaniya, Safawīya and Zainiyya.
- *Sulḥāniya. — M²³¹ — order of Turkestan (xix century).
- *Sunbūliya. — O²¹ G²⁰ — Turkish branch of the Khalwatiya (†1529).
- *Tabbā'iya. — M⁰⁷ — Tunisian order (xix century).
- *Taibiya. — R²⁸ — Moroccan branch of the Djazūliya at Ouezzan (†1727).
- Taifuriya. — H² — doctrinal school of Dāstikānī and Khurkānī (xix century), descended from Abū Yazīd Taifūr Bisfāmī (†877).
- *Tālibīya. — small Moroccan order at Salé (xix century; cf. R. M. M., lviii. 143).
- Talkīniya. — P³ — heresy.
- *Tidjāniya. — R²⁹ — Algero-Moroccan order (†1815). From Temacin and 'Ain Mahdi, it has spread through Eastern and Western Sūdān.
- *Tshishītiya. — U³² S²⁷ G¹⁰ — Indo-Afghan order: centre at Adjmir (†1236).
- Tulāmiya = Taibiya.
- 'Ulwāniya. — O¹ — Turkish artificial isnād of the xvth century, referring to a saint of Djedda of the viiith century.

¹ Cf. biogr. in Ghulām Sarwar, *Akharinat al-Afīya*, Lith. Cawnpore 1893, li. 306—308.

- Ummi-Sināfiya. — O²⁴ — Turkish order. — (†1552).
 'Urābiya. — [2² S⁸ — branch of the Kādīriya (xvth century).
 'Ushākiya. — [3² S² — Hindu branch of the Shat-
 'āriya (Abū Yazīd 'Ishkī †xvth century).
 *Ushākiya. — O²⁸ G²¹ — Turkish branch of the
 Khawāfiya (†1392).
 Uwaifiya. — [2² S² G⁴⁰ R² — Turkish artificial ismā'īl
 of the xvth century, referring to a Shāhī.
 *Wafā'iya. — R⁷ — reformed Syro-Egyptian of the
 Shādhiliya (†1358).
 Wuhādīya. — P⁵ — heresy = Wudjādīya.
 *Wārith 'Alighāhiya. — Hindu order (end of the
 xixth century).
 Wushāliya. — P¹ — heresy.
 Yasawiya. — branch of the Khwājagan in Turke-
 stan (Yasawi †1167).
 Yūsufiyya. — wandering Syrian order (Shāhīnī
 †1222).
 *Yūsufiyya. — R¹² — Maghrib branch of Shādhiliya
 at Miliana (xvth century).
 Zarrūkiya. — U¹⁰ S¹² R¹⁰ — branch of the Shādhili-
 ya of Fes (†1493).
 Zāniya. — O¹⁶ — Turk branch of Suhrawardiya
 at Brussa (Khwāfi †1435).
 *Ziyāniya. — R²⁸ — Maghrib branch of the Shādhili-
 ya (xixth century).
 Zurnīkiya. — P¹ — heresy not identified (name
 perhaps wrongly transcribed).

Bibliography: The principal sources are enumerated at the head of the table given above. One may add those given by G. Pfannmüller, in *Handbuch der Islam-Literatur*, 1923, p. 292—315. — Cf. also in the *Encyclopaedia* the articles BERKĀSH, DERGĀWA, DERWĪSH, DHĪK, FUTŪWA, GULSHANĪ, HALLĀJĪ, ISKAWIYA, KALANDARIYA, ... SA'DIYA, SĀLIMIYA, SANDHIYA, SHADĪ, SHĀDHILIYA, SHĀTĪ, SHĀTTĀRIYA... (LOUIS MASSIGNON).
TA'RIKH (A.), i. history in general, annals, chronicles. It is the title of a great many historical works, like the *Takmilat Ta'rikh al-Tubari*, supplement to the *Annals* of Tabari; *Ta'rikh Baghdād*, *Makbu* etc., history of Baghdad, of Mecca etc.; *Ta'rikh al-Andalus*, history of Andalusia. The word has also been applied to works of a very different kind, like that of al-Bīrūnī on India, *Ta'rikh al-Hind*, which is rather a study of the state of learning in India, or to special dictionaries like the *Ta'rikh al-Hukama'* of Ibn al-Kifī, a biographical and bibliographical dictionary of early scholars and Arab continuers of the Greek tradition.

2. Era, computation, date. Besides their own era of the Hijra [q. v.], the Muslims have had several other eras: that of the Creation or of the world (*ta'rikh al-'alam*), a very uncertain computation which shows great variation among Jews, Christians and Magi. Al-Bīrūnī and the Christian historian Abu 'l-Faraj (Bar-Hebraeus) reproach the Jews with having reduced the number of years since the Creation so that the date of the birth of Jesus is no longer in agreement with the prophecies relative to the Messiah; thus they placed the birth of Seth, son of Adam, 100 years too soon and have done the same with the other patriarchs down to Abraham so that their computation gives 4,210 years from the Creation to the age of the Messiah instead of 5,586 approximately

given by the Torah. The Jews, according to al-Bīrūnī, expected the Messiah at the end of the year 1335 of Alexander, so that Christ was born, in the general opinion, in the year 311 of this era. — The Era of the Deluge, which also shows differences between Jews and Christians; the astronomer Abū Ma'shar used it in his *Canon*. — The era of Nebuchadnezzar (the first Bukhārassar) used by Ptolemy in the *Almagest* concurrently with the Cycles of Callippus. — That of Philip Arrhidæus, father of Alexander, used by Theon of Alexandria in his *Canon*. — The era of Alexander, with Greek months, or era of the Seleucids, dates from the entry of Seleucus Nicator into Babylon, twelve years after the death of Alexander, in use among the Syrians and Jews (era of the Contracts); the Rūmīs also used it with a slight variation. Muhammad was born in the year 812 of the era of Alexander. — An era of Augustus; one of Antonius used by Ptolemy for corrections in the position of the stars. — The era of Diocletian or era of the martyrs which dates from the first year of the reign of Diocletian, in 596 of Alexander; it is that which was used by the Copts. — In Persia and among the Zoroastrians, the two eras of Yazdegerd III are dated one from his accession and the other from his death.

Under Muslim rule in Persia an interesting reform of the calendar took place when the Caliph al-Mu'tadid brought the *Nawrūz* or Persian New Year day, which the abolition of the intercalation had advanced too much, back to a date more in keeping with agricultural work. The Khānīan, the era of the Ilkhāns, was introduced into Persia by Ghāsan Mahmūd on Rājab I, 701 A. D.; it is a solar era. Another reform is that of the Seldjūk Sultān Malik Shāh who instituted the Djalālī era. — On March 1, 1676 (old style) the Ottomans adopted a solar calendar based on the Julian, and called it "The Ottoman fiscal calendar". The Julian year began about 11 days before the lunar year, the dates of the calendar did not keep in agreement with those of the Hijra. The Ilāhī era was established by Akbar in the 30th year of his reign. It dated from the 5th Rabi' II, 963 (Feb. 19, 1556), the date of his accession; the years are solar. In modern times, Muhtār Pasha Ghāzī has prepared another solar calendar of remarkable accuracy, which would only show an error of 0.28 of a day in a 100 centuries. — In 1926 the Kemālist Turks abandoned the Muhammadan lunar calendar and adopted the European system.

While talking of dates it may be worth mentioning the system of notation called *ijmal* (chronogram) which is sometimes found in texts of a literary character: it consists in dating by forming words, the numeral value of the letters of which gives the date. Thus the sentence *Nadjar al-khalq min al-kufi li-Muhammad*; "Muhammad saves the world from unbelief" gives, when the total value of its letters is added up, the date 1335 (an example from al-Bīrūnī).

Bibliography: al-Bīrūnī, *Chronology of ancient nations*, ed. and transl. E. Sachau, London 1879, chap. iii. and *passim*; Abu 'l-Faraj, *Ta'rikh muhtasar al-Duwal*, ed. Shāhīnī, Beyrouth 1890; E. Lacombe, *Table de concordance des dates des Calendriers arabe, copte, grégorien, israélites*, etc., Paris 1891.

TARIM, local (Turkish) pronunciation *Terim*, the principal river of modern Chinese Turkistan (length about 1,200 miles). It is probably the *Oikhardes* of Ptolemy (vi. 16). In the first (seventh) century the river is mentioned by the Chinese pilgrim Hsuan-Cuang (Hsüen-Tsang, *Memoires*, transl. Stan Julien, ii. 220) under the name *Si-to* (Sanskrit *Śitā*). In the fifth (xth) century Mahmūd Kāshgharī (i. 116) mentions the river *Umi Tarim* "which flows out of the land of Islām into the land of the Uighurs and loses itself in the sand there". According to the same source (*op. cit.*, p. 332), *Umi-Tarim* was a place near Kučs on the frontier of the land of the Uighurs along which the river flowed. The name *Tarim* then as now was apparently applied to the lower course of the river; in its upper course, often also down to its mouth, it is called after the capital of Chinese Turkistan, Yārkand Daryā. The source of the Yārkand-Daryā is the Raakem-Daryā which lies in the mountains of Karakorum on the frontier of India. In the history of Timūr (*Zafar-nāma*, Calcutta 1887—1888, ii. 219), a place called *Tarim* is mentioned not far from Bāi and Kūsan (Kūšā). *Tarim* appears also in the *Tārīkh-i Rūshdi* of Muḥammad Ḥaidar (transl. E. D. Ross, p. 67) as the name of a district, along with *Turfān*, *Lob* and *Katak*; the name of the river is not mentioned in these sources. According to the *Tārīkh-i Rūshdi* (*op. cit.*, p. 11), the town of *Lob-Katak* (or the towns of *Lob* and *Katak*) was destroyed by a sandstorm in the viith (xivth) century. As Sven Hedin (*Through Asia*, London 1898, p. 850) has ascertained, legends about the destroyed town of *Katak* ("Šāhr-i-Kattak or else *Šāhr-i-Katak*") have survived to the present day, although no one has seen the ruins of this town. An arm of the *Tarim* in its lower course is called *Ketek-Tarim* (Kornilow, *Kashgariya*, Tashkent 1903, p. 164). In the time of Mahmūd Kāshgharī, Islām had apparently not yet spread on the lower course of the *Tarim*. The people of town and desert of *Lob* on the other hand are described as *Muḥammadans* by Marco Polo (Ch. 57).

The Yārkand-Daryā leaves the mountains and enters the plain at the village of Kārčun and receives on the left bank the Klāf-Su or Kāshghar-Daryā, the Aqsu or Aqau-Daryā, the Muzart or Shāh-Yār-Daryā and the Kōnde-Daryā, on the right the Tizab, the Khatan-Daryā and the Keryā-Daryā. The right hand tributaries only reach the *Tarim* when they are flooded. Below the mouth of the Aqsu the *Tarim* is about 400 yards broad; in this region it is divided into several arms; the principal arm, the Ugen-Daryā, is 170 yards wide at Terek where Sven Hedin crossed it (*Through Asia*, p. 847). The separate arms are lost in the basin of the *Lob* or *Lob-nor* (Mongol: Lake *Lob*) in which the Čerčen-Daryā also flows; the Su-li-ho also flows into it from the east. *Lop* (or *Lob*), according to Sven Hedin (*Through Asia*, p. 871), is now the name applied to the whole region from the mouth of the Ugen-Daryā and the *Tarim* in the north to the village of Čarkhlik (south of Čerčen-Daryā) in the south; as Pelliot (*Journ. As.*, Ser. xi., vol. vii. 119) suggests, the same word *Lop* is reproduced at the beginning of our era in Chinese by Leou-lan. As the terms *Lop-nor* and *Tarim-gol* (gol, Mongol: river; the latter on the map by J. Klaproth of 1829) show, the earliest accounts of the lake basin and lower course of the *Tarim* reached European scholars from

Mongol (or Kalmük) sources. Quite recently the geographical conditions and the archaeological remains on the lower course of the *Tarim* have been investigated by numerous expeditions and many endeavours have been made to connect modern sites with references in the literary, especially Chinese, sources. According to Sir Aurel Stein's most recent explorations (1914; cf. *Geogr. Journ.*, Aug. and Sept. 1916), there has probably been a large delta in the now almost completely dried up bed of the *Lob*, but never a large lake within historic times.

On account of its continental climate, the *Tarim* in spite of southern situation is covered with ice about three months of the year. On the lower course of the *Tarim* the natives (*Lop-lā*) catch fish in special boats. Sven Hedin explored the region of *Lob-nor* in one such boat; there has never been any navigation in the proper sense on the *Tarim*. As in the time of Mahmūd Kāshgharī, the river was swallowed up by the desert before it reached the bed of the lake; the fishing village of *Kam-čapghan* is described by Hedin (*op. cit.*, p. 884) as "the entrance to the tomb of the *Tarim*".

Bibliography: A particularly full account of the most important sources is given in Kornilow, *Kashgariya*, Tashkent 1903, p. 157 sqq., from his own researches and the narration of Przewalski, Hedin, Plevtsov, Kozlov etc.

(W. BARTHOLO)

TARİM, 1. an old town and still one of the most important in northern *Ḥaḍramūt*, on the left side of the main wādī which traverses the whole of *Ḥaḍramūt* and is called *Wādī Maslā* east of *Shihām* or *Wādī Ḥaḍramūt* or simply *al-Wādī*; others distinguish *Wādī Maslā* and *Wādī Ḥaḍramūt*, but are not agreed on the position of the confluence of the two (cf. Stieler's map 60 in his *Handatlas* [Göttingen 1905] and the *Map of Ḥaḍramūt* [surveyed by Imam Sharīf Khan Bahadur] in Th. Bent, *Southern Arabia*, London 1900, p. 70). The statements of the Arab geographers regarding *Ḥaḍramūt*, especially the interior (already in part utilised by Ritter, *Erkunde*, iii. [Berlin 1846], *passim* and brought together in a critical survey based on all texts, so far accessible, by M. de Goeje, *Hadhravant, Resur Coloniale Internationale*, ii. 1886, p. 101 sqq.) are exceedingly scanty and do not give the impression of being based on the accounts of eye-witnesses, but contain the same matter as the isolated references in the travellers before Wrede and his own information about districts which he was not able himself to visit. The Arab geographers describe *Shihām* and *Tarīm* as two (principal) towns in *Ḥaḍramūt*, without further defining their situation, e.g. Vāḡūr, *Muḍjam*, ii. 284; iii. 247; i. 746; al-Idrīsī (see Jaubert, *Géographie d'Édrisī* [Paris 1836], p. 149 sq. and 53) and others (see below). Al-Ḥamdānī, *Qasra*, p. 87, calls *Tarīm* a large town (as he does the Tarta northeast of *Shihām*), *Shihām* the great capital (p. 86). Of no importance are the mere references as in al-Ḥamdānī, p. 177 (along with *Tarīm*) etc., or references in poets in al-Ḥamdānī, p. 182; al-Bakrī, p. 107, 184 etc. K. Niebuhr, as early as 1763 (see his *Beschreibung von Arabien* [Copenhagen 1772], p. 286 sqq.) received in *San'a'* and *Maskat* from Arab stories of the existence of *Tarīm* and *Shihām* (on p. 286 the mention of "these two most prominent towns of *Ḥaḍramūt*" is quoted from the *Geographia*

Nubiensis (the Latin synopsis of al-Idrîsî, Paris 1619) and Abu 'l-Fidâ'. Ritter and others have given mistaken accounts of the geographical position of Tarim; according to the best available map of Hadramût (that of L. Hirsch) it is approximately in 49° 55' E. Long. and 16° 44' N. Lat.

L. W. C. van den Berg, from his official position in Batavia, was able to get very full particulars of their native land from Arabs from Hadramût, who had migrated to the Dutch East Indies, as their countrymen still do; most of his informants came from the district of the principal Wâdi between Shibâm and Tarim. This information he worked up in his *La Hadramaut et les Colonies Arabes dans l'Archipel Indien* (Batavia 1886) (cf. C. Smuck Hargronje, *Arabie en Oost-Indië* (Leyden 1907, p. 19 sqq., French translation in *Revue de l'Histoire des Rel.*, lvii., 1908, p. 74 sqq.)). Along with much other information we owe to van den Berg the first more accurate details of Tarim. According to him it was the old capital (Maltian marks Tarim on the map in his *Krist* as "capital of Hadramaut proper"); Sai'un (p. 13), he says, is the modern capital. On p. 26 he describes the wâdis that come from the north from the al-Wofl mountains. On p. 18 sqq. he gives distances for the various stations on the road from al-Shihîr to Tarim. Tarim is surpassed by Sai'un in all respects in which it once had the supremacy in the land, number of inhabitants, trade, industry and it is more advanced generally. Several houses were already uninhabited, streets deserted, a large number of mosques no longer visited or fallen into disrepair. The decline of the town is said to have begun as early as the thirties of last century and to have been brought about by the constant feuds between the tribes of the district. According to a not very probable report in the Arabic newspaper *al-Djowâ'ib* of 18th Rabi' I 1299 (Feb. 8, 1882, Constantinople), Tarim had about 25,000 inhabitants (cf. Wrede's statement); according to the results of van den Berg's enquiries (p. 52) it had only 10,000 (which coincides with Wellsted's statement). Tarim was formerly the centre of the textile industry of Hadramût, which however was only carried on in private houses and in his time (p. 78) was still of importance, although it had begun to decline as a result of European competition. So early a writer as Seetzen (*Zeich's Monat. Correspondenz*, 1811, xxviii., p. 240) knew that silk shawls embroidered with gold thread were made in Tarim. The town was at one time also the centre of higher education in the land (grammar, theology and law): Sai'un has now taken its place in this respect also (p. 88).

In the collection of Hadramût stories collected by C. Landberg (*Études sur les dialectes de l'Arabie méridionale*, I., *Hadramût*, Leyden 1901) from the lips of natives, Tarim is mentioned (p. 175 [185], 432) (in the last passage there is a reference to the school there, *Rûs Tarim*; further particulars of it on p. 450 sq.).

The first European to visit Shibâm, Sai'un and Tarim, (July 1893) and to be able to report on the town from his own experiences, was Leo Hirsch (*Reisen in Südarabien, Makra-Land und Hadramût*, Leyden 1897). His description of the journey from Shibâm to Tarim (p. 209 sqq.) and his account of the latter town are full of information. Tarim, he says, lies on the left bank of the Wâdi Mâlle (going from Shibâm) on the side of a hill, according to his map on the southern slopes; v. d. Berg's state-

ment: "Terim (est situé sur le versant) de la chaîne des montagnes septentrionales" (p. 22) should therefore be corrected. On p. 227 sqq. Hirsch gives a fuller description of the town and its situation. Here we will only mention that whole quarters of the town, especially the southwestern part, present a desolate appearance and among the houses which are mostly in ruins — as v. d. Berg already mentioned — there are very few distinguished for size or good repair. The number of mosques, the well kept whitewashed minarets of which rise up among the houses, is not very large according to him (p. 229) (according to v. d. Berg over 300). With his statement "The medrese, where theology and law are taught, is joined to the Rubâi Mosque" we may compare the reference quoted above from Landberg and v. d. Berg's note (p. 88) that the high school, also a hostel for students, at Sai'un, an annexe of the great mosque there, is called *Rubâi* (cf. *rubâi* in the meaning: "hostel for poor Muslim students"). According to Landberg's information, the school at Tarim was closed and its place taken by that at Sai'un (see also v. d. Berg). Hirsch learned from a sayid of the town, who was lamenting its increasing decline, that it had consisted from early times of five *biḥāl* (quarters) and its population was then 3,810. The Sultân of the town had only a nominal authority and was in reality in the hands of the great sayids (p. 231). Tarim like Sai'un belongs to the Kathiri tribes; it has its own coins of silver and copper (a collection in the Berlin and British Museum; some reproduced at the end of Hirsch's book; see also Sir John A. Bucknill, *A Note on some coins struck for use in Tarim, Southern Arabia*, in the *Journal of the Malayan Branch of the Royal Asiatic Society*, vol. III, part I, [April 1925] with a plate). On account of the hostile attitude of the population, Hirsch had to leave Tarim after a few hours' stay only and return to Shibâm next morning; he had no time for a thorough examination.

From a comparison of his statements with the second-hand information of earlier writers, it is evident that, apart from the points of difference already indicated from v. d. Berg, in the latter's map the places from Shibâm to Tarim are put too far to the east and that he has also not given correctly the size and population of the three important towns. Shibâm the largest town — as it was even in al-Ḥamdânî's time — which has about 6,000 inhabitants (Hirsch, p. 198 and Bent, *op. cit.*, p. 148; on the other hand v. d. Berg, p. 42 says only 2,000), is considered an important town and far surpasses Sai'un (with c. 4,500 inhabitants, according to v. d. Berg on the other hand 15,000) and Tarim as a centre of life and activity (Hirsch, p. 205), is put by him too far below Sai'un, whose Sultân is said to be recognised in Tarim also, and even below Tarim in importance. The opinion of D. G. Hogarth, *The Penetration of Arabia* (London 1905), p. 222, that "the rivalry of these towns is such, and the changes in them are so frequent, that it is not impossible that Van den Berg was right at the moment, in regarding Sai'un as the capital of Hadramawt, with Tarim for its only peer", is hardly plausible in view of the shortness of the interval. We may note here the reference to the "journey of Mu'allim 'Abd from Ghish to Terim" in W. Hein (*Südarabische Itinerarien*, M. G. G. W.,

lvii. [1914], p. 37 *sqq.* published by his widow from his literary remains), according to which Sal'ūn is larger than Tarim, and Shibām smaller than these two towns and larger than the others (p. 43), which would rather agree with v. d. Berg's estimate. Against this view however are the statements according to which Shibām is 7 to 8 days' journey from Tarim (p. 42). Here again Hirsch's testimony seems to be preferable.

In January of the year after Hirsch (1894) Bent and his wife succeeded in reaching Shibām; they did not get to Tarim. Bent also says (*l.c.*, p. 119), in contrast to v. d. Berg and others, that the Salhāns of Sal'ūn and Tarim have no authority outside their towns (on the southern Arabian Saltānates, cf. C. Smoock Hargreaves, *L'interdit siculier* ... en Hadramūt, *Revue Africaine*, 1905, p. 92).

Bibliography: the works quoted in the text, especially those of Hirsch, v. d. Berg, de Goeje, Hein, Sprenger, Wiese-Maltzan, Ritter, and the Arab geographers (al-Hamdāni, Yāqūt, al-Idrīsī, Bakrī). (J. TKATSCHE)

TARIM. 1. According to Ḥajjājī Khaliḥ, *Djizān-namā*, p. 490 (cf. Hammer-Purgstall, *Über die Geographie Arabiens, Jahrbücher der Literatur*, Vienna 1841, xciv., p. 93 and following him Ritter, xii. 727), a fortress on the road which runs from the coast-town of Djizān on the Red Sea eastwards via *Newidje and the castle of Feleki (according to v. Hammer's transcription, which seems not quite certain) to Sa'da; that is in the Upper Yemen. From the mention in the verse of Kuthaiyir referred to by al-Hamdāni, *Sifat*, p. 182 and quoted by al-Bakrī, p. 184 (cf. 107) and 196, the situation of the place cannot be more accurately deduced. Al-Hamdāni, immediately after mentioning Humayn lying between Mecca and Kārn, i.e. a place in the southern Ḥijāz, mentions Baidah and Tarim only on the authority of Kuthaiyir without saying anything about its position. Al-Bakrī mentions (p. 195) Tiryam, for which he gives references from poets, and (p. 196) the Tarim occurring in al-A'shā and Kuthaiyir, which either has this vocalisation on account of the metre or is another place, and only then proceeds to deal with the town of the same name in Ḥadramūt (cf. No. 1) under *Tarimu*. Tarim is certainly to be distinguished from Tiryam. The verse refers, in a purely poetical simile, to a "desert of Tarim" without any geographical precision, a reference which like so many topographical references in the poets seems to be quite a conventional one, for the poet was not at all concerned with its geographical position. As regards Kuthaiyir it is certain that he is not thinking of either of the two places in Ḥadramūt of this name (No. 1 and 2). Al-Shu'ayb, mentioned by him in the same verse immediately after Tarim, is said by al-Bakrī, p. 184 to be a coast-town on the Yemen road, which is in keeping with the order in al-Hamdāni. The verse of al-A'shā, which also mentions Tarim without further precision, is quoted by Yāqūt, *Mu'jam*, i. 846, as referring to the town in Ḥadramūt, while al-Bakrī quotes it along with Kuthaiyir's verse without however giving his opinion of the localisation of the Tarim mentioned by the two poets, p. 196, s. v. *Tiryam*, and not when discussing the Tarim in Ḥadramūt. — The *Ta'jī al-A'ar* (viii. 211) which gives further places named Tarim, gives as the first of them in almost the same words as the *Lisān al-Arab* (xiv. 332) the

form Tiryam (on the authority of al-Djauharī; the *Kānūn*, s. v. knows only this form) and then, after others, Taryam (cf. al-Bakrī, p. 195 *sq.*, and records the statement that it is a wādī near al-Naḥī' — which is disputed by many on the ground that al-Naḥī' is a wādī near Madīna — according to the contrary view, a wādī near Yanbu' in the Ḥijāz (cf. al-Hamdāni, p. 181 and Yāqūt, i. 846; cf. thereon al-Bakrī, p. 195 and 548). In any case it is different from the Tiryam mentioned by Yāqūt (*op. cit.*) which is in the north near Madyan (the Turiam of the Admiralty Chart; on it cf. Ritter, xiii. 282; Sprenger, *op. cit.*, p. 23). According to the *Ta'jī*, Tiryam is also a place in the desert of Bayra. He then goes further than the *Lisān* and, after mentioning the Tarim in Ḥadramūt, says, that there is a Tarim in Syria and then goes on to deal with the "Yemen town". — Wāstenfeld, *Yemen im XI. Jahrhundert* (*Abhandl. der Kön. Ges. d. Wissensch.*, xxxii.), Göttingen 1885, p. 39, only mentions, in connection with the history of Hasan Paṣha (from al-Muḥibbi) that Tarim should be read for Tiryam in the list of fortresses taken by the Emir Sinān in 1006 (1597—1598). This is correct, but the reason given that "Tarim is in Ḥadramūt" is not. There is certainly a Yemen Tarim also, but the geographical situation of these fortresses, which are in the Ṣan'a' region, shows that it is not the one in question. Stieler's *Handatlas*, 9th ed., Gotha 1905, *Karte von Arabien* (ed. by Habenicht), marks Tarim west of Sa'da in approx. 43° 20' East Long. and 16° 57' N. Lat. which agrees with the statement of the *Djizān-namā*; the English General Staff map of the coast (Sheet 3, *Sinai*, 1916) does not mark it.

Bibliography: given in the text.

(J. TKATSCHE)

TARKIB BAND is a poem composed of stanzas of from five to eleven couplets. Each stanza, like a *ghazal*, has its own rhyme, the first two hemistichs and the second hemistich of each succeeding couplet rhyming with one another, but the rhyme of each stanza varies from that of the others, though the metre must be the same throughout the poem. After each stanza occurs a couplet in the same metre as the rest of the poem, but with its own rhyme, the two hemistichs rhyming with one another. When the same couplet is repeated after each stanza, as a refrain, the poem is called *Tarkib Band*, but the older writers on prosody applied this name to all poems in this form, whether the couplet was repeated or varied.

TĀROM (TĀRUM), 10. district on the Ḳāzī-Uzūn (cf. SAVID-ROD).

The name. The Arabs call it Tarm, Tirm (Mutanabbī), Tirm (*B. G. A.*, vi. 404, 405). Yāqūt mentions it on two occasions, under Tarm and Tāram. Mustawfī uses the Arabic dual *Tarumain*, the "two Tārams". The modern Persian pronunciation is Tārom. Although Tārom is now the name of the district, there is also a little town

named Tārom on the right bank of the Kīlī-Uzān (between Wenisārā and Kallādj); another village of Tārom (<Tārom) lies to the right of the direct road from Ardabil to Miyāna outside of the district of Tārom.

Tārom, like Khalkhāl, which adjoins it, is not yet sufficiently explored.

Below Miyāna [q. v.] the Kīlī-Uzān reaches its most northerly point near the Pardālā bridge. From there to its junction with the great Shāh-Rūd [q. v.], the Kīlī-Uzān — for a distance of about 100 miles — follows the general direction of N.W. to S.E. Tārom roughly speaking lies on the middle section of the river.

To the south the mountains of Čila-Khānā etc. separate Tārom from Zandjān [q. v.]. To the east the boundary of Tārom is the junction of the great Shāh-Rūd with the Kīlī-Uzān above the Mandjil bridge. To the N.E. the mountains of Gilān separate the basin of the Kīlī-Uzān from Masūla (Gilān). To the north and northwest Tārom is contiguous with Khalkhāl. To the southwest it is bordered by the districts dependent on Zandjān (notably the old canton of Kāghadh-Kunān).

In its northern bend, the Kīlī-Uzān cuts itself a passage through an impassable defile the depth of which is 2,200—2,700 feet. The villages and arable lands of Khalkhāl are on the high plateaus (5,200—6,000 feet high) above the sides of the defile. The ravine runs for a distance of 60 miles to Miyānsarā where on the left bank the Kīlī-Uzān receives the waters of the little Shāh-Rūd (to be distinguished from the great Shāh-Rūd, which comes from Talakān and flows into the Kīlī-Uzān on the right bank to the west of Mandjil). Below the ravine the valley of the Kīlī-Uzān widens for a distance of 60 miles and there are quite a number of villages on both banks. Near Darband the cliffs contract the water-course but afterwards the valley broadens again till just before Mandjil (12—13 miles).

Tārom properly so-called begins where the Kīlī-Uzān leaves its gorge and the gorge at Darband divides it into two parts, an upper and a lower. Details of districts of Tārom are given in the *Nushat al-Kulūb* (1340) but the names of the villages are corrupted in the manuscript.

a. The upper district includes the following cantons: 1. Dizābād-i Sufiā with 25 villages; its position on either side of the Kīlī-Uzān at the mouth of the defile is indicated by the villages Nimahil, Gul-čīn and Kalāsar (Kihār?). We may further note that the upper part of the same canton (*Dizābād-i 'Ulyā*, *Nushat*, p. 66) used to belong to the town of Kāghadh-Kunān (the old Khūnād), the exact site of which has not been identified. 2. The canton of Tārom-i 'Ulyā in the strict sense (with 100 villages) lies on both banks of the Kīlī-Uzān. Its position is indicated by the villages (still in existence) of Qalāt (cf. Yāqūt: Qilāt), on the right bank of the Kīlī-Uzān and to the right of the road from Zandjān via Akh-gādak, and Darrām on the left bank. The position of the canton of 3. Nābār(?) Bīdān(?) is not clear, unless the first name corresponds to Pābar(?) which the Russian map puts on the left bank near the Ōbar mentioned by Rawlinson. According to the latter, Upper Tārom (which should be called Tārom-i Khalkhāl?) consists only of the narrow strip on the right bank while the left bank bears the name of the Pušt-i Kūh

(*the back mountain", with reference to Gilān?). The evidence of the *Nushat al-Kulūb*, as well as that of Fortescue however suggests that Tārom includes some villages on both banks of the Kīlī-Uzān. On the other hand the strip on the right bank is not very narrow; many torrents descend from the mountains which separate Tārom from Zandjān and before reaching the Kīlī-Uzān disappear in the irrigation canals.

b. The cantons of the lower district are 4. that which is commanded by the fortress of Shamīrān (50 villages) and which is situated on both banks (on the right bank there is still the village of Kallādj mentioned in the *Nushat*; 'A'wā' must be Altun-Kush on a little tributary on the right; cf. the *Mir'āt al-Buldān* and the Russian map); 5. the canton of the fortress of Firdāwa (20 villages), the situation of which is indicated by the village of Surdān (on a right bank tributary above Altun-Kush). Another passage in the *Nushat al-Kulūb*, p. 217, adds that the canton of 6. Bara, where the great Shāh-Rūd rejoins the Kīlī-Uzān also belongs to Tārom. A passage in the *Ālām-ārā*, p. 335, shows that in the Safawid period, even Mandjil and Kharzawī to the east of the Shāh-Rūd went with Tārom. At the present day the important town of Mandjil which may correspond to the old Harkūn (Yāqūt, iv. 963) and which commands the entrance to Gilān by the valley of the Safid-Rūd, belongs to Gilān (Rasino, *R. M. M.*, xxiii. 259). Lastly, according to the *Nushat al-Kulūb*, p. 67, the revenues of the cantons of 7. Tirak(?), Mirdmān(?) and Andīdjan (cf. Yāqūt: Andīdjan) were divided between Tārom and Kharwīn. These cantons must be at the source of the Yūz-Bashī-Čai (the gorge of Miḍā 'Alī) the waters of which flow from the left bank into the Shāh-Rūd [on the Russian map we find here the villages of Marčīn and Anda marked].

Khalkhāl. The frontiers of Tārom are little known on the Khalkhāl side. Tārom in general was included in the dependencies of Irāk-i 'Adjam (cf. Schwarz, p. 736 and *Nushat*, p. 65 sq.). As to Khalkhāl, it formed part of Ādharbāidjān (or more exactly of its *tawān* Ardabil, *Nushat*, p. 81). The name Khalkhāl is not found before Yāqūt, ii. 459.

The name Khalkhāl of Ādharbāidjān must be connected with that of the old town of Khalkhāl of the district of i ti in Transcaucasia [cf. 𐎧𐎠𐎧𐎡] which Greek and Armenian authors mention between the second and fifth centuries as the winter-residence of the kings of Armenia and later of those of Albania (Arian); cf. Marquart, *Erzählung*, p. 116. It is possible that in the early centuries of Islam, the whole country between Ardabil and the Kīlī-Uzān was known as al-Bahr (the reading is not quite certain; Noldeke, *Geographie*, p. 481). This old term is frequently used alongside of Tallān = Tallah; cf. Balāghuri, p. 318, 322, 327; Ibn Khurdādhbih, p. 57, 119; Kutiāma, p. 245, 261; Dinawari, p. 197; Mas'ūdi, *Murūdj*, i. 287. The Kīlī-Uzān forms a serious barrier to communication and thus formed a convenient administrative boundary between Ādharbāidjān and Irāk-i 'Adjam. The name Khalkhāl comes from the town of this name which became the capital after the disappearance of the ancient centre Fīrāzān (now Kābakh). Khalkhāl practically coincides with the valley of the left bank tributary of the Kīlī-Uzān. One of

the arms of this river comes from the north (from the pass of Kizil-Yokush, on the Ardabil-Pardalis road) and runs past the village of Sandjawa (Yakūt, iii, p. 160: Sindjādū) or Sindjābādū; *Nushat*, ed. Le Strange, p. 180, 223: Sandjila etc.; Olearius [1663], p. 472: Sengoz). The source of the other arm is to the northeast on the western slopes of the mountains of Tāligh (near the present capital of Khalkhāl: Herow < Hirāhād). This arm is called after the village of Kūl (*Nushat*, ed. Le Strange, p. 223: Gadiw, Kadpa, but p. 84: Kūl). The two arms join near the village of Kabakh; finally the river receives on its left bank the stream from the old town of Khalkhāl (there are now several villages of this name in the valley) and flows into the Kizil-Uzān a little below the bridge of Pardalis (cf. *Nushat al-Kulūb*, p. 81: Bardalis, p. 180: Barūllā). The river Kūl describes a wide curve from east to west. To the south of the town of Herow is the high massif of Akh-dagh, the ramifications of which separate the valley of the Kūl from that of Tārom. From the south face of the Madjara (or Barandak) pass exactly south of Herow comes the little Shāh-Rūd (*Nushat*, p. 223: Shāl-rūd, from the name of the village of Shāl which still exist) which flows into the Kizil-Uzān from the left side near the Miyān-Sārā (where the Kizil-Uzān leaves the gorge). Among the dependencies of Ardabil, the *Nushat*, p. 82, mentions the valley of the little Shāh-Rūd (30 villages) as well as a considerable district of Dārmazān (100 villages) which has not been identified. In any case Khalkhāl, Dārmazān and Shāh-Rūd leave little room for dependencies of Tārom on the left bank of the Kizil-Uzān.

Communications, Products. The principal route between Ardabil and Zandjān (by the old bridge of Pardalis in the middle of the gorge of the Kizil-Uzān) passes via Khalkhāl to the west of Tārom. The caravans which take a shorter route through Tārom (Ardabil-Herow-Barandak-Kālūt-Akh-gādūk-Zandjān) have to cross the Kizil-Uzān in boats (*hātāt*). The traffic between Ardabil and Zandjān is not important; under the Pahlavi regime the question has been raised of joining Fūmen (in Gilān) to Zandjān by a road through Tārom.

According to Yakūt, Tārom is very mountainous and in spite of that fertile (*ma'a dhā'ika mu'abihā* "rich in herbs?"). The cotton of good quality, the name of which, according to Yakūt, was associated with Tārom must have come from the canton of Dizbād for the factories of Kāghadh-kunān (literally "place where paper is made") could not have existed without cotton. The high plateaus of Khalkhāl were still at the beginning of the sixteenth century regarded as the granary from which 'Abbās Mirā drew his supplies of wheat. Rawlinson saw in Tārom many orchards but in 1921 the district made a very poor impression on Fortescue. According to the *Mir'at al-Buldān*, Tārom has lead, copper and vitriol (*sūf*) mines.

Towns and Villages. According to the *Nushat*, p. 65, the capital of Tārom was at first Firzābād (in the lower district and quite distinct from Firzābād of Khalkhāl). In the Mongol period Andar (F in the upper district) took its place. According to Rawlinson, Wenisard (the Russian map: Venisārā) on the right bank was the centre of Tārom; according to Fortescue, this is Banari (left bank). The new centres seem to

be gravitating towards the Ardabil-Herow-Zandjān road.

The fortress of Samirān (Shamirān) was of much more importance: it was visited by Mi'sar b. Muhalhil, Nāsir-i Khusrāw and Yakūt. The site of Shamirān has not been discovered but the itinerary of Nāsir-i Khusrāw enables it to be fixed with sufficient accuracy. The traveller coming from Kāzwān arrived at Kharrāwil (below Mandjil); from there after a descent of 3 farsakhs, he arrived at Brzalkhyr (?), a dependency of Tārom. He then came to a village of Khandān on the Shāh-Rūd near its mouth. At Khandān a toll for crossing (*hāf*) was levied by the Amīr (of Tārom). From here to Shamirān, Nāsir-i Khusrāw reckons it 3 farsakhs. In reality the distance from Kharrāwil to the Shāh-Rūd in a direct line is not over 5 miles. In the more open country to the west of the Shāh-Rūd, 3 farsakhs would be the equivalent of a longer distance in miles. According to Yakūt, Samirān was "on a large river"; all these details enable us to locate Shamirān near Darband. Indeed Rawlinson mentions the ruins there of a "large and very strong fort" (3 miles below Gilwān) and the Russian map shows the "ruins of a fortress" on the cliff on the left bank (c. 7 miles above the mouth of the Shāh-Rūd). The strategic importance of Shamirān was that it guarded at its narrowest point the entrance to Tārom by the valley of the Kizil-Uzān while the fort of Kālūt commanded the entrance from the Zandjān side.

History. We do not know who were the early inhabitants of the district of Tārom. Rawlinson located in this part of the Kizil-Uzān, the ancient people of the Cadusii and relied for this on the authority of Dīhānī (*Akhāl al-'Alam*?) who still (sixth century?) calls all this district Kādūstān (?). The wild and remote country of Tārom-Khalkhāl only played a part in history in the period of the Musāfirid dynasty (q. v.) which, with Shamirān as its capital, ruled Adharbāidjān, Arrān, Gilān and the country as far as Kaly. As early as 316 (928) we find Sallār b. Aswār lord of Shamirān; cf. Ibn al-Athīr, viii, 142. Mi'sar b. Muhalhil (c. 330) quoted by Yakūt speaks of 2,850 large and small buildings in Shamirān. From the interesting letter of the Buyid vizier Šāhib b. 'Abīd Talakānī, quoted by Yakūt (s.v. Samirān) it seems that Tārom was at first under Kāzwān, from which it was detached by Muḥammad b. Musāfir, who coveted the district for its fortress. Šāhib pays a high tribute to the importance of Shamirān by calling it "sister of the fortress of Almut" (Muḥaddasī, p. 360) and mentions the ornamentation of the fortress of Samirān (sic!) in the form of lions in gold, the sun and the moon. In 379 the Buyids acquired Shamirān by a matrimonial alliance, but after the death of Fakhr al-Dawla, the Musāfirid Ibrāhīm seized Zandjān, Abhar, Sardjūhān (a district to the north of Abhar near Sa'in-kal'a = the old Kāhūd) and "Shahrizār" (reading uncertain, but the place must be identified with "Shahrizār", *Shahrizār*) which the *Nushat al-Kulūb*, p. 65 mentions among the dependencies of Lower Tārom. Shamirān is not explicitly mentioned among these domains but in 438 (1046) Nāsir-i Khusrāw found at Shamirān (Samirān) a Musāfirid prince and a garrison of 1,000 men. The traveller says that the fortress on a cliff commanded the town (*qasaba*); it was surrounded by a triple wall; a subterranean passage (*āris*) going

down to the river enabled water to be procured. According to Vākūt, the fortress was destroyed by the Ismā'īlīs in circumstances which are still unknown. Gilān in the time of Vākūt was occupied by the lord of Alamūt.

Under the Mongols, especially when the capital was transferred to Sulṭāniya [q. v.], Tārom gained in importance and the *Nuḥat al-Kulūb* (740 = 1340) gives evidence of the exact knowledge then possessed of this district. Under Ūldjān, Tārom was ruled by a certain *Shoḥna* Girāy (?) who is mentioned as sending the expedition into Gilān in 700 (1307) (Dorn, *Auszüge*, p. 139). Under the Timurids the *khāns* of Khalkhāl (cf. TARRH and the year 787 [1385]) and of Tārom (Shalkh Zāhid Tāroul; Dorn, *Auszüge*, p. 229, 231, 234, 382) played a role of some importance. Shāmīān also must have been rebuilt for the historians of the Gilān tell how after the death of Vākūh, the Ak-Koyunlu (896), the *Kār-kiyā* Mirzā 'Alī seized the fortress by a stratagem. Later a certain Mir Zain al-'Abidin Tāromī rebelled against Mirzā 'Alī but without success. In the reign of Rustam-beg, the Ak-Koyunlu (897—902), his general Iḥād-beg with 10,000 men recaptured the "fortress of Tārom" but later during the struggle between the Ak-Koyunlu Alwand and Muhammadī (905—906), the general of *Kār-kiyā* Mirzā 'Alī "freed Tārom from Turkish rule" (cf. *Mir'at al-Buldān*, p. 236).

Under Ismā'il I, Tārom was on the most convenient route between the lands of the *Kār-kiyā*, where the young monarch was in hiding and Ardabil, the ancestral home of his family. The route followed in 905 by Ismā'il in his famous march was by Tārom—Barandak—Nāzā—Kū'i—Hifz-abad—Abaruk—Ardabil; cf. E. D. Ross, *The Early Years of Shāh Ismā'il*, *J. R. A. S.*, 1895, p. 332. Tārom is several times mentioned in the *Tūrikh-i 'Alam-ārā* as the place where the Safawid spent the winter of 921 and hunted (1002, 1003) and from where they sent expeditions against Gilān.

The Turkish elements gradually absorbed the Irānīan (Dailamī and Gilānī) elements. Under Nādir, the Amārlī Kurds were settled in Mandjil and in the Puḡht-i Kāh of Tārom. According to Rawlinson, they were of the Lūllū tribe (Lūllū, traces of which are still found in Upper Syria [i.e. Coq], near Teherān [Brugsch] etc.), but in his time they had already become turkicised. Rabino however (*R. M. M.*, xxiii, p. 261) distinguishes between the Righwand Kurds (of Sulaimāniya) settled near Mandjil by Abbās I and the 'Amārlī Turks (?) who came in the time of Nādir. In any case Tārom has now a Turkish population; according to Fortescue after Gilwān the peasants do not understand Persian. In the toponymy also a Turkish layer gradually obscures the old Irānīan names (cf. Pardalis [from **prā*, bridge], Nimahlī, Niyāb, Gālmī etc.). A study of the old Irānīan toponymy in Aghardjūdjan has still to be made, but it is evident that the local dialects belonged to the group called "Northwestern" [cf. TAT].

According to the *Mir'at al-Buldān*, p. 335, the Kādjarā made Tārom a separate domain and gave it as a fief (*ikfā' wa-hyāt*) to Muhammad Khān Dawlā, to his son Allah-yār Khān Aḡā al-Dawlā etc. After the accession of Rīdā Shāh a punitive expedition was sent to Khalkhāl and several local Khāns (Rashīd al-Mamālīk etc.) were hanged.

Khandkov, *Map of Azerbaijan*, in *Zeitschrift d. allgem. Geographie*, 1863, xiv.

2^o. A town of Fārs [Vākūt: Tirm; *Fārs-nāma*, ed. i.e. Strange: Tār(u)m] situated at the extreme east of the province of the Kirmān side. The town seems to correspond to Tārawā in the land of the Vautiyā (Behistan, iii, 7). Tārom is now a nāhiya of the bulūk Sab'a, cf. Ḥasan Fāsī, *Fārs-nāma-ji Nāpīr*, Tihān 1314, p. 217—218. Cf. Iupré, *Voyage en Perse*, i, 372—376; Ritter, *Erkunde*, viii, p. 743; Sanī' al-Dawlā, *Mir'at al-Buldān*, p. 338; Preece, *Journey from Shiraz to Jaskh Supp. Papers, Proc. R. Geogr. Soc.*, 1885, i, part 3, p. 403—437; Le Strange, *The Lands...*, p. 292—295; Schwarz, *Iran*, ii, (1910), p. 107—108; Bartholomae, *Altiran. Wörterbuch*, col. 648, 868, 908, 1854. (MINORSKY)

TARRAGONA (Arabic TARRĀKUNA), a little town in the north-east of Spain on the Mediterranean and capital of the province of the same name. This town, which now has a population of 21,300, occupies the site of the ancient acropolis of Tarraco, which became one of the centres of Roman domination in Spain and from the time of Augustus, the capital of the province of *Hispania Tarraconensis*. The Muslims when they occupied Tarragona retained its old name. They sacked it in 724, then occupied it for the whole of the Umayyad Caliphate of Cordova, not without having twice to retake it from the Christians, once from Louis of Aquitaine and the second time from the Catalan prince Ramon Béranger. It was taken from the Muslims definitely by Alfonso el Batallador in 1120.

The Arab geographers sometimes call Tarragona (as they do Granada) "the town of the Jews", which shows they formed a notable part of the population. In the cloisters of the Cathedral of Tarragona is preserved a blind arcade in the form

of a niche of marble with commemorative inscription in the name of 'Abd al-Rahmān III and the date 349 (960).

TARSŪS, a town on the frontier between Asia Minor and Syria, the birthplace of the apostle Paul. It lies in a very fertile plain through which flows a river (Cydnos, later Nahr Baradin). Situated at the junction of several important roads and not far from the sea, even in ancient times it played an important part as a trading centre and was distinguished in the Hellenistic period for the activity of its intellectual life. Christianity spread early there and bishops and metropolitans of Tarsūs are mentioned in the *Acts* of the Councils. When the Arabs had conquered these regions, the Umayyads rebuilt the fortifications of Tarsūs and the other towns on the Byzantine frontier. These towns which formed a girdle were later called "the protectors" (*al-Awāṣim*, q. v.). According to the Arab division, they belonged to the most northerly *ghund* but were separated from it by Hārūn al-Rashīd. Their situation was very exposed and dangerous and Tarsūs especially, being a rich commercial city, suffered a good deal. In the continual fighting between the Muslims and the Byzantines, marauding bodies of troops attacked and plundered it, sometimes from one side and sometimes from the other, and the inhabitants had frequently to save themselves by flight, whereupon the victors sometimes brought a population from other districts and settled them there. In 162 (779) the Ṭāyī Ḥasan b. Kaṭība brought the caliph a description of the ruined Tarsūs, which in his opinion could hold 100,000 inhabitants, and when Hārūn al-Rashīd at a later date learned that the Byzantines intended to rebuild the town, he gave orders to anticipate them and Tarsūs was restored in 172 (788), populated by Arabs and given a mosque. It must have again been lost by the Muslims soon afterwards, but after a truce between Muslims and Byzantines for a period, the caliph al-Ma'mūn in 215 (830) undertook a campaign against the 'Awāṣim, which brought Tarsūs and Mopsuestia east of it into his power. The Caliph himself was buried in Tarsūs, where his tomb was to be seen in later days. There is a reference to Muslim judges in Tarsūs at this period (Ibn Sa'd, VII, 93, 3). In 269 (882) Ibn Ṭūlūn conquered the frontier country but Ṭūlūnīd rule did not last long. In the middle of the 10th/11th century Tarsūs passed into the hands of the Hamdānids, when Saif al-Dawla conquered northern Syria, but shortly afterwards in 354 (965) the Byzantine emperor Nicephorus succeeded in taking Mopsuestia and Tarsūs with other towns of the 'Awāṣim and Tarsūs now remained for a considerable period in Christian hands. Nicephorus had the Kur'ān burned and mosques torn down and gave the Mubammadan population the choice of adopting Christianity, migrating or remaining on payment of a *ḡizya* (q. v.). The majority preferred to emigrate but not a few went over to Christianity.

In the period which ended in this way, Tarsūs was in a flourishing condition as a result of its industrious exploitation of the fertile country round. The population was continually being increased by immigrants from adjoining lands, who wished in their glowing enthusiasm for Islām to take part in the holy war till they met their death. Particulars of the town towards the end of the period are given by several Arab authors. Mas'ūdī says that it had originally a garrison of 8,000 men, and that one of the gates was called *Ḥab al-Djihad* because those who set out to fight the infidels left the city by it. Iṣṭakhri in 340 (951) calls Tarsūs a large town with a double wall and a garrison of 100,000 men, infantry and cavalry. People came thither from all parts of the country and usually settled there. Ibn Ḥawqal (367 = 978) repeats this description but with some additions: the well built city had a large population, several of whom were distinguished for their wisdom; pious men came thither from all the lands of western Asia, as every nation had there their *ṣāḥ*, where they lived on the gifts sent thither from all parts until they fell in battle. As Ibn Ḥawqal wrote after the taking of the town by Nicephorus, his description is not of the town of his time but is taken from an older source; on the other hand the well informed Muḥaddasī says that he will not give a description of Tarsūs as the town was in the hands of the Byzantines.

The Crusaders combined the 'Awāṣim with the principality of Antioch. According to Iḍṭī's description Tarsūs was then a large town with a double wall in a very fertile region. Vākūt expressly remarks that in his time it was in the hands of the Byzantines (beginning of the 10th = 11th century). He also mentions the double wall, the broad ditch surrounding it and the six city gates. Before the Byzantine conquest the town was very prosperous and a series of highly gifted men came out of it. In 1275 the country of Tarsūs and Adhana was plundered by the Mamlūk Sultān Baibars and later it was conquered by Saif al-Dīn Kalā'ūn. In the middle of the 15th/16th century, Khālīl al-Zahiri mentions it as under the jurisdiction of Halab; the town then had a wall and a fine castle and was surrounded by a number of villages.

At the present day Tarsūs is a wretched little ruined town without any memorial of its great past. The Baradin now flows at some distance from the town and the overflow has turned the immediate vicinity into a swamp.

TARTŪS, earlier Anazarūs, frequently Antarsūs (by analogy with Tarsūs), a town on the Syrian coast; the ancient Antarados opposite the island of Arados (Arabic Qasrat Arwād, also written Arwād; now Ruwād). Under the Roman empire, Antarados was called Constantia but the old name remained alongside of this and in the end drove the latter out again.

The Muslims took the fortress of Tartūs under

'Ubadā b. al-Sāmīt in 17 (638). The town was destroyed and remained for a long time uninhabited. Ma'awiya rebuilt it, fortified it and settled there and in Maraṭiya and Bulayyā soldiers to whom he allotted lands. It was only after the conquest of Cyprus that Ma'awiya was able to take the island of Arwād also from the Greeks (Dimashki, transl. Mehren, p. 186; Theophanes, *Chronicle*, ed. de Boor, p. 344). The Qur'an of the Caliph 'Uthmān is said to have been kept in Tartūs Ibn Khurdādhbih includes the district (*kūra*) of Tartūs in the territory of Hims; according to Ya'qubi (*B. G. A.*, vii, 325) the people of the town (here wrongly written *Anṭarṭūs*, cf. M. Hartmann, *Z. D. P. V.*, xxii, 163, No. 28) belonged to the tribe of Kinda.

When in 357–358 (968) the Byzantines under Nicephorus conquered Northern Syria, the strong defences of the town protected it from capture by the enemy according to the evidence of the contemporary Ibn Hawkal (*B. G. A.*, ii, 116). On the other hand about a generation later, Yahyā b. Sa'īd of Anṭakiya reports that the Emperor took Tartūs, Maraṭiya and Hīn Djabala (Yahyā, ed. Kračkovskij and Vasiliev, *Patrol. Orient.*, xviii, 816). In 386 (996–996) the emperor Basil II took the town (Yahyā and Djamāl al-Dīn b. Zāfir in Rosen, *Zapiski Imp. Akad. Nauk*, xlv, 32, 35 sq., 241; Schlumberger, *L'Épopée byzantine*, ii, 95 sq., who wrongly distinguishes Tartūs from Tortosa). At the beginning of the year 1099 the Crusaders took Tartūs but soon afterwards lost it. It was not till 495 (1102) that they finally attained possession of it under Raimund of Toulouse (Rohricht, *Geich. d. Kgr. Jerusalem*, p. 33; van Berchem, *Voyage*, p. 322). After Raimund's death Count William of Cerdagne was given Tartūs and Djabala as a fief (Weil, *Geich. d. Chalifen*, iii, 176). By the treaty of Devol (Sept. 1108), Arwād and Tartūs among other places were promised to the Byzantine emperor Alexius Comnenus (Anna Comnena, *Ἀλεξιάς*, ed. Bonn, ii, 241: *Ἀρράδαος περὶ τῆς ἡνίκά ἤνικα Ἀνθαρῖδας* in Antonin. Placent., ed. Geyer, p. 159; cf. Dussaud, *Topogr. hist. de la Syrie*, p. 124). The town later passed into the possession of the Count of Tripoli (references in van Berchem, *Voyage*, loc. cit.). From a poem dedicated to Usūm b. Munkidh by the Egyptian vizier al-Malik al-Salih Ibn Ḡhārāt Talā' b. Fuzrik, it is evident that the town must have already been in the hands of the Templars before 1158 (Derenbourg, *Ousūma*, p. 293). In July 1188 Saladin advanced on the town, and found it deserted by its defenders, as they had retired into two strong towers on the city walls. Saladin occupied the town in less than an hour; one of the towers was stormed by his vassal, the lord of Irill, and Saladin had it destroyed and the ruins thrown into the sea. The other which was built of large hewn stones and surrounded by a well-watered garden was so bravely defended by the commander of the Templars that Saladin raised the siege and contented himself with destroying the walls and famous Church of the Virgin (van Berchem, *J. A.*, 1902, p. 424 sq.; *Voyage en Syrie*, i, 322 sq.). The earthquake in May 1202, which devastated the whole Syrian coast, is said also to have affected Tartūs but to have spared the Church of the Virgin, which had been rebuilt in 1188 (van Berchem, *Voyage*, i, 323, 332). This edifice,

celebrated for the miracles and cures wrought in it, which contained a valuable image of the Virgin, was considered her oldest sanctuary in Syria (Dimashki, ed. Mehren, p. 208); Idriat apparently already knew it (he wrote in 1154 or later?, cf. Pardi, *Revue géogr. ital.*, xxiv, 1917, p. 308 sq.) although he seems wrongly to transfer it to the island of Arwād (Dussaud, *Rev. Archéol.*, 1896, i, 317, note 3; van Berchem, p. 331 sq.). In the year 611 (1214–1215) Count Raimund of Tripoli, son of Bohemund IV of Antioch, was murdered by Isma'īlis; in revenge, the prince led an expedition against the fortress of Khawābi (Kamal al-Dīn, transl. Blochet, *R. O. L.*, v, 48; Ibn Furāt in Rohricht, *Geich. d. Kgr. Jerusalem*, p. 271, note 1; 715, note 4). The Church of the Virgin lay within the area of the sanctuary of the apostle Andrew, as appears from a letter from Pope Clement IV to Bishop William of Tortosa of April 26, 1265 (Sbaraglia, *Bullar. Francisc.*, iii, Rome 1759, p. 4, note 6).

In the treaty of 1229 between the Emperor Frederick and the Sultan, Tarābalus, Hīn al-Akrād, Saftūha, Marṭab, Tartūs and Anṭakiya were not included; the Emperor had to pledge himself to remain neutral in case of a war between these lands and the Muslims (Rohricht, *Beiträge z. Gesch. d. Kreuzzüge*, i, 41, 77 sq.; do., *Geich. d. Kgr. Jerusalem*, p. 785).

When Balbars in 666 (1267/8) was advancing on Antioch via Tarābalus, envoys from the Templars of Saftūha and Anṭarṭūs appeared before him with presents and 300 Muslims, lately prisoners, and thus succeeded in having their territory spared (al-Makrizi in Quatremère, *Hist. des Sultans Mamelouks*, i/ii, 52; Rohricht, *Geich. d. Kgr. Jerusalem*, p. 953). An attack by the Sultan on Tartūs and other towns in 669 (1270/1) met with no success of note (Makrizi, *op. cit.*, i/ii, 84; Mufaddal b. Abi 'l-Faḡāl II, *Histoire des sultans mamelouks*, ed. Blochet in *Patrol. Orient.*, xii, 528). Later however the Templars found themselves forced to conclude a treaty with him by which their territory and that of Marṭab and Bāniyās was divided between them and the Sultan (Makrizi, *op. cit.*, i/ii, 151; Mufaddal, *op. cit.*, xii, 536; xiv, 445; Rohricht, p. 953). The Master of the Templars, William of Beaujeu (de Bellojoco), in 681 concluded a truce with al-Malik al-Manṣūr for Tartūs and the district around for ten years and ten months (from April 15, 1282) and the possessions of the two parties were accurately delimited. To Tartūs belonged 37 districts of the region round 'Araima (now Kala't 'Araime) and Mi'ār (now Burdj Mi'ār) (Makrizi, *op. cit.*, i/ii, 177 sq., 221–223; Rohricht, *Regesta regni Hierosolym.*, p. 377, No. 1447; do., *Geich. d. Kgr. Jerusalem*, p. 984). After the conquest of 'Akkā, Tartūs was taken from the Franks by Sultan Khalil, being one of the last towns to fall, on 5th Sha'ban 690 (Aug. 3, 1291) (Makrizi, *Sult. Maml.*, ii/ii, 126; Abu 'l-Fida', *Annales Muslim.*, ed. Reiske, v, 98; *Recueil des hist. ar. d. Crois.*, i, 164; Weil, *Geich. d. Chalifen*, iv, 181, note 1; Rohricht, *Geich. d. Kgr. Jerusalem*, p. 1026 sq.; van Berchem, *Voyage*, p. 234).

The Templars temporarily succeeded in establishing themselves again in Tartūs in 1300–1302 from the island of Arwād (A. Trudon des Ormes, *Maisons du Temple en Orient.*, R. O. L., v, 1897, p. 426–428; van Berchem, *a. a. O.*). The island was not taken till 702 (1302/3) in the reign of al-Malik al-Nāṣir, the Christians there put to

death or carried into captivity and the defences razed to the ground (Maḡzi, *Sult Maml.*, II/ii. 195; Abu 'l-Fida', ed. Reiske, v. 180; al-Idrisi, cod. Bodl., No. 887, in marg., in Le Strange, *Palestine*, p. 400; Weil, *Geogr. d. Châl.*, iv. 256).

Henceforth Tartūs was a little district under the *nāḥi* of Tartāḥim (Ḥalkashandī, *Ṣubḥ al-ʿaṣr*, in Godefroy-Demombynes, *La Syrie*, p. 116, 228; Umari, *Tarīf*, p. 182 in R. Hartmann, *Z. D. M. G.*, lxx., 1916, p. 36, note 14). The town declined more and more; the castle of the Crusading period serves the few inhabitants of the present Tartūs (Tortosa) as a dwelling place. The Church of the Virgin still survives in its later form (for further particulars see van Berchem, *Voyage*, I. 329—334; cf. also Enlart, in *Syrie*, II., 1921, p. 333 and M. Pillet, in *Syrie*, VII., 1926, p. 420); also the fortifications (*Syrie*, III., 1922, p. 269 sq., for Jusseland's defences).

TARUDANT, the principal town in the district of Sūs, to the south of Morocco on the right bank of the Wādī Sūs, about 100 miles S.W. of Marrākush and 45 E. of Agādīr on the Atlantic. These two towns may be reached from Tarudant by tracks passable by vehicles. It is a little town with about 7,000 inhabitants. For further details and the history of the town see the article *AL-SŪS AL-AḤṢĀ*, especially p. 569b.

(E. LEVI-PROVENÇAL)

TARWIYA is the name for the 8th Dhū 'l-Hijja (*yawm al-tarwiya*). The Muslim Ḥajj begins on this day; on it the pilgrims go from Mecca to Minā and as a rule after a short stay there go on again to be able to pass the night in 'Arafāt. In Muhammadan works the term *yawm al-tarwiya* is usually explained from the fact that the pilgrims on this day give their animals a plentiful supply of water in preparation for the ride through the waterless area or from their taking a supply of water with them themselves. But *tarwiya* properly means rather "pouring" than "watering" animals or "taking water with one". It has been suggested that the expression goes back to some kind of sympathetic rain-charm with which the rite of the pilgrimage was introduced in the oldest period. With this one might compare the pouring and sprinkling with the sacred water of Zamzam as observed by Ibn Djubair in Shaʿbān 579 (1183) among the Meccans and by al-Batānūnī among the B. duins during the pilgrimage in 1909. See also *ḤADJ*.

(R. PAKET)*

TAŞAWWUF. 1. Etymology — *maḡdar* of form V, formed from the root *ṭāf*, meaning "wool" to denote "the practice of wearing the woollen robe (*labā al-ṭāf*)" — hence the act of devoting oneself to the mystic life on becoming what is called in Islām a *ṭāfī*.

The other etymologies, ancient and modern, proposed for this name of *ṭāfī* may be rejected: such are *ahl al-qūfa* (devotees seated on the "bench" of the mosque at Madīna in the time of the Prophet), *ṭāfī awwāl* (first row of the faithful at prayer), *banū Sūfa* (a Beduin tribe), *ṭawfāna* (a kind of vegetable), *ṭawfāt al-biḥā* (a lock of hair on the nape of the neck), *ṭāfiya* (passive of form III. of the root *ṭāf*, to be purified; at a very early date — the eighth century A. D. —, this passive is found in puns on the word *ṭāfī* "mystic clothed in wool") and the Greek *σωφές* (the attempt has even been made to derive *taşawwuf* from *theosophia*); Nöldeke (*Z. D. M. G.*, XLVIII., p. 45) refuted this last etymology by showing that the Greek *signa* regularly became *sin* (and not *ṭāf*) in Arabic and that there is no Aramaic intermediary between *σωφές* and *ṭāfī*.

The individual surname *al-ṭāfī* first appeared in history in the second half of the eighth century with Djābir Ibn Ḥaiyān, a Shī'ī alchemist of Kūfa, who professed an ascetic doctrine of his own (cf. *Khawāṣṣ Nasʿī*, d. 253 [867], *Itihāna*, s.v.) and Abū Ḥāshim of Kūfa, a celebrated mystic. As to the plural *ṭāfiya* which appears in 199 (814) in connection with a minor rising in Alexandria (al-Kindī, *Kuḍāt Mirʿ*, ed. Guest, p. 162, 440), it means about the same date, according to Muḥāsibī (*Mabūdī*, Pers. MS., p. 87) and Djābir (*Ḥaiyān*, I. 194), a semi-Shī'ī school of Muslim mysticism which originated in Kūfa, the last head of which, 'Abd al-Ṣafī, a vegetarian legist, died in Baghdad about 210 (825). The name *ṭāfī* is then at first clearly confined to Kūfa.

It was destined to have a remarkable future. Within fifty years it denoted all the mystics of the 'Irāq (in contrast to the Malāmītiya mystics of Khurāsān) and two centuries later, *ṭāfiya* was "applied to the whole body of Muslim mystics as

our terms *Ṣūfī* and "*Ṣūfism*" still are to-day. In the interval the wearing of the *ṣūf* or "cloak of white wool", considered in too (719) as a foreign and reprehensible fashion of Christian origin (with which Farqad Sabakhi, a disciple of Ḥasan Baṣrī, is reproached), had become what it henceforth remained, an eminently orthodox Muslim fashion; numerous *ḥadīths* (handed down and probably invented by Ḍhawḥiyārī) even make it Muḥammad's favourite dress for a religious man.

2. Origins. The mystical *tafsīr*'s on the *Kurʾān* and the mystical *ḥadīths* of the inner life of Muḥammad, about which we know so very little, are comparatively late and therefore suspect. But the tendencies to mystical life, which are of all countries and of all nations, were not lacking in the *Islām* of Arabia of the first two centuries A.H. and when once the later legends are eliminated, Ḍḥāḥīz and Ibn al-Ḍjawzī (*ḥuṣṣī*) have preserved for us the names of over forty authentic ascetics of this period, among whom the "interiorisation" of the rites of worship show distinct features of the mystic life. It cannot, however, be any longer asserted that Muḥammad *a priori* excluded mystics from the Muslim community, for it is now known that the famous *ḥadīth*: *Lā raḥbāniyā fī 'l-Islām*: "no monasticism in *Islām*" to which Sprenger had given this meaning, is apocryphal, and that it must have been invented at latest in the third century A.H. to encourage and strengthen a new, deprecatory and interdictive interpretation of a famous verse of the *Kurʾān* (lvii. 27) where *rahbāniya* (monastic life, vows of chastity and seclusion) is mentioned: a verse unanimously interpreted in a permissive and laudatory sense by the exegists of the first three centuries, like Muḍjahīd and Abū Imāma Bāḥilī (cf. my *Essai*, p. 123—131) and by the more cautious of the old mystics (cf. Ḍjunaid, *Ḍurūṣ*) before the opposite interpretation became disseminated and Zamakhsharī made it predominant.

Muslim mysticism may claim among the *Ṣaḥāba* two real precursors in Abū Dharr and Hudhayfa (the cases of Uwais and Suhail are not conclusively proved). After them came ascetics (*nussāk*, *nakhāḥ*), penitents or "weepers" (*ḥakāḥūn*) and popular preachers (*ḥuṣṣī*). At first isolated, they gradually tend to fall into two individual schools, like the adepts in other branches of Muslim thought, schools which had their headquarters on the Mesopotamian frontier of the Arabian desert, one at Baṣra and the other at Kūfa.

The Arab colony at Baṣra, of Tamīm origin, realist and critical by nature, enamoured of logic in grammar, realism in poetry, criticism in *ḥadīth*, the *suḥna* with Muʿtazilī and Ḳadiri tendencies in dogmatics, had as teachers of mysticism: Ḥasan Baṣrī (d. 110 = 728), Mālik b. Dīnār, Faḍl Raḳḳāḥ, Ralāḥ b. 'Amr Kaḥl, Siliḥ Murri and 'Abd al-Wahīd b. Zaid (d. 177 = 793), founder of the famous cenobitic group of 'Abḥādān.

The Arab colony of Kūfa, of Yemen origin, idealist and traditionalist by temperament, enamoured of *raḥawāḥ* in grammar, Platonism in poetry, Zāhirism in *ḥadīth*, the *Shī'a* with Murji'ī tendencies in dogmatics, had as teachers of mysticism: Rabī' b. Khaytham (d. 67 = 686), Abū Isrā'īl Mula'ī (d. 140 = 757), Ḍḥāḥir b. Ḥayyān, Kulāib Saīdāwī, Maṣṣūr b. 'Ammār, Abū 'l-Atāhiya and 'Abdak. The three last-named spent the latter part of their lives in the capital of the empire, Baghdād,

which became the centre of the Muslim mystic movement after 250 (864): the date when the first meeting-places for religious discussions and sacred concerts (*ḥalḥa*) were opened, with the first public lectures on mysticism in the mosques.

This was also the period in which the mystics had their first open encounter with the theologians, the trial of Ḍḥu 'l-Nūn Miḡrī (240 = 854), Nūrī and Abū Ḥamīz (between 262 = 875 and 269 = 882, according to Ibn al-Ḍjawzī, *Talḥīz*, p. 183) and Hallāḍj, before the *ḥalḥa* of Baghdād.

3. The part played by *Ṣūfism* in the Muslim community. The early Muslim mystics had not foreseen that they would come into conflict with the administrative authorities of the Muslim community. If they lived rather retired lives in voluntary poverty (*faqr*) it was in order to be the better able to meditate on the *Kurʾān* (*taḥarrā'a* is the old synonym of *taqawwā'a*) by seeking to draw near to God in prayer. The mystic call is as a rule the result of an inner rebellion of the conscience against social injustices, not only those of others but primarily and particularly against one's own faults: with a desire intensified by inner purification to find God at any price; this which is already clearly seen in the life, examples and sermons of Ḥasan Baṣrī (cf. Schaefer, *Isl.*, xiv. 1-72, and Massignon, *Essai*, p. 152-179), is magnificently expounded in the moving autobiographies of the two great mystics, Muḥāsibī in his *Wasāyā* (transl. in Massignon, p. 216-218) and Ḡharālī in his *Munḥidh* (transl. Barbier de Meynard), but this does not yet threaten established order, however unrighteous may be the conduct of the ruler. But it was the canonists and professional theologians, *fuḳahā'* and *mutakallimūn*, who, very displeased at seeing people speak of searching their consciences and judging one another by this inner tribunal — since the *Kurʾān* law had only legislated for an external tribunal and punished public sins and had no weapon against religious hypocrisy (*nifāq*) — tried to show that the ultimate results of the life led by the mystics were heterodox, since they held that the intention is more important than the act, that practical example (*sunna*) is better than strict letter of the law (*ṣarf*) and that obedience is better than observance.

Among the Muslim schools, the *Khāridjīs* were the first to display their hostility to *Ṣūfism*, in the case of Ḥasim Baṣrī; then the *Imāmīs* (Zaidīs, Twelvers and *Ḡhulāt*) in the third century A.D. condemned all calls to the mystic life as introducing among believers a kind of unusual life (*ṣūf*, *ḥalḥa*) finding expression in the search for a state of grace (*riḡa*) dispensing with devotion to the twelve *Imāms* and an apostolate, contrary to their custom of *ṭaḥya*.

The Sunnis were slower in declaring their attitude and there was never unanimity among them in condemning mysticism. The attacks on mysticism came from two sections among them: on the one hand from conservative circles (*ḥakāḥūn*); Ibn Ḥanbal accuses mysticism of developing meditation at the expense of open prayer and of seeking for the soul a state of personal friendship with God (*ḥuṣṣī*), henceforth freeing it from the observances prescribed by law (*ḥalḥa*); his immediate disciples, *Khāḥḥīh* and Abū Zurʾa, put it in a special subsection (*raḥāniya*) of the heresy of the *sanāḥīh*.

On the other hand, the Mu'tazilis and Zāhiris denounce as absurd the idea of a common life (*ṣaḥā*) uniting the Creator to his creatures, for it implies in theory anthropomorphism (*taḥbīḥ*) and in practice, contact and incarnation (*mulāmat* and *ḥulūl*).

As a matter of fact, however, moderate Sūfism has never been excommunicated by Sunnī ṭalīm, which has always borrowed its practical morality and its life of prayer, from the popular little books of Ibn Abī 'l-Ḥanẓā (d. 281 = 894) to masterpieces like the *Kut al-Ḥulūl* of Abū Ṭalīb Makrī (d. 386 = 996) and especially the *ḥyā'* of Ghazālī; learned Sunnīs, who were hostile to mysticism, like Ibn al-Djāwī, Ibn Taimiyya and Ibn al-Kāsiyyī, respected the great moral authority of Ghazālī and it was only against the monism of the disciples of Ibn 'Arabī that the fulminations of the late Sunnī canonists were thundered, without much success however. The founder of the Wahhābīs, prejudiced against mysticism as he was, himself wrote a commentary on the *Waḥy* of the Ṣūfī Shāhīk to Ḥātim al-'Aẓamm.

4. The history of the evolution of the conception of mystic union. Primitive Sūfism was based on the two following postulates: a. the fervent practice of worship engenders in the soul graces (*faṣāḥid*), immaterial and intelligible realities (a postulate rejected by the Hashwiyā); b. the "science of hearts" (*ḥikm al-ḥulūl*) will procure the soul an experimental wisdom (*ma'rifa*), which implies the assent of the will to the graces received (a postulate rejected by the Mu'tazilis, who are content with a theoretical psychology). The Sūfis assert that there is a dynamic character in the "science of hearts"; it traces their itinerary (*saḥar*) to God, marks it by a dozen stages (*maqāmāt*) and steps (*ahwāl*), some virtues acquired, other graces received, as in the *Scala Sancta* of St. John Climacus; their double list varies with different authors (cf. Sarraḍī, Kūshairī, Ghazālī) but contains almost always well known terms like *tawba*, *yake*, *tawakkul*, *ridā*. Without laying stress on the individual variants of this mystic itinerary the Sūfis aimed especially at defining the ultimate goal when, triumphing over its attachment to the flesh, the soul finds the true God to whom it is aspiring, the Real (*al-Ḥaqq*), a word used as early as the third century A. H. and perhaps borrowed from the pseudo-theology of Aristotle. But how are we to define in orthodox terms this supreme state in which the soul enters with God into this ecstatic dialogue of which the first revelations are made by Rā'īn, Muḥāsib and Yaḥyā Rā'ī, a state which raises the difficult question of theopathic conversation (*ḥaḥḥ* [q. v.]).

The mystics are obliged henceforth to have recourse to the theological vocabulary of their time; they borrow from it here and there technical terms of which they twist the sense a little, without giving a fixed meaning to them. Thus Shāhīk introduces *tawakkul*, Miskī and Ibn Karrām *ma'rifa*, Miskī and Bisṭāmī *fanā* (opp. *baḥā* = cf. Kur'an iv. 26-27), Kharrāz *ain al-djām*, Tirmidhī *wilāya*, etc. In doing this, primitive Muslim mysticism involved itself in the snares of the metaphysics of the first mutakallimūn, atomism, materialism and occasionalism in metaphysics, denying the spirituality and even the immortality of the soul, confounding ontological unity with arithmetical unity, which makes it necessary to classify the

attempts at explanation of the first Muslim mystic schools with the heresy of the Ḥulūliya. If we take the Karrāmīya who desire to emphasise the actual interest which God has in the souls, Ash'arism accuses them of inserting accidents into the being of the Eternal; or the Sālimīya who wish to assert that ardent souls became capable of adhering to the divine presence, the Hanbalīs say that they introduce God into the tongue of the reciter; finally when the Ḥallāḍīya conclude from the ecstatic dialogue, from the intermittent change in subject which is then produced in the depth of the soul, that God has made living testimonies (*sharāhid*) out of the saints, this view is accused of becoming blasphemous and impossible, of implying the usurpation of the divinity by the humanity of a perishable body, since two substances cannot occupy the same place at one and the same time.

In the fourth century A. H. infiltrations from Greek philosophy, which had been continually increasing since the early Karmatian gnostics [q. v.] and the physician Rāzī down to Ibn Sīnā, brought into existence a more correct metaphysical vocabulary implying the immateriality of the spirit (*rūḥ*) and of the soul, the consideration of general ideas, the chain of secondary causes. But this vocabulary became amalgamated with the pseudo-theology of Aristotle, with Platonic idealism and the Plotinian doctrine of emanation, which influenced profoundly the further development of Sūfism. The learned mystics of this period hesitate between three explanations of mystic union: a. the *ittihādīya*, from Ibn Masarra and the Iḥwān al-Ṣafā to Fārābī and Ibn Kāsiyyī, explaining this union as the formation of concepts by an impression of the active intellect, a divine emanation (identified with the *nūr muḥammadi* of the Karmatians and the Sālimīya) on the passive soul; b. the *ishrākiya* from Sahrawardī, Ḥalālī and Dildakī to Dawwānī and Ṣadr al-Dīn Shīrāzī, teaching the essentialisation (*taḥawwur*) of the soul, the divine spark reviving under the illuminations of active intellect; c. the *waḥḍīya* from Ibn Sīnā to Ibn Ṭufayl and Ibn Sab'īn confining itself to stating that the soul attains agreement with God, then taking on consciousness of a total indifferentiated existence in which there is no longer number nor discrimination of any sort. We may note in passing that Ghazālī (*Muḥāsib*, p. 74) refuted the thesis of the *ittihādīya*, a thesis which Ibn Sīnā had admitted into his *Nafīs* (Cairo, p. 402, 481) but rejected in his *Iḥṣārāt* (ch. ix., p. 118; cf. Ibn 'Arabī, *Taḥḥilīyat*) and that Ibn Sab'īn, a convinced hylamorphist, sees in God only the form (*ḥura*) or principle of individuation (*amniya*) of all created beings.

The third and last period in the development of Sūfī doctrine begins in the viii (xiii) century; its predominant school has been justly given by its adversaries the name of *Waḥḍīya* (or *Wuḥḍīya*) as professing the doctrines of existential monism (*waḥdat al-wuḥūd*). The doctrine of the *Waḥḍīya* claims a long descent: it turns to its advantage the Kur'an verses (ii. 109; xxviii. 88; i. 15), the primitive Ash'arī *kalām* regarding every spiritual happening as an immediate act of God and extravagances of language of the early mystics like Bisṭāmī and Ḥallāḍī (in those that 'Ain al-Kuḍātī Hamadhānī collected in his *Tamhīd*), the word *wuḥūd*, derived from *wajūd*, ecstasy, still means the qualification by God of a creature

in opposition to *ṣawm*, his extension in space). It is however really derived from the identification, proposed as early as the third century A.D., of the *nūr muḥammadi* of Muslim gnosticism with the active intellect of the Hellenistic doctrine of emanation (from which Ibn Rushd himself is not free, since he asserts in the *Taḥṣīl* that divine prescience is the superior degree of the existence of things and that souls ought to unite in it like a single passive intellect in the active intellect). Ibn 'Arabi (d. 678 = 1240) was the first to formulate the doctrine of existentialist monism; for him at bottom "the existence of created things is nothing but the very essence of the existence of the Creator" (*wuḥūd al-maḥḥūḥūṣāt 'ain wuḥūd al-ḥāqīqīyeh*, Ibn Taimiyya justly remarks). He teaches in fact that things necessarily emanate from divine prescience in which they pre-existed (*ḥuḥūt*) as ideas, by a flux evolving in five periods and that the souls by an inverse involution logically constructed re-integrate the divine essence. Farḡānī and Ḍijlī only add a few touches of detail to this main theory, which to this day has remained that of all Muslim mystics. It is the one which the Persian poets have sung interminably in the simplified form which Kuniyawi, putting into order the ideas of 'Aṭṭār expresses thus: "God is existence in as much as it is general and unconditional"; it is that which flows, like the sea under its waves through the fleeting forms of individual beings; and at the end of the xviiith century of our era, Kawrānī and Nābulusi aroused the indignation of orthodox Sunnīs by concluding that this pantheistic monism is the only correct interpretation to give to the monotheistic profession of faith of Islām (cf. Massignon, *Hallāj*, p. 784—90); in their eyes, the *ḥadīṣa* by which Islām had thought to affirm the pure transcendence of the one God signifies the absolute immanence of God in his creation and that the totality of all beings in all their actions is divinely adorable. This quietism, which established the supremacy of the divine decree over legal precept, led the Sūfīs among other paradoxes to the rehabilitation of Iblīs (supported by Ḍijlī) and of the Pharaoh of the Exodus (the celebrated thesis of Ibn 'Arabi).

5. The other characteristic features of Sūfism and the study of its sources: The other doctrinal peculiarities still to be noted are a. the *isnād* or spiritual genealogy imagined to link up, as is done in the case of ḥadīṥs, the chain of teachers of mysticism to the direct teaching of the Prophet. The earliest known *isnād* (*Fikrīst*, p. 183) is that of Khulūdī (d. 348 = 959) which claims to go back to the Prophet by the following links: Ḍjunaid (7), Saḳāṭī (6), Ma'rūf Karḳhī (5), Farḳādī (4), Ḥasan Baṣrī (3), and Anas b. Malik (2). Twenty years later Daḳḳāḳ (d. 405 = 1014; cf. *Kuṣṣairī*, p. 158) goes back to the same names except that he only gives the name of Dāwūd Tā'ī (4), before Karḳhī. Finally the classic *isnād* fixed in the xiiith century (Ibn Abī Uṣayb'a, *Uyūn*, II, 250) and since adopted by all the great religious orders, gives after Ḍjunaid (7), Rūḍḥārī (8), Abū 'Alī Kaṣīb or Zudjīdī (9), Maghrībī (10) and Gurgānī (11), and, going back before Dāwūd Tā'ī (4), Ḥabīb 'Adjamī (3), Ḥasan Baṣrī (2), 'Alī (1). Ibn al-Djāwī and Dhahabī have shown that the four oldest links in this *isnād* are false, since these men never met one another. Some religious orders utilize an *isnād*

which goes back (before Ma'rūf Karḳhī) to the nine first Shī'ī Imāms and is still more apocryphal.

A. The invisible hierarchy of believing souls in the world (*riqāṭ al-ḥayāt*); the world is supposed to endure, thanks to the intercessions of a concerted hierarchy of "averting" saints, fixed in number, the place of one who dies being immediately filled. These are the 300 *nubalāḥ*, the 40 *ahbāṭ*, the 7 *umamā*, the 4 *amūd* and their *ḥuṣṣ* (pole or mystic axis of the world = *ḥawṭā*).

c. The privileges and dispensations (*rūḥḥat*) on which is founded the communal life of the Sūfīs, (cf. *TARĪQA*): privileges frequently of an anarchical and unusual character from the distant days of Bistāmī, Shiblī and Abū Sa'īd down to the more or less irresponsible and scandalous *Majdhūbīn* of modern times. At their assemblies the Sūfīs recite special poems; this literature, which is very characteristic of Islām, has developed everywhere in extreme profusion and as a rule has not escaped either monotony or dullness; it is intended to provoke among listeners a psychic excitement by aesthetic means so as to release a sort of artificial ecstasy.

This literature extols in mystical language wine (*ḥamr*) interdicted by the law in this world and reserved for the Paradise of the elect, the loving-cup (*ḥaṭṭ al-maḥabbah*) which the cup-bearer (*ṣāḳī* = *ḥammāl al-dār* = *teruḥḥat*) sends round and gives them, detailed allegorical descriptions with an enthusiasm of a frequently dangerous kind which the majority of western translations prudently star over. Among such poems the following are specially famous in Arabic, those of Ibn Fāriḍ and of Shuṣṭarī; in Persian, the quatrains of Abū Sa'īd, the long *mawḥināt* of 'Aṭṭār and Rūmī (cf. his monistic apologue: "Who is there? — It is Thou" etc.), the *ghazal* of Hāfiz and the various poems of Ḍjāmī, in Turkish the works of Neṣrī and Niyāzī. This kind of literature has become naturalised in Urdu and in Malay, where it still survives at the present day although it has now disappeared in the nearer East; the modern Muslim elite are more and more abandoning it.

The critical study of the sources of Sūfism is far from being completed. Surprised at the profound dogmatic difference which lies between its present monism and strict orthodoxy, the early students of Islām thought Sūfism could be explained as a doctrine of foreign origin, derived either from Syrian monachism (Merx) or Greek Neo-Platonism or Persian Zoroastrianism, or from the Vedānta of India (Jones). Nicholson has shown that in this simple form the hypothesis of borrowing is untenable; indeed from the very beginning of Islām, it can be observed that the formation of the theses peculiar to Muslim mystics went on from within in the course of assiduous recitations of and meditations on the Qur'ān and Ḥadīṥ, under the influence of social and individual crises in the very centre of the Muslim community. But if the initial framework of Sūfism was specifically Muslim and Arab, it is not exactly useless to identify the foreign decorative elements which came to be added to this framework and flourished there; in this way it has been possible for recent students to discover several devotional elements derived from Christian monachism (Asin Palacios, Wensiock, T. Andrae) and several Greek philosophical terms translated from the Syriac; the Iranian analogies (suggested by Blochet) have hardly been examined;

as to the Indian elements (Horten's theory) few arguments have been added to the old similar conjectures of al-Bīrūnī and Dārā Shikūh on the parallels between the Upanishads or the Yōga Sūtra and the ideology of primitive Sūfism. On the other hand, it is probable that the critical student of the material processes producing the *ḥikm* of the modern congregations [cf. TAKIḤA] would establish the infiltration of certain methods of Hindu asceticism.

Bibliography: The list of western sources to be consulted on Sūfism has been prepared with much care by G. Pfannmüller in his *Handbuch der Islam-Literatur*, Leipzig 1923, p. 265-292. From this long list the best general works are those of R. A. Nicholson, *The Mystics of Islam*, London 1914; *Studies in Islamic Mysticism*, Cambridge 1921; and *The Idea of Personality in Sufism*, Cambridge 1923. — On special points may be consulted: on the origins, acute articles by Goldziher (*R.H.R.*, xxxvii, 314; *W.Z.K.M.*, xiii, 35; *Z.A.*, xxii, 317; *Z.D.M.G.*, lxxviii, 544; *Isl.*, ix, 144); Massignon, *Essai sur les Origines du Lexique technique de la mystique musulmane*, Paris 1922; and *La Passion d'al-Hallāj, martyr mystique de l'Islam*, Paris 1922. On Ghazālī: Asin Palacios, *Alghazālī*, Saragossa 1901 and in *Cultura española*, 1906, p. 209, and *M.F.O.*, 1914, p. 67; Obermann, *Der philosophische und religiöse Subjektivismus Ghazālīs*, Vienna 1921. On Ibn al-Fārīd: Nallino (in reply to Di Matteo, in *R.S.O.*, 1919-1920). On Ibn 'Arabi: Asin Palacios, *El místico Murciano Abenarabi*, Madrid 1925-1926, 3 vols. On Huda Sūfism of the xviith century, see von Kremer, *J.A.*, 1869, p. 105; and on the general psychological methods of Sūfism, the documents of Esfaki (translated by Huart in *Les Saints des derviches tourneurs*, Paris 1918) and the remarks by D. B. Macdonald, *The Religious Attitude and Life in Islam*, Chicago 1908. — As to the original texts, we have the fine editions by Nicholson of Sarrāqī, 'Aḥār, Ibn 'Arabi and Rūmī, the translations by Richard Hartmann (of Kūshairī) and Huart (Dārā Shikūh, in *J.A.*, 1926, p. 285), the commentaries of Gairdner on Ghazālī (*Al-Ghazālīs miḥāsāt al-amūr*, London 1924), of Horten on Suhrawardī Halabī (*Die Philosophie der Erleuchtung nach Suhrawardī*, Halle 1912), of Köprülüze Mehmed Fūād on the early Turkish mystics (*Türk Edebiyatında ilk mutasavvıflar*, Stambul 1919), of Nyberg on Ibn 'Arabi (*Kleinere Schriften des Ibn al-'Arabi*, Leyden 1919) etc. The fundamental sources in Arabic are the works of Muḥāsibī, Makki, Ghazālī and Ibn 'Arabi, favourable to Sūfism; and those of its two great opponents: Ibn al-Djawālī (*Taḥṣīs ḥikm*, Cairo 1340) and Ibn Taimiyya. (LOUIS MASSIGNON)

TASHBĪH (A.), infinitive II from *ṭ-sh-b*, saying *Subḥān Allāh* [q.v.].

TASHBĪH, assimilating, comparing (God to man), anthropomorphism, and *ṭā'īl*, emptying, divesting (God of all attributes), are the names of two opposite views of the doctrine of the nature of God in Islam; both are regarded as heresies and grave sins in dogma. The fierce dispute over these conceptions, by which even the dogma of the Qur'ān is influenced, is explained by the central position of the doctrine of the nature of God in Islam. The formal cause is to

be found in the Qur'ān, which strongly emphasises the absolute uniqueness of God and yet at the same time naively describes him in the language of anthropomorphism, giving him a face, eyes and hands and talking of his speaking and sitting. The commentaries, such as, for example, Tabari on the Throne-verse ii. 256 (cf. also Goldziher, *Vorlesungen*², Heidelberg 1925, p. 102 sqq.) enumerate the most diverse interpretations, most of which can no longer be verified; these vary from crude emphasis of the literal meaning to its explanation as allegorical. Instead of the name *taḥbīh*, which came very early into use and means not merely referring to God in phraseology which is ambiguous because generally used of man, but which had, one might say, the sanction of the Prophet, we find *taṭbīh* also used in connection with Sūra, xlii. 9 where the possibility of anything like God is excluded, while the verb *ṭ-sh-b* II is found only in Sūra, iv. 156, applied to the docetic description of the death of Jesus. *Ta'wīl*, the rational interpretation of the anthropomorphic literal meaning, is also found, it is true, as a means and introduction to *taṭbīh* but not uniformly as the root *ṭ-sh-b* II in the Qur'ān has not a censorious sense. Here again the Sūnna plays its double part. There are ḥadīths which are devoted to the question, not only purely tendentious sayings, which originated in this dispute and were coined for the purpose, but also such as are quite free from dogmatic prejudice, just as in certain Sūfi circles the longing aroused in the mystic worship of youth may have found expression in the strongly anthropomorphic visions of God in the form of a noble-looking youth (Ritter in *Isl.*, xvii. [1928], p. 257; cf. also his references in earlier pages to manuscripts). Other ḥadīths again were cited as arguments in the dispute on the strength of a superficial interpretation, e.g. that of the nightly descent of God to earth, in itself really soteriological and edifying, in which the real point actually lies in the hearing of prayer.

It is exceedingly difficult for us to approach the question, since, so far as we can see, none of the Muslim theologians declares frankly for one of the two views of God, but rather every one asserts that he stands for *taḥbīh*, keeping (God) pure, against *taḥbīh*, and *taḥbīh*, positive determination on the basis of *taḥbīh*, the recognition of the revealed text, against *taṭbīl*. All the more eagerly however, do they accuse one another of one or even both transgressions. The use of these terms is quite relative and the grouping of their alleged representatives is equally relative. There are no definite *mu'aṭṭila* and *muḥabbika* sects; on the contrary, the differences in the teaching about God's nature and attributes do not run parallel with any other statements about God and still less do they coincide with other differences in dogma and religio-political theory. Little is known of Dja'd b. Dirham, said to have been the first *mu'aṭṭil*, whom even Ibn Taimiyya, in *al-Furqān* (cf. *Maḥimāt al-Raṣā'il al-Kubrā*, Cairo 1325, i. 137, 11 sqq.) still makes responsible for the fall of the last Omayyad, who is definitely called a Dja'dī and in remarkable contrast also responsible for the Baṭiniyya of the Assassins and the Rāṣūfiyya of Syria. The exponent of *taṭbīl* most frequently mentioned, the somewhat younger Djaḥm b. Saḥwān al-Rāṣiḥī [q.v.], put to death in 128 (745), was described by the Shī'ī Ibn al-Rawandī as a Mu'tazilī Unitarian (*mu'aṭṭil*) and was re-

jected from the Mu'tazila (as "the *imān* of the *muṭabbihā*") by the Mu'tazilī Abū 'l-Ḥasan al-Khayyāṭ in the *Kitāb al-Intiqār* (*Le Livre de triomphe*, ed. Nyberg, Cairo 1935, p. 133 ult., 134, 2) on the authority of a poem cursing him by Bishr b. al-Mu'tamir and, on account of the one principle in common, — that God's knowledge of things only comes into existence at their creation — elapsed with the ultra-Shi'ī Ibn al-Hakam (see below) (p. 126, 20), the "Shaikh of anthropomorphism"; al-Khayyāṭ as a rule attributes anthropomorphic views particularly to the Nābita, i.e. the 'Uthmānī-Omayyad party (p. 145, 9 sq.); Ibn Ḥazm (*Fihl*, Cairo 1320, iv, 205, 13) classes Ḍjāḥm among the Murji'is along with al-Ash'arī, Shāristānī (ed. Cureton, p. 61) and the Ḥādī Abū Sa'īda Muḥammad al-Ḥaṣṣī (on the margin of *Ḍjānawūn*, *Kitāb al-Waḥf*, Cairo 1335, p. 70) put him with the Ḍjāḥmīs who believe in predestination. Although the description of Ḍjāḥm as a *mu'awḍ* seems to be general, the writers on heresies can only be used as authorities with the greatest caution. While Kashshā al-Nisā'ī (d. 253 = 867; see Massignon, *La passion d'al-Hallaj*, Paris 1922, p. 635 and note 2) calls the dogmatics of Ḍjāḥm *ṭaghāḥim* (purifying from any attributes of a created being), and Ash'arī, *Mabāḥith al-Iḍā'iyin* (ed. Ritter, p. 267, 11 sq.) and similarly Baghdadī in *Faṣṣṭ al-Firaḥ* (Cairo 1328, p. 199, 12) only point out that Ḍjāḥm from fear of *ṭaghāḥ* did not teach "God is a something", Ibn Ḥazm also quotes the negative denial: but also "not a not-something", which reveals the same anxiety about *ta'ṭil* or its intenser form *ṭāṭil*, destruction, annihilation, nihilism. Of the numerous pamphlets against Ḍjāḥm that of Ibn Ḥanbal is accessible in *al-Radd 'ala 'l-Zanūṭiyya wa 'l-Ḍjāḥmīya* (see *Nāḥiyet Fekūl'tel Madjūmū'at*, 1917, p. 313—327). Ibn Ḥanbal allows his opponent to say very little and the latter's arguments must not be taken as authentic without further evidence; the subject of the dispute and arguments from *Kar'ān* and *Sunna* are however clear. Ḍjāḥm is said to have denied that God can be seen by the blessed in Paradise, that he talked with Moses and that he sits on a throne. Here however Ibn Ḥanbal interprets Ḍjāḥm's fear of fixing God to a definite place in such a literal and anthropomorphic manner that he says the logical consequence for the Ḍjāḥmīs is to believe that God is in their bodies, in the bellies of swine and in latrines. He himself has however to explain God's being among men in *Sūra* lviii, 8; xx, 48; ix, 40 etc. as metaphorical *ta'ṭil*, which shows how little it is possible to draw a dividing line: on the one side Sunnis with verbal exegesis and on the other Mu'tazilīs with *ta'ṭil*! At the same time Ibn Ḥanbal earns from Ḍjāḥm the grave reproach of hypostasizing after the fashion of the Christian Trinity for his dogma that God is eternal with all his eternal attributes, for which he unhesitatingly uses the metaphor of the palm-tree consisting of root, trunk, branch, twigs, leaves, and sap.

Aḥmad b. Ḥanbal has become the great orthodox authority against *ṭaghāḥ* and *ta'ṭil*. Al-Ash'arī [q. v.] relies on him for his confession of faith in *Mabāḥith*, p. 277, 3. He gave his views on the subject in many special treatises especially on the possibility of seeing God. The happy mean which he struck by simply recognising the hands, the face and the sitting down of God "without a how" (*bi-lā Kaif*) is continually developed by his

followers, as every Muslim of himself states the problem. It has however been brought against him as "the entrance to the doctrine of the anthropomorphists" by Ibn Ḥazm, who at the same time regards Ibn Ḥanbal as an authority (il. 166, 17—19); Ibn Ḥazm for his part attacks the Mu'tazila toning down of the conception with equally colourless *ta'ṭil* (cf. il. 166, 18 sq. to 167, 6 sq.). That the Ash'arī doctrine of the nature of God was always considered *ṭaghāḥ* by the Ḥādīs is shown quite recently by al-Kāsim b. Sa'īd al-Shammūkhī in *al-Kawā al-maṭnā f. 'l-Radd 'ala 'l-Muḥallifin* (Cairo 1324, cf. esp. p. 67, sqq.). His verdict is no more lenient than that of the Almohad Ibn Tūmārt (see *Le Livre de Mohammed ben Thumart*, i, ed. Goldziher, Algiers 1903, p. 261, 2, 232, 6) on the *ṭaghāḥ* of the Almoravids.

In the effort to keep as near to Ibn Ḥanbal as possible while averting the suspicion of *ṭaghāḥ* the Maturids rather emphasised the negative: God is not bounded, not numbered, not divided, not compounded; e.g. Abū Ḥafṣ al-Nasāfī (cf. D. B. MacDonald, *Development of Muslim Theology, Jurisprudence and Constitutional Theory*, New York 1903, p. 309). This brought upon them, as it had on their fore-runner Bishr al-Māzinī from 'Uḥmān b. Sa'īd al-Darīmī, and on Ghazālī from strict Ḥanbalīs like Ibn Taimiyya (*op. cit.*, i, 425, 14) the reproach of the "divesting" *ta'ṭil*. But the Ḥanbalī school of theologians did not remain at one. In *Daf' Shubḥat al-Taghāḥ wa 'l-Radd 'ala 'l-Muḍḍarima* (ed. Ḥusām al-Dīn al-Kaṣṣī, Damascus 1342, esp. p. 5 sqq.) Ibn al-Djāwzī attacks three fellow Ḥanbalīs for lack of purity of conception. On the other hand it is Ibn al-Djāwzī's celebrated pupil Ibn Taimiyya who is regarded, along with men like Abū 'Amr M. b. Sa'īda al-Kurashī, as a bad anthropomorphist since the too much quoted note of Ibn Battaṭa that he said that "God comes down just as I am now coming down (from the pulpit)". More serious than the striking note on this by Ḥusām al-Dīn (in Ibn Ḍjāwzī, *op. cit.*, p. 48, note) may be the attack in his own works on the idea "Look like my look, hand like my hand!" (*Furqān*, i, 119, 13); also his explanation of God's being among men, which may with equal justice be called rationalistic *ta'ṭil* (l. 456 sqq.); then the constant endeavour to transfer anthropomorphic expressions applied to God to a sphere *ni'wān*, but particularly his opinion on all grossly material *ḥādīths* of God's coming down to earth as deliberate forgeries of the *ṣūfīs*, invented to make the Sunnis appear ludicrous (l. 280, 2) and in general his continual attacks on *ṭaghāḥ*, and *ta'ṭil* (i. 270, 14 sqq.; 395, 1 sqq. etc.) which at least reveal his aim and his personal conviction.

The case is worse with Abū Muḥammad Ḥishām b. al-Hakam (d. c. 199 = 814) since we possess none of his writings. Ash'arī however in *Mabāḥith*, p. 29, 3 sqq., reveals the lack of agreement among the notices of him when collected. Among them is a definite testimony that this Ḥishām was free from actual *ṭaghāḥ* and a concise positive indication of the view held, of an affinity and correspondence (*mutaḥabbab*), in *Iḍḍārāt* on *Idjī*, *Mawāḥif*, ed. Soerensen, Leipzig 1848, p. 347, 2, 3 and 31: *mutaḥabbab*, which first of all makes possible the relation of God to what is created and only makes his knowledge possible by his emanating penetration, which is only to be conceived in this way. When then in spite of this, Ash'arī opens his section on

the anthropomorphists with this Hishām "who compared the object of his adoration to a man", we have a glimpse of the origin of this careless labelling such as became common among the later historians of heresies. The very full special expositions of the Shī'is are themselves contradictory. Among them another Hishām, Ibn Salīm al-Djāwālīqī, seems to be the crudest because he talked of God's hair and sides, citing the ḥadīth "God created man in his own image" and referring the "his" to God (Kashshī, *Muṣṣafat Akhbār al-Riḍāʾ*, Bombay 1317, p. 183; Astarābādī, *Munhaḍḍ al-Mukāḥāt fī Taḥḥīḥ al-Riḍāʾ*, Teherān 1306, p. 167). Hishām b. al-Hakam on the other hand with all his care for *ikhṣās* and anxiety about *ikhṣāl*, which made him choose the term "body" (*ajṣam*) beside the vague expression "a something" (*shayʾ*), yet tried much to keep his distance from anthropomorphism. Generally speaking *taḥḥīḥ*, i.e. attributing to God a body, should not without more ado be ranked with *taḥḥīḥ* a sits crudest form, since the very phrase "not like our body" is expressly added, for example even by Hishām b. al-Hakam. In spite of the efforts of later Shī'is to clear their ancestors from the stain of heresy, Astarābādī still passes the damning verdict upon him as the pupil of the even more mythical "Daḥḥān" Abī Shākīr. Perhaps the most suggestive remark is that of Ashʿarī who says that Hishām b. al-Hakam expressed five different opinions on the nature of God in the space of one year. This is quite possible in one who, as Shī'ī sources record, was a highly strung temperament, a member of the circle of the Imām Djaʿfar al-Ṣādiq at a time when dogmatics were still in a very unsettled state, as is shown by the many polemics of the circle which include some of the two Hishāms against one other. The Shī'is themselves therefore have drifted widely apart. The Nusairis under Ibn Hamdān al-Kharrābī are classed as Muḥabbīḥīs. The Baḥīnīs who differ considerably among themselves are usually branded as symbolising nihilists; but one of their leading exponents, Naḥr-i Khusrāw, in his *Zāḥid Muḥabbīḥīn* (Berlin 1923, p. 250 *seq.*) champions a doctrine of the Creator which with its emphasis on the body rather recalls the principles traditionally attributed to Hishām b. al-Hakam, although it cannot be brought into a class of the scheme, with its causal conditionality of God, His unlimitedness in space and its divesting Him of an independent will.

The Twelvers have waged a vigorous war on *taḥḥīḥ* and *taḥḥīḥ* with due emphasis. It is true, on *ikhṣās*, but with especial Muʿtazila suspicion against degrading *taḥḥīḥ*. Their views will be found under the rubrics (with reference to God) "denial of a body, of a form and of *taḥḥīḥ*" and "denial of time, space, movement, change of place" in the encyclopaedia of Majlisī, *Bihār al-Anwār*, book II, Teherān 1306, p. 89—105. It is only in the later authors since Kulainī, Ibn Bābūya, and Ṭūsī that we can verify the statements attributed to them.

The dangers, which Hishām b. al-Hakam sought to avoid in such varied ways, show the immanent dogmatic difficulty felt between "the two limits (*ḥudūd*)". The problem is not so simple that it could be clearly defined in general terms as a twofold struggle over the recognition of God as a purely spiritual being on the one hand and over His in some way personal reality on the other. For where in that case would be put Ashʿarī, for

example? The one thing certain from the history of Muslim dogma is that every Ashʿarī would object to the classification of his master in one of two so distinct classes. *Taḥḥīḥ* is dreaded as a transition to idolatry and paganism, *taḥḥīḥ* as a preliminary to atheism and pantheism, but both are felt to be originally related. It was because Djāḥim imagines God's speaking only as a stomach, coming from a tongue and two lips, i.e. anthropomorphically, that, according to Ibn Ḥanbal, he fell into his "divesting" interpretations of the passages in question in the Qurʾān; Ibn Taimiyya calls him a "divester of anthropomorphism" (*Muṣṣafat Mumathḥil*, I, 127, 9).

Bibliography: The sections mentioned in the historians of heresies and anecdotes of theologians are, in view of the relativity of the points of view, not simply to be dismissed as malevolent inventions; at the same time they can only give indications of some value as to what views were considered to be particularly expounded on one side or the other. The value of the polemics also as authority for the doctrines of those they attacked is in the same way only preliminary. They can only be regarded as authentic sources for the views of the authors of the polemics, just as for any one the only criterion is his own exegesis of the Qurʾān and dogmatics, e.g. Ghazālī, *Iḥyāʾ ʿUlūm al-Dīn*, book I, 2: *Kawāʾid al-Aḥād* and book IV, 5 and 6: *al-Tawḥīd waʾl-Tamakkul* and *al-Maḥabbah*; cf. H. Baner, *Die Dogmatik al-Ghazālī's*, Halle 1912, 48 *seq.*; J. Obermann, *Der philosophische und religiöse Subjektivismus Ghazālī's*, Vienna 1921, 197—200, 127; Abū Manṣūr ʿAbd al-Kāhīr al-Baḥḥādī, *Uṣūl al-Dīn*, Istanbul 1218, I, 73—130 (not so much a systematic treatise as an account of *ikhṣāl* on the lines of his above mentioned *Farḥ bāin al-Firāḥ*).

(R. STROTHMANN)

TASHFĪN n. ALĪ, one of the Almoravid [q.v.] Sovereigns.

TASHKENT, usually written *Tashkend* in Arabic and Persian manuscripts, a large town in Central Asia, in the oasis of Čirčik, watered by one of the right bank tributaries of the Sir-Daryā [q.v.].

Nothing is known of the origin of the settlement on the Čirčik. According to the Greek and Roman sources there were only nomads on the other side of the Vaxartes. In the earliest Chinese sources (from the second century B.C.) mention is made of a land of Yu-ni, later identified with the territory of Tashkent; this land is later called Čo-čī or Čo-čī or simply Shī. The corresponding Chinese character is used with the meaning of "stone", and this is connected by A. Chavannes (*Documents sur les Tou-kiue occidentaux*, St. Petersburg 1903, p. 140) with the later Turkish name (*taş*, "stone" and *kend*, "village" = "stone village"). The Chinese transcription must certainly correspond to the native name Čač, known in the Muḥammadan period; the Arabs here as usual reproduce the sound č by ṭ. The Arabic form *Shāsh* gradually drove the original name out of use in the written as well as the spoken language. If and how the modern Turkish name, first found in the fifth (vith) century, is connected with Čač or *Shāsh* is still doubtful. The etymology (Tashkent = town of the Tāsh i.e. the Arabs) proposed by E. Polivanov (*İşā al-Djāmān*, for W. Barthold,

Tashkent 1927, p. 395-397) will hardly find favour.

Details of the land of Čāč and its capital, the circumference of which was about 10 li (less than 3 miles), are first found in Chinese sources of the third century A.D. In the time of Hsiao-Cung (*Memoires sur les contrées occidentales*, I, 1857, p. 16) there was no ruler in Čāč to whom the whole country was subject, as in other countries. The separate towns were under the suzerainty of the Turks. In the history of the wars of conquest of the Arabs in the second (eighth) century there is frequent reference to a "king (*malik*) of Shāsh"; his capital is given by al-Balādhuri (ed. de Goeje, p. 421) and al-Tabari, (II, 1517 and 1521) as the town of Tārband, not otherwise mentioned in the Arabic geographical literature; that we have here, as the editor (D. H. Müller) assumes a "forma contracta" for Tūrbānd (*B. G. A.*, III, 61 infra) is more than doubtful. The ruling family was presumably of Turkish origin. The suzerainty of the Turkūb Khāns was at times replaced by that of the Chinese. In 751 the Chinese governor Kan Siēn-Či (Chavannes, *Documents* etc., p. 297; F. Hirth, *Nachrichten zur Inschrift des Tsinshuk*, 1897, p. 70) executed the prince of Shāsh and his son appealed for assistance to the Arabs. Ziyād b. Šālih, sent by Abū Muslim (q. v.), inflicted a severe defeat on the Chinese in Dhu 'l-Hijja 133 = July 751 (cf. Ibn al-Athīr, v, 344) on the Talas (q. v.) and Kan Siēn-Či was killed in the battle. This battle established the political supremacy of Islām in Central Asia. No further attempts were made by the Chinese to dispute it.

Under the Caliphs, the territory of Shāsh was regarded as the frontier of Islām against the Turks; the settled lands were protected from the raids of the nomads by a wall, remains of which still exist (*G. M. S.*, N. S., v, p. 172). Nevertheless the land was conquered by the Turks, probably for a short period only, in 191 (806-807). A "prince (*qāhīr*) of Shāsh with his Turks" is mentioned as an ally of the rebel Rāfi' b. Laith (al-Tabari, III, 712). Under al-Ma'mūn, Shāsh again belonged to the Caliph's empire; when in 204 (819) the Sāmānids became governors of various districts in Mā warā al-Nahr, one of them, Yahyā b. Asad, was granted Shāsh (cf. SĀMĀNIDS; in contradiction to what is there stated we know not only the year but also the very day of the death of this Yahyā: it was Thursday five days before the end of Rabi' II, 241 (Sept. 12, 855); cf. *G. M. S.*, xx, 286b). In 225 (840) the eldest of the brothers, Nāh b. Asad, the senior governor of the lands entrusted to the Sāmānids, by conquering Isfijāb (the modern Sairām) succeeded in advancing the frontier further north. About the same time a canal in Shāsh was restored, which had become silted up in the early days of Islām. The Caliph al-Ma'tasim (833-842) contributed 2,000,000 dirhams towards the work on these canals (al-Tabari, III, 1326).

To the period of the Sāmānids belong almost all the surviving geographical descriptions of Shāsh (and indeed those of most Muslim lands). Shāsh appears in these only as the name of a country: the capital is called Binkath; on coins the mint is always given as "Shāsh", rarely with the addition of "Binkath". The territory was 1 farsakh (3 1/2 miles) in length and breadth. The modern Tashkent is of much greater extent, but the position of Binkath or the distance given by the Arabs geographers corresponded roughly to that of Tashkent (W.

Barthold, *Turkestan, G. M. S.*, New Series, v, 711, not to the position of Iki-Tashkent as in Le Strange's *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 480); there is still shown in Tashkent the tomb of the Shāshī scholar Abū Bakr al-Kāfil al-Shāshī who died in 365 or 366 (975-977).

Whether the name Tashkent was in use before the Turkish conquest (before the final collapse of the Sāmānid dynasty, the whole Sīr Daryā territory had been ceded to the Turks in 386 [996]) is doubtful. So far as we know the name "Tashkent" is first found in al-Bīrūnī (*Tarikh al-Hind*, ed. Sachau, p. 149, translation, I, 298); from the etymology of the name al-Bīrūnī wrongly identifies it with the *Alāna* *ṣūrya* of Ptolemy (J. Marquart, *Iranische*, Berlin 1901, p. 155). Mahmūd Kāshgharī (i. 369) mentions "Terken" (otherwise unknown) as a "name of Shāsh" in addition to Tashkent. The name Tashkent first appears on coins in the Mongol period. In the second half of the fifth (xith) and in the sixth (xith) century coins were struck in Banāket, Fanāket or Banākit, which lies quite close to it on the right bank of the Sīr Daryā; it is possible that this town at this time was of greater importance than Tashkent. In Djuwainī's account of the Mongol campaign (*G. M. S.*, xvi, 70 sq.) Tashkent is not mentioned; only the taking of Banāket is recorded. Under Mongol rule Tashkent, for reasons unknown to us, had a better fate than Banāket. Tashkent continued to exist as a town and was occasionally visited by the Khāns (cf. *ḤURĀḤ KHĀN*); on the other hand Banāket, although it had offered not resistance to the Mongols, was in ruins at this date, and it was not till 1392 that Timūr rebuilt it under the new name of Shāhrakhiya.

After the decline of the Mongol empire of Čaghatāi (q. v.) Tashkent belonged to the empire of Timūr and the Timūrīds; in 890 (1485) the town with the lands belonging to it was ceded to the Mongol Khān Yūnus who died there in 892 (1487) (*Tarikh-i Rashidi*, transl. Rose, p. 114 sq.). His tomb is in the mosque of Shāikh Khāwend-i Tuhūr (popularly Shākhātatur), a local saint; on his period (viii = xiv century) cf. A. Semenov in *Protokoll Turk. Kulsha Ljub. Arkh.*, xx, 1915, p. 29. Khān Yūnus was succeeded by his son Mahmūd Khān; after 1503 Tashkent belonged to the kingdom of the Ōzbegs who had, however, to give it up only a short time after the death of the founder of this kingdom, Shāhān Khān (q. v. and cf. SHĀHĀNIDS). During the centuries following, Tashkent was sometimes under the rule of the Ōzbegs, sometimes under the Kazak (q. v. KAZAK) and in 1723 it was conquered by the Kalmūcks, but not at once occupied by them; the town continued to be governed by a prince of Kazak descent who was now a vassal of the rulers of the Kalmūcks. Sometimes its rule passed into the hands of the Khodjas, the descendants of the local saint (e.g. *Z. D. M. G.*, xxxviii, 311).

During these centuries, the possession of Tashkent was frequently the cause of heavy fighting. Some of the accounts of these battles are of importance for the understanding of the topographical conditions of the period. The records of the battles of Tashkent in the time of 'Abd Allāh Khān b. Iskan-far (q. v.) clearly show that the town of Tashkent had not yet assumed its present form. It is not till the sixth (xvith) century that the

division of the town into four quarters (Kukča, Shaikhantaur, Sibir and Besh-Agha) with a common bazaar is mentioned. Occasionally each quarter has a chief (*kākin*) of its own; each quarter formed an entity by itself and was very often at war with the others.

About 1780 Yūnus Khodja, the chief of the Shaikhantaur quarter, succeeded in combining the whole town under his rule. Yūnus Khodja fought successfully against the Kazak but suffered a severe reverse at the hands of the Özbeks of Khokand under 'Alim-Khān; after his death, in the time of his son and successor Sultān-Khodja, shortly before 1810, Tashkent had to submit to the rule of the Khāns of Khokand. For its history in this period cf. KHOKAND.

On June 15/27 1865, Tashkent was taken by the Russians under Černyšev. As capital of the Str-Darya territory and of the governor-generalship of Turkestan, Tashkent attained great prosperity. Alongside of the old "Asiatic" town, a new Russian city arose as the residence of the officials, and the two parts together formed one town from 1877 with joint municipal institutions, but the Russian town, although its population was nothing like the size of that of the "Asiatic" town, enjoyed special privileges; little attention was therefore paid to the old town. The Russian part alone had a civic life in the European sense; in it were the government offices, the schools, the scientific and learned societies and associations. The number of the population (of the old and new Russian town together) amounted to 155,673 according to the census of 1897.

As a result of the revolution Russian Tashkent has lost all the privileges it had over the old town. Since the recognition of the principle of nationality in Central Asia and the foundation of national republics, Tashkent has lost all political importance. The town belongs to Özbekistān while its northern suburbs are in Kazakistān; the seat of government of Özbekistān is in Samarqand [q. v.]. As the largest town in Central Asia, Tashkent has however retained its importance as a commercial and educational centre. It is the meeting-place of the "Economic Council" (*ekonomičeskij soviet*) for the whole of Central Asia, has a University founded in 1920, a very large "Central Asiatic" library, the "principal Museum" (*glavnyj muzej*) of Central Asia, the Central Asiatic section of the Russian Geographical Society etc. Commerce is declining, as elsewhere, but the number of inhabitants is larger than formerly.

TASHKÖPRÜZADE, the name of a family of Turkish scholars, taken from the village

of Tashköprü near Kastamūnt [q. v.] in Anatolia (cf. KÖPRÜLÜZADE, called after the adjacent village of [West]-Köprü).

1. Muṣṭafā b. Khalil al-Dīn, born at Tashköprü in 857 (1453), studied at the high schools of Brussa and Stambul, became professor in Brussa, afterwards (901) in Angora, Üsküb and Adrianople, was for a time tutor to the prince, afterwards Sultān, Salīm I, then again professor in Amasia and Brussa. He never took up the office of judge in Aleppo, which was given to him. He died in 935 (1528) as professor in Brussa. Muṣṭafā b. Khalil was the author of a number of commentaries on books on law but, as a result of his busy life, he was never able to put them into final shape.

2. Ahmad b. Muṣṭafā b. Khalil, son of 1, a distinguished Ottoman encyclopaedist and biographer, born on 14th Rabi' 1901 (3rd Dec. 1495) at Brussa, studied under his father at Angora and Brussa and later in Stambul and Amasia. At the end of Rabi' 931 (May 1525) he became professor in Dimotika, in the beginning of 933 (Oct. 1526) in Stambul, at the beginning of 934 (Oct. 1527) he went to Üsküb. Five years later he again became professor in Stambul, was transferred on the 4th Rabi' 945 (March 25, 1539) to Adrianople, but went back to the capital in the same year in the capacity of "guardian". He again held a teaching post in Adrianople, then reluctantly became *kāfi* in Brussa, but soon returned to his chair. On Shawwāl 27, 958 (29th Oct. 1551) he became judge of Stambul. Three years later his eyes became affected and ultimately he went quite blind. He died on the last day of Rabi' 968 (April 16, 1561) in Stambul, and was buried there in the 'Ashik Pasha quarter in the mosque of the 'Ashik Pasha monastery. Ahmad b. Muṣṭafā had an encyclopaedic mind of astonishing versatility. He compiled an encyclopaedia of arts and sciences in Arabic, which was afterwards translated by his son (see 3) into Turkish and in this form it has been printed under the title *Meṣnū'at al-'Ulūm* (Stambul 1313, 844 and 712 pp.). The number of his other works is considerable. The most important is the *Shakā'ik al-Nu'māniya* written in Arabic in which he gives biographies of 522 'Ulamā' and *shāikh* of orders divided into ten classes (*fahāṣil*) according to the reigns of the ten Ottoman Sultāns, 'Othmān to Sulaimān. At the end he gives his own autobiography. The work, which was finished on Ramaḍān 30, 965 (July 16, 1558) is our main source for the intellectual history of the period. It was several times translated into Turkish and has been brought down almost to the present day (cf. F. Babinger, *G.O.W.*, p. 86 under *Fortsetzungen*). While the original work has been printed in the Arabic version, and in the expanded Turkish translation of Mehmed called Medjidi of Adrianople, and also in the first continuation by 'Atā', the important continuations to the present day still exist in manuscript only, an almost incredible neglect of the most important sources for the history of Ottoman scholarship. On the printed editions cf. F. Babinger, *G.O.W.*, p. 86 sq.; a German translation of the basic work was published in Constantinople in 1927 by O. Rescher (iv. 361 pp., 4th).

Bibliography: Autobiography at the end of *Shakā'ik*; German translation in F. Wüstenfeld, *Die Geschichtsschreiber der Araber*, p. 241 sqq.;

Brockelmann, *G. A. L.*, ii. 425 sq. (with Bibliography); further references in F. Babinger, *G. O. W.*, p. 84 sqq.

3. Kemâl al-Dîn Muḥammad b. Aḥmad, son of 2, Turkish historian. Kemâl al-Dîn Muḥammad was born in Sтамbul in 939 (1532), became professor and kâdî successively in Salonica, Scutari, Aleppo, Damascus, Brussa, Cairo and Galata. Later he was kâdî in Sтамbul and repeatedly held the post of kâdî 'asker of Anatolia or Rumelia. In this capacity he took part in the Wallachian campaign, fell ill and died on his way back to Sтамbul in Ishâkçe (Isağçi, in Rumania). His body was taken to the capital and buried beside that of his father. As a poet he wrote under the *muṣṣḥaf* of Kemâl. He was a translator (see under 2) and also an historian. Under the title *Ta'rikh-i ṣâf* or *Tuhfat al-Aḥbâb* he composed a history of the Ottoman empire down to Aḥmad I (1603/17), to whom he dedicated the book. He is also said to have composed a poetical *Shāhnāme*, but no trace of the work seems to have survived; cf. F. Babinger, *G. O. W.*, p. 149. His *Ta'rikh-i ṣâf* was printed in three fascicules in Sтамbul in 1287.

Bibliography: 'Aṭā, p. 641 sq.; Riyāḍi, *Tadhkirat*; *Sijill-i 'othmānī*, iv. 80; J. v. Hammer, *G. O. D.*, iii. 602, 693 sq.; *M. O. G.*, i. 164 (F. Babinger); Brüssli Muḥammad Tahir, *'Othmānī Mufassṣṣat*, i. 347; F. Babinger, *G. O. W.*, p. 149, where further references are given.

(FRANZ BABINGER)

TASHRÎH (A.), general sense: opening, exposition. It has two special meanings: 1. exposition of a science, commentary on a book, like *ṣharḥ* [q. v.]; 2. the science of anatomy which is the "opening" and exposition of the structure of the body. The two meanings are found in one sentence in Ibn al-Kifṭī: "Galen was the key of medicine, its *ṣharḥ* and its *tashrîḥ*, that is to say, it was he who expounded it and commented upon it... No one ever surpassed him in the science of *tashrîḥ* and he wrote 17 books upon it." The reference here is to anatomy.

Anatomy was not a very popular science in Islām; the reproduction of the human figure was forbidden and on religious and moral grounds dissection objected to. This was not practised among the Muslims any more than among the ancients, except at Alexandria. Galen took advantage of the opportunities he had to study the anatomy of man, but in general he worked on the monkey. Muslim observers also took advantage of any chance opportunities of advancing this science; we have an example of this in the travels of 'Abd al-Laṭīf: the author, with his friends, having learned that there was at Maks in Egypt a hill formed of human remains went to examine the skeletons and made notes.

In spite of the disadvantages under which they laboured, several Arab scholars studied anatomy, in which they followed the Greeks, notably Galen, Oribases and Aetius. A number of works of Galen were known to the Arabs and translated into their language, for example the *De Anatomia*, the *De Venarum Sectione*, the *De Musculorum Dissectione*, the *De Ostiis*, as well as the treatise on the pulse. Books x—xv. of the great work of this scholar, the *De Anatomicis Administrationibus*, were preserved only in Arabic. A German translation has been published by Max Simon.

P. de Koning has published three long extracts from works on anatomy as known to the Arabs, one from Avicenna, another from 'Alī b. 'Abbās, a Zoroastrian physician born in Persia (d. 384), and the last from the famous Razes (Muḥammad b. Zakariyā al-Rāzī, d. 320). The chapters from Razes, which are the least advanced, come from his book *al-Manṣūri*; those of 'Alī b. 'Abbās from his "Royal Book" (*al-Malūk*) and those of Avicenna from his *Kāmil*. These three works have practically the same arrangement, which is clear and logical and is found already in the classical writers. They begin with osteology: first generalities about the bones, then a detailed study from head to foot of the human frame: bones of the head, the belly, the vertebral column, the thorax, bones of the upper limbs and of the hands, the lower limbs and of the feet. The subject of dentistry was not then a separate one. — Next came the study of the muscles, myology: they are enumerated and analysed in the same order; — next the nervous system and the arteries: nerves, brain, spinal fluid, arteries and veins; — then the description of the external organs, organs of sight, taste, hearing, the tongue, larynx, lungs, heart, stomach, intestines, liver, spleen, kidneys, bladder and organs of generation.

Opposite the same chapters of Avicenna, de Koning has placed the corresponding passages from Galen and Oribases: they deal among other subjects with the trapezius muscle, the flexor muscles of the fingers, the pulmonary artery, the valves of the heart, the iris of the eye and the bone of the heart.

All this anatomy is already quite advanced, and very analytic; it is also quite final: every bone, every organ, every muscle is described from the point of view of its function and object. We may note that Arab anatomy has a vocabulary of its own. Unlike medicine and botany, it does not use Persian and Greek words, and on the other hand, unlike mathematics, astronomy and alchemy, it has not given us any technical terms. We do find a few in the Latin translations of the middle ages, like "meri" which is Arabic *marī*, oesophagus; "myrach" which is Arabic *marāḥ*, "abdomen"; "siphao" which is *ṣifāḥ*, peritoneum; but these terms have not come down to our time.

In surgery 'Abulcasis who is Abu 'l-Kāsim al-Zahrāwī, physician to 'Abd al-Rahmān III of Cordova (ivth = xth century), and Avenzoar (Ibn Zohr, d. 595) of Seville are the greatest representatives of science and experiment among the Arabs. The former wrote a book entitled *al-Taṣrif*, the anatomical and surgical part of which is taken mainly from Paul of Aegina. The latter is a late Byzantine author, a contemporary of the beginnings of Islām, who travelled in Arab lands and was much admired by the Arabs for his skill as an operator. Abu 'l-Kāsim deals with operations, describes and gives drawings of instruments. We have a number of his works illustrated in this way. This work was translated into Latin by Gerard of Cremona in the xiiith century and published in 1497 at Venice, and at Basle in 1778. Adapted by Guy de Chauliac (1300—1368) it had a great influence on western science. — As to Avenzoar, a progressive and practical mind of great skill, he cast off to a large extent the authority of Galen and substituted his own experience. He is the main source for Arnaud de Villeneuve. — We may

conclude with a mention of the earliest western translator, Constantine Africanus (1020—1087) who translated 'Alb. b. 'Abdā.

The Arabs also knew ophthalmics as a special subject. To them also we owe observations on the anatomy of animals, on hybrids and on monsters.

(B. CARRA DE VAUX)

TASHRIK is a special name for the last three days of the Muhammadan Hajj (11th—13th Dhu 'l-Hijja: *Ayām al-Tashrik*), during which the pilgrims, having finished their regular rites, stay in Mīna and have to throw seven stones daily on each of the three piles of stones there. In the early period of Islam the name *tashrik* was also given to the solemn *salāt* on the morning of the 10th Dhu 'l-Hijja. The term is probably a survival from the pre-Islamic period and therefore could no longer be explained by the Muslims with certainty. For example the obvious explanation which derives the term from "cutting into strips and drying" the sacrificial meat left over on the Dhu 'l-Hijja is doubtful. An isolated tradition derives *tashrik* from the recitation of the words '*ashrik* *ḥabir* *ḥimā* *muḥir*' (cf. *tahrik*, *talbiya* *tahbir*). One would therefore have to assume that this formula was originally used not only, as we are told, on the 10th Dhu 'l-Hijja before sunrise but also at the lapidation on the following days and that as an essential element it later became the name for the whole ceremony. In Islam this lapidation is accompanied by *tahbir* (pronouncing "*Allāhu akbar*") among other exclamations. This is perhaps why Abū Hanīfa explains *tashrik* as *tahbir* (*Taḍj al-ʿArūs*, vi. 393). Cf. also the article **HADJ**.

(R. PARET)

TASM n. **LUMH** n. **SĀM** b. **NUH**, a legendary tribe of the prehistoric period of the Arabs, closely connected by descent, dwelling-place (in al-Yamāma), conditions of life (agriculturists and cattle-breeders) and history with the Djadis [q. v.] (with whom they are always numbered) b. Ḥāshir b. Iram b. Sām b. Nūh. The story, frequently mentioned in Arabic literature, of the

fall of the two sister-tribes is in its main outlines as follows: They were at one time under the tyranny of a Tasmī named 'Amīk (or 'Amīk). Appealed to in a matrimonial dispute of a Djadis woman named Huzaila he gave an arbitrary verdict. Enraged at the opposition of the woman, he claimed the *jus primae noctis* over all the brides of the Djadis. After exercising this tyranny for 40 (?) years, a highborn Djadis woman named 'Afira bint 'Ifar who had fallen a victim to it roused her tribe to vengeance and open rebellion. Her brother al-Aswad, however, advised cunning and carried his plan through against her proposal. He invited 'Amīk and his tribe to his sister's wedding. During the feast the Djadis fell upon and killed the Tasm with weapons which had been hidden in the sand. Only one escaped, Riyāh b. Murr, who fled to the Himyarite prince Ḥassān b. Tubba' and persuaded him to undertake a campaign of vengeance against the Djadis. When the army had come within three days' journey of Dīaww, the settlement of the Djadis, Riyāh advised branches to be cut and carried by each rider to conceal him. For in Djadis there was a wise woman named Yamāma (or Zarkā) who could see anyone approaching at three days' journey distant. She, however, was able to recognise the enemy force in spite of their covering and advised her fellow tribesmen to get ready to defend themselves. They paid no heed to her and were surprised and the men killed and the women, including Yamāma, taken prisoner. Ḥassān had her eyes torn out and crucified her dead body on the gate of Dīaww, which was henceforth called Yamāma. This is the legend. In many of its features it is quite mythical but it may in part relate to a historical event [cf. *Djadis*]. The fragments preserved in the sources of old couplets in the style of a folksong are probably the remains of a ballad form of the legendary material.

Bibliography: Tabart, I. 771 sqq.; *Kitāb al-Aghāni*, x. 48 sqq.; commentary of Nashwān on the Himyar Kaṣida, extracts from which are given in D. H. Müller's *Sudārah. Studien*, p. 67 sqq.; also very fully in the commentary on the 17th verse of the 13th poem of Aḥḥa Maimūn, ed. by R. Geiger; *ibid.* (p. 74, note 12) an exhaustive list of Arabic sources for the Tasm-Djadis-saga. (H. H. BRAU)

TASMIYA. [See **HAEMALA**].

TASNIM, 1. name of a fountain in Paradise, occurring in the *Kurʿān*, Sūra lxxiii. 27, where it is said, that its water will be drunk by the *muḥarrarūn*, "those who are admitted to the divine presence", and that it will be mixed with the drink of the mass of the inhabitants of Paradise. The commentaries are uncertain, whether *tasnim* is a proper name — which, according to the *Lisān* is inconsistent with its being a diptote — or a derivative from the root *s-n-m*, a root conveying the meaning of "being high". In the latter case the meaning of the verse would be: "and it (viz. the drink of the inhabitants of Paradise) will be mixed with water which is conducted to them from a high place".

Ab-Tabart mentions a third explanation, viz. "hidden things gladdening the inhabitants of Paradise".

Bibliography: al-Bukhārī, *Tafsīr*, Sūra lxxiii.; al-Tabart, *Tafsīr*, xxx. 59; Fakhr al-Dīn al-Rāzi, *Mafātīḥ al-Ghaib*, vi. 502 and the other

commentaries on the *Ḥurān*; *Litān al-ʿArab*, xvi. 199.

2. Infinitive II of *a-n-m*: "raising graves above the level of the earth". It is said that Muhammad's grave was *muṣannam* (Bukhārī, *Ḍjanāʾiz*, b. 96). On the other hand it is said that Muhammad ordered that graves should be levelled (Muslim, *Ḍjanāʾiz*, trad. 92, 93; Ahmad b. Hanbal, *Muṣnad*, vi. 18 bis, 21). Al-Shāfiʿi's opinion was that graves should be raised only so much that they could be recognised as such, lest people should sit or walk on them (al-Tirmidhi, *Ḍjanāʾiz*, b. 56). The Mālikites, however, preferred *ṣanāʾa* (al-Nawawī's Commentary on Muslim's *Ṣaḥīḥ*, Cairo, 1283, ii. 344).

(A. J. WASSINK)
TASUḌJ (and **TASSUḌJ**), 1. Arabicised forms of the Persian word *tarū* (Phl. **tarūk*, cf. Phl. *tarum* "fourth" < **tārūma*; cf. Salemann, *Manich. Studien*, I. 128; Tedesco, *Dialectologie der west-iranischen Turfantexte*, p. 209) which means the 24th part of certain measures (Vulliamy, i. 445). According to the *Farhang-i Shāhī*, two *ḡaw* = a *ḡabba*; two *ḡabba* = a *tarūfj*; four *tarūfj* = a *dāng*; six *dāng* = a *ḡinār*. In the *Divān* of Kāsim al-Anwār (Bib. Nat. de Paris, Sup. Pers. 717, fol. 174) is a verse giving to *tarū* some mystic sense. The word is found in Armenian *thasa* and in Aramaic *tyruga*; cf. Hübschmann, *Arm. Gram.*, vi. p. 266.

2. A territorial division. Nöldeke, *Geschichte der Perser und Araber*, p. 16, contrasts the term *tarūk*, *tarūfj* ("office") meaning a district in the "Irāk with that of *rustāf* ("pariah") a division of a *kūra* (from *χώρα*) in Fārs. The province of the Irāk, according to Ibn Khurdādhbih and Qādīmā, was divided into 12 *astān* (*astān*?) each of which contained a certain number of *tarūfj*; the total number of the latter was usually put at 60 (Le Strange, *Eastern Caliphate*, p. 79). The term *tarūfj* however (the phonetical form of which actually belongs to the S.W. dialect) is known throughout Persia. The province of Abarsāhr in the strict sense (Nishāpūr) was divided into 13 *rustāf* and 4 *tarū* (Ibn Rustā, p. 171; *arṣat arṣat*) namely Ziwand, Takāb, Bushāta Furūshān(?) and Māzul. Ibn Rustā, p. 155, mentions a *tarūfj* of Kūdh among the dependencies of Isfahān. There is also a district of *Tasūdj* in the province of Fārs (Istakhrī, p. 102) on the right bank of the Kurr near Lake Bakhtigān; its capital is Khurrama (cf. also Stolze, *Persepolis*, 1888, preface). The division into *tarūfj* must have been based on irrigation. The water of a river in theory forms 6 *dāng*; thus the two watercourses into which the Kārūn divides at Shāghar (the Shūlāf and Gargar) are called in the *Zafarnāma*, i. 591 and 599, "the river of 4 *dāngs*" and "the river of two *dāngs*". A *tarūfj* seems to represent the area irrigated by a quarter *dāng*.

3. *Tasūdj* is more particularly the name of a small town in Adharbājdjān, on the north bank of Lake Urmīya to the south of the Mīshow range. It is the capital of the district of Gūney (in Turkish "exposed to the sun") including the north shore of Lake Urmīya. The old name of the district still used in government documents is Arwanak-wa-Anzāb. Since Arwanak means particularly the eastern part of the district (*Nushat al-Kulūb*, p. 79) *Tasūdj* seems to be in Anzāb. The town of Tasūdj (*Tasūdj*) lies about 3 miles from the lake; it is watered by a stream from the Kāll-dagh. Near the town which is surrounded by

gardens are quarries of rock-salt, gypsum and limestone. The population is not more than 1,000 but the fact that it is divided into 12 quarters and has 50 mosques (1) shows its former importance. The town must date from before Islām. The Armenian historian of the eighth century, Lerout, p. 134, mentions it among the places in Adharbājdjān which king Gagik passed through coming from Thofnavan (in Vaspurakan): Zarevand, Zidfoy (?), Tasak, Garnak, Ormī, Surenapat. The importance of *Tasūdj* in the Mongol period is seen from the fact that in the *Nushat al-Kulūb* Lake Urmīya is regularly called *daryā-yi shūr-i Tasūdj*. The revenues of the district however were not over 5,000 *ḡinārs*; this sum was earmarked for the maintenance of the pious foundations of the Khān Abū Saʿīd.

Clavijo in 1404 who had to pass through *Tasūdj* on his way from Khōi to Tahriz seems to call it as *Caza* ("a populous fine township which lies in a plain and is surrounded by many orchards that are irrigated by numerous streams"; transl. Le Strange, London 1928, p. 150 and note on the form *Caza-Taza* on p. 352).

Ewliya Çelebi (ii. 242; iv. 319) calls the town *Tasūj* and its river *Irīs* (?). According to him, it was a *rustān* of some importance with about 3,000 soldiers and artillery. The town had 3,000 houses, 7 mosques etc. The people were *Shīʿis*; Ewliya says it was founded by Yezdegerd in honour of his wife *Tasūhān* (?). It is said to have been destroyed by Timūr (? cf. Clavijo) and rebuilt by Dīlshāhshāh (of the Kara-Koyunlu). To the east of *Tasūdj* is the village of Kūmla (Khumla) known from the fortifications erected there in 998 by Farhād Pasha at the time of the conquest of Tabriz [q. v.] in the reign of Murād III; cf. Ewliya, *ibid.*

European travellers have rarely visited *Tasūdj*; cf. E. G. Browne, *A Year among the Persians*, p. 56. (V. MINORSKY)

TAŞWIR (A.), fashioning, forming; an image, a picture; for the prohibition of images and pictures of living beings by the Muslim jurists, see *Ṣūra*; here an account will be given of the artistic activity in the Muslim world that has produced sculptures and pictures, despite the condemnation of the theologians. Examples of the former are rare e.g. in Egypt, Khumārāwāh [q. v.] had statues of himself, his wives and singing-girls made, and in Spain, ʿAbd al-Rahmān III [q. v.] set up a statue of his favourite wife al-Zahrā, in the palace he called after her name, while the marble lions supporting the fountain constructed in the Alhambra for Muhammad V, in the latter part of the xivth century, still exist. The Seljuks princes of Asia Minor employed sculptors to decorate their capital, Konya [q. v.] and several stone figures, both human and animal, of this period are preserved in the museum of that city. The first statues of Muhammadan potentates known to have been erected in public places, are those set up in the city of Cairo by Ismāʿīl Pasha [q. v.]. Under the Fatimids in Egypt a large number of bronze ewers and perfume-burners, in the form of birds and animals, were made, and rock crystals of the same period often have animal forms cut upon them. The metal-workers of Mawjil and their fellow craftsmen who carried the same art into Persia, Syria and Egypt, made lively representations of court life, the monarch drinking among his servants and musicians, hunting, playing polo, or engaged in battle; some of these metal-

workers were certainly Christians, but their patrons were Muslim princes who paid no heed to theological opinion on the matter. A similar disregard of the prescriptions of the *shari'a* is found on the pottery of Raiy (xiith and xiiith centuries), with its brilliantly coloured representations of princes, musicians, singing-girls, dancers and knights, as well as animals of various kinds, both real and imaginary. Figures are also found on the pottery from other towns, but not with the same wealth of imagery. Carvings in wood, particularly under the Fatimids and Mamluks in Egypt, often represent figures, human or animal; figures also form part of the decoration of carpets, ivories and glass. Such objects, of these various classes, as have survived the many cataclysms that have swept over the Muhammadan world, or have escaped destruction at the hands of fanatical iconoclasts, probably form only a small part of the total number that once existed.

More abundant evidence of the existence of representational art and the use of figure-forms, in the Muhammadan world, is found in paintings, especially in Persia, India and Turkey. The existence of fresco-painting as a decoration of the palaces of Muslim princes is testified, for the Umayyad period, by the pictures of royal personages, dancers, musicians, gymnasts etc. in Qusair 'Amra (see 'AMRA, I, 338), and for the early 'Abbāsid period, by the pictures of dancing-girls, animals, birds etc. at Sāmarrā (see E. Herzfeld, *Die Malereien von Samarra*, Berlin 1927). There is ample literary evidence for the practice in the palaces of later Muslim monarchs, and remains of frescoes executed in the xvth and early sixth centuries for Persian Shāhs still exist.

But the majority of Muslim paintings are to be found as illustrations in MSS. and to some extent also on separate sheets of paper. Hardly any examples of paintings on paper have survived, of a date earlier than the xiiith century. Among the earliest books of Arabic literature so illustrated were the *Maqāmāt* of al-Hariri, *Kalīla wa-Dinnā*, works on astronomy, medicine and mechanical science, etc. Persian literature has much more abundantly received the attention of the painter, and writings of many different kinds contain pictures. Poetical works are most commonly illustrated, e.g. the *Shāh-nāma* of Firdawsi, the *Khamsa* of Nizāmī, the *Kulliyāt* of Sa'di and a large number of other poets. Illustrated MSS. of historical contents are less common, but there are MSS. of the *Diyānāt al-Tawārīkh* of Rashid al-Din, the *Rawdat al-Safā* of Mirchānd, the *Zafar-nāma* of Sharaf al-Din 'Alī Yazdī, and various works on Indian history, with pictures. The illustrations in MSS. of the *Kisās al-Anbiyā'* by more than one author, and of the *Madjālīs al-'Ushshād* by Sultān Husain Mirzā (himself a generous patron of painters) are of special interest as providing Muslim representations of the history of the holy personages of Islāmic history. Later, illustrated prose romances became common. Besides Arabic and Persian, MSS. in Çaghatāi Turki (especially those produced in Harāt in the latter part of the xvth century), Hindūstānī, Faḡhī and Ottoman Turkish have been illustrated by Muslim painters.

In addition to the illustrations in manuscripts prepared for royal personages and men of wealth, mention must be made of instances of popular disregard of the prohibition of representations of

living beings; most noticeable among these are the figures used in the shadow-plays, popular in Java, Egypt and Turkey. The houses of the poor are often decorated with crude drawings of animals, especially in Egypt, painted to celebrate the return of a pilgrim from Mecca, and cheap pictures of Borāq [q. v.] are common.

The sources of Muslim pictorial art are obscure, but influences are traceable from Christian (Jacobite and Nestorian), Manichaean, Sāsānian and Chinese paintings. In Persia, the pre-Muslim artistic traditions re-appear in the later art, and in India Hindu painters worked for Muhammadan princes and contributed elements characteristic of the country.

Some attempt has been made to distinguish different schools of Muhammadan painting, but there is little agreement in the suggested divisions. The Primitives of the xiiith century form a group apart; and there are special characteristics that mark the work of the painters in the service of the Mongol rulers of Persia at the beginning of the xivth century, the Timūrid princes of the xvth century, the Safawids of the xvth and the Mughals in India during the xvth and xvth centuries.

Of the personality of the painters very little is known; the greater part of their work is anonymous, and it often happens that no biographical material is available in cases where paintings bear a signature. Even of the greatest of Persian painters, Bihzād [q. v.], little is known, except the names of the princely patrons for whom he worked, and critics are not agreed as to which of the pictures that bear his signature, are authentic. Historical material regarding the Persian painters begins to be available in the xvth century, and for Indian and Turkish painters a little later; but the details provided are very meagre and in no instance are they sufficient to render identification of any particular picture possible.

Finally, mention may be made of coins bearing the effigy of a Muslim monarch. The earliest of these are obviously imitations of Byzantine coins, and cease after 'Abd al-Malik's [q. v.] reform of the coinage about 77 A. H. There are isolated examples of coins bearing the portraits of the 'Abbāsid Caliphs Mutawakkil, Mu'tadid and Ma'fī. But coins with human figures become more common under the Seldjūqs of Asia Minor, the Urtukids of Diyarbakr and Zangids of Aleppo; but they are generally imitations of some foreign coinage, and in no instance appear to be portraits of the monarchs whose names and titles they bear. In India, however, Djahāngīr [q. v.] struck coins bearing his own effigy, and even ventured to outrage Muslim sentiment so far as to represent himself as holding a wine-cup in his hand.

Migeon, *Manuel d'art musulman*, 2nd ed., Paris 1927. (T. W. ARNOLD)

AL-TASYIR (in the west: *stazis*, *stazis*, *athazis*, *directio*, *prorogatio*, *stazis*, *théorie apbétique*) is a process used in astrology of artificial continuation of a planet or of an astrological house or any other definite part of the heavens to another star or its aspects, or other houses with the object of ascertaining the equatorial degree situated between these two places, the figure of which is used, by converting it into a definite period of time, to prognosticate the date of a future happening, either good or evil.

The astrological magnitude ascertained by this process played a very prominent part among the ancients as well as among the Arabs and in the west, for on the one hand it made possible a *judicium speciale* (i.e. definitely laid down the time of fulfilment of statements made in the *judicium generale* of a nativity about future good or ill fortune and in particular enabled the length of life to be calculated or the choice of particularly auspicious days [*al-ḥaṣṣiyā*] for beginning a journey, for holding weddings, for founding a city, for beginning a reign, etc.), and on the other was distinguished by special complexity in the method of its calculation.

The astronomical calculation of the arc of special importance for our task (we call it briefly the *tasyir* arc) is not particularly difficult if once the limits of the places in the heavens defining the arc, the "advancing" planet or place (*al-mutaqaddim*, *al-kāṭib*, signifier) and the "succeeding" or second (*al-ḥānī*, promisor) are ascertained. In fig. 1 (and 2) A is the signifier, B the promisor, P the visible pole of the celestial sphere, NBS (NAS) the circle of the promisor (signifier), C the intersection of the circle parallel to the circle of position drawn through A (B) and C cut out the *tasyir* arc ac (bc). The *tasyir* arc is thus the curve of the equator, which in general does not exceed 90°, which crosses over the circle of position during the period in which the signifier (promisor) is transferred by the apparent daily revolution of the celestial sphere on its parallel circle to the circle of position of the promisor (signifier) assumed to be fixed within this period (for further information on the conceptions that occur, see the article *ASTROLOGY*).

According to the respective positions of the signifier and promisor, two kinds of *tasyir* are distinguished:

a. Direct *tasyir* (*directio directa*) when the signifier precedes the promisor in the order of the signs of the zodiac. Here the signifier is the place to be "directed", the promisor regarded as fixed (fig. 1).

b. Indirect *tasyir* (*directio conversa*) when the signifier precedes the promisor in the order of the daily motion of the celestial sphere. In this case the promisor is moved to the circle of position of the signifier which is assumed to be fixed.

A special form for application of the calculation of the *tasyir* (a kind of inversion of the process) was developed in choosing days in this way that the position of only one star was given and also a definite time or what is the same thing on account of the conversion of periods of time into degrees of the equator, a definite number of *tasyir* degrees. The problem is to find the degree which corresponds to the end point (the "goal") of the

tasyir arc. Judicia could then be deduced from the conjunction of planets occurring at this degree.

The mathematical calculation is a problem in spherical trigonometry and goes back to simple formulae with equinoctial time as the basis. In the equation $tasyir\ x = \beta - \alpha - B' - B''$ (fig. 1), the right side is known, for α = right ascension B - right asc. A and the magnitudes B' and B'' are found from the formulae:

$$I. \cos B' = \sin (\angle DSB') \cos SD.$$

$$II. \sin \beta B' = \operatorname{tg} B \operatorname{ctg} B'.$$

$$III. \sin B'' = \operatorname{tg} C \operatorname{ctg} B'.$$

The Arabs however used other approximative methods of calculation based on hours of mean time (*ṣamāniya*) which are given in the following formulae:

I. (According to al-Battānī, al-Bīrūnī etc.):

number of *tasyir* degrees:

$$= x \pm (\alpha - \beta).$$

$$\frac{\text{dist. } B \text{ from upper [lower] culm. point}}{\text{half day [night] arc } B},$$

where

$$\alpha = \text{right asc. } A - \text{right asc. } B,$$

$$\beta = \text{obl. asc. } A - \text{obl. asc. } B.$$

The signs \pm before the round bracket depend on whether α is greater or less than β , the expression in the square brackets are used when B is below the horizon.

Special cases:

$$a. B \text{ in the meridian: } tasyir = \text{right asc. } A - \text{right asc. } B,$$

$$b. B \text{ in the horizon: } tasyir = \text{obl. asc. } A - \text{obl. asc. } B.$$

II. (Second rule of al-Battānī):

$$\text{Number of } tasyir \text{ degrees} =$$

$$= \left| \frac{\text{dist. } B \text{ from upper [lower] culm. point}}{\text{half day [night] arc } A} \pm \text{right asc. } A - \text{right asc. of the upper [lower] culm. point} \right|,$$

where the — before the round bracket is for the case when A and B belong to the same hemisphere, the + when A and B belong to different hemispheres. The expressions in the square brackets are used for the western hemisphere or for the case when the lower meridian lies between A and B .

In both cases the total result is positive in direct and negative in indirect *tasyir*. For indirect *tasyir* B and A in the above formulae are to be interchanged. The number of degrees in the *tasyir* arc thus obtained was converted into a period of time in this way: If it was a question of length of life for example, 1° was equated to a solar year, 5' = 1 month, 1' = 6 days, in other cases 1° = 1 day.

The difficulty, continually emphasised by the Arabs, of calculating a *tasyir* is on the one hand due to the regard paid to astrological demands and on the other particularly to the amount of separate necessary astronomical calculations and measurements, which it would take too much time to detail here fully. The necessary knowledge of the different methods for accurately calculating the time of birth and the astronomical significance of the different times of being born, of the different houses of the heavens of the signs of the zodiac, of the seven planets and their aspects, of the most important fixed stars, first in themselves,

Fig. 1

Fig. 3

Fig. 2

Fig. 4

then with respect to one another and with regard to their special positions (house, degree of elevation, triplicity, injury, fall) taking into consideration the very many rules for the strength, weakness or moderation, the beneficial or dangerous influence of the various planets and their aspects, of the houses and the arrow of fortune (*isām al-idāda*), the calculation of larger, smaller or medium numbers of years for length of life according to the position of the influential planets, the choice of a lord of birth and of the horoscope after definite rules (ascendant, *al-falā*), of an interpreter of life (significator), of a foreteller of death or misfortune (promissor), of a giver of years (*al-kadhūḥ*), the knowledge of the great, little or medium effect of definite direction, of auspicious or inauspicious directions and other things, demanded a perfect command of the astrological knowledge of the period. In addition, considerable skill in the carrying out of the necessary astronomical calculations was necessary, the reduction of the time to the meridian on which the Ephemerid tables were based; the longitude, latitude and declination of the most important fixed stars, the planets and their aspects and the application of their values in the time of birth, the astrological houses in the heavens and the signs of the zodiac and planets in them; the arrow of fortune, the circles of position of significator and promissor etc. Simply for the calculation of the curve of the *tasyir* after ascertaining its termini there are necessary: right asc. of *A* and *B*, their distance from the meridian, their declination and half-day or half-night curve, the elevation of the pole over the circle of position (distance of the intersection of circle of position and equator from the meridian).

To simplify the long and tiresome process and to carry out an observation without calculation the Arabs used mechanical (nomographic) aids either single planes ("plane of the *tasyir*" in al-Bīrūnī) which were placed in the astrolabe or a special instrument ("estrumento del levantamiento" in Alfonso X of Castile) which was mainly used to obtain the *tasyir* but also facilitated other calculations. The essential part of this instrument was a plane which contained on the front the projections of as many circles of position as possible or of hours for the latitude of the point of observation concerned (it is the same plane as the plane of the *tasyir* in al-Bīrūnī; cf. fig. 3) and on the back the projections of the circles of longitude and latitude according to the system of the ecliptic (fig. 4). On the axis of the instrument, common to the two sides, was an undivided alhidade with two movable pointers placed as required on the front or back and kept in position by a fastener ("cavallo", *al-faraz*). On the back could also be put the net ("spider") with the projections of different positions of fixed stars which is made exactly as in the astrolabe.

The mechanical calculation of the *tasyir* curve was carried out as follows when latitude and longitude of the places in the heavens *A* and *B* (cf. fig. 1, 3 and 4) were known:

1. Place the moveable pointer of the alhidade on the place *B* on the back, read the degree of the equator *A* to which the alhidade now points.
2. Move the alhidade to the front, place it on the degree of the equator *A*, ascertain the circle of position (from *B*) on which the moveable pointer falls.

3. Place the moveable pointer at the place *A* on the back, read the degree of the equator *A*.

4. Move the alhidade to the front, place it on the degree of the equator *A*, turn the alhidade until the pointer running through the parallel circle from *A* points to the circle of position of *B* (in *C*).

5. Read the degree of the equator *C* through which the alhidade now points: the curve *ac* is the *tasyir* curve desired.

Works in Arabic on the *tasyir* or the plane of the *tasyir* were composed by Muḥammad b. 'Omar b. Farrūkhān (H. Suter, *Die Mathematiker u. Astronomen der Araber* etc., Abhdlg. z. Geogr. u. math. Wissensch., xlv., Heft 10, 1900, No. 34); al-Battānī (Suter, No. 89); Abū Ljā'ay al-Khazīn (Suter, No. 124); al-Bīrūnī (Suter, No. 218). But the complete astrological works of the former have not survived. The "Book of the Ataqir" in the astronomical works of Alfonso X is by Rabi Čag de Toledo (Isaak ibn Sid), the editor of the Alfonsine Tables, but seems to be merely a translation of an Arabic original.

In the "History of Scholars" by Ibn al-Kāḍī the following astronomers are honorably mentioned for their particular ability in calculating the *tasyir*: al-Ḥasan b. Miḡbāḥ (p. 163); al-Marwāzī (p. 170, Suter, No. 22); al-Khāḍim, (p. 281, Suter, No. 206); Sind b. 'Alī (p. 206, Suter, No. 24); al-'Abbās b. Sa'īd al-Djāwharī (p. 219, Suter, No. 21); Ibn Yūnus (p. 203, Suter, No. 178); Ibn al-A'lamī (S. 235, Suter, No. 137); Muḥ. b. Ibrāhīm al-Fazārī (p. 270, Suter, No. 1); Muḥ. b. Khālid al-Marwāzī (p. 281, Suter, No. 46); Yaḥyā b. Abī Manṣūr (p. 357, Suter, No. 14); Yaḥyā b. Saḥl al-Saḍīd Abū Bighr al-Takrītī (p. 365); Abū 'I-Faḍl b. Yūnis (p. 426).

(O. SCHIRMER)

TĀT (TAT), a Turkish word, meaning "the foreign elements included in the lands of the Turks" (Thomsen).

1. The term has a rather complicated history. Its occurrence in the Orkhon inscriptions (viiith century) was first noticed by Vambery (*Noten zu d. alttürk. Inschriften*, *Mém. Soc. Finno-Ougr.*, xii., Helsingfors 1869, p. 88—89). Thomsen (*Turcia*, *ibid.*, xxxvii., 1916, p. 15) proposed to translate the words *en aḡ ḡghlān tatika ḡgi*, "up to the sons of the Ten Arrows (= The Western Turks) and their *tāt* (= their subjects of foreign origin)". Thomsen passes over the question of the origin of the name in which (**tāt*) Korsch thought he could recognise a contraction of the name *Tangut*.

(*Slove "kaldak" i dolgotan turetskikh yashkakh*, *Zvezda Starina*, 1909, fasc. II—III, p. 156—161). For the history of the name Tat there may be some importance in the name *Taqat*, *Tangut*, *Tant*, which the Woguls and the Ostiaks give to the river Irtysh; cf. Marquart, *Streifzüge*, p. 499.

According to the *Imān Lughat al-Turk* (466 = 1075), II, 224, the word *tat* (sic!) means the Persians (*al-Fārisiyya*) among all the Turks; more particularly among the Yaghma and Tukhai tribes the term refers to the Uighur. In both cases *tat* has a contemptuous sense as is evident from the proverbs: "grasp the thorn by the root and strike the Tat in the eye", "but for the Tat there would be no Turk, just as but for the head there would be no hat (to cover it)".

Later in the language of the conquering Turks the word Tat became especially associated with the conquered Persians. Even Ḥalāl al-Dīn Rūmī in his Turkish poems (Gibb, *A. Hist. of Ottoman Poetry*, I, 150 and especially Martinović, *Zap.*, xxiv, 1917, p. 221) uses the terms *taj* (sic!), *taj-zia* for the Persians and their language. In a curious passage, (already noticed by Khanykov), Pietro della Valle, French travel 1603, II, 468—469 who uses the current phraseology of the Safawid period contrasts the *Kizil-bash* [q.v.] "a certain race of men who were introduced... with the King Ismail Sofi" with the Tat "the dregs of the populace but descended in a direct line from the true old stock of the Persians". The Turkish tribe of *Kashgha'i* (in Fārs) also uses the word Tat in the sense of "non-Turk"; cf. Romaševič, *Persi kashkaiyan*, *Sborn. naučnykh Antrop. pri Akademii nauk*, VII, p. 587. The Turkish speaking followers of the religion of the Ahl-i Haqq in Aḥarshatjan also seem to use the word Tat with the meaning which it must have had in the mouths of their presumed ancestors, the Kara-Koyunlu Turcomans; cf. Minorsky, *R. M. M.*, XLV, p. 242; cf. the article MAXU.

The Turcomans of the Transcaucasian territory give the name Tat to the Iranian Tadjiks; formerly, according to Samoilović, they gave the name to the people of Khiva. (Is this a memory of the old Iranian population of Khazaria? Cf. now A. Z. Walid, *Hwarezmische Sätze*, *Islamica*, III/II, 1927, p. 190—213).

The term Tat has however been applied to other ethnic elements. Schildberger (1394—1427) tells us that the "infidels" give the name "Tat" to the inhabitants of Karckert (probably Kizil-yer = Çifut-kaf's in the mountains S.W. of the Crimea). In another passage he says that one of the languages spoken in the Crimea is called Kathin and that the "infidels" call it Tat ("die zielebte sprache heisst Kathin sprache und die heiden heissen sie Tat"). From this it is evident that the name Tat in the language of the Muhammadans of the Kiptak of the xvth century was applied to the Goths of the Taurus (whose kingdom was destroyed by the Ottomans in 1475).

Later, beginning with the yarlık of İljani-beg Giray, dated 1037 (1628) (cf. Vellaminov-Zernov, *Materiali dlia istorii Krims. khantvo*, St. Petersburg 1864, p. 26), we find in the title of the Khans of the Crimea, the official reference *tat dlia Tawghaff-nih ulu gh padishah*, Budagov, *Slovar*, I, 329, explains it here as the Genoese without giving reasons (the meaning of *Tawghaff* in the title is still quite obscure). At the present day the Noghai Tatars of the northern Crimea give the name Tat to all

the Muhammadans of the southern coast of the Peninsula, who represent a mixture of nationalities that have become turkicized (personal information from Samoilović); cf. also Radloff, *Vermischte Wörterbücher*, III, col. 899, rub 5^b.

It may be also mentioned here that a section of the "Greeks" (i.e. Orthodox) settled at Marioupol in 1778 is called Tat. These Tat migrated from the south coast of the Crimea and speak a Greek dialect. The name Tat is, however, not applied to the other section of the "Greeks of Marioupol" who speak Turkish (which they write in Greek characters) and who seem to be the true descendants of the Goths of Tauris. Cf. Grigorovitch-Blaug, *Über die griechisch-türkische Mischbevölkerung in Mariupol*, *Z. D. M. G.*, xxviii, 1874, p. 576—583 and *ibid.*, p. 562—576; Tomaschek, *Die Gothen in Taurien*, Vienna 1881, p. 5, 48; Th. Brunn, *Mariupolische Griech.*, *Zivara Starina*, St. Petersburg, VII, 1890, p. 78—92.

According to Tomaschek, *ibid.*, p. 45, the Magyars call the Slovaks Tat (< "Tat").

The primary meaning of the word Tat (= "non-Turk, foreigner") is given in the *Ġaghatali-Ottoman dictionary* of Shalikh Sulaiman Efendi (ed. Kunn, p. 184): "nations that have passed under the rule of the Turks, e.g. the Tadjik". [On p. 179 however, the author says that the people of foreign origin who speak Turkish are called Tat and those who speak Persian are called Tadjik. In this connection may be noted the statement of Zaki Walid, according to which the term Tat was applied in Turkestan (in the sixth century?) to all the settled elements of the population, including the Turks settled in the country before the coming of the Mongols.] Ahmed Wefik, *Lihafiyi 'Othmani*, Istanbul 1306, p. 286, whose interpretation of the word seems to be influenced by local Ottoman conditions says, "the former Kard (sic!) and Persian inhabitants of the provinces subjected to Turkish rule". Barbier de Maynard in his *Dictionary* adopted Ahmed Wefik's explanation, but thought it applied to Turkestan.

The *Ġaghatali dictionaries* also give the secondary meanings of the word *tat*: "the class of subjected people living outside the town" (cf. above Zaki Walid), "vagabond" etc. Cf. Vellaminov-Zernov, *Slovar "Ġaghatali-turetskii" ("Abshak")*, St. Petersburg 1868; Pavet de Courteille, *Dictionnaire turc oriental*, 1870, p. 194; Radloff, *Vermischte Wörterbücher*, III, col. 899, rub 5c and d. Melioransky, however, who has specially studied the word Tat, *Zap.*, XII, 1899, p. 0154—0158, has shown that the examples of these meanings taken from the works of Mir 'Ali Shir Nava'i are very doubtful.

2. In a special and evidently secondary sense the term Tat is applied to certain Iranian peoples whom the Persians themselves regarded as distinct from them. These Tat groups are found in Persia and in Transcaucasia.

A. In northern Persia, there are little islands of people speaking their own dialects. The "southern" dialects of Fārs are called Tadjiki among the Persians [only the *Kashgha'i* Turks use the term Tat in Fārs, cf. above]. Even as applied to people speaking northern dialects the term Tat is only used in Persia for certain dialects of the North-west. It has not yet been found for example in the region of Kāshān.

The most important group of the Tat is found to the west and south-west of Kāshān; the Tat

live in the villages of Ishthārd, Cal, Ispiawaru Isfawāru, Shādmān, Sāgar-ābād, Ibrahim-ābād, Khayārak, Damsfān, Siyādhūn. This last-named town at the bifurcation of the roads from Kāzwin to Hamādān and Zandjān has 2,000 houses. The Tāt population is not distinguished externally from the other peasants of the country round Kāzwin. The "Tāt" dialects spoken in Persia are very little known. The dialect of Siyādhūn is, like those of the region of Kāshān and Isfahān, studied by Žukovsky and O. Mann. Here are a few characteristic words: *āpā*, "dog"; *āir*, "gate"; *āi*, "throe"; *āi mīnā*, "I know"; *ānā mīnā*, "we know"; *āi āmānā hāmā mīnānā*, "these men all know"; *āghar*, "look"; *āi māgo hā āi*, "where do you want to go?"; Žukovsky, *Materialien zur pers. mundartl.*, I, p. 9, gives also a few glossaries in the language of Aztekhārd (= Ishthārd). Cf. also the notes by Brugsch, *Reise*, I, 337, on the dialect of Kūshāz (on the Tihān-Hamādān road). It is possible that this group of dialects may be connected with the so-called "pure Pahlavi" which, according to the *Nushat al-Kutub*, p. 62, was spoken in the 14th century in Zandjān.

According to Rabino, *Le Gullān*, R. M. M., xxii, p. 210, Tāt is spoken in the district of Rustamābād on the left bank of the Sāfūd-rūd where Tālishi and Kurd are also spoken. The same author, *Māzandarān and Aharābād*, G. M. S., 1928, p. 63 and 70, mentions the existence of Tāt at Aghraf and Sādan-Rustāz. Nothing is known of their language. In Agharhāidjān, there is the little island of Tāt of Hārān (between Marānd and Džulfa). Lehmann-Haupt, *Armenien*, I, p. 186-187 gives the following words from the dialect of Gūlin-kaya: *āi*, two; *hāra*, three; *āi*, dog; *āpā bīndar*, the horses are yoked. In the dialect of the village of Hārān, (information supplied by Muhammad Khān Kāzwin) they say *āi*, "here", *ānā*, "to-day", *āir*, "yesterday", *ānāmānā*, "the Andjumanas". The forms *ānā*, *āir*, *ānāmānā*, which correspond in Persian to *ānā*, *āir* and *ānāmānā* are particularly interesting on account of the regular change of intervocalic *d* (*āi*) to *r* (cf. below). The dialect of Hārān is quite different from the Tāt of Siyādhūn. The existence of still undiscovered islands of Tāt in Agharhāidjān is possible. In his article on the gipsies (cf. 1911) Father Amstutz mentions vaguely a tribe of Tāt in the "Uski" mountains (read Uskū, Uskūya south of Tabriz). The dialect of Kiliid (on the left bank of the Araxes, near Ordubād), which has now disappeared, may also have belonged to the Tāt group of Agharhāidjān. Cf. Paskhalov, *Kiliid*, in *Sborn. mater. dlia etnograf. kamebaza*, Tiflis, xiii, 1892, p. 334-343.

B. In the Caucasus the term Tāt is applied to the Iranian Muslim peoples speaking the Tāt dialect. This peculiar dialect is also spoken by several other communities, Jewish and Armenian. Besides these three principal divisions, the dialect has several varieties not yet clearly distinguished.

The Tāt of the Caucasus is mainly known from the works of Vsevolod F. Miller. Its most characteristic feature is its rhotacism (*āirān* = Pers. *āirān*; *āir* = Pers. *āir*) on which cf. above. The following table gives an idea of some other peculiarities of Tāt:

Tāt	Persian	Northern Dialects
<i>ān-</i> (to know)	<i>ān-</i>	Kurd <i>an</i>
<i>gāl</i> (flower)	<i>gāl</i>	Simnani <i>yal</i>
<i>āirfānār</i> (snow)	<i>āirf</i>	Kurd <i>mafr</i>

Tāt very rarely has *āirfān*: its place is taken by an original construction: *ānā ānān* = Pers. *ānān-āi ānān* etc. The dialect is rich in postpositions (*-ānān*, "with") and in gerundives: (*ānān ānānān*, "things being so"). The vocabulary is full of Turkish loan-words. Like most Persian dialects, Tāt is not very regular in its characteristic features. Broadly speaking, it occupies a position intermediate between modern Persian and the Caspian dialects (where rhotacism is also found sporadically).

The Muslim Tāt who form the bulk of the people speaking Tāt, live in the districts of Bākū (q. v.), Kūbā (q. v.), Shamākh and Gāk-āi. There are some in the province of Ganjā and in southern Daghestān (the districts of Kālak-Tabasrān immediately west of Darband; cf. Kornobsky, *Pamiat knizhki Daghestan*, *oblasti*, Temir-khān-shura, 1895, p. 314).

The majority of the Tāt live on the two slopes of the eastern extremity of the Caucasus range and the peninsula of Apsheron (Abshāra) except its south-east point. On the ethnographic map of the Caucasus by Kittich (before 1877) the total number of Tāt is put at 64,656; Kondratenko's ethnographical map appended to vol. xviii of *Zapiski Kavk. Otd. Russ. Geogr. Otd.* gives for the district of Bākū (in 1886): 58,621 Tāt. The *Great Russian Encyclopedia*, vol. xxxii/ii, 1901 gives the total as 135,000. The Soviet census of 1923 gives 98,020 Tāt "by language" and 28,705 "by nationality". In the former are included 970 "Tāt" of the Transcaspien (i. e. the Tādjik whom the Turkomans call Tāt). In addition in the Soviet republic of Agharhāidjān there are 11,000 individuals speaking "Fārsi" which must include some Tāt. In all we may say about 90,000 people speak Tāt. The decrease in the number of Tāt may be the result of their gradual turkicisation.

The Jews speaking Tāt (the "mountain Jews" in Turkish *Dagh-Jahūt*) numbered in 1886: 21,000, 10,000 in villages and 11,000 in towns. Their largest colonies were at Kūbā (6,280), at Darband, Temir-khān-shura, Grozni, Nātk (a Circassian district of Kabarda). They are also found on the Kābun [q. v.]. The dialect of these Jews is remarkable for its guttural articulation: in it we find *ā*, *sin*, *š* and *g*, even in purely Iranian words (*hāf*, "seven"; *ān*, "horse"; *gāmānā*, "know"; *far*, "wet"). V. F. Miller thus defines the character of Jewish Tāt: "It is an Iranian dialect, spoken with the Semitic articulation, the phonetics of which (in part) and the morphology (in part) have been formed on the Turkish model". As to articulation, it could be explained by the fact that these Jews had formerly spoken Arabic, or more simply by the proximity of the peoples of Daghestān who not only have the sounds *sin* and *š* but have always cultivated a knowledge of Arabic, in which until quite recently, correspondence in Daghestān was conducted. For the rest, the Muslim Tāt also have the sounds *sin* and *š*. The influence of Turkish on Tāt is in any case not to be exaggerated. The morphological phenomena and even the vocalic assimilation in the syllables of the same word discovered by V. F. Miller have purely Persian parallels. Iranian influence on these Jews is not confined to language; Jewish folklore reflects it also (*sār-ār*, "spirit of the waters"; *āldakū-mār* "dragon" etc.).

The Tāt of the Armenians (the little town of Matnāsi [Madrasa], Kīlāl etc.) is marked by the

simplification of vowel sounds ($\delta > a$) and by the aspirated character of certain consonants.

The Tats of the Caucasus are at the present day entirely surrounded by Turkish and Daghestanian peoples. Their present habitats must always have been separated from the main body of Iranians. Their geographical distribution along the eastern chain of the Caucasus with an out-thrust to Darband seems to suggest the idea, which decided their settlement in these regions, namely the desire to reinforce the natural line of defence by Iranian colonies to meet invasions from the north. It would be tempting to recognise in the Tat remains of ancient colonies transplanted to Daghestan in the period when the Sāsānians were fortifying Darband. According to Balāḥshūrī, p. 194, Anāshirwān (531—579) had settled the region of Darband-Shāhīrān (cf. *ṣayḥwān*) with people from Sisakan (*al-siyāḥḡīn*). This last province was situated on the left bank of the Araxes (practically the district of Nakḥtawān with the surrounding mountains) immediately north of Ādharbāḡdīn. The people of Sisakan were Christians, but from the political and linguistic point of view held a special position in the kingdom of Armenia. In 571, they begged the Sāsānian king to detach their province from Armenia and include it in Ādharbāḡdīn; cf. Marquart, *Erānlahr*, p. 120—122, Hübschmann, *Die altarmen. Ortsnamen*, *Indog. Forschungen*, xvi., 1904, p. 263—266, 347—349. The late *Darband-nāma*, ed. Kazem-beg, *Mém. présentés à l'Académie des Sciences par divers savants*, vi., St. Petersburg 1851, p. 461, says, Anāshirwān peopled the new towns in the vicinity of Darband with people from Ādharbāḡdīn and Fārs and the towns to the south of Darband (the region of Shābrazan-Mashkūr; cf. the word *gūssa*) with people from the 'Irāk and Fārs. According to the same source (p. 530) however, the fortresses around Darband were re-built under the 'Abbāsīd al-Manṣūr (754—775) and on this occasion Arabs from Mawā'il and Syria were placed in them. Among the places fortified are especially mentioned Muṣṣā, Kamākḡ, etc. which at the present day are inhabited by Tats. It might be concluded from this that the presence of Tats at Muṣṣā etc. represents a migration later than the eighth century, but the text of the *Darband-nāma*, the original Persian of which has not yet been found (cf. Barthold, in *Iran*, i., Leningrad, 1926, p. 42—58) is not certain (according to Klaproth's version, three hundred families settled in Muṣṣā came from Tabasaran!). The historical sources at our disposal thus only reveal the ethnical complexity of the colonies established in Darband. On the other hand, Tat in its general characteristics is a modern dialect which (apart from rhotacism) does not show any special traces of antiquity such as might be expected if it had long been isolated. The question of the Tat Jewish dialect is only a subsidiary one, the Jews even if they had been in Daghestān before the coming of the Tats (cf. Miller, 1892, Introduction) may have adopted Tat in place of their old language (Arabic?).

As to the affinities of Tat the rhotacism of its dialects has analogies in the Iranian islands of Persian Ādharbāḡdīn at the present day. For the region of Arbil, we have examples from the 14th century (Ahmad Kirawī *Adhari*, *Zabān-i ḡstān-i Ādharbāḡdīn*, Tihān, 1304 [1927]). The early borrowings made by Armenians from

Iranian (*Mar* < *Māra*; *ṣarapet* < *ṣpānpet*) also suggest the existence at a very early date of this peculiarity among the Iranian neighbours of the Armenians (Marquart, *Erānlahr*, p. 174, note 6; Bartholomae, *Indogerm. Forsch.*, Suppl. to vol. xix., 1906, p. 43, note 1). The other curious feature is the name of the town of Lāhīj inhabited by Tats (at the sources of the Gök-čai) and perhaps mentioned in the Georgian *Chronicle*, Brosset, I, p. 364, under the year 1120 (Lidātha or Laidj). The inhabitants themselves believe they came from Lāhījīn [q. v.]. The investigation conducted on the spot by V. F. Miller in 1928 has shown that the dialect of Lāhīj has certain special features. It is possible that some colonies of Tats were settled in Transcaucasia later than others and that the dialect of the principal group exercised a levelling influence on the neighbouring dialects (according to the *Gullistan-i Irām*, of Bekt-Khanov, Baku 1928, p. 14, the people of Miskindja in the district of Samur came from Astarābād in the time of Tahmāsp I).

(V. MINORSKY)
TATAR, written Tatār, Tatāc and Tatar, the name of a people the significance of which varies in different periods. Two Tatar groups of tribes, the "thirty Tatars" and the "nine Tatars", are mentioned in the Turkish Orkhon inscriptions of the eighth century A. D. As Thomsen (*Interpretation*

de l'Orkhon, Helsingfors 1896, p. 140) supposes, even at this date the name was applied to the Mongols or a section of them but not to a Turkish people; according to Thomsen, these Tatars lived southwest of Baikal roughly as far as Kerulen. With the foundation of the empire of the Kitai [see KARA KHITAI] the Turks were driven out of modern Mongolia and Mongol tribes took their place. The district of Ötügen, continually mentioned in the Orkhon inscriptions as the dwelling-place of the Turks, lay, according to Mahmūd Kashghārī (i. 123) in his time (second half of the 10th—11th century), in the land of the Tatars. That the language of the Tatars was different from Turkish was known to Mahmūd Kashghārī (op. cit., i. 30). A number of Tatar clans had joined with Turkish peoples and moved farther westwards. In the anonymous *Hudūd al-'Alam* (cf. Zapp., x. 121 sqq.) the Tatars are described as a part of the Taghuzghus [cf. GHUZZ] (cf. W. Barthold, *Ötügen a p'edukhe v. Sednanyu Aziyu*, St. Petersburg 1897, p. 34), by Gardizi (op. cit., p. 82 sq.) as part of the Kimak [q.v.] on the Irtysh [q.v.]. In the anonymous *Muḥmil al-Tawārīkh* (c. 520 = 1126), in the list of titles of rulers (in Barthold, *Turkestan*, i. 20), is given a Tatar ruler *Sinūn buyūy* (or *biwi*) *ghayūr*, nowhere else mentioned. In the reports of the campaigns of Salḡān Muḥammad b. Takash [see KHAWARIZM-SHĀH] against the Kipčak [q.v.] is mentioned a campaign by him in 615 (1218–1219) against Kadir Khān, son of the Tatar Yūsuf (*Tutakāt-Nāḥi*, transl. Raverty, 1881, i. 267).

In the accounts of the Mongol conquests of the 13th (xiliḥ) century the conquerors are everywhere (in China, in the Muslim world, in Russia and Western Europe) called Tatars (Chin. *Ta-ta*); the same name is given in Ibn al-Athīr (ed. Tornberg, xii. 178 sq., 236 sq.) to the predecessors of Čingiz Khān, the Naiman under Kälük (see KARA KHITAI); according to Ibn al-Athīr (op. cit., p. 237), these were the "first Tatars" (*al-Tatar al-awāl*). Rashīd al-Dīn, who apparently knew nothing of the use and dissemination of the word Tatar before the Mongol period, speaks of the Tatars as if they were a separate people distinct from the Mongols, whose main centre had been the country on the Buir Nor (S. E. of Kerulen). After the conquests of Čingiz Khān many of the people subdued by him had, says Rashīd al-Dīn, adopted the name "Moghūl" (Mongol); the Tatars previously had been equally powerful; many peoples had been so called; therefore "in Khitai, Hindustān, Čin, Māchin, among the Kirghiz, in Kelār (Poland), Hāshkind (Hungary), in the steppes (*ḍawāt*) of Kipčak, in the northern lands among the Beduins, in Syria, Egypt and in the Maghrib, all the Turkish peoples are to this day called Tātār" (text in *Truḍl. Vest. Oid. Arab. Obsh.*, vii. 64).

The peoples of Mongol origin and language had apparently always called themselves Tatar. After the time of Čingiz Khān, this word was completely supplanted in Mongolia and Central Asia by the word "Mongol" (in Muslim manuscripts *Moghūl* or *Moghūl* and in the every day language of the descendants of the Mongols in Afghanistan, who have kept their language to the present day, *Moghūl*), officially introduced by Čingiz Khān. In the most western parts of the Mongol empire, the word Mongol never became predominant, although it was also introduced there officially,

as we know from European travellers (John of Pian de Carpin and William of Rubruck; *Habl. Soc.*, 1905, Index s.v. Mongol and Tartar). The people of the kingdom of the Golden Horde [see KATU KHAN and BERKE] and of the later minor kingdoms in the same region are always called "Tatar". As the many documents preserved in the Public Library in Leningrad show, the Turkish speaking peoples of the Crimea were not only called "Tatar" by the Ottomans (as by the Russians) but also called themselves Tatars.

A Mongol force had been transferred to Asia Minor at the time of the conquest. Their descendants (who no doubt became turkicised) were called "Black Tatars" (*Kara Tatar*); at the time of Timūr's campaign they were leading a nomadic life in the country between Amasia [q.v.] and Kaḥariya [q.v.]; they numbered 30–40,000 families (*Zafar-nāma*, Ind. edition, Calcutta 1888, ii., p. 502 sq.). Timūr had these "Tatars" deported to Central Asia, according to Ibn 'Arabshāh (ed. Manger, ii. 338), on the advice of Sulḡān Bāyazid; there they were allotted dwelling-places in Kashghār on an island (which now no longer exists) in Lake Issik-Kul [q.v.] and in Khwārizm; a section of them succeeded in escaping to the lands of the Golden Horde. After Timūr's death, the Black Tatars returned to Asia Minor; in 1419 they (or a part of them) were deported to the Balkans and settled west of Philippopolis; the town of Tatar-Pazardjik takes its name from them (J. von Hammer, *GÖRZ*, Feath 1834, i. 292).

Later in Russia and in Western Europe we frequently find the name Tatars applied to all the Turkish peoples with the exception of the Ottomans; this use of the word is still found in Radloff, *Aus Sibirien*, Leipzig 1884, passim. After the example of the Chinese, the name has been extended to the Mongols also and especially to the Manchus (cf. the "Tatar town" in Peking). As the name of a particular people, the word Tatars is used only for the Turkish speaking people of the Volga basin from Kazan to Astrakhan, the Crimea, and a part of Siberia; in the printed list (*spisok*) of the year 1927 of the peoples of the Union of Soviets, the Tatars in the Crimea, the Tatars of the Volga, the Tatars of Kasimow [q.v.] and the Tatars of Tobolsk are therefore given as separate peoples, in addition to the Tatars of White Russia whose ancestors were deported to Poland as prisoners from the Crimea. They have adopted the language of the White Russians but have remained faithful to Islām. The name "Tatar" is now rejected by the people of the Crimea. The Turkish speaking people of Astrakhan according to the most recent investigation belong to the Noghai stock. In the central course of the Volga also the "Tatars" are usually given this name by their Christian fellow-countrymen, the "Kryashen" (from the Russian *kryashen* "baptised") (Radloff, *Wörterbuch*, iii. 101 sqq.). They prefer to call themselves "Muslims" rather than "Tatars" which was more fitting their heathen ancestors, just as the Ottomans have for long preferred not to be called "Turks". Even in the last year before the Revolution when the principle of nationality had already come to the front it was disputed whether they should be called "Turks" or "Tatars" (*M. I.*, i., 1912, p. 270 sqq.); the name "Tatars" has now prevailed; since 1920 there has existed an autonomous Tatar Socialist Soviet Republic with capital

Kazan [q. v.] and a population of 2,780,000 of whom rather less than half (1,306,292) are Tatars. Cf. the ethnographical survey (*isrâḥ*) by Prof. D. Zolotarev in the book of travels *Povolnye*, 1926, p. 99 sqq. (the figures are given on p. 123 and 126).

Bibliography: given in the article.

(W. BARTHOLO)

TATİL a technical term used in dogmatics meaning the divesting of the conception of God of all attributes; see the article **TAYYİN**.

TAWADDUD, the heroine of a story which is preserved in the *1001 Nights* as well as in an independent form. Tawaddud (as a personal name not found elsewhere in Arabic literature — however frequent it is as a *nomen verbi* — is of similar formation to *Tamannī*, *Tadīmmī* and similar women's names) is the slave of a merchant who has fallen into poverty and, following her advice, offers her for sale to the caliph Hārūn to free him from his difficulties. Hārūn declares himself ready to pay the high price demanded on condition she shows by an examination that she possesses all the knowledge she claims. In the tests made by a number of learned men, including Ibrāhīm b. Saīyār al-Nazzām, Tawaddud answers all the questions put to her in the field of theological knowledge, astronomy, medicine and philosophy, solves all the riddles put to her and proves herself an expert in chess, backgammon and playing the lute; finally she in her turn puts questions to her examiners which they cannot answer and in this way she puts even the proud Nazzām to shame. When the caliph then asks her to beg a boon of him, she asks to be given back to her former master, which the caliph does and gives her a present besides, and makes her master one of his boon companions.

For the date of the story the name of al-Nazzām (d. 331 = 845–846), preserved in all versions even the Shī'a and Christian forms (see below), gives a *terminus post quem*, while the oldest Spanish version going back probably to the 13th century gives a lower limit; but we shall hardly have to go beyond the 11th or 12th century. Several manuscripts which contain the story as an independent story give the name of the narrator but it is not always the same and his identity has so far not been established. The essential features for him are the questions and answers which take up most of the space; the story of Tawaddud only forms the framework which he fills out with these. Several motives, such as the magnanimity of the purchaser, are found in other stories of the *Arabian Nights* and outside this collection also; the didactic purpose however and the form in which the learned matter is conveyed, ally the story to the books of questions found among the Persians, in the Christian east and European middle ages and in Arabic literature also. The Arabic books of questions are sometimes like the *Kitāb al-Tarīf wa 'l-Tadwīr* of Dīhāz; intelligible only to the learned, sometimes for popular instruction like the questions of 'Abd Allāh b. Salām, which have passed into other Muslim literatures. Tawaddud belongs to the latter group although the theological in the didactic part of the story is by no means so predominant as in the questions of 'Abd Allāh. A Shī'a version of Tawaddud is found in the *Hasanīya* of Abū 'l-Futūḥa popular in Persia in Malcolm's time.

A Christian version is the Spanish *Historia della donzella Theodor*, of which we still possess

an older form free from the Christian insertions of the later. The *Historia della donzella Theodor* — the manuscript in Madrid of the *Hikāyat al-Djūriya Tāzur* already has this corruption of the name — was repeatedly reprinted as a chap-book down to the sixties of the last century, and in the Portuguese translation down to the first decade of the twentieth.

(J. HOROWITZ)

TAWĀF (ا) from *fāṣa* with *ā* of place) encircling; in the language of ritual the running round or circumambulation of a sacred object, a stone, altar, etc. There are traces of the rite having existed among the Israelites, cf. especially Ps. xxvi. 6 (xxvii. 6, lxxi.) and the ceremony of the feast of booths in the time of the Second Temple, where the altar is circumambulated once on the first six days and seven times on the seventh. The rite however was also found among Persians, Indians, Buddhists, Romans and others and is therefore very ancient. It played a very important part in the religious ceremonial of the ancient Arabs. We find the synonymous *dawār* (from *dāra*) also used. Thus Imru 'l-Qais, *Mu'allaf*, 63, compares the wild cows with young women in long trailing robes, who perform the circumambulation (*dawār*, a circumambulated idol like *dawā* in *Antara* 10, 2, if *dawār* is not to be read here). In Mecca the Ka'ba which enclosed the Black Stone sacred from very ancient times used to be circumambulated and Muḥammad adopted this old custom when he established the rites of his religion and centred them round the Ka'ba. When, in the year 8, he made his victorious entry into his native town, he is said by Ibn Hishām, p. 820 and Tabari, i. 1642 to have performed the *tawāf* riding on his camel, touching with his crooked staff the *rukn* (the eastern corner of the Ka'ba where the stone was). This was however something exceptional and according to Ibn Hishām, it was only shortly before his death at the "farewell pilgrimage" that he laid down the authoritative rules for the circumambulation. It may however be assumed with certainty that he observed ancient traditional forms ("handed down from Abraham"; cf. Ibn Hishām, p. 51, =) so that we can deduce from Muslim practice what the ancient pagan custom was; one feature of the latter was that the circumambulation had to be performed seven times in succession (cf. above on the feast of booths) the three first at a greater speed, beginning at the black stone and ending there and during the course keeping the Ka'ba on the right; one should make a special effort to kiss the stone or at least touch it. On the contrary, if Wellhausen is correct, it was an innovation that the *tawāf* which previously took place only at the *'umra* [q. v.] was inserted by Muḥammad in the great *ḥajj* when the pilgrims visited Mecca. This suggestion is however disputed, cf. HALLIDAY, ii. p. 199 where Sura iii. 91 is quoted against it, but the expression *ḥajj al-bait* is hardly decisive,

since Muhammad may have decided on the expansion of the rites of the ḥajj, when he conceived the verse, if the expression was not inserted in the text later. The following special courses are certainly Muslim innovations: the *ṭawāf al-ṭahīya* or *al-ḥudū* (circumambulation of greeting or arrival) and the *ṭawāf al-wada'* (circumambulation of departure, cf. Burckhardt, *Reisen in Arabien*, p. 439) which are, it is worth noting, not obligatory. Of the old pagan customs, one at least was strictly forbidden by the Prophet, making the *ṭawāf* naked; see Sūra vii. 29; Ibn Hishām, p. 921; cf. Ibn Sa'd, iii. 6, 11, where there is a reference to a wooden object at the Ka'ba, where the heathen laid their clothes at the circumambulation. The pavement surrounding the Ka'ba on which the course was run is called *al-Maṣāf*. At the al-Hajm wall (see ii. 585) they run close to the outer side of it, not as usual along the Ka'ba.

The *ṭawāf*, except for the special forms above mentioned, is strictly compulsory and therefore it became an important factor in Islam. It is therefore significant that the caliph 'Abd al-Malik, when the rule of the anti-caliph 'Abd Allāh b. al-Zubair made the visits of the faithful to Mecca difficult, proclaimed that a *ṭawāf* around the Dome of the Rock in Jerusalem would have the same value as that around the Ka'ba (cf. Goldziher, *Muslimische Studien*, ii. 35). The complete omission of this rite would have meant a serious gap in Muhammadanism. But the innovation soon disappeared with its cause and in orthodox Islam any *ṭawāf* except that around the Ka'ba became more and more pointless. That the old ritual custom survived in the lower strata of Arab life is revealed in an interesting fashion by 'Udjalī, who says the Beduins endeavoured to perform the *ṭawāf* not only around the graves of their ancestors but also around the tomb of Ibn al-'Abbās in Tā'if.

TAWAKKUL, trust in God, is enjoined by the Qur'ān, but the *mutawakkilūn* whom God loves (iii. 153) do not form a special class of quietists like those known by the same designation in the iind and iiird centuries A. H. The doctrine of the latter, closely connected with that of *taḥḥid* [q. v.] and probably developed under Christian influence (cf. Matt. vi. 24—34), was sometimes carried in practice to such lengths that the comparison of the *mutawakkil* to a corpse in the hands of the washer who prepares it for burial (Kushairi, *Bāb al-Tawakkul*) seems quite appropriate. According to these zealots, *tawakkul* is directly opposed to every sort of *taḥḥid* ("acquisition", personal initiative and action): how can a man seek to help himself if he really believes that God is the only Provider? The answer given by Kushairi, that a man's activity in making use of the means which God provides need not impair his inward trust in God's providence, indicates the line of advance by which the old ascetic school of Sūfism was left behind.

(R. A. NICHOLSON)

TAWAKKUL R. BAZZĀZ (Tukli [?] b. Ismā'īl), a darwish, author of the *Sifwat al-Safā*, which is a biography of the grand Shaikh Saḥī al-Dīn of Ardabil (650—735 = 1252—1334), ancestor of the Safawid dynasty. The book was written in 750 (1350) under the direction of Shaikh Sadr al-Dīn, son of Saḥī al-Dīn, whom Tawakkul quotes as an authority. Later under Shāh Tahmāsp I the text of the work was revised by a certain Abū 'l-Faḥr Ḥasāni. The Persian text was published in Calcutta in 1329 (1911). The *Sifwat al-Safā* is a work of considerable length, about 216,000 words. It is purely hagiological in form but the historical and geographical details, important as supplementing our knowledge of the history of N. W. Persia, are overlaid with the miraculous elements. In it we find for example specimens of the old Irānīan dialect of Ādharbīdjan (xivth century). The *Sifwat al-Safā* does for the grand Shaikh of Ardabil what the *Manāẓib al-Arifin* of Allāqī [q. v.] does for the grand masters of the Mawlawī order of Koniya. Like the history of Shāh Ismā'īl (by Khwāḍja 'Abdullāh Murwīd [?]; cf. *J.R.A.S.*, 1902, p. 170) the beginning of which was translated by E. D. Ross in the *J.R.A.S.*, 1895, p. 249—340, the *Sifwat al-Safā* is a valuable document for the study of the moral and religious factors in the great Safawī movement out of which modern Persia arose. It enables us to watch the formation of the Safawī "secret doctrine"; the belief in the sanctity of Saḥī al-Dīn (of which historical orthodoxy has no doubt) later led to the extremist Shi'a doctrine, the aberrations of which are evident in the poems of Shāh Ismā'īl himself (cf. KHATĀ'Ī).

(V. MINORSKY)

AL-TAW'AMĀN, the Twins, the constellation Gemini. According to al-Kāzwinī, it contains 18 stars and seven which do not belong to the figure, and represents two men with their heads to the N. E. and their feet to the S. W. The two bright stars in the head are also called *al-Dhīr* and *al-mabrūḥa*, the outstretched arm, and form the seventh station of the moon; the two at the feet of the second twin form the station of the moon also called *al-Han'a*. The whole constellation is also called *al-Qiṣar*, like Orion; hence the name Ras algeuse for the star β (Pollux). In Ptolemy the stars now known as Castor and Pollux are called Apollo and Heracles, which become Avelar and Abracaleus in the Latin translations of Alī's commentary on Ptolemy.

Bibliography: al-Kāzwinī, *Adjāib al-Makhlūqāt*, ed. Wüstenfeld, i. 36; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, 1809, p. 150 sqq. (J. RUSKA)

TAWASHI, one of the many words used as a euphemism for eunuch. According to al-Makrīzī, the word is Turkish and was originally *tawāshī*. The reference is clearly to the word which is *tawāshī* in Ottoman Turkish and means "servant". The word has therefore undergone the same change of meaning as *khadim* [q. v.] and refers not to the physiological peculiarity of a eunuch — *sharīf* is used for this — but to a particular "servant", an official in a definite position which was usually filled by a eunuch. Thus we find the word in the language of administration in Egypt, where it means a military rank in the bodyguard (*khawāṣṣ*); *tawāshī* being also used alongside of it.

(1840), p. 132, note 163; the Turkish Dictionary and Brockelmann, *Mithatürk Wortbuch*, p. 195; Mez, *Die Renaissance des Islams*, p. 334 sqq., esp. 334 and note 4; Wüstenfeld, *Geographie u. Verwaltung von Ägypten*, p. 179.

(M. FLEISSNER)

TAWBA (أ), repentance, originally meaning "return", is a verbal noun derived from *tāba*; the verb is often used in the Qur'an, either absolutely or with *ilā*, of one who turns to God with repentance, and also with *alā* of God, who turns with forgiveness to the penitent, for He is *tawwābun raḥīm*, "very forgiving and merciful" (Qur'an, ii. 35 sqq.). The validity of tawba depends on three things: 1. a conviction of sin, 2. remorse (*nadam*), 3. a firm resolution to abstain from sin in the future (Ghazālī, 1390, book iv., where the subject is discussed in detail; Qur'an, iv. 21, 22; ix. 105; xlii. 24). If these conditions are fulfilled, God always accepts repentance, not from obligation (*maḥḥab*) as the Mu'tazilites hold, but in virtue of His eternal will; on the other hand "a deathbed repentance" is unavailing (Qur'an, iv. 22). Sin being an offence against God, tawba is indispensable for salvation, though Ahmad b. Hanbal and others deny this (Massignon, *La Passion d'al-Hallaj*, p. 666). The Sūfīs, rising above the legal notion of sin, attach a correspondingly higher significance to tawba. Amongst them the term denotes the spiritual conversion which is the necessary starting-point for those entering on the Path (*ṭarīq*), and which is represented as an act of divine grace. In its most proposed sense tawba is not so much an acknowledgement and renunciation of sin as a new orientation of the entire personality, so that the penitent is wholly turned towards God. Any recollection of sin or thought of remorse is wrong; for to remember sin is to forget God, and self-consciousness is the greatest sin of all; hence, according to a well-known Tradition, the Prophet sought forgiveness of God seventy times a day.

Bibliography: L. Massignon, *La Passion d'al-Hallaj*, p. 665 sqq.; Haddad, *Kaḥf al-Mahḥab*, ed. Schukovski, p. 378 sqq.; transl. by Nicholson, *G. M. S.*, xvii., p. 294 sqq.; K. Hartmann, *Al-Kutub al-Dawā'ir*, ed. Sūfī, p. 107—110; Margaret Smith, *Rūḥ al-mayyit*, Cambridge 1928, p. 53—58; R. A. Nicholson, *Mystics of Islam*, p. 30—32.

(R. A. NICHOLSON)

TAWHID (أ), infinitive II of *ṭawāḥḥa*, means literally "making one" or "assembling oneness" (Lane, p. 2027). In consequence, it is applied theologically to the oneness (*maḥḥabīya*, *ṭawḥīd*)

of Allāh in all its meanings. The word does not occur in the Qur'an, which has no verbal form from this root nor from the kindred *ṭawāḥḥa*, but in the *Lisān* (iv. 464, 465, 466 from below) there is an elaborate philological statement of the usages of the different forms from these roots as applied to Allāh and to men. Technically "the science of *ṭawḥīd* and of the Qualities" (*ilm al-ṭawḥīd wa-l-iḥṣān*) is a synonym for "the science of *ḥaḍar*" (see article *KALAM*) and is the basis of all the articles of the belief of Islam (Introduction by Taḥṣīlāt to the *Al-Faḥr* of Naṣafī, ed. Cairo 1321, p. 4 sq. and the marginal commentaries thereon; *Dict. of techn. terms*, p. 22). In this definition the Mu'tazilites would exclude the qualities and make the basis *ṭawḥīd* alone. But unity is far from being a simple idea; it may be internal or external; it may mean that there is no other God except Allāh, who has no partner (*sharik*); it may mean that Allāh is a Oneness in himself; it may mean that he is the only being with real or absolute existence (*al-ḥaḍar*), all other beings having merely a contingent existence; it may even be developed into a pantheistic assertion that Allāh is All. Again, knowledge of this unity may be reached by the methods of systematic theology (*ilm*) or by religious experience (*ma'rifa*, *maḥḥab*); and the latter, again, may be pure contemplation or philosophical speculation. In consequence, *ṭawḥīd* may mean simply "There is no god but Allāh" or it may cover a pantheistic position. There is a good statement of these developments in *Dict. of techn. terms*, p. 1468—1470; cf. also, p. 1463—1468.

(D. B. MACDONALD)

TAWIL, the first metre in Arabic prosody, has one *arḥūḍ* and three *ḥarḥ*; the paradigm is: *fa'ūlun maf'ūlun fa'ūlun maf'ūlun* in each hemistich.

The *arḥūḍ*, or last foot of the first hemistich, is always *maf'ūlun*. The first *ḥarḥ*, or last foot of the second hemistich, is *maf'ūlun*; the second, *maf'ūlun*; the third, (*maf'ūlun*) *fa'ūlun*.

The *fa'ūlun* foot often loses its *nūn*; the dropping of this is recommended for the foot which immediately precedes the foot forming the third *ḥarḥ*.

The first *fa'ūlun* of the first hemistich of the first verse of a piece may lose its *fa*, and combined with the loss of the *nūn*, we have: (*alun*) *ḥun*, and (*alun*) *ḥun*.

Maf'ūlun may lose its *f* or its *nūn*, but one of them must be retained.

(Mons. BEN CHEKKE)

TA'WIL (أ), originally means quite generally interpretation, exposition. In some of the passages in which the word occurs in the Qur'an it refers definitely to the revelation delivered by Maḥammad. The use of the word *ta'wil* afterwards became more and more limited to this special meaning and it meant exposition of the Qur'an, and was for a time synonymous with *tafsīr*. In time the term seems to have become more specialised although not yet confined to this one meaning; it became a technical term for the exposition of the subject-matter of the Qur'an. In this latter sense *ta'wil* formed a valuable and necessary supplement to the more external philological exegesis of the Qur'an, which was now distinguished as *tafsīr*. So long as it did not come into contradiction with the obvious literal meaning of the Qur'an or with Tradition, orthodox theology had no reason to

deny its right to exist. The question was altered however when *ta'wil* no longer satisfied these conditions. Sufis, the Ikhwan al-Safā, the Shī'is, especially such schools of thought as, without abandoning Islām itself, diverged to any extent from the path of orthodoxy, saw in *ta'wil* a suitable instrument for bringing the views held by them into harmony with the literal text of the Qur'anic revelation and even for deriving them from it. Alongside of the literal interpretation of the text there grew up a biased allegorical exposition which found the most far fetched ideas concealed in the text. With the extreme schools, this transformation of the "external" meaning came to be the only way of looking at the Qur'ān so that the traditional exposition fell into disrepute and the legal enactments of the Qur'ān were even declared not to be binding.

Details in the method of using allegorical *ta'wil* may, as Goldziher (*Richtungen*, p. 210 sqq.) has suggested, be ultimately traced back to the influence of the Neo-Platonists, especially Philo. The method itself however was the direct result of the necessity of sanctioning new views by a new interpretation of the words of the revelation that had been handed down; allegorical *ta'wil* may be considered essentially of native Muslim origin.

TAWILA, a town in South Arabia, formerly the headquarters of the Kā'imīyah of the Qadā of Kawkabān, to which the town already belonged in Niebuhr's time. It lies on a tongue-shaped spur of the Djebel Dhūl on the left bank of the Wādī Lā'a which forms a continuous chain of four rocky hills, the second (from the east) of which is called al-Huṣn. In the SSW. of the town a little lower but not 500 yards away stands the Masjid al-Zāhir, a mosque now in ruins with a fine cistern, from which a well-made paved road (*ṣarḥat*) leads eastwards towards the town. Barely 200 yards east of this ruin or rather of the ruin built of its stones (*isṣera*) is a huge building of blocks of black rock, from which another paved road leads to the town. The town is small and unvalled but has a considerable market. The administrative buildings used by the Turks when they ruled here lie to the extreme S.W. of the town, which was visited by the explorer E. Glaser on Dec. 2-3, 1885.

TAWILA, a South Arabian coin, see the article LARIN.

TAWKĪ (A.), lit. "a document with the signature or device (*alāma*) equivalent to a signature of a ruler"; hence generally, edict, decree of a ruler, and its preparation in written form. *Tawkī* has the special meaning of the titles of the ruler (roughly equivalent to the *tughra* [q. v.]

of the Ottomans) to be inscribed in the chancellery, which gives the document validity, in contrast to *alāma*, the mark or device of the ruler put on it with his own hand, which was regarded as his signature. The use of the two words is however to some extent indiscriminate, for *tawkī* was also used for motto.

In the *Inshā'*-literature edicts (*tawkī*) of the Sāsānian kings are mentioned. Under the Omayyads it is said to have arisen the custom — no doubt really an old Oriental one — of the Caliph himself deciding (*waḥḥa'a*) in public audience on complaints (*ḥisās*) brought to him; the secretaries had then to put the Caliph's *tawkī* into writing. For the 'Abbāsīd period, Kāṣimā mentions a special *Diwān al-Tawkī* (office for edicts). It may be considered an important increase in the power of the visier under the 'Abbāsīds that Hārūn al-Rashīd for the first time entrusted the Barmecide Dja'far with the right of dealing with petitions (*tawkī 'ala 'l-ḥisās*). According to Ibn al-Sairafī, there was in the Fātimīd *Diwān* a special secretary for dealing with petitions. This secretary for the *tawkī 'ala 'l-ḥisās* was one of the highest in rank. Under the Mamlūks the private secretary (*Kātib al-Sirr*) received the right of *tawkī 'ala 'l-ḥisās*. As a general rule, however, the sultāns exercised it themselves here also.

In the Mamlūk administrative system, *tawkī* was also used as the name of particular classes of diplomas of appointment, and according to Ibn Faḍl Allāh, it was applied to the diplomas of all officers, the lower as well as the upper, up to the great governors (*nawwāb*), and therefore became the word most used for appointment generally. Ibn Faḍl Allāh however says that it was only used for the appointing of the lowest ranks of officials. A little later it came into use for the appointments of "turban-wearers" (*muta'ammimūn*) i.e. the ecclesiastical and *Diwān* officials. According to Kalkashandī, *tawkī* is the fourth and lowest as well as the most extensive group of diplomas of appointment (*ṣifāt*).

In the Ottoman empire the imperial edicts were dealt with by a special official, the *nishāndji* or *tawkī*, who was responsible for the documents bearing the Sultān's style and titles. He was one of the highest officials in the kingdom (the *Er-bān-i Devlet*) and a member of the imperial *Diwān*. A device written by the Sultān himself was no longer in use here; in Ottoman diplomatic, *alāma*, like the Persian word *nishān*, means the imperial sign-manual (the *tughra*), the style of the Sultān drawn in the chancery of the *nishāndji* by a special assistant, the *tughrakāsh*. *Alāma* was in this case synonymous with *tawkī*.

Lastly *tawkī* meant a special style of script in use at the close of the middle ages (xiii—xvth century), which was specially used for documents of this period in the Mamlūk as well as the Ottoman dominions. In the great period of Ottoman history (xvth century downwards) it was ousted by the *Diwān* script.

Montana, p. 288 (cf. also Kraelitz, p. 23, note 2).

(F. TAUSCHNER)

TAWRĀT, Hebr. *Tôrā*, is in the *Kur'ān* of the Medina period (cf. also an alleged verse of the Jewish poet Saunāk in Ibn Hishām, p. 659) the name of a holy scripture revealed after the time of Ibrahim (iii, 58) and Isrā'īl (= Jacob; iii, 87) and afterwards confirmed by Yās (iii, 44; v, 50; xl, 6) which contains the *ḥukm Allāh* (v, 48). While obedience to it brings a reward in Paradise to the "people of the book" (v, 70), those who do not take upon themselves the tawrāt imposed upon them are "like asses who carry books" (xii, 5). The Tawrāt also contains a prophecy of the coming of the *Nabi al-ummi* (vii, 156) i.e. Muhammad, and in it Paradise is promised to the faithful who "fight on the path of Allāh" (ix, 112). A sentence from the Tawrāt is quoted in v, 49, which repeats approximately the text of Exodus xxi, 25 sq., while the parable quoted in xlviii, 29 from Tawrāt and Injil comes not from the *Tôrā* but, although only in its gist, from the *Psalms*; cf. for example, Psalm i, 3; lxviii, 16; xciii, 14. In iii, 87 the Jews are challenged to read from the Tawrāt the law (Genesis, xxiii, 33) which corresponds to the substance of iii, 87a. On the other hand the sentence quoted in v, 35, comes not from the Tawrāt but the *Mishnā Sanhedrin*, iv, 5. Besides such express references to the Tawrāt, the *Kur'ān* contains, frequently repeated, a number of stories from the Pentateuch — usually in their Haggada form and not infrequently adapted to Muhammad's special purposes — and many laws from the Pentateuch, both without mentioning their origin. Of the books of the Old Testament, in addition to the Tawrāt, Muhammad only knows the *Zabūr*, i.e. the *Psalms*; perhaps, as the Jews themselves sometimes do, he meant by Tawrāt the whole of their holy scriptures (see Bacher, *Exegetische Terminologie*, i, 197).

In Hadīth the Tawrāt is also frequently mentioned and in several passages Mūsā is named as he who observed it (Bukhārī, *Tafsīr*, Sūra ii, bāb 1; do., *Tawhīd*, bāb 19, 24; Muslim, *Imān*, trad. 322; Ibn Mādjā, *Zuhd*, bāb 37). While the Jews pride themselves on having a great treasure in the Tawrāt (Tirmidhī, *Tafsīr*, Sūra xvii, trad. 12; cf. for example *Prov.* iv, 2) it is on the other side pointed out that its possession has availed them nothing and the Tawrāt contains nothing equal to the *Umm al-Kur'ān* i.e. the *Ṣaḥīḥ al-Maḥmūd* (*op. cit.*, *Tafsīr*, Sūra xvii, trad. 3; *Fiḍā' al-Kur'ān*, bāb 1). The description which the Tawrāt gives of Muhammad and which according to Bukhārī (*Tafsīr*, Sūra xlviii, bāb 3; do., *Buyū'*, bāb 50) has passed in part into Sūra xxviii, 34; xlviii, 8, in the form given, *loc. cit.* proves to be only a rather inaccurate paraphrase of *Is.*, xlii, 1-4 (cf. similar passages in Ibn Sa'd, *ṭī.*, 87 sqq.). In Bukhārī, *Tawhīd*, bāb 34, 47;

Manāzil al-Salāt, bāb 47, the *Abū al-Tawrāt* in a hadīth modelled on the parable of the labourers and their hire, complain that the reward of those who obey the *Kur'ān* is larger than theirs, although the former are "less in work" *afallā 'amālun* than they, a reference to the greater number of the Jewish prescriptions. In explanation of Sūra iii, 87, Bukhārī (*Manāzil*, bāb 26; *Tafsīr*, Sūra iii, bāb 9; *Tawhīd*, bāb 51) says that the Prophet put the question to the Jews asking how they dealt with adulterers. They tried to give him a wrong answer and to conceal from him the passage in the Tawrāt, in which the punishment of stoning is prescribed (*Deuteronomy*, xxii, 23 sq.) but they did not succeed. According to Ibn Mādjā, *Aḥkām*, bāb 39, it is said in the Tawrāt "The *wasḥ* is the *ḥarām* of meals", a statement which ascribes the Jewish command to wash the hands before meals to the *Tôrā*, in which the Jewish students of the scriptures also claim to find it indicated (*Hullin*, fol. 106a).

The *Kur'ān*ic allusions early aroused in Muslim scholars the desire to have a closer acquaintance with the contents of the Tawrāt, a knowledge which was however not without its dangers because it brought out certain contradictions which existed between the *Kur'ān*ic and the Biblical revelation. How this danger was to be met, the Prophet himself gives a hint in an utterance several times quoted by Bukhārī (*Tawhīd*, bāb 51; *Ṭiḥṣūṣ*, bāb 21; *Tafsīr*, Sūra ii, bāb 11): the *Abū al-Kirāb* were in the habit of explaining the Hebrew text of the Tawrāt to the Muslims in Arabic, whereupon the Prophet commanded the latter "Declare ye the statements of the *Abū al-Kirāb* neither true nor false but say 'we believe in Allāh and what He has revealed'" — an utterance, which Bukhārī, as the title of his paragraph shows, wants to be able to apply to the decision of the question whether the translation of the holy scriptures of foreign religions into Arabic is permitted. While in Bukhārī, *Shahāda*, bāb 29, asking members of another faith about the substance of their revelations is deprecated, just as they should put no questions to Muslims about the contents of the *Kur'ān*, there is no lack of references to distinguished men of piety (Ibn Sa'd, vii/1, 179) who studied the Tawrāt in the original or even (*op. cit.*, p. 161) had read it through to the end in a week. The numerous quotations from the Tawrāt, which cannot be identified in the Pentateuch, preserved in Hadīth, canonical and extra-canonical, as well as in edifying literature, have tempted Chaiḥo (*M. F. O. R.*, iv, 39 sq.) to the untenable thesis that there was a book called Tawrāt different from the Hebrew *Tôrā*, from which these quotations were taken; in reality the passages in question are either pure invention or inaccurately modelled on sayings in the Bible of the Talmud.

An intimate knowledge of the text of certain parts of the *Tôrā* is shown by some chronological or genealogical statements about the Biblical period, such as are given by Ibn Ishāq (d. 150 = 767) in his *Maḥabba*, while Ibn Hishām (d. 213 = 828) in his still unpublished *Kirāb al-Ṭiḥṣūṣ*, quoting Wāḥb b. Munabbih (d. 110 = 728), gives certain Biblical names not only in their Hebrew but also in their Syriac form. That he checked the statements of Muslim tradition by the Biblical text is recorded in his *Kirāb al-Ma'arīf*, p. 13, by Ibn Kūṭayba (d. 276 = 889) who also gives in this

work word for word quotations from Genesis; the Biblical quotations in others of his works do not always correspond exactly to the original and the same is true of the quotations in *Ushūq al-Nadī* 'ale 'I-Najīd. On the other hand in another contemporary of Ibn Kutilba, the convert to Islam, 'Alī b. Rabhān al-Jabart, we have many literal quotations from all parts of the Old Testament canon in his "Book of Religion and Empire" written about 240 (854-855) (ed. by A. Mingana; in *M. P. O. B.*, x, 242 199.); some also are to be found in the *Risāla* of 'Abd al-Mas'ūh b. Ishāq al-Kindī. While the text of the Bible was accessible without difficulty to converts like 'Alī b. Rabhān, the Biblical quotations in authors born Muslims were either learned orally from Jews or Christians or from another Arabic translation of the Bible. Ahmad b. 'Abd Allāh b. Salām al-Indjili (whose relationship to 'Abd Allāh b. Salām, the Jewish convert of the time of the Prophet, cannot be certainly established) is said to have made one such, notably a translation of the Tawrāt, and according to the *Fihrist*, p. 22 in the reign of Harūn al-Rashīd. Three further translations are mentioned by Mas'ūdī (*Tanbih*, p. 112): that of the Nestorian Hannan b. Ishāq (d. 260 = 873-874) based on the LXX and two by the learned Jews Abū Kaḥlīl (between d. 321 = 933 or 329 = 941) and Sa'īd b. Yūsuf al-Fayyūmī, best known under the name of Sa'adya Ga'on (d. 331 = 943) from the original Hebrew. Of all these translations only that of Sa'adya has survived (ed. Derenbourg, Paris 1893) and the only other of the period in existence is one made in Spain in 345 (956) from the Latin. Of all later translations from the Coptic, Syriac or Hebrew by Christians and Samaritans, bibliographical details are given in the article "Bibelübersetzungen, Arabische", in Herzog: *Realenzyklopädie*.

Sura vii. 156 firmly convinced believers that the Tawrāt contained a prophecy of the coming of Muḥammad. Attempts to prove this go back to the earliest period of Islam (see below) but it is not till the middle of the third century that definite verses of the Pentateuch and other books of the Old Testament are quoted in a literal translation and interpreted as prophecies of Muḥammad's coming. From an unnamed work of Ibn Kutilba, Ibn al-Djāwī in his *Kitāb al-Wafā* quotes several passages of this kind and many others are given about the same time by 'Alī b. Rabhān al-Jabart (see above) and these recur again and again in the apologetics and polemics of the following centuries with greater or less completeness. From the Pentateuch the verses *Gen.*, xvi. 9-12; xvi. 20; xxi. 21; *Deut.*, xviii. 18; xxxiii. 2, 12, play a prominent part in these polemics. Since according to *Gen.*, xxi. 21, Fārān was the abode of Ishmael, and according to Sura ii. 119 he stayed in Mecca, Fārān is identified with Mecca. On the basis of the same identification, *Deut.*, xxxiii. 2 is referred to Muḥammad, as in xviii. 18, and in xxxiii. 12 a reference to the *Kitāb al-Nuḥumma* is found.

Even in the Qur'ān we find the Jews reproached with "displacing phrases from their context" (iv. 45; v. 16, 45) and an example is given in iv. 45; further they are charged with having forgotten or concealing a part of what had been revealed to them (v. 16; iii. 64; vi. 91). We have already had from Ḥadīth an example of this

concealing: the Jews wished to keep from Muḥammad the verse of the Tawrāt which prescribes the punishment of stoning for adultery. The reproach of "altering the words" is more precisely defined by Bukhārī, *Shahāda*, bāb 29, who says that the "possessors of the scripture" had altered the book of Allāh with their own hands and said it was Allāh's. Not all Muslim apologists go so far, however, as to assert deliberate falsification of the text; the milder school ascribes to the Jews only distortions of the meaning. The most distinguished representative of the stronger view is Ibn Huzm (d. 456 = 1064) who raises objections to no less than 57 passages in the Tawrāt and collects the impossibilities and contradictions which he had found in it.

TAWRIYA (ا), syllepsis in oratory, a figure of rhetoric (*bad'*) which consists in using a word having two different meanings, one obvious and the other secondary, veiling the second sense by the first so that it is the first sense which strikes the listener first. Tawriya is called *ihām* (disimulation) because he who uses it conceals the remoter meaning he had in view by the primary sense which is seized on first. It is sometimes called *ihām* ("act of concealing or masking").

There are two kinds of tawriya: 1. that which is "deprived" of everything that might indicate the meaning one has in view (*muḥfarada*), for example "The Merciful is seated (*istawā*) on his throne" (Qur'ān, xx. 4); here the remoter sense of "to make oneself master of" is in mind and there is nothing in the phrase which might suit the nearer sense of "to rest; to establish oneself, to sit"; 2. that which includes something which suits the obvious sense, for example "And the heavens which We built with power" (Qur'ān, ii. 47), literally "and the heavens which we built with our hands" in which one notices that "hand" here, taken in the secondary sense of "power", is accompanied by the verb "to build" which suits its primary meaning of "part of the body at the end of the arm". The figure is also used by the Persians who seem to have borrowed it from the Arabs.

BEN CHIENEN)

AL-TAYĀLISĪ SULAIMĀN b. DĀWUD b. AL-DĀKĀDĪN AND DĀWUD, a collector of traditions and a author of a *Musnad*. The *nisba* is derived from *al-tayālīs*, the plural of *ṭayālīs*, a piece of clothing that covers the head-dress and sometimes also the shoulders (see Dory, *Dictionnaire détaillé des noms des vêtements chez les arabes*, p. 278 sqq.).

Al-Tayālīsī was born at Bayra in 133 (750—751) and died in 203 (818—819). It is also said that he reached the age of 72 years. He has handed down traditions on the authority of Shu'ba, Sufyān al-Thawri and other well known traditionists. In his turn he was an authority for Ahmad b. Hanbal, 'Alī b. al-Madīnī, Abū Bakr b. Abī Shaiba etc. It is said that he knew 30,000 traditions by heart and that he did not make use of notes in handing them down. He is reputed to be trustworthy, although slips of his memory are on record. He contracted elephantiasis in consequence of a frequent use of *batāḥur*.

The text of his *Musnad*, which was printed in Haidarābād in 1321, has been handed down by Abū Bishr Yūsuf b. Ḥalīb, Abū Muḥammad 'Abd Allāh b. Dja'far b. Ahmad b. Fāris, Abū Nu'aim Ahmad b. 'Abd Allāh b. Ahmad b. Ishāq, Abū 'Alī al-Ḥasan b. Allāh b. al-Ḥasan al-Ḥaddād al-Makḥārī, Abū 'I-Makrīm Ahmad b. Ahmad . . . b. Muḥammad b. Kaīs al-Labbān († 597 = 1200—1201).

The work consists of the single *anwāḥ* of over six hundred ṭaḥāḥ's and is arranged in the same way as other works of the kind. It contains 2,767 traditions; this means that its bulk is about one tenth of Bukhārī's *Ṣaḥīḥ* or $\frac{1}{10}$ of Ibn Hanbal's *Musnad*. The contents cover the whole field of classical *ḥadīṡ*; all subjects of some importance are represented, though on a moderate scale. It may be remarked that the materials concerning some persons who played a part in Muḥammad's history are perhaps more scanty than in any of the other collections; there are e.g. no traditions on Khadija, Zainab bint Jajāh, Abū Sufyān, 'Amr b. al-'Ās, Abū Muḥ al-Ash'arī, 'Abd Allāh b. Ubayy, 'Abd Allāh b. Salam, Ibn Sa'īd, Ka'b b. Mi'lik, Khālid b. al-Walid, Sa'd b. Mu'adh, Salmān al-Fārisī.

The book contains scarcely any tradition which is not to be found in the classical collections; in rare cases the wording may be helpful for the understanding of difficult traditions.

(A. J. WENSINCK)

TAYAMMUM (أ.), the recommendation, or permission to perform the ritual ablution with sand instead of water in certain cases, is based on two passages in the Qur'ān, Sūra iv. 46 and v. 9. The latter passage runs as follows: "And if ye be impure, wash yourselves. But if ye be sick, or on a journey or if ye come from the privy or ye have touched women and ye find no water, take fine clean sand and rub your faces and hands with it. Allāh will not put a difficulty upon you but He will make you pure and complete His favour upon you, perhaps that ye may give thanks". Sūra iv. 46 is somewhat more briefly expressed but the law is formulated there in almost identical words except that the phrase "with it" is lacking from the sentence "and rub your faces and hands with it". According to the Shāfi'is (see Baiḥaqī on Sūra iv. 46) "with it" means that there must be some sand in the hand. The Hanafīs on the other hand consider the rite valid even if the hand has only been touched by a smooth stone.

In his *Miṣbāḥ al-Kubrā*, Cairo 1279, i. 143 sqq., al-Shāfi'ī gives 14 such points of difference between the *maḥḥad's*; they refer to a. the material (earth, sand etc.); b. the obligation to look for water; c. the question how far face and hands are to be rubbed and into what legal categories these rubbings fall; d. the question what one should do if he finds water after he has already begun the *ṭayāt*; e. the question whether a single *tayammum* suffices for two *ṣalāt* rites; f. the question whether one who has performed the *tayammum* before his *ṭayāt* may act as *imām* for persons who have performed the ablution with water; g. the question whether *tayammum* is permitted before the *ṭayāt* at festivals and for the dead, if one is not on a journey; h. the question whether one who is not travelling, and has difficulty in getting water for a *ṭayāt* the legal time for which is about to expire, should

repeat the *ṣalāt* performed after *tayammum* as soon as he has found water; i. the question whether it is permitted to use the little water one has for a partial washing and do *tayammum* for the rest; ii. the question what is to be done in cases of injury; iii. the question whether the *ṣalāt* is to be repeated in four cases, in which it has been performed after *tayammum*.

There is agreement among the *mudhhab* on the point that *tayammum* is only done for the face or hands, whether after a minor or major *ḥadaṭh* [q. v.], whether in place of a washing of all or any parts of the body is a matter of indifference (al-Nawawī, on Muslim, *Ṣaḥīḥ*, Cairo 1283, i. 406).

From various traditions it is evident that 'Abd Allāh b. Mas'ūd and 'Omar had misgivings about declaring the *ṣalāt* valid after *tayammum* in cases of *ḡunāḥa* (cf. e. g. Bukhārī, *Tayammum*, lib. 7; Muslim, *Ḥiḍḍ*, tr. 110). On the other hand the mainly Abū Dharr, who had similar misgivings, is made to say that the Prophet had disposed of them by saying: "fine sand is a means of purification when one cannot find water, even if he should look ten years for it" (Aḥmad b. Hanbal, *Musnad*, v. 146 sq.).

The permission is said to have been revealed when an expedition of Muhammadans was held up so long looking for a necklace of 'Ā'isha's that its water became exhausted.

In the *Tahmid* (*Berakot*, fol. 15^v) a permit to use sand in case of want of water similar to that of the Qur'ān is given and Cedrenus, *Annales*, ed. Hylander, Bude 1566, p. 206, tells how on an occasion in a journey through the desert, Christian baptism was performed with sand.

TĀZĀ, a town in eastern Morocco, about 60 miles E.N.E. of Fās, in a great depression, called the "trough of Tāzā" which separates the Rif from the northern spurs of the Central Atlas. To some authors of the middle ages (*Ṣiḥḥ*, al-Marrākushī) Tāzā marks the boundary between the extreme and central Maghrib. The great importance of the great natural route from the east to west through this depression, the strategic and economic advantages secured by the occupation of the site in part defended by the ravine of a wādī, must have early encouraged a foundation of some importance at Tāzā. Prehistoric settlements have been discovered there and many tombs of uncertain date in the cliffs on which the town is built.

In the beginning of the middle ages (viii–xth century) Tāzā was the most important settlement in the region occupied by one of the groups of the Mikhāṣa, semi-nomadic Berbers. According to Ibn Khaldūn, it was they who founded the *ribḥ* of Tāzā. This statement is evidently inaccurate in this form. Tāzā was not yet reckoned a *ribḥ*. It must nevertheless have played an important part in the defence against the Idrisids as partisans of the Fātimids of Kairawān, then against the Fātimids as partisans of the Omayyads of Cordova. Tāzā however, as a fortified town and a *ribḥ*, was

properly a foundation of the Almohads. In 528 (1133) 'Abd al-Mu'min, having made himself master of the High and Central Atlas, had arrived in the depression of Tāzā. There the conqueror seems to have suspended his advance. It was not till later that he tackled the ranges of the Rif and did not yet attempt to descend into the plains to meet Almoravid forces. He seems however to have felt the necessity of holding the important strategic point, of building a citadel there and placing a garrison in it. Those who held this frontier post of the Almohad dominions were naturally assimilated to the men of the *ribḥ*'s (we know that the struggle against the Almohads had the attractions of a holy war). To call the new fortress a *ribḥ* was giving it the value of a pious work. As a matter of fact Tāzā never played the religious part of a *ribḥ*. It remained, as before, a military post guarding the road to Fās. A great part of the ramparts built by 'Abd al-Mu'min seems to have survived. It is a curtain of rubble flanked by towers unequal in size, with the remains of an outer wall in front of it at places.

For lack of defenders, Almohad Tāzā hardly made any resistance to the Marinids who took it in 613 (1216). Its new lords also devoted attention to its defences; they restored the great mosque on two occasions (1294 and 1353) and endowed it with medreses. In their time Tāzā for once at least did its duty in guarding the pass, when it was attacked by the Sulṭān of Tlemcen, Abū Hammūd II, who besieged it for a week in 784 (1382) and was forced to retrace his steps.

In the beginning of the xvth century, we have a description of Tāzā by Leo Africanus. He regards it as the third town of the kingdom; it was administered as a kind of apurage allotted to the second son of the Wattāsid Sulṭān of Fās. The population which numbered about 5,000 householders, including many Jews, lived under a continual menace from the mountaineers around.

To secure control of the springs which watered the town, and to protect himself against the attacks of the Turkes of Algiers, a Sa'dian Sharif—perhaps Aḥmad al-Manṣūr—provided it with a *ḥaṣṣa*, which still stands in the S. E. corner of the enceinte. It is noteworthy however that in the result this fortress of Tāzā never served as a defence against enemies from the east, but rather became "a citadel ready at hand for every pretender who rebelled in those regions against the Makhzen who had built it" (H. Basset and Campardon). This was the case in 1596 when al-Nāṣir, a nephew of al-Manṣūr, rebelled against the Sulṭān and made Tāzā his base of operations, and again in 1664 when the first of the 'Alawid Sulṭāns al-Raḥid made it his headquarters for his attack on Fās, and in 1673 when Aḥmad b. Muḥrīz held out there against his uncle, Sulṭān Mawlay Ismā'īl. Lastly in 1902 the agitator Abū Ḥamra in his struggle with 'Abd al-'Azīz made Tāzā his capital. It was occupied by French troops on May 10, 1914.

TAZĪR (A.), punishment, intended to prevent the culprit from relapsing, to reform him (*li-taẓīr*). — The Qur'ān does not know this kind of punishment; on the contrary it classifies several transgressions afterwards punished with *taẓīr* merely as sins, e.g. slander, for which there is no *ḥadd* punishment (Sūra iv. 112) and the bearing of false witness (Sūra ii. 283; iv. 134). Tradition has very little to record about it. According to one tradition of 'Abd Allāh b. 'Omar, in the time of the Prophet, those who bought provisions wholesale without measures or weights in order to sell them again were punished by whipping (Bukhārī, *Ḥudūd*, bāb 43); disregarding the development in legal theory of this tradition by the commentators, it is clearly one of the many traditions which attack speculation in the necessities of life (cf. C. H. Becker, *Papiri Schott-Rimhardt*, Heidelberg 1906, p. 51); it is in any case based on later usage in commerce. According to another tradition of Ibn 'Abbās, the Prophet is said to have threatened with 20 lashes any man who insulted another by calling him soft or effeminate (Ibn Māǧja, *Ḥudūd*, bāb 15). Very frequently on the other hand we find a tradition (of Abū Burda, of 'Abd al-Rahmān b. Djabir, of Abū Huraira), according to which the maximum that can be inflicted except for *ḥadd* is 10 lashes (Bukhārī, *Ḥudūd*, bāb 43; Muslim, *Ḥudūd*, tr. 39; Ibn Māǧja, *Ḥudūd*, bāb 32; Ibn Ḥanbal, iii. 466; iv. 45). These traditions however can only have arisen later in the difference of opinion about the amount of *taẓīr*, especially as the later law-schools admit a much larger number of lashes. In any case *taẓīr* is a kind of punishment, which only found its way into Muslim law at a comparatively late date. For this view it is noteworthy that tradition does not connect the later technical sense with the verb *'azzara*. It is true that it occurs in the above mentioned tradition in Ibn Māǧja, *Ḥudūd*, bāb 32: *li-taẓīr*; but in a tradition of Anas b. Mālīk the verb *'azzara* is used with reference to the *ḥadd* punishment for drinking wine in contrast to its later technical sense. (Ibn Ḥanbal, iii. 180; a duplicate of this tradition in Ibn Ḥanbal, iii. 115 uses *ḥalala* in this passage).

According to the *ḥikm*-books, *taẓīr* is inflicted for such transgressions as have no *ḥadd* punishment and no *kaffāra* prescribed for them, whether it is a question of disobedience of God such as neglect of the fivefold *ṣalāt* or of fasting, or a question of crime against man such as deceit, bearing false witness, theft of an article of trifling value (cf. *ṣāḥiḥ*) etc. In the second group however there is also a breach of the divine law (*ḥuḳḳ Allāh*) as well as the breach of man's law (*ḥuḳḳ al-nās*).

The most remarkable condition for the application of *taẓīr* is that the delinquent must be in full possession of his mental faculties (*'aql*). The

kind and amount of *taẓīr* is left entirely to the discretion of the judge; he may administer a public reprimand, expose him in a public place, banish him, confiscate his property (but there is a difference of opinion, for the goods and chattels of a Muslim are regarded by some as inviolable in this case), throw him into prison or have him whipped. Except in the Mālikī school however, the number of lashes must not be more than in the *ḥadd* punishment; according to the Shāfi' school, the maximum for a freeman is 39, for a slave 19; according to the Hanafis, the maximum is 75 (some take the *ḥadd* for drinking wine, others the *ḥadd* for slander [*ḥudūd*] as the maximum); the Hanbalis on the other hand only allow 10 lashes, relying on the above tradition. There are also very minute and varying rules regarding the administering of the lashes in the different schools.

As the primary object of the *taẓīr* is reformation, and the degree of punishment to cause this varies with each individual, men are classified systematically by some jurists for this purpose. Al-Kāshīr, for example, distinguishes four classes: 1. the most distinguished of the upper classes, i.e. officials and officers of the highest rank; for them a personal communication from the judge through a confidential messenger is sufficient; 2. the upper classes, i.e. the intellectual elite and *ṣuḥabā*; they are summoned before the judge and admonished by him; 3. the middle classes, i.e. the merchants; they are punished by imprisonment; 4. the lower strata of the people; they are punished with imprisonment or flogging. Other jurists however reject this external classification according to social status and lay stress on the inner worth of the individual, his attitude to religion and his mode of life.

If it seems advisable, the judge can completely remit the *taẓīr*, in so far as it concerns the divine law; but the portion based on the law of man is not dropped even if the person injured renounces it.

The process of trial is simple in contrast to that for *ḥadd*. *Taẓīr* is inflicted on a confession, which however cannot be withdrawn, or on a statement of two witnesses, one of whom may even be a woman; *ḥukūda 'ala ḥukūda* (cf. *ḥukūda*) is also admitted. According to some, it is even enough if the judge alone has knowledge of the transgression.

How these cases for punishment left by the *shari'a* to unfettered judgment were dealt with by those in authority is very clearly seen from the stories in the *1001 Nights* (cf. Rescher in *lit.*, ix. [1919], 68 *seq.*). On the other hand the attempt was made to escape this arbitrary punishment by bribery. Frequently also the secular legislation of rulers interfered, regulating the sentence left to the *ḥadī*'s discretion by laying down definite punishments for a series of transgressions, as is the case in the *ḥikm-nāme*'s of the Turkish Sultāns, where moreover a fine is always provided for besides the flogging (cf. Mehmed II's *ḥikm-nāme* in *M. O. G.*, i. [1922], 13 *seq.*).

TAZIYA (A.), a. expression of sympathy in general, & the passion play of the Shi'is. The word, a verbal noun from *taziya* II, is not found in the *Kur'ān* (but cf. *ta'iz* in lxv. 37), but occurs in all schools of fiqh at the end of the book on public worship in the section, or in the separate book, *al-jana'iz* = burial, where sympathy is requested for the relatives. Among the Shi'is it means in the first place the lamentation for the martyred imāms, which is held at their graves and also at home. In particular, however, it is mourning for Husain. The *tasbūt*, a copy of the tomb at Kerbelā', in popular language is also called *taziya*. It is a model kept in the house, often very richly executed. *Taziya* however means particularly the mystery play itself. The time for its performance is the first third of the month of Muharram especially the 10th *Ras-i Kāfi*, the day of the murder of Husain and of the 'Ashūrā' festival [q. v.]. The local usages in Persia and in the Shi' regions of Mesopotamia and India are very varied. In a wider sense the plays include the street processions such as the cavalcade with Husain's horse, the marriage procession of Husain's son al-Kāsim with Hasan's daughter Fātima (see below), the procession to the cemetery with the *tasbūt*, all popular celebrations of a kind at which the deepest grief does not exclude a part being played by comic figures.

Lastly *taziya* means the actual performance of the passion play itself. The stage is erected in public places, in caravanserais, even in mosques and in *imām-hāṭṭā* specially erected for the festival. The chief properties required for the stage are a large *tasbūt*, receptacles in front to hold lights, also Husain's bow, lance, spear and banner. The participants in addition to the players are the *raṣṣa-shāhīn*, the poet, lit. he who pronounces the eulogy for the dead. He speaks the introduction and with gestures indicative of lamentation chants a *khusha* [q. v.] with many laments in a voice of lamentation surrounded by a choir of boys called *peš-shāhīn*, lit. announcers, while the *nūṣa-shāhīn*, dressed as mourning women utter the lamentations of the women and mothers. The spectators are separated according to sexes. They are given *mukh*, cakes of earth from Kerbelā' steeped in musk, on which they press their foreheads in abject grief. While on the stage the hunger and particularly the thirst of the martyrs is most realistically expressed, water and other refreshments are provided for the spectators. The gratuitous provision of the whole spectacle and everything connected with it including payment of the poet is not only an obligation on the well-to-do but a meritorious pious work "for he builds himself the palace in Paradise" when he builds the stage. The sayids play a prominent part in these festivals, for their descent from Husain gives them a special claim to gifts from the charitable, which they often demand with great pertinacity.

The motives and to a great extent the words are the same in the great number of such plays which are often touched up and expanded by the poets (cf. the catalogues of MSS.). The commonest are Persian but they also exist in Arabic and Turkish.

The term drama can only be applied with reservation to the series of sometimes 40–50 independent tableaux which constitute the performance. The events, especially the actual death of Husain, are prophesied from the beginning in all details by Gabriel to the early prophets and Muhammad himself, foreseen in dreams, foretold and afterwards narrated again and again.

The characters in the play are, in addition to the angels, principally taken from the story of redemption including the Old and New Testament. Their fate is frequently compared with that of the martyr. Jacob and Joseph confess that Husain and his children have suffered more than they have; Eve, Rachel and Mary understand the mother's anguish of Fātima; Muhammad, given by the angel of death the choice of surrendering to him his little son Ibrahim or the little Husain, abandons to him the former so that the latter may be preserved to die as a redeemer. Muhammad and 'Alī are only brought in as subsidiary to Husain, who even as a child plays the principal part in their thoughts and hours of death. The brother Hasan and his relation to Husain is very much idealised. Of the latter's nearer relations, there appear in addition to the spirit of his dead mother Fātima, his sisters Kulthūm and Zainab, his wife Shahrabānū, daughter of Yazdegird III, and his son 'Alī Akbar, who falls in battle. Very popular is the wedding of his and Shahrabānū's daughter Fātima with Husain's son al-Kāsim celebrated just before the catastrophe, in which the bridegroom is almost immediately killed. The death of a little son and a small nephew who are struck by an arrow, while clasped to his bosom aims at producing a great effect on the spectators, while the surviving son 'Alī Zain al-'Ābidin plays the main part in the mournful procession which brings the head and the captured women and children to the caliph Yazid I. If this procession spends a night on the way in a Christian monastery, the prior pronounces the Muslim confession faith before the head. Similar scenes are introduced with Jews and pagans and with Christian ambassadors at the caliph's court. The humility of a lion which pays homage to the head of the martyr produces a great effect on the audience.

More important, and also more serious, is the fact that these spectacles produce a completely biased view of the figures of early Muslim history upon the Shi'is: such are Salma-i Fārisi, Abū Dharr, Bilāl, al-Hurr who goes over to Husain, all on the Shi'a side and the enemies of Abū Bakr and 'Umar who are represented as depriving Fātima of her inheritance, the oasis of Fadak, with cruel blows. No distinction is made among the non-Shi'is: 'Alī's slayer Ibn Muljam is not for example branded as a *khāridjī* [q. v.]: his murder likewise is laid to the charge of the Sunnis. Ibn Sa'd, the leader of the hostile force, Shammar who is said to have dealt the fatal blow, and especially Yazid I are painted in the blackest colours. The fury against the Sunnis is so pronounced that non-Muslims are tolerated as spectators but certainly not non-Shi'a Muslims. National hatred of Arabs (and also Turks) is seen in such scenes as that in which Husain's widow Shahrabānū returns to her home in Persia or the young Fātima II is rescued by a Persian king.

The scenes mainly written in the *hasadī*-metre have grown out of various sources, but the material

and the words are often old: verses of the Qur'ān, interpreted from the Shī'a point of view, and particularly old traditions with Shī'a bias, which are clothed in a form calculated greatly to impress the hearers; sentences from the *khutbas* are found as early as Tabari. Whole sermons, curses and prayers are already found in the earliest Shī'a literature [cf. *SHI'A*], in Ibn Bābiyya, Kulaini, Shaikh Tusi, especially in the chapters *Ziyārat* (visits to tomb) in the books on pilgrimage and the imāmate and also in the *maṣṣūf* works. There also are found many hymns, while on the other hand songs of lamentation are still written in modern times.

Judged from the effect on the spectators the *ta'ziya* is a most impressive spectacle. Strangers, who cannot appreciate the inner significance of it, may find its broad realism repulsive, especially in the closing scenes where the decapitated head is the principal speaker and actor. They might easily get the idea that the spectators are simply revelling in the pain and cruelty of the spectacle. The real significance can only be ascertained from an unprejudiced examination of what is actually said. As already indicated the plays are full of dogmatics with emphasis on Shī'a *hadiṭh*. It is possible that with the primitive nature of the production, touching and exciting scenes are introduced simply for their own sake. But the leading idea is a soteriology that rules everything and is brought out, in harmony with the text books but in much more clear fashion. Here we will only refer the reader to one of these mysteries easily accessible in Chodsko (see *Bibl.*). In the very first scene "The Messenger of God" Gabriel, representing Hsuan as sharing his brother's fate, announces to Muhammad: "Thy two grandchildren shall fall under the blows of a very contemptible enemy, not because they have in some way transgressed God's laws; no, the filth of sin has never soiled a member of thy family, o Phoenix of the Universe! Rather are they sacrificed for the salvation of the people who adopt Islam so that the law of the martyrs shall eternally reflect the brilliance of the elect of God. If thou desirest the forgiveness of the sins of these evil-doing peoples, do not oppose the two roses of thy garden being plucked before the time!" (p. 5 *sq.*) And after this theme of the vicarious death for the forgiveness of sins has been again and again clearly formulated, the mystery comes to its logical conclusion in the last scene, in which the whole hierarchy of patriarchs from Adam to Hsuan's mother Fātima is assembled round the sacred head. To Fātima her father Muhammad (p. 215) says: "Thou art right to weep for thy slain child soaked in his noble blood; but there is a secret about the true reason of this martyrdom; as the price of this martyrdom God us the Day of Judgment will give into our hands the keys of Paradise and of Hell!" How old such ideas of this salvation by intervention are, is seen from the prayers of those "penitents" under Sulaimān b. Šurād who fortified themselves to fight to the death against the Omayyads by doing penance at Hsuan's grave four years after the battle of Kerbelā; they wanted to atone for their guilt which they had brought upon themselves by not having fought or died with the dead Hsuan. One of them, 'Abd Allāh b. Wāh al-Taimi, calls Hsuan and his brother and father the "bond (of reconciliation) (*waṣīla*) with God on the Day of Judgment". Tabari, II,

347, records this from Abū Mikhnaf but on the authority of an 'Alid, Hsuan's grandson Muhammad al-Bakir, through a Shī'a authority Salama b. Kūhall; but the latter, generally considered a Zaidi, does not belong to an ultra-Shī'a school.

In their elaborate form, the *ta'ziya* are recent and at one time could not be carried through without opposition from the motives on account of their crude dogma and irreligious accompaniment of dances and processions. Adam Olearius who witnessed great celebrations in Ardabīl in 1637 does not mention *ta'ziya*, nor does J. H. Tavernier (cf. *Vierzig-jährige Reisebeschreibung*, Nürnberg 1681, p. 178 *sqq.*) mention any special play among the Muharram ceremonies in Isfahān in 1667; on the other hand it was noted for example by J. Morier in 1811 in Teheran. It is probable that ancient rites of earlier mythological festivals like the Tammuz and Adonis cults have survived in the subsidiary plays which in India have been adapted by some Sunnīs and even Hindus; the banners for the processions, a large staff, the hand which is carried round by those who summon to the festival and is now interpreted as the hand of Hsuan which was cut off, have thus their ancient prototypes. That the significance of the sacred properties has altered is shown by the fact that among the Shī'a Tatars the *ta'ziya* is called the "marriage house of Kāsim". In many places there are accompanying rites with water, which were originally indigenous; the throwing of the *ta'ziya* into water among the Indian Shī'a may be due to Hindu influence. Even the style of the mourning garments is partly influenced by earlier forms. But the passion play itself is the popular expression of that religious feeling which has its roots in the historic fact of Kerbelā.

TCHAD. [See TSH.]

TEBESSA, a town in Algeria, 106 miles S. E. of Constantine and 12 from the Tunisian frontier in 35° 25' N. Lat. and 8° 5' E. Long. (Greenwich); the population is 10,399 of whom 1,614 are Europeans. It is the capital of a mixed commune of 425 sq. miles, corresponding to the territory formerly occupied by the confederation of the Nammascha, with 56,991 inhabitants, of whom 56,963 are natives.

Tebessa lies in the centre of a plateau of an

average height of 3,000 feet bounded by the masses of the Osmor and of the Djebel Dukkân, eastern extensions of the Aurès, well watered by wells coming from the mountains; this region was once covered by dense forests; now almost entirely cleared of trees except in the immediate neighbourhood of the town, which is surrounded by a girdle of gardens, it is very well fitted for growing cereals, which is done by both natives and Europeans. This circumstance, along with the position of the town at the intersection of the roads from the plateaus of Numidia to central and southern Tunisia, made Tébessa an important market. Since the beginning of the 20th century the exportation of the phosphates worked in the vicinity of the town and sent southwards by rail to Sûk Ahras has brought increased activity to Tébessa.

Tébessa corresponds to Thēvesta, where in 25 B.C. Augustus established the head-quarters of the Third Legion Augusta. The town which grew up around the camp had 30,000 inhabitants by the time of Trajan. Raised to the rank of a colonia by Septimius Severus, it was at this time considered the most important and most populous town of Roman Africa next to Carthage. Some writers give it a population of 100,000. It declined after this period. After suffering considerably in the social and religious troubles of the fourth century, it was taken and sacked by the Vandals in the fifth century. Recaptured by the Byzantines, it was restored by Solomon. He built fortifications around it partly out of materials from old buildings and thus made it a vast citadel. Nevertheless it passed into the hands of the Moors i.e. of the Berbers in 597, then to the Arabs in 682 (45 A.H.) after a battle the memory of which is preserved in the *Futûh Ifrîkiya*. Tébessa henceforth shared the destinies of this part of Africa. It belonged to the Aghlabids, to the Fâtimids (from whom Abû Yâsîd took it temporarily), then to the Zirids and the Almohads. The Ghâniya took it on two different occasions without being able to hold it permanently. It finally fell to the Hafsids who held it for centuries but their hold on it seems always to have been rather precarious. The Turks took it, probably at the end of the 15th century, and put a garrison into it to watch the lands on the Tunisian frontiers which were being disputed by the powerful confederacies of the Hanafis and the Namângha. At this date Tébessa consisted of the town itself enclosed in the Byzantine walls and the village of the *amviya* inhabited by the descendants of the marabout Sidi 'Abd al-Rahmân and by freed negro slaves.

The population of the town is very heterogeneous: families originally from the neighbouring small towns of Oukes and Bekaria, immigrants from Tunisia from Djârid, Kulugla, born of the union of soldiers of the garrison with women of the country. The last element finally became predominant and forced the Hanafî ritual upon the majority of the population. After the capture of Constantine by the French in 1837, the Turkish garrison fled into Tunisia and the town was left defenceless against the attacks of the nomads. To put an end to this some of the notables appealed to the French. French troops appeared before Tébessa in 1842, and again in 1846; a permanent garrison was established there in 1851 and a European colony soon began to gather round the military establishments.

TEHERAN (TEHRÂN), i. the capital of Persia.

The name. The Arab spelling Tihirân survived down to the beginning of the 20th century. The Arabs frequently rendered by *t* the initial *t* of Persian names (aspiration?). The Arab Yâqût however admits the pronunciation Tihirân; the Persian Zakariyâ Kâzwinî only gives this form. The short *i* in modern Persian is regularly pronounced like a short *e*, whence the European transcriptions: Teheran etc. (already in Clavius and della Valle; Chardin; Thérân). The pronunciation Tâhrân is unknown in Persia but the Turks of Constantinople, whose language sometimes preserves the oldest form of Persian words, say Tahran.

The origin of the name is uncertain. The popular etymology: *tâh* + *rân* "he who chases the people to the depths of the earth" is clearly based on Yâqût's story. *Tâh* might correspond to *tâh/tik* "depth" in a northern dialect. We know several names combined with *tâh* (Stack, i. 97; ii. 13: *tâhdâsh* < *tâh-dâsh*). It is tempting to see in the second element *-rân* a contraction of the name Raiy (Raghân > Raiyân > Rân); the whole would then mean "at the bottom, down from Raiy", but this suggestion is difficult as there is another Tihirân near Isfahân. It is however curious that the name of the latter has become Tihirân > Tihirân, while the capital has retained its original form.

H. Schindler, *East Pers. Irak*, London 1896, p. 131 sees in Tihirân, *tih-rân* "plains" (Vullers, i. 486, *etc* "planities, desertum"). In order to explain *tih-r* we have to start from its final form *tr*, but certainty will only be attained when the word in its original form *tih-r* is found in documents. The preservation of *-r* (< *tr*) shows a word of the northern group (in the south *tr* becomes *r*). H. Schindler compares the name Tihirân to that of the mountain *Shimrân* (written *Shamrân*; cf. below) in which he sees a plural of *shamar*, "mountain on which the water is kept to supply the plain" (*Shamrân-i Sâfî*, without an example). *Shamar* as a rule means "pond, reservoir" (Vullers, ii. 462) which gives quite good sense. In any case the name must have a common origin with that of the Dailam castle *Shamrân* (cf. *TAROM*).

Position. Teheran lies in 51° 25' 28" E. Long. and 35° 41' 6.83" North Lat. in a depression (*land*) below the outer spurs of the Alburz. The pass of Sar-i Tawâl, which is a dozen miles north of the town, is 12,000 feet high. This chain does not form the watershed with the Caspian basin: from behind Sar-i Tawâl rise the rivers of Karadj and Djâdjârd, both of which run towards the Central Persian desert. A southern spur of the chain runs along the right bank of the Djâdjârd and forms a barrier to the east of the plain of Teheran. It is called Se-Pâyâ ("tripod"). The little town of Shâh 'Abd al-'Azîm lies at its southern end. The ruins of Raiy (q.v.) lie between this town and Teheran. The altitude of Teheran is 3,810 feet (H. Schindler). The ground rises im-

mediately to the north of the town and forms 3 stages from Teheran to Kaş-i Kādīr (3 miles), from there to Zarganda another 3 miles (alt. 4,500 feet), from there to the foot of Tawāl.

Here on the slope of the mountain is the verdant district of Shīmrān, which not only gives a cool retreat for the people of Teheran in the summer (May–Sept.) but also provides the city's water-supply. Teheran has no river; water is brought to it by some thirty deep subterranean conduits (*qanāt*, *kāris*) from 5 to 10 miles in length, which come from the springs in the mountain.

The climate of Teheran, agreeable in winter, is unhealthy in summer; typhus and other fevers and dysentery are endemic there; every evening mist rises from the soil which is soaked by irrigation and envelops the town. Otherwise the climate is dry. According to the observations of H. Schindler, *Klimatafelde aus Persien*, *Pet. Mitt.*, 1899, p. 361–370, made in Teheran during 17 consecutive years (1892–1908), the annual snowfall and rainfall varied between 134.25 (1901) and 330.75 (1904) millimetres. The winter of 1894–1895 was distinguished by a complete absence of snow or rain. During the summer of 1905–1906 there was not a drop of rain. The snowfall in winter varied between 16.50 and 96.25 mm. The average fall in mm. and the temperatures $^{\circ}$ C per month were as follows:

November	32.26	10.8 $^{\circ}$ C	May	12.66	23.9 $^{\circ}$ C
December	34.20	5.8	June	1.58	29.7
January	46.03	1.1	July	1.11	29.7
February	28.12	5.5	August	1.30	28.9
March	47.72	8.6	Sept.	1.31	25.5
April	35.56	15.5	Oct.	8.64	18.9

The mean annual temperature is 16.9 $^{\circ}$ C with the extreme limits of +42.2 and –16.1. Other meteorological observations are given in Brugsch, *ii*, p. 475–481 and in Stahl, p. 52.

The choice of Teheran as capital is represented by certain writers (Kinnaird, Curzon) as proof of the wisdom of the Kādīrs who wanted to control the northern frontier. In reality, the choice of Teheran was dictated primarily by the desire of the Turkish dynasty of the Kādīrs not to be too remote from their ancestral fief of Astarābād and to remain in contact with the Turkish tribes of northern Persia. The majority of early travellers (Olivier, v. 87; Dupré, *ii*, 187; Flandin, *i*, 235) emphasise the disadvantages of the site of the capital (want of water, bad climate, distance from the great roads). Some of these defects have been considerably mitigated by the improvements introduced since their day, but the main inconvenience, the eccentric position of the capital, will be felt when the development of the natural resources of the south of Persia will make clear their importance for the life of Persia. The following distances have been calculated by H. Grothe, *Persien*, Frankfurt 1911, p. 98–99:

Teheran—Anzali	220 miles
Teheran—Tabriz	360 "
Teheran—Meshhed	578 "
Teheran—Muhammara	660 "
Teheran—Bughahr	764 "
Teheran—Bandar-Abbas	980 "

Routes. Fairly good natural roads connect the capital with the provinces. For communication with Māsandsarān a road passable only by horses

and mules, was built by the Austrian engineer Gasteiger Khān in 1875. Between 1883 and 1892 a carriage road was begun by the Persians and finally finished of the English company of Lynch Brothers (95 miles). Communication with Russia used to be by Karwin–Tabriz–Djulfā–Tiflis. In 1850 a regular line by Russian steamers began to run between Baku and Anzali. Although, as the crow flies, the distance between Teheran and the Caspian is only 70 miles, the passage of the Alburz was always very difficult. In 1893 the Russians obtained the concession to build a carriage road from Rasht to the capital (it was opened as far as Mandjil on Jan. 1, 1890 and to Teheran on Sept. 15, 1890). Henceforth the great majority of travellers took this route, which has also become of considerable commercial importance. Since the Russian revolution, all kinds of Russian enterprises have been introduced into Persia. Since 1917 there has been a motor-car service between Teheran and Baghdād, recently continued to Basra (Syria). An aeroplane service has put Teheran within a day's journey of Baku. Since the accession to power of Rūfī Shāh, a plan for a trans-Persian railway has been drawn up and even partly put into execution (1928). It is to connect Teheran on the one hand with the Persian Gulf (Khōr-Mūak through Lūriān) and on the other with the Caspian (Bandar-Gaz via Fīrūkūh).

The province of Teheran. It consists of six districts (H. Schindler): 1. Shahrīār on the N.W. on the right bank of the Karadj; 2. Sawdibulāh (q.v., No. 2) to the N.W. of Shahrīār; 3. Fashāwiya (Pāshāpūya) to the S.W. of the town in the direction of Rabat-Karim; 4. Waramin (q.v.) to the S.E.; 5. Shīmrān to the north of the town, with 63 flourishing villages, of which the principal is Tadjīn; the villages of Kolhāk (Gulhāk) and Zarganda are occupied by the British and Russian legations respectively, to which they were given in 1835 by Muhammad Shāh; 6. Kārān, to the north of Shīmrān on the upper course of the Dīdārūd. As subdivisions of less importance, the Persian map gives Ghār immediately to the south of Teheran (with the little town of Shāh 'Abd al-'Azīm); Lawānūt to the east of Shīmrān; Kand (Kan) and Sawlāqān to the west of Shīmrān; Shahrīstān to the north of Kand; Arange between Kand and Karadj.

Early references. De Goeje (*Istakhrī*, p. 209 k) proposed to identify with Teheran the *MITAN*, *MITAN* or *MINAN*, mentioned by *Istakhrī*, p. 209, Ibn Hawqāl, p. 366 and Mukaddasī, p. 375. This hypothesis has again been revived by Muhammad Khān Karwīn, *op. cit.*, p. 39. But according to Yāqūt, *i*, 769 (although late and not very explicit), the place Bihān which represented the old site of Rai lay 7 farsakhs (?) from this latter town, while the same geographer places Teheran as one would expect 1 farsakh from Rai. The earliest reference to Teheran is provisionally that of the *Fārināma*, *G.M.S.*, p. 134 (written before 510 = 1116); its author talks highly of the pomegranates of Teheran, also mentioned by al-Sam'ānī (in 555 = 1160), *G.M.S.*, p. 373. But independently of these references, the village of Teheran must have existed before the time of *Istakhrī* (in 340) for Sam'ānī mentions his ancestor Abū 'Abd Allāh Muhammad b. Hammād al-Thirānī al-Rāzī, who died at 'Askalān in Palestine in 261 (874). According to the *Kādat al-Shādūr* (written in 599 = 1203), G.

M. S., p. 293, in 361 the mother of the Saljuq Sultan Arslān, who was on her way from Raiy to Nakhicawān made the first stop (the regular *naqli mākan* of the Persians) "near Teheran". The Sultan himself occasionally stayed near Dulāh (the name of a place to the S.E. of Teheran, where the Russian cemetery now is). Ibn Isfandiyyār in the history of Tabaristān (written in 613 = 1216; G. M. S., p. 19) narrating the wars of the kings of the Persian epic says that Afrasiyāb's camp was pitched at the place where "Dulāh and Tihān" now are. Eight years later, Yāqūt gave a brief note on Teheran which he had visited just before the Mongol invasion. It was a considerable town with 12 quarters. As the dwellinghouses in Teheran were built underground and the gardens around the town were very thick, the town was well protected and the government in its dealings with the inhabitants preferred to be tactful with them. Civil discord raged to such an extent in Teheran that the inhabitants tilled their fields with the spade from fear lest their neighbours should steal their animals. Kāzwinī (674 = 1275) compares the dwellinghouses in Teheran to the holes of yarbūb (*ku-nāghāzi 'i-yarbūb*) and confirms Yāqūt's account of the character of the inhabitants; cf. *Aḥḥār al-Bilād*, p. 228.

All later writers note the subterranean dwellings, but only Ker Porter (I. 312) says in this connection that 200—300 yards from the Kāzwin gate he saw inside the town "an open space full of wide and deep excavations or rather pits", which served as shelters for the poor and stables for the beasts of burden (cf. plate 57 in *Hommaire de Hell*). This must be a reference to the old *darmāza-yi naw* (*ghāghāgh*) to the south of which the quarter is called *Ghār* ("caves"). This name is also applied to the whole district stretching to the south of Teheran. As to the troglodyte life in the vicinity of Teheran, cf. Eastwick, I. 294: a village to the east of the bridge of Karāfi, and Crawshaw-Williams, *Rock-dwellings at Rainah*, J. R. A. S., 1904, p. 551; 1906, p. 217.

The growth of Teheran was the result of the disappearance of other large centres in the neighbourhood. The decline of Raiy dates from its destruction by the Mongols in 617 (1220). In the Mongol period Teheran is occasionally mentioned in the *Djāmī al-Tawārikh*: in 683 (1284), Arghūn, after the victory gained near Ak-Kh'wāja (= Sāmikān, *Nushat al-Kulūb*, p. 173) over al-Yanak, Ahmad Takūdār's general, arrived at "Tihān of Raiy" (cf. Muhammad Kāzwinī, *op. cit.*, p. 38). In 694 (1294) Ghāzān coming from Firūzkūh stopped at "Tihān of Raiy" (Dorn, *Antiquaire*, p. 138). According to the *Nushat al-Kulūb* (written in 1340; G. M. S., p. 55), Teheran was a considerable town (*ma'tsar*) with a better climate than Raiy. Formerly (*mā qabl*) the inhabitants of Teheran were very numerous. The last remark may support the hypothesis of the identity of Teheran with BIZĀN (?).

In the Timurid period the village of "Tihān of Raiy" is mentioned in 806 (1403) as the place where the Shāh-sāde Rustam spent 20 days to assemble the troops with whom he marched against Iskandar-Shāikh Calāwi (*Zafar-nāma*, II. 572 = *Maḥḥal al-Sādān*; Dorn, *Antiquaire*, p. 175). About the same time (July 6, 1404) Teheran ("ciudad que ha nombre Teheran") was visited for the first time by a European traveller, the Spanish

Ambassador Clavijo (ed. St. Petersburg 1881, p. 186; transl. Le Strange, London 1928, p. 166). At this time the province of Raiy was governed by Timur's son-in-law, the Amir Sulaimān-shāh (*Zafar-nāma*, II. 591; Clavijo, p. 189, 351; Zuleman or Cumalexa Mirassa). He lived in Warāmin (Vatami). The town of Raiy (Xahariprey) was not inhabited ("agora deshabitada"). In the tower of Teheran was a representative of the governor and there was a house where the king stopped on his visits ("una posada sule el Señor sule estar quando alli venia"). Teheran had no walls.

The Safawids. Under the Safawids the capital was moved in turn from Ardabil to Tabriz and then to Kāzwin and finally to Isfahān. The district of Raiy was no longer of great importance. There were only two towns of note in it: Warāmin, which after a brief spell of glory under Shāh Rukh had rapidly declined, and Teheran. According to Ridā Kull Khān (*Rawdat al-Safā-yi Nāqiri*), the first visits of the Safawids to Teheran were due to the fact that their ancestor Saiyid Ḥama was buried there near Shāh 'Abd al-Azīm. The prosperity of the town dates from Tīmāshp I who in 961 built a bazaar in it and a wall (*kāra*) round it which, according to the *Zinat al-Madā'ir*, was a farsakh in length (*Mir'at al-Buldan*: 6,000 *gām*, "paces"). The wall had 4 gates and 114 towers, the number of the Sūras of the Qur'ān (on each of the towers a sūra was inscribed). 114 towers are still given in Berzin's plan (1842). The material for the construction of the citadel was procured from the quarries of Čāl-i Maidān and Čāl-i Hīḡir, which have given their names to two quarters. Ahmad Rāji, himself belonged to the district of Raiy, talks in laudatory terms of the incomparable abundance of the canals and gardens of Teheran and the delights of the plateau of Shāmīrān, and of the neighbouring district of Kand and Selaḡān (MS. Bibl. Nat., Suppl. Pers., N^o. 357, fol. 436—467, the greater part of which is devoted to the great men of the old town of Raiy). According to the *Madā'ir al-Ma'mūn*, the village of Sulāghān was founded by the celebrated Saiyid Muhammad Nūrakhsh, founder of many religious movements, who died in 869 (1464).

In 985 Teheran was the scene of the execution of Prince Mirzā, whose enemies had accused him to Shāh Ismā'īl II of aiming at the throne. In 998 (1589) Shāh 'Abbās I going against the Uzbek 'Abd al-Mu'min Khān fell severely ill at Teheran (*Alam-nāra*, p. 275), which enabled the Uzbeks to seize Meshhed. It is said that this gave Shāh 'Abbās a great dislike for Teheran. It is however from his time that the building of the palace of Čahār Bāgh dates, the site of which was later occupied by the present citadel (*ark*). Pietro della Valle visited Teheran in 1618 and found the town larger in area but with a smaller population than Kāshān. He calls it the "town of plain-trees". At this time a heglerbegi ("gran capo di provincia") lived in Teheran; his jurisdiction extended as far as Firūzkūh. In 1627 Sir Thomas Herbert estimated the number of houses in Teheran at 3,000.

The Afghāns. On the eve of the Afghān invasion Shāh Husain Safawi made a stay in Teheran and it was here that he received Durri-Efendi, the ambassador of Ahmad III (at the beginning of 1720; cf. *Relation de Dourri Efendi*, Paris 1810).

Here also was dismissed and blinded the grand vizier Fath 'Ali Khān 'Ismā' al-Dawla ("Athemar" of the Europeans) which precipitated the debacle; cf. Krusinski (publ. by Du Croccon), *Hist. des évén. de Perse*, 1742, i. 295. Shāh Husain only returned to Isfahān (June 1, 1721; La Mamyre Clairac, i. 200) to lose his throne. Tahmasp II made a stay in Teheran in August 1725, but, on the approach of the Afghans, he fled to Māzandaran. European writers say that Teheran resisted and Ashraf lost many men (Krusinski, *op. cit.*, p. 351; La Mamyre Clairac, *Hist. de Perse*, 1750, ii. 230; Hanway, ii. 234). Some time afterwards Teheran fell in spite of the feeble attempt by Fath 'Ali Khān Qājār to relieve the town (cf. Olivier, v. 89 and *Mir'at al-Buldān*). According to this last source, the *Darwāzay-i Darda* and *Darwāzay-i Arā* gates date from this period, for the Afghans everywhere showed themselves careful to secure the ways of retreat. The reference is of course to the old gates of those names.

After the defeat of Ashraf at Milimāndūst (6th Rabi' I, 1141 = Sept. 20, 1728) the Afghans in Teheran put to death the notables and left for Isfahān. The inhabitants fell upon the impediments they had left and through negligence a powder magazine was exploded (*Histoire de Nadir Chah*, transl. Jones, London 1770, p. 28). Ashraf himself was soon driven out of Warāmin and Shāh Tahmasp II returned to Teheran.

Nadir. In 1154 (1741) Nadir gave Teheran as a fief to his eldest son Rūḡa Kuli Mirza, who had hitherto acted as ruler of all Persia. The nomination to Teheran was preliminary to the fall and blinding of the prince; cf. Jones, ii. 123; Hanway, ii. 357, 378; 'Abd al-Karim, *Voyage de l'Inde à la Mecque*, ed. Langlès, 1825, p. 93.

During the fighting among the successors of Nadir, 'Ali Shāh 'Adil (1160 = 1747) took refuge in Teheran but was seized and blinded by Ibrahim's supporters (*Tārīkh-i Isfahān-i Nadirīya*, ed. O. Mann, p. 34). After the fall of the Nādirids, Teheran passed into the sphere of influence of the Qājārs, rivals of Karim Khān Zand.

Karim Khān. In 1171 (1757) Sulṭān Muḥammad Hasan Khān Qājār, after an unsuccessful battle with Karim Khān near Shirāz, retired to Teheran where his army was disbanded. Having learned that he had withdrawn from Teheran, Karim Khān sent his best general Shaikh 'Ali Khān there with an advance-guard. With the help of Muḥammad Khān Dawala, Muḥammad Hasan Qājār was killed and Karim Khān with his army (*ordū*) arrived at Teheran in 1172 (1759). The head of Muḥammad Hasan Khān was buried with all honour at Shāh 'Abd al-'Azīm. The next year the order was given to build at Teheran a seat of government (*Imārat*) "which would rival the palace of Chosroes at Ctesiphon", a *dhūm-khāna*, a *harām* and quarters for the bodyguard; cf. Sadiq Nāni, *Tārīkh-i Gilt Gulshān*, Bibl. Nat., Suppl. Pers., N^o 1374, fol. 29. Sanī' al-Dawla added to these buildings the garden Dānān and says that Karim Khān intended to make Teheran his capital. It was to Teheran that 'Alī Muḥammad Qājār, captured in Māzandaran, was taken to Karim Khān, who treated him generously, for which he was very badly requited later. In 1176 however, Karim Khān decided on Shirāz to which he moved the machinery of government. Ghaffar Khān was left as governor in Teheran.

The rise of the Qājārs. Karim Khān died on the 13th Safar 1193, by the 20th Safar 'Alī Muḥammad was in Shāh 'Abd al-'Azīm and the next day he ascended the throne (*Qānu*) in the vicinity of Teheran (*Mir'at*, i. 325). Teheran however passed into the sphere of influence of 'Ali Murād Khān, half-brother of Dīlār Khān Zand (*Tārīkh-i Zandīya*, ed. Beer, p. 8, 13, 25). In 1197 (1783) 'Alī Muḥammad Khān made a first attempt to get possession of Teheran but the governor Ghaffar Khān Tihāni managed to procrastinate and an outbreak of plague forced 'Alī Muḥammad to withdraw to Damghān (*Mir'at*). After the death of 'Ali Murād Khān (1199 = 1785) the town was beleaguered by 'Alī Muḥammad's troops. The inhabitants did not wish to surrender the fortress (*ka'sa*) before 'Alī Muḥammad had taken Isfahān. The news of the advance of Dīlār Khān Zand from Fārs caused 'Alī Muḥammad's troops to disperse. He was however received with open arms by the chiefs of Teheran (*ākhūn wa-amūl*) and henceforward the town was his capital (*maḥzar-i salṭanat*, *dār al-salṭana* and later *dār al-khilāfa*), from which he led the expeditions which united all Persia under his rule. According to the *Ma'āthir-i sulṭani*, transl. Brydges, *Dynasty of the Kajars*, p. 18, Teheran became the capital in 1200 (1786) and the foundations of the palace were laid then. After the capture of Shirāz all the artillery and munitions of the Zands were taken to the new capital. The last Zand king Luṭf 'Ali Khān, blinded and kept prisoner in Teheran, was put to death there in 1209 and buried in the sanctuary of the *imām-shāh* Zand; *ibid.*, p. 25, 30, 76, 82, 101.

After the assassination of 'Alī Muḥammad Shāh (21st Dhu 'l-Hijja 1211 = June 16, 1797) his brother 'Ali Kuli Khān appeared before the capital but the prime minister Mirza Shaf' would not allow him to enter. In the meanwhile the heir to the throne Bābā Khān (= Fath 'Ali Shāh) was able to reach Shirāz and after the defeat of the second claimant Sadiq Khān Shakaki was crowned at the beginning of 1798. The Shākaki [q. v.] prisoners were employed to dig the ditch of the capital (cf. Schiechtel-Wesshrid, *Fath 'Ali Shāh una sine Thronrivale*, *Stb. A. W. Wien*, 1864, ii, p. 1-31).

During the period of Anglo-French rivalry a series of ambassadors visited Teheran: on the one side Sir John Malcolm (1801 and 1810), Sir Harford Jones Brydges (1807), Sir Gore Ouseley (1811) and on the French side Gen. Komier (d. at Teheran in 1806), A. Jaubert (1806), Gen. Gardane (1807). The Russians concentrated their efforts on Tabriz, the residence of the Persian Crown Prince. It was only after the treaty of Turkmanīn (q. v.; 1828) that the Russian minister A. S. Griboyedow paid a short visit to the capital. Just before his return to Tabriz, Mirza Vaḡūb, one of the Shāh's chief eunuchs, an Armenian of Erjān forcibly converted to Islam, presented himself at the Russian legation and asked to be repatriated by virtue of article 13 of the treaty. This "apostasy" provoked an attack on the Russian embassy and on Feb. 11, 1829, 45 members of it were massacred (Griboyedow, his secretaries, Cossacks and servants). The tragedy took place in the legation's quarters (house of the *zambānkāh-sāzi* near the old Shāh 'Abd al-'Azīm gate; now the street called Sar-pūlak in the Zargashāh

quarter). On the death of Griboyedow, celebrated in the annals of Russian literature, cf. *sub anno* Rīdā-Khān, *Ruṣiyyat al-Safā-yi Nāqiri*, Tih-rān 1274 (1858); Mirzā Taqī Khān, *Tārīkh-i Kāfīrīyye*, Tih-rān 1273 (1857), i. 221; Sam' al-Dawla, *Tārīkh-i Muntazim-i Nāqiri*, ibid., 1301 (1883), p. 144; *Rélatien des événements qui ont précédé et accompagné le massacre de la garnison ambassade russe en Perse*, *Novae Annales des voyages*, 1830, part. 48, p. 337-367; Berge, *Smart Griboyedowa*, *Russ. Starina*, 1872, xlii. 162-207; Mal'akhinsky, *Podlinnoye slovo*, *Russ. vestnik*, 1890, vi. 160-233; Zukovski, *Persidskiye letopisy*, *Novoye Vremia*, 1890, No. 5068; Allahverdiants, *Konklna Griboyedova po arkhivnim isbraniyam*, *Russ. Starina*, 1901, No. 10, p. 44-58; Minorsky, "Tana krevi" Griboyedowa, *Russ. Mysl*, Prague 1923, iii. 1-15.

When the death of Fath 'Alī Shāh (Oct. 19, 1834) became known in the capital his son 'Alī Mirzā Zill-i Sultān proclaimed himself king under the name of 'Adil Shāh and struck coins. But the heir to the throne Muḥammad Mirzā arrived from Tabriz, accompanied by representatives of Britain and Russia, and entered the capital without striking a blow on Jan. 2, 1835. 'Adil Shāh only reigned for six weeks (cf. Tornau, *Aut. d. neuesten Geschichte Persiens*, Z. D. M. G., 1849, p. 1-15). The succession of the next three Shāhs took place without incident (cf. Kāshgharī) (even after the assassination of Nāṣir al-Dīn Shāh on May 1, 1896). The history of Teheran under these Shāhs is that of all Persia. The tranquillity of the town was only disturbed by epidemics and the periodical migrations caused by famine; cf. the rioting on March 1, 1861 described by Eastwick, *op. cit.* and Ussher, *Journey from London to Persia*, London 1865, p. 625.

Among the more important events may be mentioned the persecution of the Bābīs [q. v.], especially in 1850 after the attempt on Nāṣir al-Dīn Shāh. The movement against the concession of a tobacco monopoly to the Tobacco Monopoly Corporation in 1891 also started in Teheran; cf. Browne, *The Persian Revolution*, Cambridge 1910, p. 46-57.

The Revolution. Since the Persian revolution, the capital, previously somewhat isolated from the provinces, has rapidly become the political and intellectual centre of this country. The chronology of the events of the period is as follows: The *hast* of the merchants in the *Mangīd-i Shāh*, Dec. 1905. The *hast* of the constitutionalists at the British legation from July 20 to Aug. 3, 1906. The opening of the *Madjilis* in the palace of Bahārīstān on Oct. 7, 1906. The heir to the throne Muḥammad 'Alī Mirzā signs the constitution on Dec. 30, 1906. Death of Muḥammad al-Dīn Shāh on Jan. 8, 1907. The assassination of the Atābeg Amin al-Dawla on Aug. 31, 1907. Counter-manifestations by the "absolutists" from Dec. 13-19, 1907. Bombardment of the *Madjilis* on June 23, 1908. Capture of Teheran by the nationalist troops commanded by the Sipahdār-i A'zam of Rasht and the Sardār-i As'ad Bakhtiyārī on July 13-15, 1909. Abdication of Muḥammad 'Alī Shāh on July 16, accession of Sultān Ahmad Shāh on July 18, 1909; cf. Browne, *Persian Revolution* and D. Fraser, *Persia and Turkey in Revolt*, London 1910, p. 82-116; on the events of May 12, 1911 to Jan. 31, 1912, information will be found in

Morgan Shuster, *The Strangling of Persia*, London 1912. In 1915 Teheran became involved in the Great War. The representatives of the Central Powers nearly carried Shāh Sultān Ahmad off to Kum with them. The capital was outside of the zone of military operations proper but on several occasions movements of troops took place in its vicinity (skirmish on Dec. 10, 1915 near Rahāt-Karīm between Russian Cossacks and the Andr. Highmat's gendarmes who were on the side of the Central Powers; cf. Emellanow, *Persidskii front*, Berlin 1923). Down to 1917, Russian troops controlled the region between the Caspian and Teheran. From 1918 English troops took their place; cf. Dunsterville, *The Adventures of Dunsterforce*, London 1920. The division of Persian Cossacks commanded by the old Russian instructors was also employed to protect Persia against a possible offensive from the north. The Russian officers were dismissed on Oct. 30, 1920. The greater part of the division was stationed at Kāzin where an English force under General Ironside was still quartered. On Feb. 21, 1921, 2,500 Persian Cossacks who had come from Kāzin under the command of their general Rīdā-Khān occupied the capital. Sayyid Dīyā' al-Dīn formed the new cabinet (Feb. 24-May 24) and Rīdā Khān was appointed commander-in-chief (*Sardār Sipah*; cf. J. M. Balfour, *Recent Happenings in Persia*, London 1922). Towards the end of 1923 the Shāh Sultān Ahmad left the country at the same time as the prime minister Kāwām al-Saltāna (from June 4, 1923), who was accused of intriguing against the Sardār Sipah. The latter remained master of the situation and was finally crowned on April 25, 1926 (cf. PAHLAWI).

Growth of the town. Yāqūt's account of the houses of Teheran suggests that the oldest part of the town is in the south (the Ghār quarter) and that it developed from south to north (i.e. from the desert to the mountain and to the springs). There is little left in Teheran of the Zand period. The modern town has been entirely created under the Qājārs.

Olivier who visited Teheran in 1796 says that the town, which looked entirely new or rebuilt, was in the form of a square of a little more than 2 miles (3), but only half of this was built upon. The population did not exceed 15,000 of whom 3,000 were soldiers and Olivier remarks with justice that "the gold scattered around the throne" did not fail to attract inhabitants. The palace in the citadel was built in the time of Ākā Muḥammad Shāh. In the *Tālār-i tahdāt-i Marmar* were placed the pictures, glass and marble pillars taken from the palace of Karīm Khān in Shirāz. Under the threshold of a door were buried the bones of Nāṣir Shāh so that the Qājār prince could trample over them every day (Ouseley). On the accession of Rīdā Shāh the bones were taken from there.

According to General Gardane (1808), only the poor remained in Teheran in summer, but in winter the population reached 50,000.

Morier (1808-1809) says Teheran was $4\frac{1}{2}$ —5 miles in circumference. Kinneir about the same time put the summer population at 10,000 and the winter at 60,000. The town was surrounded by a strong wall and a great ditch with a glacis but the defences were only of value in a country where "the art of war was unknown".

Usuley (1811) counted 6 gates in Teheran, 30 mosques and colleges and 300 baths; he put the population in winter at 40–60,000. Ker Porter (1817) mentions 8(?) gates before which large round towers were built (cf. his plan) to defend the approaches and control the exits. In winter the population was from 60–70,000.

Fath 'Ali Shāh had considerably improved the town but towards the end of his reign it passed through a period of neglect. According to Fraser (1838), there was not another town in Persia so poor looking; "not a dome" was to be seen in it. Under Muhammad Shāh things were improved a little.

Bernsin has given a particularly detailed description of the palace (*dar-i dawlat-khāna*) with its four courts and numerous buildings (Dawlat-khāna, Daftar-khāna, Kulāh-i firangī ["pavilion"], Sandūk-khāna, Zargar-khāna, 'Imarat-i Shīr-i Khosrōshid, Sarwistān, Khalwat-i Shāh, Gulistān). The same traveller gives a plan of the palace and of the town, very important for the historical topography of Teheran. At this date (1842), the town within its walls measured about 3,800 Persian *arṣā* (roughly yards) from west to east and 1,900–2,450 from north to south, i.e. occupied an area of about 3 square miles (Polak's calculation, *op. cit.*, p. 223: 83,750 square metres is obviously wrong). The citadel (*arṣ*) was in the shape of a parallelogram (600 *arṣā* W. to E. by 1,175 N. to S., i.e. a fourth of the whole town). The north side of the *arṣ* touched the centre of the northern face of the outer wall. Gardens occupied the parts of the town next the wall. The most animated quarter was that which lay to the S.E. of the citadel in the direction of the Shāh 'Abd al-'Azīm gate. Only five gates are marked on this plan. The only open space, the Maidān-i Shāh close to the citadel on the south side, was not large (cf. the plate in *Honnaitre de Hell*). Among the mosques that of the Shāh and the *imām-i ʿāli* of Zaid and Yahyā alone are of any importance. Gardane had seen the *Masjid-i Shāh* being built in 1807. Its inscription from the hand of the court calligrapher Muhammad Mahdī is dated 1224 (1809), but according to Schindler, the mosque was not finished till 1840 (cf. Fraser above).

The plan by Krzib (1857) much resembles that of Bernsin, but around the town he marks by dotted lines the bounds of a new extension of the town, which according to an explanatory note by Dr. Polak, had been begun considerably before 1857. Polak himself in 1853 had built a hospital to the north of the north gate of the town. These new buildings were few in number and not built under any regular scheme. In 1861 the town was still within the old square; the population was 80,000 in summer and 120,000 in winter (Brugsch).

The new town. A radical change took place in 1860–1874 (cf. Carzon, Stahl and H. Schindler; the official figures on the projects for the development of the town have not yet been discovered). The town was extended on all sides. The old ditch and the bulk of the walls disappeared. Teheran assumed the form of an irregular octagon surrounded by new fortifications (bastions of earth, with fosses) modelled on those of Paris but of no military importance. According to Carzon, i. 305, the work was done during the famine of 1871; cf. Brittenbank, *Persia during the famine*, London 1873. The town was given 12 gates. The

old gates were retained within the city but their names were transferred to the corresponding gates on the new lines of fortification. The latter are 20,000 yards in length; the area now occupied by Teheran is $7\frac{1}{2}$ square miles (H. Schindler). Before the old Dāwar gate the important Tūp-khāna (arsenal) 250×120 yards was built, surrounded by the artillery barracks. A camp de Mars (*Maidān-i Mash*) even more spacious (550×350 yards) was laid out N.W. of the Tūp-khāna. Two parallel and important arteries, Khayāṭān-i 'Alī al-Dawla and Lāṭāfi, now run from the Maidān-i Tūp-khāna to the north. The old promenades outside the walls, Lāṭāfi, Nigristān etc., were incorporated in the town. The new quarters attracted first of all the foreign legations. The first French (Gardane) and British (H. Jume, Usuley) missions had been lodged in the house of Amin al-Dawla near the old Shāh 'Abd al-'Azīm Gate. In the time of Usuley a British legation was built on land belonging to the Zamburakī-bashi which the Shāh gave to the English (it was near another estate of the same owner that Griboyedow was assassinated). The new British legation was built in 1870 at the end of the 'Alī al-Dawla avenue. When the Russian legation was definitely established in Teheran in 1834 it was lodged in the house of the grand vizier Fāḥr al-Mīrā Agha in the *arṣ* itself. In 1880 the Russians built themselves a legation in the Pāmīnār quarter (east of the *arṣ*) but in 1915 they finally settled in the "park of the Atabeg" immediately to the north of the English. The Turkish and French legations are east and west of the English. The European shops and the Persian notables have followed the legations but the centre of trade is still the old bazaar, which is entered to the south of the *arṣ*.

Teheran has no fine public buildings. The mosque of the Sipāhsālār (Mirzā Husayn Khān, d. 1298 = 1881) is the most imposing edifice in Teheran in the new quarter on the N.E. beside the Bahārīstān palace, which has been occupied since 1906 by the Majlis; the building was begun in 1296 (1878), cf. *Ma'āthir al-Aḥbār*, p. 83, and finished about 1890. Its Madrasa bears the date of 1302 (1884).

The principal beauty of Teheran is the large private houses with their gardens and fountains. Around it there are many country houses and palaces of the Qājār style, which is not negligible from the artistic point of view and which continues the traditions of Safawī architecture. Such is 'Iḥsāt-ābād just north of Teheran; see the picture in Carzon, i. 34 (cf. p. 226 and in d'Allemagne the pavilion of the Shams al-'Imāra in the *arṣ*). The chateau of Kāz-i Qājār is now in ruins (cf. the plates in Saltykoff, de Coste and *Honnaitre de Hell*). The hunting-lodge Yowshān-tāp, "hill of hyssop" (popularly called Dowshān-tāp = "hill of the hares"), situated at the foot of the mountain of So-pāyā (to the east of Teheran), is connected with the town by a good road (3 miles) opened on Oct. 14, 1874 (Sorena). Pious people of the town make the pilgrimage to Shāh 'Abd al-'Azīm, a little town beyond the ruins of Raiy [q. v.]. The railway from Teheran to this sanctuary is 5 miles in length (with two branch lines, one a mile long and the other $1\frac{1}{2}$ miles); it was built between 1888 and 1893 and till 1915 was the only railway in Persia. The use

of gas was introduced into Persia in 1875 (Serena); electric light began to be used about 1905.

Under the Pahlavi regime considerable public works have been undertaken in the town. A Society of Friends of Old Teheran was founded in the capital in 1926 and it is to be hoped that it will be able to describe and protect what there is remarkable among the buildings of the Qājār period.

Teheran which still continues to grow towards the north, is now the largest city in Persia. In 1878 Mme. Serena reckoned the population at 200,000 in winter and 80,000 in summer. In 1900 Stahl gave 250,000 in the city and 350,000 in the 670 adjoining towns and villages. Balfour (1921) quotes a Persian testimony to the effect that the minimum number of inhabitants of Teheran is 250,000 while the "reasoned highest figure" may be 380,000 (for the province of Teheran these figures are 700,000 and 800,000).

Cartography: the plan of the town in Beresin (1842); J. E. Polak, *Topogr. Bemerkungen u. Karte d. Umgebung und zu d. Plans v. Teheran*, *Mitt. der K. K. Geogr. Gesell.*, xx, (1877); Vienna 1878, p. 218-225 (with a map 1:108,000 and a plan of 1:20,700 made by Comm. Kreil in 1857-1858); A. F. Stahl, *Teheran und Umgebung* (1890-1894), *Pet. Mitt.*, 1900, p. 49-54 with a map 1:210,000 (the two articles are full of interesting information); the Persian map by 'Abd al-Rasūl Khān Bughā'i (c. 1910) on the scale of 1:200,000. Besides his own surveys the author of the map has used the following sources: 1. the map by 'Abd al-Rasūl Khān made in the time of the grand vizier Mirzā Taqī Khān (1849-1851); 2. two maps by Naḍīm al-Dawla, one on a scale of 1:4,000 and the other done after Kreil (printed Teheran 1275 [1858]; cf. Brugsch, i, 210); 3. the map prepared by Persian officers under the direction of Baron Leitner (?) 1:25,000 (1880); 4. map by General Weth 1:12,500 (c. 1893); 5. Stahl's map.

2. A village in the province of Isfahān (in the district of the lower Kārwān, to the N.W. of Isfahān). Sam'ānī, p. 373, knows the two Tihāns of which "that of Raiy is better known than that of Isfahān". He mentions several traditionists born in the village, the oldest of whom is 'Uḡlīl

b. Yahyā Abi Sālih, d. in 358 (871); cf. also Yahā. The name is now pronounced Tiran; cf. Čirlikov (1850), *Persian Journal*, p. 138, but Hingsch, ii, 39 writes Tehran. According to Hontom-Schindler, *East. Persian Trav.*, p. 124, 127, 131, near Isfahan there is still a Tihān ("Tiran Ahangaran"). The Tiran canal (which runs from there?) waters the Mahalla-yi now and Rūdāūd quarters of Isfahan. (V. MIKORSKY)

TEKE or **TEKKE**, a Turkoman tribe. They are not mentioned among the 22 (30 Mahmūd Kāshgharī, i, 56 sqq.) or 24 (30 Kāshgharī al-Dīn, ed. Beresin, *Trud. Vost. Ost. Arkh. Obsh.*, vii, 32 sqq.) Oghuz tribes. At a later date they are described as descendants of the Salar [q. v.]. Abu 'l-Ghāṣī [q. v.] comprises the Teke with two other tribes, the Sarīk and the Yomut, under the name "Outer Salar" (*ahli Salār*; ed. Desmaisons, p. 209). In his still unprinted history of the Turkomans, Abu 'l-Ghāṣī describes the Sarīk and Teke as descendants of the Salar Toi-Tutmas (transl. Tumanskiy, p. 67). From certain passages in Abu 'l-Ghāṣī's great work (see index in Desmaisons' edition) it is evident that the Teke in the xth (xvth) century and xth (xvth) century lived on the Balikhān [q. v.] and Kūren-Dagh. There were also traders in this nomad tribe (cf. *ibid.*, p. 324: *rawdagar*).

Towards the end of the xvth century the Teke began to move eastwards, where they gradually displaced the Emreli (descendants of the old tribe of Kīmūr) and the Karadaghlī (descendants of the old tribe of Yarghūr or Yargh) from the Akhal [see AKHAL-TEKKE] and the Sarīk from Sarakhs [q. v.] and Merw. The final occupation of Merw by the Teke did not take place till 1857 and 1859 under Kowshut-Khān (d. 1878); in the fighting with him in 1855 the Khān of Khīwa (see KHĪWA) was killed at Sarakhs and in 1860 the Persians were defeated at Merw.

After the establishment of the Russians on the Balikhān (foundation of Krasnovodsk in 1869) the Teke had to be conquered. Fighting began in 1877 (occupation of Khat-Arwat by the Russians and the attack by the Teke on Čikighar and Krasnovodsk itself in 1878) and was only ended in 1884 by the conquest of Merw, although the whole tribe of the Teke according to the Russian calculations only numbered about 300,000 and did not form a single political unit. There were a large number of separate leaders who claimed the title of Khān; but even those among them who distinguished themselves by personal ability or valour (in addition to Kowshut-Khān, especially Nūr Weird Khān who died in 1880 in Gök-Tepe) could only influence a small section of the tribe. The fighting during the siege and storming of Gök-Tepe (Jan. 12–24, 1881) was particularly bitter. This was the only fighting in Central Asia in which the Russians lost standards and guns.

Since the establishment of Russian rule, more especially since the revolution, the various tribal names included that of Teke have lost their special significance before the general term "Turkoman".

TEKE-ELI, a district in Asia Minor, formerly the land of the Teke-oghlu [q. v.] in Pamphylia and Lycia.

Teke-eli, i.e. land of the goat (*teke* = goat, not *tekke*, from which we find the name erroneously derived as early as J. Leunclavius), lies in Southern Anatolia and comprises roughly the land around Finika, Elmali, Istanos, Istawros and the two ports of Adalia [q. v.] and Ala'ya [q. v.]. In the north, Teke-eli was bounded by the districts of Karaman [q. v.], Hamid-eli [q. v.], in the east by Is-eli, in the west by Mentesh-eli [q. v.]. In the south the sea forms the natural frontier. The early history of Teke-eli, like that of the petty dynasty of the Teke-oghlu, is rather obscure. Connections with Persia must have existed very early and it is to them that must be traced the peculiar position of this country from the religious point of view. A certain Spanish Sadr al-Din had formed a strong religious community there, which was spared by Timur in his campaign through Asia Minor. Teke-eli and the adjoining country of Hamid-eli from this time onwards has been particularly partial to "Persian Shakhism" (cf. F. Bahlinger, *Scheich Bahr al-Din*, p. 85 sq.; cf. also J. v. Hammer, *G. O. R.*, ii, 344 for Djanab's evidence). It is a fact that many 'Alid risings have taken place in Teke-eli, as for example that strange rebellion of Baba Shāh Kull of Bazarjile (near Adalia; cf. F. Bahlinger, *ibid.*, p. 88 sq.) in April 1510, which was closely connected with Safawi rule [q. v.] in Persia, and Teke-eli is inhabited by 'Alid sectarians like the Tahhtadlis [q. v.] whose position is peculiar in several respects. In the history of the trade of the Levant, the ports of Adalia and Ala'ya play a prominent part. In the ninth (sixteenth) century they were the most important centres for the export of the products of Asia Minor to Alexandria and Damietta; Adalia was able to maintain its independence till 1450 while Ala'ya did not pass to the Ottomans till 1477. On the history of Teke-eli cf. the article **TEKE-OGHLU**.

Bibliography: 'Ab Bey, *Tekeli zur Zeit [Memmeds] des Eroberers*, in *T. O. R. M.*, ii, 79, Stambul 1924; W. Heyd, *Histoire du Commerce du Levant*, ii, Leipzig 1885, p. 354 sq.; Ch. Fellows, *Discoveries in Lycia*, London 1841; Spratt and Forbes, *Travels in Lycia*, etc., London 1847, 2 vols.; Petersen and von Luchan, *Reise in Lykien, Milyas und Kibyras*, Vienna 1889; Graf Lanckoroński, *Städte Pamphyliens und Pisidiens*, Vienna 1893; Salimata Fikri, *Anfänge der türk. Geschichte*, Stambul 1340, p. 196, pp. 8" with maps and pictures. (FRANZ BAHINGER)

TEKE-OGHLU, a dynasty in Anatolia, which ruled over Teke-eli [q. v.]. The origin of the Teke-oghlu has not yet been elucidated. It is more than probable that they

are connected with the Teke Turkomans just as the Ughs 'Khadis-oghlu' (q.v.) are presumably to be connected with the Torgghulus (cf. *Isis*, xii. 102). The history of the Turkoman tribes scattered over Asia Minor who included also the Warsak (the *Sapradie* of Chukomylens, p. 243) is wrapped in obscurity. As to the Teke Turkomans, they are known to have frequently changed their place of settlement (cf. J. v. Karabach, *Zur ar. Altertums-kunde*, iv.: *Muhammad. Kunststudien*, in the *S. B. Ak. Wien*, vol. 172, *Abhandl.* 1, Vienna 1913, p. 32 sq.); they belonged to the Kizilbash, who were known to have been disseminated over Teke-eli. The ancestor of the Teke-oghlu is given as a somewhat legendary Teke Beg, also called Teke Pasha, who ruled over Adalia under Seldjuk suzerainty. His son Yunus Beg succeeded him but nothing is known of his reign. When in 733 (1333) Ilm Hattüta travelled through Adalia, he found Yunus' son Khidr Beg ruling as chief of Teke-eli (cf. HAMID). He was succeeded by his brother Mahmud Beg, about whose reign we are no better informed. In 774 (1372) we already find his son Mehmed Beg in his place (cf. Salimân Fikri, *Anfüllung Tâ'rihi*, p. 62). Ewliyâ Celebi in his *Travels (Seyâhat-nâme)*, cf. *T. O. E. M.*, No. 2 (79), p. 81 mentions an Arabic inscription of 774 (1372) dating from him. Otherwise we know practically nothing of Mehmed Beg's activities. In 794 (1392) Sultan Bâyezid I Yildirim put an end to the principality of Teke-eli and incorporated it in the Ottoman empire (cf. Sa'id al-Din, *Tâ'ri al-Tawârikh*, i. 128 sq.). Ottoman rule only lasted till 805 (1402) when a son of Mehmed Beg named 'Othmân Celebi appears as ruler. Two years later he made an alliance with several other rulers who had meanwhile risen to power. Twenty years afterwards (827 = 1424) 'Othmân Celebi again appears in history, when he was defeated and slain at the siege of Adalia by the Ottoman governor of Karahisar-Sâhib (q.v.), Hamza b. Firâs Beg (cf. *Solâk-nâme, Tâ'rihi*, p. 155 sqq.; J. v. Hammer, *G. O. R.*, i. 425). A sister of 'Othmân Celebi passed into Ottoman captivity; cf. J. v. Hammer, *G. O. R.*, i. 425. With her the line of the Teke-oghlu probably became extinct. Its genealogical table is as follows:

The Teke-oghlu *Derebeyi* (q.v.) mentioned by European travellers in the region of Adalia as late as the reign of Mahmud II can hardly be connected with the dynasty of the name; on them, see F. Beaufort, *Karamania*, London 1817, p. 118 sqq.; W. Turner, *Journal of a Year in the Levant*, London 1820, iii. 386; C. R. Cockerell, *Travels in Southern Europe and the Levant*, London 1903, p. 182 and V. Cuiet, *Turquie d'Asie*, i. 860.

(FRANZ BÄHRINGER)

TEKĪ-KHĀN, Mīrzā, better known by his title of Amīr-i Nīzam, prime minister of Persia. Of humble origin (his father was cook and later maître d'hôtel to the Ḳā'im-mahmūd, prime minister to Muhammad Shāh), he entered the service of the commander-in-chief of the army and accompanied Khusrāw Mīrzā on his embassy to St. Petersburg. By rapid promotion he became visier of the army in Ādharbāidjān, representative of Persia on the frontier commission of Erzerūm, and chief officer of the heir presumptive, Nāsir al-Dīn, who appointed him prime minister when he came to the throne in 1848. He refused the title of Sāde-i A'zam (q.v.) and took that of Amīr-i Nīzam.

He undertook to remedy the abuses which were ruining the country, such as the sale of the public taxes, the enormous number of pensions given to unworthy individuals, the embezzlement of public funds practised by officers at the expense of the soldiers. He succeeded in putting the finances of the state on a sound footing. He became brother-in-law of the Shāh.

He had made many enemies and a conspiracy was made to assassinate him; but it was discovered in time. He persecuted the Bābī movement, arrested the principal followers of the new teaching and ordered the officers of state to proceed with their execution. The soldiers regularly paid were devoted to their chief; this state of affairs disturbed Nāsir al-Dīn who dismissed Tekī-Khān. The Russian minister having said the Czar would protect him, he was exiled to Kāshān but assassinated two months later in his palace at Fin (1851). The loss of this able and energetic man was a great misfortune for Persia.

(CL. HUARY)

TEKUDER (the name is also written Tagudar and Teguder in learned works), as a Muslim called Ahmad (e.g. on his coins with inscriptions in the Mongol alphabet and language), a Mongol ruler (Ilkhān, q.v.) of Persia, 681—683 = 1282—1284. On his brother and predecessor see ABĀKA, on his fall and successor see ARGHUN. Tekuder is said to have been baptised in his youth with the name Nicolas (*Mosheimi Historia Tartarorum Ecclesiastica*, Helmstedt 1741, p. 71). Immediately after his accession, his conversion to Islam was announced. According to some sources he turned churches and temples of idolaters into mosques; on the other hand, Bar Hebraeus says he was tolerant of all creeds, especially the Christian. His adoption of Islam was taken as a basis for negotiations with Egypt for the establishment of friendly relations between the two kingdoms; cf. the letter of the Ilkhān of the middle of Djumādā I 681 (Aug. 1282) and the reply of the Sultan of Ramadān (December) of the same year, in d'Ohsson from Wassaf. During these negotiations, however, two fortresses in the frontier lands of the Mongol empire were occupied by Egyptian troops.

Bibliography: d'Ohsson, *Histoire des Mongols*, iii. 550 sqq.; Hammer, *Geschichte der seldschuk*, i. 320 sqq.; Howorth, *History of the Mongols*, iii. 285 sqq.

(W. BARTHOLO)

TELL, a term applied by the European geographers to the district of north Africa lying near to and along the sea-coast. It is the Arabic word *tell* "hill". The Tell area is an undulating region covered with ranges of hills belonging for the most part to the Atlas system interspersed with plateaus of varying extent and height. As a result of the beneficial effect of the moist winds from the Ocean and the Mediterranean, the Tell is the best watered region in North Africa. It is the land of systematic agriculture and forests in contrast to the desert and prairie. As a result of the arrangement of the hills of North Africa, the Tell zone is by no means uniform in breadth; very broad on the Atlantic side of Morocco, it is reduced to a very narrow strip in Algeria and Tunisia. Cf. the articles: ALGERIA, ATLAS, BEKERS, MOROCCO, TUNISIA.

(G. VYER)

TELL AL-AMARNA, site on the right bank of the Nile, opposite the little town of Mallawi, in the province of Minya. The distance between the Nile and the mountains (here called *Djabal al-Shaikh Sa'id*) is about 3 miles, while to the north and the south the mountains come close to the river, leaving an area of about 5 miles in length. One of the villages situated here is called al-Tell (or al-Till); Tell al-Amarna seems to be a "European concoction" (Flinders Petrie) and is properly Tell al-Amārina, from the tribe of the Banu 'Imrān (or 'Amrān), who live here and on the opposite bank of the Nile. The site is famous for having been, during 20 or 30 years, the residence of Amenophis IV., to which he retired from Thebes after having instituted the worship of the sun-disk; his town was called Ekhet-Aton. As the place never was a town again, the remains have been preserved in rather good condition. Excavations have been conducted since 1888 by the Deutsche Orient-Gesellschaft and by Prof. Flinders Petrie, and, after the war, by the Egyptian Exploration Society. Of particular importance were a large number of clay tablets, found in the "Rolls House" to the east of the town, and containing in cuneiform script the correspondence of Asiatic rulers with the Egyptian king. These tablets are for the greater part in the Berlin Museum.

The antiquities of Tell al-Amarna seem to have been scarcely known to the Arab writers. To the north lay the now nearly deserted town of Anṣīnā (Antinoö) and, on the other side of the Nile, al-Ashmūnain; Ibn Hawqāl (p. 105) and Yāqūt (i. 670) know a place called Būṣīr lying opposite this last town, but do not give further indications. Quatremère identifies al-Tell with the place Pīnauia, where, in Roman times, there was a garrison (cf. also *Description de l'Égypte*, 2nd ed., Paris 1829, vol. xviii/iii, p. 100).

Bibliography: 'Alī Pasha Muḥarrak, *al-Khiṭāṭ al-fīnānīya*, x. 43; Quatremère, *Mémoire géographique et historique sur l'Égypte*, Paris 1811, i. 39 sqq.; W. M. F. Flinders Petrie, *Tell el-Amarna*, London 1894, p. 2; Baedeker, *Ägypten*, 1928, p. 237 sqq.

(J. H. KRAMERS)

TELL BÂSHIR, a fortress in Northern Syria, on the Nahr Sâḡūr near 'Aintālā, two days' journey north of Aleppo. It lies in a broad plain and according to Abu 'l-Fidā' was mainly inhabited by Armenian Christians; the Armenians explained its name Tīpēshār as a translation of the Armenian T'īl Avestē, i. e. "hill of the glad tidings (*avēstē*)" which it formerly bore (Matthēos Uhiyēc'i, ed. Dulanier, p. 330, 433 sq.). It had markets and a suburb (probably the modern Tell Bâshir Mezra'at S. E. of the fortress) and was surrounded by well watered gardens.

The town is mentioned as early as Assyrian times as Tīl Bâsērē (Salmannassar, *Mosulitā*, rev., i. 17; Dussaud, *Topographie hist. de la Syrie*, p. 468); on the other hand it has no connection with the hill Bâshīr nor with the Biblical Telesar (Sayce, *P. S. B. A.*, xxiii. 175; Dussaud, *op. cit.*, p. 464). Its name is not mentioned in classical antiquity; but the Tabula Peutingeriana mentions a *Thalassar* 15 Roman miles from Tigranocerta (Sachau, *AM. Pr. Ab. W.*, 1880, Berlin 1881, Abh. ii, p. 53; Markwart, *Handb. Arabisch*, xxx., 1916, col. 118 sq.).

Arab authors do not seem to mention Tell Bâshir before the Crusades. In 489 (1095—1096) Ridwān in alliance with Djanāl al-Dawla took from Yaghī Shāhān of Antākīya the fortresses of Tell Bâshir and Shīl al-Dair (Kamāl al-Dīn, transl. de Sacy, in Röhrich, *Beitr. z. Gesch. d. Kreuzzüge*, i., Berlin 1874, p. 216). In 1097 Tell Bâshir and Rāwandān were taken by Count Baldwin of Bourg, Godfrey's brother, and made part of the county of Edessa (Matthēos, *op. cit.*, p. 218, ch. cliv.). In 1102 Baldwin gave the towns of Kūrus (*Cortium*), Dulūk (*Tulupa*), Tell Bâshir (*Turberet*), 'Aintālā (*Hasab*), Rāwandān (*Rauindel*) and Sumānāt (*Samozatum*) to his nephew Joscelin de Courtenay as fiefs (*Recueil hist. or. crois.*, iii. 623; Will. of Tyre, x. 24; Röhrich, *Gesch. d. Kgr. Jerusalem*, p. 49, note 8). In 496 (1102—1103) the Franks moved from Tell Bâshir to the district of Halab, took Bâsarūt and were only repulsed at Kafarīthā by the Banī Ulāim (Kamāl al-Dīn in Röhrich, *Beitr.*, i. 231). After the defeat at Harrān in which Joscelin was captured by the enemy, his companions from Tell Bâshir went into captivity as hostages for him after a ransom had been fixed and he had been released to procure it (Michael Syrus, iii. 195; somewhat different in Frankish sources, cf. Röhrich, *Gesch. d. Kgr. Jerusalem*, p. 75, note 3). In 502 (1108—1109) Joscelin along with his uncle Baldwin (Baghdūwīn) and Dīwālī, with Tell Bâshir as his base, fought Tancred (Tanukt) of Antioch allied with Ridwān (*Rec. hist. or. crois.*, i. 266; Matthēos, *op. cit.*, p. 267; Röhrich, *op. cit.*, p. 75 sq.). A large Turkish army sent by Sultān Muḥammad under the Amīr Mawḥūd of Mawṣil, who appeared with the lords of Khilāt, Marāgha etc. In 504 (1111) before Tell Bâshir, besieged it for 1½ months in vain (*Rec. hist. or. crois.*, i. 282, 287; iii. 496, 542 sq., 599 sq.; Matthēos, *op. cit.*, p. 275; Michael Syrus, iii. 216; Röhrich, *op. cit.*, p. 90 sq.).

Ighātī at the end of May 1120 after being defeated by Joscelin between Kālīm and Bahasūl advanced against Tell Bâshir, which he besieged for several days without success (*Rec. hist. or. crois.*, iii. 623 sq.; Abu 'l-Fidā', *Annal. Muḥ.*, ed. Reiske, iii. 396). In the following years the Halabīs were often harassed by raids from Tell

Bāshir (Kamāl al-Dīn, in *Rec. hist. or. crois.*, iii. 625 sq., 634). In 1124 Nūr al-Dawla Balāḥ was planning a campaign against Tell Bāshir, but he was mortally wounded before Manbidj [q.v.]. A note, not quite clear in Michael Syrus, iii. 211, seems to say, which is incorrect, that he took Tell Bāshir and three other fortresses from the Arabs and Franks. Joscelin I died towards the end of 1131 (Michael Syrus, iii. 232). He was succeeded by his son Joscelin II of Edessa, whose mother was a daughter of Leo I of Little Armenia. Unlike his valiant father, he was from youth upwards given to drinking and debauchery and spent his time in his palace in Tell Bāshir in riotous living (Will. of Tyre, xiv. 3; *convivationibus supra modum deditus, Veneris operibus et carnis delectatione immunditias, usque ad infamiam notam*). The region of Tell Bāshir had therefore soon to suffer repeated raids by Saif al-Dīn Sawār of Ḥalab (*Rec. hist. or. crois.*, iii. 665; Michael Syrus, iii. 230, 233; Röhrich, *op. cit.*, p. 197 sq.). The Emperor John II Comnenos invaded Northern Syria in 1142 and appeared before Tell Bāshir (Will. of Tyre, xv. 19; *Turbetur; est autem praedictus locus castrum opulentissimum circa Euphratem, ab eo distant miliaribus XXIV vel modicum amplius*); Joscelin II had to give hostages and gave him his daughter Isabella to wife (Will. of Tyre, *loc. cit.*).

The raids of the Saljūq Sultan Maṣ'ūd (Michael Syrus, iii. 294—296; Röhrich, p. 263, note 1) and his ally Nūr al-Dīn who defeated the Franks at Tell Bāshir in 546 (1151—1152) (*Rec. hist. or. crois.*, iv. 16, 68) still further weakened Joscelin's power. When, in May 1150, he was taken prisoner and interned in Ḥalab, Maṣ'ūd who had already attacked Tell Bāshir in the previous year (Matthæos, *op. cit.*, p. 330; Michael Syrus, iii. 296) took the fortresses of Knstīm, Bahasā and Raḥān, but could not take Tell Bāshir (Matthæos, p. 333; Michael Syrus, iii. 296 sq.; Will. of Tyre, xvii. ch. 15; Röhrich, p. 265 sq.). After he had withdrawn, the king of Jerusalem came to Tell Bāshir and brought the wife and children of Joscelin including the young Joscelin III from there to Jerusalem to safety. In Tell Bāshir, 'Azāz, al-Rāwandān, Rūm Kal'a, al-Bira and Samasā, he left garrisons of Byzantine soldiers, whom he had brought with him; but they could not restore the Franks (Michael Syrus, iii. 297; Will. of Tyre, xvii. 16). The garrison of Tell Bāshir by the 25th Rabi' I 546 (July 8, 1151) found themselves forced, after the fall of Dulūk to offer the keys of their town to Nūr al-Dīn, who appointed Ḥassān al-Manbidjī to receive their capitulation (*Rec. hist. or. crois.*, i. 29, 31, 497; iv. 73 sq.; Abu 'l-Fidā', ed. Reiske, iii. 516; Matthæos, *op. cit.*, p. 333; Michael Syrus, iii. 297). The Franks and Armenians were granted liberty to go to Antākya (Matthæos, p. 333; Röhrich, p. 281, note 2, where mention is wrongly made of an 18 months' siege of the fortress). Nūr al-Dīn handed Tell Bāshir over to Ḥassān who restored its defences and provided it with provisions for several years (*Rec. hist. or. crois.*, i. 498). On 12th Shawwāl 565 (June 28, 1170) Nūr al-Dīn went from 'Aḥṭarā via Ḥalab and Tell Bāshir to Mawṣil (*Rec. hist. or. crois.*, iv. 150). The emirs of 'Aintāb, Tell Bāshir and other places in northern Syria submitted in 1176 to Salāḍīn (Michael Syrus, iii. 366). In his retinue before 'Akkā was the Amir Badr al-Dīn Duldirim b. Bahā'

al-Dīn al-Yarūḳī of Tell Bāshir, who had successfully defended the stronghold in 579 (1183) against 'Imād al-Dīn Zangī (*Rec. hist. or. crois.*, iii. 71). In his pursuit of Ibn al-Muḥaddam, who had fled to Badr al-Dīn in Tell Bāshir, al-Malik al-Zāhir in 599 (1202—1203) took the fortress (Kamāl al-Dīn, transl. Blochet, in *R. O. L.*, v. 1897, p. 38) but lost it again (*R. O. L.*, v. 59). Badr al-Dīn was still ruling there in 615 (1218—1219) when Kalkā'ūs of Rūm took the fortress (*R. O. L.*, v. 57; *Rec. hist. or. crois.*, ii/1. 145). In the very same year al-Malik al-Aḥraf again took Tell Bāshir from the Saljūq Sultan and gave it with other places to Shihāb al-Dīn Tughril, Atābek of the young prince of Ḥalab (*R. O. L.*, v. 57; *Rec. hist. or. crois.*, ii/1. 146 sq.; p. 166; Abu 'l-Fidā', *Annal. Muslim.*, ed. Reiske, iv. 266). Al-Malik al-Aḥraf of Ḥalab in 629 (1231—1232) seized the fortress and installed a governor in it and deposed the *nāib* of his Atābek Shihāb al-Dīn (*R. O. L.*, v. 82).

The Khwārizmians in 638 (1240—1241) attacked 'Aḥṭar, Tell Bāshir and Burdj al-Raḥḥā (*R. O. L.*, vi. 5). The ruler of Ḥalab, al-Malik al-Nāṣir, sent in 646 (1248—1249) a force under the leadership of the Armenian Shams al-Dīn Lūlū against him, the Amir of which, al-Malik al-Aḥraf, was forced after a two months' siege to surrender his town and was given Tell Bāshir instead of it (Abu 'l-Fidā', *op. cit.*, iv. 494). In 658 (1260) al-Malik al-Aḥraf of Tell Bāshir paid homage in Ḥalab to Ḥullāḡū who thereafter gave him back Himy (Abu 'l-Fidā', *op. cit.*, iv. 585; Weil, *Geogr. d. Chalifen*, iv. 13).

Sultan Baibars is said to have destroyed the fortress of Tell Bāshir (Ibn al-Shūḥnā, Bairūt ed., p. 170).

TELL AL-KERĪR, a village in the Egyptian Delta, with a station on the Cairo-Zakāzīk-Ismā'īliya-Suez line, about 30 km. distant from Zakāzīk, 50 from Ismā'īliya. The station is some distance from the village on the north bank of the Ismā'īliya Canal. A market is held every Thursday. The Bedouin tribes of the neighbourhood

are the Hnadi, the Nafa'at and the Tūmīlāt. Wide stretches of sand-dunes and undulating desert land extend north and south of the Wādī, with traces of ancient fortifications and the grounds of buried cities. In the depression here, known as the Wādī Tūmīlāt through which flows the fresh-water canal, rich agricultural land is to be found. The province (*amḍīya*) is al-Sharḥīya; the district (*markaz*) Zuhārik. It is a police outpost. The inhabitants, as given by Boinet Bey, are 3,194, being the population of 3 *ahḥā* and 5 *ḥaḥra*. There are 4 *ahḥā*s and 3 *ḥaḥra*s. In modern times the place achieved fame as a result of the short but fierce encounter in 1882 between the British under Sir Garnet Wolseley and the Egyptians under 'Arabi Pasha. A small graveyard with the names of British soldiers who fell in the fight may still be seen.

TELLOH, a site in 'Irēk, consisting of a number of artificial mounds, covering an extent of 4-5 miles. It is situated on the eastern side of the Shaḥ al-Hayī, which links the Tigris to the Euphrates, at 8-10 hours from Nāsiriya. Here the French consul in Bagda, Ernest de Sarzec, discovered in 1877 archaeological remains. Under his guidance excavations were begun in 1880, as a result of which the site proved to be that of the Sumerian town of Lagash or Sirpurla. The greater part of the material excavated — including numerous statues of Gudea — was placed in the Louvre in Paris. After de Sarzec's death, in 1901, the excavations were continued by Cros.

Telloh is a local name, containing no doubt the word 'tell'. According to Schefer, the name may perhaps be derived from Tell al-Lawh, 'tablet-hill'.

TEMUČIN. [See ČINGIZ-KHAN.]

TENES, a town in Algeria on the coast, 125 miles from Algiers, 100 miles E. of Mostaganem and 35 N. of Orleans, a town in the valley of the Chelif; its position is 36° 30' 50" N. Lat. 1° 18' E. Long. (Greenwich). The town is built on a rocky plateau commanding the sea; the harbour lies below in a bay sheltered from the east winds by the bulk of Cape Tenes, but unprotected against the north and west which makes the anchorage unsafe in spite of the considerable work done to secure the protection of ships. Trade is confined to coastal traffic and the total of merchandise handled in the port hardly exceeds 19 to 20,000 tons per annum. A railway recently opened to connect Tenes with the valley of the Chelif will probably increase the trade of the port. Two miles south of the European town is a native village, with about 1200 inhabitants, called Old Tenes. It is built on a plateau along which runs on the east like a natural fosse, the Wādī Allala. Tenes is a commune de plein exercice with

6,207 inhabitants of whom 4,620 are natives; it is also the capital of a mixed commune with 51,959 inhabitants of whom 50,728 are natives.

History. The modern town occupies the site of Cartennar, a Phœnician and Carthaginian factory which became a Roman colony under the Empire. Sacked by the Vandals, then by the Arabs, Cartennar disappeared almost completely. In the time of al-Bakri, all that was left was a castle built on the shore and at the present day only insignificant traces of it have been found (remains of ramparts, cisterns and tombs). In the 13th (14th) century a new town was built two miles from the sea by adventurers from Spain. This is the modern Tenes. Al-Bakri dates its foundation to 262 (875-876) and attributes it to Spanish sailors who used to winter in the port. They invited thither people from Elvira and Marice some of whom, dismayed by the fevers, soon went back to the Peninsula; the others remained in Africa and were reinforced by Berbers from Saḥ Hādīm, a place in the valley of the Chelif. The primitive settlement of these immigrants, who were at first content to encamp in the fortress built by the Spanish Moors, gave place to a town surrounded by walls with a mosque and bazars. Traces of it still survive in Old Tenes where a part of the ramparts still exists, a bridge and notably the mosque mentioned by al-Bakri. In spite of the unhealthiness of the climate, Tenes rapidly prospered owing to the fertility of the environs which produced in abundance fruits of all sorts and cereals which, according to Idri, were exported abroad. Governed by a family of 'Alid origin, Tenes recognised the suzerainty of the Omayyads of Spain, who seem to have regarded this town as a place to which to deport any one they had reason to complain of. From the 10th (11th) century the town passed in turn under the dynasties who disputed the possession of the Central Maghrib: Fatimids, Saḥāḥja, Maghribwa, Almoravids and Almohads. After the dismemberment of the Almohad empire, it passed to the Ziyānids of Tlemcen, then in the second half of the 12th century threw off this yoke and formed an independent little principality ruled at first by members of the royal family, then by local shaykhs, the last of whom became a vassal of Spain. 'Arūdī [q.v.] took it in 1517 and a few years later Khair al-Dīn [q.v.] definitely established Turkish power there. Tenes was given a *ḥā'id* and a garrison. Henceforth its prosperity declined rapidly. The trade in corn with Europe which still went on in the xvth-xviii centuries completely ceased in the early years of the xviii century. The town was several times pillaged by the natives and rebelled against the Turks.

After 1830, Tenes was for a period independent. 'Abd al-Kādir who had incorporated this town in his possessions, tried without success to revive the trade of the port. In 1843, the inhabitants submitted without resistance to the French. Bugrand at once began to erect buildings intended to facilitate the provision of supplies for the troops operating in the valley of the Chelif. This was the origin of the present town.

(G. YVES)

TEPTYAR, a Turkish people who call themselves Tipter or Baghkir. According to Vambéry, the name is derived from a verb *tepte* "to roam" and means "rovers"; in Radloff's *Wörterbuch* (III, 1114) no such verb is mentioned and the word *tepter* only quoted as the "name of a tribe in the gouvernement of Orenburg". In Russian documents of the xviiith century the word *tepter* is frequently associated with the word *solit*, which is of course not a tribal name but means "peasant without land and family". According to Karasmin (vol. I, note 73), the Tepter were a mixed people composed of Ceremiss, Votyaks, Čuwash and Tatars, who had fled in the xvth century after the fall of the kingdom of Kasim [q. v.] to the Baghkir [cf. BAGHİR]. According to the modern view, the Tepter are a mixed people in which the Baghkir element predominates, but other elements from the Volga and Ural territory are represented. Their language is Baghkir. The Tepter took no part in the great Baghkir rising of the year 1755. At the present day, the Tepter live mainly in the gouvernement of Orenburg and also in the former governments of Ufa and Perm; their territory belongs to the autonomous Baghkir republic; they engage in agriculture and bee-rearing. Their numbers still are about 100,000, the figure given in older accounts. According to Vambéry there were beside Muslims, pagans among them and more recently also Christians. At the present day the Tepter are all regarded as Sunnis.

(W. BARTHOLD)

TERDJUMĀN, turkicised form of the Arabic *tarjūman* (cf. Muhammad Hafid, *al-Ġhulāt al-mawḥūḥa*, p. 110) meaning an interpreter. The word is of Aramaic origin and early entered the Arabic language. Interpreters must have always played an important part in the commercial and diplomatic relations of Islamic states with foreign peoples, but their activity begins to enter into clearer historical light only in the vith (ixth) century; from that time date the earliest known treaties between Christian towns or states and Muslim rulers of the countries around the Mediterranean. From the treaties with the states in Northern Africa, as published and studied by de Mas Latrie, it appears, that the "torcimani" (for the other numerous Latin and Romance forms in that time cf. de Mas Latrie, *Introduction*, p. 189 sqq.) were an indispensable class of functionaries in the commercial chanceries, called "donane" (from *dinān*), that existed in the sea-ports accessible to foreign trade. Nearly all commercial transactions took place through the intermediary of these interpreters, who often formed a kind of hierarchy; evidence given by them was accepted everywhere. Special duties were levied on merchandise negotiated through their intermediary. These interpreters were originally appointed by the local authority; they were Muslims, Christians or Jews; in certain places a particular interpreter was charged with the interests of each foreign nation. Some of these functionaries had to be present at the still more important business of concluding treaties and, when needed, of interpreting treaties, when there were difficulties

concerning the text. In these cases the name of the interpreter was specially mentioned in the text of the treaty. It appears likewise from those texts, that some of them were especially attached to the local ruler. The existence of interpreters in Syria is also mentioned by the French sources on the Crusades.

Under the Ottoman Empire the position and the function of the interpreters in the different administrations remained practically the same as it had been in former centuries. But, as commercial and diplomatic relations became more frequent and more important in time, the need of good and reliable interpreters increased and so we find more and more mention of them in historical sources. The most common name for them in European sources is the Italian form "dragoman" or "dragoman", at the side of which the French "truchement" remained a long time in use. In the many Turkish sea-ports all the Turkish government offices had their dragomans, as was also the case with the consulates of foreign nations that were established there. The position of the dragomans in the capital was naturally more important; the foreign embassies had many in their service.

The most important post was, however, that of dragoman to the Turkish government. As a special office, it was perhaps already in existence under Muhammad II, but the first dragoman to the Porte, who is mentioned was the *pa bashi* 'Ali Beg, who brought the peace treaty of 1502 to Venice. After him came Yunus Beg, who died in 948 (1541—1542) and went often as emissary to Venice; he was the builder of a mosque in Constantinople called Darughman Masdjidi (*Sicill-i 'Othmāni*, iv, 677; *Hadikat al-Djauāmi*, № 226). Yunus Beg was a Greek and his successor Ahmad was originally a German from Vienna called Heina Tulman. Another dragoman in the service of the Porte in the xvth century was Murad Beg, a Hungarian who was captured in the battle of Mohács, and known as the author of an apologetical treatise on Islam and especially of a trilingual hymn in Turkish, Latin and Hungarian (published by F. Bahlinger, in *Literaturdenkmäler aus Ungarns Türkenzeit*, Berlin 1927; cf. also p. 38 sqq. of this book for historical data about the dragomans of the Porte). About this time there probably were already several dragomans in the service of the Porte, one of whom was the *pa bashi terdjumān*; they were almost without exception Christians (Greeks, Germans, Italians). As the foreign relations between the Ottoman Empire became more important and more complicated, the influence of the interpreters of the Porte increased, until, in the xviiith century, the position of dragoman of the Porte became almost hereditary in the powerful Greek families of Mavrogordato and Ghika; it became the custom that, after having occupied the office of dragoman, they were appointed as prince of one of the Danube principalities. As it was still a rare exception, at this time, for Turks themselves to know European languages, the influence of these mediators on the foreign policy was necessarily very strong; on the other hand executions of former chief interpreters were not rare. It was only under the reign of Mahmūd II that, together with the increased importance of the activity of the Re'is Efendi [q. v.], the Turkish government was able to liberate itself from the help of these not overtrustworthy ser-

vants. A special study of the rôle played by the Porte dragomans on Ottoman policy has not yet been made. An incomplete list of them is given by von Hammer, *G. O. R.*, vii. 627.

The dragomans of the embassies and consulates were often no less powerful international mediators. They generally belonged to the same class of people, i.e. local Christians, as those in Turkish service. The treaties or capitulations and also the diploma's (*berâts*) granted to them by the sultan, guaranteed them the protection of the nation which they served in the consulate or the embassy. One of their special functions, which is expressly mentioned in the capitulations, derives from the right of the consuls to be represented by their dragomans in the processes before Turkish tribunals, in which their subjects were involved. This function had developed very naturally from the part played by the dragomans since the middle ages. As, however, since the xviiith century, the influence of European Powers and their representatives in Turkey became preponderant, the interference in Turkish affairs, exercised by the dragomans, became insupportable to the Porte; moreover the consulates made a too extensive use of their right to appoint Turkish subjects as dragomans, withdrawing them thereby from the authority of their government. As a result of the remonstrances of the Porte, an agreement with the foreign missions was reached in 1863, by which the power of the embassies and consulates to appoint native dragomans was restricted. About this time, most of the European governments had begun, however, to create a special interpreter service from their own subjects, for which a proper training was required. In the second half of the xixth century and the beginning of the xxth century, the chief dragomans in the embassies of the great powers at Constantinople were still the acknowledged authorities for conducting negotiations of all kinds with the Porte, especially with regard to the interpretation of the capitulations and the application of the special extra-territorial rights derived from those treaties. When, however, in 1914 the Turkish Government abolished the capitulations, it refused at the same time to recognise foreign diplomatic or consular functionaries with the title of dragoman. Accordingly the title is no longer officially used in Turkey.

TERDJUMAN, in the terminology of Turkish mystics, has two meanings:

1. a member of a *tarikâ*, who accompanies a neophyte of the order during his initiation, as a spiritual interpreter. When a *mürîd* is initiated in the Bektaşî *tarikâ*, he is led by two *terdjumân*s into the presence of the *Shâikh* and eleven other persons representing the eleven *imâm*s. During the ceremony the *terdjumân*s guide him and say for him the formulas he has to recite (cf. J. P. Brown, *The Dervishes or Oriental*

Spiritualism, ed. H. A. Rose, London 1927, p. 206 sqq.).

The function of these *terdjumân*s is analogous to that of a certain class of functionaries in the organisation of Islâmic guilds, after the *Futûwa*-books, who are called *maklûb*, but also *terdjumân al-hân* or *terdjumân al-kudâm*. During the ceremony of the reception of a new member in the guild, these *terdjumân*s play a similar part to those mentioned with the *Bektâshîs* (cf. Thörning, *Beiträge zur Kenntnis des islamischen Vereinswesens*, Berlin 1913, p. 106 sqq.).

2. With the Bektaşîs, *terdjumân* means also a prayer. Only special prayers, recited at special occasions, are called *terdjumân*. It is also said to be the name of the secret word or phrase of the Bektaşîs (cf. Brown, *The Dervishes*, p. 180, 199).

(J. H. KRAMERS)

TEREK, a large river in the Caucasus (length about 300 miles, breadth in some places up to 500 yards). In its upper course it is a mountain torrent and even in its lower course so swift that navigation is impossible upon it.

During the golden period of Arabic geographical knowledge (ixth—xth century) the land of Terek must have belonged to the kingdom of the Khazar [q. v.]. This portion of the Khazar dominions is not described by Arab geographers and the Terek not mentioned. The name seems to appear for the first time in the history of the fighting between Berke [q. v.] and Hulağa [q. v.] at the beginning of 661 (Nov.—Dec. 1261) in Rashid al-Din (ed. Quatremère, p. 394). Hamid Allâh Kāwini (*G. M. S.*, xliii. 259) mentions the Terek (in Le Strange's translation, p. 250: Turk) along with the Sîl (Volga) as a river in Dasht-i Kipchak [cf. *gürçak*]. The land of the Terek at that time belonged to the kingdom of the Golden Horde and probably adopted Islâm at the same time as the latter in the viiith (xivth) century. A few years after the conquest of Astrakhân [q. v.] in 1554, Russian Cossacks began to appear on the Terek and formed the "Turkish Cossack army" (*Turkîye kazâne volod*); at first independent of Moscow it was afterwards incorporated in the Russian empire. For the political life of the Muslim world, the Terek lands have never been of great importance; even the fortress of Kizlar on the north bank of the Terek was, in spite of its Turkish name, built by the Russians in 1735.

(W. BARTHOLO)

TERNATE, a small volcanic island, west of Halmahera in the eastern part of the Malay Archipelago. From the administrative point of view, it forms with several other small islands and groups of islands a subdivision of the residency of Ternate in the government of the Moluccas. Only a part of the island is directly under the rule of the Dutch East Indian government; the other part belongs to the autonomous district of Ternate, which includes several portions of Halmahera, the Sulu Archipelago and some other islands. From early times the trade in spices has brought many foreigners to these islands; the population, especially that of the area under the government, is therefore much mixed; the main element shows a strong resemblance to the native population of northern Halmahera. The standard of living is

not high, partly because the natives are not fond of work; they live mainly by fishing and a primitive agriculture. The language, Ternatan, is the *lingua franca* of the Molacca Archipelago; it belongs to the (non-Indonesian) north Halmahera group of languages and is a rather degenerate specimen of it.

The early history of these regions is little known. In the period when our knowledge begins to increase, the north-east corner of the archipelago was divided into 4 kingdoms: Ternate (then called Gapi), Djallolo, Tidore and Batjan. There must have been some connection between these kingdoms (tradition traces them back to one single kingdom). But they seem to have been continually at war with one another. Djallolo originally had a certain predominance but had later to give way to Ternate; and especially in the xvth and xvth century Ternate showed a great desire to extend its power. We have very little, and that unreliable, information as to the time and manner in which Islam spread here. According to one tradition, a Javanese merchant named Husain (or Dato Mawla Husain) preached Islam in Ternate as early as the reign of Katiil Gapi Baguoa (also called Marhum) in 1465-86 and he is even said to have been successful in converting this ruler. In native chronicles, however, this king is not numbered among the Muslim rulers, the series of whom begins with his son Zain al-'Abidin (1486-1495?) who was also the first to replace the old title *Kolano* by that of Sultan. Under him the whole population is said to have been converted to Islam; we are also told that he made a journey to Java in order to be more accurately instructed in the principles of Islam. Islam is now found here in the same form as in other parts of Indonesia; several old pagan customs still exist but the principal precepts of Islam are followed with comparative fidelity, especially at the courts. There is no fanaticism.

The Portuguese were the first Europeans to conclude a treaty with Ternate (beg. of the xvth cent.); when in the beginning of the xvth century the Dutch appeared in the Moluccas, an unceasing struggle began between them and the Spaniards and Portuguese; in 1683 Ternate recognised the sovereignty of the Dutch East India Company. In 1915 the reigning Sultan was deprived of his throne for his disloyal attitude; since then the autonomous area has been governed by a council of notables.

Bibliography: A full account of Ternate is given in T. S. A. de Clercq, *Bijdragen tot de kennis der residentie Ternate*, Leyden 1890; see also: *Legende en geschiedenis van Ternate*, in *Tijdschrift van het Binnenlandsch Bestuur*, II, 310. (W. H. RASERS)

TESHRIŖ, the name of the first two months of the Syrian calendar. It is found as early as the Palmyrene inscriptions and there means only one month, namely the first (in the Jewish calendar, the seventh) while the next was called Kānūn [q. v.]. In the calendar of the Syrian church however, we find this name applied to two months, the third and fourth Syrian = ninth and tenth Jewish, Kislūw and Tebbāth, while the original Kānūn was replaced by a second TeshriŖ month. As a stage in the development of the four first Syrian names of months from four different to two pairs A. v. Gutschmid has recognised the calendar of Heliopolis, the first four months of

which bore the names Ag, Thorin, Gelōn and Chana. The last three names correspond to Tishri, Kislūw and Kānūn. The development from Gelōn to Kānūn is explained by a change of letters, while the replacement of Ag by Tishri might be due to Jewish influence. The Syrians distinguished the two TeshriŖ by the epithets *ḡdīm* and *ḡrāy* (so al-Birūnī) for which the Arabs used *al-awwal* and *al-ākhir* or *al-thāni*.

In time, the two months coincide with the October and November of the Roman calendar and have 31 and 30 days. In the two months the four first stations of the moon set and the 15-18 rise. The days on which this happens are, according to al-Birūnī, the 10th and 23rd T. I and 5th and 18th T. II, according to al-Kazwini, the 18th and 31st T. I and 13th and 26th T. II. In 1300 of the Seleucid era (= 989 A. D.), according to al-Birūnī, the stars of the four stations rose or set on the 22nd T. I and on the 5th, 18th and 31st T. II.

TEWFIK MEHMET, called Çaylak TewfiŖ, a Turkish author and publicist, born in Constantinople in Şa'ban 1259 (Sept. 1843), the son of a certain Mustafa Agha who was connected with the Janissaries, and a freedwoman, and died in 1311 (1893) in the same city. After a rather scanty education he entered the War Ministry as a clerk. Introduced to journalism by Filib Efendi, founder and editor of the newspaper *Waḥḥet* and *Mukhbir*, he devoted himself more and more to this and to authorship, which was only interrupted by longer or shorter tenures of office as secretary in Constantinople and in the provinces (Brussa, Serajevo, and Bihac). Things nowhere seem to have gone well with him and he had to drink to the dregs the bitterness of a journalist's life under the despotic measures of the government against the press. He was apparently also a lecturer on rhetoric, although it was style that offered him the greatest difficulties at the beginning of his career. He contributed to the newspapers *Mukhbir*, *İtambel*, *TeraŖfi* and *Basiret*, founded for the walls of Brussa the printing press and official organ of the wilāyet, *Kānūn-i-ḡdī* in Brussa, and independently the political papers *Ajr* and *'Othmānī* and the humorous papers *Gazet*, *LeŖā'if-i-Āthār* and *Çaylak*.

At the same time he showed great activity as an author, especially in the literature of anecdote. His works are especially important for Turkish folklore as he saw the great importance of recording the old customs which were gradually disappearing. His *İtambella bir Sene* in particular secures him lasting recognition. His works usually appeared in parts and therefore some were never completed; they include the following: *LeŖā'if-i-İnḡā'*; *AkhiŖār-ı Nizām-i 'Aleḡ TeraŖemeti*; *KāŖā'if-i-Şu'arā'*, 1290; *Muḥbir-i-'Othmāniye*, 1293; *Āthār-i-periŖān*; *Madḡarāt-ı Seyāhat-nāme*, 1294; *Ḥarā'ib-i-Hikāyāt*; *LeŖā'if-i-Nay*

ed-Din, 1299; *İstanbul'da bir Senâ, 1299—1300*; *Buadem*, 1299—1302; *Tahrid-i Kharâbât*, 1300; *İki gün Odâ, 1301*; *Türîkâ-yâkûd bin yûs yemînîş Dîvânıyterî*, 1302; *Kâzîmî-i Lafîzî*, 1303; *Levîf-i Zevâif*; *Uşak-ı İlmî â-Kîrâbet*; *Şamuruk-ı Edebi*.

(TH. MENZEL)

TEWFIK FIKRET, whose real name was Mehmed Tewfik, the poetical name of Fikret being assumed later instead of Tewfik Nazmi which he first took, an important Turkish poet and metricist, founder of the modern Turkish school of poetry.

Born on the 24th Sha'ban 1284 (Dec. 25, 1867) in Constantinople, the son of the secretary to Fâtima Sultan, afterwards mütepparîf Husein Efendi (descended from a family of notables of Çerkes in Anatolia) and Khadija Ref'ia Khawim, a Turkish lady from the island of Chios (probably originally of Greek descent), received a careful education; he went first to the Mahmûdiye-Walide Rüşdiye school in Akserai. When the latter was closed on account of the influx of the *muhâğgir* in the Russo-Turkish war, he entered, at the age of nine, the Galata High School (*Galata Seray Sultanisi*), with which he was to remain connected for almost his whole life. At eleven he lost his mother, who had gone with her elder brother on the pilgrimage to Mecca, where both died of cholera in the desert (Fikret, who only came to realise his loss fully when his sister died, devoted to her his touching *merhiye: Hemşirem İsm* in 1318 = 1900). As a child, he was unmanageable and self-willed but later obtained a masterly control of himself and became serious, almost misanthropical and hypersensitive. In 1304 (1886—1887) he passed out of school as its most distinguished scholar, entered an office of the Porte, which he left in 1311, as the inactive life, then typical of a Turkish government office, did not satisfy his honourable nature. At the same time he taught French, Turkish and calligraphy in the commercial school in Gedik Paşa. In 1306 (1888—1889) he became teacher of Turkish at Galata Serai High School, which he left in 1311 (1893) because the government cut down his salary. In 1312 (1894—1895) he became a teacher at the Robert College in Rumeli Hisâr, where he remained till his death. In Rumeli Hisâr he built himself a house which he decorated according to his own artistic ideas (he was also an artist) with a splendid view, where he lived the peaceful idyllic life of a poet with his wife who was also his cousin, whom he had married in 1306 (1888) and his son Khalûk, to whom he dedicated a volume of poems. (It was a remarkable decree of fate that while his mother died while on the pilgrimage, his son Khalûk became a Christian in Glasgow, is now working as an engineer in America and is therefore lost to the Turkish cause).

From 1307 he was a contributor to the periodical *Mîrâd*, which was edited by the poet İsmâ'il Şefâ. In 1309, along with a few friends of like literary tastes he founded the *Ma'âmûr*, which

was suppressed by the censorship after 24 numbers. In 1311 he undertook the literary editorship of the illustrated periodical *Zîrret-i Fânî* founded by Ahmed İhsân in 1890. His wide literary activity was then begun which in a short time made him a most famous author. After suffering all kinds of restrictions under the regime of 'Abd ul-Hamid, after the revolution in 1908 he was appointed Director of the Galata Serai High School by the Young Turkish government, when he refused the Ministry of Education. He endeavoured to make the school a modern Turkish seminary, but soon came into conflict with the conservatism and red tape of the Ministry of Education and finally retired in 1910 (1327) to devote himself entirely to his poetry and his teaching in the Robert College. To this period belongs his scheme of educational reform for a new type of Turkish school (*yeni mektep*), which however was never carried through. After a long illness, he died on Aug. 18, 1913 (1331).

At the early age of 14, Fikret began to write *ghazals*, of course in the old style (*Mustakabât-ı Terzümân-ı Hâkikat*, p. 533). He developed his literary abilities under his teachers of literature, Feizi, Mu'allim Nâdî and particularly Redjâ'î-sâde Ekrem, who won a lasting influence over him as on the whole of the younger generation. It was Ekrem also who decided him to become chief editor of the *Zîrret-i Fânî*. With Fikret's accession to the staff, a new era began for the *Zîrret*. The periodical set the standard for the whole of modern Turkish literature, which is known as the Tewfik Fikret (poetry) and Khalîd Ziya (prose) period. Very soon all the collaborators of the *Mekteb*, edited by Husein İhsân on western lines, joined the *Zîrret*, whose staff included 'Ali Ekrem, 'Abd ul-Hakîk İhsânî, Djenâb Shehâb al-Din, Khalîd Ziya, 'Ali Nâdî, Husein Nâim, Ahmed Rehid. The Oriental trend in the new literature was represented by the *Muawwez Ma'âmûr*.

Two years after taking up his duties Fikret published his principal work: *Rubâ-i şikeste*, "the Broken Lane" (*Edebiyat-ı Şedide Kütüb-Khânisi*, No. 2, Stambul 1314 [1896]) which had an unparalleled success and went through many editions (later with the addition of his later works). In 1317 (1899) he wrote *Sîr* (Mist), his most vigorous poem directed against the despotic rule of 'Abd ul-Hamid. At the present day, it reads rather tamely. After the revolution he published his *Rudjâ*. In 1318 (1900) he wrote the *merhiye: Hemşirem İsm*; in 1322 (1904) on the occasion of the unsuccessful attempt on the life of 'Abd ul-Hamid: *Lahza-i t'ehhîr*; in 1908: *Miller Şarh-ı*. In No. 1 of the paper *Tanin* founded by him he published *Sîr* and *Rudjâ*, which had previously passed secretly from hand to hand. In 1329 (1909) appeared *Doğan kurtu doğdu*, which found whole-hearted approval in a special number of *Fedî-i an*, *Rubâin Dîvânî*, *Khalûkî Dîvânî* (in facsimile in the *Edebiyat-ı Şedide Kütüb-Khânisi*, No. 31). In 1328 (1910) appeared the poem *Kanyagema*, in 1330 a collection of songs for children in *Parmak Hîsâr*: *Shermin*, his last work at all.

The amount of his work is not large but its importance for Turkish literature is unique.

Fikret is now a much disputed personality. While he was praised to the skies in his life-time

and lauded as a classic poetical genius, since his death an attempt has been made to minimise his importance and even to deny that he is a real poet and to describe him as a mere virtuoso and skilful metricist. A reaction has followed his incredibly rapid rise to fame. The following criticism sums up this modern attitude to him: "Fikret is immortal in Turkish literature as a technician, unforgettable as a man, but as a poet perhaps already forgotten".

Like every poet, Fikret is to be studied in his period and milieu, in order to do justice to him. He is a finished master of technique, the creator of the Turkish renaissance, the main representative of the westernising school. The preceding period (Kemal, Hâmid, Ekrem) had abolished the dominion of Persian and Arabic forms but left the Oriental spirit. The task now was to get rid of the Muslim outlook on life and replace it by the western, i.e. French, point of view. For models Fikret took the French, especially François Coppée, Leconte de Lisle and Sully Prudhomme along with Musset, Lamartine, Baudelaire and Verlaine.

He created a new language of poetry, made new rules for rhyme on the principle that rhyme is not intended for the eye, as in the case with Ekrem and 'Abd ul-Hakk Hâmid, but for the ear. With his fine taste and sound judgment, he succeeded in developing the language in spirit and structure on Turkish lines, doing away with linguistic anarchy, turkicising the foreign elements and rhythms, although from the point of view of vocabulary he had no objection to overloading Turkish with Arabic and Persian words and his poems contain many rare non-Turkish words. Fikret did for the language of poetry what Nâmilî Kemal had done for prose. The rules laid down and followed by him are now so generally adopted that they are no longer felt to be innovations. The main object of his attention was language as such, much more than had been the case with other poets. In accuracy of language he resembles Mu'allim Nâdil and surpassed them all in command of language. He recalls to some extent Platen not only in the perfection of his language and the freedom from error of his verse, with which even the opponents of the "Decadence" like Ahmed Midhat could find no fault, but also in the soulfulness of its marble smoothness.

Even in his earliest ghazels his own special characteristics are apparent, although he is still entirely under the influence of the older school. His mastery of language and rhythm developed very rapidly and it is this that distinguishes him from all others and which have made him a model for all other poets.

In contrast to the old school, which made each verse end as a closed unit in itself (which is why, particularly in the ghazal, the verses are so arbitrarily transposable), Fikret makes the sentiment run through a series of verses. His verses have thus a flexibility and naturalness which is still lacking in the verse dialogues composed by Hâmid. The language of his verses endeavours to adapt its melody to the subject matter, which Nefî before him had tried to do. Specially noteworthy is his introduction of the sonnet, which has since been much cultivated in Turkish.

In his metres he is still absolutely quantitative, with the exception of his poems for children. Otherwise the followers of the old school could

not have so readily felt that he was indisputably a poet.

Fikret's was a hypercritical intellect which dealt with the moral, religious and political problems of his time, unswervingly following the voice of his heart and conscience. But he was not a philosopher who could solve the problems of humanity, no metaphysician who could penetrate into the depths of the soul. His mental processes were of a very ordinary, almost trivial nature. His *İnna'at İhtiyatı* and his *Ta'rihi-i Şadim* are typical of the unbelief of his time. In the poisoned atmosphere of 'Abd ul-Hamid's despotic rule and later in the time of the unrestricted and one-sided administration of the young Turks, with his pure personality, with his steadfast confidence in himself, his earnest devotion to duty and his sacred enthusiasm, by his poems he performed a duty to his country nobly so that the appeal was made to the young men of the day: "To thyself be like Fikret, to thy country like Nâmilî Kemal!" As there is something to be learned from every one of his poems, he had a great influence as an educative force on the youth of Turkey. He had a great belief in the value of education.

Tewfik Fikret is a poet although not of the greatness that his contemporaries thought. He lacks the poetic fervour of Nâmilî Kemal, especially in the poems of his second period. The poems in which he scarified despotism, like his fervent *Sir*, which in its day was accepted like a gospel by the young men, now seem colourless and unreal. They are not born of desperation like those of N. Kemal. Fikret also celebrated in his verse the smallest and most insignificant things, going much further than Ekrem, who although he said that everything is poetry, in practice only applied it to flowers, clouds, water, dawn etc. A number of poems which Fikret wrote, following the practice of the day, for pictures in periodicals, were published in the *Ruhû-i Şikvî*. Special mention may be made of the clearly outlined poems characterising Nedim, Nefî, Fuzûlî and Hâmid. That he wrote verse with difficulty and had to struggle with words and matter until he completed a poem, is clear not only from his own confession and the labour and pains that many poems reveal, which takes from their effect as works of art, but also from the not very great volume of his production.

Bibliography: Besides the mentioned works of Tewfik Fikret and his poems scattered through periodicals and anthologies: *İddâm*, No. 6648, 20th August 1915; Brusall Mehmed Tahir, *Osmanlı Muvallifleri*, İstanbul 1333, il. 380; Nuhbet Hâşim, *Millî Edebiyâtı doğru*, İstanbul 1918, p. 159; Rüben Eshref, *Tewfik Fikret*, *Hayâtına dair kâğıtlar*, İstanbul 1919; İsmâ'il Hâbib, *Türk Tefekkürü Edebiyât Ta'rihi*, İstanbul 1340, p. 440—457; Köprülü-zâde M. Fe'âd, *Bugünkü Edebiyât*, İstanbul 1342, p. 324—329; İsmâ'il Hikmet, *Türk Edebiyâtı Ta'rihi*, Baku 1925, p. 713—797; Sâlih Nigâr Keramet, *Fikretin Hayât ve Eşkeri*, İstanbul 1926; İbrahim 'Alâ ed-Dîn, *Tewfik Fikret*, *Büyük Adamlar Serisi*, i., No. 34, İstanbul 1927; Dawl, İstanbul, No. 7, 13; Horn, *Geschichte der türkischen Moderne*, Leipzig 1902; Wl. TEWFIK PASHA, Khedive of Egypt (1879—1892), was born on December 15, 1852 as the eldest son of the Khedive Isma'il Pasha. He was educated in Egypt and began his political career at the age of 19 as president of the Council of State (*al-madjlis al-ikhtisari*). On March 10, 1879, after Nubar Pasha had resigned, he was appointed Prime Minister by his father. In his cabinet, as was the case in the former, an Englishman was Minister of Finance and a Frenchman Minister of Public Works. But already on April 9 of that year, Isma'il, by a kind of "coup d'état", dismissed this new cabinet and Sharif Pasha [q. v.] became Prime Minister. Soon afterwards political difficulties led to Isma'il's deposition by the Sultan (June 26) and Tewfik followed him on the throne according to the law of succession promulgated in 1866.

At the very beginning of his reign Tewfik Pasha had to face considerable difficulties. The draft of a constitution, submitted to the new Khedive by Sharif Pasha, shortly after his accession, was disapproved and Sharif tendered his resignation (August 18). For a short time Tewfik became his own Prime Minister, but soon Riyad Pasha was appointed to that post, to keep it for about two years, till the outbreak of the army rebellion of 'Arabi Pasha. In the meantime the "dual control" of England and France over finance was re-established and in 1880 Egypt seemed to have entered a new prosperous period. In January 1880, however, occurred the first troubles in the army, which led to the nationalist revolt of September 9 on the return to power of Sharif Pasha; 'Arabi Pasha [q. v.] soon appeared as the most prominent man in the nationalist movement. The Khedive had no strong party on which he could rely to keep up his authority against this movement, and likewise the position of Egypt's sultan, the Turkish Sultan and natural protector of the Khedive's government, was too weak to be of any importance. So, in the period that followed, the Khedive could not but play a passive part and allow the nationalists to take the measures they thought fit. One of these measures was the convocation of a national assembly of notables, but although at first the nationalist leaders showed moderation, the international financial troubles brought about at last a serious anti-foreign feeling in the country, which culminated in the massacre in Alexandria (June 11, 1882), followed on July 17 by the bombardment of that town by the British fleet. The Khedive with his government had already fled from the capital to al-Ramla near Alexandria, while 'Arabi, now in open revolt against the ruler, retired to Kafr-Dawar, a few miles distant. This was the most difficult time of Tewfik Pasha's reign; he had to choose between the nationalists and foreign intervention and, at the same time, the Sultan contemplated his deposition and the installation of his uncle 'Abd al-Halim in his place and even the despatch of an army to Egypt, from which he was prevented by the attitude of the European powers. At last the nationalist insurrection was crushed by the military intervention of England (battle of Tell el-Kebir on September 13, 1882), followed by the military occupation of the country. After the battle, Tewfik had returned to Cairo, but the only possible way, in these circumstances, to keep his throne was now to fall in with the wishes of the occupying power. In fact, the Khedive's government, again presided

over by Sharif Pasha since August 1882, was now quite impotent. All the measures after the English occupation, taken with regard to the administration of Egypt, the new Organic Law of May 7, 1883, the international regulation of the financial administration in 1884, had to be accepted. There was, however, a loyal collaboration between the Khedive and the British resident with the title of Consul General, the later Lord Cromer, in the difficult years that followed. One of the most disastrous events in this time was the Mahdist rebellion in the Sudan and the abandonment of this province by Egypt, much against the personal wish of Tewfik, after the vain struggle to defeat the Mahdi (fall of Khartoum in January 1885). It was only towards 1890, that a more prosperous time announced itself for the country; soon afterwards, on January 7, 1892, Tewfik Pasha died unexpectedly in his palace at Heliwan, to be succeeded by his eldest son 'Abbas Hilmi.

Tewfik Pasha is said not to have had a character strong enough to face the overwhelming political difficulties; especially the weak attitude of himself and his government towards the first manifestations of rebellion in the army seems to have led inevitably to the complete loss of control over the course of events. On the other hand this Khedive has left the reputation of a mild and enlightened personality, who was esteemed by all those who had personal intercourse with him, amongst them Lord Cromer and other European statesmen who have given descriptions of him. At the age of 21 he had married a lady belonging to the Khedivial family and he remained strictly monogamic during all his lifetime.

Bibliography: Djirdji Zaidin, *Mashahir al-Sharq*, Cairo 1910, I. 48 sqq.; Lord Cromer, *Modern Egypt*, London 1911, esp. p. 715 sqq.; A. Hasenclever *Geschichte Ägyptens im 19. Jahrhundert*, Halle a. S. 1917, esp. p. 198 sqq. (J. H. KRAMERS)

TEZKARA. [See TADHIKIRA.]

THA, the name of the fourth letter of the Arabic alphabet with the numerical value 500. Its form is a horizontal stroke, curved upwards at its ends, with three dots above it. By these three dots it is distinguished from the third letter of the alphabet, *ṭā* [q. v.], which has two dots only. This similarity explains also the place of *thā* immediately after *ṭā*.

Of the other Semitic alphabets it is only the South-Arabic which has a special form for the sound *thā*.

Etymologically *thā* corresponds to Canaanitic *ṭ*, Aramaic *ṭ* (early-Aramaic *ṭ*), Assyrian *ṭ*, Aethiopic *ṭ*. In Arabian its place is sometimes taken by *f*.

(A. J. WERNICK)

AL-THA'ALIBI, Nisba of three Arab authors:

1. **ABU MANṢUR 'ABD AL-MALIK B. MUHAMMAD B. ISMA'IL**, one of the most fertile intellects of the 10th (10th) century, of whose life we only know that he was born in 350 (961) in Nisibis and died in 429 (1038). His numerous compilations, in which he deals by no means scrupulously with the intellectual property of his predecessors and repeats himself frequently, deal mainly with the poetry of his time but also with lexicology and rhetoric.

His most famous and, for us most important, work is the *Yatimat al-Dahr fi Maḥasin al-Aḥl al-Aqr* on the poets of his own and the preceding

generation, arranged under countries, in the main an anthology with biographical notes as a rule very brief. Like most works of its kind, it went through several recensions as may be seen from Yaḥyā's statement in the *Irshād*, ii. 320 that he read the story given in the Damascus edition, iii. 33, at Cairo in a copy given by the author to Yaḥyā b. Aḥmad b. Muḥammad, while it is not found in the usual texts. To the manuscripts given by Pertsch, *Verz. der ar. Hss. zu Göttingen*, No. 2127 and *G. A. L.*, i. 284 may now be added those in Paris (Blochet, *Catalogue des mss. ar. des nouvelles acquisitions*, Paris 1925) No. 6442, in Cambridge (E. G. Browne, *Handlist*, 1900) No. 1224 and in Nicholson's possession (*J. R. A. S.*, 1899, p. 912), as well as an anonymous synopsis in the Brit. Museum Or. 7743 (*Descriptive List*, p. 61); to the printed edition (Damascus 1304) may be added the index of Mawlawī Abū Mūsā Aḥmad al-Ḥaḥḥ entitled *Fa'idat al-'Aḥr*, a comprehensive index of persons, places, books etc. referred to in the *Yatimat al-Dahr*, the famous anthology of Tha'ālībī, Calcutta 1915, *Bibl. Ind.*, N. S., No. 1215. The first continuation of the work was written by the author himself and entitled *Tatimmat al-Yatima*, quoted by Yaḥyā, *Irshād*, vi. 411 and in the Paris mss. No. 3308 (s. Mirzā Muḥammad on Samarkandī's *Caḥār Maḥāla*, p. 129; on a ms. in Aleppo s. *Revue de l'ar. de Damas*, vii. 529-535), in other mss. like the Berlin (s. *G. A. L.*, loc. cit.) it is simply called *Dhail*; s. also al-Badr (Tunis 1340), i. 2, 38 seq. A further continuation in part coinciding with the *Tatimmat* was written by al-Bukhārī (q.v.). An anthology arranged under subject matter is the *Kitāb Aḥṣān mā zama'ra* which is much larger in the ms. of the Köprülü library (s. Rescher, *M. S. O. S. Ar.*, iv. 164) than in the printed edition of the ms. in the Khedivial library in Cairo (Cairo 1324), transl. by O. Rescher in *Et-Ta'ālībī*, Heft 3, Leipzig 1916. Subsidiary to it is the *Kitāb man ḡāba 'anhu 'l-Muṭrib*, the autograph of which is in the Iḥlāl mosque in Istanbul (No. 1946, cf. Rescher, *M. O.*, vii. 105). It is printed in the collection *al-Taḥfā al-saḥiyya* (Istanbul 1302), p. 230-294 and Bairūt 1309, transl. by Rescher in *M. O.*, xvii. 31-198; xviii. 81-109. Similar anthologies, in which however the poet's names are not given, are the *Kitāb al-Bayt al-Kabīr*, Cairo 1326, the *Kitāb al-Muntaḥal*, pr. with commentary by Aḥmad b. 'Alī as *al-Muntaḥal fī Tawāḥḥim Shu'arā' al-Muntaḥal*, Alexandria 1321, and the *Kitāb Tarā'if al-Turaf* in the Aya Sofya mss. 3767 (*Z. D. M. G.*, lxiv. 504), Köprülü 1336 (*M. S. O. S. Ar.*, xiv. 176) and Top Kapu Serai (*R. S. O.*, iv. 696). For the especial use of secretaries he prepared the *Kanz al-Kutub*, 2,500 passages from 250 poets, s. Flügel, *Die ar. etc. Hss. der K. K. Hofbibliothek zu Wien*, No. 242; on this the Turkish poet Lāmī wrote a commentary, s. Toderini, *Lit. Turca*, ii. app. xxxiv. Here also we may mention his prose versions of the verses in the anthology *Mu'nis al-Udabā'* of an unknown author which he prepared by command of the Kh'arismshāh Abū 'l-Abbās entitled *Nazḥ al-Naḥm wa-Hall al-'Iḥd min mukhṭar al-Sh'r almuḥḥi yaḥṣamū 'alāhi 'l-Kitāb al-mutarajim bi-Mu'nis al-Udabā'*, pr. Damascus 1300, Cairo 1317.

A second series of his works belong to the field of entertaining literature but also contain all kinds of useful information especially historical

anecdotes. Among these are the *Kitāb Laṭā'if al-Ma'arīf*, ed. P. de Jong, Leyden 1867, the *Kitāb al-Farā'id wa-'l-Kalā'id* or *Kitāb al-'Iḥd al-nafis wa-Nuḥat al-ḥāl*, pr. Cairo 1317 (on the margin of the *Nazḥ al-Naḥm*, 1324, the *Kitāb al-Mubḥiḥ* (or *al-Mubḥiḥ*), pr. Istanbul n. d., Cairo 1324 and the two works on praise and censure of things, that old topic of school adab entitled *Kitāb al-Laṭā'if wa-'l-Zarā'if* and *Yawāḥiṭ al-Mawāḥiṭ*; to the MSS. quoted in *Cat. codd. ar. bibl. ac. Lugd. Batavæ*, No. 455 may be added: Paris, *op. cit.*, No. 5934, Petersburg, No. 857, Nicholson, *J. R. A. S.*, 1899, p. 913, Haupt, No. 268. The two books are worked into one by an unknown hand in the Leyden ms. No. 456 and by Abū Naḥr Aḥmad b. 'Abd al-Razzāk al-Makḥḥī: the latter was lithographed under the title of the former at Baghdad 1282 and printed as the *Qamā'a fī-mā байна Kitāb al-Tha'ālībī* etc., Bulaḥ 1296 and Cairo 1300. Finally must be mentioned the *Kitāb Ghurar al-Balāgha wa-Turaf al-Barā'a*, MS. in Berlin, No. 8341, or *Ghurar al-Balāgha li-'l-Naḥm wa-'l-Naḥr* (thus in Köprülü MS. 1290, s. Rescher, *M. S. O. S. Ar.*, xiv. 197) or with the addition *wa-'l-Barā'a* in the Brit. Mus. 7758 (*Descriptive List*, p. 63), another MS. also in Nicholson's possession (*J. R. A. S.*, 1899, p. 913). Wrongly ascribed to him in the *Khams Rasā'il*, Istanbul 1307, and on the margin of the *Nazḥ al-Naḥm*, Cairo 1317, are the *Kitāb al-Amḥāl*, Cairo 1327, the *Kitāb al-Farā'id wa-'l-Kalā'id* of al-Aḥwālī (1544 = 1053) and in the Gotha MS., No. 1873 a *Maḥāsin al-Maḥāsin*, s. Z. S., iii. 78, 254.

He also compiled several collections of proverbs and sentiments, notably the *Kitāb al-Tamaththul wa-'l-Muḥādara* (to the MSS. given in the *Cat. Lugd.*, No. 454 add Paris, No. 6019), and the *Kitāb aḥṣān Kalīm al-Naḥl wa-'l-Saḥāba wa-'l-Tābbīn wa-Mulūk al-Diḥlīyya wa-Mulūk al-Islām wa-'l-Wuḥarā'* wa-'l-Kutub wa-'l-Balāgha wa-'l-Ḥikmah wa-'l-Ulamā' (*Cat. Lugd.*, No. 453; Paris, No. 8201, 2), from this is taken *Talibī syntagma dictorum brevium et acutorum*, ed. J. J. Ph. Valetton, Leyden 1844; this work was later included in the larger *Kitāb al-'Iḥd wa-'l-Iḥd*, pr. in *Khams Rasā'il*, Istanbul 1301 and Cairo 1897. To the same class belong the *Kitāb Ḥiyat al-Muḥādara wa-'l-Uḥd al-Muḥādara wa-Ma'idin al-Muḥādara*, Paris, No. 5914 and the *Kitāb Laṭā'if al-Saḥāba wa-'l-Tābbīn*, cf. *Selecta e Tha'ālībī libro facieturum*, ed. P. Cool in the *Chrestomathy to Roorda's Grammatica arabica*, Leyden 1835. Cheikho published another collection of wise thoughts in *Machriq*, v. 831-834. Finally he also compiled an *adab* work called *Mu'nis al-Waḥid* (in Ḥāḥḥī Khālifa, No. 13454) which seems to survive in the Cambridge MS. (Browne, *Suppl. Handlist*, No. 1287, while the text publ. by Flügel entitled *Der verante Gefährte des Einsamen* is only a portion of the *Muḥādarat* of Raghīb al-Isfahānī; s. Gildemeister, *Z. D. M. G.*, xxxiv. 171. According to Ḥāḥḥī Khālifa, No. 7343 he also wrote a mirror for princes entitled *Strat al-Mulūk* or *al-Kitāb al-mulūk*. It still has to be investigated whether this survives in the *Sirāḥ al-Mulūk*, an ethical work ascribed in the Brit. Mus. Or. 6368 (*Descriptive List*, p. 64) to Tha'ālībī; a counterpart of this is the *Kitāb al-Wuḥarā'*, in Gotha, No. 1886. Shorter *adab*-works are the *Kitāb Mir'at al-Murū'at wa-'l-Aḥl al-ḥasanāt*, pr. Cairo 1318 and

the *Kitāb Bard al-Abbūd* f. 'A-dūd, Samsul 1301.

A third group comprises his philological works in the narrower sense. The most famous of them is a work on Arabic synonyms composed very late in life to which he first gave the title *Sūm al-Adab* f. 'al-mūl al-'Arab. It consists of two parts, synonyms in the narrower sense, entitled *Asrār al-Lughā al-'arabiya wa-khawāṣṣihā* and notes on style entitled *Maḡāzī Kalām al-'Arab bi-Rusūmihā wa-mā yata'allahu bi 'l-Naḥw wal-'Irāb minhā wa 'l-Istiqṣād bi 'l-Kur'ān 'alā akḥarihā*; the bulk of this second part is taken word for word from the *Kitāb Fiḥ al-Lughā* of Aḥmad b. Fāris. In this oldest form the work only exists in the Leyden MS., No. 66 and Berlin, No. 7032—7033. He later published the first part separately as *Fiḥ al-Lughā*; in this form it attained very great popularity, cf. *Proverbia et specimen lexicæ synonymici arabici* Atholli, ed., verit., notis illustravit J. Seligmann, Upsala 1863; Fleischer, *Kleine Schriften*, iii. 152—166 and the printed editions Paris 1861 (ed. R. Dahdah), Cairo 1284, 1317 (with the original form *Asrār al-Lughā* on the margin), 1325, Bairūt 1885 (bowdlerized). In the Cairo editions 1284 and 1325 the second part of the original version is also printed as the *Sirr al-'Arabiya fī Maḡāzī Kalām al-'Arab wa-Silātihā wa 'l-Istiqṣād bi 'l-Kur'ān 'alā akḥarihā* also printed as the *Sirr al-Adab fī Maḡāzī 'Ulūm al-'Arab* along with Maiddīn's *al-Samī fī 'l-Aṣmā* lith. in Teheran n.d. and to be found separately in the Paris MS. No. 5989 with the error in the title *Maḡāzī* for *Maḡāzī* also found elsewhere (e.g. Ḥādīdī Khalifa, ed. Flügel, iv. 590). The work was put into verse by an unknown author in 742 (1341) as the *Nāṣir Fiḥ al-Lughā*, in the Leyden MS. No. 67; cf. Weijers, *Orient*, i. 360 *sqq.* In 400 in Nisābūr he wrote a handbook of Rhetoric with special references to Metaphor for the Khwārmīshāh Ma'mūn b. Ma'mūn, which in the MSS. is sometimes called *al-Kifāya fī 'l-Kināya* (so Paris, No. 5934), sometimes *al-Nihāya fī 'l-Tarīq wa 'l-Kināya* (so Brit. Mus., Suppl. No. 1110, 1), sometimes simply *al-Kināya wa 'l-Tarīq* (so Berlin, No. 7336). It has been printed under the last named title at Mecca 1301 and Cairo 1326 along with al-Djurdjānī's *al-Muntakhab min Kināyāt al-Uḍabā' wa-Iḥwāt al-Bulaghā'*. A collection of elegant Arabic expressions is the *Kitāb Siḥr al-Balaghā wa-Sirr al-Barā'a* (to the MSS. enumerated in *G. A. L.*, i. 285, No. 7 may be added Cairo (see *Fihrist*, iv. 183) and Paris, No. 6724, from which extracts have been printed in Samsul (Reuther, *Vers.*, i. 32, 3). Finally he compiled a collection with annotations of constant genitive combinations entitled *Ṭimūr (Thamar) al-Kalūb 'l-Muḡāf wa 'l-Manūb*, which he dedicated to the Amir 'Uḡaldallāh b. Aḥmad al-Mikālī (d. 436 = 1044); to the MSS. in *G. A. L.*, i. 285, No. 9 add Paris, No. 5942, Cambr. Suppl., No. 354, and Brussels B. K. O., vii. 81, pr. Cairo 1320. A supplement is the *al-Tadwīl al-marḡūb min Thamar al-Kalūb*, which collects the names of famous men, in the Paris MS., No. 6029. A synopsis entitled *Imād al-Balaghā* was composed by 'Abd al-Ra'ūf al-Munāwī (d. 1031 = 1622); cf. *Codd. ar. Hbl. reg. Hafn.*, No. 206; *Revue de l'az. ar. de Damas* vii. 574; *Fihrist Dār al-Kutub al-Miṣriya*, iii. 3; *Z. D. M. G.*, lxxviii. 855 (on a MS. in Brussels). It was put into alphabetical order by Muḥ. Amīn al-Muḥibbī († 1699) entitled *Mā yu'awwad 'alāthī fī*

'l-Muḡāf wa 'l-Manūb Iḥāṭi; MSS. in Cairo, *Fihrist*, iii. 285; Top Kapu, No. 2455; *'Ahl*, No. 2247 (*R. S. O.*, iv. 727; *M. F. O. B.*, v. 496), Aya Sofia, No. 4136, *M. O.*, vii. 132.

Bibliography: Ibn Khallikān, *Wafayāt*, Bulak 1299, No. 354; al-Damiri, *K. al-Hayawān*, i. 163; Wüstenfeld, *G. G. A.*, 1837, p. 1103, No. 15; do., *Geschichtsschreiber der Araber*, No. 191; *G. A. L.*, i. 284—286.

2. ABD MANṢŪR AL-ḤUBAIN B. MUḤAMMAD AL-MARḠHANI (from Marḡhan in Ḡhūr, Afghānistān), an Arabic historian of whom we only know that he dedicated his work, *Ḡhūr al-Siyar*, to Naḡr, brother of Maḥmūd of Ḡhazna who died in 412 (1021). It gives the history of mankind from Adam down to Maḥmūd Subuktegin. The first part is in Samsul in the Ibrāhīm Pāshā library, No. 916 and in Paris No. 5053. Zotenberg published the history of the Persians from it (*Histoire des rois des Perses*, Paris 1900); in the introduction he sought, without convincing reasons, to show that it was written by the better known man of the same name (No. 1). This part of the book is specially valuable because it gives the sources used by Firdawsi for his *Shāhnāme* in many places more accurately than even Tabari. The author apparently translated fairly literally the book of kings prepared in Persian about 950 by four men for the ruler of Tūs, Abū Maṣṣūr Muḥammad b. 'Abd al-Razzāk but he also used Tabari, Djawīdī and other Arabs quite uncritically. Of the four volumes which accords to Ḥādīdī Khalifa No. 8592 (ed. Flügel, iv. 319, where he is wrongly called al-Marṣūṭ) only one survives in the Bodleian (d'Orv., x. 2). This covers the period 745 to 158 A.H. It is a very laudable endeavour to cast off the fetters of the purely chronological arrangement of Arab historiography, and give history in its psychological setting. From this work Houtsma published the account of Bihārūd, *W. Z. K. M.*, iii. 30—37.

Bibliography: Th. Nöldeke, *Das iranische Nationalepos*, p. 41 *sqq.*; Caetani, *Un manoscritto arabo non identificato della Bodleiana in Oxford, il "Ghurar al-Siyar"*, in *Centenario della nascita di Michele Amari*, Palermo 1910, ii. 364—372. An accurate catalogue of contents by Gabriele in *R. R. A. L.*, ser. v., vol. xxv., p. 1138 *sqq.*, who considers it as proof of the identity of 2 and 1 that the explanation of the name *al-Ḥimūr* for Marwān II is the same in the *Ḡhūr* and in *Ṭimūr al-Kalūb* (and in *Laṭā'if al-Ma'ārif*, p. 30, see v. Miik in *W. Z. K. M.*, xx. 310).

3. 'ABD AL-RAḤMĀN B. MUḤAMMAD B. MAḤMŪD AL-DJAFARI AL-DJAZ'IRI, North African theologian, b. in Algiers 788 (1386), studied from 802 (1399) in Bidjaya, Tunis and Cairo, made the pilgrimage from there, returned to Tunis where he died in 873 = 1468 (so his tombstone, while Aḥmad Bāhā gives 875). His principal work is the commentary on the *Kur'ān* finished on 25th Rabi' 1, 833 (Dec. 23, 1420) entitled *al-Djāwāhir al-ḥiṣān fī Tafṣīl al-Kur'ān*; to the mss. given in *G. A. L.*, ii. 249, 3, 1 may be added Paris, No. 5283 and 5379; Escorial 2, No. 1324; Fās Kāzaw, No. 126/27; Algiers, No. 132/37. Of his works an eschatology has been printed, *al-'Ulūm al-fakḥira fī 'l-Naḡar fī Umūr al-Aḥkira*, Cairo 1317—1318 and a portion of his ethics *Djāmi' al-Ummahāt fī Akḥām al-'Ibādāt* entitled *Nubḡha min al-Djāmi' al-kabir*, i. l. 1911. To the list of his minor works in *G. A. L.*, i. c., may be added a

Riḍā on Definitions in Tübingen (Seybold, *Verz.*, No. 19, 2) and *al-Anwār al-muḥīṭa al-ḥamīd* aḥīn al-Shar'ī wa 'l-Haḥīṭa, Fās, Ḥaraw., No. 610.

Bibliography: Ahmad Bābā al-Timbaktī, *Nail al-ibṭihādī fī Taṭrīḥ al-Dihādī*, lith. Fez 1317, p. 148-151; Muhammad al-Hifāwī, *Tārīf al-Khalaf bi-Riḡāl al-Salaf*, Cairo 1324 (1906), p. 63-68; A. Devoux, *Les édifices religieux de l'ancien Alger*, Algiers 1870, p. 37-48; Burgès, *Complément à l'histoire des Beni Zeyan*, p. 394-396; Cherbonneau, *Essai sur la littérature arabe au Soudan*, in *Annuaire de la société archéologique de Constantine*, ii., 1855, p. 45-46; R. Basset, *Giorn. d. soc. ar. it.*, x. 54.

(C. BROCKELMANN)

THĀBIT b. KURRA, mathematician, physician and philosopher, one of the greatest figures among the promoters of Arab learning in the third (ninth) century. Born in 836 (826?) at Harrān, the ancient seat of the worship of the planets, he belonged to a prominent family settled there, which produced a long series of scholars. The later names in his genealogy (Thābit b. Kurra b. Zahrūn [Marwān] b. Thābit b. Kaṭīr b. Māriūs b. Mālaghriyūs [Μαλαγγριος]) take us back to a time when the Greek character of the life of the town was seen in its nomenclature, although it is not safe to suppose without further enquiry that Thābit was descended from Greek colonists. The biographers record that Thābit was originally a money-changer. In any case an inherited fortune enabled him to acquire a thorough philosophical and mathematical training during a stay in Baghdad. His liberal philosophical opinions brought him into conflict with the pagan community of his native town. Brought before the religious court, and compelled to recant his philosophical heresies, he escaped further molestation by moving to the village of Kafartūḥā near Dīr. Here he is said to have met Muhammad b. Mūsā b. Shākir on his return journey from Byzantium to Baghdad and the latter, recognising his mathematical talent and linguistic ability, took him with him to Baghdad, to recommend him to the Caliph Mu'taḍid, who appointed him one of his court astronomers. In Baghdad Thābit spent the greater part of his life translating and expounding Greek mathematicians, composing his own mathematical works, in philosophical studies and the practice of medicine, and died there at the age of 67 on Feb. 18, 901.

The great prestige which Thābit enjoyed at the Caliph's court benefited the Sābians in Harrān and other places. The Syriac writings which Thābit — probably while still in Harrān — wrote on the doctrine and worship of his co-religionists, were still known in part to Barhebraeus (d. 1286) but seem now to have disappeared. They would now be of the greatest value for the religious history of late Hellenism. Lists of Thābit's Arabic works are given in Chwolson, Suter, Steinschneider, Brockelmann and Wiedemann in the works quoted below. Much that is valuable and worth publishing still exists in manuscript. A survey is given by H. Suter, *Mathematiker und Astronomien der Araber*, p. 36-199. E. Wiedemann in *Beiträge*, lxiv., *Über Thābit ben Qurra, sein Leben und sein Wirken*, S. B. P. M. S., Erlangen 1920-1921, p. 210-217, has given a list of Thābit's writings, classified under subjects, which is useful as a preliminary survey. The works of Thābit which have been edited or translated are given below in the *Bibli-*

graphy. On Sinān b. Thābit and other later members of the family see the full treatment in Chwolson, *Die Sābier*, i. 566-610.

Schoy, *Die trigonometrischen Lehren des ... al-Birūnī*, Hanover 1927, p. 74-199.

(J. RUSKA)

THĀBIT, whose personal name was 'ALĀ' AL-DĪN, an important Ottoman poet of the transition period (mainly under Sultan Ahmad III [1703-30]) with a distinct style of his own, quite outside of the usual. Born in Ūtica in Bosnia about 1060 (1650) of humble origin and of Serbo-Croat parents, he was related to the poet Wuslat 'Alī Bey Pašić of Ūtica and Māhīrī 'Abd Allāh of Serrajevo. He died in Constantinople in 1124 (1712-13). He adopted a theological career and went to Constantinople at the end of his studies, where as a result of his early developed poetical talent he soon became famous and gained patrons but also the hostility of many of his colleagues. As a result of the prevailing corruption and

nepotism in the appointments to public offices, in spite of his acknowledged ability he never succeeded in rising higher than *mülâzim* which rank he reached in 1089. He therefore resigned from the *Müderrişlik*, which alone formed the stepping-stone to higher offices and adopted a judicial career, which took him to Corin, Burgas, Adrianople (1097), Kassa, Rodosto, Serajevo (1112), Konia (1117), Diarbekir (1119—1121 to which he had been particularly anxious to go). As the tenure of office was as a rule only one year, and after each period there was a considerable period of enforced inactivity (*‘asf*) without a pension, he had continually to struggle with financial worries and difficulties, especially as he was ashamed to enrich himself by irregular means. His high moral character was recognised even by his enemies. At the same time he suffered heavy blows from fate; he lost all that he owned through the outbreak of war; a portion of his family was massacred and others carried off into captivity. When he died in 1124 he had been for some considerable time without a post.

Thäbit had an impediment in his speech which hindered his advancement in his official career; he was however all the more fluent with the pen. Various peculiarities of language reveal his non-Turkish origin. His command of vocabulary and language is very powerful. His Turkish vocabulary is one of the richest and most valuable in the whole of Turkish literature, especially for its idioms. One of his characteristics is the frequent use of proverbs and popular sayings, even the most trivial ones. His language surprises us with its youthful vigour, power of expression and its wealth of bold imagery.

In spite of his reputed membership of the Melâmî-Bairâmî order and his not infrequent use of Sûfî nomenclature, there is nothing of the mystic in him. His feeling for the real is very pronounced, a feature he has in common with other Ottoman poets. What gives him a note of his own and raises him high above the level of other Turkish poets is the manner in which his own individuality comes out in his poems. He was able to invigorate the tonelessness of Turkish poetry, usually abstract to the verge of desperation, by colouring it with his personality which breaks out everywhere and fills it with the spirit of a warm-blooded man. In spite of the fact that, with his remarkable jugglery with words, he does not reveal great depth of feeling, he is yet a true poet. But what always won hearts and secured him a certain popularity is his inexhaustible humour and his sarcasm, which compel laughter and are not found in a similar form in other Ottoman poets. He is always full of jokes and witty remarks and punning allusions and double entendres, not always easy to understand. The strong contrasts which follow in rapid succession are typical of him: the simple and involved, even tortuous, beautiful and coarse, pious and frivolous, even obscene.

Although he is not a popular poet in the proper sense of the word (there are for example no *‘arâzî* by him and his great learning makes his poems not easy to understand) he was much admired at all times in many circles. The number of manuscripts is large as his *Diwân* was often copied. The fact that he has not been printed is probably due to the large number of manuscripts available. Modern Turkish literary criticism has now,

but not quite justly, rather turned against him.

His works consist of a *Diwân* with 37 *kapitulas* (incl. his *Mîrâdîyya*, which is said to have been lithographed, and 2 *na‘îs*), about 364 *ghazel's* (the *ghazel's* are the weakest part of his poetry), a few *hikmet's*, riddles, 60 quatrains, 100 *misfredâs* and about 50 chronograms; also of a number of *mehtemû's*: A *Zafer-nâme*, composed for Sellâm Girey (pr. Stambul 1299 and 1311); *Edhem u-Humâ* (*Edhem-nâme*); *Berber-nâme*; *Dero-nâme* (*Hikâyet-i Khodja Fezâd*, *Hikâyet-i Donlu Dervî*) and *Hikâyet-i ‘Amr u-La‘lâ*.

Bibliography: Hammer-Purgstall, *Geschichte der osmanischen Dichtkunst*; Gibb, *A History of Ottoman Poetry*, iv.; Brusaî Mehmed Tâhir, *Othmanî Mîrâdîyyet*, Stambul 1335, ii. 118; esp. Jan Kypka's monograph, *Beiträge zur Biographie, Charakteristik und Interpretation des türkischen Dichters Sübî*, Prag 1924, where the pertinent *Teakere* and other literature is fully discussed. (TH. MENZEL)

THAKİF. On the eve of the Hijra, the tribe of Thakif, settled in the district of Tâ'îf, claimed a common ancestor called Thakif. His real name is said to have been Kâsî and Thakif a surname. A malicious tradition has identified this Kâsî-Thakif with Abû Righâl, the traitor, who guided the Abyssinian army from Abrahâ to Mecca, and whose tomb used to be stoned on the road from Tâ'îf to Mecca. It was when they wished to ascend beyond this eponymous ancestor that divergences began. Some connected Thakif with Yâd, others with Hawâzin [q. v.]. Genealogists were still hesitating between these two schemes in the second century A. H. Most of the Thakifis declared themselves for the descent from Hawâzin. This was in order to connect themselves with the group of this name which was itself a subdivision of the mass of tribes connected with Kâsî. Their interests, their geographical position suggested this opportunist solution to the Thakifis in a district inhabited by the Banî Hawâzin, where the influence of the latter was predominant. Only among the *Ahlâf* of Tâ'îf did the theory of Yâdî descent have any partisans.

The town of Tâ'îf was the urban centre of Thakif. The tribe seems to have included only a small proportion of nomads. As for the town and the surrounding gardens, it contained the fertile country villages of Waht, of Lyya and others which stretched in the direction of the Yemen. Its Islamisation took place at the same time as that of Tâ'îf. It shared the reputation for trickery of the Tâ'ifis, took part with them in the conquests of Islâm, above all in the 'Irâk, where the foundation of Baṣra was due to them. Like them, the tribe rallied readily to the Omayyad régime, an attitude which earned them the hostility of the 'Abbâsîd rulers and also that of the 'Abbâsîd and 'Alîd traditionalists.

Meanwhile a slight movement of the tribe towards the south took place, all along the farms which they were developing in this direction. From the third century A. H. small numbers of Thakifis are found as far as the Yemen, in the Banî Hamdân country and in the district of Naḍrân, on intimate terms with the tribes of the country. It is thus that we find them in the Yemen supporting the Zaidî restoration of the 'Alîd al-Hadi lîa 'î-Hakî, studied by Van Arensdonk. For the rest the history of the tribe is not distinct from that of Tâ'îf, the

centre round which the majority of the tribe remained settled.

At the beginning of the sixteenth century, the traveller Burckhardt described the "Thakīf" as a "very powerful tribe; it possesses the fertile country round Taif, its gardens, and other sites on the eastern slopes of the mountains of the Hedjaz. A great many Thakīf have fixed abodes. Half the inhabitants of Taif belong to this tribe; others continue to live in tents. The Thakīf have very few horses and camels but they are rich in sheep and goats.... They can turn out two thousand men armed with rifles; they defended Taif against the Wahhābīs, in 1803. One of the last European visitors to Taif, Mr. Philby, found them on the slopes of mount Karā, between Taif and Mecca, where they devote themselves to agriculture.

Bibliography: Hamdānī, *Qizirāt al-'Arab*, ed. D. H. Müller, p. 53, 91, 119, 120, 121, 136; Burckhardt, *Voyage en Arabie*, transl. by J. B. Eyries, Paris 1835, iii. 309–310; Philby, *The Heart of Arabia*, London 1922, i. 189, 194. For the rest of the bibliography of the article ṬĀ'IF. (H. LAMMENS)

THĀLAB, ABU 'L-'ABDĀS AHMAD B. YAHYĀ B. ZAID B. SAYYAR (or: YASĀR) al-SHAIDĀNĪ (= Mawālī of the Banū Shāidān), an Arab grammarian, although regarded as of the "Kūfa" school (see below), spent his life in Baghdad. Born in 200 (815), at the age of 16 he began to devote himself to the study of the Arabic language. Abū 'Abd Allāh b. al-A'arabī, al-Zuhair b. Bakkar were among his teachers. He also studied with great enthusiasm the works of al-Kisā'ī and especially of al-Farrā'; he is said to have known all the latter by heart at the age of 25. Later he himself taught publicly and privately and in this capacity received a considerable salary from the court at the suggestion of the vizier Ismā'il b. Balbul. His best known pupils were Abū Bakr b. al-Anbārī and Abū 'Umar al-Zāhid. For thirteen years he was also private tutor to the son of Muḥammad b. 'Abd Allāh b. Tāhir, governor of Baghdad. His scientific activity also found expression in a number of publications of a philological, especially grammatical, nature. Of most only the titles have survived. Only two of them (*Kitāb al-Faṣḥ* and *Kawā'id al-Sha'ir*) have been printed. Thālab's hearing became very defective in his old age. This defect was the cause of an accident which he suffered on his way home from the mosque one day, of the results of which he died in Jumādā I 291 (904). As he had led a simple life, he was able to leave his daughter a considerable fortune. His extensive library was purchased after his death by the vizier al-Ḳāsim b. 'Ubayd Allāh.

The later Arab grammarians class Thālab as belonging to the so-called Kūfa school, which is said to have reached its zenith and also its end in him. He himself indeed declared he was an ardent follower of al-Farrā', the Kūfan xar' ἑξάρχης; he also waged a constant feud with al-Muḥarrad, his famous contemporary of the "Baṣra" school. But, as G. Weil has shown, one cannot really talk of a regular school of "Kūfan" grammarians; when its alleged representatives are considered to form an independent group, this is simply an invention of the later grammarians, who considered themselves the natural continuers of the Baṣra tradition and thought that the state of affairs in

grammatical study with its opposing schools in their time must also have existed in the past. Thālab no doubt continued the tradition of al-Farrā' but he was no more able than the other "Kūfians" to do more to establish his grammatical method, still less to develop it. His interest also was too much devoted to accumulating material to be memorised and to acquiring a knowledge of special linguistic forms, to enable him to develop a fruitful activity in the field of method.

THĀLABA, a common old Arab proper name (more rarely Thālab) and eponym of a number of subdivisions of the larger tribal divisions of ancient Arabia. Thus we have the Thālabā b. Uḡāba of the great tribe of Bakr b. Wā'il (Yamama as far as Bahrain); the Thālabā b. Sa'd b. Dhuhayn of the tribe of Ghatafan in the Nejd region; the Thālabā b. Yarbū' of the tribe of Tamim; the Thālabī Tayi clans of the Tayi [q.v.]. A Thālabā b. 'Amr b. Mudjalid is mentioned as the first pylarch of the Ghassanid dynasty. The "Roman Arabs of the house of Thālabā" mentioned by Joshua Stylites as taking part in the wars with the Lakhmids are either of Ghassanid origin (Nöldeke) or belong to the Bakri Thālabā (Rothstein, *Die Dynastie der Lakhmiden in al-Hira*). In the south Arabian tribes we have Azdi and Kināni Thālabā. A Thālabā clan of the Aws in Yathrib and a Thālabā b. al-Fityūn (in Caussin wrongly Ghutayūn) of the Jewish Kainukā may also be mentioned. A member of this clan, called Muḥābir, distinguished for his learning, generally hostile to the Prophet, is said to have adopted Islām and fallen at Uḡud (Tabari, i. 1424; Ibn al-Athir, iii. 24 sqq.).

Bibliography: Ibn Duraid, *Kitāb al-Ishā'iq*, ed. Wüstenfeld; Tabari, ed. de Goeje, index, s. v.; Wüstenfeld, *General Tabellen und Register*; Caussin de Perceval, *Histoire des Arabes*. (H. H. BRÄU)

AL-THĀLABĪ, AHMAD B. MUHAMMAD B. IBRĀHĪM ABU ISHĀK AL-NISĀBŪRĪ, a famous theologian and Kur'an exeget, born in Muḥarram 427 (Dec. 1035). His great work is the commentary on the Kur'an entitled *al-Kaṣf wa 'l-Bayān 'an Tafṣīr al-Kur'ān* which Ibn al-Djāwī (according to Ibn Taghribirdi, p. 660; ed. Popper, ii. 166)

criticisms on the ground that it accepts weak traditions, especially in the early Sūras, but which according to Schwally (in Noldeke's *Geschichte des Qur'ān*, ii, 174), must be one of the most useful works on the subject, as he uses about 100 sources in addition to Tabari in an intelligent fashion, and with every endeavour to attain completeness the work is only twice the size of Balḍawī. Nevertheless the work which was still very widely used in Yāqūt's time and had a criticism written on it by Ahmad b. al-Mukhtār al-Rāzi about 631 (1233) (see *Fihrist al-Kutub-hiḥne al-Khediwiye*, i, 198) has now fallen into oblivion and has never been printed. Much more popular is his *History of Prophets*, which grew out of his Qur'ān exegesis and was to be a supplement to it; it gives all the stories in very great detail but keeps on the whole clear of the worst feats of imagination of the *ḥuffāḥ*, such as we find in al-Kisā' [q. v.]. The book has been often printed e.g. Cairo 1297, 1303, 1306, 1308, 1310, 1314, 1321, 1324, 1340, Bombay 1306, and a Tatar translation by Muḥammad Amir b. 'Abd Allāh al-Ya'qūbi, Kasan 1903. As it became a popular work, the text was not treated with care, for example in the Paris MS. 1923, it is worked into that of al-Kisā'.

(C. BROCKELMANN)

THAMUD, the name of one of those old Arabian peoples, which like the 'Ad, Iram (Aram), Wihār (Joharitat) had disappeared some time before the coming of the Prophet. A series of older references, not of Arabian origin, confirm the historical existence of the name and people of Thamūd. Thus the inscription of Sargon of the year 715 B. C. mentions the Tamud among the people of eastern and central Arabia subjected by the Assyrians. We also find the Thamudaei, Thamūdenses mentioned in Aristo, Ptolemy, and Pliny. The latter mentions as settlements of the Thamudaei Domatha and Hegra, which are probably to be identified as the modern Dumat al-Djandal in Džof and al-Hijr on the Hijāz railway north of al-'Elā'. Old Arab tradition also locates the Thamūd at the last named place. The older poets mention the Thamūd with the 'Ad as examples of the transitoriness of worldly glory, e.g. al-A'ḥḥā and Umāyia b. Abi l-Salt who quotes several legendary features of their story. In the Qur'ān the fate of the Thamūd along with that of the 'Ad serves as a warning from native history along with the foreign ones from the Bible: for example in Sūra vii, 71-77; xi, 64-71; xv, 80-86; liv, 23-31. Arab tradition of the fall of the Thamūd, which was further developed by the earliest exegetas from the references in the Qur'ān is in its main lines as follows. Just as there was a prophet named Hūd among the 'Ad so there was one called Šalih (b. 'Ubalid b. 'Amir b. Sām, q. v.) among the Thamūd. Challenged by his opponents, whose leader is said to have been Djuḥda' b. 'Amr, to give a sign of his divine mission, he conjured up a pregnant she-camel out of a rock. The tendons of this animal, sacred and inviolable as 'Allāh's camel, were however cut along with those of its foal by the scoffers. In punishment the whole

people was doomed to destruction. The manner of their destruction is said in Sūra vii, 76 to have been *radīfa*, earthquake, in Sūra xli, 12, 16, *ṣifīḥa*, a thunderbolt. These expressions make it probable that tradition associated the fall of the Thamūd with one of the volcanic outbreaks which led to the formation of more or less extensive fields of lava called *ḥarra* in Arabia. West of al-Hijr lies one of the largest of these *ḥarra* (cf. B. Moritz, *Arabien*, Hanover 1923, p. 28). E. Glaser thinks the Thamūd are closely connected with the Lihyan [q. v.], the Lechiani of Pliny, that Thamūd was the older, Lihyan the later name of the people still surviving in the two Lihyan clans of the Haddhalia, and that the decline of the Thamūd coincided with the end of the Lihyan kingdom, somewhere between 400 and 600 A. D. The rock inscription found by Häber, Kuting and others in al-'Elā', al-Hijr and neighbourhood are called by epigraphists Lihyan or Thamūdene.

THANAWIYA, Dualism, means the doctrine that light and darkness are the two equal eternal creative principles. There is not a regular Thanawiya sect or school in Islām. The term, as the characteristic name of a school of thought, is limited to three non-Muslims and their adherents: Ibn Daiḡān, Mānī and Mazdak [see these three articles].

A danger arose to Islām through the tendency to dualism within its ranks from the mass conversions of Persians, as was seen for example at the beginning of the Abbāsīd period in the disturbing figure of Ibn al-Muḥaffa'. He was attacked for example by the Mu'tazilī Zaid al-Kāsim b. Ibrāhīm Tabāṭabā', *al-Radd 'ala l-Zindiq Ibrāhīm al-Muḥaffa'* (ed. M. Guidi, Rome 1927). In the further course of dogmatic development, the charge of dualism is often raised and is not by any means confined to one party. Several ultra-Ši'is of the third (ninth) century had the accusation made against them: Abū Ḥafṣ al-Haddād, Ibn Dharr al-Dharrāfi and Abū l-Ḥalī al-Warrāk, the authority on heresies, who himself, originally a Mazdazān, even after his conversion is said to have "supported the Thanawiya by his writings". But the classification, for example, of the latter among the Manichaeans is based on his agreement with them on other, not metaphysical points, for example the prohibition of killing. Even the heretic who gets his usual epithet from a Thanawiya group, the Raḡīḡ Abū Šakir al-Daiḡān got the name, so far as we can see, because he attributed a body to God, i.e. an opinion not in itself dualistic and the *Fihrist* (ed. Flügel, 338, 8) classifies him more generally among the "secret Zindiqs". In fact the distinctive Daiḡānī dogma, the derivation of bodies from the black and the white element (see Aḡḡarī, *Maḡālat al-Ilāhiyyin* [ed. Ritter], p. 335) seems so far not to be traceable in Abū Šakir; besides the branding of an opponent on the ground of a single, often quite subsidiary

tertium comparationis is an all too frequent and confusing habit of the Muslim champions of orthodoxy.

The above charges against the three last-named are taken from al-Khayyāt, *Kitāb al-Itiqān*, "Le Livre du Triomphe" (ed. Nyberg, Cairo 1344, p. 150, 4; 149, 9; 155, 14; 171, 47; cf. also the index under the names mentioned here and below). To appreciate his opinions properly, one must remember that they are counter-attacks on Ibn al-Rawandī, who in his *Kitāb Fadhilat al-Mu'tazila* had branded several leaders of the Mu'tazila [q.v.] as dualists. It is true that these circles produced many polemics against Thanawiya, Manichaeans and Daiṣānīs; but Ibn al-Rawandī seized upon the Mu'tazila endeavour to make God not the originator of evil. Even al-Djāhīz is said to have endangered monotheism by the assertion that "the bodies develop out of their nature" and that "God cannot destroy them" (*op. cit.*, p. 168). Ibn al-Rawandī particularly characterized Ibrāhīm al-Nazzām, the teacher of Djāhīz, although he wrote against the Thanawiya (*op. cit.*, p. 17, 12), as a downright dualist Manichaean and Daiṣānī (*op. cit.*, p. 38, 3; 40, 6; 17, 19; 43, 17, 19; and pass.) chiefly on account of a view of the absolute opposition between good and evil, as between light and heavy. So long as the original works are not available, we must accept with caution the distorted reproduction of his opponents' views by Ibn al-Rawandī and the evasive exposition by al-Khayyāt. It is, however, not only these opponents who suspect the Mu'tazila, who take pride in calling themselves the people of true monotheism and not only the Mu'tazila mentioned who have become suspect, but several others like 'Alī al-Aswari and Abū Bakr al-Aṣamm (cf. also de Boer, *Geschichte der Philosophie im Islam*, Stuttgart 1901, p. 47; Horten, *Die philosophischen Systeme der spekulativen Theologen im Islam*, Bonn 1912 and his other works by index under Dualismus). The Mu'tazila counter-attack however was able to reproach the Sunnis with their Qur'an which they asserted had existed from the beginning alongside of God.

Dualism is said to have been distinctly taught by some disciples of al-Nazzām. Just as they are said to have intensified his Shi'i tendencies till they became ultra-Shi'a, so they developed his christianising logos-theory into the doctrine of two creators: God and God's word. The latter however, identified with the Messiah, does not mean complete incompatibility with monotheism, as it is only a created creator, an intermediary. Even the names of these heretics are, it must be confessed, uncertain. In Shahrastānī (ed. Cureton), p. 42 whose authority is Ibn al-Rawandī they are called al-Faḍl al-Hadāthi and Ahmad b. Khāṭi. The latter is also the name given in Mas'ūdī, *Murūj* (ed. Barbier de Meynard), iii. 266, but in another classification; in Ibn Hārm, *Fihl* (Cairo 1331), iv. 197, 80 sq.; Ahmad b. Khāṭi and al-Faḍl al-Harbi (cf. Nyberg on Khayyāt, p. 148 on p. 222 sqq. and Friedländer, *The Heterodoxies of the Shiites*, in *J.A.O.S.*, xxix. [1909], p. 10 and Index). The ultra-Shi'i al-Bayān b. Sim'an al-Tamīmī is said to have interpreted Sūra xliii. 84 to mean that there is one God of heaven and another, inferior however, of the earth, and Abū 'l-Khaṭṭāb Ḥaṣṣ and a certain al-Sarri are said to have agreed with him (al-Kashshā, *Maṣrif al-Akhḍār al-Riḡāl* [Bombay 1317], p. 196, 3 sq.). This seems to lean towards those Ghulāt [cf. NUṢAIRIYA] who see in 'Alī not so much the incarnate iden-

tity with God as the demiurge under the highest God. It is often insisted by theologians and philosophers (cf. Ibn Hārm, *Fihl*, iv. 37; see also Schreiner, in *Z.D.M.G.*, lli. [1928], p. 479 sqq. and Nallino in the *Encyclopaedia of Religion and Ethics*, li. 91 sqq.) that the participation in rule by the stars as second forces in addition to God, because it is dualism, is no less infidelity than the purely atheistic paganism of an absolute astrology.

To Islam with its striving after monotheism, duality means the abolition of the very idea of God (cf. on Sūra xvi. 53: al-Rāzī, *Mafāhīḥ al-Ghāib* [Cairo 1308], v. 327, 24, 36; al-Baidāwī, *Anwār al-Tanzīl* [ed. Fleischer], p. 517, 12; al-Naisabūrī, *Taṣṭīr* [on the margin of Ṭabari, *Taṣṭīr*, Bālik 1323 sqq.], xiv. 74). Thanawiya thus became a term of contempt, but even in this use, it is not absolutely free from ambiguity but is used to some extent synonymously with the commoner word *indīk*, the application of which is much wider. Of the philosophical systems the Peripatetic brought a dualistic system, of metaphysics into the Kaḥīm of Islām. Ghazālī very strongly emphasises its halfway position, full of contradictions, between the true belief in tawḥīd on the one hand and complete infidelity on the other, as taught by the Dahriya [q.v.], naturalism, erroneous it is true, but quite conceivable: "the philosophers think that the world is eternal, but in spite of this they assume a creator; this is a self-contradictory proposition which requires no refutation"; Ghazālī insists it is only hiding and not bridging over the difficulty when the empiricism of the Peripatetics summons to its assistance, from the Neo-Platonic doctrine of emanation, after the fashion of the Brethren of Purity [cf. IGHWAN AL-ḤAKK], a being intermediate between God and the universe: "a caused (creative intermediary) alongside of the prime cause gives two creators and those eternal" (cf. *Tahāfut al-Falāṭifa* [ed. with the works of the same name by Ibn Rushd and Khawāḍjāde, Cairo 1319], p. 33, 27 and thereon J. Obermann, *Der philosophische und religiöse Subjektivismus Ghazālīs* [Vienna-Leipzig 1921], p. 43 sq., 57 sqq., 63 sqq.). It is at the same time (p. 35) strongly emphasised that from the Aristotelian Neo-Platonic point of view of Fārābī or Ibn Sīnā a proof of tawḥīd need not be given. He is therefore not all impressed in any way by the fact that the latter tries to remove the danger, which he himself feels of a "second Necessarily Existing One" (see Horten, *Die Metaphysik Avicennas* [Halle 1907], p. 542 sqq.; esp. p. 551 on Ibn Sīnā, *Kitāb al-Shifā'*, iv., treatise 9). Even more uncertain sound the monotheistic assertions of Ibn Sīnā in the narrower scope of his *Kitāb al-Naḍāt* (Cairo 1331), p. 327 sqq., 356 sqq., 374 sqq. etc., in view of the granting of the independence of the hylie substratum of creation, as it is reflected in his dualistic anthropology also.

How the contamination of Muslim monotheism by dualism from outside Islām presents itself to the Sunnī Ash'arīs may be seen, for example, in 'Abd al-Kāfir al-Baghādī. In *Farḥ bain al-Firāḥ* (Cairo 1328) he expresses surprise even more ironical than Ibn al-Rawandī (see in Khayyāt, p. 30, 1) at the fact that al-Nazzām in his arch-dualism (*Farḥ*, p. 120, 121: *taḥlīḥ al-'ainīk* [and al-Thana'awīya]) wrote against the Thanawiya and the Manichaeans (p. 117, 5; 120, 12; 123 ult.,

124, a). Al-Baghdādī in *Uṣūl al-Dīn* (Sambūl 1928, p. 54) associates al-Nazzām directly with the Thanawiya outside Islām, among whom he in error includes the Marcionites, unlike the other heresiologists: He describes the Bāṭinīs [q.v.] without qualification as dualists (p. 322): "They were originally Majūs and Thanawī, then in the time of al-Ma'mūn their prophets like 'Abd. Allāh b. Ma'mūn al-Kaddāb [q.v.] and Ḥamīd b. Karmat preached that there were two creators whom they called the first and the second; but this is in substance the teaching of the Thanawīya about light and darkness and the substance of the teaching of the Majūs about Yazdān and Ahriman". Who are meant by the "two creators" is not recognisable with certainty from the brief general observation. It might be thought that al-Baghdādī had arbitrarily emphasised only the *nūr* *shāhādāt* and the *nūr* *ṣūfī* out of the series of emanations [see KARMAṬIANS] in order to assert the Majūs character of the Bāṭinīs. The known monotheistic tendency of the Bāṭinī Nāṣir-i Khusrāw (*Zād-i Mas'ūm*, Berlin 1923, p. 74 199, 150 199, 160 199) does not support the idea of a duality of this kind (cf. also Schaefer, *Die islamische Lehre vom vollkommenen Menschen*, in *Z.D.M.G.*, N. S., iv. [1925], p. 222 199, esp. p. 231). The subordination of the second god would, it is true, not fit the comparison with the Majūs made by al-Baghdādī but it is just this point that would not be regarded as proper dualism in the usual language of the Muslim heresiologists. They expressly excluded the Majūs from the Thanawīya, distinguishing them from the three groups mentioned at the beginning of the article, because, according to their dynamic monarchicalism, Ahriman-darkness was a secondary creation of Yazdān-light or, as the sub-group of the Zoroastrians (Zaradushtīya) teach, both are equal to each other, but are subordinate to a supreme God as the first things created by him.

(R. STROTHMANN)

THĀNISARĪ, MAWLĀNĀ, whose real name was Ahmad, was a disciple of Shaikh Naṣir al-Dīn Maḥmūd Ġirāgh-i Dihlī (d. 757 = 1356), and was distinguished for his learning and piety. When the news of the arrival of Timūr (d. 807 = 1404) spread in Dihlī, most of the 'Ulamā' left the place but Thānisarī stayed till he and his dependents became prisoners of Timūr. As his fame was widespread and Timūr had previous knowledge of his learning, he was set at liberty and was received by him after order had been restored. A discussion arose about the precedence in the assembly between Thānisarī and Shaikh al-Islām who was the descendant of 'Alī b. Abī Bakr al-Faṛghānī al-Marghinānī (d. 593 = 1197), the author of *al-Hidāya*. Timūr took the side of Shaikh al-Islām and said that the latter was a descendant of the author of the *Hidāya*, meaning that preference should be given to him. On which Thānisarī replied that it was no wonder that Shaikh al-Islām had committed one mistake, for his ancestor, the author of the *Hidāya*, had committed many mistakes. Whereupon Shaikh al-Islām became very angry and asked him to point out the mistakes. Thānisarī told his pupils to do so. But Timūr stopped the discussion, in order to prevent further disturbance. When Timūr left India, Thānisarī also went away

from Dihlī and settled at Kālpī where he engaged in teaching till his death in 820 (1417) and was buried in the fort of Kālpī.

Among his compositions the *Kaṣīda Dāliya* is very famous.

Bibliography: 'Abd al-Hakīm Dihlāwī, *Aḥkār al-Aḥyār*, p. 142; Azād Bilgramī, *Sukhat al-Mardjān*, p. 37; Siddiq Hasan, *Abjad al-'Ulūm*, p. 892 and *Ḥadīq al-Hamāsiya*, p. 313. (M. Hidayat Hossain)

THĀR. [See KĪṢĀṢ.]

THAWBĀN & **IBRĀHĪM.** [See DĪW 'L-NUN.]

AL-THAWR, the constellation of Taurus, the second in the zodiacal circle. The figure is the front half of a bull whose head is turned to one side so that the horns face east. The constellation consists of 32 stars in the figure and 11 outside it. On the sector (*ṣaf*, *arcus*) are said to be four stars in a straight line; in reality the stars *ε* *ζ* *η* *θ* form a curve. The bright star of the north horn also belongs to the constellation of the Steersman. The eye of the bull, *Ain al-Thawr*, the star with a red light of the first magnitude *α* in the centre of a thick group of smaller stars, the Hyades of the Greeks, is given many names by the Arabs. The name *al-Fanīḥ*, the "large camel", seems to be genuinely Arabic; around it are grouped the other stars or *al-Ḫilāṭ*, "little camels". Other names of *α* are connected with the Pleiades. As this constellation is called *al-Naḡm* "the group of stars" by the Arabs, *α* is called *Ḥādī 'l-Naḡm*, the "driver of the stars", or *Tāḍī 'l-Naḡm* and *al-Daharān*, the "follower of the stars". This last name has passed into our star-maps in the form Aldebaran. The stars *ν* and *κ* near the ear of the bull are called *al-Kalbān*, the "two dogs", i.e. of the driver.

Bibliography: al-Kāzwīnī, *Al-Jawāhīr al-Makhlūṣāt*, ed. Wüstenfeld, i. 35; transl. by H. Ethé, as the *Kosmographie*, p. 74; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, p. 136. (J. RUSKA)

AL-THUGHÜR (A., plur. of *ṭaghūr*, "cleft, opening"), the zone of the fortresses built against the Byzantines in the Syrian and Mesopotamian marches (hence also *Ṭaghūr al-Rūmiya*). In Constantinos Porphyrogenetos they are called *τὰ Στεῦρα* (*De Cerimoniis*, ed. Bonn, i. 657; cf. Reiske's note, ii., p. 777 = Migne, *Patrol. Graec.*, cxii., col. 1220, note 38), by the Syrians "the land of Tagrā" (Michael Syrus, ed. Chabot, iii. 2039, 467; Barhebraeus, *Chron. Eccles.*, ed. Abbeloos-Lamy, i. 339 29.).

This frontier zone ran from Tarsūs [q.v.] in Cilicia along the Taurus on to Malatya [q.v.] to the Euphrates and served to protect the frontier province of the 'Awāṣim [q.v.] from enemy invasion. It corresponded in object (but not in position) to the ancient *limes*, and a distinction, analogous to the old division into *Limes Arabicus*, *Syriacus* etc., was made between the Thughūr al-Shamiya and the Thughūr al-Djaziyya. The most advanced town in the former was Mar'ash [q.v.] and in the latter Malatya [q.v.]. Al-Ḥakīmī mentions in the Thughūr the fortresses of Malatya, al-Hadath, Mar'ash, al-Harriniya, al-Kantaa (= Kantat al-Sawda'), Ain Zarba, al-Maṣṣiya, Adhana and Tarsūs; al-Dimishqī gives the following as the fortresses on the Mesopotamian frontier: Malatya, Kanakh, Shīmkhāt, al-Bira, Hīn Manṣūr, Kal'at al-Rūm, Hadath al-Hamra' and Mar'ash, on the Syrian

Tarsis, Adhana, al-Massisa, al-Harāniya, Sia and Aiyās. In the viiith (ixth) century there belonged to the marches of the Mamlūk kingdom, the 'Awāṣim and Thughūr (so al-Kalkashandī, *Ṣiḥḥ al-ʿArab*, Cairo, iv, 228; it would be more correct to give only the Thughūr here), the 8 *niyāḥas* of Malatya, Dabragi (Diwrigi), Daranda, Abulustain, Aiyās, Tarsis and Adhana, Sirfandakār and Sia, and to the Mesopotamian marches the 3 *niyāḥas*, al-Bira, Ka'at Dja'bar and al-Ruha. But the name Thughūr, at this time probably only survived in learned tradition.

For the pass of Baḥlān [q. v.] in the Mamlūk period the usual name was *Thaḡar al-Ikandariya* (H. E. Weijers, *Summa operis Durrai ad-Asfāk fī Dawlat al-Atrāk, in Orientalia*, ed. Juynboll, ii, 1846, p. 323, 429, 451, 464, 468, 489).

Sometimes the frontier of Diyār Bekr [q. v.] is known as *Thughūr al-Bakriya* (Kudāma, *B.G.A.*, vi, p. 254).

According to Abu 'l-Fida' (*Ṭabaṭai*, transl. Reinaud-Guyard, i/l. 14; ii/l. 257), the name al-Thaḡar or al-Thughūr was also used for the marches in al-Andalus and Mā warā' al-Nahr.

(E. HONIGMANN)

THULĀ, THULĀ, a town in South Arabia, at the foot of a reddish range of hills, which branches off from the great chain of Kawkabān, Hadjar al-Shaḥh, Dhi Bin to the east (S.E.) and forms the southern boundary of al-Baḥn. According to E. Glaser who visited it on Dec. 5, 1883, the town is very clean, and has narrow streets and very high regularly built houses of yellowish-red limestone, which is hewn into neat blocks of about 10 inches by 4 and shows the same character in the whole town. The town is built against the eastern side of 1,000 feet high sandstone cliff, on the top of which is the castle (*ḥuṣn*) el-Nāṣir and is surrounded by a wall with 4 gates, beginning and ending against the cliff; it is at least twice as large as Shibām and one and a half times as large as Kawkabān and after San'a', one of the largest and finest towns in the Yemen. The citadel, which was entered through a great archway, which spanned a deep cleft, but was later destroyed, is extraordinarily strongly built and apparently very old. It is said to have been previously called *Ḥuṣn al-Gharāb* (castle of the Raven), the name of the famous fortress on the coast at the old harbour of Kane (el-Madjdhaba). It is one of the finest castles in the Yemen; unfortunately the Turks at the conquest of the country destroyed all the outer works. The entrance gate of the castle

is at a height of 15 feet in an absolutely perpendicular wall, over a ravine 60—100 feet deep. Besides a fine mosque, the castle had also a large dwelling-house in the extreme east on the highest part of the hill, which looks at a distance like a low square tower; beside it a little lower is a higher tower, also square. Water was supplied from 4 or 5 deep well cemented cisterns; 15—20 granaries (*madāḥin*) cone-shaped caves, hewn out of the sandstone served as storehouses for provisions; the opening was at the narrow end. They are 18—20 feet deep, are 12 feet at the bottom and not quite 3 in diameter at the opening. The summit of the mountain, on which the castle stands, has on all sides caves hewn out of the rock (*djurf*) with regular dwelling-houses with windows, niches and doors. Some are whitewashed and have 5 or 6 rooms of varying size. They seem to be old and were at one time used as dwellings by the Arab garrison of the fort. West of the above mentioned tower-like square ruined building are several large tombs built on the sandstone with old Arabic inscriptions. A saint (*waḥī*) is said to be among those buried here.

According to local tradition, there was originally not a town of this name but a group of villages; the latter — said to have been over 40 in number — were under the rule of Thulā down to the Turkish conquest. In C. Niebuhr's time the administrative district of Thulā (he writes Tulla) comprised also the lands to the north like Kohlan, 'Affar, Hadje, Dofir, Kawkabān (near Hadje), Djebel Sherif, Habār, Sada and Djebel Shahāra with about 300 villages, and was therefore much more extensive than at the end of the sixteenth century.

THULTH. [See ARABIA, i, 386^b, 387^a.]

THUMAMA B. ASHRAS, a theologian, representative of the liberal movement under the early 'Abbāsids. On account of his great learning and intellectual ability he was invited to the court by Hārūn and Ma'mūn, to whom his sharp criticism of conservative views was no doubt also pleasing. This brought upon him the enmity of the conservative school of thought, which began to come to the front again after Mutawakkil and they have endeavoured to belittle his reputation.

To the burning questions of his time he took up an independent position, logically thought out, which often seemed peculiar and arbitrary. The "consequences" of actions, e.g. the turning of a key by a man, are produced neither by man (otherwise he would be able, like God, to bring into existence new realities, i.e. to create) nor by God, for then God would also create sin and moreover be in dependence on the will of the creature. The "consequences" (*muṭawallidāt*) are rather subjective actions and based on physics (*ṭibā'*). The liberal school traced them to *taḥlīl*, the "engendering" of man, without being willing to call this a "causation". Our knowledge is therefore, according to Thumama, something originating in time but is without a prime cause (*muḥdith*) working in time. Our spirit itself cannot produce it, for then it would be exercising a function of the Deity.

Only the internal activity of the will (*irāda*), excluding all its consequences, is our own special

possession and "free". The world is created by God through his nature (*fiḥ* = physis), i.e. synonymous with "physical" necessity. It must therefore have been, as Shahrastānī rightly observes, produced "eternally" i.e. without beginning, and this is the thesis of *falsafa*. Our natural reason decides on the ethical value of the moral action (*taḥṣin al-ʿaḥl*). God cannot arbitrarily establish the moral.

All our intellectual apprehensions are necessary (*ḡarūrī*), and have no connection with chance. He who does not know God in this logically compelling fashion is not bound to obey his commandments; but thereby he also loses the dignity of man's nature and becomes like the beasts. In the next world he will fall into dust. He is not conceded an immortal soul. This is true of Jews, Christians, followers of the *Dahr*, Mazdak (*Zandāḥa*), "Magians" (fire-worshippers, Parsis) and children, even those of Muslims.

Ibn Muṣṭafā in his "Book on the Sects" (*Kitāb al-Milal wa 'l-Niḥal*, ed. T. W. Arnold, Leipzig 1902, p. 35 sq.) puts him in the seventh generation, which follows that of al-ʿAllāf (d. 849). He was a pupil of Bishr b. al-Muṭamir (d. about 840), was regarded as "unique in knowledge and intellectual culture in his day" and was feared as an opponent in disputations. His full name was Abū Maʿan al-Numairī.

al-THURAIYĀ, the constellation of the Pleiades. According to al-Kāzwinī, the group is made up of two brighter stars between which are three others close together like grapes in a bunch. The group is also called simply *al-Naḍīm* "the (group of) stars" and the principal star (α Alkyone) is called *Wasaf*, *Djaws* or *Nalyir al-Thuraiyā* i.e. middle, heart or bright star of the Pleiades. The word *Thuraiyā* is a diminutive of *ṭharw* which means "existing in plenty" and would correspond to the Greek *πλεῖς* if this name could be connected with *πλεῖς* and not with *πλεῖν* "to navigate". According to others, the constellation is so called because rain at its rising at the dawn brings *ṭharw* i.e. great plenty. In any case, from early times the Pleiades have been credited with great influence on the weather and the processes of nature dependent on it. A more popular name for the group is, according to the astronomer Ibn Abī 'l-Ridjāl (Abenragel, in the xith = xvith century), *Dajjādīyat al-Samū' ma'a Banātihā*, the hen of heaven with her chickens, also found in the English name Hen and Chickens. The constellation is also regarded as a diadem with jewels and it is mentioned in countless passages in the poets. In the form *Saraya* the word has recently become widely known as the name of the queen of Aithiopia.

(J. RUBKA)

THURAIYĀ, MEHMEMMED, an Ottoman biographer, born in Stambul, the son of a certain Husnī Bey (cf. *Sijill-i 'Oṭmānī*, II, 178), adopted an official career and died in his native town as an official in the education service on the 19th Dhu 'l-Hijja 1326 (Jan. 12, 1909). His tomb is in Scutari in the Kaḥḥā Ahmad cemetery. Mehemmed Thuraiyā has earned lasting fame as the compiler of an Ottoman Dictionary of National Biography, which he called *Sijill-i 'Oṭmānī* and published in 4 volumes in Stambul between 1308 and 1315. On the plan, contents and importance of this work to historians cf. F. Babinger, *G. O. W.*, p. 386 sq.; the fact that the statements of the *Sijill-i 'Oṭmānī* must be used with great caution does not lessen the magnitude of the achievement, which is an astonishing one for one man. Mehemmed Thuraiyā has however not rendered the compilation of an Ottoman biographical dictionary on scientific lines superfluous. Under the title *Nuḥḥat al-Waḥā'is* (Stambul 5 parts, comes down to 1267 = 1850) Mehemmed Thuraiyā began but did not finish a collection of public appointments from 1247 (1831) to 1292 (1875) with biographical notes. Among his literary remains were found copies of several biographical works and works on contemporary history which he had begun, which still await publication or utilisation; cf. *G. O. W.*, p. 387.

Bibliography: Mehemmed Tāhīr, *'Oṭmānī Müellifleri*, III. 36 sq.; F. Babinger, *G. O. W.*, p. 385 sqq. (FRANZ BABINGER)

TIBB (A.), medicine. This is one of the branches of science in which the Arabs have attained most fame. The Muslims received their knowledge of the subject mainly from the Greeks, first through the intermediary of the Syrians and Persians, then directly by the translation of classical works. Muslim rulers and princes were at all times very eclectic in the choice of their physicians; there were at the court of the caliphs, Jewish, Christian, Mazdaean, Sabaeen and even a few Hindu physicians. Medical science had been much studied in the eastern world in the period that preceded Islam, especially at Alexandria in Egypt and at the school of Djundisābūr in Persia which lasted down to the time of the 'Abbāsids.

The Greek medical authors known to the Arabs were especially Hippocrates and Galen, besides whom may be mentioned Rufus of Ephesus, Oribases, Aëtius and Paul of Aegina. Hippocrates (cf. *BOGART*) was translated into Arabic by Hunayn b. Ishāq, Kosta b. Lūḳā, Isā b. Yahyā and 'Abd al-Rahmān b. 'Alī; they translated his book of "Aphorisms"; his treatises on "Prognostics" and "Epidemics" were later studied and annotated. A large number of the works of Galen were translated into Arabic: the *Art medica* or *liḡage* which was later very popular in the middle ages, the *De elementis secundum Hippocratem*, the *De temperamentis*, the *De sanitate tuenda*, three books on the properties of foods, *De alimentorum facultatibus*, 14 books on *Therapeutics*, *Methodus medendi*, a treatise on diagnosis, *De morbis et symptomatibus*, another on fevers which was well known in Latin, others again on the pulse, on tumours and several commentaries by Galen on Hippocrates, especially on the book on Epidemics

and on the Aphorisms to which should be added the commentary by the same scholar on the "Timaeus" of Plato, which Hunain b. Ishāq translated.

Among Christian physicians, who distinguished themselves at the court of the caliphs was Ibn Miskawayh, physician to Hārūn al-Rashīd. He was given by the caliph the task of procuring translations of the books of medicine of the ancients and he taught medicine in Baghdad. In the same period, the family of the Bokht-īshī was celebrated: one of its members attended Rashīd at the beginning of his reign. They are said to have come from Djundisābūr. 'Alī b. Ridwān, an Egyptian Christian, was physician to the Fātimid caliph Hirkīn in Egypt. He wrote a commentary on Galen.

A Zoroastrian, 'Alī b. 'Abbās, was physician to the Būyid sultan 'Aḍud al-Dawla and wrote a treatise entitled "The Royal Book," which had the greatest vogue before the *Canon* of Avicenna. The Sabaeen Sinān, son of the great geometrician Thābit b. Qurra (q. v.), attended the caliph Kāhīr. It was he who had official medical diplomas instituted: aspirants to the medical profession had to pass examinations and certificates were given them defining within what limits they were to be permitted to practise. In Baghdad alone there were over 800 doctors, who held this certificate, not counting those who, on account of the renown they already had, had been exempted from the examination. Sinān having been persecuted by the Caliph, fled to Khurāsān; he later returned to Baghdad where he died in 942.

These differences of origin among the physicians did not mean that they had serious differences in their ideas or practice of their art. A few prescriptions, a few methods on some question or other, may have been peculiar to one or other school. Thus Ibn al-Kifī tells a story of a prince of the family of Hārūn al-Rashīd, who had fallen into a lethargy. A Christian physician was sent to attend him and then a Jewish one; they were unable to do anything; a Hindu was then summoned and he succeeded in reviving him. In this case it was "Indian medicine" that triumphed: but one must not conclude that it was quite different from Jewish or Byzantine medicine, nor that it was in any way superior to them.

The Muslim physicians surpassed even the preceding in reputation. Rāzī, so well known in the middle ages in the latinised form Razes, physician, apothecary, surgeon and alchemist, left two principal works — *al-Hawī* and *al-Manṣūrī*, dedicated to the Sāmānid Abū Ṣāliḥ Maṣṣūr, on "special" maladies. Al-Rāzī was head of the hospital at Ray and then of that of Baghdad. The foundation of regularly organised hospitals under official control is a thing that reflects the greatest honour on Muslim science and governments. Historians also mention the hospital of Damascus. There were besides in large towns, a "Chief of the doctors," appointed by the authorities. Among those quoted as having had this title is the second Ibn Zuhr.

The great philosophers of the Hellenistic schools, the "scholastics," were physicians and wrote on medicine. Avicenna was a practitioner with a high reputation. His great work, the "Canon on Medicine," is the largest treatise on the subject produced in the Middle Ages; it was several times annotated in Arabic and became authoritative in the east and then in the west. It is divided into five books.

The first is devoted to the general principles of medicine, the *Kulliyāt*; these generalities are anatomy, hygiene, the diseases which as a rule affect the whole body in opposition to "special" diseases which affect particularly one organ or limb; these are enumerated and studied in Book III, beginning at the head and going down to the feet. General diseases are also dealt with in Book IV; then come different accidents, tumours, poisonings, fractures of limbs. Book II is a treatise on "simples," and V is devoted to "compound" remedies, called *akrābūḡhīn*, i. e. pharmaceuticals.

In the Maghrib, Ibn Bāḡdja and Ibn Tufail were physicians to the Almohads. Averroes, who succeeded Ibn Tufail in this capacity, wrote a *Kulliyāt*, the popularity of which rivalled that of the *Canon* of Avicenna in the Maḥammadan west and then in the Christian world. Muslim Spain also produced the family of Ibn Zuhr, the Avensoar of mediaeval Latinity.

Arab medical science had an enormous influence in the western world. It passed first to the Jews, especially to Maimonides, whose medical work is very considerable, then to the Christians. This is how Gerard of Cremona came to translate the *Canon* of Avicenna and the *Kitāb al-Manṣūrī* of Razes. The translation of the *Canon* was revised by Andreas Alpāgus of Bellona, who also translated the *De Theriaca* of Averroes and the *Practica* of Ibn Serapion. Farragut translated the *Continens* of Razes, and Bonacossa, a Jew of Padua, the "Colliget" (*Kulliyāt*) of Averroes. These translations were published at the beginning of printing.

The pharmacopoeia and the knowledge of "simples" are represented by the treatise of Ibn al-Baiṭār of Malaga in addition to the parts of the *Canon* of Avicenna which refer to this subject. The Arabs themselves studied herbs and further developed the knowledge of their medicinal properties from the teaching of Dioscorides and Galen. Through their sailors they were able to introduce into medicine the use of new plants from the Malay Archipelago and China, like camphor, cassia and sandalwood. They developed pharmaceuticals and invented several preparations, syrups, juleps and alcohols.

One branch of study closely allied to medicine, veterinary science, was the subject of a number of special treatises among the Arabs.

Bibliography: Full information on the physicians of the Muslim world is to be found in several Arabic works: Ibn Abī Usaib'a, *Tabaqāt al-Aṭibbā*, ed. A. Müller, 1884; the *Tārīkh al-Hukamā* of Ibn al-Kifī; the *Mukhtasar al-Duwal* of Abū 'l-Faraj; ed. Ṣāliḥān; Maḥḥārī, *Analeto*, for Spanish physicians; the "Canon" of Avicenna, ed. in Arabic at Rome in 1593, at the *Typographia Medica*, reprinted Bulāq in 1294.

(B. CARRA DE VAUX)

TIBBU. [See TUBU.]

TIBET, a country to the south of China. Yāqūt gives the forms Tabbat, Tubbit, and Tabbut,

preferring the first of them. The oldest Arab notices of Tibet and the Tibetan kingdom are probably of Turkish origin. The ruler of Tibet is called *Khāṣān*; the names *Tupūt* and *Tūpūt-Kāghān* are found as early as the Orkhon inscriptions. A fancied resemblance of *Tubbat* to *Thābit* and *Tubba'* has given rise to stories of the Yaman origin of the Tibetan kingdom; cf. e.g. al-Ṭabarī, i. 686 *supra*; Gardizi in Barthold, *Ottel v. poissadhe v. Sradnyuyv Aziyu*, p. 87 *supra*. There is much more that is legendary in the Arab notices of Tibet; the story of the inexplicable joy and desire to laugh that overcomes every stranger in Tibet, first found in Ibn Khurḍādhbih (*B.G.A.*, vi. 170), is frequently quoted in Muslim literature (cf. Nizāmī, *Sikandar-nāma*, Calcutta 1320, p. 226), even in the best account of Tibet we have (in the anonymous *Hudūd al-'Alam*, text in *Comptes Rendus de l'Acad. de Russie*, 1924, p. 73), the first that mentions the town of Lhasa (Lhāssā). There is said to have been a mosque in Lhasa and a Muslim community, not however, very large.

The period of the Arab conquests in Central Asia was not that of the zenith of Tibetan power and of Tibet's usually successful wars against China. In the Chinese annals Arabs are often mentioned as allies of the Tibetans and vice versa; Chavannes sums up the relationship in these words: (*Documents sur les Tou-tou [Turcs] occidentaux*, St. Petersburg 1903, p. 291): "L'appui que les Tibétains prêtaient aux Arabes dans la vallée de l'Yaxartes, les Arabes le leur rendaient en Kashgarie". It was not till the Cien-yuan period (785—805) that the Arabs began a war against Tibet. Henceforth the Tibetans had continually to send armies to the west, so that the Chinese frontier districts suffered less from them than before (E. Bretschneider, *On the Knowledge possessed by the Ancient Chinese of the Arabs*, London 1871, p. 10). In Arabic sources there is no reference either to the alliance or to the estrangement. According to al-Ṭabarī, the Arab rebel Muṣṣab b. 'Abd Allāh b. Khāṣim was attacked during his rule in Tirmīdh (fifteen years: al-Ṭabarī, ii. 1160 *infra*, till 85=704) by the Hayṣila or Habaṣila (see CHINA, i., p. 845^b), by the Tibetans and Turks (in the parallel passage in Balādhuri, p. 418, the Tibetans are not mentioned); the attack was repulsed. According to Ya'qūbi (ii. 362; also *B.G.A.*, vii. 301 *infra*), in the reign of 'Omar II (717—720) an embassy was sent from Tibet to Djarraṭ b. 'Abd Allāh, governor of Khorāsān, with the request that a teacher of the Muslim religion should be sent to that country. Saltī b. 'Abd Allāh al-Ḥanafi is said to have gone on this errand. In the same source the king of Tibet (p. 479) is mentioned among the kings who submitted to the Caliph al-Mahdi (158—169=775—785). In the last years of the reign of Hārūn al-Rashīd (170—193=786—809), the rebel Rāfi b. Laith was supported in his rising in Samarkand against the government by Tibetan troops (*djinnūd*) (*op. cit.*, p. 528). In the reign of al-Ma'mūn (198—218=813—833), the king of Tibet is said to have adopted Islam, and in token of his conversion to have sent to Khorāsān his golden idol reproduced on a golden throne. Ma'mūn sent the idol to Mecca (*op. cit.*, p. 530); the governor Yazīd b. Muḥammad al-Makhrūmī during a rebellion struck gold coins from it (p. 544). In Ṭabarī (iii. 815) the "Khāṣān, king of Tibet" is mentioned under the year 195 (810—811) as one of

the enemies of al-Ma'mūn, with whom he had to come to terms before attacking al-Amin. In 196 (811—812) al-Faḍl b. Saḥl [q. v.] was given the governorship of the eastern provinces from 'Hamadhān to Tibet' (Ṭabarī, iii. 841).

The Arab geographers seem to have generally understood by *Tubbat*, Little Tibet or Baltistan [q. v.]. There were routes to it from Khotan [q. v.] and Badakhshān [q. v.] via Wakhān. It is to the Khotan-Tibet road that the story given by al-Birūnī (*Chronology*, ed. Sachau, p. 271, s. where *Tubbat* should be read for *ḥait*) and by Gardizi (*op. cit.*, p. 88) from Dīshān about mountain sickness refers. On Dīshān in Badakhshān as a frontier post on the road to Tibet see *B.G.A.*, vii. 288 *infra*. The fullest notices of the road through Wakhān are given in the *Hudūd al-'Alam* (fol. 25^b). As a frontier fort of Mā warā' al-Nahr in this direction there is mentioned the "large village" of Samarqandāḳ (probably meaning "little Samarqand") in which Indians, Tibetans, Wakhānians (*Wakhshān*) and Muslims lived. Musk was brought from Tibet to the Muslim world by this route (*B.G.A.*, i. 280 *supra*, 297 *infra*). In contradiction to the historians and to his own statement about the frontier defences between Tibet and China (i. 208), Ya'qūbi (i. 204) says that no one ever waged war into Tibet.

Probably the first campaign of a Muslim ruler against Tibet was the campaign of the Sulṭān of Bengal [q. v.] Muḥammad Bakhtiyār Khaldī towards the end of the vith (xiith) century (the date 641=1243—1244 given in the text cannot be right as the same source gives the year 607=1205—1206 as the date of this ruler's death); it is described in the *Tabaḥṣūt-Nāṣiri* of Minhāj al-Dīn Dīnawarī (ed. W. Nassau-Lees and Mawlawī Khadīm Husain and 'Abd al-Hai, p. 553; transl. by Raverty, p. 560 *supra*; Elliot, *History of India*, ii. 310 *supra*).

The name Tibet (Tebet, Thebet, Thabet, Thibet) contrary to Bretschneider, *Medieval Researches*, ii. 21, probably reached Europe independently of the Arabs through European travellers in the Mongol period, although Tibet (*Tubbat*) is already mentioned in the xith century by Benjamin of Tudela (transl. Adler, p. 59): his account, however, probably did not become known in Europe at that time. Benjamin, as is now supposed, only went as far as Baghdad (J. K. Wright, the *Geographical Lore of the Time of the Crusades*, New York 1928, p. 282). He gives only a very confused account of what he picked up in the Muslim world, probably from Jews; for example he says that one can go in 4 days from Samarkand to Tibet.

Rashīd al-Dīn's great work on the Mongol empire also contains some references to Tibet. The name Būri Tubbat (Rashīd al-Dīn, *Tuḥfat al-Arsh*, *Divān*, xiii, text, p. 237) not found elsewhere in Muslim writers, is mentioned in the xith century by Plano Carpini (Buriṭhabet) and in Chinese sources (cf. the references in Bretschneider, *op. cit.*). Tibet, already converted to Buddhism in the viith century, was from the Mongol period of importance for the spread of Buddhism. Rashīd al-Dīn expressly says (ed. Blochet, p. 545) that of Buddhist monks (*buddhists*) those of Tibet enjoyed the greatest prestige.

After the final triumph of Islam in Central Asia and Northern India in the ixth (xvth) century, Tibet was invaded by Muslim rulers under pretext of a holy war, Little Tibet in particular. Towards

the end of the ninth century A.H., all the lands of Bolor (Kāfiristān, q.v.) and Tibet between Badakhshān and Kashmir (q.v.) were subjected by Mir Wali, general of the ruler of Kāshghar of the house of Daghāt, Abū Bakr (*Tārīkh-i Rashīdī*, transl. Rois, p. 320 and 403). When Abū Bakr was overthrown by Sa'id Khān (in 1514) the fortresses built in Tibet (in Ladakh) were abandoned by their garrisons and with their treasures seized by the Tibetans. Under Sa'id Khān (1514—1533) Tibet, Ladakh and the adjoining territories were invaded, first in 1517 by Mir Mazid and in 1532 by the Khān himself accompanied by the historian Haidar Mirzā [q.v.] (*op. cit.*, p. 417 *seq.*). In 1533 Haidar Mirzā tried to reach Lhasa, which he calls Usang, where the largest temples were, but was forced to turn back at Askābrak (p. 454), only a week's journey from Lhasa. Usang is probably the Gursang of the *Hudūd al-'Alam*, where there were large temples of idols. That Gursang is also mentioned separately from Lhasa is no evidence against this identification: the *Hudūd al-'Alam* is almost entirely compiled from written sources so that the same name often occurs twice in different forms, apparently from different sources. Later as king of Kashmir (after 1541) Haidar Mirzā in 1548 undertook a campaign against Ladakh and Baltistān.

All this seems to show that Baltistān in the tenth century A.H. was included in Tibet (according to the *Tārīkh-i Rashīdī*, p. 436 it lay "between Tibet and Bolor") and was not yet a Muslim country. The idea adopted by Cunningham and later writers, including A. Francke (*A History of Western Tibet*, p. 90) that Baltistān was converted between 1380 and 1400 by the ruler of Kashmir, Sikandar (according to Zambaur, *Manuel de Géologie et de Chronologie*, Hanover 1927, p. 293; 788—813 = 1386—1410/1411), must be rejected.

By the second half of the xvth century, Islām was already a political force in Little Tibet. The ruler of Kapulu, 'Alī Mir Shīr Khān, succeeded in uniting all Baltistān under his rule; the land was cleared of idols and other remains of Buddhism. He later succeeded in conquering Ladakh also, but only temporarily. He was also the founder of Skardo, capital of Baltistān; in the *Tārīkh-i Rashīdī* (p. 405), Askārdū is only mentioned as the name of a pass on the road from Kashmir which now no longer exists. Baltistān remained the only Muslim land inhabited by Tibetans, and since 1841 has been under the suzerainty of Kashmir. There are said to be historical works in the language of the Baltis. They also use a script of their own supposed to date from the time of their conversion to Islām; the characters, probably of Tibetan origin although influenced by Arabic, are written from left to right (Grierson, *Linguistic Survey of India*, iii. 32 *seq.*; Francke, *op. cit.*, p. 89 *seq.*). The Baltis from the first professed the Shī'a; but we learn from the *Rāḥ al-Aẓār* of Mahmūd b. Wali (text in *Zap.*, xv. 235) that in the early years of the xvth century the Sunna gained the upper hand, probably for a short time only. The king (his name is not recorded) who was converted to the Sunni had his father and brothers slain as heretics. Sunna scholars were sent for from Kāshghar. Thirty years later in 1044 (1634—1635), news of these events was brought to Balkh by a certain Ḥasan Khān who was related to the ruling house.

About 1682 when Central Tibet was under the rule of the Kalmucks [q.v.] the celebrated Khodja Apak (his tomb is still revered in Kāshghar), who had quarrelled with his Khān Ism'īl (1670—1682) went to Lhasa, which he calls "town of Djo" (*Djo Shahr*) after a great statue of the Buddha. At his request the Dalai Lama (in a Turkish manuscript we have the plural form, *Dalailamalār*) gave him a letter of safe conduct to the Khān of the Kalmucks, Galdan Boshokta. At the head of an army, which included the Khodja, the Khān invaded Kāshgharia. Ism'īl Khān was carried off a prisoner, and the rule given to the Khodja (M. Hartmann, *Der islamische Orient*, i. 210, 212, 321 and 326; *Zap.*, xv. 250).

In the last few centuries, Tibet has had little contact with the Muslim world, although Muslims went to Lhasa during the period when Europeans were excluded. Every three years an embassy arrived there with presents from Kashmir. In a plan of Lhasa given by A. Waddell (*Lhasa and its Mysteries*, London 1905) we may note a mosque and a court of law for Muslims from Kashmir and an inn for Chinese Muslims.

TIBRIZ. [See TABRIZ.]

AL-TIBRIZI, ABŪ ZAKARIYĀ YAHYĀ b. 'ALĪ b. MUHAMMAD b. AL-ḤASAN (YĒḤI add: b. MUHAMMAD b. MUḤ) b. BISTĀM AL-SHĀIRĀNĪ AL-KHATĪB, a celebrated Arab philologist born in 421 (1030). Among his teachers the best known was the poet Abū 'I-ʿAlā' al-Ma'arrī [q.v.]. A copy of the *Kitāb al-Tahqīq fī 'l-Lughah* of Abū Manṣūr al-Azhārī (Brockelmann, *G. A. L.*, i. 129; cf. however Bergsträsser, *Z.S.*, ii. 189, No. 24) came into Tibriz's hands and he required a teacher to expound it for him. He was recommended to the poet. He put the work which was in several volumes in a fodder-sack and carried it himself from Tabriz to al-Ma'arra as he could not afford to ride. His perspiration soaked through the bag and left damp stains in the books. Ibn al-Kūfī [q.v.], as Ibn Khallikān (see *Bibl.*) records with caution from his lost *K. Ashʿar al-Nuḥāt*, says he saw some of the volumes in the Baghdad *Waf* libraries. They looked as if they had been in water. — Among his other teachers and authorities were: Abū 'I-Kāsim 'Ubayd Allāh b. 'Alī al-Rakīṭī (d. 450 = 1058), Abū Muhammad (so Ibn Khallikān; Yāqūt: al-Ḥasan b. Radjā' b.) al-Dahhān (d. 447 = 1055), Abū 'I-Faṭḥ Sulaim(ān?) Yāqūt and others Salīm b. Ayyub al-Rāzī (Shāhī Fakhī, in Tyre; cf. Ibn Khallikān, No. 268), Abū 'I-Kāsim 'Abd al-Kārim b. Muḥammad al-Sayyārī (? De Slane [s. *Bibl.*] reads in the text al-Sāwī (as does Yāqūt), and also gives the variant al-Sayyārī) al-Baghdādī, Ibn Burhān, al-Muḥaddal al-Kasabānī and 'Abd al-Kābir al-Djurdjānī (*G. A. L.*, i. 287), and the Kāfi Abū 'I-Tayyib Thīr b. 'Abd Allāh al-Ṭabārī (cf. al-Sam'ānī, 367*, i. 21 *seq.*) and Abū 'I-Ḥasan al-Tanūkhī (*ibid.*, 110*, i. 42). He also studied in Tyre and Damascus in addition to al-Ma'arra. While still a young man he went to Cairo where he taught Ibn Bābushādī (Brockelmann, *G. A. L.*, i. 301). He then went to Baghdad where he acted as Kāfi (this is the correct reading for *Kāfi* in the *G. M. S.*, xx. in the MS. of al-Sam'ānī, Stambul Köprülü 1010) and acted as professor of *Adab* subjects and librarian in the Niḡmīya till his death on Tuesday 28th Djumādī

II, 502 (Feb. 2, 1109) [so Ibn Khallikān: Yāqūt I, which is wrong, as the day of the week shows]. His tomb is at the Alṭar gate. — Among his various pupils a number of sources mention al-Khaṭīb al-Baḡdādī, the historian of Baḡdād (Brockelmann, *G. A. L.*, I, 329); but this statement, which goes back to Sam'ānī and is adopted by Yāqūt, *Ma'ajam* (see *Bibl.*) and Ibn Khallikān must be due to an error as al-Khaṭīb al-Baḡdādī was thirty years older than Tibrizī. Ibn Khallikān s. v. Tibrizī refers to his article al-Khaṭīb al-Baḡdādī, where he says he gives further particulars of the relations between these two but there is no information in the passage to which he refers (Nº 33). On the other hand Yāqūt himself in the *Iṣṭiṣāṭ* s. v. al-Khaṭīb al-Baḡdādī gives a story with an *isnād* going back to Tibrizī. The *isnād* Tibrizī is not given: but there can be no doubt that our Tibrizī is meant by Abū Zakariyā' Yahya b. 'Alī al-Khaṭīb al-Luḡhawī, especially as the link in the chain is Abū 'l-Faḍl Naṣir al-Salāmī, apparently the father of Abū 'l-Faḍl Muḥammad b. Naṣir al-Salāmī, the pupil of Tibrizī, which is probably only a slip for the name of his son, since M. b. N., besides being a pupil of Tibrizī, is also known as a teacher of al-Sam'ānī (cf. Bergsträsser, in *Z. S.*, II, 205, Nº 154) while his father is in the first place quite unknown and could hardly have also had the *ḥusnā* of Abū 'l-Faḍl, but secondly because the poverty of the narrator which occasionally crops up in the story agrees very well with the poverty of Tibrizī, which we know of from the story of his journey to al-Ma'arra. Tibrizī must thus have come to Damascus in 456 and studied *Adab* under al-Khaṭīb al-Baḡdādī; the story of his thirst for knowledge is told in detail. Tibrizī lived in the minaret of the great mosque (this also is evidence of his poverty). One day al-Khaṭīb visited him in his abode and they talked for an hour. Just before leaving al-Khaṭīb gave him something wrapped up in paper as a present with the request that he should buy pens with it. When Tibrizī unfolded the packet, he found it contained 3 Egyptian dinars. Al-Khaṭīb visited him a second time and gave him money of the same value as or even higher than on the first occasion and asked him to buy paper with it. This story of Yāqūt's which is corroborated in his own article on Tibrizī in the *Iṣṭiṣāṭ* is certainly correct in contrast to that in the *Ma'ajam*, so that al-Khaṭīb al-Baḡdādī was really Tibrizī's teacher. Otherwise al-Baḡdādī would certainly have devoted an article to him in the *Tuṣṭiḥ* Baḡdād. Tibrizī's pupils were: Abū 'l-Faḍl Muḥammad b. Naṣir al-Salāmī (467—550 = 1074—1155, cf. above), Abū 'l-Ḥasan Sa'd al-Khaṭīb b. Muḥammad b. Sahl (in al-Maḳḳarī, I, 895: Sa'd) al-Anṣārī al-Andalusī (al-Ḥazzālī's pupil, d. 541 = 1146 in Baḡdād), Abū Tāḥir Muḥammad b. Muḥammad b. 'Abd Allāh al-Sindjī (462—548, lived in Merw) and lastly al-Djāwālīqī (q. v.), his successor in the Niṣāmīya. His conduct was not of the best (he is said to have drunk wine, worn silk garments and a turban trimmed with gold so that he must have later become prosperous); but his scientific authority is undisputed.

His works that are known by name are all of a learned nature; but Ibn Khallikān quotes two verses by him and a poem of al-'Imād al-Faiṣāḍ to him with his answer. In the list given below of his works, those already mentioned in Brockel-

mann (*G. A. L.*, I, 279 f.) are only given again when further remarks can be made on them.

On the *Ḥamāsa* of Abū Tammām [q. v.] Tibrizī wrote 3 commentaries, first a short one on each *ḥaṣṭ* and then one on the whole work. The second has been edited by Freytag. On the sources cf. Freytag's preface. Yāqūt had an autograph copy of Tibrizī's commentary on the *Mu'allafāt*. He also annotated the *Dirwān* of al-Mutanabbī (*G. A. L.*, I, 88), the *Mufaḍḍaliyyāt*, the *Ḳaṣida Bānat Sa'ūn* (on the edition s. the art. KA'U B. ZUHAYR), the *Maḳṣūra* of Ibn Duraid [q. v.], the *K. al-Lam' fī 'l-Naḥw* of Ibn Dīnūn [q. v.], also according to Ḥadīdī Khaliḍ the *Nihāyat al-Wuḡūl itā 'l-lm al-Uḡūl* of an unidentified Ahmad b. 'Alī b. al-Sa'ātī al-Baḡdādī (the author of this name in Brockelmann lived later than Tibrizī, I, 382), and the *Ḳar'ān*. The same authority also says he edited the *Ḳitāb 'l-taḥ al-Manṣūf* of Ibn al-Sikkīt [q. v.] in a corrected version under the title *al-Taddīb* (MS. Stambul, 'Aṭif, Nº 2716; cf. Rescher, *M. F. O. Beyrouth*, 1912, p. 495), pr. Cairo, n. d.; but there is also a commentary printed in Bairūt (1895 sq.) by him on the *K. al-Alfāz* of the same author. An abstract of the *Kāfi fī 'l-Imā' al-'Arūḡ wa 'l-Ḳawāṣif* is perhaps contained in the collected volume *Maḳṣim min Muḥimmāt al-Mutān*, Cairo 1323, p. 550 sqq. where no author is named but, according to Brockelmann, Index s. v. *Kāfi*, at least two others are possible authors of it. Attention has been called by Rescher, *Z. A.*, xxvii, p. 156 to another prosody entitled *Risāla fī 'l-'Arūḡ* in the Stambul MS. Ḥamīdiyye, 1127, which does not seem to be identical with the two mentioned by Brockelmann. A MS. of his commentary on the *Dirwān* of Imra' 'l-Ḳais is mentioned by Rescher, *Z. D. M. G.*, lxviii, 63; but the sources say nothing of this work. Of other works, now unknown, by Tibrizī Ibn al-Anbārī and Yāqūt mention: *Maḳṣim al-Farṣān*, Ibn Khallikān: *Taḳḍīb ḡharīb al-Ḥadīṭ*, Yāqūt: *Muḥaddima fī 'l-Naḥw*.

Bibliography: (so far as not already given): al-Sam'ānī, *Anṣāb*, ed. Margoliouth, 1912, *G. M. S.*, xx., fol. 103; Abū 'l-Barakāt Ibn al-Anbārī, *Nuḥat al-ʿAlbāb fī Ṭabaʿāt al-Udabāʾ*, Cairo 1294, p. 443—48; Ibn Khallikān, *Wafayāt al-Aʿyān*, ed. Wüstenfeld, Nº 810; do. Engl. by de Slane, iv., 1871, p. 78 sqq. (with valuable notes); Yāqūt, *Maʿajam*, ed. Wüstenfeld, I, 822 sq.; do., *Iṣṭiṣāṭ*, ed. Margoliouth, *G. M. S.*, vi/i, 254 sq.; vi/vii, 286 sq.; Seckis, *Dictionnaire encyclopédique de Bibliographie arabe*, p. 625 sqq. (M. PLESSNER).

AL-TIBRIZI. [See MUḤAMMAD ḤUSAIN B. KHALAF.]

TIBRIZI, commonly called SHAMS-I TIBRIZI (SHAMS AL-DIN MUḤAMMAD B. 'ALĪ B. MALIKIYĀD-I TIBRIZI, according to Dīnī, *Nafaḥāt al-Uns*, ed. Lees, p. 535), a Sūfī, was the spiritual guide of Djalāl al-Dīn Rūmī, who composed in his name the greater part of the collection of mystical odes known as the *Dirwān-i Shams-i Tabriz*. Born in Tabriz [q. v.], where his father carried on the trade of a cloth-merchant, he is said to have studied Sūfism under Shaikh Abū Bakr Zanbīl-bāf (Salla-bāf), Shaikh Rukn al-Dīn Sindjānī, and Bābā Kamāl Dīndī. Afterwards he became a wandering derwish, and in 642 arrived at Kōnya. So profound was the impression made by his enthusiastic personality on Djalāl al-Dīn that the disciples of the latter, bitterly resenting their master's devotion to his beloved friend and *murshid*, caused Shams-i Tibrizī

to leave the city. It is said that after spending some time at Damascus he returned to Kōnya in company with the poet's son Bahā al-Dīn Sulṭān Walad, who had been sent in search of him. In the month of Shawwāl 643, he vanished mysteriously. The stories which represent him as having been put to death by the myrmidons of the government or murdered by a band of conspirators, amongst whom was one of Djalāl al-Dīn's sons, are not confirmed by the best authorities, namely, the *Maṭnawīyāt* of Sulṭān Walad and the *Risāla-i Sipahsālār* of Farīdūn b. Aḥmad, an account of Djalāl al-Dīn and his successors written in Persian circa 720. Some modern scholars hold the view that Shams-i Tibrizi never existed save in the poet's imagination: "c'est son propre génie inspirateur" (Riḍā Tawfīq, in *Textes Hounoufites*, G. M. S., ix, 270, note 1); but even if we suppose the dates and other circumstantial details given by the biographers to be fictitious, such a theory rests on frail foundations. It is impossible to regard the case of Shams-i Tibrizi as unique: the terms of "deification" which the poet applies to him in the *Divān-i Shams-i Tabrīz* are entirely parallel to those used of Ḥusām al-Dīn in the *Maṭnawī* and of another dear friend, Ṣalāḥ al-Dīn Zakarīyā, in some of the odes. So far as the evidence of language is concerned, these three inspirers of Djalāl al-Dīn stand or fall together; and that evidence can with more reason be interpreted in a different way. To readers of Dante it will not appear strange that the great Persian mystic should have clothed his feelings of intimate spiritual relationship and personal affection in words which reflect the ideas of a pantheistic philosophy.

Aḥmad, *Risāla-i Sipahsālār*, Cawnpore 1901, p. 63 sqq. = p. 164 sqq. of the Turkish translation by Miḥdāt Bahārī Ḥusāmī, Constantinople 1913; Adāki, *Manāḥib al-ʿArifin*, transl. by C. Huart in *Les saints des derviches tourneurs*, Paris 1918 and by J. W. Redhouse in *The Mawānī*, Book I, London 1881; R. A. Nicholson, *Selected Poems from the Divān-i Shams-i Tabrīz*, Cambridge 1898. (R. A. NICHOLSON)

AL-TIDJĀNĪ, an Arab author of Tūnis. Practically nothing is known of his life. His name is not even handed down in a single form. The manuscripts of his *Riḥla* (see the works by Rousseau and Bel quoted below) all seem to call him Abū Muḥammad ʿAbd Allāh; so he is also called in Ibn al-Khaṭīb Ibn Kūfadh (*G. A. L.*, II, 241), al-Farīṭa fī Maḥādī ʿl-Dawla al-Ḥaffīya (in Cherbonneau in *J. A.*, iv, 17, 1851, p. 53, transl., p. 64). In his *Tuḥfat al-ʿArūs wa-Nuṣṣat al-Nuṣṣat* on the title page we have Abū ʿAbd Allāh Muḥammad b. Aḥmad: this is what Ḥajjīj Khalīfa, No. 2623 also writes and al-Zarkashī, *Taʾrīḥ al-Dawlatayn al-Muwahhidiya wa ʿl-Ḥaffīya*, Tūnis 1289, p. 51, except that the latter calls him Ibn Ibrāhīm. The sources also differ regarding the quantity of the first syllable of the *nisba*. That there is no question of more than one author of the two surviving works attributed to Tidjānī is made certain by two circumstances. In the first place al-Zarkashī, who uses the form of the name found in the *Tuḥfa* as well as Ibn al-Khaṭīb who uses the form of the *Riḥla* tells us what we also know from the *Riḥla* that al-Tidjānī had dealings with the Ḥafṣid emir Abū Yahyā Zakariyā b. Abī ʿAbbās Aḥmad al-Lihyānī (711–717 = 1311–1317). In the second place the authors of the

works quoted in the *Tuḥfa* come down to a period which make it clear that the author must have written at the beginning of the viiith (xvth) century.

Of his life we only know that he made a journey with his royal master through North Africa, which he describes in the *Riḥla*. It began in Tūnis towards the end of Jumādī I 706 (beg. December 1306) and his fellow-travellers were on the *ḥajj* to Mecca. Al-Tidjānī had however to separate from the caravan at the beginning of Muḥarram 709 (June 1309) because an illness forced him to return home. They had not got much beyond Tripolis, as long halts were made everywhere. These long delays were all to the advantage of the book of travels. Everything that was of any interest in a comparatively small stretch of country could be noted down. The *Riḥla* thus became a regular mine of geographical, scientific and particular historical information about the country passed through; extracts are also given in it from authors, whose original works must now be regarded as lost, and copies of documents. When the prince became amir, al-Tidjānī became one of his highest officials. The year of his death is not known, nor that of his birth.

There is not yet a complete edition of the *Riḥla*; long extracts are given in M. Amari, *Biblioteca Arabo-sicula*, 1857, ch. 45. A short extract with translation has been published by A. Bel, *Les Benou Ghānya* (*Publications de l'École des lettres d'Alger*, xxvii, 1903), appendix. A translation of extracts from the whole book was given by A. Rousseau in *J. A.*, iv, 20 (1852), p. 57 sqq.; v, 1 (1853), p. 101 sqq., 354 sqq. The selection is however quite arbitrary; the reconstitution of the text is defective and the translation to be used with great caution. The text can be checked for several passages in Ibn Khaldūn's *Iḥṣār*.

Al-Tidjānī's other book is a compendium on love and marriage. In 25 chapters it gives advice on the choice of a wife with very full description of the marks of beauty arranged according to parts of the body and on their treatment and on married life with means to heighten its enjoyment, all in the form of traditions and extracts from writers, roughly in chronological order. Theologians and jurists are quoted at great length but more with regard to ethical parenthesis than the regulation of the *Fikḥ*. Manuscripts and texts of the book are given in Brockelmann, *G. A. L.*, II, 257.

Bibliography: given in the article; cf. also M. Amari, *Stori dei Musulmani di Sicilia*, I, 1854, p. 1, and the works quoted by A. Bel, *op. cit.* (M. PLESSNER)

TIDJĀNĪYA (the forms *TIDJĀNĪ*, *TIDJĀNĪ* occur also), order founded by Abū ʿAbbās Aḥmad b. Muḥammad b. al-Mukhtār b. Ṣālim al-Tidjānī (1150–1230 = 1737–1815).

1. Life of the Founder. This person was born at ʿAin Mādī, a village 72 kl. W. of Laghuat, 28 E. of Tahmat. His family were the Aḥlād Sidi Shaikh Muḥammad, and his parents both died of plague in 1166 (1753). After pursuing his studies at his native place, he went to Fez in 1171 (1758) to continue them, thence to Abyad, where he stayed five years, thence in 1181 (1768) to Tlemcen, whence in 1186 (1773) he went to Mecca and Medina; thence to Cairo. At all these places he heard *shaikhs*, and at the last of these at the suggestion of one Maḥmūd al-Kurdi he founded a new order, having previ-

ously been admitted to the Kādīriya, Taibiya and Khalwatiya; of the last of these his own is regarded as a branch. He then returned to the Maghrib, and after visiting Fez and Tlemcen went to Bu Semghun in the Sahara in 1196 (1782), an oasis S. of Geryville, where he believed himself to have received a commission from the Prophet to proceed with the propagation of his Order. A disciple, 'Alī Harāsim, suggested to him to return to Fez, whither he went in 1213 (1798), and was given possession of the palace Hawah al-Ma'ayāt. Though much of the remainder of his life was spent in travelling, in order to regulate the affairs of his Order, Fez remained his headquarters till his death, and he was buried in his Zāwiya in that city.

2. *Doctrines and Practices of the Order.* The members of the Order are called *Aḥbāb* "friends", and they are strictly forbidden to join any other *ṭarīqa*. Their *dhikr* consists (as usual) in the repetition (usually a hundred times) of certain formulae, at particular times of day; these are translated by Depont et Coppolani, p. 417. Their most important doctrine is that of submission to the established government, whence ever since the French conquest of Algeria they have been ordinarily on good terms with the French authority.

3. *History of the Order.* On the death of the founder in 1230 his two sons (Muḥammad al-Kāfir and Muḥammad al-Saghūr) were left in charge of one Maḥmūd b. Aḥmad at-Tūnis, who was succeeded as guardian by al-Ḥajjāj 'Alī b. 'Isā, himself head of a Tidjānī Zāwiya at Temasin and nominated by the founder chief of the order. They were brought by the latter to 'Ain Mādī, the palace which had been occupied by their father in Fez having been seized by a new Amīr, Yaḥyā b. Ibrāhīm. After a time 'Alī b. 'Isā left the two sons in charge of the Zāwiya at 'Ain Mādī, and returned to Temasin. It would seem however that a split had occurred in the order even in the founder's time, the dissidents, who were called *Tadjādjina*, having been expelled by him from 'Ain Mādī. In 1235 (1820) these dissidents invoked the aid of Ḥasan, Bey of Oran, who besieged 'Ain Mādī, but was induced by a heavy payment and the failure of an attempted storm to retire. Two years later the Bey of Titteri attacked the settlement, but unsuccessfully. These military achievements encouraged the two sons of the founder to take the offensive against the Turks in Mascara; they failed however both in 1226 (1241-1242) and 1227, and on the latter occasion Muḥammad the Elder lost his life.

Under the direction of Sidi 'Alī b. 'Isā, who remained at Temasin, the younger Muḥammad, now in sole charge at 'Ain Mādī, proceeded with the propagation of the Order, especially in the Sahara and the Sūdān. Great success attended these efforts, but though the power and wealth of the community increased, neither 'Alī nor Muḥammad ventured on any military operations. Hence when after the French invasion of Algeria the Derkewi *Mukaddam* desired the aid of the Tidjānīs in the Sacred War, it was refused.

In 1836 (1251-1252) the Amīr 'Abd al-Kādir, who aimed at the expulsion of the French, endeavoured to enlist their services; the Tidjānī chief replied that it was his purpose to live in the calm of a religious life, and after a long and fruitless correspondence the Amīr in 1838 (1254)

presented himself at the head of an army before the walls of 'Ain Mādī, and demanded the submission of the Tidjānī chief. This was refused, and in spite of the inequality of the numbers the latter held out for eight months, wherein various expedients for reducing the place were tried by the Amīr and frustrated by the astuteness of the Tidjānī and his advisers. When the Tidjānī found the place no longer defensible, he took refuge in Laghuat. The reputation of the Order was vastly increased owing to the length of their resistance, and in the following year (1840) he offered his moral and material aid against the Amīr 'Abd al-Kādir to the French Marshall Valée. 'Alī b. 'Isā, who remained at Temasin, also declined to join resistance to the French, and on his death in 1844 left the control of the Order to the surviving son of the founder, who died in 1853, when the son of the son of 'Alī b. 'Isā, Muḥammad al-'Ā'id, succeeded.

The sons of the third Master of the Order, Aḥmad and al-Baḥīr, were of tender years at the time of his death, and fell under the charge of one Raiyān al-Maḥari, who aimed at rendering the Zāwiya of 'Ain Mādī independent of Temasin, a policy which caused the relations between the two Zāwiyas to be strained, though it did not result in a definite split. In 1860 the two became suspected of disloyalty to the French, and were arrested and sent to Algiers. They succeeded however in making their peace with the French authorities, and the heads of the Order have ever since maintained a friendly attitude towards them.

4. *Distribution of the Order.* Although the missionaries of the Order in the period of its greatest prosperity obtained adherents in Egypt, Arabia and other parts of Asia, its main expansion has been in French Africa. One Muḥammad al-Ḥāfiḥ b. Muḥṭār b. Bahīr, called Baddi, who visited the founder in Fez about 1780, received instructions to spread it among the Saharans of the extreme South of Morocco: "Returning home via Shingueti and Tijikja, he conducted the most active propaganda in favour of the Tijjani Order, and by 1830, about the time of his death, he had the satisfaction of leaving the whole tribe Ida Ou 'Alī affiliated to it" (Paul Marty, *R. M. M.*, xxxi, 239). Under his successor, who died in 1807, this attachment steadily increased. To the Meccan pilgrimage, faithfully observed by this community, there was added the practice of pilgrimage to Fez, to visit the tomb of the founder, and this is ordinarily performed before the visit to Mecca. The Order was propagated in French Guinea by one Ḥajjāj 'Umar after his return from Mecca to Dinguiray, which in consequence became one of the most important religious cities in this region; "the Tijjani doctrine supplanted almost everywhere the Qadiriyyah traditions" (*ibid.*, xxxvi, 202).

5. *Literature of the Order.* The most important collection of their doctrines and practices is called *Djawāhir al-Ma'āni wa-Bulagh al-Amāni fī Fa'id al-Shaikh al-Tidjānī* known also as *al-Kunūdh* (Cairo 1345). This work, which is said to have been dictated by the founder to Harāsim, is the chief source of the former's biography; other works are enumerated by Depont and Coppolani, p. 418 n., and Lévi-Provençal, *Les Historiens des Chérifs*, Paris 1922, p. 377. A biographical dictionary of eminent members of the order called *Kashf al-Hijās 'an man talāḥa ma'a*

¹ *Tidjānī min al-Aḥḥāb* was composed by Abu 'l-Abbās Aḥmad b. Aḥmad al-'Aiyāshī Sukairīdjī (Fes 1325 and 1332).

TIDJĀRA (A.), trade, commerce; *waḡdar* from *ṭajjara*, "to trade", which again is a denominative verb from *ṭajjir* "a merchant". Like many terms in Arab commercial language, *ṭajjir* is an old Aramaic loanword (cf. e.g. Syr.  and , which again comes from  "price, reward")

which is found as early as the pre-Muḥammadian period. Apart from the fact that the root *t-j-j* has remarkably few derivatives in Arabic, the fact that the word *ṭajjir* originally had the limited meaning of "wine-merchant" suggests its foreign origin. The earliest Aramaic merchants with whom the Arabs came into contact must actually have been wine-merchants; once adopted into Arabic the meaning was gradually extended to include any merchant. The uncertainty about the form of the plural is another indication of foreign origin; Ibn al-Aṭhīr, *Nihāya*, s.v., in addition to the regularly formed Arabic plurals *ṭajjār* and *ṭajjāra* also gives the form *ṭajjār* (cf. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, p. 181 sqq.).

This is not the place to write a history of commerce in the lands of Islām, especially as the necessary preliminary work has hardly been touched (cf. e.g. Mez, *Die Renaissance des Islāms*, Heidelberg 1922, p. 441 sqq.). Nor shall we attempt to characterize the spirit of Muslim commerce or its unages, but rather deal primarily with the problem, what position Islām as a religion adopts with regard to commerce, and how its attitude is expressed in Hadīth particularly, and in ethical works. On the legal aspects of the whole question cf. the article *BA'*.

a. That Muḥammad, who himself belonged to the merchant class, was favourably disposed to trade was natural in a commercial republic like Medina, whose prosperity entirely depended on trade. At least so we must interpret one of the oldest sūras of the first Meccan period, Sūra cvi., the time of the origin of which is just before the conflict with the Meccan aristocracy: "As often as the Quraysh equip their winter and summer caravans, they shall worship the Lord of this House (i.e. the Ka'ba)". But even in this period Muḥammad raises a warning voice against the evils which were beginning to be associated with trade; trade is to be conducted according to law and justice. "Woe to those who give short measure" says Sūra lxxxi. 1 sqq.: "who, when they receive good measure from other men demand the full measure and when they measure out or weigh out to them, defraud" (cf. Sūra lv. 6—8; and from the third Meccan period Sūra vi. 153; vii. 83). At a later period this attitude of the Prophet underwent a certain change, which must date from the Meccan period, although there is only

evidence of it in the Qur'ān from the Medina period. Under the influence of Christian ascetic ideas, his attitude to trade was modified; he does not condemn it, it is true, but he now sees in it something which may detain believers from the worship of God and from performing the ṣalāt. This is most strongly marked in the description of the monastery in the Medina Sūra xxiv. 37: "Men whom no trade nor purchase keeps from the thought of God, from performing the ṣalāt and from paying the *ṣakāt* from fear of the day on which hearts and eyes shall be full of trouble". In any case, one can deduce from this passage that the Prophet was fully conscious of the deleterious influences of trade on religious life. The result of this train of thought was in the Medina period an express prohibition of trading during the Friday service, in Sūra lxii. 9—11: "O ye who believe, when ye are called to the ṣalāt on Friday, hasten to the worship of God and cease trading; this is better for you, if ye knew it; and when the ṣalāt is over, then disperse yourselves in the land and strive after the benefits given by God and think often of Him that ye may prosper, and when they see trading and empty chatter, they turn to it and leave thee standing. Say: What is with God is better than chattering or trading and God is the best provider". On the other hand, the Prophet in the latest Medina period expressly permitted trading during the pilgrimage (Sūra ii. 194). And yet he emphasises at the same time once more that family and clan, goods and chattels and stock in trade are not to be preferred to God and his Prophet (Sūra ix. 24). To this late period also belong the well known Qur'ānic regulations for the conclusion of agreements (Sūra ii. 282 sq.).

b. This attitude, on the whole well disposed to trade, is also that of Tradition although it attacks with the greatest vigour speculation and other dishonest dealings. Trade is regarded as profitable and honourable, more remunerative than cattle-rearing or manual labour (*Kaṣa' al-Ummal*, ii, No. 2411, 4227, 4742). The honourable merchant enjoys great esteem "the trustworthy, just, and believing merchant shall stand at the day of judgment among the witnesses of the blood", we are told in one tradition (Ibn Māḡja, *Tajjārāt*, Bāb 1); he enters Paradise. The dishonest merchant on the other hand must expect punishment: "On the day of resurrection the merchants will be classed with the liars, except him who has trusted in God and has been pious and righteous", we are told in another tradition (Ibn Māḡja, *Tajjārāt*, Bāb 3). The prejudice of certain pious circles against the merchant class is even more sharply expressed in another tradition which is however quite isolated: "The Prophet said: Merchants are liars. Then some one said to him: O messenger of Allāh, has not God permitted buying and selling? He replied: certainly, but they talk and lie, they swear and do wrong" (Aḥmad b. Ḥanbal, iii. 428, cf. 444). On the other hand, it is regarded as something pleasing to God to gain profit from trading for the support of one's family; thus in one tradition in Zaid, *Moḡmī' al-Fiḥ*, ed. Grifini, No. 539 (cf. No. 544) we read: "If thou makest a profit from what is permitted, it is a *ḡihād* (i.e. like fighting on the path of Allāh) and if thou usest it for thy family and thy relations, it is *ḡadāḡa* (charity); and truly a permitted

dirham which comes from trade is better than ten otherwise gained". In trading it is recommended to be generous and conciliatory; one should give full weight and measure and in weighing give overweight. The morning is recommended as particularly blessed and profitable for trading. One should be careful to avoid deceit and deception, which cancel the blessing (*baraka*) that rests upon trade. Defects in the goods should be pointed out to the purchaser. "If any one sells defective goods without pointing this out, God will hate him for ever and the angels will for ever curse him (Ibn Mäjjä, *Tiğjārāt*, Bāb 45)". But if one has been guilty of such faults in trading, he can atone for it by alms (*ṣadaqa*). The Prophet is further said to have condemned the adulteration of goods, especially the adulteration of foodstuffs.

Trade is to be carried on by mutual agreement, but never under compulsion. An agreement already made can only be cancelled if buyer and seller have not yet separated; in this period it can also be cancelled by tacit agreement (Aḥmad b. Ḥanbal, ii. 536). A further sale can only be effected when one has obtained possession of the goods (*ḥaḥq* or *istifā*); the traditions in this connection speak only of foods [*ṣ'ām*] but we are told by commentators that foods are only taken as examples and in fact one tradition talks of a *ḥuṣ* in quite general terms (Aḥmad b. Ḥanbal, iii. 402). If in disputes between the contracting parties neither is able to prove his point, the purchase either remains valid and the assertion of the seller is taken as authoritative — or both must abandon the transaction. If there are two claimants to be the purchaser, the first is held to be the actual purchaser.

The traditions in general have nothing to say against business being arranged for a definite date or on credit (*naṣṭaṭa*). But no increase of price must take place nor is a reduction allowed if payment is made at an earlier date (Mālik, *Buyū*, tr. 81). The making of a deposit on a credit transaction is also allowed as the Prophet once purchased provisions on credit and left his iron body-armor as a pledge.

Tradition frequently objects to a practice of traders of protesting the quality of their articles with oaths; e.g. one tradition says: "Swearing furthers the disposal of goods but diminishes their blessing" (Bukhārī, *Buyū*, Bāb 26). According to another tradition, Sūra, lii. 71 was revealed in this connection; this verse has however nothing to do with the swearing of oaths when selling; its associations are other and purely religious.

A series of articles are excluded by Tradition from buying and selling: firstly all that is not one's own property (Aḥmad b. Ḥanbal, ii. 189, 190); secondly a series of articles the use of which is forbidden or which are considered unclean — wine, swine, dogs, cats, idols (*ṣūṭān*) and *waṭṭa* [q. v.] and also water; water according to a tradition is one of the three things which are *ṣ'ām* *ḥammur*, the price of which is *ḥarām* (Ibn Mäjjä, *Kuḥūn*, Bāb 16).

Tradition strongly condemns a practice still very prevalent in the east: haggling or bargaining; in selling also one should not outbid his fellows. Tradition also condemns the raising of prices (*naḥḥa*) and speculation in or holding up of foodstuffs (*ḥaḥḥa*); on the expression, cf. Fraenkel, *op. cit.*, p. 189). Anyone who holds up food sup-

plies and thus raises prices "is a sinner" (Aḥmad b. Ḥanbal, ii. 351). "Him who holds up food supplies, God will punish with leprosy and bankruptcy" (Ibn Mäjjä, *Tiğjārāt*, Bāb 6); "the speculator is accursed" (*ibid.*); according to other traditions, he "will be thrown into the deepest hell-fire" (Jawālib, N°. 928). On the other hand, the prophet is said to have declined as an injustice to fix prices for foodstuffs in a time of scarcity (Ibn Mäjjä, *Tiğjārāt*, Bāb 27 etc.). Generally speaking however, Tradition condemns any speculation in foodstuffs. It is forbidden to buy or sell provisions wholesale without fixing weights and measures (*ḥuṣṣa*); food should not be sold again in the same place as it is purchased in but only in the particular market-place intended for the purpose. One should not go out to meet caravans to purchase goods (*ṭalaḥḥa*); the townsman should not purchase from the man from the desert in order to sell again in the town at a profit; brokering (*ṣimār*) is therefore condemned.

Finally may be mentioned a whole series of branches of business and practices which are described by Tradition as forbidden:

1. In the first place it forbids the conclusion of two transactions in one contract e.g. one portion of the goods on credit and another for cash (cf. Aḥmad b. Ḥanbal, i. 398).

2. *Ba' al-'urbān*: a form of sale in which an earnest-money (*ṭarḥan* or *urbān* < עִרְבִּין < ἀρχαῖον; cf. Fraenkel, *op. cit.*, p. 190) is given which belongs to the vendor if the transaction is not carried through (Aḥmad b. Ḥanbal however considers earnest-money permissible; cf. Ibn al-Athīr, *Nihāya*, i. v.).

3. Auction (*ba' al-muṣāyada*); in three cases it is permitted however: in direct poverty, in sickness or when deeply in debt.

4. *Ba' al-muṣābana* (presumably also of Aramaic origin; cf. Fraenkel, p. 189), i.e. when any goods the weight, size or number of which is not known is sold in bulk for a definite measure, weight or number of another commodity, e.g. the still green fruit of a palm-tree for a definite measure of dates or the seed for a definite amount of provisions. The unreal and speculative in this transaction is seen by Tradition in the fact that the yield which cannot yet be defined may bring the purchaser more or less than he has given for it (cf. Aḥmad b. Ḥanbal, ii. 64). This rule is in the direction of the prohibition of profiteering. — But according to one tradition of the Prophet, an exception was allowed, the *ba' al-'arāyā*; according to this, a poor man who does not possess a palm-tree of his own, in order to procure his family fresh dates may purchase for dried dates the fruit of a palm on the tree, but it has to be valued. In the opinion of several traditionists, this transaction is limited to cases where not over five *ṣaḥḥ* are involved while 'Abd Allāh b. 'Amr b. al-'Āṣ transmits a tradition according to which the Prophet prohibited even this (Aḥmad b. Ḥanbal, ii. 183).

5. *Ba' al-mu'āwama*, is the purchase of the yield of palm-trees for two or three years in advance. This is a question of the sale of things which are not yet in existence at the time of the contract.

6. *Ba' al-munābaha*. In this the exchange is irrevocably concluded by the two parties handing over the goods without seeing or testing them beforehand. Another form of this transaction is

baṣ al-ḥaṣī (cf. Ibn al-Aṣḥar, *Nihāya*, s. v.) or *baṣ il-ḥaṣī al-ḥaṣī* (cf. Ahmad b. Ḥanbal, iii. 59, 68, 71) when, as a sign of the conclusion of the agreement, a small stone is handed over in place of the goods (cf. Mutarrizī, *Mughrib*, s. v. *nabadaḥa*).

7. *Baṣ al-mulūmāna*. In this the transaction is also concluded without the goods being seen or examined beforehand, the covered goods being simply touched with the hand.

8. *Baṣ al-ḡharar*: "dangerous or hazardous trading". For this kind of transaction the traditions give a series of examples, e.g. the milk in the udder, an escaped slave, booty before its division, fishes in the water etc. (cf. e.g. Ahmad b. Ḥanbal, i. 302, 388; iii. 42). The commonest example is the very complicated case of *baṣ ḡharat al-ḡharat*, namely the sale of a pregnant she-camel for slaughter with the prospect that it may produce a female young one, which will again bear young.

All these transactions are condemned by Tradition on account of the element of uncertainty in them. On money-changing (*ṣarf*) and the prohibition of profiteering (*ribā*), see these articles. The above transactions are in all the older collections; a still larger number with a great wealth of detail are given in the later collections, e.g. *Kanz al-Ummāl* (cf. Ritter in *lit.*, vii. [1917], 28 sqq., where a series of such traditions is translated).

9. In the traditions of the first three centuries an open and honourable attitude in business is demanded of the merchant; he is to treat his customers "like his brother" and refrain from cheating them in any way. Tradition therefore also condemns any business in which there is an element of uncertainty, in which chance can play any part, so that no one may suffer injury. These fundamental principles of Muslim commercial ethics have found their classical expression in Ḡhazālī's *Ṭḥyā' 'Ulūm al-Dīn*, Cairo 1326, ii. 48 sqq. According to Ḡhazālī (d. 505 = 1111), one should strive to earn one's living with a view to the next world. To him the acquisition of a livelihood is a means of attaining bliss, the world is a field sown, a preliminary to the next world. But Ḡhazālī does not regard trade as absolutely better than any other means of earning one's living. "Through trade," he says, "one can either attain a sufficiency or wealth and superfluity". He condemns the accumulation of wealth, in so far as it is not applied to good purposes. But if the merchant obtain a sufficient livelihood for himself and his family, it is at any rate better than begging. But certain types of men do well to refrain from any such activities, for example, the pious, the mystics, the learned and the officials. Ḡhazālī then gives his views on the ethics of commerce of which only a brief résumé can be given here.

Even if a business is legal and irreproachable, yet it may be immoral and injurious to others; for not every prohibition makes the agreement invalid. Ḡhazālī then distinguishes two kinds of business, those that injure the community and those that only injure the individual. To the first group belong speculation in foods, especially in corn (*ḡḡīḡār*), and the putting into circulation of false coins. In the case of false money the merchant has to pay attention to the following points: 1. If he takes false money, he should throw it down a well. 2. He must acquire a thorough knowledge of the coins current in

the country. 3. If he pays another false money with the latter's consent, he is not free from guilt, as the other may put them into circulation again. 4. If he takes false money to oblige some one, he will only participate in the blessing which rests upon a good feeling in trade, if he does it with the intention of throwing the false money into a well.

Ḡhazālī then deals with the conduct of business, which is only injurious to the individual. The guiding principle in trade is that one should only do to a fellow Muslim as he would be done by. Therefore 1. the seller should not praise the wares and not emphasise his statements by oaths; he must only emphasise such qualities in the goods as the customer cannot know without further trial, e.g. the capability of a slave; 2. he should tell all the faults of the goods, he should for example not show only the good sides of a material, he should not exhibit materials in a dark room etc.; for this is deception and neglect of the "good counsel" to which his brother is entitled. The merchant must remember two things, firstly that though he can dispose of his goods by concealing defects, he thereby loses the blessing which rests upon trading, and secondly that the benefit of the goods of this world ceases with the end of life and that only the injustice and sin remain, which were committed in trading; 3. the merchant must give just and full weight and measure; 4. he must quote the correct price of the day.

Ḡhazālī then deals with the showing of little kindnesses and civilities in trading, i.e. one should allow the other an advantage which he is not strictly compelled to do. Such little civilities are: 1. if the seller refuses a price offered which is much above the market price; 2. if the purchaser allows himself to be charged too much when the vendor is a poor man; 3. if in the collection of arrears, one allows a remission or prolongation of the period; 4. if the debtor brings the money to his creditor to save him the trouble of coming for it; 5. if at his request the contracting party is allowed to annul an agreement to purchase that has been concluded; 6. if one sells to the poor on credit and only demands the price, when it is possible for them to pay or keeps no record in one's books of the debt and leaves the payment completely to their pleasure.

The merchant however in his pursuit of profit should not neglect the salvation of his soul. The merchant should therefore 1. begin his transactions with good intention (*niyya*) and good faith (*aḡḡīda*); 2. he should conceive of trade as a "social duty", as a *ṣarf al-ḡifāya*, as his trade is only a part of the complicated system of the whole; 3. he must not let the market of this world distract him from the markets of the next world, i.e. from visiting mosques and performing the ṣalāḡ; 4. in entering the market and in it itself he must often think of God; 5. he must not be too eagerly set on the market and trading, not be the first to enter it and the last to leave it and must not cross the sea; 6. he must not only avoid what is forbidden, but also avoid all doubtful and suspicious business; he should enquire after the origin of goods and not deal with notorious swindlers or thieves; 7. he must carefully watch his words and deeds in business, as on the day of judgment he will be called to account for them.

According to *Gharāli*, the market for the merchant is the scene of his *jihād*, his "holy war" where he has to wage a war against his own ego in his intercourse with his fellow-men. Since for *Gharāli*, commerce is a preliminary and a preparation for the next world, he therefore discards the ascetic ideal of fleeing from the world for the ordinary mortal as an evasion of the struggle.

Similar views, although not always of such high moral worth as in *Gharāli*, are found throughout *nahw* and *ahkām* literature. For example, *Tādj al-Dīn al-Subkī*, the biographer of the *Shāhī* jurists (d. 771 = 1370), in his *Mu'ad al-N'am* discusses the merchant in several passages. In these he no doubt takes typical cases of his age. Thus the paper merchant should give preference to those of whom he knows that they buy the paper for the preparation of religious works (*kutub al-dīn*). On the other hand, he should not sell paper to those of whom he suspects that they will use it for the preparation of heretical works, false documents, increases of taxation etc. (ed. Myhrmann, London 1908, p. 188; transl. Rescher, Constantinople 1925, p. 138). The bookseller must not sell religious works (*kutub al-dīn*) to people who will destroy or criticise them. He further must not deal in works by heretics or by astrologers nor in fabulous works like the *Strat Antar*, nor must he sell copies of the *Qur'ān* or works on Tradition and Law to unbelievers (cf. thereon *al-Shāfi'i, Umm*, iv, 132 and Hoffening, *Fremdenrecht*, p. 49, note 5, where the "keine" should be deleted before "hannaf. Werke"). Lastly the dealer in lands must take care that he does not sell *wakf* estates (ed. Myhrmann, p. 205; transl. Rescher, p. 150 sq.).

d. A more selfish morality on the other hand is championed in the book ed. and transl. by Ritter, *Kitāb al-ṣḥāra ilā Maḥāsin al-Tidjāra*, by Abū l-Faḍl Dja'far b. 'Alī al-Dīmīshqī (of the vii/viii = xth/xii centuries). The book consists of two parts, one dealing with the merchant and the other with his goods. On the subject of merchandise there are many other works, some independent and some in the well known Muslim encyclopaedias, on which see Ritter, *op. cit.*, p. 17 sqq. Here we are mainly concerned with the sections on the merchant. The classes of merchants distinguished are: 1. The wholesaler (*shāwī*). He endeavours to purchase his goods under the most favourable conditions in order to sell them again, when there is a scarcity of them and the price has gone up. He must therefore keep accurately informed about the position of the market at the places of production and the security of the roads thither so that he does not let the best time for buying and selling pass him. A purchase of larger consignments is recommended to be carried through in four instalments at intervals of 15 days so that no loss may be suffered by a sudden change in price or by some other unforeseen circumstance. The wholesaler must also take account of the state of the government of the country, whether it is just and strong or if it is just but weak or tyrannical. — 2. The travelling merchant (*rakkāf*). He must take especial heed as to what goods he buys and must exercise great caution; for his journey may be prolonged or some unforeseen accident may happen to him, like danger on the road, which will delay him so that he must again sell the goods in the

place where he has purchased them and thereby suffer considerable losses. He must also know the average prices, which the goods he is buying will attain in his native land as well as the tariffs, lest he throw away his profit even before purchasing in a foreign country. He should also look out for a reliable agent, and a suitable warehouse etc. at his destination. — 3. The exporting merchant (*mudfahhīn*). Here we have to deal with agencies. He must have a reliable agent in the place to which he is exporting; to him he sends the goods under reliable care; the agent then has to sell the goods and buy others, sharing the profit.

Besides much other valuable advice for the merchant and warnings against swindlers and deceivers, al-Dīmīshqī's work also contains discussions of questions of economic theory such as the fixing of the market price, the "average price" about which the merchant must keep himself accurately informed. How far all this is connected with economic views of the ancients has not yet been investigated.

Ibn Khaldūn in the chapters on trade in his *Muqaddima* (Cairo 1317, p. 441 sqq.; transl. in *N. E.*, xx, [1865], p. 348 sqq.) expresses himself in similar terms. He also classifies his observations under the heads of the wholesale and the travelling merchant, while he apparently omits the export merchant. He defines commerce as the art of increasing one's fortune by buying goods and selling them again at an increased price, either by storing them and awaiting an increase of price, or by taking them to another country where the price is higher.

Ibn Khaldūn's verdict on merchants in general is of interest; for the trade of merchant, one requires to have much skill, to praise his goods unduly, to deal cunningly and stubbornly with his customers, all things which affect a man's sense of honour and justice and unfavourably influence his character. It is the small trader who succumbs more readily to this influence as he has to deal with his customers day in and day out. It is otherwise with the merchant who through some favourable circumstance has risen rapidly to wealth and fortune and has attained a position of esteem; he is rather protected from the evil influences of trading as he can leave the actual dealing to his employees and has only to supervise them and give them general directions.

e. The question raised in the beginning of this article of the attitude of Islam to trade is one aspect of the problem, several times discussed in recent years, of the possibilities of the economic development of the lands of Islam. Until shortly before the world war the possibility of development was denied, as is still frequently done in missionary circles. W. Barthold in his introductory essay to the *Mir Islām* may be regarded as the first to show the untenability of this view on historical grounds. Following Max Weber's religious and sociological studies, C. H. Becker, R. Junge and more recently Alfred Rühl have dealt with this question and come to the conclusion that Islam has never been hostile to economic development. But the Oriental mind thinks of economic problems quite differently from the Western, which is the result of the peculiar conditions of the east, especially certain racial characteristics and the dry climate prevailing almost everywhere with the

supreme importance of the question of water supply. These conditions produced a much closer bond of union between the individual and the community. The prevailing principle is not competition but cooperation. From these circumstances one can understand the fundamental principle of Muslim commercial ethics, that the merchant must treat his customers like his brother. To this strongly marked feeling of being a member of a community is added religion, which for every Muslim is the main guiding principle of all his dealings. Even business must submit to its control and cannot take up an independent position with a morality of its own.

In spite of this however, Muslim lands will be quite capable of adopting modern business methods; Islam in the past has often displayed its adaptability and capability of development and various Muslim lands like Turkey and Egypt are at present making up for what they have long neglected in various fields: figures like Ziyā Gök Alp and Muḥammad 'Abduh are milestones on this path of progress.

TIDORE, a small volcanic island west of Halmahera in the eastern part of the Malay Archipelago. For administrative purposes it belongs to the residency of Ternate but is not under the direct authority of the Dutch East India government; along with various other small islands and a part of Halmahera it forms an autonomous district also called Tidore, formerly under a sultan, since 1909 under a council of notables. The population is in every way very like that of Ternate [q.v.]. From Portuguese sources it may be deduced that Islam was introduced into Tidore about 1430; according to native tradition, an Arab named Shaikh Mansūr was the first to teach Islam here and Tjiliati (also Tjiliatu and Tjiri Liliatu) about 1495 was the first ruler to be converted, when he took the name Djamāl al-Dīn.

AL-TIFĀSHI, SHIHĀB AL-DIN ABU 'L-ABBĀS AHMAD B. YUSUF, d. 651 (1253), is the author of the *Kitāb Ashār al-Afshār ft Djamā'ir al-Afshār*, one of the best known works on jewels which he describes — in all 25 kinds — according to their origin, provenance, natural and magical properties, defects and merits, price and appre-

ciation of particular varieties. An edition and translation of the book which exists in good manuscripts is a great desideratum, as that by Count Raineri Biscia of 1818 (new edition 1906) no longer suits modern requirements. — Nothing is known of a second mineralogical work of which there is a manuscript in Paris. To Tifāshī are also ascribed some writings of an obscene nature.

(J. RUSKA)

TİFLİ (AHMAD ÇELEBİ T.), an Ottoman Turkish poet and meddāh of the xviii century. Shaikhī in the *Shakā'ik dhili* says he was born in Constantinople but the other sources say he belonged to Trebizond. He was the son of a certain 'Abd al-'Aziz Efendi and wrote poems while still a mere child, hence his sobriquet of Tiflī. Of a very keen wit he acquired a reputation as a meddāh and *sedim* rather than as a poet. In this capacity he was a member of the entourage of Murād IV and was very well off, as a result of the income granted him from the customs and *ewşaf*. All the sources record that he used to recite the *Shāhnāma* in the circle of Sulṭān Murād and that he composed witty and amusing stories (to gain an idea of the importance and place of the *Shāhnāma-ghāna* and *ghayā-ghāna* in the palaces of India, Persia and Asia Minor, cf. Köprülü Zāde Fu'ād, *Turkiyat Medjmu'atı*, l. 4—5, 10—12). Ewliya Çelebi who confirms these statements adds that he was called Leklek Tiflī on account of his height (l. 671). Although he belonged to the Melāmiye-i Bāīr-miye order and was an adept of Idris Muḥṭaf (MS. of Mustakīm Zāde, *Menāzib-i Melāmiye-i Bāīr-miye* in my private library), he led a dissolute life. According to the *Medjmu'at* of Süleimān Fā'ik Efendi, he lived in the vicinity of Ködja Mustafa Paşa. The anecdotes about his relations with the poets of his time are famous. We know from Şafā'ī that Tazīz Meḥmed Çelebi of Eski Zağra wrote two satirical treatises in verse called *Wāḥiyet-nāma* and *Dhille-nāma* and represented them as the work of Tiflī. There is a copy of the *Wāḥiyet-nāma* in my own library. He is also mentioned by the poet Gafī of Edirne in his amusing rhymed biographies of poets. He died in 1071 (1660—1661) and was buried near Hazret-Bāli outside Siliwri Kapı. His *ter'ika* was engraved on his tomb-stone by his relative Naḥmī Meḥmed Efendi. The celebrated poet Nā'ili Kādīm also wrote a *ter'ika* on his death (the *ter'ika* of 1070, given by 'Asim in the *Dhail Zubdat al-Afshār* and by Shaikhī as well as the *ter'ika* of 1074 given by Şafā'ī are wrong. Hammer, *Ormanische Dichtkunst*, iii. 449, gives the date 1074 on the authority of this last source and Rieu repeats it in the *Catalogue of Turkish MSS. in the British Museum*, p. 198). Tiflī — who according to Şafā'ī wrote a *Dhūm* — is not however quite negligible as a poet. Biographers like

Shakhri, Riza, 'Asim and Safa'i include him among the poets. There is a *Divan* of his in the British Museum but it contains only his *ghazaliyat* (Rieu, *Catalogue*, p. 198; Add. 7933, fol. 18—53). In the *medjma'a* dating from this period we have several of his poems (Flügel, *Katalog der orient. MSS. Wien*, i. 721).

It is to his quality as a *meddāh* and *medim* that he owes his great fame. The sources of the xviiith century are all agreed in this respect and Mirza Zade Salim, author of a *tezkere* in the xviiith century, in order to emphasise the skill as a *meddāh* of his contemporary Kirtmi says that he was a teller of stories as skilful as Tifli, which shows that the latter's fame still survived (*Tezkere-i Salim*, Constantinople edition, p. 568). Suleimān Fā'ik Efendi, author of the *Medjma'a*, says he was the first and oldest of the 'Othmanli *meddāh's* but this is wrong, as my investigations on this subject have shown. We may however regard Tifli as the most famous of the 'Othmanli *meddāh's*. In some old *medjma'a*, we find fragments of his work and anecdotes about Tifli and Sulṭān Murād have been kept alive to the present day. In the story of *Şanṣar Muṣṭafā* contained in No. 1208 of the library of the University of Stambul and in another copy in my private library, Sulṭān Murād and Tifli appear as the *dramatis personae*. In the story of *Khanlarli Kānām*, also one of the oldest stories of *meddāh's*, Tifli and Sulṭān Murād play a part ('Ali, the editor of the *Djerd-i Hawādith*, has republished this old story at the Djerd-i Hawādith press under the title *Khanlarli Kānām Hikāye-i ḡharibet*. On the life of this 'Ali and a résumé of the story cf. the article *Meṣṣāḥir-i Medjma'e* by Ibn al-Amin Maḥmūd Kemāl in *T. O. E. M.*, No. 96, 1928). It may be asked if these stories which are of an extraordinary value for a knowledge of the social life of old Stambul, were really composed by Tifli himself, or if later *meddāh's*, remembering the great fame of Tifli, adapted them and introduced Tifli into them. No definite answer can be given, but these stories of *meddāh's* show in any case what a great reputation Tifli had acquired.

Bibliography: (besides the works above mentioned): the addition of Shakhri to the addition of the *Shakhri's*, entitled *Wafā' al-Fuṣṭāt* (there are a number of copies in the libraries of Constantinople. The author's son completed his father's work and added the biographies of the 'afāmā and *ṭhāḥis* from 1131 to 1143; there is a copy in the Aya Sofya, No. 3198); Riza, *Tezkere-i*, Constantinople 1316, p. 63; Safa'i, *Tezkere-i*, library of Es'ad Efendi, No. 2549; Seirek Zade Mehmed 'Asim, *Dhail Zubdat al-Aḥṣar*, in my private library; Gufi, *Tezkere-i*, in my private library; *Medjma'a* of Suleimān Fā'ik Efendi (on this *Medjma'a* and the different manuscripts of his works cf. *Turkiyat Medjma'at*, i. 35); Mehmed 'Ali 'Aini, *Kūḍiḡi dairam weli*, Constantinople 1343, p. 127; Köprülü Zade Mehmed Fu'ad, *Turkiyat Medjma'at*, i. 31—34.

(KÖPRÜLÜ ZADE MEHMED FU'AD)

TIFLIS, the capital of Georgia and also the eastern part of Georgia (Kharthlia).

The Name. In Georgian the town is called Tphlisi or Tbilisi which is usually explained as derived from *iphili* "hot" (referring to the hot springs of Tiflis), in Armenian Tphkhis (Tphlis),

in Arabic Taflis (Balādhuri: Taflis). Among similar names we may note the town *Ṭāḡis* or *Ṭāḡis* mentioned by Ptolemy v., ch. 11 to the N. E. of Abania, i.e. in Daghestan and the place called Taflis to the south of Lake Urmia [cf. Kudama, p. 213: the road running from Dainawar to Adharbāidjān forked at Barza (= Sakhsiz? q.v.). Taflis lay 2 farsakhs north of Barza on the road to Urmia].

Before Islām. The old capital of Georgia was at Mtskheta (Ptolemy, *Geography*, v., ch. 2, *Mas'āra* = *Marzāra*) which the Arab geographers by a popular etymology sometimes call Masdjid Dhi 'l-Karnain (Mas'udi, *Murūḡi*, ii. 56; cf. Marquart, *Scythica*, p. 186). According to the Georgian Chronicle the Persian *eristhān* ("ethnarch") sent against Waraz-bakar (379—393?), king of Georgia (of the Khosrovi dynasty descended from the Sasanians), built Tiflis "between the Gates of the Caucasus" (between Darial and Darband) "to serve as a bulwark against Mtskheta" (Brosset, *Histoire de la Georgie*, i. 140).

During the wars of king Wakhtang Gurgul (446—499?) with the Persians, the fortress (*hala*) and the village (*sopheli*) of Tiflis were destroyed. Wakhtang laid the foundations of a town at Tiflis and his son Dadi (499—514) completed its walls (*op. cit.*, p. 180, 196, 201).

After 523, the Persians, having suppressed the ruling dynasty of eastern Georgia, maintained a Persian *marzban* in Tiflis, beside whom representatives of the Georgian nobility had a nominal share in the administration of the country (Brosset, i. 226; Marquart, *op. cit.*, p. 397, 431—432; Djawakhow, *Khrist. Vostok*, i. 110). The governor of Mtskheta was under the *marzban*. Theophanes of Byzantium (viiith century) is the first Byzantine author to mention ἡ Τίφλις (Τίφλις) *μετρίστα* under the year 571 (Theoph. byz. apud Photius, in *Migne, Patrologia graeca*, ciii. 139; cf. Muralt, *Essai de chronologie byz.*, St. Petersburg 1855, i. 156).

The wars with the Turks and the Byzantines having detracted the attention of the Persians from Iberia, the Georgians asked the Byzantine emperor to give them a king and the Bagratid Guarām (575—600) was set up at Mtskheta. To this king tradition attributes the "restoration of the foundations of the church of Sion in Tiflis" (i. 222).

After the victory gained over the Byzantines by king Khosraw Parwēz (after 606), the son of Guarām, Stephanos I (who was content with the title of *eristhān* = ethnarch), joined the Persians. Later when in 624 Heraclius and his Turkish allies laid siege to Tiflis, Stephanos defended the town bravely. Heraclius appointed as *methawer* (chief) Adarnases of the old Khosroid family and associated with him the *eristhān* Djibghu (Theophanes: Ζίβηνα; according to Marquart: Thong Vabghu Khakan). The citadel (*hala*) was taken and Stephanos slain.

The Arab conquest. The Arabs confounded Armenia and Georgia (cf. Balādhuri, p. 194; and Yakūt, ii. 58 where Djurān is a *nāḥiya* of the country of Arminiya). According to the Georgian chronicle (*Kharthlis tskhovreba*), the Agarians invaded Somkheta ["Armenia", a rather ambiguous term, for "Somkheta of Kharthlia" began to the south of the river Khrām, about 20 miles S. of Tiflis] in the reign of Stephanos II (639—663?), son of Adarnases, who lived in Tiflis. On the death of this king, his sons Mir and Aril

withdrew to Egris (Mingrelia, the land north of the Rion and to the west of Imerethia as far as the Black Sea). In the period of their joint reign (663–668) Georgia was visited by the ferocious Murwan Kru (*M. the Deaf*) sent by the *Amir al-Mu'minin* Eshim (= Hisham whose dates are actually 105–125 = 724–743!). Such mistakes and anachronisms may be explained by the fact that at this period the national life of Georgia had taken refuge far to the west in lands not easily accessible from Ćorokh (Klardjethia). The thread of events may however be pieced together from Arab and Armenian statements (cf. the article ARMENIA).

In reality Arab expeditions penetrated into Transcaucasia in the reigns of the early caliphs. According to Tabari, i. 2666, in 22 (643) Surāka having made peace with Shahr-Barāz (king of the Bāb al-Abwāb) sent Habib b. Maslama against Tiflis. To the same year Tabari, i. 2674, puts the peace with the people of this town but it was actually made in 25 (645) in the reign of 'Othmān (al-Ya'qūbi, p. 194; Balādihuri, p. 198). When Habib b. Maslama had conquered Armenia (q.v.) he turned his attention to Georgia. A Georgian ambassador (Nikly = Nicolas? Thy = Theophilus?) appeared before him to testify that the *harāsh* of Djurzān and his people were well disposed. Habib's answer (cf. the versions in Balādihuri, p. 201 and Tabari, i. 2764; Ya'qūbi, i. 857 rather follows Balādihuri) was addressed simply to "the inhabitants of Tiflis, in (the rustāk of) Mandjalis (now Manglis) in al-Djazzān (= Georgia) in the land of Hurmuz".

Habib guaranteed the people the exercise of their religion, but he sent to Tiflis the learned 'Abd al-Rahmān b. Djar' to expound the law of Islām and indeed the people of the town were soon converted to Islām.

After reducing Tiflis, Habib extended his conquests or his treaties of peace over other regions inhabited by the Georgians and their neighbours (Balādihuri, p. 202–203; cf. the attempt to analyse them in Ghararian, *op. cit.*). Among these the Sanāriya play a prominent part (Ptolemy, v, ch. viii, § 13; *Συναγωγὴ*; in Armenian: Tsamarkh), a very warlike Christian people who lived in Kakhetia and the high Alazani and who, according to the hypothesis of N. Y. Marr, were identical with the modern Thugh, whose language is related to that of the Ćedens (cf. *Isr. Akad. Nauk.*, x/xii, 1916, p. 1379–1408).

From the time of Habib's expedition to the reign of al-Mutawakkil (232–247) the Djurzān (eastern Georgians) and the Abkhāz (q.v., here in the wide sense of "western Georgians of the valley of the Rion", i.e. of Imerethia) paid tribute to the Arab military commander in Tiflis (*Murūdj*, ii. 65; Ya'qūbi, ii. 583). Of the time of Yazid II (101–105) we have a letter in which Djarāh b. 'Abd Allāh confirmed to the Djurzān the guarantees given by Habib b. Maslama (Balādihuri, p. 203; there is a reference there also to the rustāk of Mandjalis, but several place-names are still unidentified).

As to the "Murwan Kru" of Armenian and Georgian tradition, two personages seem to have been confused in this figure (Marquart): Muhammad b. Marwan of whom the Georgians seem to have heard the Armenians speak, and his son Marwān b. Muhammad who (in the reign of Hisham, 105–125) was fighting mainly in Daghestān but whose

expedition against the "Gate" of the Alān must have passed through the region of Tiflis. His headquarters were at Kīāl (?), 20 farsakhs from Tiflis and 40 farsakhs from Burghā'a (probably Kesala below Ta'ūs, which satisfies the description; cf. below). A dirham is known of 'Abd al-Malik struck at Tiflis in 85 (704).

The 'Abbāsids. In 141 (758) the Khazars under Ka's Tarkhān invaded Armenia (Ya'qūbi, ii. 446). Tabari (iii. 328), speaking of the same event under 147 (764), says that during the invasion of Astār Khān al-Khwarizmī (*etc.*) many Muslims and *dhimmī* were made prisoners and the Turks entered Tiflis. Ya'qūbi immediately after 141 mentions a rising of the Sanāriya. The latter were defeated by 'Amir b. Isma'il who then returned to Tiflis and executed his prisoners there.

Another Khazar invasion took place in 183 (799). Their king came as far as the bridge over the Kur and ravaged the country but the taking of Tiflis is not mentioned by the Arab writers (Ya'qūbi, ii. 518; Tabari, iii. 648) while the Georgian chronicle says that in the joint reign of the brothers Ioane and Djuansher (718–786?) the Khākan's general Blān (in Armenian Bul'ān) took Tiflis and conquered Kharthlia.

Of the governors that Hārūn al-Rashīd (170–193 = 786–809) sent to Armenia the hardest was Khuzaima b. Khāsim (Balādihuri, p. 210). The Georgians called him Ći'um-Asim. Ya'qūbi, ii. 210 confirms the cruelty of his second governorship. The Djurzān (read Djurzān) and the Sanāriya rebelled. Khuzaima's general Sa'id b. Haitham defeated them, drove them out of the country and then returned to Tiflis.

Under al-Ma'mūn (198–218) a certain Muḥammad b. 'Atāb established himself in Armenia. In 214 (829) he conquered the land of the Djurzān and the Sanāriya joined him (Ya'qūbi, ii. 540, 565–566). Khālid b. Yazid gave the *amān* to Muḥammad b. 'Atāb and defeated his allies, the Sanāriya, but the disturbances in Arminiya went on (Ya'qūbi, ii. 566; Balādihuri, p. 210–211). In 215–239 (830–853) Ishāk b. Isma'il carved himself out a principality in Georgia.

Ishāk b. Isma'il. According to Mas'ūdi, *Murūdj*, ii. 65, he was of Kurnāsh origin. His father Isma'il was the son of Shu'aib, a client of Marwān II (126–132 = 744–750); he had settled in Georgia in the time of the caliph Amin (193–196) and had had skirmishes with the wali Asad b. Yazid (Ya'qūbi, ii. 528). The uncle of Ishāk, 'Alī b. Shu'aib mentioned in the Georgian chronicle, i. 260, 265, is said to have received Tiflis from Khālid, probably after Muḥammad b. 'Atāb. But already in the governorship of Ḥasan Badghisht, the second successor of Khālid, we find the name of Ishāk. When the Byzantine troops of Theophilus (829–842) reached Wanand (near Kars) they "were cut to pieces by Sahak, son of Ismael" (cf. Stephen Asolik, ii, ch. v., transl. Dulaurier, p. 171). As a result of such exploits the caliph Wathīk (842–847) recognised Ishāk as lord of Armenia, but this did not last long. Muḥammad, son and successor of Khālid, defeated Ishāk and drove out the Sanāriya. According to the Georgian chronicle, the Georgian princes (who had less fear of the central government so far away) supported Muḥammad against Ishāk and his allies, the people of Kakhetia and the Sanāriya.

Finally in the reign of al-Mutawakkil the Turk

Bughā al-Kabīr al-Sharīf was sent to Armenia. In Rabi' I 238 (autumn 852), he left Dabil for Tiflis. Bughā watched the operations from the high hills beside Sughdabil (the reference is to the heights of Makhatha to the north of Isani = Sughdabil; cf. the description of Tiflis below).

Ishāk made a sortie but Bughā's *naffātin* (throwers of Greek fire) set fire to the town. Ishāk's palace was burned. He and his son 'Amr were taken prisoners by the Turks and the Moors. Ishāk was decapitated and 50,000 (?) men lost their lives in the destruction of the town by fire. The Moors took the survivors prisoners and spoiled the dead. Ishāk's wife, daughter of the lord of Sarir (= the principality of the Avars in northern Daghestan), was at Sughdabil, which was defended by the Khuwaithiya (people of Sasun; cf. MAIYA-FANIGIN). Bughā granted them the *amān* on condition that they laid down their arms and continued his operations in the direction of Djardman and Bailakān (Tabari, iii. 1114—1116; cf. Thomas Artzruni, iii., ch. 9—10, ed. Brosset, St. Petersburg 1874, p. 140—150. A Georgian inscription on the church of Atani gives the Muhammadan date 239 for the taking of Tiflis by Bughā; cf. Djawakhov, *Khist. Vostok*, 1912, i. 284). The destruction of the Muslim principality of the former clients of the Omayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphate. The Arab authors (Mas'ūdī, ii. 67; Yāqūt, ii. 38) date the decline of Arab power in the Caucasus from this. Bughā was soon recalled; cf. Brosset, *op. cit.*, i. 266—268 and Thomas Artzruni, *ibid.*

There was an 'Abbāsid mint for dirhams at Tiflis till 922 (pieces are known of 210, 248, 250, 294, 298, 304, 307, 311, 312, 314, 330, 331); cf. Tiesenhausen, *Monnaies des khālfes orientaux*, St. Petersburg 1873 and especially Pakhomov, *op. cit.*

The aid which Bagrat (826—876) had lent to the caliph against Ishāk did not bring the reward desired by the eastern dynasty. The rival dynasty called of Abkhazia (cf. the explanation of this term above) seized Kharthlia. Thus Mas'ūdī (writing in 332 = 942), *Murūj*, ii. 69, 74, says that the Kur left the possessions of Djurdjin (Bagratid of the lateral line, i. 941; Marquart, *op. cit.*, p. 176) crossed the land of Abkhāz (sic) and arrived in front of Tiflis, the inhabitants of which although surrounded by infidels on all sides still retained their courage and were numerous. The founder of the Armenian Bagratid kingdom Ashot (885—890 A. D.) also intervened in the affairs of Kharthlia (Brosset, i. 270, note 12). Mas'ūdī gives Mas'ūdī Dhi'l-Karnain (= Makheta) as the residence of the king of Djurdjin (*al-fanbaghi*, ingeniously emended by Marquart, *op. cit.*, p. 186 to the Armenian **mambaghi* > *mambali*, a Georgian title).

The Sājjids, the Sālārīds and the Shaddādids. In the meanwhile there arose in Adharbāidjān the first Muslim dynasty that owned the suzerainty of Baghdād, the Sājjids (276 or 279—317; cf. this article and R. Vassier, *O monts du Saffidow, Taveria Obzr. in. Azerb.*, Baku 1927, No. 5, p. 22—51). Abu'l-Kāsim Yūsuf went to assist the isolated Muslims in the north. In 912(?) he came to Tiflis the amir of which was called Dja'far b. 'Alī (cf. below) and seized the fortresses of Udjarmo and Bol'orma (on the upper Iora) (cf. Brosset, i. 275, note 2). The

chronicle also mentions another expedition (between 918 and 923) of the "Saracens called Sadj" in the course of which Makheta was taken. The Muslim sources are silent about these expeditions. Immediately afterwards the chronicle mentions the appearance of the Sālārīds [q. v.] at Bardha'a and in Adharbāidjān.

Bagrat III and Bagrat IV. The series of reigns "shows the greatest confusion" (Brosset) until the king Bagrat III (980—1014?) reunited Kharthlia, Abkhazia, Tao (on the Corokh) and Ardanoj. In his time the Shaddādīd [q. v.] Fadlūn invaded Armenia but was defeated by the Georgians and Makheta was always regarded as the royal city although the rulers resided in Kutais (Khatathisi). In 1030 (421) the Georgian and Kakhethian notables, with the help of the amir Dja'far of Tiflis, undertook an expedition against the Shaddādīd Fadlūn (Fadlūn of Gandja). But when the latter died, Liparit Orbelliani, the powerful lord of Thrileth (on the upper Khrum), captured Dja'far by a ruse and only released him on the appeal of the young king Bagrat IV (1027—1072), who evidently did not wish Tiflis to be annexed by the turbulent Liparit. Dja'far was re-established at Tiflis but a few years later the king himself laid siege to Tiflis. The siege had lasted for two years when suddenly the king at the suggestion of Liparit made peace with Dja'far. After the death of the latter the elders (*ber*) of Tiflis offered the keys of the town to Bagrat, who occupied the citadel Dār al-Djalāl and the two "towers" Ts'alkin and Thabor (cf. the description of Tiflis below). The inhabitants of the laan quarter on the left bank of the Kur however destroyed the bridge and Bagrat had to turn his ballistas upon them.

The Saldjūks. In 1048 the troops of Ibrāhīm Yanāl (in Georgian Bahram-Lam) appeared for the first time in Russian (Pasin on the upper waters of the Araxes). In 1053 (?) the Saldjūks undertook an expedition against Gandja but a counter-movement by the Byzantines who were allies of Bagrat IV saved the town. Thereupon the people of Tiflis again invited Bagrat but as a result of Liparit's intrigues, the Byzantines kept Bagrat prisoner in Constantinople for three years. Then Bagrat recovered the greater part of his fortresses, when suddenly Alp Arslan (1063—1079) invaded Georgia (Brosset, i. 326). On Dec. 10, 1068, Alp Arslan accompanied by the kings of Armenia and Kakhethia (Aghsarthan, son of Gagik, of the dynasty of *Korikēs* [Chorepiscopi] which ruled from 787 to 1105) as well as the amir of Tiflis marched against Bagrat. All Kharthlia was occupied and many Christians slain or taken prisoners. The Shaddādids were given compensation. Tiflis and Rustaw were given to Fadlūn of Gandja and Ani to Manutir b. Abu'l-Aswār. In the spring of 1069, Bagrat returned to Kharthlia. Fadlūn encamped at Isan (a suburb on the left bank) and with 33,000 men ravaged the country. Bagrat defeated Fadlūn who took the road through Kakhethia but was taken prisoner by Aghsarthan. At the price of conceding several fortresses on the Iora, Bagrat ransomed Fadlūn and received from him the surrender of Tiflis where in the meanwhile a certain Sitlharaba (Sayfī al-'Arabī?) was proclaimed amir. This plan failed for Alp Arslan obtained the liberation of Fadlūn. Giorgi II, son of Bagrat (reigned 1072—1089, lived in 1125), lived in Kutais. In Kakhethia Aghsarthan retained

his possessions on condition that he adopted Islam.

Dawid II. The revival took place under Dawid II Aghmashenebeli (the "Restorer") who took the title of king "of Kharthlia and Abkhazia" (1089—1125?). Dawid brought into Georgia through the pass of the Alans (Darial) 40,000 Kiptaks (Polovtsi) and 5,000 slaves converted to Christianity. In spite of their unruliness (Brosset, *op. cit.*, I, 379) these warlike elements enabled Dawid to throw off Seldjuk domination. He ceased the payment of the *kharaǰ* and put an end to the seasonal migrations of the Turks into Georgia. He gave his daughter Thamar in marriage to the Shirwānshāh [q.v.] Akhsitan (in Georgian Aghsartan) and treated him as his vassal.

The capture of Tiflis in 515 (1121). On the complaints of the Muslims of Tiflis the Seldjuk Mahmūd b. Muhammad (1118—1131) sent an expedition into Georgia in which the Urtukid Nadīm al-Dīn Ghāzī, the Maryādīd Dubais b. Šadaka (Durbes of the Georgian chronicle) and the brother of the Sultān Tughrlī (lord of al-Artan and Nakhicewān) with his atābeg Kun-toǵdī all took part. On the 18th August 1121 this army entered Thraileth and Mangli but was destroyed by Dawid and his Kiptaks, after which in 515 (1121—1122), Dawid stormed Tiflis so that the town might become "for ever an arsenal and capital for his sons"; Brosset, I, 365—367 and *Additions*, I, 230, 236—241; cf. Ibn al-Athīr, x, 398—399 [= Defrémery, *Fragments*, p. 26]; Kamāl al-Dīn, *Tārīkh Ḥalab*, in the *Recueil des hist. des croisades*, III, 628; Yāqūt, I, 857 (Taifis). The Arab historian al-Aīnī (1360—1451) who utilizes sources, some of which are no longer accessible (Brosset, I, 241), admits that Tiflis was burned and pillaged but, contrary to the other sources which emphasize the atrocities committed by Dawid (Matth. of Edessa in Brosset, *Add.*, I, 230), says that the king respected the feelings of the Muslims more than Muslim rulers had done; Dawid is also said to have promised to strike coins with Muslim legends; the coins however of the king (cf. Pakhomow, *Mémoires* etc., p. 77—81) bear the image of the Virgin. Great caution in dealing with the Muslims was necessary because as the Georgian chronicle acknowledges, the fighting between Muslims and Christians was still very bitter (cf. Brosset, I, 380).

The Banū Dja'far. Dawid succeeded in Tiflis to the Banū Dja'far of whom it is not known whether they were of Arab or purely Georgian origin. While the Georgian Chronicle (I, 367) puts at 400 years the period of Muslim rule in Tiflis, al-Aīnī gives the Banū Dja'far alone a period of 200 years. Indeed, we have seen that about 300 (912) the amir of Tiflis was already called Dja'far [b. 'Alī] (Brosset, I, 275). His successor struck coins at Tiflis; dirhams are known of Manšūr b. Dja'far, dated in 342 and 343 (with the name of the caliph al-Mu't' li 'llāh), and of Dja'far b. Manšūr, dated 364, 366 (al-Tāy' li 'llāh). In the time of Bagrat IV (1027—1072) the amir of Tiflis was called Dja'far (his father 'Alī had carried off the property of the Sweet-Tskhoweli church of Mtskheta). The Chronicle calls him Mukhath Gwerd Djaphar (Mukhath Gwerd is a place near Mtskheta). During the 40 years before the conquest of Tiflis by Dawid, the town was governed by the young members of the Banū Dja'far family, each of whom in turn held power for a month (al-Aīnī).

The strong kings. The reign of Dimitri

(1125—1154) was occupied with a civil war with the Orbeliani family. The Muslim rulers contemporary with him were: in Adharbājdjān, the atābeg Ildigiz (in Georgian Ildigaz); at Ani, the scions of the Shaddādid; at Khilā, Zahir al-Dīn Shah-i Arman (1128—1183); at Erzerum, the amir Saltuk b. 'Alī, whom the Georgians defeated near Ani in 548 (1153); cf. Ibn al-Athīr, xi, 126 sub anno 548 (1157); Māvedjānī-bashī, II, 577; Defrémery, *Fragments*, p. 40. It was Dimitri who, taking advantage of the earthquake in 1139 at Gandja, carried off the famous iron gate of this town and took it to the monastery of Gelathi (cf. Fraehn, *Mém. Ac. St. Pétersbourg*, VIIth series, *Sé. moralis*, vol. III, p. 531). The position in Tiflis is described by Ibn al-Azrak, historian of Māyāfārikin [q.v.] who visited Tiflis in 548 (1153). He says the Muslims were in a favoured position. Every Friday Dimitri came to the mosque and sat on a dais (*dhakka*) opposite the *khutbā*; cf. Amedroz, *Three Arabic MSS.*, *J. R. A. S.*, 1902, p. 791 (al-Azrak may have been the source used by al-Aīnī).

Under Giorgi III (1156—1184) the Muslim kingdoms around Georgia remained the same and the king conducted vigorous campaigns against Erzerum, Ani, Dwin, Nakhicewān, Gandja, Bardha'a and Balakān. To assist his cousin the Shirwānshāh Akhsitan, son of Thamar, Giorgi's aunt, the king even went to Darband (cf. Brosset, I, p. 383—403 and *Add.*, I, 253—257, 266; Ibn al-Athīr under the years 556, 557, 559, 561, 569).

The reign of Thamar (1184—1211 or 1212), the "Sun of Kharthlia", is the culminating point in the history of Georgia, now on the threshold of terrible trials. Having forced the diadochi of the Seldjūks to accept peace, the Christian kingdom now assumed the offensive and surrounded itself with Muslim vassals. Thamar played an important part in the creation of the empire of the Comnenoi of Trebizond (Kunik, *Osnef. Trapes. imperii v 1204*, *Ulen. Zap. Akad. Nauk*, 1853, vol. II, p. 705—733). The troops operating from Erzerum and Erzinđjān inflicted defeats on the Ildigizids of Adharbājdjān. The sack of Ardabil by the Georgians (Brosset, I, 469—473) finds confirmation in the *Sililat al-Narab-i Safawīya*, Berlin 1843, p. 43; cf. Khanykow, *Mémoires asiatiques*, I, 1852, p. 380—383. The Chronicle also mentions in 1210—1212 an expedition through the whole of northern Persia as far as Romguaro (= Ramdžūr near Nishāpūr?), but beyond Tahriz the stages in this march seem to be quite fanciful (Brosset, I, 469—473). In spite of the brilliant success of the generals Zakharé and Iwané of the Mkhargrdzel family (Armenian of Kurd origin; cf. Brosset, *Add.*, I, 267), the Georgian victories were not lasting and of all her conquests, Thamar could only retain Kars (Brosset, I, 467). At home also (Djawkhow) the growing power of the feudal lords demanded the attention of the queen. Muslim customs penetrated into Georgia; the general Iwané was given the title of *Atābeg* ("used among the Saljūks"; Brosset, I, 474). In the reign of Thamar, we find mention of a rebel, Gozan son of Abu 'l-Hasan, "amir of Tiflis and Kharthlia" (is this a scion of the Banū Dja'far?).

The Mongols. The son of Thamar, Giorgi III Laša ("splendid" in the Abkhazian language) who ruled from 1212—1223, levied the *kharaǰ* of Gandja, Nakhicewān, Erzerum (Karnukalak) and

Khilāf but in 617 (1220) the Mongol troops of Subutai and Djebé (in Georgian: Suba and Iama or Čeba) made their appearance in Persia. The Georgians were several times defeated; the Chronicle (Brosset, I, 493) considers the defeat at Dardūd (on the Bortala) as the turning-point in the fortunes of the Georgian armies, hitherto invincible.

Giorgi died suddenly and the throne passed to his sister Rusudan (1223—1247) [*ḡis-mālā*, the "maiden king" of the Muslims], a beautiful princess devoted to pleasure, whose hand was sought by her Muslim neighbours (Brosset, I, 495). In the end she chose the son of the Saldjūq of Erzerum, Muḡith al-Dīn Toghril (in Georgian Orthul) who by his father's orders became a Christian (Ibn al-Athīr, xii, 270: *ḡadithatun ḡharibatun lam yuḡad mithlaha*). In the letter from Rusudan to the Pope Innocent III (which reached Rome in 1224) the king speaks of the Mongol invasion as an insignificant episode, but a new enemy was at the gate.

The Khwārizmshāh Djālāl al-Dīn defeated the Georgians at Garni in Shaḥān 622 (Aug. 1225) (Ibn al-Athīr, xii, 283; Nasawi, ed. Houdas, p. 112; Brosset, *Add.*, I, 309). The Georgian commander Shalwa (Djuwaini, II, 159: he and his brother) was taken prisoner. Tiflis was occupied on March 9, 1226, thanks to the treachery of the Persians who lived in the town. According to Djuwaini, Djālāl al-Dīn spared the inhabitants and allowed them to withdraw to Abkhazia but destroyed all the Christian places of worship. Ibn al-Athīr on the other hand says that the town was taken by storm (*anwatan wa-fahrān min ḡhairi amān*) and all those who did not accept Islam were massacred. Nasawi (p. 122) also confirms the massacre of all Georgians and Armenians in Tiflis (cf. Brosset, I, 504—507). The vizier Shuraf al-Mulk was appointed governor of the town. When he left for winter-quarters at Gandja, the Georgians returned to Tiflis and burned the town, knowing that it was impossible for them to hold it (Nasawi, p. 125). Djālāl al-Dīn, occupied elsewhere, did not return to Georgia till 1228 when at Mindor (in Georgian "field") near Loré he scattered the forces of the commander-in-chief Iwān, made up of very diverse elements: Georgian, Alān, Armenian, people of Sarir (= the Awar of Daghestān), Lakz, Kipčak, Swan, Abkhāz, Džant (= Čan-eti; cf. the article LAZ), men from Syria and Asia Minor (cf. Djuwaini, II, 170). The Georgian Chronicle (Brosset, I, 510) says that after the victory at Bolnis (= Mindor?), Djālāl al-Dīn committed fresh atrocities at Tiflis.

Second coming of the Mongols. Djālāl al-Dīn disappeared from the scene in 628 (Aug. 1231) but the remnants of the Khwārizmians disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tiflis however was still in possession of Rusudan, when the Mongols of Djurmaghan entered Georgia via Gandja. This took place in 1236 (Brosset, I, 333; according to d'Oshason, III, 75: ca. 632 = 1235). Rusudan left Tiflis for Kutais and the governor of Tiflis burned the town (Brosset, I, 514: "thus was ruined the city of Tiflis").

The *no'in* of whom the Chronicle always mentions four (Čarmaghan, Čaghatar, Ioser and Bičoy) occupied the country and restored Tiflis. Rusudan's rule was confined to the valley of Rion.

The Mongols broke up the political organisation of the country: the Georgians were pressed into the Mongol service (expeditions against the Sal-

jūq of Rūm, Ghiyāth al-Dīn, against the Imašillans of Alamūt, against Bughdād etc.). The country was divided into six *rumans* and the Georgian feudal lords (*arkhawar*) whose fiefs underwent changes, were divided among the *no'in*. The people of note had to go to Batu-Khān and then to the Great Khān in Mongolia, where they were kept for years. In this way the heir to the throne, Dawid (called in Mongol Narin "splendid"), was removed from the country. A certain Egarlan tried to unite the country against the Mongols ("he only lacked the name of king"; Brosset, I, 542) but the Mongols set up against him Dawid, son of Giorgi Lasha, who was crowned at Mtskheta. He also had to go to Batu and to Kurağorum. The "two Dawids" are mentioned among these present at the kurultai of Guyuk-khān in 643 = 1245 (cf. Djuwaini, I, 205, 212; Rashid al-Dīn, ed. Blochet, p. 242). Returning to Georgia, after the accession of Möngke (1248—1259) they ruled together at first.

As Hülagü did not love Dawid Narin, the latter escaped to Abkhazia. "It was thus that our country became two principalities", says the Chronicle (Brosset, I, 546). Eastern Georgia owned two sultans: on the one side Batu-Khān, lord of the country north of the Caucasus, wished to extend his authority over Georgia; on the other side the Ilkhāns of Persia asserted their rights over it. Dawid, son of Lasha, exasperated by the exactions of Khodja 'Aziz, collector of Mongol taxes (Rashid al-Dīn, ed. Quatremère, p. 395, calls him "one of the governors of Georgia"), fled to his cousin. The *no'in* Oyrat Arghun occupied Tiflis. A reconciliation only took place when the son of Lasha had fought beside Hülagü against the troops of Berke, successor of Batu who had invaded Shirwān in 1262 (d'Oshason, III, 182). In the reign of Abagha, Berke returned to Transcaucasia and reached Tiflis, where many Christians were massacred (in 1266; cf. *ibid.*, p. 418).

The successor to Dawid, son of Lasha, was his son Dimitri II (1273—1289) who took part in the numerous campaigns of Abagha and Ahmad but in the reign of Arghun his treasures were confiscated and he himself beheaded after being bastinadoed at the *ordu*. The Georgians call him Thaw-Dadchull, "he who gave his head as a sacrifice".

Several further kings were nominated and deposed by the Mongols. In vain Dawid VI (1293—1310) endeavoured to negotiate with the Khān of the house of Batu (Omākha = Tokhtoghu); he had to send to Ghazan an embassy consisting of the orthodox Catholicos and the *kādi* of Tiflis (cf. Brosset, I, 615 [this last detail is evidence of the revival of Islam as a result of the accession of Ghazan]). The Georgians continued to take part in all the campaigns of the Mongols, which however saved them neither from persecutions (cf. the activity of the Muslim *no'in* Nawrūs in the reign of Ghazan: Brosset, I, 617) nor from attempts to convert them (e.g. after the Gilān expedition of 1307).

Giorgi V. After the death of Uldjaitu (1316) Giorgi V (*Brtskhmale*, the "Splendid") was placed on the throne (1316—1346) under the patronage of the amir Čoban. Giorgi profited by the troubles in the last years of the dynasty of the Ilkhāns to drive out the Mongols. He exterminated the rebels, went with his army into Imerethia and united under his rule not only the Georgian lands

as far as Sper (now Ispir) but all the lands from *Nikoltsia (15 miles from Sukhum on the Black Sea) to Darband".

Timūr. It was during the long reign of Bagrat V (1360—1395) that Timūr made his appearance. The official historian of his reign represents his campaign in Georgia as a *ghihād*. Timūr set out from Kars in the winter of 788 (1386) (*Zafar-nāma*, i. 401). Bagrat had shut himself up in the citadel of Tiflis. The town was captured and the King and Queen taken prisoners. The Chronicle and Thomas of Metsoph (Nève, *Exposit.*, p. 37) mention the apostasy of the King but represent it as a clever ruse which enabled him to exterminate 12,000 of Timūr's soldiers and regain his lands. His son Giorgi succeeded him in 1395. The *Zafar-nāma*, i. 705, 720 does not give these details. In 796 (1394) he only mentions the despatch of four generals to the district of Akh'al-tskhe (Akhtskha, q. v.) in order to apply the law of *ghazā*. Timūr in person finally chastised the Georgians called Kars-Kalkānlik ("with black bucklers" = the Georgian mountaineers, the Pahavis and Khewsuris) and returned via Tiflis to Shekki (q. v.).

In 798 (1395) the Georgians, allied with Sidi 'Alī of Shekki (q. v.), inflicted a defeat on the troops of the Timurid Mirān-shāh who was besieging Alindjak (near Nakhicewān) and delivered Sultān Tāhir Djalāyir, who was shut up in it (*ibid.*, ii. 203). This event brought about its reaction in winter 802 (1399) when Timūr took Shekki and mercilessly ravaged the wooded defile of Khimshā (?), probably in northern Kakhetia where a Khimshia family held a fief at Mareli, to the east of Thionethi (Brosset, II/2, p. 464). In the spring of 1400 Timūr marched on Tiflis and demanded that King Giorgi (Gurgin) should hand over Sultān Tāhir. On receiving an evasive answer, Timūr laid the country completely waste (*ibid.*, ii. 241). Tiflis received a Khorāsmian garrison but Giorgi retired again to the mountains. After the voluntary submission of a Georgian prince named Djānī-beg and the capture of the fortress of Zarik (?) Timūr's troops set out in pursuit of Giorgi and laid Swanethia waste. Giorgi went into Abkhazia and sent Tāhir back to Asia Minor. Through the intermediary of a Muslim named Ismā'il (Brosset, i. 668) he offered to Timūr to pay the *kharaǰ*. Timūr accepted the offer. Next the land of the Georgian Iwané (the *atābak* of Samtskhe) was converted to Islām and that of the Kars-Kalkānlik plundered. After resting for two months in the summer quarters of Min-göl ("1,000 lakes") near Kars, he sent troops against the Georgians who had concentrated at Farasgiri (Phanaskert, on the upper Č'orokh); *ibid.*, ii. 250.

In 804 (end of 1401) Timūr returned to Transcaucasia via Siwās-Baghdād-Tabriz. His delegates (*muḥasibīn*) went to collect the tribute (*saw wa-kharāǰ wa-ǰizya*) from Giorgi who sent his brother with the contributions. Timūr gave Giorgi the *amān* on condition that he supplied him with troops and treated the Muslims well (*ibid.*, ii. 379). In the summer of 804 (1402) Timūr went from Karabāgh to Min-göl and took the fortress of Tortum occupied by Kurdjik, lieutenant of a certain Taghi (?).

When, in 805, Timūr returned to Erzerum, he decided to punish Giorgi for not having come to present his congratulations on his victory over Bayazid. At Min-göl, Iwané, son of Ak-bughā, arrived with gifts as did Kustānīl (Constantine),

brother of Giorgi, who was then on bad terms with his brother (*ibid.*, ii. 512). Shāikh Ibrāhīm of Shtrwān went to estimate the revenues and expenses of Georgia (*ibid.*, ii. 521). Giorgi sent new presents but Timūr refused them and summoned Giorgi to appear in person. In 806 (Aug. 1403) he himself laid siege to the impregnable fortress of Kūrtin defended by Nazil or Narwāl (the Chronicle calls it Birtwis on Alget) and took it in nine days (*ibid.*, ii. 524—532). The troops then laid waste the country round (*asrāf*) Georgia as far as the borders (*hudūd*) of Abkhazia: "which is the end of this country", 700 towns and villages were destroyed and the historian of Timūr waxes eloquent over the massacres and destruction (ii. 536). Timūr only stopped them when the *ulamā* and the *mufti* decided it was possible to grant the *amān*. The Georgians sent 1,000 *tangas* of gold struck in the name of Timūr, 1,000 horses, a ruby weighing 18 *mithkāl* etc.

Timūr passed through Tiflis, destroyed all the monasteries and churches and went to Ballakān (winter of 1403—1404). All the country from Ballakān to Trebizond was given as an appanage to the prince Khālī Mirzā (ii. 545).

Post-Timurid period. The general disorder after the havoc wrought by Timūr, is reflected in the part of the Chronicle which gives a brief account of the reigns. The Muslim sources (*Maṭla' al-Saf'ain*, N.E., xiv. 235 and Mirkhond; cf. Defrémery, *Fragment*, p. 245) mention an expedition of Shāikh Ibrāhīm of Shtrwān, a friend of the dynasty of the Djalāyir, against the Kars-Koyunlu Kars Yūsuf in which Kustānīl, king of Gurdjistan, took part. The allied forces were defeated to the north of the Araxes and Kars Yūsuf slew Kustānīl with his own hand. This happened in 815 (1412—1413). 300 *amānīyars* (Georgian nobles; cf. Armenian *amān* "race") were also massacred. Wakhshūt (Brosset, i. 689) alone mentions Constantine as king and puts his death in 1414. In 1413 (1416?) on the invitation of the Persians (= Muslims) of Akh'al-tskhe, Kars Yūsuf invaded this region and laid the country waste (Thomas of Metsoph; cf. Nève, *loc. cit.*, p. 96; Brosset, *ibid.*, i, p. 399). The Chronicle confesses that down to the accession of Alexander (1413—1442) "no consoler arose from anywhere". This king gradually drove out the invaders, restored the cathedral of Sweti Tskhowell (at Mtskheta) and repaired the fortresses. The Georgian envoys who greeted Shāhrukh in 823 (1420) at Kars-bāgh (cf. Mirkhond in Defrémery, *op. cit.*, p. 251) must have been sent by Alexander, and when in 841 (1437) Shāhrukh arrived in Somkhetia (cf. above) Alexander sent him rich gifts after which the son of Timūr left Georgia. In 1444 (848) the Kars-Koyunlu Djihān-shāh made a raid to Akh'al-tskhe (cf. Brosset, i. 683; according to Thomas of Metsoph, Djihān-shāh took Tiflis in 1440; cf. Nève, p. 149).

Partition of Georgia. At this period Georgian tradition becomes exceedingly difficult to unravel (Brosset, i. 679—689). The history of Wakhshūt, which continues and corrects the Chronicle and agrees better with the statements of the Muslim historians, begins with the reign of Constantine III (1469—1505) during which Georgia was divided into three main kingdoms (Brosset, II/1, p. 11—18, 147, 208, 249): Kharthlia (on the Kur [in Georgian Mtkwar], with capital Tiflis), Imerethia (on the Rion, with capital Kutais)

and Kakhetia (on the Alazani, with capital at Gremi [in Persian Girin] and later at Thelaw). In addition, the atabeg of Samtskhe (with capital Akhal-tsikhe) rebelled and founded the independent principality of Saatabago (consisting of Samtskhe, on the upper course of the Kar, and of Klarjethia on the Corokhi) the princes of which from Manuçar III = Safer-pāshā (1625) had become Muslims (Brosset, II, 228). A number of local princes also became independent of Imerethia (the Gurikis of Guria, the Dadianis of Mingrelia, and the Gelowani of the Swans; cf. the article *ANGHĀZ*). In Kharthlia also, Constantine III's reign was disturbed by the invasion of Bagrat II of Imerethia.

The Ak-Koyunlu. In this period Uzun Hasan comes on the stage. According to Münedjdim-başı, III, 160, he went to Georgia for the first time in 871 (1466) when he liberated the Muslim prisoners and took the fortress of Çemkār (?). Civil complications prevented him taking Akhal-tsikhe but he returned to the attack in 877 (1472). King Bakasiti (read: Bagrat II of Imerethia) was dethroned (*kuşar*) and 30,000 prisoners taken from Georgia. According to Wakhushit's version, Tiflis was surrendered to Uzun Hasan by Constantine, evidently to prevent Bagrat getting it. Uzun Hasan left a garrison in Tiflis but entrusted its government to Constantine (cf. Brosset, II, 13 and 25). The *Tārīkh-i Amlak* however calls the governor (*ayālar*) left by Uzun Hasan, Süfi Khalil Beg, who stayed there till the death of Uzun Hasan in 1478 when the Georgians re-occupied the town.

Sultān Ya'qūb Ak-Koyunlu invaded Samtskhe in the autumn of 891 (1486) to chastise the Atabeg Kwarqware. In the next year Ya'qūb sent Süfi Khalil Beg to conquer Georgia. The construction of the forts of Aghdja-kafa and Kazani was begun by the Turkomans on the lower course of the Debeda (Bortala) at the place which commands the approaches to Georgia from the south (cf. the *Geography* of Wakhushit). Kustāndil (Constantine III) withdrew from Tiflis. Süfi Khalil began the siege with the help of reinforcements which arrived in the winter; he took first of all the fortress of Kodjir (Kodjori, south of Tiflis). In the fighting around Tiflis the Muslims suffered heavily but finally Wali aghā eghikči-aghā took the town (3rd Rab' 1. 894 = 1489) (cf. the unpublished history of the reign of Ya'qūb, *Tārīkh-i Amlak*, MS. Bibl. Nat. Paris, N^o. 101, fol. 101^r—105^r and 155^r—159^r). The Chronicle (Brosset, II, 326—327) which confirms many of the details, denies however that Tiflis was taken and adds that the people of the Gec of Sabarathiano (called Barāt-ili by the Muslims) on Alget inflicted a defeat on the Turkomans.

The Safawis. In 907 (1501) a detachment of Ismā'il I's forces under the command of Khādīm-beg invaded Georgia (*Shāhīnshāh-nāma*, quoted by Dorn). The invasion by Dīw Sultān in 926 (1520) was stopped by the embassy of Ramaz, son of Dawid VIII, to Ismā'il I (cf. *Ḥabīb al-Siyar*, Bombay, III, dīwār IV, p. 92). In 929 (1522—1523) the founder of the Safawid dynasty seized Aghdja-kafa and by making certain promises obtained the surrender of the citadel of Tiflis; he desecrated the churches and built a mosque "at the corner of the bridge"; cf. Wakhushit, in Brosset, II, p. 23 (the mosque is still standing on the right bank).

Iskander Munght mentions four expeditions on a large scale sent by Shāh Tahmāsp against Georgia. In 947 (1540) Tahmāsp seized Tiflis, the governor

of which (for Luarsab I) submitted to the Persians and became a Muslim. Next the fortress of Barāt (Birthwis) was taken (*Ālam-ārā* [Teheran 1314], p. 63). The second time was in 913 (1546) when the Georgian princes came to pay homage to Tahmāsp at Shīrāgel (near Gümi = Alexandropol = Leninakan). The third expedition in 958 (1551) was sent from Shekhi on the appeal of the atabeg Kai Khuraw, son of Kūrūra (Kwarqware) who complained of the injuries done him by Luarsab (Iskandar Munght writes Lawārsāb but the name is Iranian: Luhrāsp; cf. *Mir'at al-Buldān*).

According to Iskandar Munght, *Ālam-ārā*, p. 65, by the Turco-Persian peace of 961 (1553) the territories of Mašk (Meskhi = Samtskhe), of Kārtli (Kharthlia) and of Kākhit were allotted to Shāh Tahmāsp, while Sultān Sulatmān received those of Bašk-añak ("with head uncovered", a nickname of the king of Imerethia), of Dādīyān and of Gūriyān (Guria) as far as Trebizond and Trablas (Tire-boli). Luarsab I however continued to worry Tiflis. This provoked the fourth expedition. Barāt-ili (Sabarathiano), Gori and Ateni were occupied and the king himself fell in battle. Wakhushit dates the four expeditions in 1536, 1548, 1553 and 1558 respectively. Brosset, II, p. 452 considers these very probable as they coincide very well with the vicissitudes of the Turco-Persian war.

King Swimon I, son of the indomitable Luarsab, had a troubled reign (1558—1600). He was defeated by the Persians and replaced by his brother Dawid (Dāwūd Khān) who purchased the throne at the price of apostasy. Swimon was imprisoned in Alamūt from which he was released by Ismā'il II (1576—1577) to checkmate the activity of the Ottomans.

Ottoman Domination 1578—1603. In 1578 during the reign of the weak Shāh Khādībenda, the Ottomans under Mustafā Lala-Pāshā penetrated into Georgia via Samtskhe and in August seized Tiflis from which Dāwūd Khān had fled. The Turks put a garrison of 200 men with 100 guns in Tiflis. Muhammad, son of Ferhād-Pāshā, was given the sandjak (pashalik?) of Tiflis (v. Hammer, *G.O.R.*, II, 483). Two churches were turned into mosques. In October, Gori received a Turkish garrison and was given as a sandjak to Swimon. When Mustafā Pāshā returned to Erzerum, Ismān Kuli Khān, son of the Shamkhal slain by Özdémir-Pāshā, and Swimon laid siege to Tiflis. Supplies were brought to the garrison by Hasan-Pāshā (*ibid.*, p. 489) but the struggle around the town continued. In 1580 the new serasker Sinān-Pāshā arrived in Tiflis and appointed as Beglerbeg a son of Luarsab who had adopted Islām under the name of Yūsuf (?). Swimon made advances to the Turks which were not accepted. In August 1582 Muhammad Bey left Erzerum to bring supplies to Tiflis but was defeated at Gori by the Persians and Georgians. Ferhād Pāshā put himself at the head of a new expedition (Dec. 1581) intended to strengthen the towns held by the Ottomans. In 1584, Ridwān Pāshā left for Tiflis. Dāwūd Khān on further reflection went over to the Turks. Swimon attacked Ridwān but without success. Ferhād Pāshā's Janissaries mutinied at Akhal-kalaki which forced him to retire. After the campaign of 1585 against Tabriz (q. v.), the Ottomans obtained from Persia the cession of Ādjarbāidjān and of Transcaucasia including Georgia (treaty of March 21, 1590);

cf. the Chronicle of the Psalter of Meshki (1559-1587) in Takaishvili, *op. cit.*, p. 183-214; von Hammer, II, 481-497 (Brosset has given an annotated translation, II/1, p. 411-419). The principal source used by von Hammer is the *Naqir-Nāma* of 'Alī (Jan. 1578-Jan. 1580). On the other Turkish sources cf. Babinger, *G. O. W.*, p. 117, 181. Soon after the accession of Muhammad III (1595) Swimon was taken in a skirmish and sent to Constantinople where he died in 1600. Ottoman rule, more or less undisturbed, lasted from 1591 till 21st Oct. 1603 when Tiflis was retaken by Shāh 'Abbās I. The Turco-Persian treaty of 1612 re-established the situation as it had been under Sultān Selīm (1512-1520).

Shāh 'Abbās I and the Muslim Kings. The worst misfortunes fell upon Georgia (and especially on Kakhetia) in the reign of this monarch. Although Giorgi of Kharthlia and Alexander of Kakhetia had fought under his banner at the siege of Erivān in 1602, 'Abbās after his victory took Lore from Georgia. He married the sister of Luarsab II (1605-1616) but brought the latter to Persia and had him strangled at Gulsh-kal'a. In 1605 (1616) 'Abbās came in person to Georgia and granted Kharthlia to the Muslim Bagrat VI (1616-1619). He then punished Kakhetia. According to the official history of the reign, *Ālam-ārā*, p. 635, the number of those put to death was 60-70,000 and the number of young prisoners of both sexes 100,000-130,000: "since the beginning of Islām no such events have taken place under any king". In 1633 (1623) Kartīkai-Khān on being sent to Georgia called to the colours 10,000 men of Kakhetia and instead of leading them against Imerethia had them massacred "as if at a baitue" (*chikurt-wār*; *Ālam-ārā*, p. 719). Exasperated by such treachery the *mow-rāz* ("governor of lower rank"; Brosset, II/1, p. 148; the Persians write *mikhrum*) Giorgi Saakadze (a Muslim and till then a faithful servant of the Shāh) raised a rebellion in Kharthlia which the Persians did not overcome till 1626 (Josselian, *Zin mowrawa G. Saakadze*, Tiflis 1848; Brosset, II/1, p. 53-59 and 489-497). In spite of all these disasters, the part played by Georgians in the life of Persia becomes more and more important and Shāh Safī, successor to 'Abbās I, owed his throne to the support of Khusrav Mirzā, brother of the king Bagrat who was *darughā* of Isfahān.

When Swimon II perished in the civil war (1629), Theimuraz I of Kakhetia (1605-1664, a very troubled reign marked by all kinds of misfortunes; his mother Khethewan was put to death at Shirāz in 1624; Brosset, II/1, p. 167) came to Kharthlia where he reigned from 1629 to 1664, after which the Kai Khusrav already mentioned arrived from Persia and set himself up in Tiflis under the name of Rostom (1634-1658). The old King, brought up in Persia, took the Persian title of *shāh-āghā* and ordered his court in the Persian fashion. Persian garrisons were installed at Gori and Sam. The Georgian prisoners who had become converts to Islām returned from Persia; Persian manners and customs became the fashion. On the other hand, as if to celebrate the fusion of the two cultures, Rostom celebrated his marriage both in the mosque and in the church, and restored the cathedral of Mikhketa etc.

In 1636 Murād IV took Erivān and by the

treaty of 1641 (1639) Persia renounced her claims to Kars and Akhal-tsikhe (*Zafar-Nāma*, p. 686); according to Wakhtang (Brosset, II/1, p. 68), the Sultān received Imerethia and Saabago and the Shāh kept Kharthlia and Kakhetia.

Wakhtang (to Muslims, Shāh Nawās I), adopted son of Rostom, succeeded him (1658-1676). The Persophil policy continued. Shāh 'Abbās II (1642-1667) married the daughter of Shāh Nawās. The latter, although a Muslim, favoured the Christian religion and even restored the confession and the communion of which the people "had been ashamed" in the reign of Rostom (Brosset, *ibid.*, p. 79). In order to give more support to Shāh Nawās the Muslim tribes of Adharbaidjān and Karabagh (15,000 Djawānsir and Bayat) were settled in Kakhetia (cf. the History of Shāh 'Abbās II by Muhammad Tāhir Wajid, in Dorn, p. 109, 111 = Brosset, II/1, p. 503-504). Shāh Nawās fought in Imerethia, but when he set his son on the throne there, the Shāh restored the situation as guaranteed by the treaty of 1639.

Giorgi XI (Shāh Nawās II) received investiture from Shāh Sulaimān. In 1688 he fell a victim to his own intrigues in Kakhetia and the Shāh replaced him by Erekle I (1688-1691; 1695-1703). This King who had been brought up in Russia became a convert to Islām under the name of Naṣr 'Alī Khān.

Afghān Invasion of Persia. When the Baluch and the Afghāns began to disturb eastern Persia king Giorgi with a body of Georgians was sent against them by Shāh Husain. He restored order in Kandahār but in 1709 was treacherously slain by Mir Wais [cf. the article *AFGHANISTAN*] who then defeated the new Georgian forces led by Giorgi's successor, Kai Khusrav (1709-1711). These events paved the way to the Afghān invasion of Persia.

Wakhtang (governor of Kharthlia 1703-1711; King, 1711-1724 with interruptions) was at first a Christian. The Persian garrisons with the connivance of certain Georgian elements went in for slave-trading. Wakhtang tried to put down this traffic (Brosset, II/1, p. 97, 101, 105) and in general "humbled the Muslims, especially those who garrisoned the citadel of Tiflis". Between 1614 and 1616 he was replaced by a fervent Muslim Iese (= 'Alī Kuli Khān) and only regained the throne at the price of professing Islām.

After the decisive victory of the Afghāns at Gūnābād, near Isfahān (1722), Shāh Husain sought help from Wakhtang but in November 1721 the latter had offered his services to Russia (Brosset, II/1, p. 117). Peter the Great who reached Dardband on Aug. 23, 1722 had to return at once to Russia. On the other hand the King of Kakhetia Muhammad Kuli Khān (Constantine III) took the field on the side of the Lezgis against Wakhtang and in 1723 took Tiflis, which was plundered for three days.

Second Ottoman Occupation (1723-1734). The troubles in Persia and the Russian advance disturbed Turkey. War against the Shī'is was declared permitted. In June 1723 the serasker Ibrahim Pāshā, who had been negotiating with Wakhtang, installed in Tiflis the latter's son Bakar (in Persian Shāh Nawās and now given in Turkish the name Ibrahim Pāshā). The Janissaries occupied the citadel. Bakar soon rebelled but the Turks sent to Tiflis reinforcements under Iese, uncle of Bakar (who now assumed the name of 'Abd Allāh).

In the meanwhile the Russo-Persian treaty of Sept. 12, 1723 was signed by which the provinces on the Caspian were ceded to Russia. As a counterpoise through the good offices of the French ambassador, a Russo-Turkish treaty was concluded at Constantinople on June 12, 1724: Russia kept Daghestan and the narrow strip of littoral; Turkey obtained all Transcaucasia as far as Shamkha, including the Georgian territory (von Hammer, *G. O. R.*, iv, 206—214. The Ottoman historian of these events is Çelebi-nâde; on the other sources cf. Babinger, *G. O. W.*, p. 289; Nâmi, *Feth-nâme der Akh-ı Gurdjistan*).

The deposed King Wakhtang went to Russia with a retinue of 1,400 (Aug. 1724). The Turks having taken possession of Kharthlia took a census and levied taxes on the inhabitants. The stay at Tiflis of the noble 'Othmân Topal Pâshâ alone has left a pleasing memory among the Georgians (Brosset, *II/I*, p. 129). Iese did not bear the title of king and the real power passed to Ishâk Pâshâ, a hereditary ruler of Akhal-tsikhe established at Tiflis. After the death of Iese (1727) Ishâk Pâshâ was appointed governor of all Georgia (Brosset, *II/I*, p. 236). In 1728 he divided Kharthlia among the feudal lords (*mtakwar*) whose dissensions made it easy for him to control them. The Lezgis continued to ravage Georgia (cf. Brosset, *II/I*, v. Hammer, iv, 223, 231, 235, 280, 313).

Nâdir Shâh. In 1143 (1730—1731) after a war in which he won little glory, Shâh Tahmâsp recognised the Araxes as the frontier between Persia and Turkey (Mahdi Khân, *Tarikh-i Nâdiri*, Tabriz 1284, p. 90 = transl. Jones, i, 141; v. Hammer, iv, 277 dates the peace on Febr. 6, 1732). Nâdir dissatisfied, dethroned Tahmâsp and resumed the conquest of Transcaucasia. While he was operating against Daghestan (1147; autumn of 1734) Ishâk Pâshâ of Tiflis set out with an army to the help of Gandja. Theimuraz, son of Nazâr 'Alî Khân (= Erekle I), and his nephew 'Alî Mirzâ = Alexander (son of Imâm Kuli = Dawid III) attacked Ishâk Pâshâ and forced him to shut himself up in the citadel of Tiflis. Nâdir, highly gratified, gave presents to the two princes (*ibid.*, p. 114 = Jones, i, 200). At the siege of Gandja, Nâdir ordered Şafî Khân Baghîrî to lay siege to Tiflis with the help of the Georgian nobles (*manvâwân wa-asnâwân*; *ibid.*, p. 116 = Jones, p. 205).

When 'Abd Allâh Pâshâ was defeated at Bâghward near Eriwân, Ishâk Pâshâ surrendered the citadel of Tiflis on the 22nd Rabi' I, 1147 = Sept. 17, 1734 (*ibid.*, p. 123). Nâdir summoned the nobles (*manvâwân wa-asnâwân*) of Kharthlia and Kakhethia among whom Tahmûrath (= Theimuraz) had most importance and privileges. Nâdir however appointed as wali of Kharthlia and Kakhethia, 'Alî Mirzâ, because he was a Muslim, and his brother Muhammad Mirzâ (= Leon) had fallen in battle against 'Othmân Pâshâ. Tahmûrath was allowed to go to Kakhethia to bring his family (*âul*) to Tiflis. Now he was a "man of the sword and rapid decision"; he fled to the mountains of 'Karakalkhân (Pahaw), Rûs (Ru's, west of Gori) and Çerkes'. Nâdir sent his troops in pursuit of him, arrived himself at Tiflis on the 29th Djumâdî I, where he distributed punishments and rewards. 6,000 Georgian families of the Kaikâl (Abots) were transported to Khorâsân (*ibid.*, p. 124 = Jones, p. 219). In 1736 Şafî Khân captured Theimuraz and sent him to Persia. At the beginning of the

Indian campaign Nâdir released Theimuraz but kept his young son Erekle with him.

In 1156 (end of 1743) Tahmûrath Khân captured the pretender Sâm Mirzâ and later (1744) along with 'Alî Khân Kiliđja (the Georgian sources call him Khandjal, Khandjali), new *beglerbegi* of Tiflis, defeated near Ru's on the Aragwi Yûsaf Pâshâ of Akhal-tsikhe, who by order of the Porte went to Daghestân to work for another pretender Şafî Mirzâ. Arriving at Gori, Nâdir, as a reward for Tahmûrath's services, transferred him to Kharthlia and gave Kakhethia to his son Erekle (*ibid.*, p. 202 = Jones, ii, 164); cf. Brosset, *II/I*, p. 77 (Papuna Orbeliani) and *II/I*, p. 208 (Kherkheulidze).

In 1745 Nâdir levied an impost of 50,000 *tumans* on Georgia. Theimuraz went to obtain a reduction but on reaching Tabriz he heard of the death of Nâdir. The latter's successor was 'Alî Kuli Khân, husband of Khathewan, daughter of Theimuraz.

The Bagratids of Kakhethia. The period of troubles after the death of Nâdir (1749) and the reign of Karim Khân, a prince of a peaceful disposition, whose influence did not extend north of the Araxes, secured a respite for Georgia. The opportunity was skillfully exploited by Theimuraz (king of Kharthlia 1744—1761) and by his son Erekle or Irakli II (king of Kakhethia 1744—1761; king of Kharthlia and Kakhethia 1761—1790). The reign of these Christian kings is one of the happiest periods in the history of Georgia. They conducted numerous expeditions into Transcaucasia. In 1752 the Afghân Azâd-Khân, a rival of the Zand dynasty, was defeated by Erekle near Eriwân and in 1760 captured at Karakh and sent to Karim-Khân. The Kurds of Eriwân were chastised in 1765, 1770 and 1780 and the Georgian troops pursued them over the district of Bâyard. Almost every year the Georgians drove back successfully the incursions of the raiding bands from Daghestân (the most dangerous leader of whom was 'Omar Khân Awar). Only the Khâns of Shekid (q. v.), Hâdjji Çelebi and Aghâ Kishi (in 1752—1753), ever succeeded in inflicting reverses on the Georgians.

In spite of all these successes the situation of Georgia was precarious and in 1760 Theimuraz went to Russia to seek assistance. But he only arrived a few days after the death of the Empress Elizabeth and he himself died in St. Petersburg on the 8th—20th Jan. 1762.

Erekle becoming king of the united kingdoms continued the policy of rapprochement with Russia. At the beginning of the Russo-Turkish war, a Russian force under the command of General Tottleben arrived in Georgia (in 1769) and with Erekle marched against Akhal-tsikhe. The allies did not agree (cf. the letter from Catherine II to Voltaire of Dec. 4th 1770) and the Russian troops returned to Russia in 1772. But, left alone, Erekle, gained a considerable success at Aspindza and, with Solomon of Imerethia, besieged Akhal-kalaki. Sulaimân Pâshâ of Akhal-tsikhe soon assumed the offensive. The Russo-Turkish treaty of Küçük-Kainardjî (1774) brought no territorial change in the lands of Georgia. The Porte only renounced the tribute of youths and maidens and other levies (art. 23). But after the treaty Sulaimân Pâshâ of Akhal-tsikhe had to send a representative to Constantinople. On the other hand he renewed his appeals to St. Petersburg and asked that his kingdom should be united (*prizovokupleno*) to Russia (Tsagareli, *Gramot*, N^o. 144). Russia gave an

evasive answer and it was not till July 24, 1783 that the treaty establishing a protectorate was signed. Russia guaranteed to Erekle his lands and left him full control of domestic policy but the management of foreign affairs passed to Russia. A Russian force was sent to Tiflis but recalled in 1787.

The Kādījārs. During this period the Kādījārs had succeeded the Zands. In 1795 Āghā Muhammad Kādījār laid siege to Shūshā in Karabagh and then turned against Tiflis which was taken on Sept. 11, 1795 and pillaged in dreadful fashion; cf. Brosset, *II*, p. 260; Olivier, *Voyages en Orient*, *III*, p. 78 (testimony of an Hungarian physician who was an eye-witness). The Persian invasion was followed by an invasion by Daghestānians. In 1795 two Russian battalions arrived in Georgia; in March 1796, Russia declared war on Persia. But Nov. 6—18, Catherine II died and her son Paul I at once recalled the Russian troops. Āghā Muhammad set out again for Transcaucasia but was assassinated near Shūshā (June 15, 1797). The aged King Erekle died on Jan. 12—23, 1798.

His son Giorgi XII succeeded him. Fath 'Alī Kādījār was occupied in dealing with his rivals. From Kars, Giorgi sent a force of 2,000 Lezgīs under the command of his two sons; dynastic intrigues in the King's family rendered his position very difficult. In 1799 he sent an embassy to St. Petersburg the object of which was as follows: Georgia should be placed not under a protectorate but under the full power of the emperor, like the other provinces of Russia. On the other hand the throne was to be guaranteed to the dynasty.

On Dec. 18, 1800, Paul I signed the manifesto of annexation (*prisyedineniye*) of Georgia which was proclaimed on Jan. 18, 1801 after the death of Giorgi on Dec. 28, 1800. On March 11, Paul I was put to death. In April the Georgian envoys begged the emperor Alexander I to appoint a Georgian prince as governor with the title of imperial lieutenant and king of Georgia. On Sept. 12, 1801 Alexander I, alleging the impossibility of re-establishing the old government under a protectorate, confirmed the manifesto of Paul I. The treaty of Finkenstein (1807) by which Napoleon recognised the rights of Persia over Georgia never took effect and by art. iii. of the treaty of 1813, Persia renounced her claims to the lands of Georgia.

Since 1917. The status of Tiflis remained unchanged down to the Russian Revolution of 1917. Transcaucasia, cut off from Russia, declared itself independent on April 12, 1918. Tiflis became the capital of the federal republic but the Muslims refused to continue the war against Turkey and the Diet (May 26) agreed to the partition of Transcaucasia. Three republics, Georgia, Armenia and Ādharbāydjān were formed; Tiflis again became the capital of Georgia. On May 28, 1918 the provisional agreement between Georgia and Germany was signed. German troops appeared in Tiflis; after the Armistice their place was taken by British troops. On Jan. 26, 1921, the Allies recognised Georgia *de jure* but by February after some fighting the power in Georgia had passed to the partisans of the Soviet Union. Transcaucasia has been organised as a federal republic, itself forming part of the Union of Soviet Republics (U. S. S. R.). Hence Tiflis became the centre of the central government of Transcaucasia (Z. S. F. S. R.) and at the same time the capital of Georgia (S. S. R. G.).

Description of Tiflis. The Arab geographers give few details about Tiflis. According to Isṭakhri (p. 185) the town was very large; it was surrounded by walls of clay (*ṭin*) with 3 gates and had natural hot baths like those of Tiberias. According to Muṣ'ir b. Muḥalhil (in Yāqūt), these baths were reserved for Muslims. Ibn Ḥawqāl (p. 142—144) compares the water-mills of Tiflis (*nurub*) with those of Mawṣil and Raḡḡa. He is filled with admiration for the plentiful supplies of food at Tiflis and the hospitality of the inhabitants. Tiflis was an outpost of Islām, beyond which there were no Muslims (Isṭakhri). The town was surrounded by enemies (Ibn Ḥawqāl). An interesting detail is given by Balādhuri in the ninth century: the town was built of pinewood (*ṣanawdar*) (according to Ḳazwīnī, only the roofs were of pinewood).

In the Mongol period, Zakariyā Ḳazwīnī tells us that on the one bank of the Kur at Tiflis could be heard the call of the *mū'adḍin* and on the other the psalms of the Christian *nāḡū*. The Christians were in the majority. Ḥamd Allāh Mustawfī describes the houses of Tiflis built one above the other, the roofs of the one being the courtyard of the next.

From the xviiith century we have the Turkish descriptions of Ḥādījī Khālifa (his brief narrative refers to the years 1630—35) and Ewliyā Ālebi (in 1648) and also the first detailed description by a European (Chardin 1673). Ewliyā gives many details of the citadels. The larger (that on the right bank of the Kur) was 6,000 paces in circumference and its walls were 60 *ells* (*dhīrā*) high. It had 70 towers and a garrison of 3,000 men. There was no ditch. There was a tower fitted up to supply the fortress with water (*suluḡ ḡule*). In the large citadel there were 600 houses roofed with clay. In the smaller citadel (on the left bank) there were only 300 houses but it was very strong on account of its walls. Pl. iii. of Chardin's *Atlas* gives a general view of Tiflis in which the traveller shows the 19 principal features (churches, palace, etc.).

For the xviiith century we have the descriptions by Tournefort (1701, II, 307 (with a view, p. 314) and in Wakhshat's *Geography* (the difficulties in which have now been cleared up by Brosset, I, 180). A panoramic plan of Tiflis was published by De l'Isle, *Avertissement sur la carte générale de la Géorgie*, Paris 1766 (the editor had received it during his sojourn in Russia from the "prince of Georgia"). The gazetteer by P. Josseliani (1866) is valuable as it locates ancient buildings.

Old Tiflis consisted of 4 quarters, of which three lay on the right bank of the Kur (which here bends from N. to S. to N.W. to S.E.): 1. *Kālā* or *Kālīnī* (= Arabic *Kal'ā*), the old quarter *intra muros* (between the streams Sololaki and Dabakhāna which flow into the Kur), with the citadel Narin-kālā. 2. The town properly called Tphlīsī, which grew up around the hot springs (according to Brosset, I/1, p. lxxx., it was founded by Armenian inhabitants). The town was situated on the bank of the Kur opposite and below the Kālā. Shāh Saft had settled a colony of Saiyids on the heights of Thabor (to the east of Dabakhāna) whence the Persian name of this district: Saiyid-āhād. 3. The outer quarter Gareth-ubani near the race-course (*asṭara*), above and to the north of the first two quarters. 4. The quarter on the left

bank opposite the Kala was called Isani or Nisani (later Awlabar) and had the heights of Makhatha to the north of it. Isani corresponds to the Sughdabil of the Arabs. It is the cemetery Sagodebel, in Georgian "place of groanings", mentioned in the Life of St. Abi; cf. Brosset, *Additions*, p. 136 and Schulze, *Das Martyrium d. hl. Abi von Tiflis, Texte und Untersuchungen*, 1905, xiii, fasc. 4, p. 35. The same name occurs twice in the Georgian Chronicle (cf. Brosset, i, 407 and 633).

Three citadels have to be distinguished at Tiflis: 1. The old citadel of Thabor (*Kort-kala*) on the hill on the right bank of the Daba-khām destroyed in 1618, in 1725, and finally in 1785; it defended the southern gate of the Kala, called the Gandja Gate. 2. The citadel Narin-kala on the hill of Kala. Before Islam, this fortress seems to have borne the name of Shuris-tsikhe (Wakhush). It was dismantled in 1818 (cf. the picture in Gamba's *Atlas*). 3. The citadel of the left bank (Isani) served as a bridge-head; in 1728 the Turks began to fortify this place for the last time but left the work unfinished.

As to the royal palaces the oldest was that of Metekhi on the left bank in front of the old bridge. In 1638 the Muslim king Rostom built a palace about 400 feet in length along the Kur in Tphili. Here Chardin was received by Shāh-Nawāz. A little farther to the south King Wakhush VI built a palace very richly adorned in the Persian style; it was destroyed by the Turks in 1725; cf. Iosseliani, *Opisanie* (on the mosques cf. p. 239).

From the nature of the site, compressed between the Kur and the heights of the right bank, Old Tiflis attained no considerable extent (cf. Chardin). In the sixteenth century the town began to extend far beyond its ancient limits and is developing especially on the left bank along which run the railway lines (Tiflis-Baku, Tiflis-Batum, Tiflis-Djula and Tiflis-Kakhethia).

Population. In 1783 after the prosperous reigns of Theimuraz and Erekle, the town had 4,000 houses with 61,000 inhabitants. In 1803 it had only 2,700—3,000 with 35,000 inhabitants. This was the result of Āghā Muhammad's invasion in 1795, traces of which could everywhere be seen even in Gamba's time. The more exact figures for 1834 (Dubois de Montpéroux) give 3,662 houses, 4,936 families and 25,290 inhabitants, not including Russians. The population grew rapidly: 1850: 34,800, 1865: 70,000, 1897: 160,605. Of the last figure the Armenians formed 38.1%, the Georgians 26.3% and the Russians 24.8%. The census of 1922 gives 233,958 inhabitants for Tiflis, of whom 85,309 were Armenians, 80,884 Georgians, 38,612 Russians, 9,768 Jews, 3,984 Persians, 3,255 Āgharbağdjanli Turks, 2,457 Germans etc.; cf. the *Zakazatsye*, Tiflis 1925, p. 156—157. Lastly the census of Dec. 17, 1926 gave 282,918.

Bibliography: The standard work is M. F. Brosset, *Histoire de la Géorgie*, St. Petersburg, 1849—1857: vol. i, 1 — an important introduction by the author and the early history to 1450; vol. i, 2 — *Additions*, for which Armenian and Muslim sources have also been ransacked; vol. ii, 1 — History of prince Wakhush (± 1450—1750: separate histories of the four kingdoms: Kharthlia, Kakhethia, Saatabago, Imere-

this) followed by *Additions*; vol. ii, 2 — Later chronicles, memoirs etc. (circa 1659—1856); in all 2,424 pages in 4°. Cf. also Laurent Brosset, *Bibliographie analytique des ouvrages de M. F. Brosset* (1824—1879), St. Petersburg 1887 (analysis of 271 books and articles). For the history of the sources cf. the three chronicles translated by Takaishvili in *Shornik materialow*, Tiflis 1900, xxviii, 1—214. The chronicles are supplemented by the important *Geography* of prince Wakhush (finished at Moscow in 1745), transl. into French by Brosset, *Description géographique de la Géorgie*, St. Petersburg 1842 (with the original maps), Russian transl. by Djanashvili, Tiflis 1904, in *Zap. Kavk. Old. Russ. Geogr. Obsh.*, xxiv, fasc. 5; P. Iosseliani, *Istoricheskiye razskazy*, Tiflis 1849 (history of Georgia under the Muslim kings 1569—1729). A revision of the history of Georgia has been undertaken by Djawakhishvili, *Kharthvel eris itera*, 2 vols., Tiflis 1913 (down to the Mongol invasion); vol. i, 3rd ed., 1928, a part of vol. iv. (Post-Timurid period), 1924.

MINORSKY).

TIGRIS. [See DIBJLA.]

AL-TIH, properly *Fahs al-Tih*, is the name of the desert forming the frontier between Syria and Egypt in the interior of the Sinai Peninsula. The Arab geographers also call it the "Desert of the Bani Israil". As early as the *Tabula Peutingeriana* we find the legend: *Desertum ubi quadragesima annis erraverunt filii Israel ducente Moyse* and on the map of Madaba: *Ἰσραὴλ τοῦ τοῦ Ἰσραὴλ τῶν Ἰσραὴλ* and *Ἰσραὴλ τῶν Ἰσραὴλ*. In the desert there was a fortress of the same name (De Guignes, *Perle des Merveilles*, N. E., ii. 31); there is a Wadi 'l-Tih in the eastern part of it (Quatremère, *Mémoires sur*

l'Égypte, i. 186). The desert of al-Tih which formed the most southerly district of Filastin was 40 *farsakhs* long, about as much broad, and stretched from the district of al-Djifir (the region of al-Faramā, al-'Arish, al-Warrāda) to the mountains of Sinai (the Sinā); in the west it was bounded by the Egyptian province of al-Rif (Maspéro-Wiet, *M.I.F.A.O.*, xxxvi. 101 sq.), in the east by the districts of Jerusalem and Southern Palestine. According to the description of the Arab geographers, it consisted partly of stoney and partly of sandy soil, contained also salt-marshes and red sandstone hills, a few palm-trees and springs. In the desert districts of Tih Bani Israil al-Dimashki mentions the Jewish towns of Qadas (Qadesh Barnea), Huwairik, al-Khalasa (Elusa), al-Khalay (Lyssa), al-Saba' (Beerseba) and al-Madura. He had already mentioned al-Tih among the districts of the kingdom of Karak, by which he seems to mean the lands that had once belonged to Renaud of Châtillon. From the desert of al-Tih one went down through the 'Aḥab Busak to Aila (Yāfūt, *Mu'jam*, ed. Wüstenfeld, i. 610); this road was first made passable for the pilgrim caravans in the time of Khumrawaih (884—896). It was two stages' ride from Aila right through the desert to the sea of Farin. When in 652 (1254—1255) the Bahri Mamlūks fled from Cairo, a body of them wandered for five days in the desert; on the sixth they discovered a great abandoned city with walls and marble halls, buried in the sand. They found vases and articles of dress, but these fell to dust at the first contact; there was also a reservoir with ice-cold water. When they reached Karak on the next day and paid for goods with dinars which they had found in the buried city, they learned that they belonged to the time of Moses and that they had been in the "green city of the Israelites".

The caravan and military road from Cairo to Syria ran in normal times through al-Djifir, without touching the desert of al-Tih; only in the period when this was interrupted by the Frankish occupation did the route straight through the desert gain a certain strategic importance, as we see in the campaigns of Salāh al-Din and in the building of the fortress of Sadr (now Kal'at Gindi).

HONIGMANN)

TIHĀMA, the narrow strip of low land along the coast which runs from the Sinai Peninsula along the west and south side of Arabia. Al-Idrisi gives us the fullest account of Tihāma. According to him, it is traversed by a chain of hills which begin at the Gulf of Qulzum

and send out a ridge to the east. The frontier of Tihāma is in the west the Gulf of Ḳulsam and in the east a range of hills running north and south (the Sarāt). The province called Tihāma stretches, according to Idrisi, from Sardiya to 'Aden, 12 days' journey along the sea-coast and 4 days' journey by road from the mountains as far as the land of Ḡhalīfika (not Alābika). The greatest breadth of Tihāma is in the hinterland of Djidda, the port of Mecca, which is also usually included in Tihāma — as districts of Mecca in Tihāma are also given Danḡān, 'Aḡham, Baiḡ and 'Akk — although writers differ in their views on the extent of Tihāma in this particular direction. Al-Aḡma't for example makes Tihāma begin at Dhāt 'Irḡ. Ibn al-Ḳuṭāib puts its frontier at Dhāt 'Irḡ and al-Djufā and in the Yaman highlands; according to 'Umāra b. 'Aḡl, it stretches from the sea to Harra Sulaim and Harra Lailā; al-Madā'ini says that everyone who passes through Wadjra, Ḡhamra and al-Tā'if in the direction of Mecca is already in Tihāma, which he puts south of the Hijāz, others again make Tihāma stretch from Dhāt 'Irḡ via Mecca to 'Uḡān (between Mecca and al-Madīna) (all the statements are recorded by Yāḡūt, *Muḡam*, i. 902; of the Yaman Tihāma, extent and particulars of the people etc., a full account is given by al-Hamdānī, *Sifa Dja'irat al-'Arab*, p. 53 sq., 119—121). In any case the geographers not only use Tihāma as a synonym of "coast" (*ḡāḡil al-baḡr*) and "depression" (*ḡhawr*) or "hollow" (*ḡāḡa*) but they place it as an independent geographical or political entity alongside of Yaman, al-Yamāma, and al-'Arūd (*B.G.A.*, viii. 79). Indeed Tihāma at various periods in the history of Yaman was a separate province for administrative purposes, for example as early as the period of the Persian conquest of the Yaman (end of the 5th century A.D.), presumably a survival of the organisation of the late Sabaeen kingdom, and at a later date under the Ziyādiyya; then it had a period of independence with Zabīd as capital (1159—1174 A.D.) to become a province again under the Imāms of Ṣan'ā'.

It is significant of Ibn Khordādhbih's keen perception of the similarity of the coast on both sides of the Red Sea that he also speaks of a Tihāma of Ethiopia (*B.G.A.*, vi. 155), by which he apparently means practically the coast of Erythraea. Ibn al-Wardī describes the Tihāma as mountainous country, which is peculiar, no doubt on account of the hills which run through the plain along the coast and are also mentioned by al-Idrisi. Al-Isṭakhri and Ibn Hawḡal in this way made the Tihāma stretch far into the mountains while others expressly define Tihāma as the land between the sea and the Sarāt.

As to the etymology of the name, B. Moritz, *Arabien*, p. 9, note 1, for example thinks Tihāma is taken over from the Hebrew-Babylonian תִּימָת *tīmātu*, "sea". On the other hand, H. Zimmern, *Die Keilinschriften und das alte Testament*², Berlin 1902, p. 492, note 2, is not certain whether Hebrew *tēhōm* like the Arabic *tihāma* as a name for a coastal region is originally connected with Babylonian *tīmātu* or, what is more probable, in both cases we have a case of an early borrowing from the Babylonian. When it is suggested that *tīmātu*, *tāmātu* (in *Berosos apocrypha*) with the meaning of "ocean", "salt sea" is connected with

the Hebrew טִיחַ meaning to "stink" (cf. P. Jensen, *Neilsen'sche Bibl.*, vi/1, p. 559 sq.), it should be pointed out that the Arab philologists also quote *tihāma* with this meaning to explain the name Tihāma (on account of the malodorous air there), but at the same time they compare *tihāma* with the meaning "intense heat", "calm" (Yāḡūt, *Muḡam*, i. 902; Bakrī, *Muḡam*, i. 203). The name Tihāma moreover occurs already in the South Arabian inscriptions, Glaser, N^o. 554, 3, 6; 618, 2, 9, and Rehatsek, 2, 2 as תִּימָת with which may be compared the תִּימָת in Cruttenden, line 10. The *musnad* inscription of king Ṣarāḡbīl b. Yaḡḡub quoted by Yāḡūt, *Muḡam*, iv. 104, also gives as the titles of this ruler "king of Saba", Tihāma and their Arabs" and another *musnad* mentioned by al-Hamdānī, *Sifa Dja'irat al-'Arab*, p. 208, 9 sq., mentions *aḡl tihāmat wa-ḡawdim* "people of the Tihāma (coastland) and of the mountains", quite in keeping with the passage in Glaser, N^o. 554, 3, 2, 618, 2 sq. (טִיחַ וְתִימָת). With the first of these *musnads*, which is evidently taken from an inscription of a late period, may be compared the inscription N^o. 13 of the Académie des Inscriptions et Belles-lettres in Paris, published by J. and H. Derenbourg in which the rulers mentioned by name are described as "kings of Saba" and the Tihāma".

The origin of the Tihāma, the breadth of which varies considerably — sometimes it is merely a narrow strip of coast, as at places between al-Tūr and Suez and at Kunfudha and Luhaiya — probably dates from the middle Pliocene period and is connected with the subsidence of the Red Sea. Coral formations and modern alluvial deposits form the material of which this plain consists; in the Yaman portion it rises to 2,000 feet above sea-level and then suddenly ascends sharply to the great highlands of the Yaman Sarāt. The Yaman Tihāma begins at al-Lith and stretches to 'Aden if we include the Tihāma of 'Asm. In the Yaman part the breadth varies between 30 and 50 miles. From the slightly undulating country rise — especially towards the high land — isolated hills which consist either of recent limestone, which often contain fossils (namuliths) at a considerable height, or of volcanic rock. The climate is very unpleasant. It is hot and dry and extreme temperatures are recorded at certain periods in the year (May and Sept. 35–45° C., April 40° C.). In the summer the temperature drops a little under the influence of the frequent rains but on the coast 40° C. by day and 30° C. by night are not unusual. In the winter the temperature varies between 25° and 35° C. but the minimum even in the coldest months is never below 14° C. on the coast. The rainy season is from February to March or from May to the end of September. Only the most southern part of the west coast of Arabia belongs to the region of tropical summer rains, and the south coast as far as 50° East Long. and 15° or 16° N. Lat. A feature of the Tihāma are the mists called *inḡḡaimān* or *anḡma* which rise in the mornings and drift towards the highlands and make these regions regular hothouses in which flourish numbers of valuable crops, notably coffee.

Tihāma, hot and dry, is the natural soil for the vegetation of a plain with thornbushes, thistles and grasses. The saline steppe which adjoins the coast (*ḡāḡat*) is covered with bushes; in the in-

terior especially towards the highlands, durra, barley, maize, wheat, sugar-cane, date palms, sesame, indigo and cotton flourish. The population of Tihāma, estimated at 5,000,000 (according to 'Abd al-Wāsi' b. Yahyā, *Ta'riḥ al-Yaman*, p. 292) on the coast is engaged in trading, shipping, fishing (also pearl-fisheries) and shipbuilding and in the interior mainly with agriculture. They appear to be a mixed race with olive-coloured complexions; their woolly hair and thick lips show a strong admixture of African blood. Their colour is described e.g. by Botta as quite black; Bury speaks of the negroid taint and calls the Tihāma people slightly built. The largest tribe, the Zeranīk, is characterised by the crisp short beard and straight hair (cf. the picture in Bury, *Arabia Infelix*, facing p. 28). The language of the Tihāma Arabs is generally said to differ very much from pure Arabic and to contain numerous foreign loanwords.

The southern Tihāma, the maternal frontier of which runs from Mukhā to Mawza^c is traversed in all directions by volcanic ranges and shows only scanty deposits of sedimentary rocks; it is mainly formed of the same rocks as the continent. There is no continuous strip of flat coast; this is only found at intervals between projecting spurs of the highlands of the interior or the volcanic features of the coast. Perpendicular chalk and sandstone cliffs which run along the coast alternating with white deposits of chalk and sandy depressions are characteristic of the southern Tihāma which rarely ever exceeds 25 miles in breadth. In the interior the southern Tihāma is more steppelike in character; in the valleys of the Wādīs on the other hand, fruitful oases are found after the fertile summer rains, for example the extraordinarily rich oasis of Lahudj or of the Wādī Maifa'a which has the same flora as the western Tihāma. The southern Tihāma has as a rule a slight rainfall. The winter rains are irregular although they seldom fail. At the end of April heavy rains begin, often accompanied by severe thunderstorms; occasional rains fall in January, November, and December and July, and August.

(A. GROHMANN)

TIK, a technical term in Arabic music, corresponding to the learned term *ṣaf*; also used in Arabic dialectal metres for the *saḥāf*. It means the note struck, sharp and heavy: *a.* on the edge of the tambourine, sometimes on the little cymbal that is fixed there, *b.* on the back of the closed left hand when the hands are beaten, *c.* with the left foot on the ground when dancing.

It is one of the two terms of the fundamental metrical dualism of the popular songs in Arabic dialects (called *muwāḥḥahāt*), where between the pauses there only follow a pair of antithetic values (like the iambic of classical metres, except that the antithesis depends not on the length but on the intensity): *ṣaf* (usually *tik*) and *dih* (usually *dam*); the first being the sharp and heavy blow and the latter, *dih*, the dense and sonorous. The latter being struck on the stretched skin: *a.* at the centre of the tambourine, *b.* on the centre of the open left palm if the hands are beaten, *c.* with the right foot on the ground when dancing.

Just as classical prosody built up a series of metres by arranging long and short in varying order so the popular Arabic prosody of the *muwāḥḥahāt* built up the series of special rhythmic

types (called *qurūb*) on differentiated series of *ḥāṣ* and *ṣikḥ* with pauses between. The *muḥammīdī* rhythm for example may be thus written:

$k, m, s / k, s / m, m, s /$
(where $k = \text{ḥā}$, $m = \text{ṣikḥ}$, $s = \text{silence}$ and $/ = \text{caesura}$).

So that the phrases in the song may coincide with the series of characteristic beats of the rhythm selected the following rules are observed: 1. each syllable must correspond to one beat (*naḥḥa*) at least; 2. one or more *ḥāṣ* may be intercalated (intercalation = *riḥāḥ*) in the rhythmic series; 3. but certain pauses must not be interfered with, intangible caesuras, characteristic of the rhythm (first by pause after a *ḥāṣ*, otherwise short pause after a *ṣikḥ*); 4. contrary to Arabic classical metre, we may have open syllables when the time is strong and closed when the time is weak. Martin Hartmann was therefore wrong in trying to reduce the rhythm of the *muḥammīdī* to the *tafāʿil* of the Arabic classical metres. Several Oriental musicians have given tables of identification, confusing intensity and duration, so as to force the Arabic *qurūb* to correspond with European musical notations. Indeed modern Turkish music counts a *ṭik* as a quaver and a *ṭum* as a crotchet.

TIKRIT. [See TAKEIT.]

TILIMSĀNĪ. Many Arabic scholars are known by this *nisba*, but generally the three following are meant when mentioned in books of *adab*: 1. 'AṬIF AL-DĪN SULAYMĀN a. 'ALĪ a. 'AND ALLĪH a. 'ALĪ b. YAKĪN claimed to be descended from a family which originally came from al-Kūfa (Dhahabī in MS. Or. 53 reads however Kūm al-Aḥl) and was born at Tilimsān (?) in 616 (1219) according to his own statement. He came early to Syria where he occasionally filled official positions, but was also frequently out of employment. He claimed that in Asia Minor (Rūm) he had as a Sūfī gone forty times into seclusion (*ḥalwa*), each time for forty days, without interruption, a statement which Dhahabī rightly questions as the total makes 1,600 consecutive days. At one time he filled the post of supervisor of the market-dues (*maḥṣ*, q. v.) and when al-Aḥḥād came to Damascus in the retinue of the Sulṭān al-Manṣūr Kālāwūn he demanded from 'Aṭif al-Dīn a balance-sheet of his accounts. As this after repeated requests was not forthcoming he upbraided 'Aṭif al-Dīn, who then lost his temper and wanted to remonstrate with the Sulṭān for having, contrary to the Sharī'a, placed a Coptic Christian over Muslims. He was finally appeased and probably never rendered the desired accounts. 'Aṭif is said to have been a pious man of affable manners with a certain amount of dignity, but he was always under suspicion because, as Dhahabī puts it, one could never really ascertain what his true opinions were and he was even accused of being an adherent of the Nuṣairī sect (q. v.). The difficulty lay in his poetry which was eloquent, easy and pleasant, but, his biographers say, contained

hidden poison. His poems collected in a *Diwān* of which copies are in the libraries of the British Museum, the India Office, the Bodleian at Oxford and elsewhere, certainly do not openly contain any heresies, but are in many cases after the style of Sūfī compositions addressed to some imagined object of love. Kāṭib al-Dīn al-Yūnīnī found him pleasant company and says that he laid claim to *ʿarfā* (q. v.), the full conception of God. This he is said to have expressed upon his death-bed when he is stated to have said: "How can any one who knows God fear him, and since I do know him I have no longer any fear and am happy to meet him". He died in Damascus on the 5th of Rājab 690 (July 1, 1291) and was buried in the Sūfī cemetery of that city. He composed a number of works upon various sciences, besides his *Diwān*, of which apparently only his *Riḥla fī 'ilm al-'Arūd*, Berlin N^o. 7128, has survived. Dhahabī mentions in addition: *Sharḥ al-Aḥḥād al-Hamā*; *Sharḥ Maḥāṣin al-Nafā* and *Sharḥ Nuṣūṣ al-Hikam* of Ibn al-'Arabī. The titles of these works indicate the school in which he was trained and we may assume with safety that he was an ardent follower of Ibn al-'Arabī.

Bibliography: Dhahabī, *Ta'riḥ al-ʿilām*, MS. Brit. Mus., Or. 53, fol. 777; Kutubī, *Fawa'id al-Wafayāt*, I. 228; Vāḥī, *Mir'āt*, ed. Haidar-ābād, iv. 216-218; Brockelmann, *G. A. L.*, I. 258, N^o. 18.

2. HIS SON SHAMS AL-DĪN MUHAMMAD b. SULAYMĀN, called al-Shabb al-Zarīf (the intelligent youth), was born in Cairo in 661 (1263) and died young two years before his father in Rājab 688 (June 1289). He held an appointment in the office of the treasury in Damascus and is described as a young man given to pleasure and amusement. His reputation rests mainly upon his poems collected in a small *Diwān* which has been printed several times. These poems consist principally of short amatory pieces addressed to males, occasionally to fictitious women, in simple language. A Sūfī interpretation is possible, but hardly likely. His other compositions preserved in manuscript convey the impression that the poems also are realistic. Two *Maḥṣ* contained in the MS. Berlin N^o. 3953 are jocose and lascivious and the same appears to be the case with two other works contained in MS. Berlin N^o. 8594 entitled *Faḥḥāt al-Maḥṣ* *fī Maḥṣ* *al-Maḥṣ* and *al-Maḥṣ* *al-Hiyya wa 'l-Saḥṣ*. The *Maḥṣ* *al-'Uḥḥād* contained in the Paris MS. N^o. 3947, and the Damascus print of a *maḥṣ*, are perhaps identical with the last-named work. A short tale about Shams al-Dīn related by Dhahabī, in the biography of his father, concerning him lends colour to the suspicion that 'Aṭif al-Dīn looked upon the extravagances of his son as a step towards becoming an accomplished Sūfī by the way of *malāma* (q. v.), but they were in reality perhaps one of the causes of his premature death.

Bibliography: Dhahabī, *Ta'riḥ al-ʿilām*, MS. Brit. Mus., Or. 53, fol. 627; Kutubī, *Fawa'id*, II. 265; Brockelmann, *G. A. L.*, I. 258; I. E. Sackin, *Dictionnaire de bibliographie arabe*, p. 187. Editions of the *Diwān*, Cairo 1281 and 1308, Bairūt 1885 and 1325. A *maḥṣ* Damascus n.d., 16 p.

3. AND IḤYĀK IBRAHĪM b. ABĪ BAKR a. 'AND ALLĪH AL-ANṢĀRĪ was born in Tilimsān end of Djumādī II or the 1st of Rājab 609 (Nov 1212), but when nine years old his father took him to Granada

in Spain. Three years later they removed to Malaga and here Ibrahim conducted most of his studies. Later he went to Sahla (Centa) where he married the sister of the Maliki lawyer Malik b. al-Murahhal and in this city he died after 690 (1291). He was a learned Maliki lawyer, skilled in drawing up contracts and a poet. At the age of 21 he composed his *urfiyya* upon the law of inheritances, which has been the subject of a number of commentaries preserved in manuscript. His other works are 2. *Natijjat al-khawar fi Masalat al-ghayr*, a rhymed life of the Prophet; 3. *Maqala fi l-'Aruf*; 4. *Manquma fi l-Mawlid al-Karim*; 5. *al-Ashar al-Bibliography*: Ibn Farhūn, *Dihādī*, ed. Fez, p. 90; Ibn Maryam, *Bustan*, p. 55 sq.; Brockelmann, *G.A.L.*, I, 367, N° 6 and 385, N° 10.

(F. KRENKOW)

TILISM. [See TILSAM.]

TILSAM, also *tilim*, *tilim*, *tilam* etc. from the Greek *τίλμα*, a talisman, i.e. an inscription with astrological and other magic signs or an object covered with such inscriptions, especially also with figures from the zodiacal circle or the constellations and animals which were used as magic charms to protect and avert the evil eye. The Greek name is evidence of its origin in the late Hellenistic period and gnostic ideas are obviously reflected in the widespread use of such charms. The wise Balinūs is said to have been the father of talismans; according to tradition, he left in many towns charms for protection against storms, snakes, scorpions etc. Many rules for preparing talismans are also ascribed to Hermes Trismegistos.

(J. RUSKA)

TIMAR a grant of land for military service (*beneficium*) or more exactly a kind of Turkish fief, the possession of which entailed upon the feudatory the obligation to go mounted to war (*exere taimik*) and to supply soldiers or sailors in numbers proportionate to the revenue of the appanage (*dirlik*).

The feudatory or "timariot" was called *timār* (*timār* or *chili timār* or *timār eri* ("Ashikpasha-zade, ed. Giese, p. 22, 38, 232) or *timār sipahisi* or simply *sipahi* i.e. "horseman", whence the popular name *sipahilik* for the timar.

There were three categories of military fiefs, according to their importance:

1. *hassa* (plur. *hassas-tar* or *hassaslar*) or more exactly the majority of the *hassa* of the governors of provinces;
2. *asamet* or *asamet* with a minimum annual revenue (*hassit*) of 20,000 aspers (*akla* or *akir*);
3. *timar* with a maximum revenue (*hassit*) of 19,999 aspers.

In a wider sense the name *timar* is sometimes applied to the two last and even to all three classes.

Timar has often been translated "commandership" (*commanderie*, Meunier, Michel Baudier, Pitton de Tournefort) by analogy with the *commendatariae* of the Knights of Malta and the Teutonic Order but the institutions are very different, the commanders were former Knights whose services were rewarded by giving them the right to collect for themselves a part of the revenues of certain estates of the Order.

The word *timar* has further the meaning of of care given to a sick or mad person, a wounded man or beast of burden (still used in this last sense in modern Persian); dressing a wound; tending a horse, whence *timargi* (Egyptian *tanurgi*) (male nurse). It further means rest-cure or open air cure for servants or slaves (*hassat-ih, kalfa*) and care given to an estate, a farm, or a vineyard (Shams al-Din Sami Bey).

Etymology of the word *timar*: Leunclavius seems to have been the first to connect this word with the Greek *τίμα* *honorarium* which in turn comes from the Greek *τιμή* (*Jo. Leonclavius Pandeter historiae turicae*, N° 186, I, at the end of *Annales Sultanicorum Ottomanorum*, Frankfurt 1596). This hypothesis was admitted by Michel Baudier (*Histoire générale du Levant*, 1624, chap. xvii.) and by Ducange.

Unfortunately the example of the use of the word *timarion* in the sense of fief is taken by Leunclavius from a text of the xvth century (the reference is to the *ἱστὴρ τῶν βασιλευσάντων βασιλέων* of Damascus Thesal.; cf. Emile Legrand, *Bibliothèque hellénique*, II, 1885, p. 12). The quotations, including this reference, given by Ducange in his *Glossarium* and its Supplement are, as has been already pointed out by V. D. Smirnov (*Kulibey gomarginskiy*, St. Petersburg 1873, p. 73, note 1) of much too recent a date. They are all later than the Ottoman conquest. The "novellae" of the Byzantine emperors do not use this term for military fiefs, but others like *εργασια* *εργασια* or simply *εργασια*. As more technical terms we find *oliveia* and later *epheia* when the military beneficium had developed more towards the form of a seignorial fief (Ernst Stein, *Untersuchungen zur spätbyzantinischen Verfassung*, M. O. G., II, 9).

In 1598 we find the Venetian senator Lazaro Soranzo (*L'Ottomano*, p. 12) proposing, but not conclusively in opposition to the Greek the Persian etymology *timar* "care, anxiety, pains, dressing". It may be objected to this etymology, which has the support of von Hammer (and more recently also of Grigorjewski) that the word *timar* has never been applied to military fiefs in Persian and that the Turkish feudal organisation seems to have been borrowed from the Byzantines and not from the Persians.

In my opinion the word *timar* is an echo of the Byzantine *pronoia* (*pronia*). In other instances also it can be noticed that the semantic evolution of terms can be paralleled from language to language. The Latin synonym of *pronoia*, *beneficium*, French "*provisions*" (cf. Ducange and the edition of Pachymeres in the *Corp. Script. Hist. Byz.*, II, 715) is also a term relating to benefices. The Latin and low Latin *cura* and in a less degree the French and English "*cure*" have almost all the acceptations of the word *timar* (except that

they have no military associations) "care, treatment (medical), country-estate, cleric's benefice".

We need not waste time over the explanation from the Arabic *ṭīmār*, plural of *ṭhamar*, "fruit", proposed by Halbe de Vegenre and Trévoix's Dictionary.

Origin of the Institution. Von Hammer, in spite of the importance he gives to Persian influence, Wotms, who has however corrected several of his predecessor's errors, Belin, and Tischendorf have represented the *timār* as being a kind of adaptation of the Muslim "feudal" system.

Although the historian Sa'd al-Din uses this term of lands which were distributed to the *musellem* of Turkey (cf. below) it seems to me difficult to recognise in the Arab *ṭīmār* the origin of the Turkish *timār*. The more particularly Muslim element in the Turkish legislation, was the legal and political distinction between the *'aṣṣṣiyya* (tithe-lands) i.e. "those conquered by force and divided among the conquerors on condition they paid a tithe" and *ḥāṣṣiyye* "tributary lands, taken after capitulation and left to the *ṣunni* (*dhimmi*) or infidels on payment of tribute". Now the military fiefs as Belin himself says (*Progr. fonderie*, N° 303) could consist of any kind of land and it is only by a very wide interpretation that some lawyers have assimilated them to *ḥāṣṣiyye* lands constituted into *wakfs* for military requirements (*ibid.*, N° 298). The jurists of the period — fairly late — of Salāmān the Magnificent found some difficulty in defining the status of the military domains in the strict sense (cf. Steeg and Padel, p. 19-26 and especially *M. T. M.*, p. 58-59 [Turkish text] von Hammer, i. 342 *sup.* [German edition], *Journ. As.*, Jan.-Feb. 1844, p. 68 *sup.*). Voltaire was right when he said that the Turks had not borrowed the system of the *timār* from the Arab Caliphs (*Essai des Mœurs*, chap. xcxi).

The hypothesis of a Persian origin seems to me no more justifiable. Kremer (*Culturgesch. des Orients*, i. 109-110) has shown that the Persians had no influence on the Arab feudal system. Von Hammer certainly exaggerated when he attributes to Persian influence the organisation of the Byzantine and Turkish military fiefs. There certainly is one feature in common to the three nations: this is the existence of mounted fenciblemen wearing cuirasses (cf. for Persia Cl. Huart, *La Perse*, 1925, p. 184, 204). It is even possible that these cuirasses were of Persian origin (a novella of Nicephorus Phocas seem to speak of them as an innovation) but this is of minor significance.

It seems much more natural to admit that the Turks imitated or rather preserved the Byzantine institution which they found in existence. What would tend to confirm this is the existence of fiefs with the obligation to naval service alongside of those supplying horsemen. This was also the case with the Byzantines (Aug. Fr. Gröber, *Byzantinische Geschichte*, iii. 21).

It is not our task here to enquire to what extent the Byzantine military fiefs were related to the Roman *beneficia* or to the colonies of German soldiers (on the mailed horsemen of Byzantium, cf. Gustave Schlumberger, *Un Empereur byzantin au X^e siècle*, new ed., 1923, p. 40 and p. 288 and on Greek military feudalism: Ramchand, *L'Empire grec au dixième siècle*, 1870, chapitre intitulé *La féodalité dans l'Empire grec: les fiefs militaires*; *L'histoire générale* of Lavisse and Ram-

chand, chap. xiii. of vol. i., by C. Bayet, p. 668 *sup.*; Zachariae von Lingenthal, *Histoire du droit privé gréco-romain*, transl. into Fr. by Eugène Lanth, Paris 1870, p. 63, 129 *sup.*; da., *Geschichte der griechisch-römischen Rechts*, 1877; Gaignetot, *Des fiefs militaires dans l'empire romain et spécialement en Orient et au X^e siècle*, Bordeaux 1898, p. 81, 89; Testard, *Des rapports des fiefs militaires et des petits propriétaires ruraux dans l'empire byzantin au X^e siècle*, Bordeaux 1898, p. 75 *sup.*; *Juris Graeco-romani tomus duo* Johannis Laurentii Amelbarni, Frankfurt 1596, li. 144 *sup.*; cf. also the works of Meursius, Moreuil and the bibliography to the article *beneficium* in the *Dictionnaire des antiquités grecques et romaines* by Daremberg and Saglio).

As to the influence which the Seldjūks of Asia Minor may have exercised on the *timār*, we know nothing about it nor about their military organisation in general (cf. however the remarks by Köprülü-zade Mehmed Fu'ad in *Millî et Medjîm*, N° 5, p. 213-214).

Formation of the Ottoman military fiefs and their administration: We know very little about the administrative activity of the early boys or Ottoman rulers. The following words are put into the mouth of Othman, the founder of the dynasty: "He to whom I have granted a fief shall not be deprived of it without good reason; if he dies, his son shall succeed him; if the latter is too young, his servants shall take his place in war until he is fit to bear arms".

Under Orkhan, 'Alā al-Din formed a corps of horsemen called *musellem* "exempted from taxation", who held in times of peace certain lands free of taxes and who seem to have been absorbed in part at least by the organisation of the *timār* (on this militia, cf. Belin, *Fiefs Milit.*, p. 39-40, Grzegorzewski, p. 45; Marsigli: a firman relating to them, Bibl. Nat. Paris, MS. Suppl. Turc., N° 79, 1^{re} in fine).

Mar'ad I, assisted by Timurtash Pasha beylerbeyi of Rumelia, in 1375 issued a *kānūn* laying down the distinction between the little *timār* and the *ṣāṣet* (Bibl. Nat. Paris, MS. Suppl. Turc., N° 68, fol. 63).

Mehmed II in 881 A.H. instituted a more systematic method of keeping the registers (*defter*) of the military fiefs. There is comparatively little reference to these fiefs in the *Kānūn-Nāma* of this ruler (publ. in a supplement to *T. O. E. M.*, 1330 A.H. 32 pp. 8^e. Cf. v. Hammer, *Staatsverfassung*, 8, p. 87-101; *Catal. of the MSS in Vienna*, N° 1820, 31st and 1813, 31st). The fiscal officials who administered the fiefs (*ṣipāh yashīl-lar*) appear in it as completely organised in the provinces. They were the *timār defterdār* for the simple *timār* on the *defter koshkuntāi* (*shahāri*) for the *ṣāṣet*. Both sets of officials were under the *defter emini* who in turn was under the *defterdār* of the empire (cf. the *Kānūn* above quoted, p. 19: von Hammer, p. 93 and Belin, *Fiefs milit.*, p. 44). Details of the organisation of the timariots or *ṣipāhīyān* will also be found in another *Kānūn* of Mehmed II, publ. by F. Knehlitz-Greifenhorst in the *M.O.G.*, i. 13, 48. In contents this *Kānūn* is closely connected with *Kānūn* (cf. below).

Sulaimān the Magnificent is credited with the organisation of the *timār* but it is probable that he only codified already existing regulations. In

any case he deprived the governors of control of the relatively more important *timār* which were called *tekereli* (cf. below). It is from his reign that the rather numerous collections of laws begin to date (*kanūn*, *kanūn-nāme*, *kanūn-nāme-i alī*, *Ottomān*, *Şānu-i mülkai* or codes drawn up by the *nizāmī* (note rarely by the *defter-dār* and the *defter emini*), with the help, more and more frequent as time goes on, of the *Shāikh al-Islām* (cf. *Bibl.*). These laws clearly reveal the agrarian character of the institution of *timār*. The *timār* lands or domains of which they were formed were fields lying around the villages, the houses in the latter being the property (*mülk*) of private individuals (*M. T. M.*, p. 54). Otherwise any land under cultivation, even in a garden or vineyard belonging to the *ra'ya*, became domain and paid dues to the *sipāhī*. (*M. T. M.*, p. 87; cf. *J. A.*, Jan.-Feb. 1844, p. 87).

The *timār* from the military point of view. We know that the Turks had a remarkably well organised regular army before the western powers. In the beginning of the sixteenth century, i.e. on the eve of the disappearance of the *timār* it consisted of the following elements:

1. The permanent regular army with regular pay (*akūfe*) from the public treasury, called *kapu* (*kapı*)-kulu, servants of the Porte (of the Sultan): it consisted of the Janissaries, gunners (*topçular*), bombardiers, (*kumbaracılar*) sappers, (*tugaydarlar*) engineers, (*mekendiler*), firemen (*akutombacılar* q.v.), ammunition-bearers (*ciğerdarlar*) horsemen (*sipāhī*, not to be confounded with the timariots) and *lanuik*.

2. The cavalry (*topraklı*) and feudal troops.

3. The *serasker* (*serasker-kulu*) or frontier troops, as a rule summoned to the colours and paid irregularly, and particularly at times of great danger, they comprised as cavalry the *gömlük* (*gömlük*) or "volunteers", heavy cavalry, *beşli* or *besti*, a light cavalry (according to Montecuculi, like the Hungarian Hussars), and *deli* (*deli*) or partisans, and for infantry, the *asak* (*asak*) or picked garrison soldiers (like the Hungarian *heyduks*, according to Montecuculi), *reymen* or peasant volunteers, fighting like dragoons on foot or on horseback and placed in charge of the baggage and cavalry and the *musellem* or pioneers.

4. The *yerli kulu* or "local troops" of the *paşa*, *sandjakbey* or *ayaz*. Levied in theory by special authorisation of the Porte but often without this they enabled a number of ambitious *Paşas* to gain power (Ali of Tebelen, Djessâr, Mustafa Bairakier etc.). Rightly or wrongly they are often confused with the preceding, and some writers like Ahmed Râim put among the *yerli kulu* the *asak reymen*, and *musellem* above mentioned, adding the *tufengci* "fusiliers", *ciğerdar*, "heavy artillery of the frontier forts" and even the *azgıncı*. It is into this second category, that of *topraklı* or territorial troops that the feudatories who held *timār* fall. Jauchereau de St. Denis compares them to the "levies of the arrière-bans of the old feudal monarchies of the west".

There were no hard and fast divisions between these different categories of soldiers. Janissaries could obtain *timār*. On the other hand there were timariots in the frontier provinces and one of the means of promotion, the only legal one, for a man who was not the son of a *sipāhī* or *ciğerdar* actually was to go as a volunteer (*gömlük*) "to the frontiers" to distinguish himself there by va-

liant deeds. The *sirdâr* or commander-in-chief had power to distribute on the battlefield itself *timār* which were vacant as a result of the army's losses and to accept meritorious volunteers as *yolduk* (cf. Bellin, *Fluss milit.*, tir. a part, p. 65; Abesci, p. 23; Mme Louise St. Belloc, *Bonaparte et les Grecs*, Paris 1826, p. 109; my *Sommaire des archives turques du Caire*, p. 27, note 1).

It is usually said that the principal military obligation of the timariots was, for those whose grant was reduced to the minimum called *şahîş* "sâoni", to go to war in person (or when impossible to send a substitute) and for the more richly endowed to send one or more *ciğerdar*.

It does not seem to have been quite so simple. The timariot had to present himself with a cuirass. He was thus also a *ciğerdar* (*kendü ciğerdar*, says the *kanūn*, cf. *T. O. E. M.*, p. 11), and this was the case with the less rich (1,000 aspers) according to the *kanūn*, which could however be modified. All the others had to bring also their *ghulām* "squire" and a tent (Tournfort, p. 319, also mentions the tents). The richer ones had also to bring one or more *ciğerdar* and tents of a better quality (cf. the varieties in the same *kanūn*).

Petit de la Croix, in a note to his translation of the *Nâşîk-nâme*, p. 88, says that the *ciğerdar* were "armed soldiers, cuirassed . . . serving in the artillery and in the trenches, carrying off the earth which the Janissaries dug" and Tournfort (p. 320) says that the timariots are "forced to supply baskets to their horsemen who use them to carry the earth necessary to fill up the ditches and trenches". There was an official in the army called the *ciğerdar aşak* who had control of the effectives of the *ciğerdar* (cf. Gzregorowski, doc. N° 100). Pouqueville, *Voy. dans la Grèce*, p. 10, suggests an etymological connection between the *ciğerdar* and the cuirassed gabeloux!

Details on the armament of the timariots will be found in Abesci, p. 18. Tournfort (p. 320) further says: "their cavalry is better disciplined than that which is properly called *spahis* although the *spahis* are lighter and more active: the latter only fight in platoons having the oldest horsemen at their head, while the *Zaims* and the *Timariots* are divided into regiments and commanded by "Colonels under the orders of the *Paşas*".

The hierarchy of the military (iefs; *şâhîş* of the governors of the provinces. As is evident from Tournfort in the above quotation, there was a rather close connection between the administrative organisation of the provinces and the feudatories: those of the first category (holders of *şâhîş*) are even confused with the governors.

It must not be concluded however from this that there were *şâhîş* and *timār* in all the provinces. The mediate possessions like the Crimea, the Danubian principalities, the Barbary Regencies had no *timār*. It was the same with some of the outer provinces of the empire like Egypt, Bagdad, Crete, Cyprus, Vard, Caffa. Ewliya Çelebi says that there were none in the peninsula of the Morea (except in certain adjoining islands) but the contrary is stated by Pouqueville, *Voy. dans la Grèce*, p. 12.

Other Ottoman writers distinguish in this connection between the provinces ruled as *şâhîş*, a word which means "annual" in Persian (*şâhîş* *ilâ şâhîş* *ilâ şâhîş* or *i. i. mûşâhîş* *şâhîş*) and the *şâhîş*

provinces. The former were held by governors either in full ownership (*mülkiyet*, *ahlakîlik* or *yurtluk*) like the mediate provinces or like the 5 Kurd sandjaks called *ahlakî* or the 19 sandjaks of the wilāyet of Diyarbakır, or for a year at a time (*iltizam ile* or *senevi iltizam ile*, whence the word *ailyane*). With this system the emoluments of the governors were deducted from the revenue of the state collected by the fiscal offices of the province (or levied on the *iradîlye* which represented, after deduction of allowances and the pay of the soldiers, the *hazine*, Turkish *hazina* or "treasury" destined for Constantinople) without the *beylerbeyi* (viceroys) "being able to exact the least thing from the people" (Marsigli) while the governors who held *ahlakî* levied tithes (*ushr*, pl. *ushar*) on these fiefs.

This distinction must not be taken too literally. Some *ailyane* governors actually held *ahlakî* and the *ahlakî* were not all military fiefs. The *khān* of the Crimea for example levied 1,200,000 aspers on the customs of Caffa, under the name of *ahlakî*. On the other hand sandjaks of different character are found in the same province, some *ailyane*, others *ahlakî*. This was the case with the provinces of Baghdad, Cyprus (already mentioned as *ahlakî* provinces), Damascus, Aleppo, Cilid, without reckoning the *eyālet* of the Kapudan Paşa. This distinction between *ailyane* and *ahlakî* provinces appears very clearly, when it is a question of a sandjak and not of an *eyālet* as a whole.

The idea of *ahlakî* must not be confused with that of "military fief". It is larger and differs from it, in as much as the *ahlakî* was attached not to the person but to the position of the governor. At least this was the case from the time when in the reign of Murād III, the sandjak-bey ceased to be inalienable (cf. Belin, *Propr. féodale*, N° 313). The sultan had also his regular private *ahlakî* which were called *ahlakî-i-hümâyûn*.

With this reservation the vassals of the first category were represented by two kinds of high officials, the *beylerbeyi* and the *sandjakbeyi* both holders of *ahlakî*.

The *beylerbeyi* (cf. Deny, *Sommaire des arch. turques du Caire*, p. 41-52) held *ahlakî* the value of the annual revenue of which varied from 650,000 aspers (Morea) to 1,200,700 (Kapudan Paşa) and were proportionate to their rank and precedence i. e. to the date of the conquest of the province. The *ahlakî* the revenue of which attained or surpassed the million were Rumelia, Anatolia, Damascus, Erzerum, Diyarbakır, Wan, Shehrizor, Khānate of the Crimea, Baghdad, Basra, Habesh, Egypt and going down by 100 aspers: Rhodes, Cyprus, Algiers, Tunis, Tripoli in Barbary (it is probable that some of these *ahlakî* existed only on paper).

Each *beylerbeyi* had to supply one *mukemmel* *çibelli* for each 5,000 aspers of revenue. Marsigli adds that some portions of this revenue were exempt from military obligations.

The *beylerbeyi* were allowed themselves to issue *berat* conferring the small *timar* (*tekerrir*; cf. below). When a viceroy died the state gave *timar* to eleven of his servants. The *sandjakbeyi* in theory held *ahlakî* of at least 200,000 aspers of annual revenue. In practice we find in the lists of 'Ain-i 'Ali sandjaks with a lower revenue. When the new holder was an officer of the palace (in such case the expression used was "to go out to

or ascend to the sandjak": *sandjakğa çıkmağ*), the minimum was higher and proportionate to his dignity. The Agha of the Janissaries had the highest: 500,000 aspers.

The augmentations or *terakki* of the fiefs of the *sandjakbeyi* were made by sums of 100 aspers on each 1000 of revenue, (i. e. 10%). When a vacant fief was allotted to a *sandjakbeyi* who had not yet a right to the whole of the revenue it yielded, the surplus went to the *menkûf* (was retained by the state) to be set aside for the janissaries who had a right to a *timar*. Later, the *ahlakî* could be reconstituted in its entirety for the benefit of the same holder and the timariots who were thus dispossessed were given compensation. This system prevented the domains being broken up into small sections.

The precedence of the *sandjakbeyi* was regulated by the importance of their *ahlakî*, but ex-grand viziers had always precedence over all others. A *sandjakbeyi* had also to supply one *mukemmel* *çibelli* per 1,000 aspers of revenue. When a *sandjakbeyi* died, the state gave *timar* to six of his servants. It is probable that it was not necessary to be a *sandjakbeyi* to obtain a *ahlakî*.

What was the lower limit of a *ahlakî*? The authors of Turkish works on the history of the Ottoman empire say that the *ahlakî* was a domain with at least 100,000 aspers of revenue, granted to *amir* (plur. of *amir* = bey, which is applied to the *sandjakbeyi* and in opposition to vizier or paşa of 3 tails, to the *beylerbeyi* or paşa of two tails. At the present day, it is applied to the higher officers in contrast to the general or paşa). Although the figure of 100,000 aspers is confirmed from other sources (Tournet, p. 319) it was probably fixed at a later date. We actually find, in the lists of 'Ain-i 'Ali Efendi, *ahlakî* which are lower than this (for the benefit of the *defterdar* of a wilāyet). If we may judge by the total of the duties of *halemiye* (cf. below) paid by the *ahlakî*, the minimum revenue of the latter must have originally been 60,000 aspers.

Zi'âmet or *ze'âmet*. Every fief called *zi'âmet* had a minimum revenue of 20,000 aspers, which could not be reduced or divided in case of transfer to an heir or another holder. This minimum was called *hikmî zi'âmet*. The surplus, whatever its amount, was called *hisse* or "part".

Every *zi'âmet* entered in the register (*defter*) as irreducible was called from this fact *defter* in opposition to *hisseli* or divisible into parts (Belin, *Fiefs ottomans*, p. 55-57). It was the same with *timar*; cf. Marsigli, p. 96-97.

The holders of *zi'âmet* were called *za'im* (plur. *za'imân*), "chief". A *za'im* had to go to war in person and supply one *çibelli* for each complete 5,000 aspers of revenue above 20,000 aspers of the *hikmî zi'âmet*. Nothing was paid on a sum less than 5,000 even if it were 4,999. The *za'im* who lived in the capital of a *kaça* generally became a *mu-bağcı*.

According to modern Turkish writers and Tournet, the maximum revenue of a *zi'âmet* was 99,999 aspers but some *defter* *hahâşî* held *zi'âmet* with a large revenue (lists in 'Ain-i 'Ali). Gregorowski gives the maximum of 50,000. It is probable from what has been said above about the *ahlakî* that originally it was 59,999 aspers.

Timar. The *timar* were of two kinds:

1. — *tekerrirli*, or given by *berat-i sulţânî* on pro-

duction of a certificate (*tekerer* or *mürümle* *tekerer*) issued by the *beylerbeyi* or viceroy (cf. the models of *tekerer*'s in Grzegorzewski's documents N^o. 75, 78, 87, 91, 100, 102 and 106);

2. — *tekerer*s or given by a simple *berat* of the *beylerbeyi* i.e. without certificate, to feudatories already having or having had a fief. The dues of a first timar had always to be paid or at least be approved by imperial *berat*.

The dues on the irreducible minimum (*hakkı*) of the two kinds of timar varied according to the province but those on a *tekererli timar* were always higher than those on a *tekererless timar*. The individuals, limited in number, who normally received *gedikli* *zâmet* were: the *dergâh-ı 'Âli müteferri-kârlar* (young nobles), the *d. 'a. hawallâr*, the *divân kâtibleri*, the *defter-hukûmî kâtibleri* (M.T.M., p. 543; Djewdet, I, p. 313). They also drew pay from the little *rûnânclığı* (Hammer, *Staatsverfassung*, II, 54 and *Kânûn* publ. in 1330, p. 21, note). They were respectively 6,000 and 3,000 aspers in the beylerbeyliks of Rumelia, Buda, Bosnia and Temesvar 5,000 (or 3,000 and 6,000) and 2,000 aspers elsewhere.

The timariot owed personal service for his *hakkı* and for a certain sum above it, the services of a *çetel*. According to 'Ala-ı 'Alî, in Rumelia the timariot owed one *çetel* for each 3,000 aspers, which is the actual equivalent of a *hakkı* but there seems to be a initial allowance of 10,000 aspers which is free. By analogy we should have to allow one *çetel* for each 2,000 aspers for the rest of the empire. This system means a great simplification in contrast with the state of things revealed by the *Kânûn-nûma* attributed to Seyidî Bey, p. 11 (Mansûrî gives 5,000 aspers as for the *zâ'im*).

The name *çetel* (or *çet-kîn* or *çet-kîn-çî*) *timar* "combatant timar" from the verb *çet-mek*, above mentioned, was given to a fief which owed direct service and retainers when called upon. The *çetkîncî timarlar* were contrasted on the one hand with the *benevzet* (*be-nûbet*) *timarlar* belonging to various individuals owing service in turn and on the other with the *mustahfî timarlar* or fiefs (fewer in number) granted to non-combatants like the imâms or *mü'eddim*s of mosques in the frontier towns or to individuals whose duty it was to provide the palace with game-birds or butcher-meat.

The connection should be investigated which existed between these latter timars and the fiefs (*zâmet* or *timar*) which were called *gedikli* or "privileged" because their holders were not obliged to do service except when the grand vizier led the army in person (Belin, *Propr. jenc.*, N^o. 357; Em. Legrand, *Ephémérides daces par Constantin Dapentis*, Paris 1881, II, 62—63). Before disposing of a vacant *timar* it had to be ascertained if it was not in the special register of the *gedikli timar* (cf. the formula *gedikli kaydında deyil-ise*, documents in Grzegorzewski, N^o. 78 and 100).

In the great days of the timariots the feudatories, according to Koca Bey, led out more men than they required to and the timariots were ambitious of becoming *zâ'im* through exploits such as capturing a score or so of prisoners or bringing in as many heads.

In theory the *timar* were granted only to Muslims but there were exceptions at the time of the Conquest and Christian feudatories were left in possession of their estates (cf. for Serbia: Grzegorzewski, p. 62, and for the Morea: Pouqueville, *loc. cit.*).

Military organization of the fiefs. The high command of the feudatories was exercised by the governors of provinces (themselves important feudatories) and thus the title of *mîr-lîvâ* (a synonym of *sandjak-beyi*) became the name for a brigadier-general.

Under the orders of these generals were officers whose duty it was to mobilize and probably also to command the feudatories, namely:

1. the *alay-beyi*, a kind of colonel chosen by the feudatories of a *sandjak*. They had the right to a drum and a flag (the *bayrakdâr* or "flag-bearer" was a kind of lieutenant-colonel and the *çavuş* a kind of "major"). The Turks often confused the *sipâhî* and the *veyevoda* (a loanword from the Slavonic) but distinguished between the *sipâhî* of the *flâcus* (*Mîr zabâhîlar*) and those of the *timar* (*çetli timar zabâhîlar*) cf. the *Kânûn* publ. in 1330, p. 28.

2. *leri-başı* and *su-başı*. These two titles seem, as has been observed, to refer to the same officers (*su* [older *sû*] is a synonym of *leri* "army, troops"). There was one for each district (*kaza* or *nâhiye*). In peace-time the *su-başı* were officers of the police.

As to the *lerî sürûdjüleri* (from *lerî-sûk*) ("to drive a flock or troop in front of one") Belin makes them captains of ten, for the sake of symmetry with the preceding, but they were less regular officers than police or detectives, i.e. soldiers whose task was to bring back deserters to the army (cf. documents N^o. 85 and 72 in Grzegorzewski).

In case of mobilization the Sultân sent a firman to the *beylerbeyi* concerned ordering them to raise the ban of the *zâ'im* and *çetel* (cf. a specimen of one of these firmans in the *Nâşîhat-nûma*, transl. Pétis de la Croix, p. 35—36; the same work p. 8, puts at 2,000 *yûk* i.e. 100,000 aspers, a sum set aside for the gifts which according to custom were given in this case to the militia and especially to the *zâ'im* and timariots).

Administration of the military fiefs. We have already mentioned the administrative and fiscal officials who had charge of the allotment of fiefs. These officials who were called *zâ'îyat muharrirleri* or "provincial writers" kept registers called *isfâmât* or "general" statistics of the fiefs and *mufassal* or "detailed" statistics. In another book called *rûnâmclık* or "journal" were recorded the *berat* or orders relating to the fiefs. The armies in the field carried these registers with them (probably duplicate copies) in order to enter at once on the battlefield the necessary distributions of *timar* (cf. doc., N^o. 78, 100 and 102 in Grzegorzewski).

In the Turkish archives are preserved registers which go back to the Conqueror and would be well worth studying. Cf. my article in *Histoire et historiens depuis cinquante ans* (Bibl. de la Revue historique), Paris 1927, vol. I, Turquie.

The *berat* granting fiefs were liable to chancery dues ("of the pen" *kalemîye*) levied by the *Naşîhat emîn*. It was $\frac{4}{10}$: 120 aspers for the holders of *timar* of 3,000 aspers, 800 aspers for the *zâ'im*. There were 15,000 aspers for the *çetel* (we have used this figure to ascertain the probable original minimum of the *çetel*). The *berat*, following a general custom, were renewed annually (*teğdid-i berat*) and the same *kalemîye* dues were paid every year (cf. *Nâşîhat-nûma*, p. 41, 78, 79).

It would take us too long here to give the regulations which were intended to secure the

devolution of the *timâr* to men suitable for military service and who had to be by preference the sons or descendants of feudatories (*îpâhî-iâde*, in plural *enânî-îpâhîyân*) or of *îftekâr* who had done their service. Their legitimacy was established by the evidence of ten timariots (Kocü-Bey).

When a timariot failed to obey the summons, he became *ma'sûl* "deprived" i.e. he was temporarily deprived for one or two years of his *timâr* which was then called *dirliyi lallamaş*. Every *timâr* vacant (*muhtâl*) through escheat or default fell (*düşürmek*) as *mençûl* to be managed by the official called *mençûlîsâdjî*, who collected the revenues until it was allotted again.

The *îpâhî* were bound to live on their estates. To look after the land one in ten was usually left at home and called the *kurucûn* or "guard". If the war was a prolonged one, the *îpâhî* of each *sanjak* sent home a score of their number who, known as *âharîdîşîlî*, had to send supplies (*âharîdîşî*) to their comrades in the field.

A *çaya* or peasant could only become a timariot by proving his prowess on the battlefield, which he could only do by going as a volunteer to the frontiers (cf. above).

Decline of the system of military fiefs. In spite of precautions and attempts at reform like that of 1632 as a result of the memoir presented by Kudî Bey (or Kuçî, or better perhaps Kocü Bey) of Korica (better of Gümüşîna) and again in 1637 and 1777, the decline of the fiefs continued to be marked.

In addition to the laments of Turkish officials like Kocü Bey and 'Ain-i 'Alî Efendi, we find frequent criticisms in western writers.

In theory the *çaya* and timariots had to go to war, even if they were so ill that they had to be carried in a litter, with their children in panniers (Tournetfort) but after putting in an appearance an opportunity was always found to return home (Abecî, 88, p. 18). We find in Grzegorzewski orders to bring to the colours mutinous timariots, who were hiding in their *îstîlîk* (*îstîlîk*) (doc. N° 73 for example).

A timariot could buy himself off and this was a valuable source of revenue for some ministers, according to Philippe du Fresnoy-Canaye (*Le Voyage du Levant en 1573*, Paris 1897, p. 137).

Another passage in the same traveller (p. 60) seems to show that foreign ambassadors could actually obtain *timâr* for their protégés. Tournetfort (ib., p. 319) writes: "The viceroys and provincial governors have such powers by their intrigue at court that commandships which are outside of their districts are given to their servants or to those who give them most money".

Baron de Tott shows us that the *khân* of the Crimea was very dissatisfied with the services of 10,000 *îpâhî* sent by the Porte and says he was able to prove to himself that some of them were really Christians who pretended to be converted to Islam for the sake of the *timâr* (*Mémoires*, 1785, I, p. 112). Lastly there is an account of various other abuses in Mouradjea d'Ohanon, *Tableau de l'Emp. Ott.*, VII, p. 375.

The suppression of the Janissaries and of the corps of cavalry or paid *îpâhî* under Mahmûd II brought about the disbandment of the feudal militia. To safeguard the rights they had acquired, this Sultan formed the élite of the dispossessed feudatories in 1831 into four squadrons, which later formed

the framework of the new regular cavalry. As to the other holders of the old fiefs now the property of the state, they received pensions which were provided for in the budget. The total of these pensions at first 120,000 purses or 60,000,000 piastres (Belin) fell in 1850 to about 15,000,000 without reckoning some 10,000,000 paid as indemnity to the farmers of the domain lands (leased since the ministry of Rüstam Paşa Sulaimân's grand vizier). On the 27th Radjab 1280 (Jan. 7, 1864) these pensions underwent a revision which still further reduced their number, from lack of certain formalities (Tischendorf).

There was no longer any military organisation of the fiefs but the state retained the *tapu*, which it henceforth levied for its own benefit, and the laws retained numerous survivals of the old system (cf. below).

The *timâr* and Ottoman land legislation. In return for his services the *îpâhî* had the right to collect all or part of the *hauquşî-şer'î* (of divine prescription) dues as well as "taxes decreed by the sovereign" *ra'ayî ul-îlâ* (we should add "or sanctioned by usage") on the lands of the fief. He exercised a kind of seignorial jurisdiction over the *ra'as* "Muslim or Christian peasants". If the peasants, the tillers of the soil, only held their land with a *tevarrûf* title (possession not implying ownership) they hand it on death to their children only. All other heirs or acquirers can only acquire possession of them by paying to the *îpâhî* of the place the dues (*mon'addjîlî*) called *tapu*: if there are no heirs, the land is awarded to a new owner also by *tapu* and by regulations made *ad hoc*" (Belin, *Prop. font.*, N° 303).

In return for his military obligations the timariot enjoyed feudal privileges. As regards the proprietor of the soil he was his lord (*îstîlî-î arz* or *arz* for the Arabic *ard*) but this right of ownership was not only bound up with military service: it was precarious and revocable.

The peasant (*ra'iyet*; plur. also employed in the singular: *ra'âyâ* or *ra'ya*) Muslim or Christian — for western usage is wrong in applying this term only to Christians — was attached to the state and went with it (Belin, *Fiefs milit.*, spec. rept., p. 50).

He paid to the *îpâhî* different taxes and dues which varied somewhat according to locality, a few of which may be enumerated here:

İpandjî or *gendjî* "gift" (Belin, N° 323; Grzegorzewski, p. 233); *benâk* or *penâk* (Grzegorzewski, p. 226 and doc. N° 84; *Kânûn-nâme*, ed. 1320, p. 16, note 2; Hammer, *Staatsverfassung: netak*; *resmî-îstî* (Belin, N° 318; Grzegorzewski, p. 236; *Kânûn-nâme*, p. 316, note 2); *mu'djerrid* "bachelors" (N° 321); *arwâne* "a girl, married woman" (N° 329, 330); *dukkân* or *rutûn* "right of fuel for individuals foreign to the *timâr*" or *îpâhîlîk* (N° 326, 348); *nâterîye* (N° 348; *Kânûn-nâme*, p. 16, note 3); *zeyâk* or *deyirmân* "moulton" *îlâk* "pasture"; *yaylak* "summer pasture"; *îstîlîk* "winter pasture"; *îstîlî-kışan* "sheep"; *mürdet pâkalâr* "compensation for the maintenance of a falcon which comes to die"; *bedaya* or *kâd-û-kawâ* "extra ordinary taxes"; *kenân* "hives"; *îlî* "measure of wheat" (N° 345).

A fuller list of imposts and taxes will be found in Ahmad Wafîk, *Tikâlif kâv'idî*.

Western authors give as the most important imposts on land in the country the tithe, but the older Ottoman legists distinguish between:

1. The imposts of the canon law (*shari'a*) subdivided into:

a. *kharaḍj-i mawḍūf* "fixed impost on land" or tribute of the soil, represented in practice (or perhaps by an artificial assimilation) by the *ḥiṣṣi* (also called *ḥayunduruk ḥaḥḥi* or *ṭaima ḥiṣṣi*) and the *ispente* or "poll-tax" by the *ispente* or poll-tax on the Christians (identified with the *ḥiṣṣa* of the divine law; the *ḥiṣṣi* or *ḥayunduruk* of Egypt and sometimes popularly called the "kharaḍj" par excellence).

b. *Kharaḍj-i muḥṣama* "proportional impost on land" or tribute on the produce represented by the tithe or *ṣūḥūr*, which in spite of its name varied in practice between $\frac{1}{8}$ and $\frac{1}{12}$.

2. The imposts of customary law (*urfīya*) represented particularly by the *ḥiṣṣa bennāl* paid by rayas, married Muslims without land, to be distinguished from the *ḥiṣṣa bennāl* (a kind of *ḥiṣṣi* with reduced taxes) cf. *M.T.M.*, p. 99, 109, 10 and 54.

This classification, which seems somewhat arbitrary, takes no account of the distribution between taxes on persons and those on who own property. On taxes and land in the country cf. also Heildorn, *Les Finances Ottomanes*, Vienna 1912, p. 17 sqq. and 3 to 10.

Some dues had to be divided between the timariot and the *suḥaḥḥi* (Belin, N^o. 348).

Such were the regulations for lands liable to *tapu*, for these were lands belonging completely to the *sipāhī* and called *ḥiṣṣe*. As they were also called *ḥiṣṣi yeri* ("sword lands") and could not be given by *tapu*, I think we may conclude that the reference is to the inalienable part of the *timār*, called *ḥiṣṣi* (cf. above). It is indeed not surprising that *ḥiṣṣi* has been considered inalienable even by *tapu*. Belin and Worms take different views and compare, wrongly I think, *ḥiṣṣe* lands and *ḥiṣṣi* which they contrast with "lands of combatants" or *māl-i müḥarrik* or *ḥiṣṣi māl*, alone liable to the organization of the military fiefs (Belin, N^o. 312-313).

In spite of the charges made against the "cavaliers" (*ṣipāhī, atī*) contained in popular stories like those of Nāṣir al-Dīn Khodja, the situation of the peasants does not seem to have been bad and according to Leunclavius (Löwenklau), there were Hungarian peasants ready to set fire to their farms and flee to Turkey (Thornton). Juchereau de St. Denis attributes this to the fact that the owner of a fief had "no legal right of lordship and justice over the persons living on it". We have seen that he had numerous fiscal rights. The relations between the *ṣipāhī* and the *ra'ya* were nevertheless very complicated. They occupy very considerable space in the Ottoman land-laws as contained in the *ḥiṣṣa*'s enumerated above (N^o. 3, 4 and 5). Many of these regulations — with the reservation that the State has taken the place of the *ṣipāhī* — have passed into the modern land-laws or *crvāz ḥiṣṣa* where they have become merged with borrowings from the Code Napoléon. The text of these laws will be found in vol. I. of the Turkish *Düstūr* and the French translations in Belin, *Propr. fonc.* and German by Padel in Berlin, *M. S. O. S.* (1901). For the "code of land-laws", cf. G. Young, *Corps de droit ottoman*, vi. (1906), p. 44-111. The most characteristic of these survivals is the *tapu* about which we now give a few lexicographical details.

Tapu. The Ottoman substantive *tapu* or by the operation of the law of vowel harmony *tapı* (as in Bāki, ed. Dvofak, p. 171, s. infra) for the older (Oghuz) *tap-ngh*, *ḥaghatai tap-uh*, is derived from the verb *tap-mah*: 1. to obey, to submit to God or a conqueror by begging *amān* from him (cf. *Ḥiṣṣi-pāḥā-ade Torikhi*, ed. Giese, p. 22; Nöldeke, *Nesheri*, Z.D.M.G., 1859, p. 212: *tapān wilāyāt* is not a proper name); 2. to worship (a divinity), 3. to pay homage. — Cf. also *tapu*, Vambery, *Alt-Osman. Sprache*, p. 219; *tabu*, Codex Comanicus, 217; Houtama, *Ein türk.-ar. Glossar*; the Roman form with intervocalic sonant is found in the Karaitic *tabu*, *tab'e*: thanks, gratitude (T. Kowalski, *Karaimische Texte*... von Traki, Cracow 1920).

Tapu according to Kāshghārī means 1. "service" (*ḥiṣṣa*); 2. obedience (*ṭā'a*); i., p. 311 and derivatives i., p. 410; ii., p. 132, l. 5; cf. iii., p. 278, infra, the proverb: *tuyin tapuḡhaḡ, tāngri sāoinis* "the priest is always ready to worship God but the latter is not at all pleased with him".

The *Burhān-i Kātib* explains the Persian borrowing thus: "It is a polite custom which the Turks of Transoxania call *tapu* and consists in, when one has committed some crime, presenting oneself before the Sultān or viziers, the head uncovered, holding one's ears, bowing down and seeking forgiveness". Cf. for the meaning the Turkish verb *yükün-mek* so frequent in the Buddhist and Manichaean texts publ. by F. K. W. Müller, von Le Coq, Pelliot etc. The following passage is typical: *Ṣā' ze Oghuz rumindje tapu ur-ḥiṣṣat ṣamin yirine geirāiler*, "prostrating oneself" (or bowing) three times according to the custom of the Oghuz, they went through the traditional gestures of *tapu* and homage" (Houtama, *Hist. des Seldj. d'Ibn Bibi*, p. 10, l. 9). The ceremony seems to have included the offering of a cup for there is an expression *tapu saḡharaḡi* "cup of homage" recorded by the *Burhān-i Kātib* (p. 477 sub *saḡharaḡ*).

It may also be noted that according to Silvestre de Sacy, the Arabic *ḥiṣṣa* "service" given above as the equivalent of *tapu* (according to Kāshghārī) sometimes has the same meaning as the Turkish *timār* (N. E., l. 210, note d; cf. *Bibliothèque des arabes*, Cairo, ii., p. 114, 116).

Lastly in Mongol, the same word (pronounced *tabik* according to Kowalewski which presupposes a Turkish form *tap-igh*) means "offering, sacrifice, divine service, service, worship, act of honouring".

In connection with the *timār*, *tapu* is the name of the title-deeds which confirm the tributary state of the land, the renewal of which is obligatory in certain circumstances and which establish the permanence of the right of conquest (Belin, N^o. 298, note 2).

From the preceding one might be tempted to see in the *tapu* a kind of homage and Ahmad Wafik gives as the equivalent of *tapu*, the expression *aghānī ḥaḥḥi* "right of the overlord", but the analogy is only apparent: *tapu* existed between the *ṣipāhī* and the *ra'ya* and not between the *ṣipāhī* and the *sultān* (Sultān). It is therefore quite a real bond going with land. As the delivering of this title was done with the payment of a certain sum in anticipation (*mu'ajjale*) the name *tapu* was given not only to the title but to the sum itself. And when on the abolition of the *timār* the *tapu* was levied by the state, *me'mūru*

or *kātibī* was given to the employer who handed over the *tapu* (Belin, N^o 88, 335 *qq.*). *Tapu* could only be demanded when an estate became really vacant. Transmission by inheritance takes place without *tapu* or gratis.

The following are some phrases in which this word occurs: *tapu-la-maṣ* or *tapu-ya ver-mek* or *tapu-ile vermek* "to give by *tapu* (speaking of the *sipāhī*)"; *tapu-ya almaṣ* "to take by *tapu* (speaking of the *ra'ya*)"; cf. *tapu-laym-dan almaṣ*, MS. suppl. Turc, N^o 68, fol. 7; *kā-tapu* or *tapu-ile* "against payment of the *tapu*", opposed to *hīla tapu* or *medfūnūn* "without expense, without paying *tapu*"; *tapu-ya mustahakk* "(land) which ought to be or perhaps as a result of a vacancy given to another or payment of the *t.*" (whence the expression *istihakkıye*, with *erazi* understood, etc., opposed to *af'ıye*); *tapu-yu boz-maṣ* "to break an engagement by *t.*"; *tapu-ın dī'ā'sı de'vīl* "cannot be given by *t.*"; *verm-i tapu* "tax paid as *t.*"; *hakk-i t.* "right of holding land by *t.*"; *tapu-i vīl* "right of proportional *t.*"; *dam tapu* "tax levied on any new building created by the *ra'ya*" (M. T. M., p. 83; J. A., Jan.-Febr. 1844, p. 88; v. Hammer, i. 399).

Comparison of the *timār* with western fiefs. The *timār* is more of an administrative than a social organisation. It is due to the initiative of the state and the latter has never lost its right to supervise and even control directly the *timār*, which are only hereditary because the state finds an advantage in this, but it sees that no dynasty of feudatories is allowed to establish itself in the provinces. The fief is and, in spite of certain abuses, remains closely associated with the obligation to military service and is taken away on the slightest sign of failure to perform this or of rebelliousness. The possession of it is so precarious that some *timār* have returned as many as eight times to the state in one campaign (Thornton). The domain, which has not the same social importance as in the west, does not confer its name upon its holder nor give him any degree of nobility. There is even a somewhat unexpected tendency according to which a *ra'ya* could receive a *timār* without ceasing to be a *ra'ya*. He could not abandon his state of *ra'ya* when the *berat* conferring the fief specifically stated that his *yol-darlığı* was being rewarded, "his good services in war as a free comrade in arms" (*Milli tet. m.*, p. 311). The feudal relationship is expressed only in the domains, an irreducible part of which only was guaranteed the holder on condition that he gives military service. The reward is, as it were, divided into small sections which are used to give regular increases, as to officials. One does not talk of a *timār* of so many aspers but of so many aspers of *timār* (*şu kadar asfer timār*). The great feudatories are at the same time officials and if the state fears them it is not so much as feudal lords, but rather as viceroys of large provinces.

There are no vassals. Each feudatory owes his fief directly to the Sultan (except the very small ones appointed by the *keylerbeyi*). He is not under the orders of more powerful feudatories except when mobilised for military service. Over the *ra'ya* he only has certain fiscal rights, as we have seen, some of which recall the rights of milling etc.; cf. e.g. the dues on betrothal (*arūṣane* or *gerdek*). Madame Louise Saint Belloc thought it would not be unreasonable to admit that Napoleon borrowed his system of grants of land from the Turks.

Bibliography: Belin, secretary-interpreter of the French Embassy at Constantinople is the only man who has so far seriously studied the Turkish *timār*. To him we owe the two following monographs:

1. *Étude sur la propriété foncière en pays musulman, et spécialement en Turquie* (*Kilt kanaklı*), reprinted from the J. A., Paris 1862;
2. *Un régime des fiefs militaires dans l'Islamisme, et principalement en Turquie*, reprint from the J. A., Paris 1870 (notably from 'Ain-i 'Alī, whose text is translated).

We may also mention the work of Worma, *Recherches sur la constitution de la propriété territoriale dans les pays musulmans et subsidiairement en Algérie*, J. A., 1842, 1843 et 1844. As to the study by Paul Andreas von Tschendorff (*Das Lehnwesen in den muslimischen Staaten insbesondere im osmanischen Reich*, Leipzig 1872, 129 pages in 8^o), this is simply a version of Belin's works with a few additions. We have been unable to procure the important work by Truhelka, *Historička podloga agrarnog pitanja u Bosni*, publ. in the *Glasnik Zemaljskog Muzeja u Bosni i Hercegovini*, xxvii. 1915, p. 125 *qq.*; a German version was published at Sarajevo in 1911, under the title *Die geschichtliche Grundlage der bosnischen Agrarfrage*. For further details cf. Dmitriev in *Zapiski Kollegii Vostočevedor*, ii. 1926, p. 104.

The works of which we now give the full titles with some others of less importance have been quoted in the body of the article:

Joseph von Hammer (Purgstall), *Das osmanischen Reichs Staatsverfassung und Staatsverwaltung*, Vienna 1815, i. 337—434 (chap. vi.: *Das Lehnrecht, Kanuni timar*); Pitton de Tournefort, *Relation d'un Voyage du Levant*, Lyon 1717, 3 volumes; Comte de Marsigli, *L'Etat militaire de l'Empire ottoman, ses progrès et sa décadence*, The Hague and Amsterdam 1732, folio (Italian and French); Elias Abecsi, *L'Etat actuel de l'Empire ottoman*, English transl. by Fontanelle, Paris 1792, 2 vol.; A. de Juchereau de Saint-Denis, *Révolutions de Constantinople en 1807 et 1808*, Th. Thornton, *Etat actuel de la Turquie*, English transl., Paris 1812, 2 vol.; J. Grzegorzewski, *Z rzyssytaw rumiśskich epoki wyprawy wiedeńskiej*, Lwow 1912, 144 pages of Turkish text and 264 of Polish text (*Recueil de documents turcs des archives de Sopha, relatifs à l'expédition contre Vienne*); W. Padel and L. Steeg, *De la législation ottomane*, Paris 1904.

The *Ḳānūn-nāme*. The bibliography of these codes has still to be compiled. Here we shall confine ourselves to giving the more important, neglecting those, not very many, which do not refer to military fiefs.

Apart from the *Ḳānūn-nāme* of Mehmed II already quoted, these are:

1. Sulaimān's code as published by the F. O. E. M. as a supplement under the title *Ḳānūn-nāme Aī-i 'Oṭmān* (72 p., 1329). The editor Mehmed 'Arif attributes it to Saiyidi Bey in spite of the copy in the library of 'Ashir Efendi which gives as its author the *nishān* Djalāl-zāde Mustafa (as does von Hammer, *Hist. de l'Empire Ottoman*, Fr. transl., vi., p. 247, where the names are inverted). Cf. also Bibl. Nat. Paris, MS. Suppl. Turc, N^o 80 and also Anc. fonds Turc, N^o 35, 1^o; Suppl. Turc, N^o 79, 2^o;

the beginning of the latter seems to be the same as that of the manuscript mentioned by von Hammer, *Staatverfassung*, i., p. xxi., under N^o. vi., but the text of Hādījī Khalifa to which he refers really deals with mining laws.

2. Another version (later?) of the preceding (Vienna, N^o. 1799, 1^o; Bibl. Nat. Paris, Suppl. Turc, N^o. 81). This version and the preceding should be compared with the text translated into German by von Hammer under the title *Straf- und Polizeygesetze Sulaymans* (*Staatverfassung*, i. 143—62) which according to him (i., p. xix.), is the part of the code of laws of Aḥn-i 'All Efendi to be mentioned below (N^o. 6).

3. Code or *Kānūn* of the same sultan, commonly called *İfedit* "the new" (although this qualification seems also sometimes to be applied to the two preceding). If the somewhat confused explanations of von Hammer (*Hist.*, vi. 247 and 267 and *Staatverfassung*, i. 375—376) are correct, this code, which is almost entirely devoted to questions of land laws, was first compiled by 'Abdī Oghlu Mehmed Çelebi, in the early years of Sulaimān's successor (Selim II). It contains a large number of *fetwās* of the celebrated Shaikh al-Islām Abū 'l-Sū'ūd and Kemāl Pāshā-rāde. It would be valuable to discover the original dated manuscript of this collection, of which we have a large number of copies more or less late (Rien, Add. 7840, iii., mentions a copy of 1014 but there are some as late as the xiiith century A. H.). The preface which invokes the authority of the great Sulaimān the Legislator is the same in all copies but the more recent are encumbered with *fetwās* of later Shaikhs al-Islām: (Akhi-rāde) Hüseini (d. 1043), (Zekeryā-rāde) Yahyā (d. 1053), Mehmed Behā'ī (d. Safar 1064), not to mention Pīr Mehmed (cf. below), 'Abd al-'Azīz, Mehmed Sa'd-allāh, Şan'-allāh, Shaikh Mehmed, Al-Hādījī Mehmed 'Abd-allāh Muṣṭafā and Mehmed Brusevi. These *fetwās* are mixed with *Kānūn* dating (*der zeman*) from earlier *niḥān*ji such as (Tājjī-bey-rāde) Dja'far Çelebi (d. 921), Djalāl-rāde (already mentioned), or older, like Hamra Pāshā (d. 1180), Mu'allim-rāde Lām 'Alī Efendi etc. The majority of the dated laws belong to the first half of the xiith century A. H., the latest being of 1129; a partial German translation of this text is given in v. Hammer, *op. cit.*

This *Kānūn* was published in N^o. 1 and 2 of the *Milli tel. mecmu'atı*. There are MSS. of it in Paris, Suppl. Turc, N^o. 71 and 78, Vienna, N^o. 1816, 1817, 1822, 2^o and elsewhere (cf. a list in Rien's catalogue, Add. 7834).

4. *Kānūn* or *Kutaba* by the Shaikh al-Islām Uskūbī Pīr Mehmed Efendi b. Hasan, author of the *Mu'ta ul-Mufa*. This like the preceding is based mainly on the *fetwās* of Abū 'l-Sū'ūd. MS. at Paris, Suppl. Turc, N^o. 68 and fragment at Vienna, N^o. 1804, 4^o.

5. *Kānūn-i Līvā-i Beḥa* prepared by order of Sulaimān by Muṣṭafā b. Aḥmad Kātib al-Defa'ir al-Khāṭir at the end of Ljūmādā I, 973 (middle of Dec. 1565) under the direction of the *na'im* Beḥāret, MS. at Vienna, N^o. 1804, 6^o. Another MS. of the same work was used by Belin (*Prepr. fons.*, N^o. 298, note 2; N^o. 315 *vgg.*). This text, along with some others has been published by Trubeika in the *Glasnik* of Sarajevo,

xxviii; for further details cf. Dimitrew, *loc. cit.*, p. 105.

6. *Kānūn* called that of Aḥmad I, edited by the *defter emini* Mū'eddhin-rāde 'Ain-i 'All in 1018 (1609) under the title *Kānūn-i 'Alī 'Othmān der Khātūn-i Meḥmūd-i Defter-i Dīvān*. Printed in Kab' I, 1280 (Aug.—Sept. 1869) by Aḥmad Wafik Pāshā, the imperial commissioner in Asia Minor, MSS. in Vienna (4 copies), Leipzig, Dresden and Paris (incomplete). It was translated into French by Belin and into German by Tischendorf (cf. the *Bibliography* below). It is the only *kānūn* that has so far been systematically studied. Hammer (*Staatverfassung*, i., p. xvii—xx.) has given an analysis of a work, of which this *kānūn* seems to be only the first part. Ewliya Çelebi seems to have used, in part at least, this *kānūn* for the statistical information which he gives on the provinces and the military fiefs of the empire (i. 173—206).

7. *Naṣḥat-nāme* (book of counsels) written by a vizier of Ibrahim I (1640—1648) for his sovereign. Translated into German by Behnauer in the *Z. D. M. G.*, xviii., p. 699 *sq.* and previously into French under the title *Canon de Sultan Sulaiman II représenté à Sultan Mourad IV pour son instruction en état politique et militaire tiré des Archives les plus secrètes des Princes Ottomans et qui servent pour bien gouverner leur Empire. Traduit du turc par M. P. * * ** (Pétis de La Croix), Paris 1725. Extracts in Hammer, *Geschichte*, v. 684—687. MSS. in Vienna, N^o. 1823—1825.

8. *Telkāt ul-Beyn fi Kānūn-i 'Alī 'Othmān*, written in the reign of Mehmed IV (1648—1687) by Hüseini Efendi Herzāfenn. Cf. the list of the chapters in v. Hammer (*Staatverfassung*, p. xx.—xxi.). MS. in Paris, Anc. fonds Turc, N^o. 40.

9. Hādījī Khalifa's work entitled *Destūr* (*Düstūr*) *ül-Amel*, cf. Behnauer, *Z. D. M. G.*, xi, p. 111—32.

10. The organic regulation of the military fiefs promulgated in 1777 (1911) by 'Abd al-Hamid (reproduced in Djewdet, *Tarīkh*, i. 184—192).

Among other *Kānūn* we may mention the MSS. of the Bibl. Nat. de Paris: Anc. fonds Turc, N^o. 41, Suppl. Turc, N^o. 79, 1^o (*Kānūn* presented in 1017) and Vienna, N^o. 1804, 4^o (*Kānūn* presented in 1038), N^o. 1822, 2^o etc. The list might be prolonged by searching the catalogues of various libraries. Marsigli's work (cf. above) was compiled from a *Kānūn*, as far as facts dealing with military fiefs are concerned.

There is an important note on these *Kānūn* by Aḥmad Rafik Bey in *T.O.E.M.*, xivth year, p. 319—320 (which is not at the moment accessible to me). Cf. also the article by C. Brockelmann in *Isl.*, viii. 261—267 (*Der Göttinger cod. turc.* 25.—*Ein Beitrag zur Quellenkritik des Qānūnnāme*). There were also *kānūn-nāme*'s for each wilāyet. They were on the back or at the top of the *defter-i mufasṣal* of these wilāyets (cf. *M. T. M.*, N^o. 1, p. 109. Such is for example the *kānūn* of the *līvā*'s of Sregecin, Hatvan and Novigrad, MS. Bibl. Nat. Paris, Suppl. Turc, N^o. 76).

The majority of the extant *kānūn-nāme*'s — apart from their original defects, often serious — are full of errors and obscurities, the result of the carelessness of copyists. They ought to be

completed and corrected from the collections of *inshā'* or model letters and especially of original documents, *firmans*, *berats* etc., as for example those of N^o. 823 of Suppl. Turc de la Bibl. Nat. de Paris and 1802 of Vienna; cf. also Grzegorzewski's collection. Meninski himself has given three in his *Instituentis linguarum turcicarum*, Vienna 1756, II., p. 174—175. A study of the rich archives of the *Difter-ghāhāni* in Constantinople would assuredly be most fruitful. (J. DESV.)

TIMBUKTU (Timbuctoo; French Tombouctou), a town in western Africa. It is not only of interest as evidence of the great extension of Islam to the south; it has itself been a centre of Muslim life of considerable activity; it possessed a celebrated university and produced learned men and historians who are not without merit. According to the author of the *History of the Sudan*, it was founded at the end of the vith (xiith) century by the Maghaharen Tuāreg, a nomadic people who came into these lands to pasture their flocks. In summer they camped on the banks of the Niger in the village of Amadagha; in autumn they went back to their homes in Arawan. At last they settled definitely on the site of this town. Timbuktu became an important commercial centre; travellers reached it either by the river or by caravans from the coast of Morocco and Tripolitania. The people of Waghdaw migrated thither in considerable numbers; the commercial centre had formerly been Walāta. Learned men and devout theologians soon followed the traders; they came from Egypt, from Ghadames, from Tuat, Tafilale, Fez, Sāa etc. The town was given fine buildings and walls were built around it; the huts, once built of branches and straw, were replaced by houses of clay. A large mosque was built in Timbuktu itself and another to the north at Sankorā.

The first dynasty, which came from Malli [q. v.] reigned at Timbuktu from 737 to 837 (1336—1433). The town in this period was visited by the celebrated traveller Ibn Battūta whose description is very interesting. In 753 (1352) he went there with a caravan from Morocco which included many traders of Sijilmāsa, then a very prosperous commercial centre. After a journey of 25 days he made a halt at Taghāza where there were mines of rock-salt, then at Walāta (Iyālāten), the first place in the land of the negroes, two months' journey from Sijilmāsa. Ten days after leaving Walāta he came to Zāghari and reached the Niger near the town of Karakhu; thence he went to Malli on the river Sansara and finally reached Timbuktu, after which he continued his journey by water. The people of these lands were Muslims; the tribe of Messūfa was the dominant one. Ibn Battūta admires certain virtues of the negroes but cannot understand the nudity of women among the believers. The town itself does not seem to have impressed him greatly. The Messūfa who lived in it wore the *ūthām* [q. v.], a veil covering the lower half of the face. We know that the Arabs usually gave the name of *al-Mulaththimūn*, the veiled people, to the Berber peoples who led a nomadic life in the desert as far as Nubia (Juynboll and de Goeje, *Descr. du Maghrib*, Leyden 1860, p. 48).

A second dynasty, that of the Maghaharen Tuāreg, held sway in Timbuktu for 40 years. Then came the conqueror Sunni 'Alī whose rule lasted 24 years (873—898 = 1468—92). He made his victorious

entry into Timbuktu in 873 and wrought great havoc there. Local historians judge him very severely, as a wicked libertine and a bloody oppressor who persecuted learned men and laughed at religion. He performed the *ḡalāt* sitting. Nevertheless the Songhai dynasty which descended from this prince was a brilliant one and raised the town to a high degree of prosperity. The most eminent sultan of this dynasty was the askia al-Hādī Muḥammad, a patron of letters and learning. The last, the askia Dīwād, died in 935 (1528). Timbuktu then passed under Moroccan domination. The Pāshā of Marrākush Muḥammad conquered it from the Sultan of Morocco, Muḥay Ahmad in 999 (1590). Moroccan rule lasted from 999—1164 (1590—1750); the exactions of the Pāshās and the raids of the marauding Tuāreg mark the period of decline. The Tuāreg regained the town in 1207 (1792), then the Ful took it in 1243 (1827) and then the Tukulor.

In the ixth (xvth) century Europeans came into contact with Timbuktu. Through Tunis and Tripolitania it had dealings with Italy, especially with Florence. Four great caravan routes led from it, going to Egypt via Kanem and Gao, to Tunis by the Hoggār, to Morocco via Sijilmāsa, Tafilale and Tuat, and to the Sudan by Malli. Two Europeans mention the town at this time and refer to it in terms which suggest that it was a well known place; these were the Florentine Benedetto Dei who visited it in 875 (1470) and says only "here coarse clothes are sold and serges and materials which are made in Lombardy", and a few years later Leo Africanus who is more enthusiastic: "the city", he says "is well provided with shops: it has a temple of stone and lime, built by an excellent architect of Granada and a splendid palace for the king. The latter is very rich in plates and rods of gold some of which weigh 1,300 pounds". The traffic in gold and in salt is specially mentioned at this time.

After the xth (xvth) century Timbuktu became cut off from Europe. It was now only talked of in Europe as a mysterious and inaccessible town, thought to be very beautiful and rich, no doubt on account of its trade in gold, ostrich feathers, ivory, and slaves. The mystery of Timbuktu after various unsuccessful attempts and the assassination of Major Laing was pierced by the French explorer René Caillié in 1244 (1828) who was much disillusioned by it and greatly preferred Djenné. Barth then visited it in 1853.

The town, still modest in appearance, although the native architecture is not without taste, was incorporated in the sphere of French colonisation in 1311 (1893). Communication by motor-car (caterpillar wheels) was opened with Algeria by the Haardt-Audouin-Dubreuil expedition. The town is no longer as large as it was under the old Songhai kings, whose memory the natives still cherish; in those days it was bounded by one of the arms of the Niger, but now the ruins lie 10 miles south of it. Caravans carrying salt still do a busy trade.

As to the works of Sudanese authors, the manuscripts of them have been brought back mainly by Felix Dubois and Colonel Archinard. M. Houdas has published several of them. The most important are the *History of the Sudan* and a *Dictionary of the Farkas*. The best known author of Timbuktu is Ahmad Bāhā, who compiled a biographical dictionary. Taken prisoner when the town was occupied by the Moroccans, he was carried off to

Morocco where he lived till 1006 (1597). He died at Timbuktu in 1036 (1626). The period of the greatest literary activity in Timbuktu extends from the viiith (xvth) to the xiith (xviiith) century. Educated Muslims are still to be found in the country, for example the *kaḍī* who a few years ago (1913) made available some inscriptions throwing light on the history of the Muhammadan penetrations of the Niger country.

TIMSĀḤ (A.), the crocodile; in Arabic a loanword from the old Egyptian *tm-sḥ*, or Coptic *emsh*, with article *temshāḥ*, also found in Assyrian. *tm-sḥ* (Bezold, *Glossar*, 294) and in Herodotus as *τῆς ὄψιν*. The earliest full description of the crocodile is given in Herodotus (ii. 68) and a good deal that is new is added by Aristotle. Pliny's account is remarkable for his love of the marvellous. The views of the ancients are reflected in the Arabic sources.

According to 'Abd al-Latif crocodiles are most numerous in al-Ṣa'īd and at the cataracts: there they swarm like worms, large and small, in the open water and between the rocks of the rapids. The animals when they crawl out of the egg are no bigger than lizards but soon become as much as 10 ells long. They have 60 teeth, lay 60 eggs, live 60 years etc., as Aristotle already told us. In the region of the stomach they have a swelling, which contains a fluid that smells of musk. — The fullest description of the crocodile is that of Kazwini, who is followed in essentials by Dimashki and Damiri. The crocodile has wide jaws, 20 teeth in the upper and 40 in the lower and between them sometimes also a small square tooth; they all fit into one another. Its head is 2 ells long, its back 8, its tail 6; its back is like that of the tortoise. The animal cannot bend or turn because it has not flexible vertebrae. It does not move its lower but its upper jaw, a long disputed but accurate observation. The crocodile is a frightful animal which devours men and sheep and also kills horses and camels. When it sees its prey on the bank, it swims cautiously below the water up to it and then darts out suddenly. Worms are generated in the flesh which remains hanging between its teeth and these are picked out by the bird called *kaṭkāt*, while the crocodile opens its jaws. This bird also warns the reptile of the approach of the hunter. When the *kaṭkāt* has done its work, the crocodile closes its jaws; it would eat up the bird, if the latter did not have a bone as sharp as a needle on its

head. The crocodile is pricked by this, opens its mouth again and lets the bird fly away. From this we get the proverbial saying *idjā' al-timsāḥ* "crocodile gratitude". — Copulation takes place on land, the male has however first to turn the female on her back and afterwards turn her back again as she cannot do it herself and would fall a helpless prey to the hunter. The eggs are laid on land; any that fall in water perish or produce a *sukankūr*, not a crocodile. Crocodiles are found in the Indus as well as the Nile, but there they are smaller. The uses of parts of the crocodile in medicine are numerous.

Cohen*, 1912, p. 341. — Photographs from nature from the upper Nile in Bengt Herg, *Mit den Zugvögeln nach Afrika*, Berlin 1925. (J. RUSKA)

TIMSĀḤ (Lake), one of the series of swamps and lagoons in the Eastern Delta through which the Suez Canal passes on its way from Port Sa'īd south to Suez. The Canal enters the Lake at the 80th kilometre. On the northern shore lies the town of Imā'iliya [q. v.], an exclusively French residential quarter. The Lake is about 6 sq. miles in area, although before the construction of the Canal it was brackish and reedy. Now it is very picturesque with its bright blue waters and the background of desert hills. The name means Crocodile Lake [cf. the preceding art.], being once upon a time the haunt of that creature. Archaeologists are undecided as to the part it played in historic times. Wallis Budge (*Hist. of Egypt*, v. 131 sq.) supposes that it was somewhere in its neighbourhood that the Israelites crossed during their flight from Egypt. He identifies it with the *Ḥay* or Sea of Reeds mentioned in Exodus, xiii. 18.

TIMUR LANG (Tamerlane), the conqueror of Asia, born near Kash in Transoxiana on the 25th Sh'abān of the year of the Mouse, 736 A. H. (8th April 1336), the son of Amīr Tārāghāi (or Turghāi), governor of Kash and its district before Hājīdī Barlas, and Takina Khātūn. His family claimed descent from Čingis Khān and his epitaph gives the following genealogy: Tīmānāl, Kačūlāl, Iramēt Barula, Karāčār Nūyān, Hāngīr, Burkel, Tārāghāi, Timūr. A rabid detractor of Timūr, Ibn 'Arabshāh, says that he was the son of a shepherd and lived at first by brigandage and the epithet of Lang (lame) was given him as a result of a wound he received while stealing sheep. Timūr was also called Kūrkān, the "son-in-law of the Khān", Amīr, "the Emir", al-Amīr al-Kabīr, "the Great Emir", Ṣāhib Kirān, "lord of the fortunate conjunction of planets". In 790 (1388) he definitely took the title of sūlṭān and after his death was given that of Djaunāt Makūn, "dweller in Paradise".

While still quite young, Timūr distinguished himself by his intelligence, forethought and bravery. At first in the service of the local ruler, the amīr

Kāghān, he accompanied Hājjī Barīs fleeing before the invasion of Tughlāk Timūr Khān but soon returned to plead the cause of his oppressed countrymen before the conquerors. He did this with such eloquence and courage that the invaders, eager to win over such an opponent, gave him the governorship of his native country. The next year (762 = 1361), Tughlāk Timūr organising his conquests, made his son Ilyās governor of Samarqand and appointed Timūr his vizier; the latter however, disgusted with the coarseness of those around him, soon went to rejoin his brother-in-law Andr Hussin, who was preparing for resistance against the invasion.

Tughlāk Timūr and Ilyās, defeated in their turn, perished on the battlefield. Turning against his ally, Andr Hussin, Timūr made war on him, had him assassinated after a pretended reconciliation and becoming master of Balkh ascended the throne on Ramaḍān 12, 771 (April 10, 1370), assuming the titles of successor of Čaghatāi and descendant of Čingiz. His reign however only really begins with the conquest of Džata and Khwārizm, which took over ten years of fighting (771-782 = 1369-1380) and nine expeditions: five to the first and four to the latter country. Becoming the official protector of Islām, Timūr favoured the priests and the new Naqshbandiyya order and on his campaigns was accompanied by a long retinue of holy and learned men, men of letters and artists.

On the partition of the Kipčāk in 777 (1375) Timūr had taken the part of Toktāmish [q. v.], Khān of the Crimea, who had been defeated by Urūs, ruler of the White Horde. In 782 (1380-1381) he sent him against the Russians; Moscow was taken and sacked. Four years later Toktāmish rebelled against his benefactor; at first victorious, then defeated, he wanted to continue the struggle although Timūr offered to pardon him. In 790 (1388) he invaded Transoxiana, defeated Umar Shaikh, son of Timūr, with his generals and threatened Samarqand. Timūr had to go to restore the situation. There was another invasion in 793 (1390-1391); this time Umar Shaikh had his revenge and the rebel Khān fled into Georgia, abandoning his lands, to resume the offensive four years later.

Undertaken in 782 (1380-1381), the conquest of Persia began with the invasion of Khormān, which submitted. On the return of an expedition against the pagan Mongols in 784 (1383), Gurgān, Māzandarān and Seistān were conquered in rapid succession; the local rulers having submitted, retained a nominal authority. In the following year the rebellion of Herāt ended in the suppression of the Kurt dynasty. In 786 (1384-1385) Wālī, king of Māzandarān, was dispossessed. The years 788-789 (1386-1387) were occupied with the conquest of Fārs, the Irāk, Luristān and Ādharbāidjān. Sultān Ahmad Džalālir was defeated and put to flight. Timūr spent a winter in Tahriz and imposed a heavy fine on Isfahān which having rebelled was punished by the massacre of 70,000 inhabitants. Towers were built of their skulls. Timūr is said to have had a lively disputation with Hāfiẓ in Shirāz, but the truth of this story is not certain.

On the 10th Ramaḍān 795 (July 31, 1392) Timūr set out on what is known as the "five years' war"; the main episodes of it were the massacre of the heretics in the Caspian provinces, the destruction of the Muzaffarid dynasty of Fārs (795 = 1393)

and the Mesopotamian campaign. Ahmad Džalālir after seeking to conciliate his rival fled into Syria, where he became a vassal of the Sultān of Egypt, al-Malik al-Zāhir Barqūk. The latter having refused the extradition of his protégé, Timūr invaded Asia Minor took and sacked Edessa, Takrit, where he erected a pyramid of skulls, Mārdin and Amid. Umar Shaikh was killed in the course of the fighting. Forced to defend himself against a new attack by Toktāmish, Timūr invaded the Kipčāk (797 = 1395), occupied Moscow for over a year, undertook a campaign into Georgia and suppressed several risings in Persia.

According to Sharaf al-Dīn, Timūr thought the Muslim rulers of India much too tolerant; they ought, he thought, to have imposed Islām on their subjects. In Rajab 800 (March-April 1398) therefore, he set out for India, crossed the Indus on the 12th Ramaḍān 801 (Sept. 24, 1398) and on the 7th Rabi' II (Dec. 17) took Delhi. In spite of the admiration with which this city inspired him, he plundered and destroyed it, massacring 80,000 of its inhabitants. The defeated Sultān Mahmūd III had retired across the Ganges. Timūr who had just divided his kingdom among his officers had to retire hurriedly to face new troubles. A rebellion had just broken out in Syria and Ahmad Džalālir, once again lord of Baghdad, had invaded Ādharbāidjān, the governor of which, Mīrānshāh son of Timūr, had compromised everything by his excesses. The rivalry between Timūr and Bayazid I was beginning and the new Sultān of Egypt, Faraj, had refused to release a relative of Timūr's; the envoys sent to negotiate had been executed by the governor of Damascus.

Having taken the necessary measures against Mīrānshāh, Timūr ravaged Georgia and set out for Asia Minor in Muharram 803 (Aug. 1400). At Sivas the Muslim garrison was spared but 4,000 Christian soldiers were buried alive. Malatya fell. Timūr entered Syria, took Aleppo and after demanding of the "ulamā" which, his men or the enemy's, killed in fight would earn the title of martyr, handed over the town to be plundered for three days. Hamā, Hama and Ba'albek fell in their turn; Sultān Faraj was defeated. Damascus capitulated and Timūr sacked it, reduced its inhabitants to slavery and extorted from the "ulamā" a *fatwā* approving his conduct. On the 27th Dhu 'l-Kāda 803 (July 10, 1401), he took Baghdad by surprise and wrought a great massacre there to avenge his officers killed in the siege, 20,000 inhabitants, or according to Ibn 'Arabshāh, 40,000 are said to have perished. Abū Bakr, son of Timūr, was given the task of defending the region against the attacks of Kara Yūsuf.

Bayazid who had sought investiture from the 'Abbāsids in Egypt and attacked the Byzantine emperor, a friend of Timūr's, next molested his allies, the princes of Asia Minor. On Timūr's returning from a new expedition into Georgia, war broke out between the two rivals and their fate was decided at the battle of Ancyra, actually fought at Çobukabad, N.E. of Angora on the 19th Dhu 'l-Hijja 804 (July 21, 1402). Bayazid who had disposed his forces badly was defeated after a desperate struggle in spite of the valour of his troops. Impeded in his flight by the fall of his horse, he fell into the hands of the victor who treated him with respect and showed real regret when Bayazid died at Ak Shehir on the

14th Shāhān 805 (March 14, 1403). Owing its origin to a misunderstanding of a Persian verse, the legend that he ended his days in an iron cage is quite fictitious.

The captures of Bursa and Smyrna were marked by new atrocities. During his sojourn in Asia Minor, Timūr lost his grandson and heir Muhammad Sulṭān, and received embassies from the Sultān of Egypt, who recognised his authority, and from the Byzantine emperor John VIII. Georgia having become tributary, Timūr returned to Samarkand in 807 (1404) where he received a number of ambassadors, to one of whom, Ruy González de Clavijo sent by Henry III of Castile, we owe a valuable account of the court of Samarkand and the festivities which took place there on the occasion of the marriages of several of the grandsons of Timūr.

A new campaign was planned, this time against China, of which Timūr was not content to remain simply suzerain. The Kuriltai assembled at Samarkand acclaimed the declaration of war. On the 23rd Jumādā I, 807 (Dec. 27, 1404) he began the campaign, crossing the Oxus on the ice. At Otrār he granted Toktamish the pardon which he sought of him. On the 10th Shāhān 807 (Jan. 12, 1404) he fell ill. Feeling his end near, he made all his dispositions and died on the 17th (19th) January aged 71, having reigned 36 years. His body in a coffin of ebony was brought two months later to Samarkand, where his funeral was celebrated, and the magnificent monument, the Gūr-i-Mir, in which he is buried, can still be seen.

Timūr had married two Chinese princesses whom Ibn 'Arabshāh calls the Great Queen, *al-Malikha al-Kubrā*, and the Little Queen, *al-Malikha al-Sughrā*, and also Tāmān, daughter of the amir Mūsā, governor of Nakhshab and Djalān, a woman of rare beauty whom he had executed for some imaginary fault. He had also a large number of concubines. His children were Ghiyāth al-Dīn Djahāngīr (d. 779 = 1377—1378), Mu'izz al-Dīn 'Umar Shāhkh, killed in Syria, Djālāl al-Dīn Gurgha, called Mirānshāh, Shāhrukh whom circumstances made his heir, and one daughter Sultāna Bakht, who married Sulaimān Shāh. Realising that his rule could not last for ever and desirous to avoid civil wars, he had divided his empire among his sons and grandsons giving them equal parts. But Muhammad Sulṭān, son of Ghiyāth al-Dīn, and after his death Pir Muhammad Djahāngīr, his brother, were to have precedence.

Grave and serious, Timūr did not love displays of gaiety and demanded absolute frankness in speaking to him even though it should pain him. Clavijo speaks highly of his justice and he certainly showed himself merciless to criminals. Gifted with a very fine memory but having little education himself, he encouraged and rewarded men of genius. It was in his reign that the art called "Timūrid" had its origins. He enriched Samarkand with magnificent buildings and made it an international market which, in his lifetime at least, supplanted Tabriz and Baghdad and he transplanted thither the artists and craftsmen from the towns he conquered. He did everything possible to encourage commerce and industry and by his conquests he opened up new routes by land for the trade between India and Eastern Persia. Throughout his empire he carried through great public works, organised the administration and the army on rational bases and worked with all his might for the spread of Islām.

In physique, Timūr was of middle height, had a large head and a high complexion. His hair had become white at an early age. Two wounds in the foot and the hand had made him somewhat deformed. Numerous portraits of him exist, by Persian or Indian artists, but they are for the most part purely imaginary (cf. Vámbéry, *Geich. Bechara's*, i. 212—213).

Bibliography: To Timūr are attributed *Memoirs (Mafrūzāt)* and *Institutes (Tashkīlāt)* but their authenticity is very doubtful. He himself, however, had two official histories of his career written: one, the *Tārīkh-i Khānī*, written in Turki verse in Uighur characters, is now lost and the other the *Zafar-nāma* of Niẓām al-Dīn Shāmi, still unpublished, survives in a unique manuscript in the British Museum (Add. 23,980): a recension of the latter work by Sharaf al-Dīn 'Alī Yazdī is the best known in Europe of his histories. The *Adab-i al-Maḥdūr fī Nawā'ib-i Timūr* of Ibn 'Arabshāh is a bitter satire but it nevertheless contains a just appreciation of the character of the conqueror and valuable details about Samarkand. *Mirkh'and (Kawfa*, Bk. vi.) and especially *Kh'wandamīr (Habīb al-Siyar)* are with 'Abd al-Razzāq Samarkandī (*Maḥlā' al-Salātin*) the most valuable of the later historians. In Books vii. and viii. of his *Geich. 2. Osm. Reicher*, von Hammer has given the substance of contemporary Ottoman and Byzantine chroniclers. We may also mention the *Munshi'āt* of Feridūn Bey, a valuable collection of documents. Among European travellers, we may mention Clavijo, Schiltberger and Bouccault.

For further details of the sources we refer the reader to the valuable works by E. Blochet, *Introduction à l'Histoire des Mongols*, and E. G. Browne, *A History of Persian Literature under Tartar Dominion*, p. 180—185, and to the studies by L. Zimine, *Les détails de la mort de Timūr (Protocoles et communications de la Société archéologique du Turkestan, xviiith year)* and *Les exploits d'Emirāddé 'Omar Chāhkh (R. M. M., 1914, xxviii. 244—245)*. Down to the sixteenth century European historians hardly used anything but Petis de la Croix's translation of Sharaf al-Dīn. D'Herbelot, Gibbon and De Guignes (*Hist. des Huns*, book xx.) are the most important earlier European writers. Among modern writers we may mention Vámbéry, *Geich. Bechara's*, chap. x.—xi.; Skrine and Ross, *The Heart of Asia*; Sykes, *History of Persia*, chap. lix.; E. G. Browne, *op. cit.*, book ii.; Casplicka, *The Turks in Central Asia*, and Grousset, *Histoire de l'Asie*, vol. ii. (L. BOUVAT)

TIMÜRIDS This term, sometime used to include all the descendants of Timūr, means more especially the princes of his family who ruled in Persia and Central Asia in the xvth century; it is in the latter sense that it forms the subject of this article.

The history of the Timūrids may be divided into two quite distinct periods (cf. Browne, *A History of Persian Literature under Tartar Dominion*, p. 380). In the first the empire, divided between the sons and grandsons of the conqueror, was soon reduced to two great kingdoms—in the west that of Mirānshāh and his sons Abū Bakr and Muhammad 'Umar—in the east that of Shāhrukh which, at first limited to Khurāsān, to which Transoxiana was next added in a few

years, comprised almost the whole of the lands that had been ruled by Timūr. It was a brilliant and comparatively happy period. Of a peace-loving disposition in spite of his success in war Shāhrukh endeavoured to repair the damage done by his father and favoured as far as he could men of intellect. In the second period from the death of Shāhrukh to the battle of Shūrūr which by securing the unity of Persia dealt the last blow to Timūrid domination, the empire was steadily breaking to pieces. Each prince wanted to have his own kingdom, thus facilitating the advance of the enemies who from all sides were threatening the enfeebled state. But by a bizarre contrast the renaissance which had marked the reign of Shāhrukh continued under his successors to the end of their rule in all its splendour. The whole xvth century is the golden age of letters, art, and scholarship. The court of Husain Bāikara, the second last Timūrid, was not inferior to that of Shāhrukh.

The amirs believing that by concealing the death of Timūr they could successfully carry out the expedition to China, decided to take as ruler for the duration of the campaign prince Khalil who was to be assisted by a council of regency and at the end of the expedition would surrender the power to Pir Muhammad Djihāngīr, as Timūr had desired. War broke out between the two claimants and Pir Muhammad twice defeated submitted to the generosity of Khalil who left him his lands. Six months later the vizier Pir 'Alī Tār had Pir Muhammad assassinated and tried to seize the throne himself; this cost him his life (808 = 1406). Abandoned by his troops, dethroned by his amirs who reproached him with his extravagance, Khalil was compensated with the governorship of the 'Irāk (809 = 1406-1407) in which he ended his days.

Mirānshāh reigned, with his son Abū Bakr, and under the authority, imposed by Timūr, of his youngest son Muhammad 'Umar over a kingdom which included the 'Irāk, Adharbāidjān, Mughān, Shirwān and Georgia. A quarrel broke out between the two brothers and the amir Djihāngīsh tried to deprive them of their power which cost him his life. Mirānshāh having made a hostile demonstration against Shāhrukh had to submit (808 = 1405-1406). In 810 (1408) he was killed in battle with Kara Yūsuf. His sons perished about the same time.

Shāhrukh on the death of Timūr was ruler only of Khurāsān; he conquered Mazarandār in 809 (1406) and Sistān in the next year, then extended his authority over Transoxiana to which he went in 811 (1409) to take possession of Samarkand, to organise the country, rebuild Merv and restore the old course of the Murghāb; he further extended his power to Fārs (817 = 1414-1415), Kirmān (819 = 1416-1417) and Adharbāidjān to which he had gone to attack his redoubtable rival Kara Yūsuf; the latter having died suddenly, the enemy army dispersed (822 = 1419) but the fighting continued with the successors of Kara Yūsuf and the rival dynasty of the White Sheep. In the end, Shāhrukh held all the lands of Timūr except Syria and 'Arabistān. Many risings broke out in his reign but all were put down. Among them were those led by the amir Khudāidād and Shāh Baka' al-Dīn (812 = 1409-1410), Bāikara Mirzā at Shirās (818 = 1415-1416), Iskandar and Djihāngīsh (832 = 1429).

In 820 (1417-1418) Shāhrukh had put at the head of the government his son Bāisonghor, made all who had been false to their trust disgorge their ill-gotten gains. He survived all his sons except Ulugh Beg and died in Fishāward (Bāy) on the 25th Dhu 'l-Hijja 850 (March 12, 1447) leaving the memory of a generous and peace-loving prince, brave and free from ambition. To him we owe amongst other useful works the opening of a large library in Herāt. With China, of which he was suzerain, he was always on good terms and he asserted his nominal suzerainty over India. On the other hand, his relations with the Ottomans and with Egypt were always difficult.

After his death the decline began, rapid and irremediable. Ulugh Beg, the 'astronomer-king' (850-852 = 1447-1449), was a scholar and man of letters, more fitted to be a student than a ruler and incapable of facing the difficulties which assailed him. Conquered by his nephew 'Alī al-Dawla he agreed to all his demands in order to obtain the release of his son 'Abd al-Latif. But the conqueror failed to fulfil his promises. The Özbeks took and sacked Herāt and Samarkand; 'Abd al-Latif rebelled, seized his father, who had been several times defeated, put him to death after going through the farce of a trial but was himself assassinated after reigning six months (853-854 = 1449-1450). 'Abd Allāh Mirzā, grandson of Shāhrukh, ascended the throne in spite of the opposition of Abū Sa'īd who sought the support of the Özbeks. 'Abd Allāh was defeated and slain (853-854 = 1450-1451). Bāber Mirzā, a dissipated and drunken prince, who had vainly sworn to reform himself, lost the 'Irāk, Fārs and Kirmān, blinded 'Alī al-Dawla, failed against Abū Sa'īd and died of his excesses (855-861 = 1452-1457).

Very different was the reign of Abū Sa'īd, the most powerful monarch of his time. A bitter opponent of 'Abd Allāh Mirzā he had at his death taken possession of Samarkand; the disappearance of Bāber Mirzā and his further conquests gave him Transoxiana, Badakhshān, Kābul and Kandahār, with the border districts of India, the 'Irāk and Khurāsān, which he completely conquered in 863 (1458-1459). He was ambitious but the historians agree that he had fine qualities: dignity, discretion, frankness, energy and remarkable political ability. After fighting the Mongols he made an alliance with them, returning to the old traditions of his family. Declaring war on Uzun Hasan whose attempts at a reconciliation he repulsed, he marched into the Kara Būgh where his army starving deserted him. He fell into the hands of the enemy and Uzun Hasan's officers, in spite of their master's opposition, demanded his death (855-872 = 1452-1469).

Sultān Mahmūd, who began by having the four sons of his predecessors assassinated, only reigned six months, detested and obnoxious. His tyranny, arbitrariness and depravity surpassed anything previously known. He was assassinated and a rebellion was just about to break out when his death which had been concealed by the astute vizier Khusrū Shāh (900-901 = 1494-1495) became known. He left several sons. Sultān Ma'ūd who reigned four years had to fight for his throne with his brothers Bāisonghor and 'Alī who, thanks to the intrigue of Khusrū Shāh, failed miserably (901-905 = 1495-1499).

Sultān Ahmad, son and successor of Abū

Sa'id, had a number of good qualities: he was loyal, frank, courteous and brave; but having no power he was only a puppet in the hands of his entourage especially the clergy; and except for an attack by 'Umar Shaikh and an expedition against Häber, the future conqueror of India, his reign was peaceful. Magnificent buildings were erected in Samarkand at this time and scholars and men of letters flocked to his court (874-899 = 1469-1494).

'Umar Shaikh, fourth son of Abū Sa'id, had made for himself a little kingdom in Farghāna of which the capital was Akhsi. Brave and fond of fighting, although his army was only 4,000 men, he made several attempts to take Samarkand. His contemporaries praise his justice, his generosity and lovable disposition. Although given to wine and gaming, he was very devout. A son-in-law of the sovereign of the Čaghatāi, he had to cede to his father-in-law Yūnis Khān lands which he could not keep and died after an accident after a short reign on the 4th Ramaḍān 899 (8th June 1494) aged only 39. His son Zāhir al-Dīn Häber who succeeded him at the age of 12 after various successful expeditions in one of which he took Samarkand, was dispossessed by Shaibāni in 906 (1500). He went to India where he founded a great empire.

Sultān Husain Bāikara reigned at Herāt for 37 years. Literary and artistic, a brave and successful soldier, he conquered Khurāsān, Tukharistān, Kandahār, Sistān and Mēzandarān, victorious over all his rivals. But the eight or nine years of his reign were troubled. A martyr to rheumatism, threatened by the Ōzbeks, he had to put down rebellions by his sons and finally died on his way to fight Shaibāni. At first an ascetic and pious Muslim, he latterly gave himself up to debauchery, an example which his sons and subjects followed. The literary circle at Husain Bāikara's court is famous. In it besides the famous vizier Mir 'Alī Shīr, the creator of Turkī literature, were poets like Djāmī, historians like Mirkhwānd and Khwāndamīr, painters like Bahādd and Shāh Mujaḥḥar. The palaces of Herāt rivalled those of Samarkand (873-911 = 1469-1506). The son and successor of Sultān Husain Bāikara, Badī' al-Zamān, was the last Timurid of Persia. Defeated by Shaibāni, a guest of Shāh Ismā'il and finally a prisoner of Sultān Salīm, he died at Constantinople in 923 (1517) leaving a son Muḥammad al-Zamān, who went to try his fortunes in India, where he died in 946 (1539) after vainly trying to become king of Guḡjārāt with Portuguese help.

The coming of Shāh Ismā'il, the triumph of the Shī'a and the Persian unity which was the result, the realisation of national unity in China and in Russia in the same period, the foundation by the Shaibānids of a great empire in Transoxiana deprived the descendants of Timur of all hope of domination except in India which was passing into the hands of one of them.

The intellectual revival which characterizes the 15th (xvth) century is in part the work of the Timurid sovereigns and princes many of whom were themselves poets, artists and scholars, and attracted to their courts men of genius. Among the former were Shāhrukh, who promoted historical studies, Ulugh Beg, astronomer, poet and theologian, Husain Bāikara, artist and poet, and Häber, who left a number of valuable works in addition to his memoirs, and among the latter, Bāisonghor, son of Shāhrukh, a calligrapher of the first rank to

whom the art of the book owed a great deal. Djāmī is at this period the greatest name in Persian literature which is also represented by the mystic poets, Saiyid Ni'matallāh Kirwānī and Kāsim al-Anwār; by Ḥafīẓ and Kātibī, authors of *maṭnawīs*; Husain Wa'iz Kāshifī, a moralist and author of apoloques; the historians Mirkhwānd and Khwāndamīr, 'Abd al-Razzāk Samarkandī, Ḥafiz Abru, the latter also a geographer. Besides Djāmī, the most notable theologians were Ahmad Taftāzānī and the traditionalist Mir Djāmāl al-Dīn Muḥaddas. Jurists, mathematicians, physicians etc. were also numerous.

Of the Turkish poets of the time, Mir 'Alī Shīr is almost the only one known; he had however some notable disciples, like Shaikhum Beg Suhaili and Kamāl al-Dīn Gazargāhī.

In the 15th (xvth) century Persian art attained its perfection. The schools of painting of Samarkand, Bukhārā and Herāt were at their best. We have already mentioned what Bāisonghor did for the book. Architecture, inspired alike by the Chinese pagoda and the Mongol tent is represented by monuments like the Gūr-i-Mīr, the mosques of Bibi Khānum, Ulugh Beg and Shāh Ziada not to mention those of Samarkand. Owing to the presence of the colonies of artists and artisans installed *nilens volens* in Samarkand and Aḡharbādījān by Timur, decorative arts, ceramics in particular, made remarkable progress. Music also was brilliantly represented.

Bibliography: For the whole period Mirkhwānd and especially Khwāndamīr are very useful; 'Abd al-Razzāk Samarkandī whose *Maṭla'*, unfortunately still unedited, was largely used by Quatremère (*Mémoire historique sur le règne du sultan Shah-rokh*, *J. A.*, 1836, and *Notice de l'ouvrage persan... formant la première partie de vol. xiv. of the N.E.*); Mu'tu al-Dīn Isfārī, author of a valuable chronicle of Herāt (extracts given by Barbier de Meynard in the *J. A.*, 1860-1862). For the early years, Sharaf al-Dīn 'Alī Yazdī, Ibn 'Arabshāh, Faḥrī, author of a *Muḥimāl* unpublished and incomplete. For the last years the memoirs of Häber are most valuable, checked and supplemented by the *Tārīkh-i Roshdī* of Mirzā Haidar Dughlāt, and the *Shāibāni-Nāma* of Muḥammad Šālih. Feridūn Bey and Minedjīm Bāshī should be consulted for the relations with the Ottomans. For further details the reader may be referred to the works of E. Blochet and E. G. Browne quoted under TIMUR LANG; L. Bouvat, *Essai sur la civilisation timouride*, *J. A.*, ccviii., 1926, p. 193-299; do., *L'Empire mongol (2^e phase)*, vol. viii./iii. of the *Histoire du monde*, publ. under the direction of A. E. Cavaignac (Paris 1927).

On the literary renaissance, cf. the *Tugh-kira* of Dawlatshāh and the works of Mir 'Alī Shīr, his *Madjallī al-Naf'is* in particular (extract in Belin, *J. A.*, 1861, xviii. and 1866, vii., viii.).

The European travellers who have given us descriptions of the Timurid kingdom are: Clavijo and Pero Tafar, Spaniards; Ambrogio Contarini, Nicolo' Conti, Hieronymo di San Stefano and Caterino Zeno, Italians; Boucault, French; Nikitine, Russian; Schiltberger, German. The principal European historians are D'Herbelot, De Guignes, Gibbon, von Hammer and Vámbéry, *Geich. Bochara's*, chap. xii.; Browne, *op. cit.*, book iii.; Skrine and Denison

Ross, *The Heart of Asia*; Sykes, *Hist. of Persia*, chap. 15.—1st.; Canpicke, *The Turks of Central Asia*; Grousset, *Histoire de l'Asie*, vol. II. The Bibliography in vol. III. of the *Archives Marwanides* (see index, p. 94—95) gives a list of works on Timurid art down to 1905; other important works since published include: Cl. Huart, *Les calligraphes et les miniaturistes de l'Orient musulman*, Paris 1908; E. Blochet, *Les Peintures de manuscrits arabes, persans et turcs de la Bibliothèque Nationale*, Paris 1911; F. R. Martin, *The Miniature Painting and Painters of Persia, India and Turkey*, London 1912; T. W. Arnold and A. Grohmann, *The Islamic Book*, London 1929; Arneftag Beg Sakisani, *La miniature persane du XIII^e au XVIII^e siècle*, Paris 1929, and Anzoda K. Coomaraswamy, *Les miniatures orientales de la Collection Goloubew au Museum of Fine Arts de Boston*, Paris 1929.

(L. BOUVAT)

TIMUR-TASH, an Ortoqid, son of Nadim al-Din Ilghazi of the line of Mardin. Al-Malik al-'Alim al-'Adil Husam al-Din Timur-Tash was born in 498 (1104) and by the age of 12 (in 512) his father had left him in Aleppo as his temporary deputy. In 515, Timur-Tash was sent to the Saldjuk Sultan Mahmud and as a result of this mission Maiyafarihin [q. v.] was added to the territory of the Ortoqids. After the death of Ilghazi, his lands were divided up. Timur-Tash received Mardin, his brother Sulaiman, Maiyafarihin and his cousin Sulaiman b. 'Abd al-Djabbar, Aleppo. In 518, Balak b. Bahrām b. Ortoq of Aleppo was killed while besieging Manbij (which belonged to the amir al-Hassan of Ba'albek). Timur-Tash, who was in camp at Balak, raided the country as far as Aleppo which he seized on the 20th Rabi' I 518. He left his lieutenant there, for Syria was full of fighting and he was a man who liked peace (Ibn al-Athir, x. 436). As a result of the intrigues of the Shi' Dubais (of the Maryaddid dynasty) the Franks besieged Aleppo. The inhabitants, seeing the weakness (*al-wahn wa 'l-'adja*) of their master appealed to Ak-Sunkur al-Bursuki of Mawsil, whom they admitted into the citadel.

Timur-Tash suffered a series of reverses immediately after the accession to power of 'Imad al-Din Zangi (who succeeded Bursuki in Mawsil in 521). Zangi, eager to extend his possessions, marched on Nisibin which belonged to Mardin; Timur-Tash sought the help of his cousin of Hısn-Kaifa, Dawud b. Sulman, but Zangi by a stratagem obtained the surrender of Nisibin before the troops of the two cousins could arrive.

In 524 on his way back from Syria, Zangi besieged Sardji (between Mardin and Nisibin; cf. Kayi Serikhen [?] 8 miles W. of Nisibin). Timur-Tash, Dawud and the lord of Diyarbakr collected 20,000 Turkomen but were defeated. Failing to take Hısn-Kaifa, Zangi turned back to take the fortress of Dara.

In spite of these reverses we find Timur-Tash in 528 joining Zangi in the siege of Amid (Diyarbakr). The lord of this fortress summoned Dawud to his assistance but the latter was defeated. Zangi and Timur-Tash laid waste the district of Amid but the fortress held out. Zangi recompensed himself by taking Sawr which belonged to Diyarbakr [cf. MAHDİ: the *kaifa* of Sawr].

In 518 Timur-Tash was to succeed his cousin Sulaiman at Maiyafarihin. His only success seems

to have been the taking of Hattakh (or 'Attakh; *Sharaf-nama*, I. 245; 'Atāk) to the north of Maiyafarihin [q. v.] which he took in 532 from the last son of the Marwanides [q. v.].

Timur-Tash and Dawud took advantage of the death of Zangi in 541 to recover their former possessions which had been annexed by the lord of Mawsil. The latter's successor however, Saif al-Din b. Zangi, not only regained them but laid siege to Mardin and laid the country round it waste. The peace-loving Timur-Tash confined himself to regretting the days of Zangi which now seemed to him like days of rejoicing (*al-ṣamha la-ḥad khat al-ḡadā*). He hastened to make peace with Saif al-Din and promised him his daughter. Saif al-Din died however in 544 and the young princess became the wife of his successor Kaṭib al-Din. Timur-Tash 'lord of Mardin and of Maiyafarihin' died in 547 (1152) aged about 48 after a reign of 30 years. The same date is given by Abu l-Faraj (ed. Pococke, p. 391) and by Abu l-Fida', while the sources used by 'Ali Emiri (an *Umm al-'Ibar* of 'Abd al-Salam Efendi, mufti of Mardin [d. in 1259 = 1843] and Ferdi) give 548. Timur-Tash built the Hisamiya madrasa of Mardin and the cathedral-mosque opposite it. The coins of Timur-Tash described by Ghali Edhem, *Catal. des Monnaies Turcomanes*, Constantinople 1894, p. 27 and by 'Ali Amiri, *op. cit.*, p. 18, bear neither date nor mint. 'Ali Amiri interprets the symbol found upon them as the *tamga* of the Turkish tribe of Kayi.

Reiske; Kaṭib-Ferdi, *Mardin Mulaḥ-i Urfuḳiye Tarih-i* (944 [1537], a quite unimportant list of reigns but supplied with valuable notes by the editor 'Ali Amiri), Stambul 1331. (V. MINORSKY)

TIMURTASH, an Ottoman general and vizier, son of the Kara 'Ali Beg, who in the first year of the reign of Urghun took the fortress of Hercke on the Gulf of Nicomedia and displayed particular bravery at the siege of Aidos, when he removed with his own hand an arrow that had pierced his eye. Of the origin of the family very little is known, as is also the case with the other noble families of the early Ottoman empire, viz. the Candaris [cf. ÇANDARLI], the Ewrenos [q. v.], and the Mikhil-oglu [q. v.]. Timurtash Pasha is mentioned for the first time, when he continued the Sultan's conquests along the Tundja by Murad I's order with the help of Lala Shahn Pasha. In 767 (1365) he took Venidje Kışlaghaḥ (cf. Hıdjidi Khalifa, *Rumeli and Bosna*, p. 49 sq. where the date is given as 768) and Vānboll (*ibid.*, p. 53 sq. with the same date) in the plain of the Tundja. The sources tell us nothing of his activities during the next decade. When Lala Shahn died towards the end of the Serbo-Bulgar War (777 = 1375), Timurtash succeeded him as Begler-beg of Rum-eli. In this capacity he distinguished himself in the first place by completing the organisation of the army, by founding the system of *fuds* of the sipahis [see TIMAR] and creating the *voluḡ* for the lowest ranks in the army, which consisted mainly of Bulgarian Christians who were chiefly used as drivers (cf. J. v. Hammer, *G. O. R.*, I. 181 sq.). It appears that it was at Timurtash's instigation that the felt caps

(usually made in Biledjik) since the time of Urkhan worn generally, were limited to the army and that red was decided on as the colour for the headresses of the begs and officers (cf. J. v. Hammer, *G. O. R.*, i. 89 sq.). Timürtäsh Pasha again came into prominence when he took the fortress of Monastir (the modern Bitolj), Prilep and Ihtip (the modern Štip) (the date given is 784 = 1382; cf. Hüdjdj Khalifa, *Rumeli und Bosna*, p. 97, 96 and 92 and also his *Tağwim al-Tawārikh*, Stambul 1146, p. 97 where the same date is given, but is difficult to reconcile with the reputed letter of Murād I to his son Bayazid I given by Feridūn, *Munsha'at al-Salāṭin* 2, i. 107, dated Adrianople first tenth of Rabi' I, 787 = middle of April 1385; cf. thereon J. v. Hammer, *G. O. R.*, i. 191 sq. where the extracts are given from the document). Until the chronology of the early Ottoman period is finally settled, it may be regarded as certain that Timürtäsh crossed the Wardar, invaded the south of modern Serbia and conquered there three strongholds for the Sultān. Kāfil-eli, viz. Aetolia and Acarnania, the land of the "King of the Epirotians" Carlo II Tocco (d. July 1429), was also hard pressed by him on this occasion. In 1385 Timürtäsh is said to have undertaken a campaign against the Arta (not far from the Ionian Sea), who were showing separatist tendencies (cf. *Epirotica*, ed. J. Bekker (Bonn 1849), p. 229, and Jorga, *G. O. R.*, i. 273) so that he was sometimes here, sometimes there in Thessaly and in Epirus, districts in which Turakhān Beg [q. v.] also fought with success. In 788 (1386) Turakhān Beg suddenly appeared in Anatolia. In the battle which Murād fought in the plain of Konya against his most dangerous opponent, 'Alā' al-Dīn 'Alī of Karamān, he commanded the rearguard of the Ottoman army and it was his intervention that put the ruler of Karamān to flight and thus decided the battle in favour of the Ottomans. As a reward he was given the greater part of the plunder and the title of vizier i. e. a Pasha with 3 tails, which he bore as the first Beglerbeg of the kingdom. When in the following year (789 = 1387) Murād was again preparing for a campaign in Europe, Timürtäsh remained in Anatolia and administered the district of Germiān-eli [q. v.] in the absence of prince Ya'qūb. In 792 (1390) Timürtäsh again appears in the Balkans. In this year, according to Hüdjdj Khalifa's *Tağwim al-Tawārikh*, he took Kratovo (Turkish Karajowā) east of Üsküb, famous for its mines of silver and copper. In the next year (793 = 1391) he was taken prisoner in Brussa during a Karamānian raid

on it and Angora, was released and revenged himself by defeating the prince of Karamān in the plain of Ak-zai (in Germiān-eli) when he hanged him without ceremony although he was the brother-in-law of Bayazid I. From Mānecidjimbashi, who probably drew on İdris Bitlwi (iii. 311) we learn of the further history of Timürtäsh Pasha that he conquered Kianghri [q. v.] in Anatolia by order of Bayazid I in 799 (1396 and 1397) and in the following year (800, beg. Sept. 24, 1397) Athens (cf. *Chronicon breve* in Ducuz, Bonn ed., p. 516 [Meuprōv] and J. H. Mordtmann in *Byz.-Neogr. Jahrb.*, iv., 1923, p. 346 sqq.) with the surrounding lands, also Behesni [q. v.] and Maltiya [q. v.] from the Turkomans, Diwrigi from the Kurds, Dārende and Kemikāh [q. v.] (cf. also Sa'd al-Dīn, i. 150) and was busy with warlike enterprises, sometimes in Europe and sometimes in Asia Minor (cf. J. v. Hammer, *G. O. R.*, i. 248 sq.). In the battle of Angora (19th Dhu'l-Hijja 802 = 20th July 1402), he with his son Yakhshī shared the fate of Bayazid I and passed as a prisoner into Timür's hands. When the treasures accumulated by Timürtäsh were discovered in Kütahya [q. v.], Timür heaped reproaches upon him and at first refused him his liberty (cf. J. v. Hammer, *G. O. R.*, i. 330, following Sharaf al-Dīn 'Alī Vaziri, *Histoire de Timur-Beg*, transl. Petit de la Croix, v. 54, p. 41). He only survived the collapse of the Ottoman kingdom for a short time. While leading an army for prince Isā in the battle of Ulubāṭ (Asia Minor) he was treacherously murdered by one of his own servants in 808 (1405). Sultān Mehmed I sent the head of the old warrior to his brother Sulaimān as a token of victory. His body was taken to Brussa and buried there in the mosque founded by him. He had four sons, who also rose to distinction as viziers and generals, viz. (according to Sa'd al-Dīn) Urudj Beg, Umur Beg, 'Alī Beg, and Yakhshī Beg. The last named, who had distinguished himself in the Balkan campaigns (e.g. at the capture of Nish in 777 = 1375 [cf. J. v. Hammer, *G. O. R.*, i. 181] and of Provadija [Turk. Prāwadi, Bulg. Oveč, cf. K. Jireček, *Das Fürstentum Bulgarien*, p. 539 and Jorga, *G. O. R.*, i. 259] in 1388) seems to have perished soon after the battle of Angora. A son named 'Othmān Beg mentioned by J. v. Hammer, *G. O. R.*, i. 495 (cf. however *ibid.*, p. 402, where he is not given) cannot be traced in the Ottoman annals. There may be some confusion with a grandson of Timürtäsh who bore this name (see below). The family of Timürtäsh is set out in the following table:

Bibliography: The works mentioned in the text and Belligh-i Brūsewī, *Gūdest-i Riyāzi 'Irān*, Brussa 1302, p. 63, where two bearers of the name Timurtaşh appear in error. — On a general Timurtaşh under 'Othmān and Urkhan, see Zinkeisen, *G.O.R.*, i. 112. (FRANZ BÄRINGER)

AL-TINNIN, the constellation of the Dragon. According to al-Kāwīnī, it consists of 31 stars none of which lies outside of the constellation. Apart from the general figure of the constellation which comes from Greek (and probably earlier from Babylonian) astronomy the Arabs have names for smaller groups of stars within it. Thus the star μ is called the Dragon's tongue, *al-rāḥ*, "the isolated grazing camel"; the four stars $\beta \gamma \delta \epsilon$ in the head *al-awḥ'idh*, "the young dam-camels", a not very bright star between them *al-ruḥ*, "the camel-foal"; the bright stars $\zeta \eta$ are called *al-dhāḥin*, "the two jackals", the dark ω *al-qār* *al-dhāḥ*, "the jackal's claws". The Arabs imagine that the two jackals are trying to seize the camel-foal and that it is being protected by the dams. At the beginning of the Dragon's tail is the star *al-dhik*, "the male hyena". In Ulugh Beg we find the readings *al-awḥ'idh* "the lute-player" and *al-rāḥ* "the dancer" (this also in Wüstenfeld's text); these seem to have no further authority and are easily explained as misreadings of *al-awḥ'idh* and *al-rāḥ*.

(J. KUSKA)

TIPŪ SULTĀN, the son of Haidar 'Alī [q.v.] of Maṣūr, was born in 1753. His father employed him in many military operations, and on one occasion, in 1771, when he and his troops were not found where they were expected to be, publicly indicted on him a most unmerciful beating. On his father's death, on Dec. 7, 1783, he succeeded to the throne of Maṣūr, and in 1784 he concluded peace with the British, with whom his father had been at war. In 1785 war broke out between Tipū and the Marāṭhā Pishwā, who was joined by Nizām 'Alī of Haidarābād, but in 1787 Tipū took alarm at some military reforms introduced by Lord Cornwallis and made peace with his opponents. He was a bitter enemy of the British, and was known to be secretly in communication with the French at Pondicherry, and in 1788 he attacked the Rājās of Travancore, who was under British protection. The Rājās appealed to the British for aid, and in 1790 Lord Cornwallis entered into an alliance with the Pishwā and Nizām 'Alī and declared war against Tipū. The operations in that year were futile, and in 1791 Lord Cornwallis took the field in person, but was disappointed by his allies. In the following year, however, he attacked Seringapatam, Tipū's capital, and compelled Tipū to submit, to cede half his territories, and to pay an indemnity of three millions sterling. In 1798 it became known that Tipū had received French envoys, and had been admitted, under the title of "Citizen Tipū", as a citizen of the French Republic. Lord Mornington, now Governor General, demanded an explanation, but Tipū refused to receive the British envoy, and sent a letter containing lame excuses, and charging the French authorities with

malice and falsehood. In 1799 a British army under General Harris, accompanied by Colonel Arthur Wellesley, Lord Mornington's brother, invaded Maṣūr, and was joined by a force from Haidarābād, while another British force entered the state from the Bombay Presidency. Tipū attempted to oppose the invaders, but was driven back on his capital. He sued for peace, but when he discovered that he would be required to surrender half of his remaining territories and to pay a sum of two millions sterling he resolved to fight to the last. Seringapatam was taken by storm in May 1799, and the corpse of Tipū was found in a gateway.

Tipū spoke Hindustānī and Canarese, and also Persian, after Indian fashion. "From a smattering in Persian literature he considered himself as the first philosopher of the age". The leading features of his character were vanity and arrogance, and, being no judge of character, he was very ill served. His application was intense, and he attempted to carry out in person the whole business of his state, but the task was far beyond the power of any one man, and Tipū was no statesman, and wasted much of his time by the introduction of absurd innovations. He also lacked military ability, and as a soldier his sole virtue was that of physical courage.

(T. W. HAIG)

TIRĀNA, also TIRĀN, capital of the kingdom of Albania, pleasantly situated 400 feet above sea-level in the well cultivated plain at the foot of the Mal' Dajit (5,370 feet) enclosed on three sides (east, south and west) by hills, connected with the Adriatic and its seaport Durazzo by road (25 miles) and soon to be connected by a railway now being built. The town which in 1927 had 12,454, mainly Muslim, inhabitants only attained importance when it was chosen in place of Durazzo as the seat of government of the Free State and later kingdom of Albania. Tirāna is also the seat of the chief Mufti of Albania and with its numerous Muhammadan noble families forms a stronghold of Islam in Albania. It is important in commerce as the market for a large part of lower Albania. Tirāna is usually said to be a foundation of Barkin-zade Sulaimān Pāshā (about 1600) who in memory of his Persian campaigns called it after the Persian capital Tihān of which Tirāna is a corruption. This statement (cf. A. Degrand, *Souvenirs de la Haute Albanie*, Paris 1901, p. 205 sqq.) is not worthy of credence because as early as 1572 "*il borgo di Tirana*" is mentioned (cf. M. v. Saffay, *Städte und Burgen Albanien*, in *Deutscher. Ak. Wien*, LXIII/1, 1924, p. 35). It is certain that Tirāna was of no importance in earlier times, in comparison with the adjacent Krūya. On Sept. 2, 1477, in the plain of Tirāna the Venetian provveditore Francesco Contarini with 2,500 cavalry and Albanian infantry fought the Turks in a battle which ended disastrously for him (cf. J. v. Hammer, *G.O.R.*, ii. 151). Later the place passed into the possession of the powerful family of Toptan from Krūya, who established themselves here through marriage at the end of the xviiith century. Their most celebrated member was Kāpian Ahmad Pāshā (c. 1800) who was given large estates round Tirāna for his services to the

Sultān in the war against Kara Mahmūd Paşa Bushatli of Scutari (Albania). The whole plain of Tirāna still belongs to the Toptan family. There are very few memorials of older times in the town. The most important are the mosques of Hādīdj Edhem Bey, a descendant of the above mentioned Sulaimān Paşa, the Aḡāḡ Džāmī'i, and a mosque founded by Sulaimān Paşa in 1605 with his *türbe* beside it. On the S.E. side of the town, surrounded by very old cypresses, is a quadrangular open space called *Namāzga* on which the Muslims assemble to worship together at the feast of Bairam. In 1830 Tirāna suffered a good deal during the civil war. The Muslim inhabitants of the town until quite recently were reputed to be very fanatical.

(F. BABINGER)

TIRĀZ. The word is borrowed from the Persian and originally means "embroidery"; it then comes to mean a robe adorned with elaborate embroidery, especially one ornamented with embroidered bands with writing upon them, worn by a ruler or person of high rank; finally it means the workshop in which such materials or robes are made. A secondary development from the meaning "embroidered strip of writing" is that of "strip of writing", border or braid in general, applied not only to inscriptions woven, embroidered, or sewn on materials, but also to any inscriptions on a band of any kind, whether hewn out of stone, done in mosaic, glass or faience, or carved in wood (cf. e. g. al-Makrīzī, *Kitaḡ*, II, 79, 212, 407). The name *tirāz* then becomes the special name for the inscriptions officially stamped upon the rolls of papyrus in the factories for papyrus with ink, sometimes in colours (red, green) and is next used for the factories themselves. The two last meanings are limited to a few occurrences (cf. J. v. Karabacek, *Die arab. Papyrusprotokolle*, p. 8 sq.; A. Grobmann, *Corpus Papyrus Raineri*, I/II, N^o. 175 [p. 170], 204 [p. 200], 214 [p. 209], 265 [p. 239], 270 [p. 242]); when papyrus ceased to be made about the middle of the tenth century A.D. these two meanings of *tirāz* disappeared.

Cloths, curtains and garments with inscriptions embroidered, woven or stitched on them may be divided into two classes, distinguished by the contents of the inscriptions and the rank of the wearer. One class expresses the whims of private individuals, the height of which is reached in the inscriptions, collected in the *Kitaḡ al-Muwaḡḡiḡ*, p. 167 sq., with which dandies and ladies of fashion liked to adorn their robes; the other is of an official character and may to some extent be compared with our orders and decorations. Such scrolls ran, either along the border, sometimes arranged in two, or even more, strips around the upper garment or were placed around the neck, around the sleeves, on the upper arm or wrists

and even on the headdress. They were used not only as ornamental borders but were also put in the pattern of the material. The breadth varied considerably and while J. v. Karabacek (*Suḡand-ḡhird*, p. 84 sq., note 56; *Papyrusprotokolle*, p. 26) gives breadths of from 2 to 55 centimetres, this does not exhaust all the possibilities; on fragments of material from Egyptian graves, *tirāz* borders of less than a centimetre in breadth have been found.

Ibn Khaldūn is very well informed about the institution of the *tirāz*; according to him, the majesty of the ruler found expression in his name or the royal badge (*'alāma*) being put in the border (*tirāz*) of the materials, which were used for his robes of silk or brocade, and the inscription was worked into the web of the material with gold thread or bright coloured yarn, which stood out against the background of the material. The royal robes were thus distinguished to mark out the royal wearer, or him who received the garment from the ruler as a mark of special favour, to show him honour or appoint him to one of the higher offices in the kingdom. Under the Umayyads and 'Abbāsids the cloth mills which worked for their wardrobe were housed in their palaces and called *Dār al-Tirāz*.

They were under the control of an official called *Ṣāhib al-Tirāz*, whose duty it was to supervise the activities of the workers, the machinery and the weavers and to see that they were paid and that everything went smoothly. Only men of high rank and trusted individuals among their freedmen were given this office; the same arrangements were in vogue under the Umayyad caliphs in Spain and their successors, under the Mamlūk sultāns in Egypt, and their contemporaries among the Persian kings in the east. It was only with the decline of the great Muslim empires that this system came to an end.

Ibn Khaldūn's statements, which are in the main followed here, find ample corroboration in the finds of Muslim textiles which have been made at different places in Egypt (notably Aḡhimim, Antinoë, Erment, al-'Aḡm near Asyūt) and preserved in the museums in Berlin (Schlossmuseum, Kaiser-Friedrich-Museum, Kunstgewerbemuseum), Leningrad, Paris (Louvre and Musée de Cluny), London (Victoria and Albert Museum), Vienna (Österreichisches Museum für Kunst und Industrie and Sammlung Papyrus Erzherzog Rainer in the National Library) and in many private collections, as well as in the rich stores of textiles found all over Europe in churches and monasteries. Ibn Khaldūn's information is obviously based on his own experience, for the inscription in these textiles does actually, without exception, stand out in bright colours from the background: e. g. the pieces of linen, Inv. Ar. Lin. N^o. 11 and 19 of the Rainer collection in Vienna show a border of writing embroidered in red silk (N^o. 19 reproduced in J. v. Karabacek, *Führer*, p. 228 and do., *Papyrusprotokolle*, p. 38). In Inv. Ar. Lin. No. 18 of the same collection, on the other hand, the *tirāz* inscription stands out from the background and is embroidered in black silk; in the fine brocades it is often woven in gold thread. The texts of the surviving inscriptions also fully confirm Ibn Khaldūn's statements. In the first place as to the names of the rulers, we find various examples of these occurring alone on textiles. A green silk

damask from al-ʿAḡm in the Victoria and Albert Museum, Inv. N^o. 769—1898 (Guest, N^o. 9, p. 395 sq.; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 39) has the inscription *Nāṣir al-Dunyā wa ʿl-Dīn Muḥammad b. Kaṣṣūn*; a piece of linen embroidered with red silk in the Leningrad Museum has the name of the Fātimid caliph *al-ʿAzīz bi-llāh* (365–386 A.H.; A. R. Guest, *J.R.A.S.*, 1918, p. 263, No. 1). The name of the ruler in addition to his usual titles, is frequently accompanied by auspicious formulae, as Ibn Khaldūn also tells us (cf. below); thus, a piece of linen in the Kaiser-Friedrich-Museum, the inscription of which I copied in 1924, has the inscription woven in red and enclosed in a white border: *Bismillāh al-Rahmān al-Rahīm, Baraka min Allāh wa-karāma li ʿl-Ḳhalifa ʿAbd Allāh al-Muḥṣi bi-llāh Amir al-Muʾminīn, aḡala Allāh baḡḡahu*. "In the name of God, the Merciful, the Compassionate. The blessing of God and grace upon the Caliph ʿAbd Allāh Muḥṣi bi-llāh, the Commander of the Faithful, whom may God long preserve" (cf. E. Kühnel, *lit.*, xiv. 83). On a steel-blue piece of silk in the Arab Museum in Cairo, which has a pattern of blue-grey tendrils and lotus flowers, the latter has as a border: *ʿIsa bi-Mawlānā al-Sulṭān al-Malik al-Nāṣir Nāṣir al-Dunyā wa ʿl-Dīn Muḥammad Kaṣṣūn* "Glory to our Lord, the Sulṭān, the King al-Nāṣir, the Protector of the World and of Religion, Muḥammad Kaṣṣūn" (cf. Herz-Bey, *Catalogue raisonné*, p. 272 and fig. 51; Falke, *Seidenweberei*, II, fig. 366; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 41 and Pl. xii, 957). On the Danzig textile with parrots, apparently woven in China, which was made for Sulṭān Muḥammad b. Kaṣṣūn (d. 1340 A.D.) there is on the wings of the parrots: *ʿIsa bi-Mawlānā al-Sulṭān al-Malik al-ʿAdil al-ʿAlim Nāṣir al-Dīn* "Glory to our Lord, the Sulṭān, the just, wise King Nāṣir al-Dīn" (cf. O. v. Falke, *Seidenweberei*, II, fig. 334; J. v. Karabacek, *Die liturg. Gewänder*, p. 141). On the piece of satin in the South Kensington Museum published by O. v. Falke, *Seidenweberei*, II, fig. 368; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 46, there is in the mandorla arranged on a coat of arms on either side, running to right and to left: *ʿIsa bi-Mawlānā al-Sulṭān al-Malik* and in the four rosettes, alternately to right and to left *al-Aḡraf*. The material is ascribed to the Mamlūk Sulṭān al-Malik al-Aḡraf Kaṣṣūn-bey (1468—1496 A.D.). Such conventional formulae sometimes take up a good deal of space in the *tirāz*. On the fragment of a linen robe with woven borders and coloured silk from Erment, published by Guest, *J.R.A.S.*, 1906, p. 392 sq. (South Kensington Museum, Inv. N^o. 1381—1888; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, S. 10), we have the following text: *Bismillāh al-Rahmān al-Rahīm, la illāh illa ʿllāh, Muḥammad Rasūl Allāh, ʿAlī Wālī Allāh ʿal. . . al-Mustanzir bi ʿllāh Amir al-Muʾminīn, Salawāt Allāh ʿalaihi wa ʿala Abi ʿihi [al-ahramīn] al-fāḡirīn wa-abnā ʿihī al-mustanzirīn*. "In the name of God, the merciful, the compassionate. There is no god but Allāh, Muḥammad is the Messenger of God, ʿAlī is the vice-regent of God. . . al-Mustanzir bi-llāh, Commander of the Faithful, God's blessing upon him and his ancestors (the most noble), the pure and his sons, the expectant".

Sometimes, in addition to such conventional formulae, the name is given of the place of manu-

facture and of the vizier or other official in charge of the treasury or of the *tirāz*-factory; more rarely the name of the artist who made the cloth is given. Thus the narrow fragment of linen, Inv. Ar. Lin., N^o. 19 in the Rainer collection in Vienna has the following inscription embroidered on it in red silk: *[Bismi ʿllāh al-Rahmān al-Rahīm, Baraka min Allāh, Nʿma wa-Salāta li-ʿAbd Allāh Djaʿfar al-ʿImām al-Muḥṭadir bi ʿllāh Amir al-Muʾminīn, aḡala Allāh Baḡḡahu, mimnā amara al-Wazīr Abū Aḡmad al-ʿAbbās b. al-Ḥasan* "In the name of God, the Merciful, the Compassionate. The blessing of God, grace and good fortune upon the servant of God, Djaʿfar, the Imām al-Muḥṭadir bi-llāh, the Commander of the Faithful, whom may God long preserve. [This is part] of what the vizier Abū Aḡmad al-ʿAbbās b. al-Ḥasan has ordered. . ." (cf. J. v. Karabacek, *Papyrusprotokolle*, p. 38). One of the most important *tirāzes* in the collection of textiles in the Arab Museum in Cairo, found in al-Faṣṭāṭ (cf. Herz-Bey, *Catalogue raisonné*, p. 271; E. Kühnel, *lit.*, xiv. 83) bears the following inscription: *Bismi ʿllāh, Baraka min Allāh bi-ʿAbd Allāh al-Amin Muḥammad Amir al-Muʾminīn, aḡala Allāh Baḡḡahu; mimnā amara bi-Sanʿatili fī Tīrāz al-ʿAmra bi-Majr ʿala Yaḡal al-Faḡl Im al-Rabī Mawlā Amir al-Muʾminīn* "In the name of God. The blessing of God upon the servant of God, al-Amin Muḥammad, the Commander of the Faithful, whom may God long preserve. [This is part] of what he ordered to be made in the public factory in Miṣr (al-Faṣṭāṭ) through al-Faḡl b. al-Rabī, the freedman of the Commander of the Faithful". Al-Faḡl b. al-Rabī, born 140 A.H., died 208 A.H., was according to Ibn Taghribirdī (I. 598), chamberlain and vizier of the caliph Ḥārūn al-Raḡid; after the latter's death, he took possession of the storehouses (*ḡazāʾin*) and handed them over to his successor designate, al-Amin in Baghdad, at the same time bringing him the insignia of the ruler—the cloak, the staff and the signet ring—for which al-Amin showed him marks of honour and entrusted him with the management of his affairs. In his capacity as Amin's vizier, he had also to see to the manufacture of the textiles intended for the caliph, as we learn from the above *tirāz*. He is also mentioned in the *tirāz* of two curtains (*ḡirwa*) for the Kaʿba mentioned by al-Maḡristī, *Aḡḡat*, I. 181, 226 (cf. J. v. Karabacek, *Papyrusprotokolle*, p. 35 sq.). In this connection, we may also mention a piece of linen from Sāmarrā with an inscription embroidered in red silk (cf. E. Kühnel, *lit.*, xiv. 87 and fig. 3) which reads: *Baraka min Allāh bi-ʿAbd Allāh al-ʿImām al-Muʾtamid ʿala ʿllāh Amir al-Muʾminīn, aḡadahu Allāh; mā ʿamila bi-Tinnis ʿala Yaḡal Yaḡal Mawlā (ʿ)mir al-Muʾminīn*; also a piece from Akhmīm, like the preceding, now in the Kaiser-Friedrich-Museum in Berlin (E. Kühnel, *op. cit.*, p. 85, fig. 2) with quotations from the *Qurʾān* in the centre and above and below: *[Bismi ʿllāh]h. Baraka min Allāh bi-ʿAbd Allāh Ḥārūn Amir al-Muʾminīn and Sanʿat Marwān b. Ḥudī(?)*. Finally we may mention a *tirāz* inscription of the 12th century A.D. on a Sicilian Saracenic fabric in F. Fischbach, *Ornamente der Gewebe*, pl. 144, 145 (the so-called cloak of the emperor Henry VI in Regensburg). On the two central stripes is the inscription *al-ʿIsa wa ʿl-naḡ wa ʿl-ḡal* ("Glory and victory and good fortune"); in the centre of an eight-rayed star: *ʿamila ustād*

'Abd al-'Aziz "manufactured by the craftsman 'Abd al-'Aziz" (cf. also A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 66).

The text of the tiraz inscriptions however very often consists only of the conventional title of the ruler without his name, accompanied, or not, by certain auspicious formulae, or of the latter alone. A few examples will suffice here. On the brocade in the Ducal Museum in Brunswick several times repeated and divided by rosettes is the inscription 'Is li-Mawlānā al-Sulṭān, ḫalāda Mulṭukū (O. v. Falke, *Seidenweberei*, ii., fig. 342). On a piece of silk in the Arab Museum in Cairo we find: 'Is li-mawlānā al-sulṭān, 'azza najrūku (cf. Herz-Bey, *Catalogue raisonné*, p. 272); on a piece of silk textile in the Victoria and Albert Museum in Guest, *J. R. A. S.*, 1923, p. 405 (A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 40): 'Is li-mawlānā al-sulṭān al-malik al-naṣir; on a piece from Granada in the same museum, continuously: 'Is li-mawlānā al-sulṭān (O. v. Falke, *Seidenweberei*, ii., fig. 372). The well-known specimen in Brussels of the 15th century A. D. in O. v. Falke, *Seidenweberei*, i., fig. 172, shows, on the wings of the birds on either side, the inscription: al-'is al-dā'im wa 'l-qabr wa 'l-dawla li-ṭāhībiki. Only a portion of this formula, al-'is al-dā'im, is found on the textile woven in Syria or Egypt, Inv., No. 1235—1864 of the Victoria and Albert Museum in Guest, *J. R. A. S.*, 1918, p. 264; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 44 (xth—xvth century A. D.). The already mentioned formula al-'is wa 'l-najr wa 'l-iḥbāl often occurs alone (cf. O. v. Falke, *Seidenweberei*, also ii., fig. 338, 339, 340, 342; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 66 and pl. 21). The wish *najr min Allāh* "victory from God" is found on several textiles in the same Museum in Guest, *J. R. A. S.*, 1906, p. 398, No. 12—15 (A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 14); the formula al-'is laka al-iḥbāl al-maḥḥid "The glory be Thine, the fortune, the splendour" is found embroidered in red silk on a piece of linen with a coat of arms in the Arab Museum in Cairo (Herz-Bey, *Catalogue raisonné*, p. 274). The conventional title of the ruler is found on a textile in the Kaiser-Friedrich-Museum in Berlin with pairs of griffins; in the circles of the braided border we have: al-'ādil al-'ālim al-'āḥil, in the central bars of the circles of the compartments, arranged like a coat of arms: al-sulṭān al-muḥaffar (O. v. Falke, *Seidenweberei*, ii., p. 63 and fig. 363), on a textile in Danzig (xivth century A. D.): al-sulṭān al-'ālim (O. v. Falke, *Seidenweberei*, ii., fig. 358, 359). On a piece of Spanish silk in the Kunstgewerbemuseum in Berlin in O. v. Falke, *Seidenweberei*, ii., fig. 377, we have the title al-sulṭān al-malik; on a patterned textile in the Arab Museum in Cairo we find al-sulṭān embroidered in silk thread (Herz-Bey, *Catalogue raisonné*, p. 273 sq.). In conclusion we may remind the reader of the pious formulae, which often make up the entire tiraz inscriptions. Thus on the Maastricht specimen, with the lion, we have on the lion's breast: [al-mu]ḥ li-llāh (O. v. Falke, *Seidenweberei*, i., fig. 153); others have the formulae al-amr li-llāh, which means the same thing (*ibid.*, i., fig. 187, 191). A much used formula is al-baraka al-ḥamīla (arranged as in a coat of arms on right and left in O. v. Falke, *Seidenweberei*, i., fig. 205) or baraka alone (*ibid.*, i., fig. 202). On a textile

in the South Kensington Museum (Inv., No. 613—1892) in Guest, *J. R. A. S.*, 1906, p. 399 (A. F. Kendrick, *Catalogue etc.*, p. 18) is the formula *mā ḥṣa 'llāh ḥana* "What God wills is done", in addition to a series of other formulae, which have only survived in fragments but are known on other textiles in the same collection (*ibid.*, p. 396 sq.). The finest specimen of the kind however is probably that in the Musée de Cluny (Inv., No. 6526 found in Bayonne) which shows a portion of the symbol of Islam in letters, a span wide, beautifully woven. Occasionally these inscriptions are abbreviated by the omission of some letters (cf. J. v. Karabacek, *Die liturgischen Gewänder*, p. 142 sq.). It may further be mentioned that dated inscriptions are found among the tirāzes; for example the piece published by Guest, *J. R. A. S.*, 1918, p. 407 from the Engel-Gros collection with *baraka* and date 448 (cf. A. F. Kendrick, *Catalogue etc.*, p. 10, No. 861 and pl. 6); another with the name of the caliph al-Mu'taḍid of the year 282 in the South Kensington Museum was also published by Guest (*J. R. A. S.*, 1906, p. 391; cf. A. F. Kendrick, *Catalogue etc.*, p. 35; G. Salles and M. J. Ballot, *Les Collections de l'Orient Musulman*, p. 74).

It has already been pointed out that the tiraz bands with inscriptions correspond in a way to our orders and decorations. The presentation of garments adorned with them was a sovereign right of the crown, as much as the right of coinage. The custom of presenting such robes is certainly a very ancient one in the East. The Pharaohs used to give their faithful servants robes of honour, in addition to golden neck-rings and other valuable presents. It was under Islam that the custom first attained great proportions. Not only was the decree appointing high officials of the state usually accompanied by a robe of honour, but the officials also received, at least once a year, a robe of honour and, at the court of the Mamlūk Sulṭān, the Mamlūks and high officials of state used to receive a robe corresponding to their rank, twice a year, in winter and in summer (cf. A. v. Kremer, *Kulturgeschichte*, ii. 220—23; Kalkashandi, *Subḥ al-'aḥḍā*, iv. 55). According to Ibn Ḍjūbair, *Nikla*, p. 94, the dress of the preacher in the principal mosque in Mecca — and no doubt of the other large mosques also — consisted of a black robe trimmed with gold and a similar piece of cloth wound round the head, with a turban cloth of fine *ḥarḍ* linen; it was given to the preachers of the empire from the caliph's own stores, so that it was an official dress, given by the ruler. The robes of the emirs, which they wore on state occasions, were of course more gorgeous. Those of the Fātimids consisted of materials from Dabīq with head-dresses with golden tiraz borders, which were given to the emirs from the Caliph's stores (*Dār al-Kirwā*) (Makrid, *Kāḥḥat*, i. 409, 427, cf. 440). Kalkashandi, *Subḥ al-'aḥḍā*, iv. 52 sq., tells us that part of the dress of honour of the emirs was a turban cloth with the name of the sulṭān embroidered on it and the robes themselves had similar inscriptions.

It was only natural that the caliphs should lay great stress on this important prerogative of the crown and take every precaution to prevent abuses. What importance was given to the tiraz and its preparation is evident, for example, from the fact that in Hārūn al-Rashīd's will (186 A. H.), in the

portion dealing with the allotment of the province of Khurāsān to al-Ma'mūn, the *tiraz*-factories (*ṭarāz*) are specifically mentioned alongside of the *kharrāj*, the post and the treasuries (cf. al-Aṣṣāḥī, *Al-Bihar Makka*, p. 162, 166). The mention of the ruler in the *tiraz* is a mark or sign of his sovereignty as in the *khawṣa* and, when al-Ma'mūn rebelled against his brother al-Amin, the first thing he did was to omit the caliph's name from the *tiraz* inscriptions (Ibn Taghribirdi, *al-Nuḡūm al-sāhira*, i. 544; cf. further passages in J. v. Karabacek, *Papyrusprotokolle*, p. 25). When a successor was designated, his name was put into the *tiraz* inscriptions (J. v. Karabacek, *loc. cit.*); this applies not only to the inscriptions on textiles and on robes of honour but also to those on rolls of papyrus (cf. *Corpus Pap. Raineri*, iii, vol. 1/2, No. 150, 158, p. 145 sq., 153 sq.). But while, in the latter case, the vizier is often mentioned in the protocol, it seems very rare and to be a special distinction for the name of the vizier to be put in the *tiraz* inscriptions of robes of honour. The Fāṭimid al-ʿAzīz bi'llāh, for example, put the name of his vizier Ya'qūb b. Yūsuf b. Killis (d. 380 A.H.) in the *tiraz* inscriptions (al-Maḥṣīn, *Kharrāj*, ii. 6, 12, 284 ult.). Similarly the Fāṭimid caliph al-Musta'li bi'llāh (1094—1101 A.D.) allowed his vizier al-Aḥḥāl to be mentioned in the *tiraz*, as we learn from the *tiraz* inscription on a textile in the Vatican library (cf. J. v. Karabacek, *Papyrusprotokolle*, p. 39), but, in this case, the name of the vizier is followed by the additional words "in the name of the Imām" so that the sovereignty of the ruler is fully guarded. Later, it is true, high officials kept their own *tiraz* establishments. Thus 'Alī b. Aḥmad al-Rāṣiṭ (d. 301 A.H.), who was governor of all the territory between Wāsiṭ and Dīwandīsbūr on the one hand and Sūs to Shabrazūr on the other, maintained no less than 80 *tiraz* factories, in which cloth for his own use was woven (Ibn Taghribirdi, *al-Nuḡūm al-sāhira*, ii. 192; A. v. Kremer, *Kulturgeschichte*, ii. 293) and on a piece of silk from Egypt (xi—xiii century A.D.) in the Victoria and Albert Museum (Guest, *J. R. A. S.*, 1906, p. 394; A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 43 sq.) we find *al-sayyid al-ʿadīl Yūnus al-Dawla Abū Yūnus, ʿafāla Allāh baḥāʾahu*, "The most glorious lord Yūnus al-Dawla Abū Yūnus, may God give him long life"; on the splendid piece of silk in the Louvre, published by G. Migeon, *Syria*, iii. (1922), p. 41—43, we have *ʿiz ʿazīz al-ḥal li 'l-Kāʾid Abi Manṣūr Naḍīṭakīn, ʿafāla Allāh baḥāʾahu*.

The sovereign rights of the caliph however did not find expression only in the inscriptions of the *tirāzes* on garments. The right of covering the Ka'ba with a *kiṣwa* originally belonged exclusively to the caliph (al-Kāḥṣhandī, *Subḥ al-A'ḥḍā*, iv. 57). The 'Abbāsids sent such *kiṣwas* every year from Baghdad to Mecca — they were often manufactured in Egypt — then this duty passed to the rulers of Egypt. In Kāḥṣhandī's time, the *kiṣwa* was woven in the Mashhad al-Husain of black silk with an inscription in white; at the end of the reign of Zahir Barkūk with a yellow inscription gilt with gold. A collection of the inscriptions on these *kiṣwas* has been made by J. v. Karabacek (*Papyrusprotokolle*, p. 35—39). According to these inscriptions, the *kiṣwas* were made either by direct orders of the caliph to the governor and at the direction of the latter's financial sec-

tary, who was directly in charge of the *tiraz* establishment, or the order to make them was given by the caliph's vizier (cf. above). It is worth noting that among the texts given by Karabacek is the *tiraz* of an 'Alid rebel in the reign of al-Ma'mūn (*op. cit.*, p. 37 sq.). We may here also briefly mention the dedication which the Fāṭimid al-Mu'izz had placed in 353 A.H. upon the variegated silk tapestry described by al-Maḥṣīn, *Kharrāj*, i. 417, 12 sq. (see also J. v. Karabacek, *Über einige Benennungen mittelalterlicher Gewebe*, p. 33). The formulae are in many cases those usual on textiles, as are to be expected from al-Kāḥṣṣ's observations quoted in al-Baiḥaqī, *Kiṣab al-Maḥṣīn wa 'l-Maṣūf*, p. 499. Special attention must be drawn to the fact that there are undeniable connections between the so-called heraldic inscriptions (Schriftwappen) of the Mamlūk sultāns (see L. A. Mayer, *Das Schriftwappen der Mamluken-sultane*, *Jahrb. d.asiat. Kunst*, 1925, p. 183—187) and various regular formulae of the *tiraz* inscriptions, e.g. the frequently recurring *ʿiz li-mawlānā al-sultān al-malik etc.*, *ʿazza naḥnu*.

The frequent heraldic-like arrangement of short formulae, such as *al-baraḥa al-kāmila*, which are placed together, one to the right and the other to the left, as animals are arranged in a coat of arms (cf. the double-eagle), suggests a kind of heraldic development of these formulae in the *tiraz* also, especially as the title of the ruler sometimes is placed in a cartouche on textiles or in the central bar of the encircling shield which is like a coat of arms (see O. v. Falke, *Seidenweberei*, ii. fig. 363 and above). We have already referred above to the fact that the preparation of the cloth and garments required for the use of the court and the high officials, to which may be added the covering for the Ka'ba was not left to private hands, but to state factories, which must frequently have been on a very large scale. Egypt took the first place for linen and to a considerable extent for silk also. The linen weaving was mainly concentrated in the Delta: Tinnis, Tinn, Damietta, Shajā and Alexandria were the principal centres of its manufacture; in addition there were Dabik, Banḥā, al-Farama, and Dumaira (in the district of Shirbin, not Damira, as Jaubert says). Tinnis, like Damietta, produced fine linens in the style of what were known as *dabik* and *ḥarb* linens, as well as materials for covering furniture in bright patterns (Yāqūt, *Muḥḍam*, i. 882). These materials fetched high prices and a robe with gold embroidery was sold for 1,000 dinārs, one without embroidery for 100 to 200 dinārs (Idrīsī, i. 320). In Tinnis, where there were 5,000 looms, there was according to Ibn 'Abd Rabbihi, *ʿIḥṣā*, iii. 362, a factory working for the caliph, which is confirmed by the inscriptions given by al-Maḥṣīn, *Kharrāj*, i. 181, for coverings for the Ka'ba manufactured there (cf. J. v. Karabacek, *Papyrusprotokolle*, p. 35) as well as by the textile above mentioned from Sāmarrā. Nāṣir-i Khusrāw, according to whom Tinnis mainly made the coloured *ḥajab* stuffs used for turbans, caps and women's dresses, tells us that the material made in the sultān's workshops was not disposed of to private individuals. A Persian prince had sent 20,000 dinārs to Tinnis to procure a garment of this precious material, which however was reserved for the use of the crown, so that his agents could get nothing. A speciality of Tinnis was the *ʿandana* intended for the personal use of the caliph, a

garment that came complete from the loom and had not to be cut or stitched (cf. Herz-Bey, *Catalogue raisonné*, p. 266—268; A. Mez, *Die Renaissance des Islams*, p. 433). The export of the materials produced in Tinnis was considerable and down to the year 360 A. H. reached a value of 20—30,000 dinars annually. The village of Tūna, which belonged to the administrative district of Tinnis, made the same kind of stuffs and also kiswas for the Ka'ba (al-Makrizi, *Khitat*, i. 181; J. v. Karabacek, *op. cit.*, p. 36). There was a tiraz factory here also. Damietta produced not only the same linens as Tinnis — but white in colour — but also gold brocade and the material known as Balchan (*balḥan*) ('Alī b. Dawūd al-Khaṭīb al-Djāwharī, MS. A. F., No. 282, fol. 69a; cf. also A. v. Kremer, *Culturgeschichte*, ii. 289) and other textiles. Shatā also made kiswas and the stuffs known as *Shatāwī* (al-Makrizi, *Khitat*, i. 226, 3 seq.). Of the former we are told that they were made in a tiraz factory which belonged to the state, as we know from the kiswa inscription given by al-Makrizi (cf. J. v. Karabacek, *Papyrusprotokolle*, p. 36); as to the latter this is not definitely known. In a papyrus in the Rainer collection (No. 849 in the *Ausstellung*; cf. J. v. Karabacek, *Führer*, p. 227) in line 6 there is a reference to a braided head-cloth from Shatā (*mandil shatāwī ma'lam*) worth 20 carats of gold. This price must be considered fairly high, as those of Shatā and Dabkū (Dabkū) and Damietta were not so fine as those of Tinnis (Idrisi, p. 320). The work done here by Copt weavers was under strict state control (al-Muḥaddasī, *B. G. A.*, iii. 213; cf. A. Mez, *Die Renaissance des Islams*, p. 118; C. H. Becker, *Islamstudien*, p. 184) which began the moment the weaver began to work the stuff in his loom. An official stamp had at once to be placed upon it. What these were like we know from the red stamp on the piece of linen, *Inv. Ar. Lin.*, No. 1 in the Rainer collection with the inscription *al-Malik al-Mu'izz* (cf. *Corpus Pop. Raineri*, iii. *Ser. Arab.*, i/i, p. 59 sq. and fig. 2). It could only be sold through brokers appointed by the state and a government official had to keep a record of all transactions; only when this had been done, was the cloth given to one workman, who folded it up, then to another who wrapped it in a packing, made of bast (*ḥiḥr*, perhaps the coarse papyrus packing is meant), then to a third who did it up in bales and finally to a fourth, who tied these up; each of these men received a definite fee. The bales were then taken to the gate of harbour and here also a charge was made and each man put his mark on the bale. The whole process does not very much suggest that we have a state factory here. In the Delta at least, we seem rather to have an industry conducted in private houses, probably alongside of the state factories. The lot of the workmen — women spin and men wove and the workrooms were rented by them — was wretched; the half dirhem, which was the daily wage, was not sufficient for the minimum necessities of life. Wages throughout Egypt, however, were very low. Silks and brocades along with the fine shurb linens were mainly made in Alexandria, also however in Tinnis, Damietta and Shatā (cf. A. v. Kremer, *Culturgeschichte*, i. 353) which even in Roman times was celebrated as a silk-weaving centre and where the Byzantine court had a gynaeceum. While the quality of the material under Muslim rule was

at first not so fine as in the earlier period, in the viiith and ixth centuries Alexandria was supplying Byzantium and the Pope in Rome (O. v. Falke, *Seidenweberei*, i. 48, 51, 110); and several popes used beautiful stuffs with the horseman pattern as gifts to churches. The state factories in Tinnis, Alexandria and Damietta worked mainly for the wardrobes of the Fātimid caliphs (al-Makrizi, *Khitat*, i. 413; al-Kāḥkashandī, *Ṣubḥ al-A'ḥḥā*, iii. 476; F. Wüstenfeld, *Geographie*, p. 175 sq.) and their successors, and Abu 'l-Fida', *Ta'rikh al-Khams*, iv. 101 mentions that the *Dār al-Tirāz* in Alexandria worked for the ruler's private requirements (*li 'l-Khāṣṣ al-ḥarīf*) (cf. J. v. Karabacek, *Die liturgischen Gewänder*, p. 195). Dabkū, which produced the curtains which were used to drape the throne of the Fātimid Caliphs on ceremonial occasions (al-Kāḥkashandī, *Ṣubḥ al-A'ḥḥā*, iii. 499), was celebrated for its linens and turban cloths. Dabkū textiles are frequently mentioned in literature, notably in al-Makrizi. The manufacture was an old established one here; a richly embroidered sash of the Coptic period in the Austrian Museum has within the border the inscription

TIRAZ, the Coptic name of the town (cf. J. v. Karabacek, *Die Theodor Graf'schen Funde*, No. 427). Of the manufacturing town of Banḥā we know little more than the name. The fragment of a silk tiraz embroidered in black from the Rainer collection (*Inv. Ar. Lin.*, No. 18) published by J. v. Karabacek, *Papyrusprotokolle*, p. 39, has the inscription [*ḥadḥā minnā aḥmarā bi-umī fī firāz al-khāṣṣa Banḥā*] [this is part of what was ordered to be made in the factory of the royal property of Banḥā]. Here then we have the case of a silk factory, which supplied the caliph only, and was state property. We also know the name of the place from papyri. Besides the Faiyūm in Upper Egypt, al-Ushmūnān was celebrated for its manufacture of textiles (cf. al-Istakhri, *B. G. A.*, i. 58; Ibn Hawqāl, *B. G. A.*, ii. 105; al-Idrisi, i. 124; A. v. Kremer, *Culturgeschichte*, i. 353) as was Takḥā, where woollen goods were made (cf. A. Mez, *Renaissance des Islams*, p. 432). Al-Bahnāsā occupied a special position; in it, according to al-Idrisi, i. 128, valuable materials were produced which bore the name of the town and were used for making garments for the ruler and high officials; ordinary kinds were also made. The lengths of stuff, which was made in pieces of about 30 ells, cost 200 dinars the pair. Every piece of cloth, whether woollen or cotton, cheap or dear, bore the name of the quality, so that the purchaser could know what he was buying. As to prices, we get some information from a papyrus in the Rainer collection (*Ausstellung*, No. 849), according to which a long turban cloth from Bahnāsā (*mandil bahnāsī ṭawīl*) cost 1 carat of gold. Idrisi, unfortunately, does not tell us whether the stuff intended for the court came from a tiraz factory or from a private firm. A *firāz sa'id* is mentioned in 'Alī b. Dawūd al-Khaṭīb al-Djāwharī, A. F., No. 282, fol. 91a, but it is not stated where in Upper Egypt this state factory was. Two papyri in the State Library in Cairo (*Inv.*, No. 96 and 103) assist us on this point, for a certain Rimāh b. Yūṣuf is described in them as *al-Mutawakkil bi-Tirāz Uṣhmūn wa-Anṣinā*. The man was therefore manager of the tiraz factory of Ushmūn and Anṣinā, and managed them both together, in which connection it may

be noted that the two originally separate *kūra's* of this name were later combined into one (cf. C. H. Becker, *Papyri Schott-Reinhardt*, i. 20). In Cairo (al-Fustāt) under the 'Abbāsids, there was already a public *tirāz* workshop (*tirāz al-'amma bi-Maṣr*) as we know from the already mentioned piece of cloth in the Arab Museum in Cairo. The *'amma* is here apparently contrasted to the *khayma*, which means a factory which worked only for the caliph. This does not mean that in al-Amin's time the Cairo factory had become a purely private concern; it can quite well have been a state undertaking, which supplied private individuals as well as the court. In no particular case can we see with certainty how the question of ownership stood. We cannot imagine, as it has hitherto been usual to do, following Karabacek, that the crown had exclusive control.

While the Umayyads and 'Abbāsids had already devoted great attention to the manufacture of fabrics with the *tirāz* and to the preservation of the rights associated with them, the importance of such fabrics increased under the splendour-loving Fātimids. The account which al-Maḳrīzī gives, following the very well informed Ibn al-Tuwair (*Khitaṭ*, i. 469), sufficiently shows this. Besides the famous state *Dār al-Tirāz* in Alexandria there was a factory of the same name in Cairo, which was founded under the successors of the caliph al-Aḥiz bi'llāh, in the name of the vizier Abu 'l-Faraj Ya'qūb b. Yūsuf Ibn Killa, who died in 380 (991) and was also called *Dār al-Dibādī*, because silk brocades were made there (al-Maḳrīzī, *Khitaṭ*, ii. 104, 23 sq.). At the head of the administration of these state factories there was always an official of high rank from the judicial or military service, who was held in particular estimation by the caliph. A picked staff was at his disposal for the transport of the products of the *tirāz* factories, as well as the necessary means of transport. When he arrived with the fabrics intended for the royal use, among which were the parasol and the robes called *badla* and *badama* and the ruler's personal apparel, he was received with the highest honours and a steed from the caliph's stables was placed at his disposal for the duration of his stay. His quarters in town were in the Manṣara al-Ḥayzalla on the bank of the great canal, opposite the door of the Djami' Ibn al-Maghribī, which had also fallen into ruins in Maḳrīzī's time, and he received the same hospitality as foreign embassies. When the bales with the precious fabrics were brought in, the superintendent of the *tirāz* presented himself to the caliph, showed him all that he had brought with him, and called his attention to each piece, that went into the caliph's palace through the hands of his chamberlain. When the presentation was over he was given a robe of honour by the caliph at a private audience, — the public being excluded, an honour which was shown only to him — and then returned to his lodging. Only at certain clearly defined times, could he be represented by his son or brother. He held a very prominent position and his salary was 70 dinars monthly, that of his deputy 20. The latter took charge in his stead, when he had to go to deliver the fabrics, and was present as his witness at the packing of the bales. When the parasol and other articles for the personal use of the caliph were brought into the public room of the *Dār al-Tirāz*,

during which ceremony the people present stood up, the superintendent of the *Tirāz* sat in his seat and his deputy carried through his task standing (cf. also al-Kalkashandī, *Subḥ al-A'ṣā*, iii. 476; F. Wüstenfeld, *Geographie*, p. 175 sq.).

As already mentioned, the *tirāz*-factories brought a considerable sum to the state by their valuable products. It is significant that out of the treasures of the towns of Tinnis, Damietta and al-Uḥḥimnain in 363 A. H. under the Fātimid vizier Ibn Killis could pay 200,000 dinars into the treasury in one day (al-Maḳrīzī, *Khitaṭ*, ii. 6) and the expenditure for gold thread was usually 31,000 dinars and under al-Amir bi-Aḥkām Allāh even amounted to 43,000 dinars (*Ibid.*, i. 469). Under the Mamlūk sultāns, conditions seem to have been somewhat altered. At least, Ibn Khaldūn (i. 223) tells us that the fabrics and garments with *tirāzes* were no longer made in their factories and palace-workshops, and were no longer produced by the state in its own buildings but what the state required was simply woven from silk and pure gold in the houses of the weavers.

The institution of royal *tirāz* factories was of course not limited to Egypt. We find them in other lands also. If we turn to the west we find one in Palermo in Sicily. Ibn Djubair, *Riḥla*, p. 329, even records the name of an embroiderer who worked in the *Tirāz al-Malik*, as the royal factory was called. The chief piece of evidence from this factory is still the cloak woven for Roger II in 528 (1133), later the coronation robe of the Austrian Royal Treasury. In its *tirāz* inscription the factory is called *Khayma al-malikiya* (cf. F. Bock, *Kleinedien*, p. 29). This *regium ergasterium* produced finely woven silks down to the thirteenth century A. D. (cf. O. v. Falke, *Seidenweberei*, i. 119, 121). In Spain, Almería, where 800 looms were working in Idrīs's time and valuable brocades, *siḡlātūn* and silver were made in the style of those of Djurdjan and Isfahan, was the principal centre of manufacture, but Murcia, Seville, Granada and Malaga should also be mentioned. In the latter town there was a factory for gold brocade (cf. J. v. Karabacek, *Über einige Benennungen mittelalterlicher Gewebe*, p. 6; M. J. Müller, *Beiträge*, p. 5; F. Bock, *Geschichte der liturg. Gewänder*, p. 39 sq.). In Asia Minor there was a *tirāz* factory at the Saldjuk court; one of its products is the gold brocade of the Lyons Textile Museum, the inscription on the border of which mentions Sultān Kaikubādī, son of Kaikhusraw (1219–1236 A. D.). Marco Polo (cf. O. v. Falke, *Seidenweberei*, i. 106) notes the industry of the Greek and Armenian population of the Saldjuk empire, who made the finest carpets and rich silks. In Syria, Damascus and Antioch were famous for their textiles (O. v. Falke, *op. cit.*, i. 108; J. v. Karabacek, *Die liturg. Gewänder*, p. 196). In the 'Irāk, Baghdad was the most important; its speciality was the white Marw fabrics (Ibn al-Faḳīh, *B. G. A.*, v. 252) but it also made silks and richly embroidered brocades which were celebrated throughout the west as *haldachin* or *braudechin* (O. v. Falke, *op. cit.*, i. 108). Silk-weaving here can be traced back to a colony of weavers from Tustar who settled here at least as early as the middle of the tenth century (J. v. Karabacek, *Über einige Benennungen mittelalterlicher Gewebe*, p. 28). On a piece of silk published by A. F. Kendrick in the *Burlington*

Magazine, xlix, 261—267 is the following *tirāz* inscription at the top (twice, as in a coat of arms) *al-baraka min Allāh wa 'l-yumn wa---* „the blessing of God and good fortune and ---“; below in the same arrangement *bi-qāḥibī Abū Naṣr minnā 'unila fi Baghdād* „to its possessor Abū Naṣr. This is part of what was manufactured in Baghdād“. Presumably this is the production of an official *tirāz* workshop. The court however imported a great deal from Egypt but under the Fātimids the export from there was forbidden (A. Mez, *Die Renaissance des Islāms*, p. 433).

The development of the weaving of silk in Persia seems to begin with the transplanting of workmen from Mesopotamia, Amīd and other Byzantine provinces to Sūs, Tusar and other places in Abwāz by Shāpur II (cf. al-Mas'ūdī, *Murūfī*, I, 124). In the province of Fāris, which was celebrated for its weaving of linen, there were factories like those in Egypt, which, for example in Fāzā, worked both for the ruler and for commerce, while the ruler had also his own establishments in Shīnāz, Djannāba, Tawwādj and al-Ghundiḡjān (Ibn Hawkal, *B. G. A.*, II, 213 sq.; J. v. Karabacek, *Susandichird*, p. 106 sqq.; al-Idrīsī, I, 391, 399 sq.). Kāstūrān, „the Damietta of Persia“, later became the chief centre of the linen manufacture and about 500 A. H. (beginning of the 11th century A. D.), this was so strictly controlled that the Rabbān canal, important for the making of the yarn and the transport of the finished articles, being the property of the royal treasury, was only available to those weavers who wove cloth for the emir; here also we find the production under state control (cf. A. Mez, *Die Renaissance des Islāms*, p. 434). Not less celebrated than Persia was Khūzistān (Susiana) as a centre of textile weaving. In Tusar, where silk fabrics, brocades, velvets, turban shawls, curtains, and the heavy *khaz* stuffs were manufactured, there was a state factory with a superintendent (*shāhib*) at its head. The curtains for the Ka'ba were made of brocade produced there and as these, as we have seen, were sent by the court in Baghdād, we can understand the significance of the remark by Ibn Hawkal, *B. G. A.*, II, 175, that every one who reigned in the 'Irāk had a factory and a superintendent in Tusar (*tirāz wa-shāhib*) (cf. also J. v. Karabacek, *Über einige Benennungen mittelalterlicher Gewebe*, p. 30—32). In Idmī's time, the material for the kiswas was already made in the 'Irāk (*Nuṣṣat al-Muḥṭāṭ*, I, 383). Not less important than Tusar were the two towns of Sūs and Ḳurḳūb. In Sūs, where there was a state factory, *khaz* fabrics and fine linen was made (al-Isṭakhri, *B. G. A.*, I, 93; Ibn Hawkal, *B. G. A.*, II, 175; al-Mukaddasī, *B. G. A.*, III, 416). There was also one such factory (*tirāz fi 'l-sulṭān*) in Ḳurḳūb, where as in Sūs, royal robes, rich brocades, and the striped materials, which took the name of the town were made (al-Isṭakhri, *B. G. A.*, I, 93; Ibn Hawkal, *B. G. A.*, II, 175; al-Idrīsī, I, 383 sq.; J. v. Karabacek, *Susandichird*, p. 107); finally it may also be mentioned that in Sidjistān also, there was a *tirāz* factory working for the ruler, in which robes of honour were made, with which he was very liberal (Vāḡūt, *Muḡjam*, III, 458).

On the origin of the institution of the *tirāz* nothing has been definitely ascertained. J. v. Karabacek (*Papyruspretibollie*, p. 27) endeavoured to

trace its origin to foreign, probably Babylonian-Assyrian influences and even thought that the many factories of fabrics in Fāris which were state monopolies and the erection of great storehouses for garments (*ghusā in al-kiswā*) might be taken as a royal custom inherited from the Sassanians (Ober *einige Benennungen mittelalterlicher Gewebe*, p. 20). Karabacek seems to be right in quoting in this connection the statement in Ibn Khaldūn (I, 222) to the effect that the Persian kings before Islām put the portraits of kings or figures and pictures made specially for the purpose on ornamental borders, and the Muslim rulers replaced these by inscriptions containing their names and auspicious formulae. Karabacek also points out that they were in this matter influenced by the Byzantines, among whom they found the *tirāz*, which had come from the same source. G. Ebers, *Cleopatra*, I, 205 also connects the *tirāz* with the *clavus*, and O. v. Falke, *Seidenweberei*, I, 77, holds the view that the key pattern was imitated by the Persians also in the fifth and sixth century A. D. on the celebrated robe of Yazdegerd (before 640 A. D.; cf. Falke, I, 83 and fig. 105), the dress of the great king has these typical key pattern stripes woven in it, which run downwards from the shoulder and also down the back, as we frequently find in tunics from Aghmām. Falke sees in the borrowing of the key pattern from the west on the tunic a sign of a new Persian style (p. 85) and a comparison with the famous Sassanian fabric with the horseman in the Berlin Kunstgewerbe-Museum (Falke, I, fig. 107) arouses misgivings against the assumption of adoption of the key pattern into Persian court-dress, when we see here in what an un-Roman and confused fashion the key pattern has been interpreted by the artist. Perhaps there are connections here which we cannot yet see in their completeness, but it is well worth noting that the Roman *clavus* — the sign of the senatorial and knightly rank — is ultimately traced to an Etruscan origin (cf. the article *clavus* in Pauly-Wissowa, *Real-Enzykl.*, VII, col. 4 sqq.), so that an Oriental origin for this remarkable institution is not absolutely excluded. Memories of the ancient *clavi* survived until quite late in the external form of the *tirāz* borders. Thus the two pieces No. 921 and 922 of the Aiyābid and Mamlūk period published by A. F. Kendrick, *Catalogue of Muhammadan Textiles*, Pl. 7, still show the same fundamental form as the Coptic fabrics, although the decoration is slightly varied (cf. O. v. Falke, *Seidenweberei*, I, fig. 26); even the custom, so frequent in Muhammadan *tirāz* borders, of placing a figured or decorative strip between two bands of writing is already found on the border of a strip of Coptic cloth of the 11th century A. D. (cf. A. Riegl, *Die ägyptischen Textilsfunde*, Pl. 9 opp. p. 48). The text used here is Psalm 44, verse 10 sq. The continuity in art in Egyptian industry, which in the Muslim period, as far as the production of textiles is concerned, was mainly in the hands of Copts, makes the preservation of old forms and customs quite intelligible. It is worth noting that, in Muslim fabrics also, the band of writing was often embroidered or woven in red silk. Perhaps the preference for this colour is due to the fact that the *clavi* of the Romans were usually done in purple. The privilege of the *Prinsep* to grant the *latus clavus* to the senators and the reservation of purple for the use of the

ruler and, from 369, the limitation of the production of gold braid to the gynaeceae, at least, afford parallels to the sovereign right of the Muslim Caliphs to the *tirāz* and its presentation. The institution of the gynaeceae was not imitated in Islām however. Only in Cairo was there for a time a similar institution, where the garments intended for the caliph underwent a slight fitting by a staff of 30 women under a female superintendent (C. H. Becker, *Islamstudien*, i. 183 sq.). The institution of the *tirāz* in Islām is in any case found quite early under the Umayyads; we know this from al-Kisā'i's account of 'Abd al-Malik's reform of the coinage and adoption of the Arabic language for the text of official documents. So far, it is true, we have only found only one caliph of the Umayyad house—probably Marwān II—mentioned, on a piece of silk from Akhmin which bears the inscription [*Abd*] *Allāh Marwān Amīr al-Mu'minīn* (A. R. Guest, *J. R. A. S.*, 1906, p. 390 and A. F. Kendrick, *Catalogue of Muhammadan Textiles*, p. 35). With the Muslim fabrics which were imported to Europe in considerable quantities inscribed *tirāz* bands were brought into fashion. As early as *Parcival* (231, a), Anfortas wears an Arab *tirāz* braid on his head dress and it is very curious to find that the vestments of high dignitaries of the church were adorned with *tirāz* braid, which contained the Muslim confession of faith. A collection of Arabic *tirāz* inscriptions on robes of the Madonna and on pictures by Italian masters was made by Sewall, *J. R. A. S.*, 1907, p. 164. I may add that on fol. 22 of the fine Vienna manuscript of René d'Anjou's *Le livre du cœur d'amour épris* (written after 1457 A. D.), Cupid is represented with a blue tunic with Arabic *tirāz* borders written in gold on a blue ground, and two Brussels gobelins of the xvth century show Abraham with *tirāz* inscriptions in gold at the wrists and sides. The often clumsy imitation of Arabic inscriptions on North Italian silks is well known.

(A. GROHMANN)

TİRE, a town in Anatolia, capital of the *kaḍā* of Tīre in the wilāyet of Aidin, in the valley of the Kütük Menderes, 18 miles S.E. of Smyrna with which it is connected by railway. The present town presumably occupies the site of the ancient Arcadiopolis, later called Teira (i.e. "town", e.g. in Thyā-teira; cf. W. M. Ramsay, *Historical Geography of Asia Minor*, p. 104, 114). In the Byzantine period the town appears as Thyrea (Θέρεα) and Thyraia (Θήραια; cf. Ducas, p. 38, 73, 97, 109, 175, 196) and repeatedly plays a part in history. In 1308 Sasan transferred many of the inhabitants of Ephesus to Tīre (cf. Pachymeres, ii. 588). Travellers like Ibn Battūṭa (ii. 307 sq.) who went via Burge to Tīre which lay in the midst of orchards, gardens, and streams in the land of the "Sultan of Burge", i.e. of the Aidin-oghlu or the adventurous Catalanian chronicler Ramon Muntaner (sect. 25) used to pass through Tīre. When in 1403 Timūr advanced against the town, the inhabitants fled to Smyrna (cf. Ducas, p. 38, 97, 109). After the collapse of the petty kingdom of the Aidin-oghlu in 830 (1426), Tīre became Ottoman. It plays no particular part in later history; it was a mint down to the xvth century and is occasionally mentioned in connection with risings (cf. J. von Hammer, *G. O. R.*, iv. 398, note and v. 50 note). In Tīre is the tomb of the celebrated 'ulemā 'Abd al-Latif b. 'Abd al-'Aziz b. Firsihte (Ar.: Ibn al-Malak, Turk.: Firsihte-oghlu, d. according to the *Sālnāma* of Aidin of 1302, p. 239 in 799 [1396]; cf. on this point *Ṣaḥāḥ al-Nu'māniya*, p. 66 sq.) known as the author of a once much used Turkish dictionary in verse (*Lughat-i Firsihte-oghlu*) and of a commentary on the principles of jurisprudence, *Manār al-Anwār* of al-Nasafi [q. v.]. He taught there in a medrese which bears his name and is still in use. Tīre was also the birthplace of several Ottoman authors, e.g. Shaikh Haidar b. Sa'd Allāh (cf. *ʿAṣāʾi, Dhail on the Ṣaḥāḥ*, p. 191), Molla Naṣr Allāh al-Kūmī (*ibid.*, p. 123) and the scene of activity of *kaḍīs* (cf. *ibid.*, p. 130, 172 and F. Babinger, *G. O. W.*, p. 146; *Ḍarrārāde*). Tīre is also mentioned as a place of banishment; the versatile historian Shihānāde for example ended his life here (cf. F. Babinger, *G. O. W.*, p. 346). The earlier European travellers rarely visited Tīre. The chaplain of the English factory in Smyrna, Edm. Chishull (d. 1733) is one of the few who visited Tīre (cf. *Travels in Turkey and back to London* [London 1747], p. 19 and Thos. Smith, *Septem Asiae Ecclesiarum Notitia*).

It was then thought that Tīre represented Thyāteira (= Ak-hisār), one of the "Seven Churches of Asia". Ewliya Celebi [q. v.] describes Tīre in the ninth, still unpublished, volume of his *Travels*. The town does not seem to possess any antiquities. Mention may be made of the library of 1,325 volumes (including the holograph of the above mentioned commentary of Firsihte-oghlu), presented by Nadjib Pasha, governor of Baghdad. Down to the Turko-Greek exchange of population, Tīre had about 15,000, mainly Greek, inhabitants (cf. V. Cuinet, *Turquie d'Asie*, iii. 508 sq.) who were mainly occupied in carpet-weaving and the cultivation of the vine.

(F. BABINGER)

TİREBOLİ, capital of the *kaḍā* of Tīreboli in the wilāyet of Trapezunt in Anatolia on the Black Sea, picturesquely situated on three capes from which the town of Tripolis, founded by Greeks from Miletus in the eighth century A.C., received its name. The town is commanded by a mediaeval castle; the remains of two small churches still recall the Byzantine period. In view of its proximity to Trapezunt and Kerasunt, Tīreboli played no special part in history in ancient or modern times. The Comnenoi of Trapezunt were fond of living in the castle here. The conquest of Trapezunt by Mehemmed II in the autumn of 1461 also sealed the fate of Tīreboli. The inhabitants fled to the fortress of Petroma 20 miles away and only surrendered after a long siege, when starved out. Henceforth Tīreboli belonged to the Ottoman empire. While the Spaniard Roy Gonzales de Clavijo on his journey to Samarkand in 1404 still found Tīreboli ("Tripil") a very large town, the place later sank into comparative insignificance. European travellers have often visited and described Tīreboli, e.g. J. Pitton de Tournefort (cf. *Relation d'un voyage du Levant*, ii. [Paris 1717], 222 sq., with picture); Wm. J. Hamilton (cf. *Researches in Asia Minor*, London 1842, i. 253); A. D. Mordtmann (cf. *Anatolien*, ed. v. F. Babinger, Hannover 1925, p. 411); J. Ph. Fallmerayer (*Fragmente aus dem Orient*², i. 131, 135 sq.) etc. In Tīreboli, besides 8 mosques, there are a number of Greek churches, some of them old. Near it is the now deserted dervish monastery of Sarī Khalifa (cf. thereon J. H. Mordtmann in *M. S. O. S. A.*, xxix. 112 sqq. and xxx. 206, perhaps the individual in question). Before the Turko-Greek exchange of population Tīreboli had about 8,000 inhabitants, 1/4 of them Greeks.

(F. BABINGER)

TIRHĀLA, the Turkish name for TRIK (KALAM), a town in western Thessaly (Greece), on the well watered Trikkalinos, 400 feet above sea-level, on the Volos-Kalabaka railway. Tirhāla, not far from the ancient Triikka, now completely disappeared, with the famous temple of Asclepius and belonging since 1881 to Greece, formerly to the Ottoman empire, in which it was incorporated in 798 (beg. Oct. 16, 1395) by Bāyazīd I (cf. Hājjī Khalifa, *Rumeli und Bozna*, ed. by J. v. Hammer, p. 100, and J. v. Hammer, *G.O.R.*, i. 249). The town was taken at the same time as Larissa (Turk. Yenī Shehr, q. v.). Later it belonged to the dominions of the Turakhān-oghlu (q. v.), one of the oldest and most distinguished Ottoman noble families. In the reign of Sulaimān the Great the Jews deported from Budapest were settled in Tirhāla (cf. F. Belon, *Les observations de plusieurs singularités* etc., Paris 1555, fol. 58^r). In it 'Omar b. Turakhān founded a *medrese* roofed with lead, in which among others, the Ottoman historian Ahmad called Pars-Parsāde taught; he died in Tirhāla in 908 (1560) and was buried in the mosque of 'Omar b. Turakhān, which now no longer exists (cf. 'Atā'i, *Dhail on Shāhā'ib al-Nu'māniya*, p. 20, and F. Babinger, *G.O.W.*, p. 83 sq.); cf. also Na'imā, *Ta'rikh*, iv. 38. Tirhāla was also the official residence of a *kādī*, and several famous scholars like 'Aṣṣā'ī and Weist held this office. Of the four mosques of Ghāzi Turakhān, 'Osmānshāh Beg, Hājjī Muḥaffa and Husain Agha only two survive. The first is that built by the famous architect Sinān, that of 'Osmānshāh Beg, called Kara 'Osmānshāh, a nephew of Sulaimān the Great, who held the governorship of Thessaly and died in Tirhāla (975=1567) (cf. Peṭewi, *Ta'rikh*, i. 45 and Ewliyā, *Siyāhat-nāma*, i. 172; do., *Travels*, ed. J. v. Hammer, i. 1, p. 87). The mosque with the *tūrbe* of its founder, although falling into ruins still bears traces of its former splendour. Of the tombs of celebrities here, the following may also be mentioned: Djalāl al-Dīn Baba, Sinān Baba, Ramaḍān Efendi, Dja'far Efendi and Etlī Kalkān (اتلی قلقان).

The 14 wells built by Muḥaim Faḥḥā-rāde 'Abdullāh Paḥḥa are evidence of Tirhāla's plentiful supply of water. Tirhāla is now entirely abandoned by Muslims and only Greeks (mostly Wallachians) and Jews live in the town, which, while not particularly healthy, with its commanding Byzantine fortress and its wealth in gardens, forms a picture not easily forgotten.

AL-TIRIMMĀH R. HAKIM AL-TĀY, a celebrated poet of the first century of Islām. He was descended from a highly respected clan of his tribe and his grandfather Kais is numbered among those who came to Mecca in the year 9 of the Hījra to pay homage to the Prophet. He himself, according to the most reliable accounts, was born in Syria and spent the earliest years of his life there. Later he came as a soldier to al-Kūfa and through the influence of some Khāridjī leaders became himself one of their sect, and remained true to their doctrines to the end of his life. Either as a soldier or in some other capacity, he visited several parts of Persia. His collected poems, which are preserved only in part in a very old Spanish manuscript, are distinguished from those of his contemporaries by a studied use of uncommon words, similar to the compositions of the *rafi'at*-poet Ru'ba, who made a kind of speciality of this. Ru'ba was for the grammarians of Bagda a source of information on questions of obscure words and he alleged, according to the grammarian al-Asma'ī and a few others, that he had learned these strange expressions from Tirimmaḥ. This claim is most likely unfounded because Tirimmaḥ was dead when Ru'ba came into prominence. Different was the intercourse of Tirimmaḥ with the poet al-Kumait [q. v.], a fervent Shī'a poet of no mean order, for in spite of their differences in almost every other thing, their friendship was sincere and lasting. The betrayal of the Tamīmīs of the family of al-Muhallab and the downfall of Yazīd b. al-Muhallab in 102 (720–721) and the undisguised joy of the Tamīmīs brought Tirimmaḥ into opposition with the poet al-Farazdaq and in the end after a stinging *hijā'* poem by Tirimmaḥ it seems as if al-Farazdaq gave up the contest. This poem remained for more than a century the pride of the Yamānīs and was continually cited against the Tamīmīs. Tirimmaḥ's grandson Amīn a century later lost a post as secretary in North-Africa when Ibrāhīm b. Aghlab, who claimed to be descended from Tamīm, became governor of North-Africa in 184 (800). The fragmentary state of the *diwān* of the poet gives us only an imperfect idea of his character, but through some of his verses runs a pious vein, so different from that of his profligate adversary. Verses of his from the descriptive poems, abounding in uncommon words, are often cited in Arab dictionaries as evidence of their existence in the language; but I have been able to ascertain with a fair amount of certainty that Tirimmaḥ uses many words which are also found with the same meanings in the poems of his tribesman Abū Zubaid, and of Ibn Muḥbil (Tamīm b. Ubāy b. Muḥbil al-Adjānī) whom he may both have known personally in his younger years and we may assume that the words he uses were really found in the speech of some Arab tribes and not newly-coined words, as is frequently the case with Ru'ba.

Bibliography: The poems of Tufail al-Ghanawī and Tirimmaḥ b. al-Hakīm, ed. F. Krenkow, Leyden 1928; *Kitāb al-Aghāni*, x. 156–160; Ibn Kutāiba, *Kitāb al-Shīr*, ed. de Goeje; Marzubānī, *Muwaththah*. — He is cited in the *Lisān al-Arab* more than a hundred times and the *Asās al-Balāgha* of Zamakhsharī alone cites 56 verses, which are not found in the manuscript of the *Diwān* nor in any other accessible work. (F. KRENKOW)

TIRMIDH, a town on the north bank of the Amū Daryā [q.v.] near the mouth of the Surkhān. As Sam'āni, who spent 12 days there, testifies, the name was pronounced Tirmidh in the town itself (*G.M.S.*, xx., fol. 105^b) which is confirmed by the Chinese Ta-mi (e.g. Hiouen Tshang, *Mémoires sur les contrées occidentales*, I, 25). Russian officers in 1889 also heard the pronunciation Termis or Tirmiz (*Sbornik materialov po Asii*, lvii, 393 and 399). The town is now officially known as Termez.

Tirmidh does not seem to have been touched by Alexander the Great and is not mentioned in antiquity, although its foundation was afterwards ascribed to Alexander. According to Hāfīz-i Abrū (q.v.; text by Barthold in *al-Muṣaḥḥaṭiyya*, St. Petersburg 1897, p. 20) not only Tirmidh but also Burdāghūy, not far from it on the river, was built by Alexander; Burdāghūy is said to be a Greek word and to mean "inn" (*mihmānkhāna*) (? Greek *νυκτεριον*).

At the time of the Muslim conquest Buddhism was predominant in Tirmidh; there were 12 monasteries and about 1,000 monks there (Hiouen Tshang, *loc. cit.*). Tirmidh was then under an important ruler who bore the title Tirmidh-Shāh (Tabari, ii, 1147; *B.G.A.*, vi, 39); there was a powerful fortress on the bank (Tabari, ii, 1147). In the year 70 (689-690), Tirmidh was conquered by Mūsā b. 'Abd Allāh b. Khāsim, who had thrown off allegiance to the Muslim government, and ruled for 15 years by him (cf. Balādhuri, p. 417 sqq.; Tabari, ii, 1145 sqq.). Only towards the end of 85 (704) did 'Uthmān b. Ma'sūd by order of the governor al-Mufaddal b. al-Muhallab succeed in taking the town for the government. In this fighting and in later sieges and bridge-building, the island at Tirmidh, called in the Arab period Dja'irat 'Uthmān, played an important part; in the Ōzbeq period the island is called Orta-Aral or Orta-Aral ("middle island") (J. Senkowski, *Supplément à l'histoire générale des Huns etc.*, St. Petersburg 1824, text, p. 20, and the passages quoted from manuscripts in Barthold, *K istorii orozheniya Turkestana*, St. Petersburg 1914). The worship of the prophet Dhu 'l-Kifl (*B.G.A.*, iii, 291) mentioned as early as the fourth (tenth) century in Kalīf, was transferred here; after this cult, the island is now called Aral Paighambar ("island of the prophet").

On geographical conditions in the fourth (tenth) century cf. especially *B.G.A.*, i, 298 and iii, 291. Tirmidh was an important port on the Amū-Daryā; boats were built and exported from there (*B.G.A.*, iii, 325, 7). Like Balkh, Tirmidh was noted for its soap (cf. *cit.*, p. 324). Two natives of Tirmidh have attained fame in Muslim literature: the author of the famous collection of traditions Abū 'Isā Muhammad b. 'Isā al-Tirmidhi [q.v.] (d. 279 = 892) and the traditionist and mystic 'Abū 'Abd Allāh Muhammad b. 'Alī al-Tirmidhi [q.v.] d. 255 (869); cf. Brockelmann, *G.A.L.*, i, 164. The latter's tomb, probably erected in the ninth (xvth) century is now the finest building in the ruins of Tirmidh and one of the most beautiful in Central Asia (picture e.g. in *Is. Geogr. Oskh.*, xlv, 1908, on p. 652 with a Russian translation of the inscriptions and in Barthold, *Islam*, St. Petersburg 1918, p. 57). The inscriptions give us in part what we are told about Muhammad b. 'Alī in the *Tadhkirat al-Awliya'* (*Pers. Hist. Texts*, v, 93) of Farīd al-Dīn Attār [q.v.], and in the *Nafahāt al-Uns*

(lith., p. 77) of Dīlāmī [q.v.]; we are further told that he studied under the same scholars as al-Bukhārī, which Sam'āni (*G.M.S.*, xx, 106^a) refers to Muhammad b. 'Isā.

Tirmidh afterwards shared the political history of Khorāsān and Mā warā al-Nahr, sometimes, as at the present day, the Oxus frontier and sometimes the connection with Balkh being of greater importance. Under Maḥmūd and his immediate successors, Tirmidh like other dependencies of Balkh north of the Oxus belonged to the empire of the Ghaznavids [q.v.]. When as a result of the battle in the desert of Kaṭwān near Samarkand (5th Šafar 536 = Sept. 9, 1141) rule over Mā warā al-Nahr passed to the Kara-Khitai [q.v.], Tirmidh remained in the Saldjuks as is shown by the fact that Sulṭān Sandjar [q.v.] sought refuge here in 551 (1156). Tirmidh was later in the possession of the Kara-Khitai from whom it was taken in Dhu 'l-Ka'da 601 (June-July 1205) by 'Imād al-Dīn 'Qamar, governor of Balkh for the Ghōrids [q.v.] (Ibn al-Athīr, xii, 135). 'Imād al-Dīn's son Bahrām Shāh (the name occurs in Nasawi, ed. Houdas, p. 39) was appointed governor of Tirmidh. The very next year it was taken by the Khwārizmshāh Maḥammad, then allied with the Kara-Khitai, and handed over to the latter; according to Ibn al-Athīr (xii, 152 sq.), this news provoked great indignation against the Khwārizmshāh throughout the Muslim world. According to Djuwainī (*G.M.S.*, xvi, ii, 64), the town was surrendered by the governor on the advice of his father to 'Othmān, Khān of Samarkand; in Mirkhwānd (*Hist. des sultans du Khorasan*, ed. by Defrémery, Paris 1842, p. 51 sq.) the Khwārizmshāh is mentioned in place of the Khān. After the fall of the empire of the Kara-Khitai, Tirmidh belonged to the empire of the Khwārizmshāh; in the autumn of 1220 it was taken and completely destroyed by the Mongols. In Djuwainī's narrative (*G.M.S.*, xvi, 102) of the conquest it is mentioned that half of the city walls are in the middle of the river.

A few years earlier, we have the first reference to the sayyids of Tirmidh whose importance was not affected even by the Mongol conquest. When the Khwārizmshāh Muhammad had quarrelled with the caliph Nāṣir, he proclaimed through the learned men of his empire that the 'Abbāsids had appropriated by unjust means the power, which really belonged to the descendants of 'Alī, 'Ala' al-Mulk, one of the great sayyids (*see al-Da'i-basray*) of Tirmidh, was appointed caliph (*G.M.S.*, xvi, ii, 97, 122). The appointment had no further consequences and we know nothing of the life or end of this anti-caliph. In the *Ta'rikh-i Guzda* of Ḥamd Allāh Kāwīm (*G.M.S.*, xiv, i, 496) he is called Saiyid 'Imād al-Dīn Tirmidhi.

In the next century Ibn Baṭṭūṭa [q.v.] (ed. Defrémery and Sanguinetti, iii, 48) records happenings in the Čaghatai [q.v.] kingdoms. 'Ala' al-Mulk Khudāwand-zāde, a descendant of Ḥusain b. 'Alī, lord (*iṣṣīd*) of Tirmidh is mentioned. He is said to have thrust himself upon the Khān Khālīf Allāh at the head of 4,000 Muslims and to have been appointed vizier by him. The members of his house are also called Khudāwand-zāde in later times (in the *Zafar-nāma*, Ind. ed., i, 210, pass. and in the *Bābur-nāma*, facs. Beveridge, fol. 208 contracted to Khān-zāde. The full form is found in the oldest recensions of the *Zafar-nāma*, composed in Timūr's time [*Tekst po istorii Sredney*

Asi, St. Petersburg, 1895, p. 131 and 199). In the *Zafar-nāma* the "Khān-sāde" Abu 'l-Ma'ālī and his brother 'Alī Akbar are several times mentioned; in 1371 Abu 'l-Ma'ālī was banished for his share in a campaign against Timūr (*Zafar-nāma*, i. 231), but his exile was not of long duration; in the very next year we find him taking part in Timūr's campaign against Khwārizm (*op. cit.*, p. 241). A Khān-sāde 'Alā' al-Mulk is again mentioned later; Timūr stayed at his home on his return from his Indian campaign in 1399 and from the campaign in the west in 1404 (*op. cit.*, ii. 190 and 593). In 1487 Ahmad Mirzā married a wife of the house of the Saiyids (*Bābur-nāma*, fol. 206).

In the time of Ibn Battūta, when Balkh was still in ruins, Tirmidh had already recovered from its destruction by the Mongols; the town was not rebuilt on its old site but two Arab miles from the river; it was a fine large town with prosperous inhabitants (Ibn Battūta, ed. Defrémery and Sanguinetti, iii. 56 sq.). Among the ruins of this town is the mausoleum described by A. A. Semenov (*Problemy Turko-Khanstva Lyub. Arkh.*, xix. 3 sqq. with pictures) with the tombs of the Saiyids now called Sultan-Sadat (probably *Sultān-Sādāt*). The descendants of the Saiyids now live in the village (according to the latest census: 724 inhabitants) of Sālīhābād near Tirmidh. A. Semenov obtained from them a manuscript genealogy and history of their house ending on the 4th Dhū 'l-Hijja 1046 (29th April 1637). According to this MS., the Saiyid Hasan al-Emir, son of the Emir Hussain, came to Samarkand in 235 (849–850) and thence went to Balkh and Tirmidh in 246 (860–861). We are told something of his relations with the Samānids, with a number of anachronisms; for the rest, the genealogy only contains names (*Sultān-sādāt* occurs in it as a woman's name) without facts or historical associations.

In the *Zafar-nāma* (i. 57) "Old Tirmidh" (*Tirmidh-i Kuhā*) is mentioned alongside of Tirmidh. In literary works, including the MS. just mentioned, and on coins Tirmidh after the Mongol period is frequently called "The Men's Town" (*madīnat al-rijāl*). After Timūr's death, the Oxus frontier again came into prominence for a brief period. Khalīl Sulṭān who had seized Samarkand could only hold the territory north of the Āmū-Darya. During the preparations for war between him and Shāhrukh [q. v.], Khalīl Sulṭān in 810 (1407) restored old Tirmidh and Shāhrukh, the defences of Balkh (Ibn 'Arabshāh, *Egypt*, ed., p. 205 sq.). It is to this period that probably belongs the memorial to Muḥammad b. 'Alī al-Tirmidhī.

From the 15th (xvth) century Tirmidh, and as a rule Balkh also, belonged to the kingdom of the Ōzbegs. During the fighting for Balkh between the Ōzbegs and the Indian prince (later emperor) Aurangzeb [q. v.] in 1646 and 1647, Tirmidh was occupied by Indian troops under Sa'ādāt Khān (Elliot-Dowson, *History of India*, vii. 79, also Barthold, in *Bulletin de l'Acad. etc.*, 1921, p. 204).

In the early years of the xviiith century Tirmidh was in possession of Shīr 'Alī of the Kūghrat family, the founder of the town of Shīrābād (*Z. D.M.G.*, xxxviii. 276). A distinction was made at this time between the "great citadel" (*kal'a-i khalīl*) of Tirmidh and the "citadel of the village" (?) where

the bulk of the inhabitants (of Tirmidh?) lived. The unsettled condition of the following decades brought about the complete ruin of Tirmidh as of many other towns. In 1758 Muḥammad Rahīm Khān rebuilt the town (Barthold, *K istorii erozheniya Turkestana*, St. Petersburg 1914, p. 74); it was afterwards destroyed once more.

In the second half of the xixth century, there was nothing near the ruins of the old town of Tirmidh except the insignificant village of Patta Hījār (with 1,257 inhabitants) and Sālīhābād (cf. above). Patta Hījār acquired more importance when it was made the starting point of the Russian steamships on the Āmū-Darya. In 1894 the Russian fort of Termez was built 5 miles from the ruins and gradually became a town, but with a predominantly male population (according to the last census: 8,052 men and 2,069 women). In 1916 the Bukhara-Karshi-Termez railway was opened; during the revolution it was destroyed but has since been rebuilt. The excavations conducted on behalf of the Moscow Museum for Oriental Culture have yielded important results; among other things, objects of the Buddhist period have been found.

(W. BARTHOLD).

AL-TIRMIDHĪ, ABU 'ISĀ MUḤAMMAD B. 'ISĀ B. SAWRA B. SHAUDĀL, the author of one of the canonical or semi-canonical collections of traditions. The *nisha* al-Tirmidhī connects him with Tirmidh, a place on the upper Āmū Darya, at a distance of 6 leagues from Balkh (about 37° Lat. N. and 67° Long. E. from Greenwich; cf. Karwini, *Nushat al-Kulūb*, ed. and transl. Le Strange, *G.M.S.*, xxiii, index, s.v.; Le Strange, *The Lands of the Eastern Caliphate*, p. 440 sq. and map ix., facing p. 433), where he is said to have died in 279 (892–893); according to other reports, he died at Būgh, one of the boroughs of Tirmidh, in 275 (888–889), or in 270 (883–884).

Of his life very little is known. It is said, that he was born blind but also, that he lost his eyesight in his later years. He travelled widely, in Khurāsān, Irāk and Hijāz, in order to collect traditions. Among his masters were Ahmad b. Muḥammad b. Hanbal [q. v.], al-Bukhārī [q. v.] and Abū Dāwūd al-Sijistānī [q. v.].

Two of his works have been printed: his collection of traditions (Cairo 1292, in 2 vols.; lithogr., Mirtah 1283, fol.) and his *Shams'ul*, a collection of traditions concerning the person and the character of the Prophet (Cairo 1306, with a commentary by Muḥammad b. Kāsim Dīnāsī, entitled: *al-Fawa'id al-Djalila al-Bakiya 'ala 'l-Shams' al-Muhammadiya*; and ibid., 1318 with 2 commentaries: the first, entitled *al-Was'il*, by 'Alī b. Sulṭān Muḥammad al-Karī; the second by 'Abd al-Ra'ūf al-Munāwī; for other editions and commentaries, see Brockelmann, *G. A. L.*, i. 162). Brockelmann, *loc. cit.*, mentions also a collection of forty traditions; it does not appear whether this was made by himself or by others. In Arabic sources other works on various subjects — asceticism, names and kunya's,

law, history — are ascribed to him, none of which seems to have come down to us.

His collection of traditions bears the title of *ṣaḥīḥ* in the edition printed at Cairo; elsewhere it is called *ḍiʿmī*; it deserves the latter qualification (cf. Goldziher, *Muhammedanische Stud.*, ii. 231, note 2), as it comprises, besides traditions on law, also some concerning other topics. A glance at the list of chapters shows that nearly one half of the work is devoted to such subjects as dogmatic theology (*ʿAdar, Kiyāma, ʿDjanna, ʿDjahannam, Imān, Kurʿān*), popular beliefs (*Fitan, Kuʿya*), devotion (*Zuhd, Thawāb al-Kurʿān, Daʿawāt*), manners and education (*ʿIstīḥṣān, Adab*), hagiology (*Manāḥiṣ*).

The work contains far fewer traditions than those of Bukhārī or Muslim, but also less repetitions. It is chiefly two chapters that are particularly extensive, viz. *Manāḥiṣ* and *Tafṣīr al-Kurʿān*; they are lacking in the other three *ṣumman* (by this title the four collections of Abū Dāwūd, al-Tirmidhī, Nasāʾī and Ibn Māǧja are sometimes denoted). Though traditions showing a predilection for 'Alī are not rare, those which favour Abū Bakr, 'Umar and 'Uthmān are not lacking.

By two features, however, Tirmidhī's work is distinguished: the critical remarks concerning the *isnād's* and the points of difference between the *maḥabbah's*, which follow every tradition. On account of the latter feature, Tirmidhī's *Ḍiʿmī* may be called the oldest work on *ikhṭilāf* that has come down upon us; the remarks on this subject occurring in Shūbī's *Kitāb al-Umm* are much less complete and scarcely authentic.

According to the *Taḥṣīb*, as cited by Goldziher (*Muhamm. Stud.*, ii. 252, note 1), the MSS. are not uniform in reproducing Tirmidhī's remarks on the *isnād's* (*ṣaḥīḥ, ḥasan, ḡharīb, ḥasan ṣaḥīḥ, ḥasan ḡharīb, ṣaḥīḥ ḡharīb*). The author gives no explanation of the principles upon which his distinctions are based. The work opens with an enumeration of the authorities, which have handed it down to the final redactor. It closes with a brief eulogistic formula.

Bibliography: al-Samʿānī, *Kitāb al-Anṣab*, G. M. S., xx., fol. 106^a; Dhahabī, *Tahāḥāt al-Huffaz*, ed. Wüstenfeld, part iii., p. 57, No. 3; do., *Maʿān al-ʿIṭidāl*, Cairo 1325, iii. 117, No. 1021; Ibn Khallikān, *Wafayāt al-Aʿyān*, ed. Wüstenfeld, No. 624; Ibn Ḥaǧǧar al-ʿAsqalānī, *Tahḍīb al-Tahḍīb*, Haidarābād 1326, ix. 387—389, No. 236; do., *Taḥṣīb al-Tahḍīb*, lithogr. Delhi, no year, p. 230^b; Ibn Khayr al-Dahha, *Tuḥfat al-Ḥawī ʿl-ʿArab*, ed. T. Mann, p. 143; I. Goldziher, *Muhammedanische Studien*, ii. 250 sqq. (A. J. WENNING).

AL-TIRMIDHĪ, ABU ʿABD ALLĀH MUHAMMAD B. ʿALĪ B. ḤUSAYN, known as al-Ḥakīm (the wise), a Sunni theologian of Khurāsān, a *muḥaddith*, a jurist of the Hanafī school and a mystic, d. in 285 (898). Some thirty of his works still exist in manuscript; their style is somewhat prolix but they are very fully documented.

In his *Nawādir al-Uṣūl* and his *Kāṣim al-Wilāya*, he attempts to give an orthodox mystical exegesis of certain gnostic themes (developed by the extremist Shīʿis) like the pre-existence of the *Nūr Muḥammadi* and the *Ḥaḳīqa Adamiya*, the value of the 28 letters of the alphabet, angelology, the criteria of the state of "sanctity" which he

was the first to study *ex professo* under the technical name of *wilāya* (borrowed from the Shīʿis); in it he gives a particular role to Jesus.

He tries to explain rationally the form of the canonical rites in his *ʿIṭal al-ʿUḥūdīya* (which were condemned), *Sharḥ al-Ṣalāt, al-Ḥaǧǧa wa-Aṣrūku*; his curious *Kitāb al-Farūḡ* endeavours to show that there are no true synonyms (which is half-Muʿtazila). He insists on introspection of the heart and professes a very high morality; his *Kitāb al-Aḳyār* castigates the different professing categories of hypocrisy and refutes the *ḥiyal* of the casuists of the time. He was the author of the first collection of biographies on the history of Sūfism but this work is only known from quotations.

He is the true precursor of Ibn ʿArabī who three centuries later studied him closely and admired him.

Bibliography: Hadjwiri, *Kaṣf al-Maḥ-ḡṣūd*, ed. Shukovski, 1926, p. 177—179, 265 sqq.; transl. Nicholson, 1912, p. 141—142, 210 sqq.; Amedroz, in *J.R.A.S.*, 1912, p. 584; L. Massignou, *Essai sur ... la mystique musulmane*, 1922, p. 256—264; do., *Textes inédits ...*, 1929, p. 33—39 and add. (L. MASSIGNOU).

TIRMIDHĪ, SAʿYID BURHĀN AL-DĪN, a Sūfī, also known as Saʿyid Ḥusayn Tirmidhī, Saʿyid Sirdān, or Burhān al-Dīn Muḥakkik, a native of Tirmidh and a disciple of Mawlānā Bahāʾ al-Dīn Walad. After studying for some time with the latter he spent a long time in ascetic practices and finally settled in Tirmidh where pupils gathered around him. After the death at Konya of Bahāʾ al-Dīn Walad (628 = 1231), Burhān al-Dīn went to Konya (629—630) in response to the appeal of his late master's spirit and undertook the spiritual education of the young Djalāl al-Dīn Rūmī who up till then had been studying law and literature. After nine years, in spite of the appeals of Mawlānā, he retired to Kaiṣariya. It is evident from his biographies that he was in this town when the Mongols took Kaiṣariya and made a general massacre here (the MSS. of Müneddjim Bāshī, *Djāmī al-Dumal*, No. 5019 and 5020 of the *Kitābkhāna-i ʿumūmī* say that this event took place in 641 [1245]; for the details cf. *Recueil de textes rel. à l'histoire des Seldj.*, ed. Houtsma, iv. 241). Shams al-Dīn Iṣfahānī, the Seldjuk governor of Kaiṣariya, was the patron and disciple of Burhān al-Dīn. It was he who saw to the performance of his funeral rites and built his tomb. We do not know the exact date of his birth nor can we determine accurately that of his death. Ewliya Çelebi says that the *maḥam* of Saʿyid Burhān Tirmidhī was in Kaiṣariya and that he died in 474 which is clearly wrong. At the present day there is in Konya near the *türbe* known as the *Türk-khānlar Türbesi*, a *türbe* called Burhān al-Dīn Türbesi; although there is no inscription on the latter, it has always been regarded as that of Saʿyid Burhān Tirmidhī. Dawlatshāh, who regards Burhān al-Dīn Muḥakkik as the *ṣaḥīḥ* of Bahāʾ al-Dīn and of Mawlānā, says that he accompanied them on their travels in Syria and to the Hijāz and that he died and was buried in Syria. This is not in keeping with the facts (Dawlatshāh, ed. Browne, p. 194; Bombay edition, p. 86; and quoting Dawlatshāh: Fehmī, *Safinat al-Shuʿarāʾ*, Constantinople, Matbaʾa-i ʿAmire, 1259, p. 82). Saʿyid Burhān Tirmidhī owes his fame more especially to the part he plays in the traditions of the Mew-

lewis. From this point of view, it is in the oldest and most important sources for the history of the Mawlawi order, such as *Sipahsalar Manāshih* and *Ḥikāṭi Manāshih*, that we must seek for reliable information about him.

(the MSS. of both versions are in many libraries); do., French translation by Cl. Huart, *Les Saints des derviches tourneurs*, Paris 1918, index; Lāmī's translation of the *Nafahāt al-Uns*, p. 515—516; Ewliyā Çelebi, *Siyāhatnâme*, Dur-i Şa'adet 1314, iii. 186; Khālī Edhem, *Kaṣṣ-i Şahri*, Constantinople 1334, p. 118; Köprülü Zāde Fu'ād, *İlk Matnawîşler*, Constantinople 1918, p. 245.

(KÖPRÜLÜ ZÂDE FU'ÂD)

TİT (in the texts one finds sometimes the Berber name *Tiṭ-an-Fiṭr*, sometimes its Arabic translation: *ʿAin al-Fiṭr*, "Source of the Breaking of the Fast"), a place on the Atlantic coast of Morocco, some eight miles S.W. of Mazagan.

According to the local legend, Tiṭ owed its foundation to a saint, Ismā'il Amghār (Berber = Arabic *ṣāḥib*) who came from Medina, led by a light which guided him in the sky, and settled among the Gādāla, a branch of the Ṣanhādja of Azemmūr; he settled in the forest opposite a spring "situated in the sea" to which he used to go walking on the waves whenever he broke his fast; hence the name of *Tiṭ-an-Fiṭr*. If we may trust the synchronisms given by the legend, his settlement here took place in the tenth century.

Ismā'il married the daughter of the chief of the country and became the ancestor of the Sharīfan family of the Amghāriyūn [cf. the article *AMGHARA*], one of the members of which Mawla'y 'Abd Allāh founded an important *ribāṭ* at Tiṭ in the first half of the 11th century. The history of this stronghold is not well known and al-Bakrī, who enumerates with details the ports and towns of the Atlantic coast, does not mention it; but it should be remembered that he also omits Azemmūr. In the 14th century, al-'Umari mentions Tiṭ as one of the 42 large towns of Morocco; it paid 5,000 mithqāls of taxes, as much as Tighas and a little less than Safra. When in 1513 the Portuguese occupied Azemmūr, Tiṭ also submitted to them and paid tribute. But in 1514, fearing that the *ribāṭ* might serve as a base for the Christians, Muḥammad al-Nāṣir, the Wattāsid sovereign, dismantled its walls and transported the inhabitants to the region of Fās; Tiṭ henceforth lost all importance, which passed to the neighbouring port of Mazagan which became the principal Portuguese factory in the land of the Dukkfla. At the present day it is only a wretched village among the ruins of the towers and gates of the old *ribāṭ*; its old name is hardly known to the natives who call it after the founder of the *ribāṭ*: Mawla'y 'Abd Allāh.

In spite of the resemblance of meaning, this Tiṭ has no connection with *Tiṭ-an-Wagurraut* "Spring of the Saint (?)", which the Almoḥad historian al-Baiḥakī says is in Tāmasnā in the land of the Barghawāla; we know that Tāmasnā lies to the north and not to the south of the Umm Rabi'. This second Tiṭ should, it appears, be identified with the place-

name wrongly written *تنن وربي* in the manuscripts of Idrisi "a little place but nevertheless a town in character, inhabited by Berbers of mixed origin and lying on the road from Tādla to Sale, four days' journey from Tādla and two from Sale". It must therefore lie approximately in the south corner of the lands of the present day tribe of the Zā'ir.

Bibliography: The legend of the Banū Amghār is given at length in a manuscript attributed to Ibn 'Abd al-'Azīm al-Zammūrī; H. Baasat and H. Terrasse, *Sanctuaires et fortifications almohades: Le ribāṭ de Tiṭ* (in *Hesperis*, 1927, p. 117—156). (G. S. COLIN)

TITTAWIN, TETUAN, Fr. TETOUAN, Sp. TETUAN, the *Tittigwin* of Leo Africanus, a Berber place-name meaning "the springs" (a quarter of the town is still called al-'Uyūn); al-Idrisi gives the defective form *Tittāwin* and the modern popular pronunciation is *Tittāwin*, *Tittāwin*. The name Tetuan given it by the Spaniards comes from the form *تنن* found at the end of the 17th century on coins of the early sovereigns of the Fīlālī dynasty. It is a town in the north of Morocco, 21 miles S. of Ceuta. It is built on a little terrace which juts out of Mount Darja and commands the valley of the Martin (or Martil) which flows into the sea 7 miles away. Between Tetuan and the sea lies a little plain encircled by the mountains of Andjara, of Buī Ḥōamār and the lower hills of the Buī Ma'dān. The Martin corresponds to the *Θαυρόδα* of Ptolemy and the *Tamuda* of Pliny. These old names are perhaps to be connected with the Berber *tamda*: "pond", "marsh", for the low valley of the Martin is very marshy. Pliny also mentions an *oppidum* called Tamuda; this must have been the name of the Berber-Roman town, the ruins of which can still be seen on the right bank of the Martin 2½ miles west of Tetuan near the bridge on which the railway to *Shaf-shāwan* crosses; an old Lybian inscription has been found there. The river was then more navigable and ships could ascend to the *oppidum*. The *Notitia Dignitatum* (Occ., xxvi. 13) mention Tamuda as the residence of the *praefectus* and of the *ala herculeae*. The lists of bishops mention a *Tamudensis episcopus*.

The name of Tetuan is not found in the early days of the Arab conquest; the country was then governed by Yulyān (= Julian?) who ruled the whole territory of the Ghumāra but Ceuta was the capital. Tetuan does not appear in the Muslim history of Morocco until the ninth century when the empire of Idris II was partitioned in 828; the town fell to al-Kāsim along with Tangier, Ceuta, Kaṣr Maḥmūda and Ḥadjar al-Naṣr but the capital of this kingdom was Tangier.

In the 11th century al-Bakrī knows Tetuan as the capital of the territory of the Banū Sikkin, a section of the Maḥmūda of the coast; it was a town with an old citadel and a minaret.

In 347 (953) the Fātimid general Djawhar came from Morocco to fight the Omayyads and marched on Ceuta and Tetuan after having taken Fās; but having failed in his attack on Ceuta he went no farther and returned to Sijilmāsa. In 399 (979) the Fātimid general Buluggin b. Ziri came to the top of the hill of Tetuan but did not take the town.

In the 12th century Tetuan is twice mentioned by the Almoḥad historian al-Baiḥakī; the Almo-

avid general Reverter encamped there when he was pursuing the Almohad troops. Al-Idrisi mentions it as a stronghold (*ḥiṣn*) of the Majjaks. It does not seem to have played any special part under the Almohads. In 685 (1286) the Marinid Sultān Yūsuf b. Ya'qūb wanting to create a base for operations against Ceuta, held by the king of Granada, built an important fortress at Tetuan around which his successor the Sultān Abū Thābit 'Amir in 708 (1308) ordered a town to be built; the historians are not clear as to whether this was the restoration of the old Tetuan which had fallen into ruins or the creation of a new town on a different site. In 1350 Tetuan saw Abū 'Isā, son of the Marinid Sultān 'Alī b. 'Uthmān, rebel against his father and proclaim himself sovereign. The new town barely lasted a century; it had become at the end of the xvth century a haunt of pirates, particularly dangerous to Spain on account of their proximity to its coast; in 1400 Henry III of Trastamare, king of Castile, sent a squadron of ships which penetrated into the mouth of the Martín and destroyed the corsairs' fleet; troops were landed who took the town, destroyed it and carried off many of the inhabitants as prisoners. Tetuan remained deserted for about eighty years.

In 1414 the Portuguese established themselves at Ceuta which was now to be held by Christians. After Ferdinand's capture of Granada, in Jan. 1492, many Spanish Arabs went over to Morocco; one of them, a valiant defender of Granada, Abū 'I-ḥasan al-Mandari, obtained from the Waṭṭasid ruler of Fās, Muḥammad al-Shaikh, the concession of Tetuan and the lands round it; gathering round him a number of émigrés from Spain, he built a fortress surrounded by ramparts and ditches. A new town was soon built with its Friday mosque. With a body of Spanish horsemen and contingents of mountaineers who had joined him, al-Mandari began to harass the Portuguese at Ceuta, al-Kaṣr al-Saghīr and Tangier by his raids, taking many prisoners whom he employed on the building of the town. Leo Africanus passing through Tetuan saw over 3,000 of them, who were shut up at night in siloes (a quarter of the town is still called *al-Māmār*, 'the siloes'). After the suppression of the risings of the Muslims of Spain, many came to join al-Mandari in the last years of the xvth and early years of the xvith century, especially in 1501 and 1502. To the war by land against the Portuguese was joined that of the corsairs by sea; Tetuan with the adjoining Shafshāwan became one of the principal centres for carrying on the holy war.

With the death of al-Mandari the heroic period of the history of new Tetuan comes to an end; henceforth it was simply a town of bourgeois from Spain whose only desire was to increase their wealth by trade and enjoy in peace the pleasures of arts and letters. Independent and turbulent and favoured by the isolated position of their town, they tried to escape the authority and especially the taxes of the Sultān, but whenever they had begun to enjoy a semi-independence, they broke up into factions who afflicted the town and made foreign intervention easy.

Down to the time of the 'Alawid Sultān Mawliyy Ismā'il, the supremacy seems to have belonged to the family of al-Nakhs, which this ruler had to exterminate. The period of anarchy which followed the death of Mawliyy Ismā'il saw the fighting between the Ka'id of the Dīḥād in the Rif, Aḥmad

b. al-Baḡḡī governor of Tangier, against the Tetuanese commanded by 'Umar al-Wakkaṣh; the Rifian leader finally succeeded in extending his authority over Tetuan. After his death (1743) the Tetuanese resumed their old habits, recognising all the pretenders who appeared in the district. In the sixteenth century, the important fact for the history of Tetuan is the Spanish-Moorish war of 1839-1860, at the end of which the town was taken by the Spaniards, who occupied it till May 1862. In 1890 Tetuan was visited by the Sultān Mawliyy al-Ḥasan. In 1903-1904 it was blockaded by the hillmen of the neighbourhood, who took advantage of the anarchy provoked by the rising of the pretender Abū Ḥimāra. Lastly in 1913, the Spaniards occupied Tetuan which became the capital of their zone of protectorate in northern Morocco and the residence of the Sultān's *Ḥalifa*.

Tetuan, whose port is Ceuta with which it is connected by railway, is the centre from which the tribes of the Ghumāra and the region of Shafshāwan obtain their supplies of imported goods. The local industries, especially the manufactures of brocade and of silk, are declining. The population is about 25,000 of whom 12,000 are Muslims and 4,250 Jews.

Bibliography: All the details of the history and topography of Tetuan and its economic life have been collected by A. Joly in the following works: for the description see *Tetuan*, in *Archives Marocaines*, vol. 4, p. 199-343. For the history, cf. *Archives Marocaines*, vol. 5, p. 161-264, 311-430; vol. 8, p. 404-539; vol. 3, p. 266-300 (on the siege of 1903-1904). On the economic life, cf. *L'Industrie de Tetuan*, in *Archives Marocaines*, vol. 8, p. 196-329; vol. 11, p. 361-393; vol. 15, p. 80-156; vol. 18, p. 187-256. — Cf. also: Cerdeira, *Inscriptions arabes de Tetuan*, in *Revista de tropas coloniales*, No. 11, Ceuta, Nov. 1925; Cuevas y Espinach, *Colección de estudios referentes al bajato de Tetuan*, in *Bol. Soc. Geogr. Madrid*, vol. 39, 1897, p. 49-74; Gomez Moreno, *Descubrimientos y antigüedades en Tetuan*, in *Revista hispano-africana*, Jan.-Feb. 1924; H. Cohn, *Mœurs des Juifs et des Arabes de Tetuan*, Paris 1927. (G. S. COLIN)

TIYÜL, a term used in the administrative system of Persia (the usual pronunciation *tuyül* is due to a false assimilation to Arabic plurals of the type *fa'ül*; in the same way Chardin's translation "perpetual" is due to an erroneous derivation from the Arabic *fawṣ* "long").

The *tiyül* (at least in the sixteenth century and in principle) is the authorisation granted by the government to an individual to levy his salary or pension directly on the taxes which a village or group of villagers has to pay the treasury. In its simple form the *tiyül* was a kind of guarantee to secure the payment of the pension. This guarantee was given sometimes simultaneously with the pension and sometimes later as an additional favour. The beneficiary could be a stranger to the village but he might also be its owner. The economic and social history of Persia still remains to be written and we can only indicate a few facts relative to the origin of the word *tiyül* and the custom to which it gives its name.

Etymology. The word is of eastern Turki origin. Radloff, *Opt. Słowara*, iii, col. 1343, 1380, explains it as "property assigned to any one, allotment" (*das Zuertheilte*) and derives it from

the verb *ti-māk* (= Constantinople Turkish, *diğmek* > *deymek*). From the point of view of morphology one might compare *tiy-ul* with the word *hāt-ul* "camp" which has also passed into Persian (place to which one returns, from *hātmak*, "to return"). The word *tiyāl* is not found in the Mongol period; for example, it does not occur in Rashid al-Dīn's chapter on Ghāzān's reforms (MS. Bibl. Nat. Paris, Suppl. Pers., N^o 209, fol. 405^a—443^b and d'Oshson, *Hist. des Mongols*, iv, 370—477). It is not even found for the period of Tīmūr in the *Zafar-nāma*. So far as one can see, the word first appears as an official term under the Tīmūrids; cf. the *Maṭla' al-Sa'dain* under 810 (1407); cf. N.E., xiv, 1843, p. 124—125, where Quatremère studies the word and quotes passages from the *Akbar-nāma* (concluded in 1597) and the *Ālam-ārā* (which comes down to 1629).

Origin of the institution. Although the name *tiyāl* is comparatively late, the practice to which it is applied existed in the time of the Seldjūqs or even earlier. The old Turkish word *tiyāl* in the popular language must correspond to an official term like *ihṣā'* "fief" (plur. *ihṣā'āt*) which it finally supplanted. The Arabic term *ihṣā'* disappears just at the time when the terms *tiyūr-ghāl* (cf. below) and *tiyāl* come into general use.

In chap. v. of the *Siyāsat-nāma*, Niṣām al-Mulk thus defines the prerogatives of feudatories (*mukṣṣān*): "they must know that their statutory rights (as *farnān*) over the peasants (*ra'āyā*) are simply the levying in a mild fashion of the legal dues (*māl-i haṣṣ*) which have been assigned (*hawālat*) to the feudatories. These dues having been levied, the cultivators remain free (*almān*) in all that concerns their bodies, their wives and children. Their property — goods and lands (*arṣāl wa-ḥayr*) — is also free and the *mukṣṣān* have no claim on it". The *ihṣā'* is thus reduced to the right to levy the dues (*māl-i haṣṣ*) payable by the cultivators. This form of *ihṣā'* (we do not know if it was the only one!) very much resembles the *tiyāl* of a later date. In the Mongol period, Rashid al-Dīn quotes the text of the decree of 703 (1303) by which Ghāzān Khān created the military fiefs (*ihṣā'*). This edict distinguishes between crown lands (*imḍā* and *diwānī*), those of private individuals and of the *waṣṣ*, and those which are uncultivated. As to the first category the lands of the peasants (*ra'āyā*) continued to enjoy their rights but paid all their dues (*hakra*, *māl*, *habbur*, *mutawaffiqihāt-i diwānī*) to the military feudatories (*lārīkhān*; on the meaning of a number of these terms cf. Barthold, *Nadpis na meisti Manuie*, *Aniushiya sriya*, N^o 5, St. Petersburg 1911, p. 32 sq.) in place of sending them to the treasury. This practice is also very close to the *tiyāl* although in 703 it formed part of a whole system of privileges which formed the counterpart of military service (d'Oshson, iv, p. 424, §§ 1—9).

Tiyāl, a financial expedient. The regular *tiyāl* is characterised by the simplification of the process, which is gradually transformed into a simple financial expedient in proportion as the number of payments increases and the central treasury finds a difficulty in making them in specie. Chardin, v, 416, for example, explains the origin of "payments by assignments" as mainly due to scarcity of currency.

The nature of the *tiyāl* (i.e. of the right to appropriate the taxes of a village) was often

complicated by privileges granted at the same time to the *tiyāldār* (e.g. that of administering public domains on his own account). This explains the vagueness of the definitions given it by European observers.

Chardin translates the word *tiyāl* by "assignation de terre" and distinguishes two categories of *tiyāl* "for these estates are either the apportionment of the charge, the great charges having all the lands which are annexed to them for the payment of wages and which remain perpetually attached to the charge; or they are assigned at the will of the treasury". In the latter case also, the payments had a character of perpetuity for a series of years. Chardin with much perspicacity criticises the system and concludes (p. 418): "the lands which are assigned for payment of salaries are not under the inspection of the king's men; they are as if they were the private property of the man to whom they are granted. He arranges about the revenue as he likes with the inhabitants of the place".

Similarly Kaempfer (1684—1688) enumerates three kinds of salaries in Persia: *harāt* (claims on remote provinces), *kama sālā* (lands yielding only the amount of the pension) and *tiyāl*. These "*tawil* ou *tiyāl*" which correspond, broadly speaking, to Chardin's first category are the lands (*paḡi*, *prædia vel fundi*) given to dignitaries of state (*ministres regni*) who during the term of their service enjoy possession of them (1) and of their taxes (*ut durante servitio eorum possessiones et annona gaudeant*) and only draw from these lands (belonging to the Amīr) a revenue equal to 3 to 10 times their salary.

Siyūrghāl. A distinction must be made between *tiyāl* and the document by which the privilege was granted; this usually was given the Turco-Mongol name of *siyūrghāl* (favour) (or perhaps *inām*), cf. Chardin, vi, 65 (who limits the meaning too much) and Budagov, I, 650. The firmān of Shāh Husain Safawī dated 1113 [1701] (publ. by Khanykow, *Mémoires asiat.*, iii, 1859, p. 70—76) may be taken as a specimen of a *siyūrghāl* (the only name for it used in the text of the document): the beneficiary has to put at the Shāh's disposition seven armed men; for this he is allotted the annual sum of 6 tamāns, 3 *hasr* and 96 dinārs and a half representing the taxes of the district of Dirmār. The peasants have to pay their taxes (*māl-waḥḥāt* [?]) *wa-waḥḥāt wa-huḥḥāt-i diwān* to the beneficiary of the *siyūrghāl* and the agents of the government are not to interfere with the exercise of this privilege. Thus the favour of the monarch (*siyūrghāl*) constitutes the *tiyāl* of the beneficiary.

XIXth Century. For the beginning of the XIXth century we have confirmation of the exact sense of *tiyāl* in Rawlinson, *Notes on a Journey from Tabriz*, *J. R. G. S.*, x, 1840, p. 5: "*Tiyāl* is a grant of the crown revenues of any town or district; the individual receiving the grant is usually entrusted with its realization, though not necessarily so. The grant also extends only to his own lifetime, unless otherwise specified. It is calculated that about a fifth of the whole land revenue of Persia is at present thus alienated from the crown". But very often the *tiyāl* proper continued to be associated with other privileges accorded to the same beneficiary, which disguised the extent of the *tiyāl*. Dr. Polak who himself nearly became a *tiyāldār* thus defines *tiyāl*: "ebenfalls Kronland,

dessen Ausnutzung aber einzelnen Personen statt des baren Gehalts überlassen wird".

The system of *tiyul* gave rise to all kinds of abuse. The landed proprietors of Persia are an intermediate class between the state and the peasants. The latter are regarded as the serfs (*ra'iyas*) of the proprietor. The latter (*arbab*) exercised certain administrative rights and among others himself collected all the taxes due from the peasants. Of the sums raised he retained the amount due to him as owner (*māliyyāt-i arbabī*) and handed the rest over to the treasury (*māliyyāt-i dawlatī*). If a *tiyul* is added to this system, the *tiyuldār* and the proprietor, two private individuals, arranged between themselves without the intermediary of the government; if the two titles coincided, the "owner-tiyuldār" escaped the financial control of the state and became a kind of feudal lord whose domains formed an enclave on territory governed by the local representatives of the central government. The *tiyul* often led to the transformation of its holder into a landed proprietor. As the favour of *tiyul* (especially in the sixteenth century) was granted to *personae gratiae* at the court, their privilege put them in a position to extend and strengthen their influence. In the rare cases where the peasants were the proprietors of the soil (*khurda-millik*) the impossibility of resisting stronger neighbours or the oppression of government agents often forced them to seek out a powerful *tiyuldār*, who would grant them his protection, but very often this protection ended in the disappearance of their rights as small owners. The *tiyul* was as a rule given for life; when the heirs of the *tiyuldār* were able to get the *tiyul* extended to them it was usually reduced by a third. In the course of several generations this led to the extinction of the *tiyul* but the heirs easily found means to prevent the disappearance or the diminution of their privilege. The *tiyul* on the state domains (*khālīqa*) liberally granted by the government finally led to the almost complete disappearance of the *khālīqa* in several localities, as for example in Adharbāidjīn (Tigranow).

Bogdanov alone finds extenuating circumstances in the practice of *tiyul* (the presents given by the *tiyuldār* to the government might be greater than the total of the taxes, which would otherwise have reached the capital; the *tiyuldār* protected the peasants against the extortion of government agents), but the disadvantages of this mediaeval system were too obvious and the Majlis at its first assembly on June 1907 hastened to decree that all *tiyul* should return to the state, which was done.

(V. MINORSKY.)

TLEMCEN, in Arabic *TILMĀN*, from the Berber *tilmas* (pl. *tilmān* and *tilmān*), "spring, well of water" is the "town of the springs". The old town a few hundred yards E.N.E. of the modern town was called both Tlemcen and Agādīr, the latter, the old Phoenician name, which passed into Berber with the meanings given above (cf. AGADIR) and also that of "steep cliff or plateau", which corresponds exactly to the position of the place on a slightly inclined plateau rising abruptly from the plain which it commands to N. and E. Perhaps we may see in this name of Agādīr the origin of the Arab legend which calls Tlemcen al-Djūdīr or Madiyat al-Djūdīr and makes it the scene of the meeting between Moses and al-Khaḍīr (q.v. and cf. *Qur'an*, xvii. 64 *sqq.*). The following other names of this town may also be noted: Pomaria "the orchards", of the little town which the Romans had there and which is found in some Latin inscriptions found on the site of Agādīr; — Tāgrūt, "the camp" (Berber), given in the 11th century A.D. by the conquering Almoravids who founded the modern Tlemcen and its principal Mosque when they were besieging the older Tlemcen, i.e. Agādīr, — and lastly that of Manāḡira or al-Mahallat al-Manāḡira (Arabic), the "Victorious" or "Victorious Camp", a town 250 acres in area built by the Marinids of Fās a mile to the west with a great mosque, a palace and a walled fort at the end of the 13th century and beginning of the 14th, at the time of their first and great siege of Tlemcen. Of the three successive towns forming Tlemcen, Agādīr in the east, Tāgrūt in the centre and Manāḡira to the west, only the central one has survived and retained the name Tlemcen.

Geographical position. Tlemcen lies in 1° 30' W. Long. of Greenwich and 34° 53' N. Lat. It is 2,600 feet above sea-level. It is built on the north flank of a ridge of the massif of Tlemcen facing the sea, which can be seen 30 miles to the north, on the ravine which the Tafna makes in the chain along the coast. The massif of Tlemcen is a geographical unity; it consists of parallel chains running S. W. to N. E. which rise by stages towards the south from 400 feet just behind Tlemcen to 6,000 commanding the steppe of Alfa in the south. This Jurassic massif is bounded on the south by the ancient alluvial formations of the steppes, in the W. and N. and E. by the argillaceous plains of the Cartenian (Marnia) period, of the Cartenian and Middle Myocene (Hennaya) and Lower Eocene, of the Helvetian and Pleistocene alluvial deposits of Lamoricière and Bel-Abbès. From its geological formation of Dolomitic limestones resting on porous sandstones resting on clays and gravels so suitable for the collection of the rain water in vast subterranean basins, the Tlemcenian massif is a vast reservoir which distributes during the long summer the precious liquid from the countless springs, which never fail and give the region of Tlemcen for miles around the town the beautiful orchards and rich vegetable gardens which constitute its fortune and the luxuriant vegetation and beautiful woods which adorn it.

The Jurassic massif, down the slopes of which run perennial rivers (Tafna, Mafragh, Wād-Shūli, Wād-Isser) with their waterfalls and which is covered with forests (oaks of various kinds, thuyas, terebinths, wild olives etc.) and which gives a home to a large fauna (lynx, hyena, jackal, fox, wild boar and other smaller quadrupeds as well

as countless birds). In the mountains are also many subterranean galleries, caves and caverns filled with pigeons and sometimes affording shelter to the animals and homes to the natives.

The soil is fertile and the flora varied: in the orchards of Tlemcen the trees and plants of the Mediterranean coast are grown as well as the species of Central Europe. The average annual rainfall is about 26 inches. It is spread over all the months of the year but is very low in July, August and September, which only have a few thundershowers. Snow makes a brief appearance each winter. The climate is healthy and invigorating and especially beneficial to anaemic or neurasthenic people.

History. A situation so favourable for human habitation has naturally been occupied by man for millenia. Almost everywhere traces of prehistoric man have been found; but there is still much to be found in this region, so far little explored from this point of view and especially in the numerous caves, none of which, so far as I know, has been systematically excavated.

We know very little about the Roman Pomaria of which a few inscribed stones survive nor of its divinity Aulisa (called on the inscriptions *deus invictus* and *deus sanctus*) nor of the body of cavalry which garrisoned it.

Nothing is known of the history of Tlemcen between the Roman period and the Muslim conquest. If we do not know how Islam penetrated into this region in the viiith century A.D. we know no more about the Sofri Berber principality whose chief in the viiith century was Abū Kurra. We know that on several occasions this emir of Tlemcen at the head of his Zenāta Khāridjīs undertook military expeditions to the east as far as the Zāb and Ifrikiya.

Sunni Islām was definitely established in Tlemcen and its vicinity at the end of the viiith century. Idris I "built a fine mosque in which he put a beautiful pulpit" in 790. Henceforth Tlemcen-Agādūr was the seat of a Muslim provincial government which experienced all the vicissitudes of the central and western Maghrib.

Modern Tlemcen (Tāgrārt) founded at the end of the xith century by Yūsuf b. Tāghfta developed considerably and the Almohads at the end of the xiith century surrounded this town (Tāgrārt) with a rampart, for Agādūr already had its own walls.

Of the Almoravid Tlemcen, which was a centre of theological and legal studies (1081—1144) in which celebrated masters flourished, there remains as an expression of religion in art, the great mosque with its vigorous and elegant floral epigraphic ornamentation of carved slabs around the *mihrāb*. It was about 55 years after the occupation of Tlemcen that the Almohads finished the decoration of this part of the great mosque as we know from a beautiful inscription running round the cornice of the drum of the dome in front of the *mihrāb* giving the date 530 (1135 A.D.).

It is remarkable that the great builders of beautiful monuments like the Almohads have left no trace of their rule in Tlemcen (1144—1236) except the solid rampart of terre pisée around the town. No building in Tlemcen or its immediate neighbourhood can be attributed to them. It was during this period (1197) that the great mystic, Abū Madyan [q.v.] of al-Andalus, who is buried at Tlemcen, became the patron saint of the town.

In the first half of the xiiith (xiiith) century when the Almohad empire, weakened by lack of energy and authority in its rulers, was being exposed to the attacks of nomad Berber tribes in the west and the Hafsid governors of Ifrikiya rebelled against the imperial authority and declared themselves independent, the Zenāta tribes of the Banū 'Abd al-Wād (cf. 'ABD AL-WĀDĪS) in the Central Maghrib and the Banū Marīn (cf. MARĪNĪS) successively formed two kingdoms having Tlemcen and Fās as capitals.

In spite of the almost continual attacks, often successful, of which Tlemcen and the 'Abd al-Wādīd kingdom were the objects during the xiiith (xiiith) and xivth (xivth) century, especially from their Hafsid neighbours in Tunisia and the Marinids of Fās, the kings of this Tlemcen dynasty found time to embellish their capital with various buildings, some of which still exist. They also cultivated the sciences and founded *madrasas* for students, one of which, in the village of al-'Ubbād near Tlemcen to which the great historian of the Berbers, Ibn Khaldūn, retired for a time, still exists. They realised the commercial importance of Tlemcen for relations with the Sahara, the high plateaus and the Tell and entertained constant relations with Spain through their port of Humāin; they also did not fail to take advantage of the favourable position of the town for trade with east and west since it was on the great natural road from east to west.

Tlemcen was not only a centre of trade, a market for the products of the country around, but its own industries produced articles which were much sought after as they still are. At the time of the emigration of the Moors from Spain in the ixth (ixth) century, Tlemcen received an important contingent of them, which gave it renewed activity in various fields (learning, industry, art, literature and music, agriculture, etc.).

Unfortunately this town so well gifted by nature and climate was never able, even at the height of its power when it was the capital of the central Maghrib, to spread Muslim culture as one would have expected. This was because it was surrounded by nomad tribes in a continual state of agitation: Berbers of the Zenāta or Hilālī Arabs; the latter especially were much too turbulent neighbours and politically too unreliable for the capital to enjoy for sufficiently long periods the peace necessary to develop its culture.

The Turks and Christians of Spain disputed Tlemcen at the beginning of the xivth (xivth) century. The last 'Abd al-Wādīd prince accepted the suzerainty of the Spaniards in Oran. Salāh Rā'īs, pasha of Algiers, took final possession of Tlemcen for the Turks in 1355.

With the Turks, Tlemcen entered upon a period of moral and intellectual decay; commerce gradually declined and education ceased; no more fine buildings were erected; a number of public buildings and palaces were even allowed to fall into ruins. The popular poetry of this period gives an idea of what Tlemcen had become under the military and fiscal rule of the Beys:

"God has sounded Tlemcen's last hour! has He not devoted everything to an irrevocable end? For it the glorious days are over; the days of sadness and misfortune have come. It is ruined, it has perished, ruined by tyranny. It is clothed in mourning and covered with shame; vice has supplanted the former virtues".

In addition to the memory of three centuries of oppression, the Turks have left an important ethnical element in Tlemcen, the Kulughlis (Koroghli, "son of a slave or of a soldier"), the result of the union of the Turks with the women of the country. The Kulughlis still form a quarter of the native Muslim population of the commune of Tlemcen of which they form the most active element, the closest to European in character and the most accessible to progress.

From 1830 to 1853, Tlemcen, rid of Turkish domination, was under the Sultān of Morocco. This Moroccan suzerainty was even recognised by the emir 'Abd al-Kādir, who with the support of the Hājar (Moors and Berber-Arabs) had succeeded in establishing a precarious authority over Tlemcen.

The French entered Tlemcen for the first time in 1836 but abandoned it on May 30, 1837 (treaty of the Tafna) surrendering it to 'Abd al-Kādir's lieutenant. After the breach of the treaty of the Tafna, Bugeaud came and retook Tlemcen on Jan. 31, 1842. Henceforth peace and prosperity reigned in the town which had been ruined by the years of fighting between Muslims (Kulughlis and Hājar). Tlemcen was made a "commune de plein exercice" in 1854 and capital of an *arrondissement* in 1858. It is now also the capital of a judicial district, of a military subdivision and has a regiment of infantry and one of cavalry (*spahis*), many educational institutions, banks and agricultural credit offices etc. The population is about 30,000 Muslims, 6,000 Jews and 4,000 Europeans.

The attraction of Tlemcen lies not only in its verdant and picturesque situation but also in its monuments of Muslim art, which make it a regular museum of the best period of Hispano-Moorish decoration and in the public and private life of its Muslim Maliki population, who have for the most part remained faithful to the manners and customs of their ancestors. No other Algerian town can be compared with Tlemcen in this respect.

Besides the imposing remains of the old ramparts around Agādīr, Tāgrārt and Manṣūra, and the numerous mausoleums of Muslim saints, the following may be mentioned as worthy of the attention of the archaeologist and lover of Muslim art: the great mosque (vith [xiiith] century), with its minaret of the viith [xiiith] century, the minaret of the great mosque of Agādīr (viith [xiiith] century), rising on the site of the old mosque founded by Idrīs in the second (eighth) century which is no longer in existence; the mosque of Sidi Bel-Ḥasan (viith [xiiith] century) with its graceful *mihrāb*, its elegant minaret and the lovely lacework of its fretted and carved plaster, its floors of cedar in geometrical patterns (this building houses the Museum of Muslim archaeology). The mosque of the Ullād al-Imām (beginning of the viith [xivth] century) stood beside the Madrasa al-Ḥadīma which has disappeared. In the town (*infra muros*) one can still admire the *Maḥḥwar*, the fortified palace built in the viith (xiiith) century in the highest part of the town by the first 'Abdalwālid ruler of Tlemcen. Next we may mention for their art, the mosque and sanctuary of Sidi Brāhīm, the mosque of Sidi Saṣūsi and of Sidi al-Banna.

In the faubourg (*extra muros*) are to be found further treasures of Muslim art and architecture: 1. the ruins of Manṣūra, this Tlemcen of the west built by the Marinids of Fās at the end of the viith (xiiith) and beginning of the viith (xivth)

century when laying siege to the 'Abdalwādids, their relatives and rivals, besides the imposing remains of the flanking towers and of a part of the surrounding walls 4,000 yards in circumference, the ruins of an ancient royal palace, we are particularly struck by the remains of the outer wall and majestic minaret in hewn stone of the vast huge mosque; what still remains, some 120 feet high of this minaret of the beginning of the viith (xivth) century recalls by its vigour, beauty of decoration, coated with polychrome faïences, Almohad works like the Giralda of Seville, the tower of Ḥasan at Rabat and the Kutūbiya of Marrākush.

2. To the E. S. E. of the town in the Muslim village of al-'Ubbād still stands in perfect preservation the Mosque of Sidi Bū Madyan founded by Abu 'l-Ḥasan, the Marinid lord of Tlemcen for several years; it is dated 1339 A. D.; with the memorial porch of its main entrance, the swinging doors of cedar wood studded with carved bronze work, its halls of prayer with the walls covered with floral and epigraphic arabesques, its ceilings ornamented with protruding bricks, the dome lit by panes of many coloured glass in front of the *mihrāb*, the minaret patterns traced on its sides in protruding bricks with the remains of paintings and faïences in delicate enamels, this monument, which is exactly dated, is a valuable document for the Muslim art of this period and country. Beside this mosque which the ruler built in honour of the saint whose name it bears, Abu 'l-Ḥasan erected a number of subsidiary buildings: a madrasa (1345 A. D.) quite well preserved in spite of the fact that some of the outer covering of plaster and faïence has disappeared, latrines and lavatories, a *hammam*, a palace now much decayed but whose splendour is recalled by the remains of its walls richly adorned with plaster and faïence. It was here between the mosque and the ruins of the palace that there was buried at the end of the viith (xiiith) century the famous mystic, patron saint of Tlemcen, Sidi Bū Madyan; his mausoleum — an object of pilgrimage for every Muslim passing through Tlemcen — is a building on a square plan covered by a dome in 12 sections surmounted by a roof of green tiles; inside, the walls are covered at the bottom with Italian faïence of the xviiith century and at the top with moulded and painted plaster work. Many princes have adorned with some new decoration this hall which the faithful have filled with their gifts. The framework of the arch of the door is ornamented with arabesques in plaster of the Turkish period; a well with a border of onyx and four pillars of onyx with capitals supporting the roof stands in front of the mausoleum.

3. To the north of the town at the very foot of the walls in the centre of the Muslim faubourg of Sidi 'l-Halwt (the name of another great Andalusian mystic) rises another Marinid mosque, the work of Abū 'Inān, son and successor of the sovereign Abu 'l-Ḥasan. This very well preserved building which, like the other mosques still standing at Tlemcen except that of Sidi Bel-Ḥasan (now a museum), is still used for worship, is another monument of Marinid art of the viith (xivth) century (1353). In the technique of its interior decoration (plaster covering of the walls, ceilings of cedar-wood in compartments covered with geometrical patterns, columns and capitals of onyx which support

the principal hall of prayer and come from Man-šira) this mosque may be compared with the madrasa of Bu 'Inānīya in Fās, founded by the same ruler at the same time. In the one as in the other of these two monuments we can clearly see signs of the decadence of the Muslim architectural art of Barbary. It is the period when Muslim culture is beginning to lose its hold on Tlemcen as on the rest of the Maghrib. This is not the place to examine the causes. But in the domain of minor arts (weaving, embroidery of gold and silver, ornamentalations of articles of copper and wool, wood and metals) Tlemcen long retained an honourable place among the great cities of Islam in North Africa. Its countless artisans in these minor arts and industries are still renowned; they still hold the first place for embroidering in gold or silver thread on leather, especially the ornamentation of harness and saddle-cloths for horses for state occasions.

The population. One can easily understand that in this old metropolis of Islam, the native population (Muslim and Jewish) always very conservative, has preserved its original character in spite of the material and intellectual development produced by a long contact with Europeans, especially the French.

The Muslim population (agriculturalists, artisans, traders, workmen, clerks and minor officials) is the most numerous; it is formed of elements of diverse origins: the Ḥaḍar (lit. "citizens") or Moors are the result of the intermarriage of the former Berber occupants of the land with the Arabs; among them are also descendants of the Moors driven from Spain in the viiith (ixth) century and ixth (xth) century; the negroes, not numerous, descendants of former slaves who came from Tuat and the Sūdān; the Ḳulughli, since the Turkish occupation. To these may be added an element in the rural suburbs, which are known as *ḡūa*, whence their name of *ḡūai*. The whole forms the Muslim community of Tlemcen united by one faith, the same beliefs, a common family law, but deeply divided by racial *soff* and family feuds.

Early converted to Islam and having probably adopted the Arabic language in the Idrisid period, the people of Tlemcen and its suburbs have always shown themselves greatly devoted to the cult of saints and the practice of magic.

The Jewish population has for some centuries been an important community here which, for long oppressed, has preserved its habit of close combination against the foreign and non-Jewish elements around it. The Jews themselves are for the most part of Berber origin belonging to the district or to Morocco. To these have been added from time to time foreign Jews especially Spanish at the emigrations. The old costume is no longer worn except by the old men; the younger generation educated in the French schools has adopted European costume and shown aptitude and willingness to study. All however have remained faithful to their ancestral customs and beliefs, sufficiently close to those of the Muslims, in the belief in spirits and occult powers, in magic, in funeral rites, in the cult of saints and even for usages of family life. As usual throughout North Africa the Jews speak an Arabic dialect; it is here strongly influenced by Moroccan and clearly different in phonetics, morphology, and even

lexicography, from the Arabic dialect of the people of Tlemcen and that of the rural districts around it.

To sum up then, Tlemcen, an ancient Berber city converted to Islam in the viiith—viiith century using the Arabic language since the third (ixth) century, has since then remained Mālikī (no other Sunni school or Muslim sect has representatives in Tlemcen). During the middle ages it was an important provincial capital, then the royal capital of a Muslim Berber dynasty of the viith (xiith) to the xth (xvth) century. From the period of its glory it has retained intact precious monuments and numerous remains of buildings of great interest, traditions and customs, testifying to an established culture of its own.

The coming of the Turks, practically without influence from the cultural point of view, was of importance ethnically. The Ḳulughli (Turkish) element however has been absorbed by the natives so far as customs and religion are concerned but remains distinct from the social point of view and is hostile to the proper native element or *ḡūai*. Ḳulughlis and Ḥaḍar do not intermarry or very rarely and are readily distinguishable by intellectual as well as physical features.

Next in order of numerical importance to the Muslim group, which is by far the largest, comes the Jewish group, then the French and other Europeans. No more here than in the rest of North Africa is there any fusion between the three great groups by marriage. Religion which for Muslims and Jews decides customs, family life and mental outlook, has established between these two groups and between them and the European element an impassable barrier to reciprocal penetration.

Leading their daily lives side by side, on terms of unrestricted and friendly intercourse bound by common interests of business, these three groups of the Tlemcen population are clearly separated by profound differences in upbringing and private life. If it happens that an individual of the Muslim or Jewish group joins one of the two other groups through change of religion or simply by marriage he becomes to some extent excommunicated and banned from the society to which he formerly belonged and may even be cut off by his own family.

Bibliography: Besides the Muslim geographers and historians should be consulted of publications relating to Tlemcen: L'Abbé Barges, *Histoire des B. Zéyan, rois de Tlemcen*, vol. I, Paris 1850; do., *Mémoire sur les relations commerciales de Tlemcen avec le Soudan et le règne des B. Zéyan*, in *Rev. de l'Orient*, Paris 1853; do., *Complément à l'Histoire des B. (ALFRED BEL.)

TOBNA, a town of Central Morocco, which no longer exists. The few traces of it, that survive, lie 3 miles south of Barika (department of Constantine) between the Wādī Barika in the north and the Wādī Bīḥam in the south. The advantages of this position, which commands the passage between the Sahara and the plateaus of the Tell, the *Shoṭt* Hodna, and the mountains bordering the east of this depression, had been recognised by the Romans. They built here on this site the town of Tubuna, which became a *municipium* in the time of Septimius Severus, and after a fortress had been built there it protected the country from the incursions of the nomads. The Byzantines in turn built a large fortress there and made it the capital of a district governed by a *praefectus limitum*. During the early expeditions of the Arabs, Tobna seems to have been one of the centres of the joint resistance of the Byzantines and Berbers. The Arabs however succeeded in taking it, probably at the beginning of the eighth century A. D., and in the governorship of 'Omar b. Hafṣ Hazarmerd (151 = 768) they strengthened its defences. This same 'Omar was besieged three years later by the Khāridjīs, who, however, did not succeed in taking the town, although they repeated their attempts in the years following. Tobna remained in the power of the Arab governors of Kairawān, formed part of the Aghlabid kingdom, belonged to the Fatimids, to the Zirids, and finally fell to the Hammādids in 1017.

During the early centuries of Muslim rule, Tobna seems to have been a populous and prosperous town. Ya'qūbī mentions it as the capital of the Zab. Al-Bakrī says it is the largest town of the Maghrib between Kairawān and Sijilmāsa. It was, according to his description, surrounded by a brick wall, with monumental gates and flanked on the south side by a castle, built of stone covered by vaulted chambers, provided with cisterns and used as official residences. Inside the town were a *djāma'a* and a main street with shops and bazaars. Outside lay the suburbs, a cemetery, gardens and fields irrigated by the waters of the Wādī Bīḥam. The environs were fertile and well tilled, cotton especially

being grown. The population consisted of the Afārec, descended from the intermarriage of Romans and Berbers, and of Arabs descended from the soldiers of the *djund* settled in the region. These two elements were however often at loggerheads and the first had the support of the people of Setif and the second of those of Biskra. The Hilālī invasion dealt a decisive blow to the prosperity of Tobna. Sacked in 1064, after the defeat of the Hammādids by the Arabs, Tobna rapidly declined. Its importance declined in favour of Biskra and it was not long in disappearing completely.

TODMIR. [See **TUDMIR**.]

TODMIR, the name given to the province (*kūra*) of al-Andalus, of which Murcia was the capital down to the time of the breaking up of the Omayyad caliphate. If we may believe the Arab authors, the word is an Arabic transcription of the name of the Visigoth governor Theodomir, who, at the time of the conquest of Spain by the Arabs, was the representative in Murcia of Roderick, king of Toledo. He is particularly known for the treaty which he made with Mūsā b. Nuṣair [q. v.], the Arabic text of which has been preserved by al-Dahbī and Ibn 'Abd al-Mun'im al-Himyari. It was first published by Casiri, *Bibliotheca Hispana*, vol. II, p. 106 and has been the subject of an elaborate study by Gaspar Ramiro, *Historia de Murcia musulmana*, p. II—37.

The *kūra* of Todmir, according to the Arab geographers, was adjacent to those of Jaen and Elvira and its principal towns were Lorca, Orihuela, Alicante, Cartagena and Murcia. For the history of this part of al-Andalus during the Muslim period see the article **MURCIA**.

TOGHA TIMUR. [See **TUGHA TIMUR**.]

TOGHRUL. [See **TUGHRUL**.]

TOGHUZHGUZ, a Turkish people. The name was variously written and pronounced. The Arabic notices of the settlements of the Toghuzhguz correspond to the Chinese and later Muslim accounts of those of the Uighur; according to Chinese sources, the Uighur were divided into nine tribes; according to Rashīd al-Dīn (text in *Travels of Rashīd al-Dīn*, vol. I, 161), the Uighur were divided into two main groups, the On-Uighur (ten-Uighur) and the Tokus-Uighur (nine-Uighur). It was on these facts that Grigoryev based his formerly generally accepted view (*Vostochny Turkestan*, v. 2, St. Petersburg 1873, p. 203) that for Toghuzhguz one should read Toghuzhgur, which

was a contraction from Toghuz-Uighur. This view was disseminated in western Europe by M. Th. Houtma in his article "Turks" in the *Encyclopædia Britannica*; he was followed by M. J. de Goeje (*de Muur van Gog en Magog*, Amsterdam 1880 = *Middelen-lingen K. Ak. Wet.*, Ser. 3, v. 36—122). In the first five volumes of the *B. G. A.*, de Goeje adopted the reading Toghurghuz; in vol. vi. (1889) Toghurghuz is used throughout and in vii. he went back to Toghurghuz. In the preface to this volume a few extracts are given from a letter from Th. Nöldeke, quoting *Pahlavi Texts*, ii. 329 (*Sacred Books of the East*, xviii.). Nöldeke observes that in the book by the Persian high priest Mānōšchir written in 881 A. D. (cf. now *G. J. P.*, ii. 104 where the form is Mānōštshir), we find *Tughuzghuz* "in absolutely clear Pārsand script; Ughur and therefore not Uighur is the form in it". A few years later, the name Tokuz-Oghuz was found in the newly discovered Orkhon inscriptions. The form Toghuzghuz is now perfectly certain; it is equally certain that it contains the name of the Ghuz (Oghuz); nevertheless the view has been recently upheld by several scholars that by Tughurghuz the Arabs meant the Uighur and no one else. J. Marquart (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, p. 390) lays stress on the fact that the first edition of Ibn Khurdādhbih, said to have been written about 232 (846—847), already has the Toghuzghuz in the district to which the Uighur did not come till 866. As the identity of the Toghuzghuz with the Uighur seemed doubtful to him, Marquart thought the explanation was that we really had a recension of the book prepared not earlier than 272 A. D. Apart from the references given under GHUZ, in which the Toghuzghuz appear much farther west than usual (cf. also Makrizi, *Khitat*, i. 313 on Tūlūn, father of Ahmad b. Tūlūn [q. v.] who came from the people of the Toghuzghuz), the Toghuzghuz are also still mentioned in the east in the first half of the ninth century A. D. Muhammad b. Mūsā al-Khwarizmi identifies the two Scythians of Ptolemy with the land of the Turks and the land of the Toghuzghuz (*Bibl. arab. Historiker und Geographen*, iii. 105, No. 1600 and 1601). Even the text of Djāhiz (d. 869 A. D.) quoted by Marquart, *op. cit.*, p. 91 shows that the Toghuzghuz were regarded as having long been neighbours of the Khazars. As Reinaud (*Relation des Voyages etc.*, Paris 1845, *Discours préliminaire*, p. cxxvii. sqq.) has shown, what we are told in Arabic sources (e.g. in Mas'ūdī, *Murūj*, i. 288 and 365) about the doings of the Toghuzghuz in China refers not to the Uighur but to the Turkish, i.e. Oghuz, Sha-t'o (on this tribe, cf. now also E. Chavannes, *Documents sur les Turcs occidentaux*, St. Petersburg 1903, p. 96 sqq. and 272). In spite of the Chinese references to the nine Uighur tribes, the expression Tokuz-Uighur has not yet been found in sources of the pre-Mongol period; the Uighur Khān of the eighth century of whom an inscription has been published by Ramstedt, *Zwei uigurische Inschriften aus der Nord-Mongolei*, Helsingfors 1913, p. 13, calls his people On-Uighur Tokuz-Oghuz.

The name Toghuzghuz, which properly belonged to the predecessors of the Uighur, the Sha-t'o Turks, seems to have been transferred by the Arabs to the Uighur. The Arabs apparently did not know that the Sha-t'o had been driven away by the Tibetans and the latter in turn supplanted by the

Uighur. From what sources the Arab notices of the Toghuzghuz are taken and to what date they refer has not yet been established; nor is anything known about the date of the journey mentioned by Yaḳūt (*Mu'djam*, i. 840 supra) made by Tamīm b. Ḍakr al-Muḍawwāl to the "Khāḳān of the Toghuzghuz". The best sources, the account in the anonymous *Hudūd al-'Alam* and in Gardizi have been in part used by Marquart (*op. cit.*, Index under "Toguzghuz a. Uiguren"). The account in Idrisi (transl. Jauher, i. 401) is quite different. It is important to note that the only Arab author who writes on Central Asia, not from books but from his own experiences, knows nothing of the Toghuzghuz; on the other hand we find in him the Uighur (without a numeral) hitherto quite unknown to his Arab predecessors. Later writers quoting literary sources again mention the Toghuzghuz in place of the Uighur; cf. the note by Fakhr al-Dīn Maḥārak Shāh al-Marwarrādī (beg. of the vii. [xiii] century) on the scripts of the Soghdians and Toghuzghuz (*Afshār-Nāma, A Volume of Oriental Studies* presented to E. G. Browne, Cambridge 1922, p. 405 sq., p. 407 wrong vocalization: Toghuzghuz). It was only, when during the Mongol period more accurate information became available about Central Asia and especially about the Uighur, that the name Toghuzghuz for a people disappeared from Muslim geographical literature; in the *Nuḥṣat al-Kulūb* of Ḥamd Allāh Kāswīnī (printed in 740 = 1339—1340) it does not occur.

Bibliography: given in the text.

(W. BARTHOLO)

TOKAT, a town in Asia Minor, situated in the northern part of Cappadocia, to the south of the middle course of the Tozanlı Şu, the ancient Iris. The town is situated on both sides of a mountain valley opening to the north and between the town and the river there is a beautiful plain. In a northeastern direction, facing the river, lay in ancient times the well-known town of Comana Pontica, the name of which still survives in the village of Gümenek; the site of Tokat was occupied by a fortress called Daimon (on this identification cf. Ramsay, *The Historical Geography of Asia Minor*, London 1890, p. 329 sqq.). This fortress must have gained in importance during the frontier wars of the Byzantine Empire. The name Tokat, however, which occurs in the Muhammadan geographers since Yaḳūt (Tughl, Yaḳūt, i. 895; Abu l-Fidā, ed. Reinaud, Paris 1840, p. 384—85), is said to have been derived from the Armenian form of the name Endoxia (St. Martin, *Mémoire sur l'Arménie*, i. 188), but this identification still presents difficulties. Ewliyā Celebi gives a number of other etymologies. After the Seldjūq conquest, Tokat kept its strategical importance and was occasionally a princely residence; during the Mongol invasion, the Seldjūq sultan tried to put his possessions in safety in the citadel, and resided there, when the Karaman Oghlu had taken possession of Konya in 1275 (Ibn Bibi, *Rei. de textes rel. à l'Hist. des Seldj.*, iv. 325). Afterwards Tokat belonged to the states of the Eretna Oghlu and of Kāzı Barḥān al-Dīn of Siwa (vide 'Asir ibn Ardāshir Astarābādi, *Basm-u Rasm*, ed. Constantinople 1928); from him the Ottoman Sultan Bāyazid II took the town in 1392. Timūr is said to have been unable to take this stronghold (Ewliyā Celebi, v. 55), and, after his withdrawal, the Ottomans were soon again

masters of the town. Under MuĖammad II ToĖat was devastated by the army of Uzun Ėasan, during the Karaman wars, in 1471, but after that time it does not play an important role in Turkish history; occasionally its prison in the citadel, called ĖartaĖ-ı Badawı, was used for political offenders. It remained, however, an important town, as it lay on the main caravan and army road from Constantinople to the East; by this road it was linked to Amasia in the north and Siwās in the south. Other roads also converged to ToĖat, so that, in the xviii century, it was the chief crossing point of trade roads in those regions (Tavernier).

ToĖat has also traditions in religious history; in the xiii century it was invaded by the adherents of Baba IshāĖ (Ibn Bibi, p. 229) and Ewliyā tells a probably legendary story about the attempts of ĖādĖdĖi Bektaşh to win the town from the infidels in the time of Ertoghrul.

Until the sixth century, ToĖat was a *ḡazā* in the *sandĖāĖ* of Siwās, belonging to the *ayālet* of Siwās. The legislation of 1804 made it the chief town of the *sandĖāĖ* ToĖat in the *vilāyet* of Siwās, while, under the Turkish Republic, ToĖat has become the capital of a *vilāyet* with six *ḡazās*: ToĖat, Zile, Arba'a, Nıksār, KeĖhādiye, Artık Owa. Towards the end of the sixth century, the population was about 30,000 inhabitants, 17,500 of whom were MuĖammadans (Cuinet). The chief industries were the manufacture of copper stencils and yellow leather, the copper being imported from the mines of KeĖān Ma'den and ArĖhāna Ma'den.

TOĖHĖARISTĖN, also written TOĖĖARISTĖN and TOĖĖARISTĖN, a district on the upper course of the Ėmū-Daryā [q.v.]. It is the name of a district formed from that of its inhabitants (like AfĖĖānistān, BalōĖistān etc.), but the question of the nationality and language of the ToĖĖarians was of no significance in the Muslim period. With the exception perhaps of the mention of Balkh as *Madīnat ToĖĖarā* in Balādhuri, p. 408 there is nothing to show that anything was known in the Muslim period of the ToĖĖarians as a people, although as late as 630 A.D. the Chinese pilgrim Hsuan-Cuang (or Yuan-Cuang) mentions, in addition to the land of Tu-ho-lo on the Ėmū-Daryā, another district of Tu-ho-lo, then a desert, east of Khotan (Hsuan-Tsang, *Memoires sur les contrées occidentales*, transl. St. Julien, i. 23 and ii. 247). The land of the Tu-ho-lo on the Ėmū-Daryā was in those days divided into 27 small principalities; the northern frontier formed the "Iron Gate", i.e. the Buggala pass between the valleys of the Kashka-Daryā and the Upper Ėmū-Daryā. In the Muslim period also ToĖĖaristān in the wider sense included all the highlands dependent on Balkh, right and left of the upper course of the Ėmū-Daryā. According to YāĖūt (*Mu'djam*, iii. 518), there were two ToĖĖaristāns, Upper (*al-'ulyā*) and Lower (*al-sufā*), but he does not seem to have had any exact idea of this division. Upper ToĖĖaristān was said to be east of Balkh and west (according to modern

maps south) of the DĖishūn (Ėmū-Daryā); Lower was also west of the DĖishūn but more to the east than Upper ToĖĖaristān. The latter is also mentioned in *B. G. A.*, vi. and vii. and in Tabari. According to *B. G. A.*, vii. 93 (Ibn Rustā) Upper ToĖĖaristān, as was to be expected from the physical features of the country, lay north of the Ėmū-Daryā; on p. 292, s. the high lying territory on both sides of the Upper Ėmū-Daryā is included in Upper ToĖĖaristān along with Badakhshān and Shughnān. In *B. G. A.*, vi. 34 on the other hand it is assumed, as in YāĖūt, that Upper ToĖĖaristān lies east of Balkh and south of the Ėmū-Daryā. In Tabari (ii. 1589 and 1612) the expression Upper ToĖĖaristān twice occurs without its situation being defined. In another passage (ii. 1180), we are told that the lands of the Shūmān and AkĖarūn (north of the Ėmū-Daryā on the Upper Kāfir-nihān) were in ToĖĖaristān, without the qualification *al-'ulyā*. YāĖūbi, *B. G. A.*, vii. 289 and 290 calls the district of the town of Bāmiyān [q.v.] "the first" (*al-ūlā*) or "the nearest" (*al-dunyā*) ToĖĖaristān. Bāmiyān was the "first of the districts (*mamālĖik*) in the nearest, western ToĖĖaristān". Ibn KhordādĖbih assumes that ToĖĖaristān extends far to the northwest including Zāmon, the modern Kerki (*B. G. A.*, vi. 36) as well as to the south where the frontier lands (*ḡhaghār*) of ToĖĖaristān are said to be Zābilistān (p. 35) and Kābul (p. 37).

The frontiers of ToĖĖaristān in the narrower sense are given most accurately by IṡṡakĖri (*B. G. A.*, i. 270 sq.); they were the lands east of Balkh, west of Badakhshān, south of the Ėmū-Daryā and north of the main ridge of the Hindūkush; the most important towns besides the capital TāleĖān or TāyeĖān were Warwālig and Andarāber.

The Hāital (pl. Hayātāla) appear for the first time in Tabari's history of the Sāsānians during the fighting for the Persian throne after the death of YazdeĖird II (438). They had conquered ToĖĖaristān shortly before (Tabari, i. 873, 4; Nöldeke, *Geschichte der Perser und Araber*, p. 119); from whom we are not told. During the Arab wars with the native princes, the last Sāsānians and the Turks for the possession of ToĖĖaristān a *ḡabĖhū* (*ḡabĖĖhūya*, Tabari, ii. 1206) is mentioned as king (*malĖik*) of ToĖĖaristān; he was a prince of the Turkish people of the KhārĖlūkh (Karluk); the expressions *ḡabĖĖhūya al-ToĖĖarĖ* (ii. 1604 and 1612) and *ḡabĖĖhūya al-KhārĖlūkh* (1612) are used promiscuously by Tabari, although in one passage (1591) he does make a distinction between ToĖĖaristān and the land (*urf*) of the *ḡabĖĖhūya*. Shortly before 740 A.D. these wars were finally decided in favour of the Arabs. ToĖĖaristān later appears as a part of the kingdom of the ĖĖhōrida [q.v.] and of that branch which had its capital in Bāmiyān. The name ToĖĖaristān as that of a district seems to have dropped out of use since the viii (xiii) century.

TOĖTAMISH, also written TOĖĖTAMISH (e.g. regularly in Russian annals), Khān of the Golden Horde. The reading ToĖtāmish described as correct by E. G. Browne (*Persian Literature under Tartar Dominion*, Cambridge 1920, p. 583

probably on the authority of the lines quoted on p. 328) is contradicted by the reading in many manuscripts and on the Uighur coins and documents; for example Ibn 'Arabshāh (Egypt. ed., p. 14 and pass.) regularly writes Toqtamish-Khān. The accounts of his origin vary a good deal. The name of his father (although it is often corrupted in manuscripts) was certainly Tuli-Khōdja, who, according to the genealogy given by E. von Zambaur (*Manuel de Généalogie et de Chronologie pour l'histoire de l'Islam*, Hanover 1927, Genealogy S) and to that given by Lane-Poole and others, was a brother of the Khān Urus and a descendant of Orda, the eldest son of Djūz; but according to Abu 'l-Ghāzi (ed. Desmaisons, p. 178), he was descended from another son of Djūz, Tukai-Timūr-Khān. Our only source for the life of Tuli-Khōdja and the early days of his son is the anonymous work compiled for Timūr's grandson Mirza Iskandar described by Rieu, *Catalogue of Pers. MSS. in the British Museum*, p. 1062 *sqq.*, of which another copy is preserved in the Asiatic Museum in Leningrad (cf. the end of the article LUKA-BUVRU, iii., p. 46). According to this source (As. Mus. MS., fol. 242^b) he was governor (*hākim*) of Mangishlak [q.v.] and executed by order of Khān Urus; his son Toqtamish had once or twice taken to flight but had come back again; as he was still a minor he was pardoned. In the year of the Dragon (= 1376) he went to Timūr and was received by him in Samarkand; according to 'Abd al-Razzaq Samarkandi (q.v.; MS. of the University of Leningrad, fol. 70^b) he had been shortly before defeated by Khān Beg-Pulad. Timūr granted Toqtamish the towns of Otrār, Šabrān and Sighnāk; there he was attacked by Kātluḡ-Bughā, a son of Khān Urus: Kātluḡ-Bughā fell in the battle but Toqtamish was nevertheless defeated and had to retire to Timūr. The latter lent him assistance and he returned to Šabrān but was soon afterwards defeated by Tokhta-Kiyā, another son of Urus-Khān and had again to flee to Timūr. Timūr himself, according to the *Zafar-Nāma* (Ind. ed., i. 278), at the end of the same year of the Dragon (= beg. 1377) had to take the field with Toqtamish against the Khān. The enemy was routed and Urus Khān died soon afterwards. He was succeeded by his sons, Tokhta-Kiyā first and then Timūr-Malik. Timūr returned at the beginning of the year of the Snake (= 1377) to his capital; Toqtamish was thereupon defeated by Timūr-Malik but at Timūr's desire proclaimed Khān in Sighnāk (*op. cit.*, p. 284). In the winter (1377-1378) Timūr was told that Timūr-Malik was continually drinking and thus had lost all prestige; Toqtamish was told of this and in the same winter by a rapid campaign he put an end to Timūr-Malik's rule; in the following spring (1378) he undertook from Sighnāk the conquest of the western part of the Golden Horde and successfully carried it through (*op. cit.*, p. 290). The period of these successes can be more exactly ascertained from the Russian annals. On September 8, 1380 the ruler of the Golden Horde, Mamai (in the *Zafar-Nāma*: Mamāk), was defeated by the Russians on the Don at Kulikowo and soon afterwards by Toqtamish in the neighbourhood of the Sea of Azov; in the same year the Russians learned of the victory of the new Khān. When in 1381 the submission of the Russians demanded by Toqtamish was refused, Russia was cruelly ravaged in the following year

by him (1382); on Aug. 26, the capital Moscow was completely destroyed and sacked and Tatar rule re-established in Russia for another century.

According to Iskandar's anonymous historian (*Asiat. Mus.*, Ms. f. 243^r), Toqtamish was a just and vigorous ruler (he is also said to have been a handsome man); but as a result of his ingratitude to Timūr, his abilities were of no avail. Very soon after his rule was established he came out as an enemy of Timūr; Khwārizm was conquered by Timūr in 781 (1379) and by 785 (1383) we find coins struck there in the name of Toqtamish. So far as we know, Timūr on this occasion took no steps either against the Khwārizmshāh or against Toqtamish; in the *Zafar-nāma* (i. 410 *sqq.*) Toqtamish's first hostile act against Timūr is said to be his campaign through Derbend to Adhar-būdjan in 789 (year of the Hare = 1387). Toqtamish in the previous winter had already sent an army against Tabriz [q.v.] (*Zafar-nāma*, i. 392) but Timūr had not yet reached it so that his rights were not directly challenged by the Khān's expedition. Tabriz was laid waste in the most terrible fashion. Killing and plundering went on for 8 days (so the contemporary writer Zain al-Din Kāzwai; cf. *ṬUGHĀ-TIMŪR*). Even on this occasion Timūr still showed great restraint towards his opponent; from his winter quarters in Kātābūḡ he sent his son Mirnashāh against the enemy with a division. After the latter's victory, the prisoners were released and Toqtamish was simply reproached and cautioned by Timūr.

Towards the end of the same year (1387) when Timūr was still in Persia, Toqtamish sent his armies to attack the heart of Timūr's empire. On this occasion the armies of the Golden Horde were everywhere victorious and advanced as far as the Amū-Daryā; Bukhārā was besieged and the country round it laid waste (*Zafar-nāma*, i. 443). Timūr had to return hurriedly and left Persia about the end of Muharram 790 (beg. Feb. 1388). It was not till 1391 that Timūr began his campaign of vengeance against the lands of the Golden Horde; at the beginning of this campaign an embassy arrived from Toqtamish, which of course could have no influence on the course of events. On Monday, 15th Raddjah 793 (June 19, 1391) Toqtamish was defeated at Kūnduz. Timūr advanced as far as the Volga, but he returned to his kingdom without having subjected the kingdom of the Golden Horde. Toqtamish had to abandon his throne for a short time but soon returned again. We find a letter from him to the Polish King Jagello, from Tana (Azov) of 8th Raddjah 795 (May 20th 1393) in which these events are narrated from the Khān's point of view. Timūr, he said, had been summoned against him by the Khān's enemies and the Khān only learned too late of this: at the beginning of the fighting these conspirators had abandoned the Khān, so that his kingdom was thrown into great confusion. Order was now entirely restored and Jagello had to hand over the arrears of tribute: his merchants could travel freely about (*Zaf.*, iii. 3 *sqq.*).

There was now open enmity between Timūr and Toqtamish. In 1385 ambassadors bearing gifts had been sent to Egypt by Toqtamish (Tiesenhansen, *Sbornik materialov o smoryashchikhsya k istorii Zolotoi Ordi*, St. Petersburg 1884, p. 427 *sq.*) but nothing was said about joint military undertakings on this

occasion; on the other hand the missions of 1394 and 1395 had the specific purpose of an alliance between Egypt and the Kingdom of the Golden Horde against Timūr (*op. cit.*, p. 428, 445 and 450). This was the time of Timūr's "Five Years' War" against the west (1392—1396). In 1393 Timūr had sent an embassy from Baghdad to Egypt (*Zafar-nāma*, i. 642 sq.); by order of Sultan Barquq [q.v.] the ambassador was murdered at Raḥba, the frontier town on the Euphrates (*loc. cit.*, ii. 275). In 1394 Timūr wanted to go to Syria, but abandoned this idea and went instead to Northern Mesopotamia (Iskandar's anonymous historian, MS. in the Asiatic Mus., fol. 291b); according to an Egyptian source (Ibn Ḥadjar al-Askalāni in Tiesenhausen, *op. cit.*, p. 450), the reason for this was the news of a raid by Toqtamish into Timūr's territory. Adharbāidjān with the lands north of it as far as Derbend had been under the rule of Timūr's son Mirānshāh since 1392 (*cf.* TANI, 12); Derbend and Shirwān had previously been expressly claimed by Toqtamish and coins had been struck there in his name from 790 (1388) till 792 (1390); but there is no reference to danger threatening from there in the year following. Timūr was delayed for a considerable time by fighting in Armenia and Georgia. It was not till towards the end of 1394 that Timūr in Shaki heard from Shirwān that the country had been invaded by the army of the Golden Horde; they were easily repelled and Timūr took up his quarters for the winter in Mahmūdābād (*Zafar-nāma*, i. 732 sq.). From here in the spring of 1395 he undertook his main campaign against Toqtamish. Before the opening of the campaign Shams al-Din Alwalighi was sent as an envoy to Toqtamish; his reply was awaited on the Samur (south of Derbend); when it proved unsatisfactory, the campaign took its course. The decisive battle was fought on the Terek on Wednesday the 23rd Djumādā II, 797 = April 14, 1395 (*Zafar-nāma*, i. 745 sq.). Toqtamish had once more to disappear from the scene for a time. Timūr never, as the *Zafar-nāma*, i. 761 says, reached Moscow but only came to the Velec, where according to Russian annals, he turned on Aug. 26, 1395. Soon afterwards Azāk (Azov) and in the winter Ḥādījī Tarḥān (Astrakḥān) and Sarāy [q.v.] were sacked with much bloodshed: in the spring of 798 (1396) Timūr returned via Derbend to Adharbāidjān, once more without establishing his rule or that of one of his protégés over the lands of the Golden Horde. Toqtamish was able to return to his throne once more; according to Ibn Ḥadjar al-Askalāni, in 799 (Oct. 1396—Sept. 1397) he fought against the "Genoese Franks" (Tiesenhausen, *op. cit.*, p. 451). On the 3rd Dhu 'l-Ḥijja 800 (Aug. 17, 1398) Timūr received an ambassador from the rival and successor of Toqtamish, Timūr-Kutluḡ, son of Timūr-Malik (*Zafar-nāma*, ii. 33; the date in the original source, *Tekst po istorii Sredney Asii*, St. Petersburg 1915, p. 54). Toqtamish fled to Witowt, the prince of Lithuania, who took up his cause but was defeated by the Tatars on Aug. 12, 1399 on the Worksa. Henceforth Toqtamish led the life of an adventurer. Shortly before his death Timūr received an embassy from Toqtamish in Otrār, which he had reached on Wednesday the 12th Radjāb (Jan. 14, 1405), bringing the assurance of his penitence and an appeal for pardon. Timūr promised to come after his return from the campaign to China, to the land of the Golden Horde again

and restore his throne to Toqtamish (*Zafar-nāma*, ii. 646 sq.). According to Russian sources, Toqtamish fell in 1406 at Tūmen in Siberia fighting against a force of Khān Shādi's (802—810 = 1399/1400—1407/1408); according to Iskandar's anonymous historian (*Asiat. Mus.*, fol. 243b) he died a natural death.

Bibliography: given in the text itself.

The earlier European accounts of Toqtamish (especially Hammer-Purgstall, *Geschichte der Goldenen Horde*, and Howorth, *History of the Mongols*, part II.) are no longer in keeping with our present knowledge of the sources. See also the article TIMUR-LANG. (W. BARTHOLO)

TOLEDO (Ar. TULATULA), a town in Spain in the centre of the Iberian Peninsula 60 miles S. S. W. of Madrid. Built 2,000 feet above sea-level on a granite hill and surrounded on three sides by a bend in the Tagus, which has dug out its bed along the bottom of a deep fault, it commands in its immediate vicinity a fertile *vega* which runs to N. E. and N. W. along the river and beyond it is the plain of denudation of the Castilian plateau. Toledo has at the present day only some 25,000 inhabitants. It is the capital of the province of the same name and the see of the premier Archbishop of Spain. The old capital of the kings of Castile is now a little quiet town, but it has preserved a character of its own and is most attractive in a position of incomparable grandeur.

The Arab geographers who describe the Peninsula all give more or less long descriptions of Toledo. Idrisi puts it in the *islīm* of al-Sharāt (= las Sierras). In his time it had already been taken from the Muslims. He describes its excellent strategic position, its ramparts and the gardens which surround it, intersected by canals from which the water is raised for irrigation by means of norias. Abu 'l-Fida' also praises the beauty of its orchards among the trees of which were pomegranates with enormous flowers. According to Yāqūt, the cereals grown around Toledo could be kept for 70 years without deterioration and its saffron was of excellent quality.

Livy (*Hist.*, xxvii. 7) is the first to mention the Iberian town of *Toletum* which was taken not without difficulty in 193 B. C. by the proconsul M. Fulvius. It remained very prosperous under Roman rule and when Christianity was introduced into Spain, it soon attained great importance as centre of religion. In 400 a council of 19 bishops met there for the first time. Toledo was taken in 418 by the Visigoths and in the sixth century became the capital of their kingdom in the Peninsula. In 567 Athanagilda made it his capital and when the king Rekkared was converted to Christianity in 587, the Visigothic capital again became the religious metropolis of Iberia, on an even grander scale. The Roman Catholic clergy began to interfere in the political control of the country and to display their activity in numerous councils.

It is in Toledo that is laid the scene of the legendary episode of king Rodrigo and Florinda, daughter of Count Julian of Centa, and in the town the spot is still pointed out on the bank of the Tagus where she was bathing when the Visigothic prince saw her and fell in love with her (*Baños de la Cueva*). The invader Ṭāriq b. Ziyād [q.v.] took Toledo in 92 (714). He found it almost empty; only a few Jews had remained in it. Ṭāriq enrolled them in his army, which was

soon rejoined in Toledo by the force he had sent to take Granada and Murcia. It is also in Toledo that the Muslim chroniclers locate the meeting of Tāriq and Mūsā b. Nuṣair [q. v.]. The Arab leader only remained a short time there and continued his advance to the north of the Peninsula, going to Saragossa, which he seized.

The Arab writers, who deal with the history or geography of al-Andalus almost all record fascinating but legendary stories which circulated in the early centuries of the Hijra about the fabulous wealth which the Muslim invaders found in Toledo, when they took the city. The best known story is that of the "closed house of Toledo"; the sources which give it were studied by René Basset in 1898 (cf. the *Bibl.*).

The name of Toledo recurs frequently in the chronicles of Muslim Spain in the period of the governors and especially after the establishment of the Umayyad emirate of Cordova. According to the accounts which they give and which are confirmed by the Christian chroniclers, the town very soon became a hot-bed of sedition and a continual centre of rebellion against the government. It is certain that in spite of Muslim rule, the greater part of the people of Toledo never abandoned Roman Catholicism and remained Mozarab. In spite of the great toleration shown by the conquerors, their rule was not accepted at all passively. The Toledans never lost an opportunity of throwing off the yoke and, whenever a chance was given them, called to their assistance the ever turbulent Berbers, over whom the governors of Spain or their successors were never able to exercise complete control. It was in Toledo that the great Berber rising of 122 (740) found most support and it was near it on the banks of the Wādī Saltī (Guazalete) that the rebels were crushed by the troops sent from Cordova. It was again in Toledo a little later when 'Abd al-Rahmān I deprived him of his governorship that Yūsuf al-Fihri sought refuge and he was killed near the town in 142 (759).

From the reign of the first Umayyad emir to that of 'Abd al-Rahmān III al-Nāṣir there was not a ruler to whom Toledo was not a matter of care and anxiety, sometimes grave. In 147 (764) Hishām b. 'Udhra rebelled there and 'Abd al-Rahmān I had to send his two generals, Badr and Tammām b. 'Alqama, against the town. On the accession of Hishām I (172 = 788), his brother and rival Sulaimān had himself proclaimed in Toledo and the emir was forced next year to besiege the town from which he had to retire after two months without success. In 181 (797) soon after the accession of al-Hakam I, a new rebellion broke out in Toledo, stirred up by an individual named 'Ubaida b. Humaid. But the Umayyad prince was not long in severely punishing the Toledans for their habitual insubordination. Their spirit of rebellion at this time was being fanned by the verses of one of their townsmen, who was very popular with them, the poet Ghiribī. On the latter's death, al-Hakam appointed to the government of Toledo a renegade (*mawallad*), a native of Huesca, named 'Amrūs who, by arrangement with the emir of Cordova, after gaining their confidence, lured the notables of the town into a trap in which they were all slain. This was the famous day of the ditch (*wafāt al-hufra*) (191 = 807). But the brutality of this suppression did not prevent Toledo from rebelling less than

ten years later. In 199 (814-815) the emir al-Hakam himself went against Toledo and by a stratagem succeeded in entering it and burned all the higher part of the town. In 214 (829) Toledo was again the starting point of a rebellion raised by a *mawallad* named Hāshim al-Darrāḥ (the smith) and it took two years to suppress it. In the reign of 'Abd al-Rahmān II, an expedition was sent against Toledo under prince Umayya in 219 (834). The next year the emir of Cordova laid siege to the town and it was taken by assault, after being invested for some months, in Rajab 222 (June 837). Toledo remained subject to the Umayyads, to whom it gave hostages, until 238 (852) but in this year, on the accession of the emir Muḥammad b. 'Abd al-Rahmān b. al-Hakam, it rebelled once more. The intolerance of the emir had exasperated the Toledans and the latter led by one of their number, Sindola, deposed their Arab governor and declared themselves free of Umayyad rule. Not only did they drive out of their town the representatives of the Cordovan government, but they organised an army which in Shawwāl 239 (May 854) defeated the troops of the emir Muḥammad near Andujar. Then in order to resist the force sent against them from Cordova, they made an alliance with the king of Leon, Ordoño I, who sent an army under Gatón, Count of Bierro, against them. But the resultant battle was disastrous for the Toledans, who lost 20,000 men. In 244 (858) Muḥammad, giving the town no rest inflicted another disaster on it by mining the bridge over the Tagus; it collapsed when crowded with soldiers. Toledo had to beg for *amān* in the following year and Muḥammad appointed a governor there. From this time down to the reign of 'Abd al-Rahmān III al-Nāṣir, the Arab historians hardly ever mention Toledo. We only know that in 873 its citizens obtained a treaty by which, if they agreed to pay tribute to Cordova, their political independence would be practically recognised.

The final subjection of Toledo was to be the work of the great Umayyad ruler al-Nāṣir. Before tackling it, he had to wait until all the other hot-beds of rebellion in his dominions had been exterminated. Once Badajoz had been taken, the caliph in 318 (930) sent to Toledo a deputation of fakhs to make the citizens understand that their liberty was no longer compatible with the authority of the government of Cordova. This peaceful effort having failed, he at once laid siege to the town and came himself with a large army to direct operations. He pitched his camp on the heights of Charneca and made it clear that he would not withdraw his troops until Toledo was taken, by erecting some buildings and a bazaar which were given the name of Madinat al-Fatḥ (town of victory), opposite the invested city. The blockade was continued into 320 (932) and Toledo had finally to surrender. A strong Umayyad garrison was placed in the town and its capture had a great moral effect throughout Spain. Henceforth it was the capital of the Middle Frontier (*al-thaghar al-awṣaq*) and the office of governor of Toledo was one of the most important military offices of the Umayyad *diwān*. Among the principal holders of this office were Muḥammad b. 'Abd Allah b. Hudair, the *ḥā'id* Ahmad b. Ya'la and, in the reign of al-Hakam II, the general Ghālīb b. 'Abd al-Rahmān al-Nāṣir, the father-in-law of the famous *ḥā'id* al-Manṣūr [q. v.] Ibn Abī 'Āmir.

During the period of troubles which ended in the fall of the caliphate of Cordova and in the dismemberment of the Umayyad empire in Spain, Toledo no longer played any more than a very minor part in politics. On several occasions it served as headquarters or as a refuge for rival rebels but it does not seem to have itself taken advantage of these occasions to rebel, as it had so often done before. It was for several years the base of operations of the general Wādīh and between his two reigns Muhammad b. Hishām b. 'Abd al-Djabbār found a refuge there. Soon afterwards when little Muslim kingdoms were founded in the Peninsula, it became the capital of an independent kingdom, that of the Banū Dhī l-Nūn.

The Banū Dhī l-Nūn [q. v.] were nobles of Berber origin who in the reign of al-Manṣūr Ibn Abī 'Amr had obtained certain military commands. They were settled in the region of Shantaberiya (Santaver, the modern province of Cuenca). It was to them that the Toledans appealed when on the fall of the Cordovan caliphate they wished to give themselves a chief. 'Abd al-Rahmān Ibn Dhī l-Nūn, lord of Shantaberiya, sent them his son Ismā'il who took command of the town and the territory belonging to it and appealed to the experience of a notable of Toledo, Abū Bakr b. al-Hadīdī, to administer it for him. According to several Arab chroniclers, Ismā'il b. Dhī l-Nūn was not the first king of Toledo but succeeded other chiefs of other families, Ibn Masarra, Muhammad b. Ya'ish al-Asadī and his son Abū Bakr Ya'ish; other names are mentioned, Sa'id b. Shanṣir and

his son Aḥmad, 'Abd al-Rahmān b. منبیه and his son 'Abd al-Malik. The new ruler of Toledo, the beginning of whose reign is usually put in 427 (1035-1036), took the honorific *lakh* of al-Zāfir and was only a few years on the throne for he died in 435 (1043-1044).

His son Yahyā succeeded him and took the title of al-Ma'mūn. On his long reign see the article on him (iii., p. 223, where the date of his accession should be corrected from 429 to 435; cf. Dozy, *Recherches* 2, vol. i., p. 238, note 1).

On the death of Yahyā al-Ma'mūn at the end of 467 (1075) the kingdom of Toledo, considerably increased, passed into the hands of his grandson Yahyā b. Ismā'il b. Yahyā who took the *lakh* of al-Qādir. The great incapacity of this prince brought a period in which decadence became more and more marked after the brilliant and prosperous long reign of al-Ma'mūn. Left to himself by the old Muslim allies of his grandfather, especially by the prince of Seville, he had to seek the alliance of the king of Castile and Leon, Alfonso VI. The latter granted him his protection, but in return demanded payment of tribute which became larger and larger. To meet his engagements, al-Qādir had to oppress his subjects with taxation and the latter ended by rebelling. Al-Qādir retorted by more rigorous measures and had several notables of the town executed along with his first minister Ibn al-Hadīdī. This only exasperated the Toledans against him still more and he had to abandon his capital and seek refuge at Huete. The kingdom of Toledo was then offered to the Afṣadī kings of Badajoz, al-Mutawakkil, who took in 472 (1077) possession of it. Alfonso VI retook Toledo soon afterwards for his Muslim ally but this was only a pretence: on 27th Muḥarram 478 (May 25, 1085)

the king of Castile, after a treaty concluded between him and al-Qādir, which the latter could not escape signing, entered Toledo on his own account, thus making an important step in the progress of the *reconquista*. The taking of Toledo had a great moral effect among Christians as well as Muslims. It, more than anything, determined the invasion of Spain by the Almoravids in the next year.

In spite of the successes, which, first Yūsuf b. Tāshīn, then the Almohads, won in the Iberian Peninsula, Toledo never again passed into Muslim hands. For a century, however, it remained one of the great objectives of their armies. It was twice besieged without success, once on the death of Alfonso VI, and again by the Almohad Abū Yūsuf Ya'qūb al-Manṣūr in 592 (1195) in the course of an expedition which won the towns of Calatrava, Guadalupe and Madrid for the Muslims for some years, and was distinguished by the victory of Alarcos. But the battle of Las Navas de Tolosa, on July 16, 1212, soon deprived the Muslims of all hope of retaking Toledo.

Becoming Christian again, and created the capital of their dominions by the kings of Castile, Toledo however long retained a markedly Muslim character. Islām continued to be practised by a certain number of the faithful. A town of Mozarabs under Islām, it was a town of Morescoes for quite a long time after its return to Christianity.

There are very few traces left in Toledo of its long occupation by the Muslims. At most, the remains of the little mosque of Bib Mardūm (Cristo de la Luz), some parts of the palace of Las Tornerías and of the old gate of Visagra can be dated back to the period of the *mulūk al-fawā'id*. On the other hand in the *svga* near the town, a considerable number of epitaphs of Muslims of Toledo have been found, mainly engraved on the shafts of columns.

In spite of its position as a frontier town with a population containing a large proportion of Christian elements, Toledo, especially at the end of the Umayyad caliphate and in the reign of al-Ma'mūn, was reckoned one of the intellectual centres of Muslim Spain. A large number of the articles in the collections on the biography of Muslim Spain are devoted to scholars and jurists of Toledan origin.

TOPAL OTHMÂN PASHA, an Ottoman grand vizier. Topal i.e. "limping" Othmân Pasha was born in the Morea in 1104 (1692), entered the palace service in Stambul at an early age, where he filled a number of offices until he was promoted to the rank of beylerbeyi at the age of barely 24, soon afterwards he became serasker in the Morea and finally vizier with two tails (*tugâ*, q.v.). He then held governorships repeatedly, e.g. twice in Bosnia, Naupactus and Widin, next went as commander-in-chief to Persia and finally received the grand vizierate on 19th Rabi' I, 1344 (Sept. 21, 1731) when Dâmiâd Ibrâhîm Pasha fell into disgrace. He only held the office for six months however. On 15th Ramadân 1344 (March 12, 1732) he was then dismissed and sent as governor to Trapezunt. He was then in turn wali of Erzerum and Tiflis, until he was given supreme command of the Ottoman army in the war against Nâdir Kullî Khân [q.v.] of Persia. In the battle of the Tigris on July 19, 1733 he defeated the Persians, put them to flight and drove them out of Baghdad. Three months later however in another battle on Oct. 26, 1733 in the plains of Lailao S.E. of Kirkuk, he was severely defeated and was himself slain. By order of Nâdir Kullî Khân his body was taken to Baghdad and buried there. Topal Othmân Pasha is described as a rough, superstitious but able and vigorous personality. The best accounts of him are that of his French private physician Sieur Jean Nicodème (in a letter to the Marquis de Villemeuve dated Aug. 10, 1733, printed in J. v. Hammer, *G.O.R.*, vii, 599 sqq.) and that of Jonas Hanway in his *Historical Account of British Trade over the Caspian* (London 1753, vol. ii, sect. 12, which deals entirely with Topal Othmân Pasha). A description of Topal Othmân Pasha's campaign against Nâdir Kullî Khân is given in a work composed by a Christian entitled *Ghazwât-i Topal Othmân Pasha*; cf. F. Babinger, *G.O.R.*, p. 289, note 3, N° vi. — The sons of Topal Othmân Pasha were Râtib Ahmad Pasha and the Beylerbeyi Arslân Bey (cf. J. v. Hammer, *G.O.R.*, viii, 394). Among his grandsons were Yûsuf Pasha and Mûsâ Pasha and a later descendant was the author and poet Nâmlîk Kemâl Bey [q.v.].

TOPAL OTHMÂN PASHA, Ottoman governor of Bosnia, Sharif, but usually called Topal Othmân Pasha because he was lame from a bullet-wound, belonged to the vicinity of Smyrna where he was born in 1219 (beg. Apr. 12, 1804), as the son of a peasant named Hâdîdî Sharîf

Agha. He first entered the navy and in 1839 as Rear-Admiral, along with the Kapudan Pasha [q.v.] Ahmed Fawî Pasha surrendered the Ottoman fleet in the Dardanelles to Muhammad 'Alî Pasha of Egypt, on hearing that Khuraw Pasha [q.v., iii, p. 978] had been appointed grand vizier. He remained a refugee in Egypt for several years after the conclusion of peace where he enjoyed the Khedive's favour. When an amnesty was granted to the deserters he returned in 1258 (beg. Feb. 12, 1842) to Stambul and entered the civil service. He became Kâ'im-makâm of Ismid, then *Mutqarrif* of Katal [q.v.], in Dhu 'l-Ka'da 1265 (Sept. 1849) of Bigha [q.v.], in 1271 (beg. Sept. 24, 1854) of Cyprus. In 1273 (beg. Sept. 1, 1856), he went as commandant (*as-kâfî*) to Belgrade from which he went on 11th Radjâb 1277 (Jan. 23, 1861) to Sarajevo [q.v.] as governor (*wâlî*) of Bosnia and Herzegovina. His governorship may be described as a golden period in the history of Bosnia under the Ottomans. He held the office for nine years, a period only attained before or after him by one other governor, namely Khosrew Pasha [q.v.]. His great aim was to deprive the powerful begs of their influence and thus to strengthen the power of the Ottoman government. His plan was to place Bosnian notables in public offices, where they soon lost their hereditary prestige and influence with the people. He also raised the status of the bourgeois, especially artisans and small traders, and played them off against the nobles; as the protector of the common people he soon attained enormous popularity and to this day the "glorious days of Ottoman Pasha" are almost proverbial in Bosnia. He devoted special attention to the education of the youth in schools, which under his administration assumed a development hitherto undreamt of. In Sarajevo, in addition to numerous public schools, he built a reading room (*hîrâ't-ahâne*), a high school (*rîhâdiye*) as well as a technical school for the training of officials (*mekteb-i hukûk*). The object of these institutions was to "Stambulise" the people of Bosnia, i.e. to bring them up to be loyal Ottoman citizens. But the educational institutions of the non-Muslim creeds were also supported in all kinds of ways by Othmân Pasha. He endowed the mosque of Ghâzî Khosrew [q.v.] with a splendid library (about 2,000 MSS. and books) and one of his great services was the institution of a printing-works for the wilâyet in which were printed not only the official calendar (*Sâlmûs-i Bosna*), but the weekly papers *Bosna* (official Gazette) and the *Gulshen-i Serây* (in Turkish and also in Serbian as the *Sarajewski cvjetnik*), schoolbooks. From 1863, Othmân Pasha endeavoured to regulate the relations between the Muslim landowners and the, usually Christian, serfs, the *kmets*. He established a certain degree of legal protection for the *kmets* from oppression by the landowners and thus gained the affection and reverence of the lower classes. His endeavours to abolish tithes and replace it by a direct tax on land failed against the opposition of the Porte. Othmân Pasha was continually making roads in his province and used all the available labour in the work. A number of important routes within Bosnia and also connecting it with the outside world were his work (e.g. from Maglaj to Dônja Tuzla and Zvornik; from Bosnian-Gradiška-Banjaluca-Travnik-Livno and thence across the Prolog into Dalmatia; the road from Sarajevo to Mostar

completed by the War Office in 1864; the road made in 1868 from Trebinje to Ragusa etc.).

It was only natural that he should continually strive to beautify Sarajevo, which was his official residence. There he built a splendid country house, the Čengić-villa which still exists (called after its later owner Derwish Pasha Čengić, known as De-daga, therefore also called by the natives *De-daginci-konaci*). As a result of the intrigues of his numerous opponents in Stambul, 'Othmân Pasha was removed from his governorship in Ramañân 1285 (beg. Dec. 16, 1868) and transferred as Wali to Sili-stria (*Duna Wallist*). *Muhtir* Şafvet Pasha was appointed to succeed him. Suddenly, however, these changes were cancelled and 'Othmân Pasha returned to Sarajevo amid the tumultuous enthusiasm of the populace. His new period of activity was of short duration. His Stambul enemies were able to persuade the credulous Sultan 'Abd al-'Azîz that 'Othmân Pasha had built himself a Serây in Bosnia and that, as an old pupil of the rebel Maḥmūd 'Alî Pasha, he cherished the ambition to make himself independent. The consequence was that 'Othmân Pasha was definitely recalled on the 15th Şafar 1286 (May 27, 1869). He disposed of his estates and his konak and retired on a very modest pension to Stambul, where he lived in complete retirement in a little house in the country on the Bosphorus. He died there on the 10th Dju-mâda II, 1291 (July 26, 1874) and was buried in Stambul behind the Arsenal (*Tersâne*). — One of his sons is Re'uf Pasha.

TORGHUD, a Turkish tribe in Asia Minor.

The Torgud tribe appears alongside of the Warsak (the *Bapandec* of the Byzantine historians, cf. the important passage in Chalkondyles, p. 243, 4), quite early in Ottoman history. Its origin is wrapped in obscurity; it is mentioned for the first time in history at the end of the eighth century A. H. when 'Alî al-Dîn of the Karamanoglu included the Torgud among the tribes who joined his colours. A century later they appear in the army of Djâm Sultan in his Anatolian campaign against Sultan Bâyezîd (cf. J. von Hammer, *G. O. R.*, ii. 256; 886 = 1481). About this time the Torgud and the Warsak were living in the Cilician Taurus on the other side of the Bulghar Dagh (cf. J. v. Hammer, *G. O. R.*, ii. 294). Then and later they were in political dependence on the Karamanoglu, the enemies of the Ottomans. With the decline of the latter the Torgud disappeared from history. They cannot be connected with the place called Torgud-lu in the sandjak of Sarukhan (q. v.), still less with the Kalmuck Torgots (Törge-uten). (F. BÄRINGER)

TORGHUD, a general and companion-in-arms of 'Othmân I.

Torgud, usually Torgud-alp (alp as a personal name, is Turkish = "brave, fearless, warrior"; cf. Alp-Tekin, Alp-Arslan, and Aighud-alp, Konur-alp etc.), is mentioned among the companions of 'Othmân I and connected with the earliest Ottoman conquests. He is said, for example, to have surprised Angelokoma, the modern Ainegöl, in 699 (1299) with only seventy men and taken it (according to Neshri, Idris Bitlisi in J. v. Hammer, *G. O. R.*,

i. 53 sq.). He remained the councillor of 'Othmân's son Urkhan. On the latter's instructions he took Edrenos on Olympus, the key to Brussa (1326). Nothing is known of his later life. In the Byzantine historians, like Chalkondyles (cf. p. 65, 20, 243, 25, 244, 1 sqq., 491, 4 of the Bonn edition), he appears as *Τοργούρος*.

(F. BÄRINGER)

TORGHUD-ELI, literally "the land of Torgud", is the district around Ainegöl in Asia Minor, which Torgud-alp (q. v.) conquered and received as a fief. According to Leonclavius (cf. *Hist. Musulm. Turc.*, p. 154, 25, 853 infra; cf. on this *Id.*, xii. 102), the Arabic form Dhu 'l-Kadr is a corruption of this, which is very probable, as it is almost certainly derived from some Turkish proper name. The royal family of the Dhu 'l-Kadr-oghlu (q. v.) would thus have to be connected with the Turkoman tribe of Torgud (q. v.).

Bibliography: cf. F. Bâninger in *Id.*, xii. 102.

(F. BÄRINGER)

TORTOSA, Arabic *ṬURTUBĀ* (*nisha*: *Turtubā*), a town in Spain on the left bank of the Ebro, a few miles above the beginning of the delta of this river, 115 miles from Valencia, 105 from Barcelona and 60 from Tarragona. Tortosa which now has 28,000 inhabitants, is the chief town of a *partido* of the province of Tarragona and the see of a bishop.

The town is built on the site of the old Iberian town of *Iertosa* which was succeeded by the Roman colony of *Julia Augusta*. Its geographical position has always given it considerable commercial importance. It passed early under Muslim rule and most of the Arab geographers who deal with the Peninsula, give a description of it. According to Idrisi, it was part of the *ihlām* of al-Burtat; it was, he says, a large commercial town where ships were built with the wood of the pine-trees of remarkable quality which grew in the neighbourhood. According to the historical and geographical dictionary of Ibn Abd al-Man'im al-Himyari, the Umayyad rulers built a wall around it of dressed stone, with four gates. It had also a cathedral mosque with five naves which was built in 345 (956—957), four public baths and several suburbs. Its wharves for shipbuilding (*dār al-ṣinā'a*) were built in 333 (945) by order of the caliph 'Abd al-Rahmân IV al-Nâsir; the foundation inscription happens to have survived.

Information about the history of Tortosa in the early centuries of Muslim rule is scanty and scattered. We only know that it was besieged in 193 (809) by Louis the Debonnaire, son of Charlemagne, whose army was defeated by that sent against him by the emir al-Hakam I under his son 'Abd al-Rahmân. This first siege, which ended in failure, did not prevent Louis from taking Tortosa two years later, but he only held it for a short time. Later it appears that Tortosa, on account of its position on the borders of Muslim Spain, was used as place of compulsory residence for exiles from the Cordovan court; for example, the secretary 'Abd al-Malik b. Idris al-Djastri was detained there by order of al-Manṣûr Ibn Abi 'Amir.

On the dismemberment of the Umayyad caliphate and the formation of the kingdoms of the *taifas*, Tortosa became the capital of a little principality of 'Amirid "Slavs" (*ṣakātibā* (q. v.)). The best known of these was an individual called Nabil; he even was able to take advantage of the anarchy prevailing in the east of al-Andalus to seize Valencia,

which he only held for a few years, however. His predecessors had been the *fatā* Labīb, then Mukātil, who took the *lubb* of Saif al-Milla. In 452 (1060) Tortosa rebelled against Nābil and the latter handed over the town to the king of Saragossa, al-Mukṭadīr Ibn Hūd [cf. the article SARAGOSSA]. Tortosa remained in the possession of the Banū Hūd, down to the end of the Arab kingdom of Saragossa. Later the counts of Barcelona attempted to take it and finally Raymond Beranger IV took it on the 14th Sha'bān 543 (Dec. 30, 1148), the same year as Lerida and Fraga, with the help of the Templars. A counter-attack by the Muslims was a failure, owing to the courage of the women of the town. It had previously been taken by the Christians in 512 (1118).

If we may judge by the scholars who bore the ethnic al-Turṭuṣī, Tortosa seems to have been for a considerable time a brilliant centre of Muslim studies. Among these men of letters, the most famous was Abū Bakr Muḥammad b. al-Walīd al-Fihri al-Turṭuṣī, known as Ibn Abī Rundaḳā, born at Tortosa in 451 (1059) and died at Alexandria in 520 (1126), the author of the *Sirāfi al-Mulūk*, publ. Cairo 1289 A. H. (cf. on him Ibn Ḥaḥkwal, *Siḥ*, No. 1153; al-Dabbī, *Buḥyāt al-Mulūmī*, No. 205; Ibn Farḥūn, *Dibāḡ*, p. 250; Brockelmann, *G.A.J.*, i., p. 459; M. Ben Cheneb, *Étude sur les personnages mentionnés dans l'Idjāz du cheikh 'Abd al-Qādir al-Fāyī*, Paris 1907, p. 133, p. 169—170 and the literature quoted).

TOSKA. [See ARNAUTS.]

TRAPEZUNT, TREBISOND. [See TARABZUN.]

TRIPOLIS. [See TARABULUS.]

TRIPOLI (Tarābulus, Atrābulus), a city on the Northern coast of Africa, 13° 20' E. long., 32° 50' N. lat., now the seat of the government of Tripolitania, one of the two colonies forming Italian Libya. Its Muslim population, according to the census taken in 1914 by the municipality of Tripoli, was 19,907, including the Mencia; Jewish population 10,471, European population, in the town of Tripoli only, 14,180. The latter, in 1928, may be calculated at 25,000; total about 60,000.

The name Tripolis, applied to the territory of the three cities Sabrata, Oea, Leptis (Lepqi), of Phoenician-Carthaginian origin, does not appear till Roman writers of the 1st century A. D., but the name Tripolitania was already given in the

3rd century, to the region otherwise called Sirtica, governed from the administrative centre of Tacape (Gabes). In the Byzantine period we find the name Tripoli applied to the city of Oea; this usage was confirmed under the Arab conquerors, in the form Tarābulus and Atrābulus, with the addition of al-Gharb, to distinguish it from Tripoli in Syria.

The ancient city of Oea, one of the *emporia* of Sirtica, was first a Phoenician, then a Carthaginian colony; Roman influence began to prevail in the second century, during the Punic wars; direct Roman rule may be dated from the end of Carthage's rule (149 B.C.).

The ancient city lay mainly in the western part of the present city, round the still existing Arch of Marcus Aurelius, erected in 163 A.D. under the proconsul Cornelius Orfitus by C. Calpurnius Celsus, *curator numeris et publicis muneribus*, and dedicated to the Emperors M. Aurelius Antoninus and Lucius Verus. Oea however had no great political, military or economic importance, notwithstanding its harbour, protected by a barrier of rocks. The *emporia* of Sabrata and Leptis were then of greater military and economic consequence.

The first city wall may be attributed to the 1st century A. D., when the attacks of nomads from the interior became a menace. The Vandals, Procopius says, destroyed the walls of the African cities, but it is certain that the Byzantines hastened to reconstruct them; in Tripoli also the sections of walls still existing after the vicissitudes of ages, and partly demolished since the Italian occupation, preserve traces of Byzantine workmanship. The city was not surrounded by walls on the side overlooking the sea; the Arab invaders were thus able to enter it from the W., following the beach.

Occupied by the Vandals about 439, Tripoli remained under their rule up to 535, save for the expedition of Heraclius, sent by sea from Byzantium in 468. Belisarius, after having conquered the ancient province of Africa in 533, sent troops also to Tripoli, which from 535 may be considered subject to the Eastern Empire; the Catholic religion, troubled by the invasion of the Arian Vandals and by the rebellions of tribes in the interior, seemed to flourish anew in Tripoli for about a century.

Historians do not agree on the date of the Muslim occupation, which according to some happened in 22 (642—643), and to others a year later. It may be that a first vanguard of the Arab conquerors of Egypt pushed as far as Tripoli in 22 A. H., and that a second expedition was led against it in 23.

It is well known that these first Muslim expeditions were raids, rather for the purpose of plunder than of conquest; neither the interior of Tripolitania, nor Tripoli itself, were firmly held at that time; as late as 26 (647—648) 'Abd Allāh b. Sa'īd with 'Uḡba b. Nāfi' passed through it; in 45—46 'Uḡba b. Nāfi' pushed further the conquest of Ifrīqiya; about that time a garrison (*ḡund*) was permanently established in Tripoli; the names of the city's governors are not known.

'Abd al-Raḥmān b. Ḥabīb, governor of Ifrīqiya, after 126 H. marched against Tripoli in 131 (748—749), slew two Tripolitans, 'Abd al-Djabbār and al-Ḥarīb, Berbers of the Ḥādīte school, and in 132 restored the city walls. Ibn Khaldūn records

that the city was then governed by Bakr b. 'Isa al-Kāsi, and that he was killed during the revolt. Throughout the second and third centuries, Tripoli and its environs were troubled by the political-religious revolt of the Ibadīs. This sect had found many followers among the Hawwāra and Zanāta Berbers, who formed the predominant element in the population. About 140 (757-758), the Ibadī imām Abu 'l-Khaṭṭāb al-Mu'āzzī set out from Tripoli, in the rising known as the revolt of the Warfajūma, which seriously endangered Arab possession of North Africa, and was put down by Muḥammad b. al-Ash'ath, sent by the Caliph al-Manṣūr, in the battle of Tawārgha (143 = 760-761). In the following years further risings, due to the rebel Ibadīs, took place, and Tripoli was repeatedly besieged and attacked. We know that Harṭama, governor of Ifrīqiya in the name of the 'Abbāsids in 179-180 (795-797), ordered the wall on the side next the sea to be built (al-Bakrī, transl. de Slane, p. 25; Ibn al-Athīr, vi. 49; Ibn 'Adhārī, transl. Fagnan, i. 107).

Tripoli remained under Aghlabid rule from 184 to 296 (800-909), but this century was not one of quiet; among many revolts, Ibn Khaldūn mentions that of 196 (811-812) against 'Abd Allāh, son of the Amīr Ibrāhīm b. al-Aghlab, and against his successor Sufyān b. al-Madā; its leaders were once again the Ibadī Berbers, who had their centre of resistance in the Djebel Nefūsa. Under the Aghlabid Amīr Ziyādāt Allāh, Tripolitania was invaded by al-'Abbās, son of Ahmad b. Tulūn, lord of Egypt; the governor of Tripoli, Muḥammad b. Kurhub, was vanquished in 255 (868-869) by 'Abbās at Labda, and besieged for 43 days in Tripoli.

During the rule of the 'Ubaids in Northern Africa, Tripoli was subject to them, and they appointed its governors; a revolt, put down by Abu 'l-Kāsim, is mentioned in 300 (912). When the 'Ubaids transferred themselves to Egypt, Tripoli was at first ruled by the Zirids, left as their lieutenants in Ifrīqiya, but not much later the independent rule of the Berber Banū Kharrūn, of the Zanāta stock, was established there (391-541 = 1000-1145).

The history of this period of a century and a half is not quite clear, notwithstanding the information furnished by Ibn 'Adhārī, Ibn Khaldūn and Ibn al-Athīr. Tripoli enjoyed a period of almost autonomous government, but it was ravaged by internal discord.

The invasion of the Banū Hilāl and the Banū Sulalim, an event which was to modify deeply the ethnical and political formation of Northern Africa, swept away also the rule of the Banū Kharrūn in Tripoli. For twelve years (1146-1158), the city was under the Normans; it was then conquered by the Almohads, who held it for about a century, in the midst of raids and risings due to the adventures Karākush and to the Banū Ghāniya.

The condition of Tripoli under the Hafṣids is better known, thanks to Ibn Khaldūn, al-Tijjānī and al-Zarkashī. The dependence of Tripoli upon the Almohads ceased in 646 (1247-1248), when Muḥammad b. 'Isā al-Hintātī was appointed governor of the city. Al-Tijjānī, who passed through Tripoli in 1308 A. D., found a Hafṣid governor, there living in a castle (*ḥaṣaba*), probably on the site of the present castle; the city was administered by the governor and a council of 10 notables

(*shaykh*), who used to meet in a sanctuary called *maṣḥid al-'aṣḥara*. The traveller observed in Tripoli a fine bath (*ḥammām*), broad, clean streets, mostly meeting at right angles; he admired the Arch of Marcus Aurelius, a Great Mosque (*al-djām' al-'aṣḥam*), many shrines, a *madrasa* (*al-madrasa al-mustanziriya*), strong walls in good repair, with a moat in some parts. The city's intellectual life was flourishing at this time; cultivated people abounded.

A short time after al-Tijjānī's visit, Tripoli appears in the history of the internal rivalries in the Hafṣid family, at the time of al-Lihyānī; later, notwithstanding the permanence of the Hafṣid rule, the city had a second, almost autonomous dynasty, that of the Banū Thābit or Banū 'Ammār Berbers (1324-1400 A. D.). In this period Tripoli was conquered for a few days by the Genoese Filippo Doria, who sacked it in 1354, and immediately sold it, for 50,000 *mithkāl*s of gold, to the Marinids. The Hafṣid Sulṭān Abū Fāris made his direct influence felt as far as Tripoli for a few decades longer; later the city was almost independent under its own rulers, until 1510, the date of the Spanish conquest.

Peter of Navarre, who had conquered Oran in 1509, and Bougie in January 1510, reached Tripoli with his Spanish troops in July 1510; the city was much damaged by the attack and the looting of Spaniards, who however reconstructed the castle in the form it has preserved more or less up to this day; they also repaired the walls. Little is known of the 20 years of Spanish rule (1510-1530).

Already in 1524 the city had been visited by a committee of the Order later called of Malta, which had left Rhodes and had repaired to Civita Vecchia and Viterbo. In 1530, when the Maltese archipelago was conferred on the Order as a fief by the Emperor Charles V, Tripoli also went to the new rulers. The Knights of Malta maintained themselves at Tripoli from 1530 to 1551, holding out against the attacks of the rebel Arabs, who received help from the Barbary corsairs in alliance with the Porte. Khair al-Dīn Barbarossa, who in 1533 had occupied Tunis, now threatened Tripoli; after him Murād Aghā, a corsair arrived from Constantinople, directed from Tadjūra the continual incursions on Tripoli by land and sea. The Order had in Tripoli a garrison of Knights and of Italian and Spanish mercenary troops, its authority was limited to the city and its immediate environs. On August 5th 1551, Sinūn Pāshā, with Darghūt Pāshā and Murād Aghā, besieged the city, and took it on August 13th; the Governor-Commander Fra Gaspar de Valier was able to depart for Malta with the Knights of the garrison; most of the mercenaries were slaughtered. Murād Aghā became the new governor for the Porte, with the title of Beylerbey; his name is preserved by the large mosque in Tadjūra; about 1554 he was succeeded by Darghūt Pāshā, an important figure in Ottoman and Barbary history, and especially in that of Tripoli; he was killed in the siege of Malta (1565 A. D.) and was buried in the mosque he had founded at Tripoli. Spain and the Order of Malta tried many times to take the city from the Turks; the expedition of 1559-1560 ended in disaster at the island of Djarba; the attempt of 1589-1590, in spite of an understanding with a rebel *murshid*, Yahya, was fruitless. Many times the galleys of Malta entered Tripoli's harbour, and burned its vessels.

Tripoli was the seat of the *agās* of the same name, one of the three *agās* of the Janissaries in Barbary. Their chief, sent from Constantinople, bore the title of Pāshā. However in Tripoli, as in Tunis and Algiers, owing to the distance and the decay of the central government, a dominating oligarchy was soon formed in the Janissaries' quarters, and through marriages with the local population, the *Kulughli* ethnical class developed. Christian renegades were many and very powerful. Rule was wielded by the Pāshā, assisted by a *dīwān*; the administration was presided over by a Dey, the army by a Bey. Often Dey and Bey were the real masters of the city; the whole history of Tripoli in the xviiith century and in the beginning of the xixth, is full of these risings of Janissaries. While the central government grew weaker, and anarchy prevailed in the interior, the Consuls' power increased, especially in the case of the consuls of France, England, and, later, of Sardinia.

A period of great power for Tripoli began with the rule of Mehemmed Pāshā Sakīlī, of Chios, who reigned from 1042 to 1059 (1632—1649), and was succeeded by his son-in-law Uthmān Pāshā, also of Chios (1649—1672). During these 60 years, within which fell the famous siege of Candia (1645—1669), the corsair navy of Tripoli became more daring than in the past, and captured many prizes; Tripoli was enriched by new mosques and public baths. Under their successors, England in 1676 and France in 1685 broke the pirates' overbearing pride with bombardments and threats. Internal struggles continued up to 1711, when Aḥmad Karamānli (Karamanli) succeeded, by slaughtering his opponents, in establishing a dynasty, which ruled, with the consent of Constantinople, for over a century (1711—1835). The rule of the Karamānli [q. v.] has left to this day many traces in Tripoli, in the part that remains of the Muslim and Barbaresque city; we shall therefore give a fuller account of its history.

Aḥmad Karamānli (1711—1745), founder of the dynasty, was an energetic figure; in the 34 years of his rule Tripoli enjoyed comparative peace and economic prosperity; its power was felt more strongly than ever before, even in the interior of Tripolitania, as far as Fezzan and the territory of Barka (Cyrenaica). Having unmasked, in 1721, a plot against his life, he secured, with his family and friends, the actual control of administration and government. An historian, Ibn Ḡhalbūn, wrote about 1731—1732 the *History of Tripoli*, which is largely concerned with his reign: there were also poets who celebrated his exploits and his generosity. He was, however, cruel, a tyrant towards his enemies and all those who excited his suspicion. He died blind in 1745. Among his acts, Ibn Ḡhalbūn mentions many *waḥf* in favour of the city, the construction of an aqueduct which brought the water of a neighbouring spring, by means of a water-wheel, to the castle and the mosques, a fountain on the beach to supply sailors with water. But his best memorial is the mosque erected (1737—1738) on the side overlooking the castle, with its *madrasa*, which is still frequented, and enriched by many revenues, among them that of the neighbouring *sūq*. He also embellished the castle with new rooms and restored it. He had difficulties with the Powers and with the consuls on account of the damage sea-trade suffered at the hands of his cor-

sairs, but showed humanity and often generosity towards Christians, who from that time began to settle in larger numbers in the city and to ply their trades and crafts. The Franciscan mission was also kindly treated by him.

His son and successor, Mehemmed Pāshā Karamānli (1745—1754), reigned too short a time to leave lasting memories; in 1751 the English defended with energy the rights of their citizens on the sea. In 1752 he put down a revolt of Albanians. Muḥammad was succeeded by his son 'Alī Pāshā (1754—1793), whose period of rule is well known through abundant historical sources, printed and MSS. In 1765 he signed in Venice, through an ambassador, a peace treaty with the Republic; in the following year, his promises having been broken, a Venetian fleet, commanded by the captain Giacomo Nani, obliged the Pāshā to observe them. Under 'Alī Pāshā the government was composed as follows: the Pāshā, supreme head of the State, with almost regal authority, the Bey, commander of the troops, the *Agā*, chief of Janissaries, the *Adāyā*, first civil authority and the Pāshā's counsellor, the *Re'is*, commander of the corsair fleet, the *Aḥannafis*, State Treasurer, one *ḥakīm*, administrator of the city, a sort of mayor, a *ḥakīm*, assisted by other clerks in the State Chancery. Important decisions were taken in the *dīwān* of council composed of men who had been ambassadors to Europe or military commanders. It was said that 'Alī Pāshā had begun to neglect consultations with the *dīwān*.

In 1784—1785 Tripoli was ravaged by a terrible famine and by the plague: of the city's 14,000 inhabitants one fourth is said to have perished. 'Alī Karamānli's reign was unfortunate on account of family quarrels, due to the ambition of one of his sons, Yūsuf Bey, who in 1790 went so far as to kill his brother Ḥasan Bey in the arms of his mother Lalla Ḥallūma. In 1793, while Yūsuf Bey had become an outlaw and was waging war against his father, a certain 'Alī Borghul, formerly an official in Algiers, entered the harbour with a few ships and Greek mercenaries, and occupied the city during the night of July 30th. 'Alī Pāshā took refuge in Tunis, whence he returned in 1795, with his children, thanks to the help of Ḥamūda Pāshā of Tunis. 'Alī Borghul turned once more to the sea on the night of February 8th.

Aḥmed II Pāshā, son of 'Alī Pāshā Karamānli, assumed the rule while his father, who died in 1796, still lived, but was unable to hold it against the jealousy of his brother Yūsuf, who took his place in June 1795.

Yūsuf Pāshā Karamānli (1795—1832) possessed, together with courage and foresight, all the perfidy, wiles and cruelty of a Barbary sovereign. He carefully repaired the fortifications, and restored the city walls between the harbour and the castle, as is proved by an inscription of 1215 (1800—1801) in the neighbourhood of the *sūq al-naḥḍifāra* (market of the carpenters). During the Napoleonic wars, in consequence of the Egyptian expedition and of the occupation of Malta, the Regency of Tripoli acquired international importance. It was to have been used as a base to victual Malta and to keep up relations with Egypt after the English had gained control of the sea, but this was not possible, as they had blockaded the harbour of Tripoli, and taken in charge the French

consul, whom they landed at Genoa. In 1801 France resumed friendly relations with Yūsuf Pāshā. In 1803-1815 Tripoli was on bad terms with the United States: the ship *Philadelphia*, which had come there to punish the pirates, stuck on the rocks of the harbour and was burnt; the Americans then appealed to Ahmad Karamānli, the deposed brother, and tried to provoke rebellion in Cyrenaica, but could not get the advantage of the crafty Pāshā. Piracy meanwhile went on, having survived down to the time of Yūsuf Pāshā. At the head of the fleet was his son-in-law Mustafā Gardji, who amassed great wealth, and spent part of it in constructing the mosque which bears his name (1249 = 1833-1834). As a consequence of the decisions taken at the congress of Vienna in 1815, and at Aix-la-Chapelle, Lord Exmouth reached Tripoli in 1816 with a British fleet. Capitulations were renewed on England's behalf, and established for the first time on behalf of the Kingdom of Sardinia. The latter, in 1825, sent a fleet to Tripoli, under Commander Sivori, for the purpose of settling difficulties raised by the Pāshā concerning the tribute which used to be paid on every change of consul; some Tripoli ships were burnt, and the Sardinian consul received full satisfaction. In this period (1815-1830) the consuls' authority overruled that of the Pāshā; the French consul Rousséan and the English consul Warrington were rivals and particularly energetic.

After a fruitless expedition of the Neapolitan fleet in 1830, the corsairs' power received its death-blow in the same year, with the French occupation of Algiers. Admiral Rosamel exacted and obtained on August 9th the end of piracy and the freeing of all Christian slaves.

Yūsuf Pāshā, who had wrested the power from his brother, was afflicted in his last years by the rebellion of his nephew Muḥammad (1832); the chaotic conditions of the Regency, the intrigues of the Powers, and, above all, the French occupation of Algiers, induced the Porte, in 1835, to send an expedition to Tripoli. The Turkish forces landed on May 27th and re-established direct Turkish rule in all of Tripolitania, including Barka (Cyrenaica). Yūsuf Pāshā, who in August 1832 had abdicated in favour of his son 'Alī, died under the new regime on August 4th 1838.

The second period of Ottoman rule (1835-1911) was characterized by the progressive conquest of the interior, hindered by the ambitions and revolts of the tribes. The city however remained for 76 years entirely subject to the Ottomans; the conditions of the native population were practically unchanged; the city enjoyed a certain measure of progress thanks only to the foreign colonies, amongst which the Italian colony predominated as to numbers, influence, and private and financial enterprises. On October 5th 1911 Italian troops landed in Tripoli.

The city; monuments. In the historical summary we have already mentioned some of Tripoli's monuments. Without describing the Roman and pre-Roman remains, like the necropolis to the NW. of the city and the Arch of Marcus Aurelius, we may mention among Muslim monuments, the *Djāmi' al-Nāḩa* (*an-nāḩa* according to the local pronunciation), which is one of the most ancient, reconstructed by Šafar Bey in 1019 (1610-1611); *Djāmi' Darghūt* or *Djāmi' Šhā'ib al-'Ain* was built in 1110 (1698-1699) by Meḥmed Pāshā, called *Šhā'ib al-'ain*; *Djāmi' Karamānli*, finished

under Ahmad Pāshā Karamānli, in 1150 (1737-1738); *Djāmi' Gardji*, already mentioned; *Djāmi' Hamūda*, in front of one of the city doors, recently restored on behalf of the Awḩāf Direction, by Italian architects. Some mosques have attached to them *turba*s of great artistic and historical importance; worthy of mention are those connected with the mosques of Darghūt, of Karamānli, the *turba* and the *madrasa* of 'Uthmān Pāshā, near the Arch of Marcus Aurelius. The ancient cemetery was outside the walls, on the NW. corner of the city; many gravestones had been built into the fortifications, and when the latter were demolished, were placed in the city museum, founded after the Italian occupation. There are now other cemeteries outside the city; the best known is that of Sidī Minder (Munsaidhar, one of the Prophet's Companions). The Ottoman occupation has left no traces in the city monuments, except a few private buildings, and the military constructions outside the walls, especially in the Eastern plain and in the Menscia. The Italian government has but slightly modified the Muslim city's aspect in its native quarters and in the Hūra, the Jews' ghetto; a lengthy portion of the walls, however, had to be demolished, part of them has been restored, and adapted to civic and sanitary requirements. The side of the city overlooking the sea has however been completely transformed by the construction of a modern harbour, piers and a large avenue along the beach (Lungomare Volpi, from the name of the Governor for 1921-1925). The Castle (*ṣarāya* of the Arabs), partly adapted to public offices by the Turks, has been restored in 1922-1923.

Administration. At present that part of the city's affairs which is not directly conducted by the Government, is administered by a Municipality, presided over by a Mayor (*ra'īs al-baladiya* for the natives), and by Government commissioners. The administration of mosques and *wāḩf*s is in the hands of an *idārat al-wāḩf*, composed of Muslims.

Public instruction. Muslim school organizations, with *madrasas* and *kuttāb*s for religious instruction, exist alongside of the Italian schools.

Libraries. There is a Government Library in the Castle; it contains a limited collection of works on Muslim history and religion, and some Arabic manuscripts. In the Castle the Ottoman Archives are also preserved; its most ancient documents go as far back as 1850 only. Of great importance for Tripoli's history are the archives of the French and English consulates; the more recent ones of the Sardinian, Tuscan and Neapolitan consulates are preserved in the Government Library.

Private families possess small collections of books, containing also manuscripts. But the most important library is the so-called Library of the Awḩāf (*kutubkhānat al-maktabat al-awḩāf*). The central nucleus of this collection was established by Mustafa Khodja al-Misri, first clerk at the time of 'Alī Pāshā Karamānli. The act (*waḩfīya*) which founds as a *wāḩf* the *madrasa*, the *kuttāb* and the library annexed to them, together with a small shrine, is dated: beginning of *Djūmāda II* 1183 (October 1769). Successively various Muslims left books as a *wāḩf* to the library, which was enriched by part of the books left by the Tripoli historian Ahmad al-Nā'ib al-Ansārī, and in 1922 by a gift of printed books from the Governor Count G.

Volpi. A systematic catalogue of this library has not yet been compiled, but an Arabic index-inventory is available. The books are arranged according to subject, following the traditional Muslim classification; printed and manuscript works are not separated; all the books, except a few Turkish ones, are in Arabic.

(ETTORE ROSSI)

TUBU, a people of the Eastern Sahara. The Tubu are distributed over an immense territory lying between the Libyan desert on the east and the Haggar on the west, Fezzan in the north and the region of Tchad in the south. In Fezzan, they constitute the greater part of the district of Gatrūn; they are found in Kūfra; they occupy Tibesti, Borkū, Bodele, the northern port of Wadai, the valley of the Bahr al-Ghazal; they are very numerous in Kanem and in the oasis of Kavar. The name Tubu or Tibbu was given by Europeans to all these people but the various groups call themselves by particular names. Tubu is applied more particularly to the natives of Tibesti; in the Kanuri language it means the people of Tu or Tibesti; the latter call themselves Tēda; in the same way are distinguished the Amma Borkū (Borkū), the Kreda, Norea, Cheurafade in Wadai, the Koherda in the Bahr al-Ghazal. From the linguistic point of view, two groups may be re-

cognised, speaking dialects very different in vocabulary: the Tēda of Tibesti and the Darāgāda settled in the southern districts. The Arabs give the latter the name of Gouran.

The Tubu are very distinct from the black Sudanese on the one side, and the Arabs and Berbers on the other. They are as a rule of small stature, with a lean and slim body, dark skin, straight nose, sometimes aquiline, thin lips, and smooth hair. These physical characteristics are particularly strongly defined in the Tēda, who have remained isolated in their mountains. They are found scattered through the Darāgāda, who are more or less mixed with negro blood. The poverty of their country dooms them to a wretched existence. Some are nomads, others sedentary. The main supplies come from the cultivation of the palm-tree and cereals in the "cunedi" or moist valleys, the rearing of goats in Tibesti and of cattle in the Tchad region. The Tēda also make some money by hiring out their camels: they act as guides to caravans but are particularly given to brigandage whenever an occasion arises. This mode of life develops in them an extraordinary power of resistance to fatigue and privations, but also makes them treacherous and cruel robbers, as European travellers from Nachtigal, who was the first to study them, onwards, are all agreed. — The settled Tubu are found in groups, not as a rule large. They either dwell in little stone houses, covered with palm-branches, or in huts of wattle with roofs of thatch, or even in caves roughly furnished. The gardens adjoining the huts are cultivated by slaves while the Tubu themselves fight and herd the flocks.

The Tubu are divided into two classes: the nobles or "maina" and the common people. Among the Tēda, the tribes are divided into suzerain and servile tribes. The former are three in number, the Thomāghara, the Gūnda, who have almost all emigrated to Fezzan and the Turaba. The Salūa of Tibesti, or Dardai, who rules the country with the help of a council of nobles is compulsorily elected among the Thomāghara. Among the Tubu, on the other hand, as among the Sudanese peoples, the Haddād (smiths and fishers and hunters) form a distinct caste, regarded as inferior and despised by all. From the religious point of view the Tubu are Muslims but, it seems, only recent converts. The Arabs treat them like dogs and regard them as infidels. They have actually retained fetishist superstitions and practices, and their own customs which are on many points in contradiction with the Kur'anic law. For example, they do not take the *diyya* or pecuniary compensation in case of murder nor do they observe the prohibition relative to fermented liquors. The Tubu are none the less fanatical Muslims, especially in Tibesti, Borkū and Bahr al-Ghazal; they are very much under the influence of the Sanusiya, of the sāwiya of Wadai, of Anigalaka, etc. and have opposed a resistance to European penetration.

We have only incomplete and fragmentary notes on the history of the Tubu. The Arab authors down to Makrīzi make no mention of them. Relying on a passage in this author reproduced by Leo Africanus, they were for long regarded as Berbers and they have been identified with the Bardas, mentioned by both these geographers. Barth tried to reconcile this view with the fact ascertained by him of the affinity of the Tubu and Kanuri languages. On the other hand it is now agreed,

that the Tubu originally lived in the Sūdān and were then driven into the Sahara. In any case, they seem to have played a fairly important role in the history of Kanem. Some of their clans took part with the Kanembou in the foundation of this kingdom. Down to the end of the 12th century A. D. the sultāns of Kanem kept up the custom of marrying wives from the Tubu. A certain number of Tubu had settled in Kanem, which the tribes who had remained in Tibesti came to attack in the 13th century. Sultān Dūnām II was forced into a seven years' war with them, out of which he emerged victorious but with the resources of his kingdom exhausted. In the 15th century the Tubu were the allies of the Būlāba and helped the latter to conquer Kanem. Settled in the lands around Lake Tchad, they shared the fortunes of their neighbours [cf. the articles BORNŪ, KANEM]. As to the Tubu of Tibesti, nothing precise is known about them till the 17th and 18th centuries. In this period they were frequently raiding Bornū and Fazzān. A defeat which they suffered in 1788 forced them to cease their raids into the latter country but in the second half of the 19th century, they had in their turn to defend themselves against the repeated attacks of the Wlad Sliman and the Tūareg.

(G. VVER)

TUDELA, Ar. TUFĪLA, a little town in Spain, with about 9,500 inhabitants, 860 feet above sea-level and 50 miles N. W. of Saragossa, on the right bank of the Ebro and the left bank of a tributary of the latter, the Queiles (Ar. Kūlah). According to the Arab geographers, it was founded by the Umayyads in the reign of the emir al-Hakam I (180—206 = 796—822). In this period and on several other occasions, it was the headquarters of rebel Muslim leaders: for example in 229 (843—844) the emir 'Abd al-Rahmān laid siege to it and in 264 (877—878) al-Mundhir. It was several times taken by the Christians and retaken by the Muslims. 'Abd al-Rahmān III made it his base on one of his expeditions to the north of the Peninsula in 308 (920—921). The general al-Hamid b. Basil had to recapture it three years later for the same sovereign. The Arab historians do not tell us at what period Tudela finally passed into Christian hands.

(E. LÉVI-PROVENÇAL)

TUDJIB (BANŪ), the name of an Arab family several members of which attained distinction during Muslim rule in Spain in the period of the *Mulūk al-Tawā'if* as well as under the Omayyad caliphs. The family became divided into two branches, the Banū Hāshim of Saragossa and the Banū Šumādīh of Almería. The family of the Banū Tadjib had settled in Aragon at the conquest. In the reign of the emir Muḥammad I (239—273 = 852—886), its head was 'Abd al-Rahmān b. 'Abd al-'Azīz al-Tadjibī and his authority over his fellow-tribesmen was recognised by the ruler of Cordova, who thus tried to put an end to the power of another family in Aragon, of Visigothic origin, the Banū Kaṣī. On the Banū Tadjib, who were later vassals of Cordova, and then of the independent rulers (Banū Hāshim) of Saragossa down to the time they were deposed in favour of the Banū Hūd, cf. above, s.v. SARAGOSSA.

The other Tadjibid branch, that of the Banū Šumādīh, had early been driven out of Aragon by the descendants of 'Abd al-Rahmān al-Tadjibī. In the first half of the 5th century A. H., Abu l-'Aṣbagh Ma'n [q. v.] b. Muḥammad b. Ahmad b. Šumādīh al-Tadjibī, the head of the second branch, succeeded in gaining possession of the little principality of Almería, founded in 1025 by the two 'Slavs' Khairān and Zuhair. On his death in 443 (1052) his son Abū Yahya Muḥammad succeeded him with the *laqab* al-Mu'tasim. He was then only 14 years of age and for three years his uncle Šumādīh b. Muḥammad acted as regent. Al-Mu'tasim remained ruler of Almería till his death in 484 (1091) and his long reign was very brilliant and prosperous, if we may believe the Arab chroniclers. His son, Ahmad Mu'izz al-Dawla, succeeded him but soon after his accession, he retired before the Almoravids and when the latter seized Seville he went to Bougie, where he ended his life in obscurity as did his sons.

Bibliography: The history of the Tadjibids has been given in detail by R. Dory, *Essai sur l'histoire des Tadjibides, les Beni Hāshim de Saragosse et les Beni Šumādīh d'Almerie*, in *Recherches sur l'histoire et la littérature de l'Espagne pendant le moyen-âge*, Paris-Leyden 1881, I. 211—281. Dory, *Histoire des Musulmans d'Espagne*, Leyden 1861, IV., *passim*. (E. LÉVI-PROVENÇAL)

TUFALI, "parasite, sponger". This is the meaning given to the word in the majority of the European dictionaries of Arabic, Persian and Turkish, e.g. Belot, Ghaffarow, Sāmi-bey, etc. But this does not render the exact shade of meaning of the word, which was first of all applied to an individual who goes to a feast without being invited or accompanies a person invited. A little lower class of parasite is called in everyday Persian *ḥufailī*.

the term applied to hangers on of the *ṭufail*.

According to the Arabic dictionaries, *Lisān al-'Arab*, xiii, p. 429, *Taḡī al-Arās*, ed., p. 418 the word *ṭufail* comes from a native of Kūfa, Ṭufail al-A'rās, "Ṭufail the feaster", who used to attend all the feasts without having been invited and was wont to express his delight that Kūfa was like a bowl, nothing in the interior of which escaped his eye. From this name Ṭufail come the Arabic verbs *ṭafala* or *taṭafala*: "to act like Ṭufail". The latter lived in the time of the Umayyads and belonged to the Banū 'Abd Allāh b. Ghatafān. His story is told as early as Ibn al-Sikkī (d. 244 = 858).

In the form *ṭufail*, the word (in Persian) has the special meaning of "complement, thing thrown into the bargain, thing one gives up". Hāfiṣ says in one of his odes: "all human beings and the *ṭufail* are corollaries (*ṭufail*) of the existence of love".

In Hindustānī (cf. Shakespeare, *A Dict. Hind. and Engl.*, p. 1436), *ṭufail* is used adverbially in the sense of "by means of, through, for the sake of".

(V. MINORSKY)

ṬUFAN. [See NUB.]

TUGH (T.), a yak's tail (*ṭufāz*), later replaced by a horse's tail attached to a pole, sometimes surmounted by a crescent and used as a standard and rallying point for troops. It was also used as badge of military ranks in the early Ottoman empire: the *mir-liva* and *sarıjak-bey* had one, the *beyler-bey* two, the viziers three, the grand vizier five and the Sultan in time of war seven or nine tails. When a Pāshā was dismissed from office he was deprived of this badge. It was abolished by Sultan Mahmūd II along with the other badges of the Janissaries. — In Central Asia the bearer of this standard was called *tugh-begi*.

(CL. HUARY)

TUGHA TIMÜR, a Mongol Khān, whose dynasty ruled in Djundjān for a century before 808 (1405).

The Name. The Khān's name may be read Tugha or Togha. The *Zafar-nāma* transcribes it *Tegh* (Tughait); on a coin published by Fraehn it is spelled Toghan (in Mongol character; cf. Howorth, *op. cit.*, III, 718).

Family. Tugha Timūr b. Suri (Surikuri?) b. Babā Bahādur was a descendant in the sixth generation from a brother of Čingis-Khān (Djufi-Kasar, *Shahjārat*, p. 315, misunderstood by Miles). In 705 (1305) Babā Bahādur arrived in Khorāsān with his *naman* (10,000 families) and entered the service of Uljāitū-Khān. In 715 (1315) he made a raid into Khwārizm. On the complaint of Özbek, Khān of the Eastern Kiptak, Uljāitū executed Babā and his son Suri (*Shahjārat*, p. 321, 330; d'Oshson, *Hist. des Mongols*, IV, 572—5). The tribe of Babā remained in Māzandarān (at this period, *Nushat al-Kulūk*, p. 159; this term included Djundjān and the eastern part of Tabaristān).

After the death of the Hūlāgīd Abū Sa'īd (736), anarchy broke out in Persia. The Djālayir Hasan Buzurg put the pretender Maḥammad on the

throne. As a result of a quarrel among the amirs of Hasan Buzurg, a number of them, like the Uighar Igrāndj (Miles, *op. cit.*, p. 315, 320, wrongly Akarpank) with the help of the amirs of Khorāsān (Shāikh 'Alī b. 'Alī Kūshdij, 'Alī Dja'far, Arghun-Shāh) went to Tugha Timūr whom they proclaimed Khān in 737 (1337). Tugha Timūr, accompanied by his amirs, marched on Adharbāydjān where he was rejoined by the other claimant Mūsā supported by the Oyrats. Tugha Timūr and Mūsā proposed to divide Persia, but on the 6th Dhu'l-Hijja 737 they were defeated by Hasan Buzurg in the Garmarūd (west of Miṣyān; *Shahjārat*, p. 316; d'Oshson, IV, 726). Tugha Timūr withdrew to Bīstām where he ruled over Māzandarān (in the sense above mentioned) and Khorāsān. At the same time the exactions of the minions of Khodja 'Alī al-Dīn Muḥammad, vizier of Khorāsān, provoked a rising and the coming to power of the Sarbadars [q. v.]. The expansion of their power considerably cut down that of Tugha Timūr. With the Kart dynasty of Herāt, Tugha Timūr was on friendly terms, for his daughter Sultān-Khātūn had married Mu'izz al-Dīn Kart (*Zafar-nāma*, I, 320).

In 739 (1338) Hasan Buzurg himself invited Tugha Timūr to come to the Irāk. He went there with the amir Arghun-shāh, son of Nawruz and grandson of the celebrated Arghun-ōkā; cf. Djuwānī, II, 251 (this family held Nishābūr, Tās and Kalāt; it is known by the Mongol name of Džān (Djūn) Ghurhān (in Persia Džānī-Kurbān)). Hasan Buzurg went to see Tugha Timūr at Sāwa but on the one hand Khodja 'Alī al-Dīn Muḥammad, who had control of the financial administration, appeased the inhabitants and on the other the Khān himself entered into negotiations with the Čobanid Hasan Kūčik. The latter seized the opportunity to compromise the Khān with Hasan Buzurg. Disgusted by his intrigues, the simple Mongol that very night broke his camp at Marāgha (?) and returned to Khorāsān (*Shahjārat*, p. 327; d'Oshson, IV, 732).

In 741 (1341) Tugha Timūr for the third time invaded the Irāk. He was supported by the princess Sālī, daughter of Uljāitū-Khān, and by Shīrburghān, her son by the amir Čoban, but the army of Tugha Timūr commanded by his brother 'Alī-Gāwun was defeated at Abhar by the troops of Hasan Kūčik.

Khorāsān very soon passed under the rule of the Sarbadars who drove Arghun-shāh, lord of Nishābūr and Tās, out of it. The Sarbadar Wādij al-Dīn Mas'ūd defeated the Khān's troops on the Atrak, slew 'Alī-Gāwun and even held Djundjān for a time. According to Dawlat-Shāh, p. 236—237, Tugha Timūr had to be content with nominal power (*nām-u-rām-i-saltanat*) although the Sarbadars appeared once a year at the Khān's court to pay homage as vassals (*mulūmat wa-ta'addib-i 'ahd*). During one of these visits the Khān was assassinated at Sultān-duwān (between Gurgān and the Kān-su) by the Sarbadar Yahyā Karābī. The chronogram composed by the poet Azīz gives the date of this event as the 16th Dhu'l-Ka'da 754 (Dec. 1353). According to Dawlat-Shāh, Tugha Timūr resembled the Sarbadars in his democratic tendencies; he encouraged people of modest origin and distrusted the nobles. He spent the summer at Rādān and the winter on the Gurgān. He built a fine *imārat* at Maḥḥad. Coins in name of Tugha Timūr were struck not only at Āmul, Maḥḥad,

Kaswin etc. but also at Basra (741) and Baghdad, (after 740) which shows the prestige which he enjoyed, in name at least (S. Lane-Poole, *Catalogue of Oriental Coins in the British Museum*, vol. vi, 1881, p. 98—101). According to the *Maqna' al-Fuqah*, the poet Ibn Yamin was the panegyrist of Tugha Timür (Browne, *Pers. Litt. under Tartar Domination*, p. 216). The Khān himself is credited by some authorities with poetic gifts (v. Hammer, *op. cit.*, p. 341) and his title on coins is *al-Sultān al-'Alim*, 'the learned sultan'.

After an interval during which the Sarbadars appointed their own governor at Astarābād, power in Djurdjān passed to Tugha Timür's old general 2. Amir Wali, son of Shaikh 'Alī Hindū (or Hind). With the support of the lord of Nass (of the Dī'ān Ghorbān family), he defeated the Sarbadars and won himself a principality which included Astarābād, Bistām, Damghān, Samnān and Firūzkūh (*Maqna' al-Sa'dain* under 761 A.H. in Dorn, *Auzūge*, p. 155—157). In 772 (1370) he tried to conquer Ray but the Djalāyirid Uwais defeated him. In the following year Uwais, eager to dispose of Amir Wali, resumed the campaign but did not go beyond Urdjān. In 774 Amir Wali instigated by the Mu'azzarid Shāh Shudjā took Ray and Sāwra. The death of Uwais (776 = 1374) put an end to any further military preparations (Markov, *Katalog Djalayir, Monet*, St. Petersburg 1897, p. xiv.) When in 783 (1381) Timür took and razed to the ground Isfariyān which had been held by Amir Wali (*Zafar-nāma*, l. 325), the latter received with all honour the envoys of the conqueror, but once Timür returned to Samarkand, Wali came to an arrangement with 'Alī-beg, son of Arghūn-Shāh, who took Kalāt and Tūs (*Zafar-nāma*, l. 324) and he advanced against the Sarbadars 'Alī Mu'ayyid. Timür returned to Khorāsān in the winter of the same year (1381—1382), besieged Kalāt and went on to Djurdjān. Via Rūghl(?) he went to Kabūd-Djāma and Shāmān (Kabūd-Djāma, now Hādjdjār, on the left bank tributary of the Gurgān, between Nardīn and Gunbad-i Kābū). Amir Wali hastened to send propitiatory presents to Timür and the latter returned by Samuljān [in the Atrak valley] (*ibid.*, p. 349, 351). In the meanwhile 'Alī-beg was also reduced to submission. He and his relatives (*mu'atallifān*) were deported to Transoxania. 'Alī-beg was executed at Andijān in 784 (*ibid.*, p. 355).

In 785 (1383) Timür sent troops to the lands of Amir Wali. Having conquered Sistān, Timür took the field in person against Amir Wali. After the battle of Gāwars (*Zafar-nāma*: Gāwargh) the fortress of Durūn (halfway between Ashkhabād and Kirdi-Arwat) was taken (*ibid.*, l. 382). Timür continued his advance on Dihistān and Djilāwān (= Mashhad-i Miqrīyān on the Atrak below Čat) and crossed the river of Gurgān. Amir Wali valiantly fought his advance step by step but his night attack (in Shawwāl 786 (1384)) failed. Timür occupied Astarābād. Amir Wali sent his family to Gird-Kūh (near Damghān) and himself fled to the west (*ibid.*, l. 382—386). He took part in the defence of Tabrīz [q.v.] against Toktamish and in 788 (1386) finally met his death through the treachery of his host Mahmūd Khalkhālī (*ibid.*, p. 392, 398).

3. Luqmān Pādshāh, son of Tugha Timür, who had been driven out of Djurdjān by the usurper Amir Wali, was re-established in his hereditary fief by Timür in 786. The latter enjoined him to

keep on good terms with the saiyid-wālīs of Sāri and Āmul (*ibid.*, p. 387, 391).

During the campaign of 794 (1391) the ruler of Astarābād was 4. Pīr [or Pīrāk] Pādshāh, son of Luqmān Pādshāh (= Pādshāh; *Zafar-nāma*, l. 570) whom Timür had installed there after the death of his father. Pīr Pādshāh entertained Timür lavishly and procured him ships for the conquest of Mahānazar (4 farsakhs from Āmul). His loyal services are also mentioned in 806 (1404) on the occasion of Timür's expedition against Iskandar Čalāwī in Māzandarān (*ibid.*, ii. 591). At the beginning of the reign of Shāhrukh, Sultān 'Alī of Sabzawār having collected a body of Sarbadars rebelled in Khorāsān. Pīr Pādshāh appeared suddenly in Djuwain and joined Sultān 'Alī, but the allies were defeated by Saiyid Khodja sent by Shāhrukh (*Maqna' al-Sa'dain*, N.E., 1843, p. 26). Sultān 'Alī with his allies sought refuge with Mīrān-shāh, who had come from Adharbāidjān but the latter handed him over to Saiyid Khodja. On this occasion several sons of Pīr Pādshāh fell into the hands of Saiyid Khodja (*ibid.*, p. 54, 80). In 808 Shāhrukh promised Pīr Pādshāh that he would be safe and summoned him to his court. Saiyid Khodja, however, overwhelmed with tokens of gratitude by Shāhrukh, conceived ambitious projects, entered into negotiations with Iskandar (of Fārs) and finally rose in rebellion. From Kalāt he had to seek refuge with Pīr Pādshāh. This provoked Shāhrukh's expedition against Māzandarān (809 = 1406). Pīr Pādshāh had considerable forces under him but lost the battle. He fled to Khwārizm and Saiyid Khodja went to Shirāz. Shāhrukh set prince 'Omar Bahādur up in Māzandarān but he soon rebelled and was replaced by Ulugh-beg. In 810 the latter informed his father Shāhrukh of Pīr Pādshāh's new preparations. For a second time Shāhrukh set out for Māzandarān and the news of his advance forced Pīr Pādshāh to seek refuge with the Bādūspānīd Kaylmarth b. Bisūttān. Without striking a blow Shāhrukh re-established his authority at Astarābād and Shāmān.

In 812, the son of Pīr Pādshāh, 5. Sultān 'Alī came to Shāhrukh and took part in the expedition to Sistān but on the news of the death of his father fled to Rustamdar. There he obtained the support of the amir Kaylmarth and collected his father's forces. On the departure of Shāhrukh for Transoxania Sultān 'Alī tried to take Astarābād but was defeated and slain by the governor. His head was sent to Harāt (*Maqna' al-Sa'dain*, in Dorn, *Auzūge*, p. 195).

(V. MINORSKY)

TUGHRA (Ottoman and Seldjuk Turkish), cipher or calligraphic emblem of the Oghuz, later Seldjuk and then Ottoman ruler, which in course of time became the coat of arms or escutcheon of the state, and was placed by the ruler not only on rescripts and firmans but on title-deeds of property, coins, official monuments, ships-of-war and in more modern times on documents of identification, passports, postage-stamps, sheets of stamped paper, goldsmith's marks etc.

Lexicology. The word *tughra* was synonymous with the Persian *nishān*, *nishān* or *nishān* (whence the Arabic plural *nayāshīn*) "sign" and with the Arabic *tamgha* [q. v.] "cipher, signature" and in the concluding formula of firmans the *tughra* is called '*al-imet*'. All these words have a wider meaning than *tughra*, and it came about, in Egypt for example, that the *tughra* was only a part or a particular aspect of the '*al-imet*'. *Tughra* has passed into Persian (cf. the examples from Hākīm-i Khākāni and Mir Nāzmi, in *T. O. E. M.*, No. 43, p. 56) and Ibn Khallikān (*Wafayāt al-A'yān*, i. 202), even thought the word was of Persian origin. According to Ibn Khallikān, it was in Persian that the orthography in Arabic characters became fixed as *تُغْرَا* and *تُغْرَا* (*tughra*) with *alif* *muḥḥūra*.

This is why it has been taken by Turkish literary usage for an elative Arabic feminine *fu'la*, and declined, according to Turco-Persian syntax, with feminine adjectives: *tughra-i gharrā* "the illustrious or brilliant *tughra*". Some western writers also put it in the feminine ("die *Tughra*").

Arabic has for some time used the verb *ṭaghghara*, "to place the *tughra* upon" (Maḥrizi, *Khifāt*, Cairo 1270, ii. 211). Popular Arabic has confounded *tughra* with *ḥarra* "طَرَا" "border of a piece of cloth or the upper border of a document" and this last name is given to the *tughra* in Djibarti (iv. 95, 2) and in present day usage in Egypt. This confusion, easily explained from the place in the document where the *tughra* was put (cf. below), is fairly old (cf. Ibn Khallikān, *op. cit.*; cf. also Quatremère, *Mamlouks*, II/ii. 308, note).

In dialects, *tughra* is pronounced *tūra* and *tura*, for example in Gaganz (Radloff, *Preben*, x.; Moschkoff, p. 98) and thus becomes a homonym of a word, which means in Turkish "stick or sinew used for playing on a large drum, a twisted handkerchief used in a game to strike someone in the hollow of the hand" (the Arabic *ḥarra*, already mentioned, is also found with this meaning; cf. also Arabic or Persian, *ḥarra*, *ḥirra*, "nerve").

In spite of all these attempts at assimilation by foreign languages, the word *tughra* must be considered as of purely Turkish origin. From valuable notes in Kāshghari (i. 388), we know that it comes

from the Oghuz *tughragā* (تُغْرَاغَا) which meant:

1. "seal (*ṣāḥ*) and cipher (*ṣawḥ*)" of the Oghuz ruler (*malik*), but the (settled) Turks do not know it";

2. "any horse provisionally lent to the army for the days of a royal review or for the duration of

a war (it is probable that this comes from the royal mark stamped upon the horse)".

Kāshghari also gives (ii. 217) the verb *tughragā* *la-n-waḥ*, "to receive the *tughra*" referring to a document or to a page (Turk. *oqlan*, Ar. *qulān*).

The change *tughragā* > *tughra* is explained by the dropping, regular in Osmanli of the final guttural *gh* of the Oghuz. We have many other examples of the same phenomenon.

Like other Turkish and Persian words ending in *a* and borrowed by the Arabic, *tughra* in the latter language was given the termination *-wāt* in the plural: *tughrawāt* (cf. Kāshghari, ii. 162) like *ayḥawāt*, *ṣāḥawāt*, *ḥāḥawāt*, *ustāwāt*, *ḥurawāt*, etc.

On the other hand, the existence of the old form *tughragā* enables us to dispose of a number of rash etymologies proposed for *tughra*, like that of Zenker who sees in it, with metathesis, the optative *tur-gha* (y) "let it be so" or that of Tychsen, who sees in it the word *doghra* "truth" (*Introdutio in rem numariam Muhammedanorum*, Rostock 1794, quoted in the *Description de l'Egypte*, vi. 338—339).

The theory which connects *tughra* with the name of the fabulous bird *tughri* deserves more space. The writers who have maintained it, Ahmad Midhat Efendi, Ahmad Wefik Paşa, Ziyā Gök Alp (*M. T. M.*, No. 3, p. 404, 445) and Colonel 'Alī (*T. O. E. M.*, No. 43 and 44 of the year 1334), say that this bird was the badge (Ziyā Gök Alp says "totem") or *ongun* (ونغن) of the great Khākān

of the Oghuz and that each of the 24 tribes under him and each of the 4 khāns who commanded them in groups of six had their *tamga*. Unfortunately not one of these authors gives their authority for their statements. The quotations from Rashid al-Din and Maḥmūd Kāshghari only contain descriptions of this fabulous bird (we may add that it is mentioned in the *Sāḥnūma*, ed. Mohl, in folio, v. 619, 621; the Khākān makes a present of this bird to Bahrām Gūr).

Kāshghari, although better placed than we are to discuss the etymology of *tughragā*, only says: *wa-lā aḥd al-aḥlān*, "I do not know its origin".

History of the *tughra*. Unfortunately we do not know the pattern of the *tughra* used by the Oghuz or the Seldjūks, who were of the same race. The title of the *tughrai* or official appointed by the latter to draw the *tughra* has been preserved through the fame of one of them, who was vizier to Malik Shāh and Maḥmūd and author of the *Ḥamīyat al-ʿadām*, d. in 514 according to some, 518 according to others (see the art. AL-TUGHRA¹). His biographers (Ibn Khallikān, ed. de Slane, i. 462; Ibn al-Wardī, Cairo 1285, ii. 131; Ibn al-Aṭīr, *Recueil des Hist. des Croisades*, i. 327) all say that *tughrai* means the official who draws the *tughra*. M. Babinger mentions also a *raʿīs al-dawān al-inṣāʿ* or *al-tughrawiyya* from the *Mafāḥīl al-Budāʿ fī Mandūḥ al-Surūr* (Cairo 1300, ii. 118), a work by 'Alī al-Dīn 'Alī b. 'Abdallāh al-Bahāʿī, d. in 815 (1412).

We again find the *tughra* among the Mamlūk Sultāns of Egypt, who no doubt borrowed it from the Seldjūks (through the Ayyūbids?). According to Kāshghari, it was only used down to the reign of Shāḥīn b. Husayn (1363—1376). This statement is confirmed by Maḥrizi, *Khifāt*, *loc. cit.*, who says the *tughra* was no longer in use in his

time, i.e. between 766 and 845 (1364—1442).

Ḳalkaṣḥandī (xiii. 162—166) gives details of the tughra (تغرى) which the sultāns of Egypt placed upon *manṣūṣ* (q. v.; plur. *manṣūṣiyyat*) or rescripts addressed to the chiefs of a 1,000 and to the *emir fakhkhāna*.

It was the duty of a special official to prepare these tughras on rectangular pieces of paper. The scribes then inserted these rectangles in the spaces left blank for them in the *ḡarra* or "upper part of the document", above the *ḡarmala* (cf. also Quatremère, *Sultans Mamlouks*, ii. 308—309).

The tughra was formed of the *alḡib* of the Sultān, written on one line. The text of the tughra of Sultān al-Malik al-Nāṣir Muḡammad b. Ḳalā'ūn was: *al-Sultān al-Malik al-Nāṣir, Nāṣir al-dunyā wa 'l-dīn, Muḡammad b. al-Sultān al-malik al-Manṣūr Saif al-Dīn Ḳalā'ūn* (fig. 1).

The uprights (*wuṣṭāṣ*) of all the vertical letters like *alif*, *ḡaf*, *lām*, *ṣā*, *ṣā*, which number 35 in this tughra, are considerably elongated isolated uprights alternating with groups of two (Ḳalkaṣḥandī gives the exact measurements of the spaces left between the verticals). To secure this regular arrangement, some letters were displaced; this was the case with the *alif* of *al-malik*, which was inserted between the two *lāms* of *al-sultān*. Under the line of titles were the words *ḡallada 'lūku sultānaku* which were written, not by the official of the tughra, but by the scribe who wrote out the *manṣūṣ* itself on which this formula encroaches a little (perhaps intentionally).

The size of this tughra, according to al-Ḳalkaṣḥandī, was "a half *ḡirā' al-ḡumūṣ al-ḡāhiri*" in width and height. The size of the characters or of the *ḡalam* varied according to the number of uprights.

We refer to the same work for a description of fig. 2. In it we have 45 uprights (for 47 vertical letters), which are arranged in pairs with their extremities horizontal. But the most striking peculiarity here is the fact that at the bottom of the verticals (traced in the *ḡalam ḡatīl al-ḡulḡ*) is written the name of the sultān, *Shā'īn b. Ḥusain* (in larger characters or *ḡalam al-ḡumār*).

We may call attention to the peculiar features of the two *nūn*'s (supplied by the words *Shā'īn* and *(i)bn*) which are in the centre. It is probable that this is the junction of the two curves to be mentioned below.

The Ottoman tughra, although derived in all probability from the same model (Saldjuk), differs markedly, in appearance at least, from the Egyptian tughra.

The oldest Ottoman tughra known to me is found on the coins of the emir Sulaimān (806—816 = 1403—1416). All that von Hammer says on the subject of tughras dating from Murād I or his father Orḡān does not seem to be based on anything tangible. Fekete, it is true, according to Khalil Edhem, who gives no definite reference, speaks of coins of Murād I with the tughra, but this author's *Catalogue* does not mention these coins. Colonel 'Alī (p. 110—111) also gives the scheme of the graphic evolution of the tughra from Murād I but without saying whence he had taken it.

It should be noted that the tughra of the emir Sulaimān already contains the principal elements of this cipher, i.e.

taken from the *alif*'s in the name of the prince and his father. The words "Emir Sulaimān" are surmounted by "(i)bn", in turn surmounted by Bāyazīd. In a tughra of Mehmed (i)bn Bāyazīd (Mehmed I; cf. Khalil Edhem, *Mus-i ḡumūṣ Miskūḡ-i 'Osmāniyye*, Constantinople 1334, l. 31), there are 4 verticals but this number is exceptional and is only found, for the sultāns, at a comparatively remote period.

2. The oval or elliptical curves, not closed, to the number of two, which meet in the lower part of the name of the prince and which turning first to the left, ascend, then turn to the right to cut the verticals in their upper parts and then disappear on the right. Exceptionally, we find one or three curves. The number two at quite an early period became sacred for the sultān's figure.

These curves seem originally to have been prolongations of the letters *nūn*, which occur in the word (i)bn and in the name of the prince or of his father or in the tughra of prince Sulaimān, in that of Murād I (according to Colonel 'Alī), in that of Mehmed I, where the second *nūn* is supplied by the word *sultān* (cf. Khalil Edhem, *loc. cit.*) or in the later tughra in which, according to Fekete, the *nūn*s of the word *ībn* and *ḡāh* have been prolonged. It is true that they are found very early, even when the names do not supply a second *nūn*; cf. the tughras, incomplete it is true, given by Khalil Edhem, p. 44, 48, 55, 65, 67 and 68.

At first the names and the patronymic were placed in the escutcheon, circumscribed by the curves but in the later development of the tughra this space was left partly vacant. At first only the name of the sultān was left there; the name of his father and later the two names were placed quite at the bottom of the verticals where they formed a crowded group of intersecting lines, forming a more or less geometrical figure called *ser* which means "the little palm, space between the finger and the thumb" (properly "spreading out" = gerundive of the verb *ser-mek*; cf. the saying *ser-e serpe, ile serpe*; the word is found with the same meanings in Kirghiz, cf. Radloff, *Wörterbuch*, iv. 458).

Between the *ser* and the escutcheon is inserted the word *al-muṣṣaffar* "victorious" with the addition of *dā'imān* "always", which is placed in the form of a very conventional seal in the centre of the escutcheon. The final *alif* of the word *dā'imā* (*dā'imān*) is lengthened and, turning sharply round to the left, cuts through the curves. These words appeared for the first time according to I. Ḡalīb Edhem (*Catalogue*, p. 3 and 206 note) on the coins of Ibrāhīm II, whose reign began in 1049 A. H.

The two extremities to the right of the curves are given an elongated and more elegant form. They have become one more characteristic feature of the modern tughra of which they form the arms (*tughra ḡallārī*). From the tops of the three verticals descend three broken lines like floating flames. As to the word *Ḳhān*, after having figured at the end of the name of the sovereign's father, it was added to that of the sovereign from the time of Maḡmūd I (1730—1754).

In the field to the right of the tughra, was frequently placed a flower. In the same place the sultāns later put their title of *ḡāhī* when they had the right to it (Maḡmūd II put his poetic

1. The verticals to the number of 3, which are

nom de plume *'Adli* there, cf. fig. 8). For the other modifications in detail undergone by the tughra, cf. Fekete, p. xlv., note 1.

The form of tughra which we have just described has often been imitated by private individuals who used to substitute for the name of the sultan religious formulae to make *lawahs* or calligraphic plaques to hang up in mosques, libraries, cafés or private houses. In Egypt we even find tradesmen's signs of this kind, but they are now disappearing and it was quite recently allowable to order a *khassaf* or a maker of falcons to make a tughra in one's own name (cf. fig. 12, 13).

The official use of the tughra ceased in Turkey with the dethronement of the last sultan (law of Ankara from Nov. 1, 1922).

If we now compare the Osmanli tughra with the Mamluk tughra to ascertain the graphic element which is common to both, we find that this element reduces itself to the uprights of the vertical letters. We are thus led to conclude quite naturally that the essential feature of the tughra is a certain number — not fixed — of upright strokes.

Writers have talked of a tughra formed on the coins of Murad II (Ah, p. 113; Khalil Edhem, *loc. cit.*) made simply of oval curves but I do not think we really have a tughra here. At least it is an incomplete one. We have seen that if in some Mamluk tughras there were lines analogous to these curves, they were not an indispensable element.

Although supplied later by the method of writing the words, the decorative motif represented by the verticals must be older than the use of the Arabic script among the Turks.

The symbol of the tughra. If we suppose the tughra is not simply a conventional mode of writing, what symbol does it represent?

We have already mentioned that some see in it the figure of a bird. Others have gone so far as to see in it a horseman galloping at full speed (Tychem) but the most popular theory is that which owes its fame to v. Hammer (*Hist. de l'Emp. Ottoman*, I, 231). According to him, the tughra would be the imitation of the mark left by the hand of sultan Murad I, who not being able to write, dipped his hand in ink (!) and stamped it instead of a signature on the treaty concluded with the Ragusans. This explanation, which seems to overlook the fact that the sultan in question had a chancellery, is taken by v. Hammer from Engel (*Gesch. des Freystaates Ragusa*, Vienna 1807, p. 141), who does not give any authority. It is not known in the east and is clearly a legend, which originated no doubt in Ragusa itself. It nevertheless has had a great vogue: Barbier de Meynard accepted it (*Rec. des Hist. des Croisades*, IV, 138 note) and it was defended quite recently by arguments taken from the antiquity of the use of finger prints.

Looking at the primitive form of the tughra (cf. above) all the hypotheses which we have just given, fall to the ground at once. It is interesting to note that Fekete came to the same negative result, starting from the design of the Ottoman tughra, which however is more complicated. Later interpretations being based on more elaborate forms of the tughra are of little importance.

This is why the fact that the tughra or the *penic*, which is the imitation of it (see below), is sometimes given the form of a bird in Turkish

decorative art (a specimen of the year 1181 A.H. is given in figure 14). Similarly the fact that *penic* means "claw" and *ser* "palm" is not an argument in favour of von Hammer's theory, who however did not think of quoting it (the French word "griffe" is used also with the meaning of "stamp for a signature").

In this simplifying the problem, one is led to ask if the hooks of which we have spoken have not some symbolical significance. One question arises which we put forward with all reserve: do not these verticals represent the *tug*, a word which we know was applied by the Turks to the horse or yaktail floating on the end of a pole, or rather to flags in general? The main argument that can be produced against the suggestion is the rarity of the denominative verbal suffix *-ra*, from which we should have to derive *-ra-g* (in *tugra-g*) by a formation parallel to the well known suffixes *-la* (*-la-g*). We have however called attention to this suffix in our *Grammaire de la langue turque* and more especially in *L'Anthropologie*, xxxiii. (1923), p. 174. The fate of this hypothesis can only be decided by a more profound study, which has still to be undertaken, of this suffix.

As to the argument that one might be tempted to draw from the flames floating at the top of the tughra or from the fact that in the *penic* the custom became established of very often drawing two verticals for the pashas of two tails and three for the pashas of three tails or *wasir*, these are all interpretations *a posteriori* which prove no more than those we have rejected above (as a curiosity we give as fig. 15 a signature in which the words *khaliq al-fu'ad* are arranged in three verticals of a *tug* although they refer to a woman). It is also to be noted that numismatists sometimes seem to take the word *tughra* in the larger meaning of "motif of decoration by letters" (*J.R.A.S.*, ix, 300, 381 [1848]).

Nishāndji. We have seen that the Saldar or Mamluk rulers had officials whose particular duty it was to draw the tughra (in Turkish *tughra ledmek*, in Persian *tughra keshidan*). It was the same among the Ottomans, who had officials for this purpose called *nishāndji* and *tasvifi*.

The *nishāndji* was with the three *defterdar* and the *defter emini*, one of the five high officials of the court of the class of the *khodjagan* (Mouradja d'Othman, III, 350; von Hammer, xvii, 34).

Apart from his special office he had, at least at first, certain quite important legislative duties and he used to be called *mufiti-i fānān*, "jurisconsult of secular law", in contrast to the *mufiti-i shar'i* or *shaykh al-Islām*, "jurisconsult of religious law". In his house the *fatwas* were prepared. The text was checked by his *māmeurin* and the *nishāndji* himself then drew the tughra upon it. It may be further noted that the majority of the *fatwas* that have come down to us were prepared by *nishāndjis*.

These officials had also at first the right to examine and control all documents presented to him to be marked with the Sultan's monogram, which gave them a kind of supervision over the departments which sent them up (Mouradja d'Othman, *loc. cit.*).

According to the *Khān-nāme* of the *travāfi* (*nishāndji*) 'Abd al-Rahmān (of 1087, *M. T. M.*, p. 515), the following were the formalities to be gone through: When a firman is promulgated re-

TUGHRA, MULLĀ TUGHRA'Ī MAŠHADĪ, a Persian literary man, was born in Mashhad (the date is not known) and went to India towards the end of the reign of Djalā'ir. After spending some time in the Deccan, he became *wungh* to Prince Muṣṭafā Bakhsh in the reign of Shāh Djalāl. He accompanied the latter on his expedition to Balkh. The conquest of the latter town and of Badakhshān by this prince (1055–1057 = 1645–1647) was celebrated by him in a prose work (*risāla*). This *risāla* called *Mir'at al-Futūḥ* was later imitated by a certain Ghulām Muḥyi al-Dīn who in 1135 (1722–1723) wrote a panegyric biography of a high military officer of the Mughal Empire, Saif al-Dawla 'Abd al-Samad (d. 1150 = 1737–1738) entitled *Futūḥ-nāma-i Samadī*.

Tughra later went to Kashmir in the train of the *Divān* (Privy Councillor) Mirza Abu 'l-Kāsim. Here he spent the last years of his life and died before 1078 (1667–1668). He is mentioned as already dead in a book written in this year (Rieu, p. 742). The year 1130 (1717–1718) in which, according to Pertsch (*Die persischen Handschriften der ... Bibliothek zu Gotha*, p. 24), a work by Tughra was completed, according to the colophon in the Gotha MS. No. 9, is to be referred to the copyist and not to the author of the text. Ch. Stewart (*Catalogue Mysore*, p. 64) gives 1323 A.D. as the year of Tughra's death; I cannot suggest how such an error arose.

Tughra wrote poems as well as prose (*rusū'id*). Among his poetical works may be mentioned:

Sāfi-nāma, a comprehensive *Mathnawī* in imitation of a work of the same name of an earlier poet Zuhūrī (d. 1025 = 1616); *Tarīf-i Kashmir*, a description of Kashmir in *Mathnawī* form. Here also he imitated an earlier poet, Ḥakīm Zilālī (d. 1026 = 1617). Tughra also wrote a preface to the works of this poet (cf. Ethé, *Catalogue of the Pers. MSS. in the India Office Library*, p. 816, 819). The *Tarīf* was apparently composed in Kashmir i.e. after the poet had left the Mughal court. Tughra, like almost all Persian poets, also wrote *ghazals*, *rubā'iyāt*, *muḥafẓat* etc. His *risālas* written in very affected, pompous prose seem however to have enjoyed greater popularity than his poems. These exist in a number of MSS., while those of the poems are less numerous (in Europe at least). Tughra wrote about 30 of them — a list of them extant in MSS. will be found in the books quoted below in the *Bibliography*. — Here it is sufficient to mention in addition to the

Mir'at al-Futūḥ; *Mi'yār al-Idrāk*, an essay on the *Divān* of Ḥāfiḥ; *Firdawsiya* and *Tadalliyyat*, two descriptions of Kashmir in prose; *Tadhkirat al-Ashā'ir*, panegyrics on twelve contemporary scholars and poets of Kashmir; *Mir'at al-Uyūb*, a satire on an emir of the court of Golkonda; *Zinūsiya*, a panegyric on Awrangzib and *Fariḥ-nāma*, a panegyric on the Shāh of Persia 'Abbās II. Lastly may be mentioned Tughra's letters to various contemporaries. An edition of 18 of his *risālas* with the letters and commentary appeared (lith.) at Cawnpore in 1871 and Lucknow in 1885.

(V. F. BÜCHNER)

AL-TUGHRA'Ī MU'AYYID AL-DĪN FAKHR AL-KUTYĀN ABU ISMĀ'ĪL AL-HUSAIN B. 'ALĪ B. MUHAMMAD B. 'ABD AL-SAMAD AL-ISFAHĀNĪ, better known by the name of Tughra'ī (so named after the scroll, consisting of the name of the sovereign and his titles, written at the top of official documents above the *hasmala*). Arab poet, was born in 453 (1061) probably in Isfahān. His early career is imperfectly known, but he appears to have first been engaged as secretary in Irbil. Then he entered the chancellery of the Saljuq Sultān and served during the reign of Malikshāh and his son Muḥammad. He was without equal as regards the beauty of his calligraphy, but according to the prolix statement of 'Imād al-Dīn, his work was tediously slow. The vizier of Sultān Muḥammad who may have feared his rivalry was his enemy and should have liked to have him removed, but could find no cause. That Tughra'ī aspired to higher things is evident from the remark of the biographers that he spent money in bribes to obtain the position of vizier, but was not successful. His chance seemed to have come when Sultān Muḥammad died, while he was with prince Mas'ūd at Mawla, while the Wazīr al-Sumairimī was with prince Mahmūd at Isfahān. In conjunction with other nobles they persuaded Mas'ūd to throw off allegiance to Mahmūd, whom al-Sumairimī had proclaimed Sultān of the Western provinces of the Saljuq empire. Sultān Muḥammad had died in 511 (1117–1118) and it was only in 513 that they tried to make a bid for the throne. An ill-equipped army accompanied by Mas'ūd and Tughra'ī, who was at last vizier, marched to meet the army of Sultān Mahmūd. A battle was fought in the neighbourhood of Hamadīn which

resulted in the complete defeat of Mas'ūd. He himself was made a prisoner as also was Tuġhrā'i who had thus fallen into the hands of his enemy. Mas'ūd was pardoned, but Tuġhrā'i condemned to death, because he was declared a heretic. He was ordered to be shot with arrows by a company of soldiers, but some verses uttered by him as he was facing death caused the vizier to defer the execution of the sentence. It was however carried out at a later date, which is generally fixed in the year 515 (1121—1122). The chronology of these events is far from certain. Ibn al-Athīr dates the battle in the year 514 and one account even gives 518 as the date of Tuġhrā'i's execution. This latter date is certainly wrong, because al-Sumairī was murdered in the month of Šafar 516 in Baghdād near the Niḡāmiya Madrasa by a negro slave who was said to have belonged to Tuġhrā'i and committed the murder to avenge his master.

The reputation of Tuġhrā'i rests principally upon his poem, the *Lāmiyat al-Afjam*, composed in Baghdād in 505 (1111—1112), in which he complains about the evil times in which he lives. This poem, published by Gollius with a Latin translation, was perhaps the earliest specimen of Arabic poetry accessible to wider circles in Europe and was several times reprinted and translated into other languages. It has also been the subject to a number of Arabic commentaries. The *Diwān*, printed in Constantinople, was collected after the author's death and contains, in addition to the *Lāmiya*, poems in praise of notables and princes, and the latest compositions are perhaps those in praise of his youthful master, prince Mas'ūd.

There was another branch of study cultivated by Tuġhrā'i, namely alchemy and in this pseudo-science he composed a number of works, which, as Dhahabī put it, were the cause of the waste of untold wealth, both by the author himself and by those who made use of his works. The language in these is abstruse as usual with this class of literature. The following titles of his works are recorded and several of them exist in manuscript: 1. *Diwān al-Aṣṣār* (MS. in Gotha?); 2. *Tarākh al-Annār* (perhaps only part of the title of the first-named); 3. *Ḥaṣṣat al-Ṭarīḥ al-Ḥadīd*; 4. *Kitāb Dhāt al-Fawā'id*; 5. *Kitāb al-Radd 'alā Ibn Sīnā fī Ḥal al-Kīmīyā*; 6. *Ma'āshī al-Ḥikma wa-Mafātiḥ al-Rahma*, for advanced students only (MS. Paris, N^o. 2614); in addition to these the Paris MS., N^o. 2607 claims to be a commentary of the *Kitāb al-Rahma* of Dīshūrī b. Halyān under the title of *Sirr al-Ḥikma fī Škarḥ Kitāb al-Rahma* but the authorship is uncertain.

Editions of his poems: *Diwān*, Constantinople 1300; *Lāmiya* by Gollius, Leyden 1629, reprinted by H. van der Sloot in Franeker 1769; E. Pocock, Oxford 1661 with Latin translation, reprinted in 1770 by J. Hirth in *Institutiones Arabicæ*, Jena; L. G. Pareau, Utrecht 1824 and A. Raux, Paris 1903 with French translation. English translations by J. D. Carlyle, *Specimens of Arabic Poetry*, Oxford 1796; reprinted by W. A. Clouston, *Arabic Poetry*, Glasgow 1881; L. Chappelow, Cambridge 1758 (after Pocock's Latin version) French translation by P. Vattier, Paris 1660, after Gollius and the one by Raux mentioned above. Commentaries: Saḥḥ al-Dīn al-Šafādī, *Ḥaṣṣat al-Muraḥḥam bi-Škarḥ Lāmiyat al-Afjam*, also called *Ḥaṣṣat al-Adab alladhi 'mudjama fī Škarḥ Lāmiyat al-Afjam*, printed Cairo 1290 and 1305. This is a

voluminous work and enlarges upon all subjects connected with the poem or otherwise. Several abbreviations exist of this commentary: one, called *Šarḥ al-Ḥaṣṣat al-Muraḥḥam* by 'Abd al-Rahmān al-'Alawī, was printed Bilāḥ 1290; another, much curtailed abridgment with the title *Kitāb al-'Arab min Ḥaṣṣat al-Adab*, was printed Balūr 1897. Other commentaries found in manuscript are *Nuḣḥ al-'Alam fī Škarḥ Lāmiyat al-Afjam* by Muḥammad b. 'Umar al-Ḥaḥrāmī (died 939) of which a number of copies are found in libraries; *Nuḣḥ al-Afjam 'an Lāmiyat al-Afjam* composed in Constantinople in 962 by Djalāl b. Khidr; the oldest commentary is perhaps that by Muḥibb al-Dīn Abu 'l-Bakḥ 'Abd Allāh b. al-Ḥusayn al-Ukbarī (d. 616). The commentary by Kamāl al-Damīrī is also a mere extract from that of al-Šafādī, and many more.

Biographies of Tuġhrā'i are found in almost all historical works giving obituaries; all appear to draw upon the same sources: Yāqūt, *Iṣṣāḥ*, iv. 50—60; Ibn Khallikān, ed. Cairo 1310, i. 159; Šafādī, *Ḥaṣṣat*, Cairo 1305, i. 6 499; Ibn al-Athīr, *Kāmil*, *passim*; Bundārī, ed. Houtama, *Recueil*, ii., *passim*. Verses of his are cited in all later anthologies.

Bibliography: given above.

(F. KRENKOW)

TUĠHRĪL I b. MUHAMMAD, a Seljuq ruler in the Irāk 526—529 = 1132—1134, b. 503 = 1109, had as his guardian (*atābeg*) the doughty emir Šīrğir and received as his fief a large part of the province of Dībal with the towns of Siwa, Kaṣawīn, Abhar, Zandjān, Talaḥān etc. On the death of his father (511 = 1118), the Atābeg Šīrğir was thrown into prison and his place taken by the emir Kündoghdl, who was on bad terms with Sultān Maḥmūd, Tuġhrīl's brother. With Kündoghdl he took part in the unfortunate campaign against the Georgians in 515 (1121) and was in a serious position when his atābeg died in the same year and his relations with his brother, never very good, became still worse. In these straits he was easily persuaded by the able and turbulent Arab Dubais b. Šadaka [q. v.] that it would be easy to seize the province of al-Irāk and get rid of the caliph and the sultān. The enterprise failed however and the two sought refuge with Sultān Sandjar, who took up their cause and began negotiations on their behalf with Maḥmūd in al-Raiy (end of 522 = 1128). Some years later (525 = 1131) Maḥmūd died and his son Dāwūd was summoned to the throne temporarily until Sandjar had finally decided the succession. The latter declared for Tuġhrīl, but in the meanwhile another brother Mas'ūd had claimed the throne and was approaching with considerable forces. In the battle that followed at Dīnawar (526 = 1132) between Sandjar and Mas'ūd the latter was defeated and sent back to his province of Gandja while Tuġhrīl was installed as sultān. Sandjar then departed and left his nephew to enforce his recognition upon his opponents. He was successful in routing Dāwūd's adherents but the latter himself escaped to Baghdād. Mas'ūd was soon in power there and was able to persuade the caliph to mention him in the *Ḥaṣṣa* and designate Dāwūd as his successor (527 = 1132). Tuġhrīl was not a snatch for his brother and, after wandering about a great deal, sought refuge with the isphahād of Tabaristān where he spent the whole of the winter of 1132—1133. In the

following year fortune was rather more favourable to him and he succeeded in again taking the capital Hamadhān but, on arriving there, he fell ill of a cholera and died early in 529 (Oct.-Nov. 1134). *Recueil*, ii. 174, wrongly gives 528. His widow later married Ildēgiz [q. v.] who raised Tughril's son Arslān to the Seldjūq throne (555 = 1160).

Bibliography: Cf. the article *سُلجُوق* (M. TH. HOUTSMA).

TUGHRIL II R. ARSLĀN, the last Seldjūq Sultan in the 'Irāk 571—590 (1175—1194) was born in 564 (1168—1169) and when still a minor was raised to the throne by the Aīsbeg Pehlewān, after his father had been poisoned to thwart his endeavour to escape the burdensome tutelage of the aīsbeg (cf. Houtsma in *Acta Orientalia*, iii. 140 sq.). It was only on the death of Pehlewān in 581 or 582 (1186) that Tughril, now grown up, who had enjoyed a careful education and was distinguished by physical and intellectual gifts—he composed a number of short Persian poems—showed that he was not at all inclined to do as his father had done, and be content with the mere name of sultan. He was assisted by the fact that Pehlewān's successor, Kīzī Arslān, had quarrelled with the widow of his deceased brother and their two sons, so that he was able to make arrangements with a number of Turkish amirs and seize the Seldjūq capital Hamadhān. In order to be more sure of completely disposing of his dangerous opponent, Kīzī Arslān asked the caliph to send him troops from Baghdad while he himself advanced from Ādharbāidjān but the incapable leader of the Baghdad army, the vizier Ibn Yūnus, attacked Tughril at Dāymarg (584 = 1188) and suffered a terrible defeat from the impetuous bravery of his opponent. Little however was won thereby for Tughril's cause, for Kīzī Arslān was coming nearer and the caliph was equipping a new army. To add to his troubles, the young Sultan quarrelled with his own people and on his return to Hamadhān hanged several of his most prominent supporters. The result was that he could not hold out in his capital, which was very soon taken by Kīzī Arslān, spent some time ravaging the region of Ūrmiya, Khōi and Salmā, endeavoured in vain to win the caliph to his side, applied without success to several Muslim princes, including Salḡ al-Dīn, for help and had finally to surrender to Kīzī Arslān, who imprisoned him in the castle of Kahrū near Tabriz in 586 (1190). Kīzī Arslān then himself occupied the throne of the Seldjūqs but, when he was murdered next year at the instigation of the widow of his brother, Tughril succeeded in escaping and found an asylum with the Banū Kafāhū in Zandjān. The lack of unity among the sons of Pehlewān, now the rulers of Ādharbāidjān, gave him the opportunity of coming again to Hamadhān and marrying Pehlewān's widow, only however to put her to death. He also took Isfahān and al-Rāy and sacked the stronghold of Tāharāq near the latter town (*Yāqūt, Mu'jam*, iii. 307 sq.) but this brought upon him the enmity of the powerful Khwārizmshāh who only a short time before had taken al-Rāy. He was not inclined to lose this city and sent troops there to take it from the Seldjūq Sultan. The wise course would have been to avoid their superior numbers but Tughril felt it a point of honour to defend the Seldjūq claims on the 'Irāk even at the cost of his life,

calmly awaited the approach of the enemy in spite of the advice of his friends, then threw himself with a few faithful followers on the foe and was immediately slain (29th Rabi' I 590 = March 25, 1194).

Bibliography: Cf. the article *سُلجُوق* (M. TH. HOUTSMA).

TUGHRILBEG, RUKN AL-DIN ABŪ TALIB MUHAMMAD R. MIKĀ'IL, the first Seldjūq Sultan, 429—455 (1038—1063). For the beginnings of Seldjūq power, the rise of Tughrilbeg and of his brother Čaghribeg, the reader may be referred to the article on the latter. Here we begin with the year 429 (1038) when Tughrilbeg entered Naisābūr and his name was mentioned in the *Ḥuṣṣa* there. Al-Baihaqi, p. 691, gives interesting details of this. Ibn al-Athir and others say that as early as this he received an envoy from the Caliph, who complained of the robberies of the rude Ghuz which is very probably correct, for we know that the Seldjūqs in their earliest document (Baihaqi, p. 583) call themselves *manāfi* (clients) of the Commander of the Faithful and that there were from the first certain relations between the Seldjūqs and the Caliph. Tughrilbeg had however very soon to abandon the town again on account of the Ghaznawids, and only after the defeat of Mas'ūd at Dandīnāqān on 7th Ramaḍān 431 (May 22, 1040), were the latter forced to withdraw from Khōrāsān and leave this province to the Seldjūqs. The leaders of the latter, among whom may be mentioned Tughrilbeg, Čaghribeg, Ibrāhīm Ināl and Kutalmish, had begun to extend their rule over the adjoining lands also, each for himself, although Tughrilbeg was conceded a certain pre-eminence. The first to submit to him were the Ziyarids of Djurdjān and Tabaristān on payment of an annual tribute in 433 (1041—1042). In the following year he assisted his brother Čaghribeg in the conquest of Khwārizm; he then restored order in al-Rāy, where the unruly Ghuz were laying waste the country under Ibrāhīm Ināl, and conquered the Būyid Maḍjīd al-Dawla, who had still been holding out in the stronghold of Tāharāq. The rule of the Seldjūqs was recognised in Kārm and Hamadhān also; Farīmāz, the lord of Isfahān, agreed to pay a sum of money. Through the intervention of the Caliph, who sent the celebrated jurist al-Māwardī to Tughrilbeg for this purpose (435), the Būyid Djalāl al-Dawla sought to make peace with the Seldjūqs but, as he died in the same year, the result desired was only attained under his successor Abū Kalīdār in 439 (1047). Ibrāhīm Ināl, who had ravaged Kurdistan with his Ghuz and was now on his way to Baghdad and had reached Huiwān and Khānīkīn, was therefore instructed to retire and seek another field for his activities. He thereupon turned against the Abkhaz and Byzantines, took the prince of the Abkhaz, Liparites, prisoner and carried off such vast booty that 10,000 waggons were not sufficient to transport it (440 = 1048). A quarrel resulted between him and Tughrilbeg which ended in his being taken prisoner, but he was pardoned and even later installed in al-Mawāsil as commander. Tughrilbeg released the captured Liparites without a ransom and sent an embassy to Byzantium to negotiate peace but, owing to the raids of the Ghuz, this could not be of long duration. In the meanwhile he was continually extending his power, received the homage of the Marwānids of Diyār-

hair and in 492 (1050) besieged Isfahān whose ruler Farāmāz, according to circumstances, kept in the good graces of the Seldjūqs or of the Būyids in turn. The siege of a fortified town was not a task for his rude warriors, so that it dragged on and Farāmāz was only forced to surrender for want of supplies in the following year. The town pleased him so well, that he decided to make it his residence and to give Farāmāz-Yazd and Abarkūya in compensation. In 446 (1054) we find him, after a severe illness, in Adharbāydjān to receive the homage of the lords of Tabriz and Gandja. A raid into Byzantine territory had no particular results, the siege of Malāzgar had to be abandoned (cf. Matth. of Edessa, ch. 78; Cedrenus, ed. Bonn, ii. 590). It is true that he was then busy with other schemes; in the autumn he collected his troops and had large supplies of munitions accumulated in Hamadhān with the object of undertaking the great campaign against Baghdad. He was invited to do this by Ibn al-Muallim [q. v.], vizier of the caliph, who had been conducting a secret correspondence with him, because the Būyid rule of Malik al-Rahīm, successor of Abū Kalidjār since 440 (1048), which was exercised by their military commandant in Baghdad al-Basāsiri [q. v.] who had a secret arrangement with the Fātimids, was intolerable to him and the caliph. Tughrilbeg did not hesitate to accede to this appeal and in Ramaḍān 447 (1055) reached Hulwān on his way to Baghdad where his arrival caused great dismay. Al-Malik al-Rahīm, who was in Wāsiṭ, at once hastened to the capital but al-Basāsiri found it advisable to depart and seek refuge with the Maz-yādīd of al-Hilla, Dubais. There was now no obstacle to open negotiations with Tughrilbeg. By Ramaḍān 22, 447, the caliph had his name mentioned in the *ḥuṭba* and three days later the sultān entered Baghdad. The presence of the rough Ghur however soon led to plundering and murdering and threatened to end in a regular street war with the citizens, so that Tughrilbeg had at once to intervene to put an end to this state of affairs and, under the pretext that al-Malik al-Rahīm had brought it about, he had him arrested in spite of the Caliph's intercession and the rule of the Būyids was ended for ever. The alliance with the caliph was cemented by his marriage with a daughter of Čaghribeg, but the sultān and caliph only met after the former had brought Dubais and other rebellious Arabs to terms (end of 449 = beg. 1058). He was given the title of "King of the East and of the West". Soon afterwards however a change set in; al-Basāsiri had in the meanwhile been working actively for the Fātimids and even Ibrāhīm Ināl had been tempted to rebel against Tughrilbeg, handed over his post in al-Mawṣil to al-Basāsiri and himself went to Hamadhān where many of the Sultān's Ghur who were restive under the long period of inactivity in the 'Irāk, joined him. Tughrilbeg therefore set out from Baghdad with the troops that had remained faithful to him and when the sons of Čaghribeg came to his assistance with more troops, was able to take Ibrāhīm Ināl prisoner at al-Raiy and had him promptly executed. In the meanwhile al-Basāsiri entered Baghdad, which was now empty of troops, and had the name of the Fātimid caliph al-Mustanṣir inserted in the *ḥuṭba* (8th Dhu l-Ka'da 450 = Dec. 27, 1058), while the Caliph and his vizier Ibn al-Muallim appealed for the

to Kuraish b. Badrūn [q. v.] who was a friend of al-Basāsiri's. The latter succeeded in bringing the Caliph in safety to Haddithat 'Ana and handed over the vizier to the vengeance of al-Basāsiri who inflicted a cruel death upon him. Exactly a year later Tughrilbeg appeared on the scene, brought the caliph again into his capital and defeated the troops of al-Basāsiri, who was himself slain in the battle (end of 451 = beg. 1060). The memory of these events was still kept alive in Yāqūt's time in Baghdad by certain proverbial sayings (*Mu'jam*, iii. 595, 10 *et seq.*). Tughrilbeg then went to Wāsiṭ, made peace with Dubais and appointed farmers for the collection of tribute in Wāsiṭ and Bayra. In 452 (1060) he was again back in Baghdad attending to a business which he had very much at heart, namely, the seeking of a daughter of the caliph in marriage, against which the pride of the 'Abbasids revolted. It was only when Tughrilbeg's vizier, al-Kunduri, threatened to confiscate the revenues of the caliph, that the latter yielded and the wedding took place during an absence of the sultān in Armenia (454 = 1062). On his return to Baghdad, in the following year, however, he was only allowed to see his bride veiled, and he departed for al-Raiy without the consummation of the marriage being mentioned. Moreover he was now an old man of 70 and his end was near, for he died in al-Raiy on 8th Ramaḍān 455 (Sept. 4, 1063). On the death of his brother Čaghribeg, he had married one of his wives, as he was himself childless. He had designated her son Salaimān as his successor but the latter was at once compelled to leave the field for another son of Čaghribeg's, namely Alp Arslān [q. v.].

TUGHTEGIN s. 'ABD ALLĀH AMIN AL-DAWLĀ ZAHIR AL-DIN ASU MANSUR, founder of the dynasty of the Būrids. Tughtegin began his military career as a mamlūk in the service of the Seldjūk Sultān Tutush [q. v.] who afterwards manumitted him, entrusted him with the education of his son Duḡāk and even gave him the latter's mother Šafwat al-Mulk as a wife. After Tutush had fallen in battle with his nephew Barkiyārūk (488 = 1095) Duḡāk was recognised as lord of Damascus. He showed the greatest respect for his stepfather and, following the example of so many other Atābegs, Tughtegin soon thrust himself into the position of actual ruler. On the death of Duḡāk in Ramaḍān 497 (June 1104) he had homage paid first to a son of the deceased named Tutush, who was only a year old, and then to a brother of Duḡāk, the 12 year-old Artāsh (or Bekrāsh). Artāsh however was soon thrust aside and Tughtegin recognised as the ruler. The former thereupon entered into negotiations with king Baldwin I of Jerusalem. It was not long before Tughtegin came into conflict with the Franks. When the Fātimid vizier al-Malik al-Aḥḡal sent a large army to Palestine, Tughtegin was persuaded to send forces to support him. In Dhu l-Hiddja 498 (Aug. 1105) however Baldwin inflicted a severe defeat on the Muslims near al-Ramla. In Safar 499 (Oct. 1105) Tughtegin defeated a Frankish Count who had been harassing the district of Damascus by repeated raids and destroyed his fortress, only two days journey from the town. Soon afterwards — or according to another authority a little earlier —

he also took Rafaniya where a nephew of Count Raymond was in command. He was less successful when he tried to take the fortress of 'Irka N. E. of Tripolis, the commander of which had broken his allegiance to his lord, al-Kāḍi Ibn 'Ammār [q.v.] of Tripolis, and sought the help of Tughtegin. The latter succeeded in taking several strongholds but on hearing of his success, Count William of Tripolis took the field and defeated the Damascus troops so thoroughly that they fled in disorder to Hims whereupon he took 'Irka (Shāban 502 = March 1109). In 504 (1110/1111) the Salḡūq, Sulṭān Muḥammad [q.v.] at the request of the Syrian fugitives decided to intervene vigorously against the Crusaders, ordered the ruler of al-Mawṣil to collect an army and take the field against the Franks and issued orders to all the vassals of the Salḡūqs to join Mawḍūd's army. After a few successes, the Muslim leaders began to quarrel and on Rabi' I, 507 (Sept. 1113) Mawḍūd was murdered by an Assassin in Damascus. Several Muslim rulers including Tughtegin were suspected of complicity in this deed. But when Sulṭān Muḥammad appointed the police-prefect of Baghdad, Aḥ-Sonkor al-Barsukī [q.v.], as Mawḍūd's successor, the Ortokid Ighāzī I [q.v.] rebelled as he felt himself insulted by this appointment. Tughtegin joined him, as he was regarded in Baghdad as the instigator of Mawḍūd's assassination and therefore feared the vengeance of the Sulṭān. On the alliance of these two Muslim leaders with the Christians and the further course of the war, cf. the article *ḤIḤAZI*. In Dhu 'l-Kāda 509 (March-April 1116) Tughtegin went to Baghdad and submitted to the Sulṭān who gave him a friendly reception and even appointed him governor of Syria with the right to recruit levies and regulate taxation. Tughtegin after some time again joined Ighāzī and they continued their joint war on the Franks [cf. *ḤIḤAZI*]. In course of time however Tyre fell into the hands of the Christians. This important commercial town belonged politically to Egypt but in 506 (1112-1113) the citizens out of fear of the Franks had appealed for help to Tughtegin. The Atabeg sent them a governor named Ma'ūd who held his office for some years. The Tyrians then complained of his conduct to the Fātimid caliph who at once dismissed him and appointed another governor. When the Crusaders threatened to attack the town, the new governor appealed to Tughtegin. The latter could not force the besiegers to retreat and had to begin negotiations. The garrison and the inhabitants were given free passage with their portable possessions and in Djumādā I, 518 (July 1124) the Franks entered Tyre.

Tughtegin, "one of the most dreaded enemies of the Christians", died on the 8th Šafar 522 (Feb. 12, 1128). He is described by the Oriental historians as an able and just ruler. In accordance with his wish, his eldest son Tādī al-Mulūk Būrī succeeded him as lord of Damascus.

TULAIHA b. KHUWAILID b. NAWFAL AL-ASAHI AL-FAG'AD, one of the tribal leaders who headed the *ridda* as prophets.

In 4 A.H., being in command of the Banū Asad with his brother Salama, he suffered defeat from the Muslims in the expedition of Kaṭan. The following year he took part in the siege of Madīna. Early in 9 A.H. Tulaiha, as one of ten Asadis, probably representing only a section of the tribe, came to Madīna and submitted to Muḥammad; Sūra xlix. 14-17 is said to rebuke their arrogance, but a tradition that only Tulaiha embraced Islām, points to political submission rather than conversion, he alone being considered a convert only because the *ridda* was explained as religious apostasy. The whole story may have been invented as a parallel to Muslima's visit to Madīna.

Tulaiha rebelled in 10 A.H.; he concentrated his forces at Samirā, assumed the role of prophet, and is said to have offered terms to Muḥammad, who sent Dirār b. al-Azwar to keep him in check. No encounter of any consequence followed until after Muḥammad's death, when Tulaiha succeeded in gaining the support of the Banū Fazāra and an important portion of Tayi, and joined the revolt in central Arabia, sending troops to the battle of Dhu 'l-Kassa.

In Rajab 11 Khalid b. al-Walid marched against Tulaiha, and with threats persuaded most of the Banū Tayi to follow him. The battle took place at Buzāḡha; Tulaiha's defeat was due to the defection of 'Uyaina b. Ḥiṣā, chief of the Banū Fazāra, disappointed, it is said, by his failure to obtain an encouraging revelation. Tulaiha fled with his wife; many of his followers, refusing Islām, were burnt alive, and his mother sought death in the flames.

After Buzāḡha, Tulaiha lived for a time in obscurity, near Tā'if or in Syria. He was eventually converted after the Asad, Ghatafān and 'Amir's submission; passing through Madīna on the *ḥajra* some time later, his presence was denounced to Abū Bakr, who mercifully refused to molest the convert. On 'Umar's election, Tulaiha went to do homage to him; the Caliph reproached him for slaying 'Ukkāsha b. Miḥṣan and Thābit b. Aḡram at Buzāḡha, and asked him what was left of his divination. "One or two puffs of the bellows", Tulaiha modestly answered.

His subsequent military career was long and creditable: he performed acts of valour at Kādīstya, at the head of his tribesmen, led the Muslim infantry at Djalāla, and the victory of Nihāwand has been credited to his plan of attack. He is generally reported killed in this action (21 A.H.), but we find him mentioned in 24, one of 500 Muslims who garrisoned Kaṭwān, and the date of his decease remains uncertain; 21 was probably fixed upon because it was the year in which Khalid, Nu'mān b. al-Muḥarrir and 'Amr b. Ma'dikarib also died.

His real name was Talha; the diminutive is contemptuous (cf. Maslama—Musallima). Of his revelations, which he claimed to receive from an angel

(Gabriel or *Dhu 'l-Nūn*), very little is known; one is a prophecy of conquest in Syria and 'Iraq, another mentions the millstone, a common metaphor for victorious military action. He appears rather as a soothsayer than a prophet, for his few known utterances concern actual events, and no religious system is discernible.

Tulaiha was a gallant warrior, considered the equal of a thousand horsemen, but he lacked the qualities of a leader, to judge from his short career as a rebel. 'Umar wrote to al-Nu'mān b. al-Mukarrin concerning him: "use him in action and consult him on military matters, but do not entrust any command to him". Mention is also made of his outcry and poetical improvisations on the field; he appears to have been a perfect type of the pagan tribal leader, combining the offices of soothsayer, poet, orator and warrior.

AL-TULAITILI, an ethnic by which the learned Spaniard ABU 'L-KĀSIM SĀ'ID b. AHMAD AL-ANDALUSI, commonly called "the Kaḍi Sā'id", is sometimes known. Born at Almería in 420 (1029), Sā'id began his studies at Cordova and completed them at Toledo, then the capital of the dynasty of the *Dhu 'l-Nūnids* [see this article] and the centre of a very brilliant intellectual activity. He very soon made a name for himself by his knowledge of law, history, mathematics, astronomy. Appointed Kaḍi of Toledo by the *Dhu 'l-Nūnid* emir Yahyā al-Ma'mūn, he held this office till his death in Shawwāl 462 (July 1070).

Sā'id wrote a treatise on astronomy, a universal chronicle and a work in the style of the *Kitāb al-Niḥāl* of Ibn Ḥazm, which now appears to be lost. At the present day, we only possess by this author a history of the sciences, called *Kitāb Taḥqīq al-Umām* (ed. by Cheikh, Beirut 1912). This book is divided into two parts. In the first, the author treats of the peoples who do not cultivate the sciences, and confines himself to generalities. In the second, Sā'id studies the eight nations who have been interested in the sciences, namely the Hindus, the Persians, the Chaldeans, the Greeks, the Occidentals, the Egyptians, the Arabs and the Jews. At the present day only the chapters on the Greeks, Arabs and the Jews deserve our attention. The brevity and the anecdotal form of the notices, the absence of any technical development, moreover, show clearly that Sā'id had never intended to compose a profound treatise after the manner of the specialists but only a simple popular work. The *Kitāb Taḥqīq al-Umām* unfortunately soon lost in the eyes of the public the character, which its author had given to it. Very soon from being a summary of the history of the sciences, it came to be regarded as a leading work dealing thoroughly with all human knowledge. Soon, and this is more serious, the work of Sā'id was even regarded, no longer as a compilation but as a first hand source of information. In the 13th century

this error was definitely sanctioned by the Arab authors who wrote on the history of the sciences. Ibn al-Kifī borrowed largely from the *Kitāb Taḥqīq al-Umām* and it can be estimated that the parts taken from this work form a good quarter of his *Ta'rikh al-Hukamā'*. Even Ibn Abi Uayyib, in his great work called *Uyūn al-Anbā' fī Taḥqīq al-Afakā'*, has reproduced several biographies of physicians, the text of which has been taken from Sā'id's work. Finally the Christian Bar Hebraeus has taken from the same treatise the division of peoples into the friends and the enemies of science as well as the general sketch of each of the races studied in his Arabic chronicle, *Muḥtaṣar al-Duwal*.

(R. BLANCHÉ)

TULUMBADJI, a Turkish noun meaning: 1. (obsolete) regular fireman; 2. (modern usage) volunteer or irregular fireman; 3. (figuratively) a badly brought-up person (R. Yousouf); a street rowdy, a rough (Red-house), derived from *tulumba*, "pump, hydraulic machine" (Meninski, *Thesaurus*, 1680, p. 1375; cf. *Relation de l'Ambassade de Mohammed Effendi*, Paris 1841, p. 52).

The word *tulumba* is for the Italian *tromba* with the same meaning, with change of *r* into *l* and epenthesis of the disjunctive vowel *a* between the two initial consonants. One also says *yangin tulumbası* "fire-engine" to distinguish it from the other meanings of the word *tulumba* which are "sounder, pipette of the surgeon or douanier (*istimara tulumbası*: wine-pipette); waterspout in the sea". The word *tulumba* has become popularised in Turkey by its naval use, if one may judge from the common phrase *hargo tulumba etmek*, a transitive verb, which means "to work (cf. Venetian *cargo*) the pump, i.e. for two or more people to carry some one — especially ill, wounded or dead — by taking him by the head and feet" (Mehmed Djewdet, *Ahḥad ḥāṣir*, p. 156; Husnī Rahmī, *Djān gazari*, *İḥdüm* of the December 8, 1922). The Turkish *tulumba* (and the Italian *tromba*) may be compared with their synonyms, the old French *trompe* (Jal, *Gloss. Nautique*), the Basque *tromba* (*ibid.*), the modern Greek *trōmra* or *trōmra* (Hesse-ling, *Les mots maritimes*). The word *tulumba* has passed into most of the Balkan languages: Roumanian (*périnē*, *Damē*), Bulgarian, Greek of Rumelia (P. Louis Ronzevalle). The Persian *tulumb* (Nicolas) and, in part at least, the Arabic of Syria and Egypt and the north coast of Africa (*turumba* or *tulumba* must be borrowed from the Turkish).

One knows how frequent and violent are the Constantinople fires, especially in the past. A Turkish proverb says "if it were not for the fires in Constantinople, the thresholds of the houses would be of gold" (*İstambulun yangın olmasa, emlerin ehiyi altundan olurdu*).

Many things combined to make the old capital of Turkey perpetually threatened by fire and to keep away from it until quite recently even the most enterprising insurance companies.

1. The houses were almost all of wood (*ahhahab*) and painted with oil (aspic oil, in the time of Baron de Tott). Through laziness, as well as from fatalism and fear of earthquakes, of relatively rare occurrence, however, the Turks did not build of stone. The government, which, it was said, was afraid to allow any places of any strength in which rioters might hold out, was very reluctant to grant permission to build houses of stone (*hâşır*, popularly *hâşır*, *hâşır*, *hâşır*, *hâşır*). Apart from Pera, where hewn stone appears relatively early, there were only the mosques, fountains, *khâns*, public baths, *basen* (markets, covered in and closed at night, for valuable merchandise) and a few houses of the Fanariots, some ancient monuments, like the aqueduct of Valens, which might escape the action of the fire and sometimes even served to bar the advance of the flames.

It should also be noted that the lead melted from the domes of some of these buildings during a fire ran into the street and made approach to them dangerous. There were also places for shelter built of masonry in the better class houses. Called *gâşır* par excellence, and strengthened by iron doors, they were regular strong-boxes for articles of value. They were fire-proof, but one had to wait some weeks to open them after a fire, for fear that a premature draught might carry the flames inside. As, in the case of a fire, nothing was left but these cellars, the chimneys and the foundations of stone, the debris was easily cleared away and the town was rapidly rebuilt, but this was only an illusory advantage for it sometimes happened that an afflicted quarter was burned down again, even before it had been completely rebuilt.

2. The streets were narrow and the landlords were able to prevent the government from widening them (as was the case, for example in the reign of 'Othmân III).

3. Rises in the wind are frequent on the shores of the Bosphorus, where the breeze from the sea frequently changes its direction. It is said that there is a recrudescence of fires, when aubergines (*patlıcan*) are in season, when the breeze which bears the same name (*patlıcan meltemi*) blows on the kitchens.

4. The older Turks used to be exceedingly careless in the use of tobacco-pipes (*tubuk*) and *tandır* (or *tandır* for *tannür*), a kind of heating box for the winter.

5. Attempts by incendiaries (*kondakçı*) were not rare. They used to throw into the houses dolls made of inflammable material (*kondak*, a word of Greek origin) either for political reasons, or simply out of vengeance. It may be said that every crisis in domestic politics was accompanied by violent fires, the people adopting this simple method of manifesting their discontent. The firemen were sometimes their accomplices and fed the fire instead of extinguishing it. Among the best known cases of incendiarism are those which occurred during the rule of the unpopular chief eunuch, Beshir Agha under Mahmûd I (according to Jovanin, *Turquie*, p. 343, this was the first occasion on which the *kondak* was used), during the occupation of Egypt by the French and on the accession of Mahmûd II. As to fires started out of personal vengeance, they were very frequently the work of negro slaves dissatisfied with their masters (according to Bailli).

It would take too long to enumerate the fires recorded in Turkish annals. We shall mention only those which were of particular violence of the period from 1750 to 1756 (principally from v. Hammer, *Histoire*, xv., p. 200 sq.). In 1750: on February 31st, a fire which lasted 30 hours and burned up 6,667 houses and the "Porte" of the Agha of the Janissaries; 18 days later: a fire which destroyed the house of the mufti among others (started out of malevolence), two months later the market for arms. In 1751: 2,000 houses destroyed at the same time as the *aski odalar* or "old barracks" of the Janissaries. In 1752: several fires directed against Beshir Agha (cf. above). In 1754: four great fires. In 1755, reign of 'Othmân III: on 12th July, 16 hours' duration, 2,000 houses; 3 months later, a fire of 36 hours which consumed a large number of houses, notably the Sublime Porte or Porte of the grand vizier and that of the *İstifdar*. Finally in 1756 on July 6th, there broke out the greatest fire recorded since the conquest of Constantinople: 8,000 houses were destroyed (Théophile Gautier writes 80,000). Fanned by the wind, after being temporarily checked by Saint Sophia, the flames went in 13 directions and ultimately combined to form one vast conflagration. This catastrophe has been described by de Tott.

Théophile Gautier noted 14 fires, most of them considerable, in one week during his sojourn in Constantinople. In his time, there were very few houses over 60 years old. In our own day the Fâtih quarter has been completely destroyed. Thus in spite of Muslim fatalism, the outbreak of fire was no trifle. Watchmen, usually musicians (*mehter*), were stationed in the tops of the towers of Galata, and later on those of the Serâskerat, and announced outbreaks by beating drums and by hanging from the towers baskets during the day and lanterns during the night, varying in number according to the quarter to be indicated: Stambul, Galata, Scutari.

The night watchmen (*behi* or *patward* for *patlân*) used to utter their cry of *İstambûlida* (or *Galatada*) *yangın var!* which travellers have made well-known (de Amicis used it as the title of a chapter of his *Constantinople*). As soon as the alarm was given, the grand vizier, the *kapudan paşa* and the Agha of the Janissaries, sometimes the sultan himself, went to the spot and each official had to pay a kind of fine to his superior, if he allowed the latter to reach it before him. Th. Gautier particularly noticed the local colour provided by the odalisques dressed in red, whose duty it was to warn by his mere appearance the sultan who was in his harem (cf. Robert de Flers, *Vers l'Orient*, p. 302).

The institution of firemen in Turkey is however of relatively recent date. Ewliyâ Celebi (xviii century), who gives a long and varied list of trades including the very humblest, does not mention any particular organisation for fighting fires. They were content to limit the area affected by demolishing houses with the help of long poles with hooks on the end (*kanğa*) and the destruction was completed with axes. Castellani also mentions the chains which were tied round walls in order to pull them down, and Basili talks of sheets sewn together and soaked with water, to protect the houses adjoining the centre of the conflagration.

According to the historian Râşidî (1st ed., vol. III, fol. 111^b—112), it was in Ramañan 1134 (June–July 1722) in the reign of Ahmad III and in the viceroyship of Dâmad İbrahim Paşa, who was fond of innovations, that pumps were used for the first time, made and directed by the renegade Gerçek Dâvud (of French origin, according to Mouradja d'Osson). The results were so encouraging that a body of firemen was established with Dâvud as commandant (*tulumbađı başı*). He was given quarters in the recruits' barracks (*adîmi adaları*) situated near the new barracks or *yeni adalar* in the Şahzâde-başı quarter. This body of picked men was recruited at first from the Janissaries and the other regiments (*ođak*). It enjoyed special pay and various privileges. The office was hereditary, according to Thalasso. As in precedence, they ranked next to the Janissaries and before the *çibekçi* or army service corps. Gradually however, they lost their military character, just as the *çibekçi* did. A connection with the different *ođak*s survived, however, in this way that each corps of soldiers had its own firemen but, except for those of the *ođak* of the *kutancı* who were regarded as regular Janissaries, the others were young artisans (*esnaf delikanlıları*), who only remotely resembled soldiers. The corps of Turkish firemen seems however to have very soon degenerated. Less than thirty years after their creation, they were holding to ransom and extorting money from people whose houses had been burned, or who had asked them to protect threatened houses, and sometimes, de Tott says, gave themselves up to such pleasantries as turning the hose on the spectators.

They wore a plated (*kalaylı*) helmet (*tar*) without a visor, held in horror in Muslim lands, a head-dress which, according to Castellani, was surmounted by a spike and resembled, according to him, the *galerus* of the Salian priests, while Luđi Efendi, more prosaically, compares it to a soap-tureen (*lorba tarı*). On it was the badge (*nışan*) of the *orta* to which the fireman belonged. The helmet of the *tulumbađı başı* was of solid silver. The firemen turned out to fires with arms, legs and chests bare. At other times they wore huge turbans (*tarlı*) and red cloaks (*kapak*) called *karat kanat* (for *kanat*) i.e. eagle's wing. On their bare feet they wore *yemeni*, also red.

The pumps were quite small and two men were able to carry them. They were a little improved in 1754 by the adoption of hose of more pliable leather. The number of pumps was increased shortly afterwards, in the reign of 'Othmân III, and they were distributed among the watchmen, instead of, as previously, storing them with the chiefs of the different quarters (v. Hammer, *Histoire*, p. 263).

The destruction of the Janissaries in 1826 precipitated the break-up of the corps of firemen. There only remained the pumps of the War Ministry (*sâb-ı serâskerî*), served by a collection of vagabonds (*derme latma*). A little later in 1243 (1827–1828), *müdür* or 'directors' were appointed to each engine and new firemen were enrolled (*kâriđden nuref atâriđ*), especially among the Armenians, a nation considered, however, according to Baill, as not of very active physique. There was nevertheless a certain improvement in the service, according to the same Baill. This improvement does not seem to have been maintained

if we may judge by the depths to which the institution soon sank. The *tulumbađı* became regular brigands, who took advantage of the fires to plunder as they pleased: as to their habit of blackmail, we have seen above that they were only keeping up an older tradition. Recruited from among the porters (*kammal*) and the boatmen (*bayrakçı*), the most turbulent corporations in Turkey, they formed a body of 20,000 men ready for anything. From the fear which they inspired in a feeble government they succeeded in maintaining their positions, even after the institution of a regular fire brigade, to be discussed below, and according to Thalasso, they continued to draw rations of bread. Their jailbird figures were to be seen running through the streets preceded by a grotesque courier or herald. He alone seems to have retained the helmet; he was clothed in fiery red, had a hatchet at his side and in the right hand a pike with which he beat dogs and people not prompt enough at getting out of the way. This courier was called *bara fulak* (black ear) i.e. "lynx", because according to legend, this animal performs a similar duty for the lion, whom he precedes on his hunts. Sometimes they had violent fights with the regular firemen. These latter were never at peace among themselves, and the Muslim companies fought with those consisting of Armenian or Greek Christians.

The tiny pumps, holding only three or four gallons, were painted in bright colours, surmounted, as the case might be, with the crescent or the cross and bearing the names of the different quarters or, what comes to the same thing, of the different mosques or churches. The firemen, who lived by preference beside the fountains (*çeşme*) to be able to fill their pumps more quickly, had the latter opened to them during the night by the *saka* (*sakâ*), the latter also having to assist at putting out fires. Some writers (e.g. Duckett) have paid a tribute to the skill and courage of the *tulumbađı* but criticisms like those of von Hammer are more frequent. The least one can say is that the corps lacked discipline.

The modern regular firemen (*ıfâ'ıye*). The modern fire-brigade was created after the conflagration of June 5, 1870 (the greatest since that of 1831 in the same quarter; it was described by de Amicis from oral information). Its organisation was entrusted to the Hungarian Count Edmund Széchenyi (*Seleni Paşa*), who had previously been in command of the Budapest Fire Brigade. The first battalion began its duties on January 3, 1876 and in the course of its first year extinguished 77 fires, some very serious. It had a staff of 580 men, 2 large horse-drawn pumps, 8 small pumps, a first aid waggon, a water-waggon (with 16 buckets) and a waggon for the engines. This equipment was later improved. Three other units were added later: there was one of two battalions in Pera (*Tağîmi*: the headquarters of the corps was also at Pera), Stambul (Seraskierat), Scutari in Asia and at the Admiralty. There were also naval firemen and a battalion of sappers. All these units together formed the regiment of firemen (*ıfâ'ıye alayı*) which formed part of the first army corps or of the Imperial Guard (*kâhıfı ordu-i Hümayun*). Each of the battalions was commanded by a *binbaşı* and Count Széchenyi ranked as a general of division (*ferik*). Details of the cadres of this regiment are given in the Turkish military yearbooks (*sânâme-i 'askeri*).

(J. DENY)

TULUNIDS, the name given to the first Muslim dynasty of independent governors and rulers of Egypt. The founder of the dynasty, Ahmad b. Tulūn [q. v.], entered Fustāt as the deputy of the siflee of Egypt, the Turkish general Bayakbāk, on 23rd Rammān 254 (15th September 868), and in the course of the next ten years succeeded in uniting Egypt and Syria under his rule, in virtual independence of the Caliphate. He died on 10th Dhū 'l-Kā'da 270 (10th May 884), having nominated as his successor his son Khumārāwāh [q. v.], who, after a brilliant reign of twelve years, was murdered at Damascus on 17th Dhū 'l-Hiddja 282 (7th February 896). The army commanders subsequently raised to the throne two young sons of Khumārāwāh, the elder, Djaish, being deposed on 10th Dhu-māda II 283 (26th July 896) in favour of his brother Hārūn. With the assassination of Hārūn on 19th Šafar 292 (1st January 905), the rule of the dynasty virtually came to an end, though his uncle Šaibān b. Ahmad held local authority as amir of Egypt for twelve days longer.

The stages in the establishment of the empire of the Tulunids, and their relations with the Abbasid Caliphs, are fully related in the articles AHMAD b. TULUN and KHUMARAWAH. By the terms of the treaty negotiated on the accession of the

Caliph Mu'tadid (279 = 892), the possession of Egypt, Syria, Cilicia, and Mesopotamia (excluding Mosul) was made over to Khumārāwāh and his heirs for a period of thirty years, in return for an annual tribute of 300,000 dinārs (which was the sum formerly remitted by Ahmad b. Tulūn to the Caliph Mu'amid in respect of Egypt alone). This treaty marks the apogee of the power of the dynasty; the subsequent weakening of their position led to the revision of its terms in 286 (899), by which their dominions were restricted to Egypt and Syria, and the annual tribute raised to 450,000 dinārs. The breakdown of their administration in Syria in face of the Karmatians supplied a pretext for the sending of imperial troops to Damascus in 289, at the instigation (according to Tāharī, iii. 2222, 2299) of the Syrians themselves. Thence the victorious general Muhammad b. Sulaimān organised, with the aid of the fleet of Tanūs, a combined military and naval expedition into Egypt, and meeting with comparatively little opposition, captured Fustāt on 2nd Rabi' I 292 (12th January 905). The city was plundered and the inhabitants subjected to barbarous ill-usage, the military suburb of al-Kaṭā'i, founded by Ahmad, was razed to the ground, and the surviving males of the house of Tulūn were carried in chains to Baghdād and there kept in confinement.

The power of the Tulunids was based entirely on the army created by Ahmad, the core of which consisted of Turkish, Greek, and Sudan slaves, and probably also Greek mercenaries. With the local levies the army numbered more than 100,000 men. The most severe discipline was imposed upon the regular troops, and enforced by provost-marshal, probably one for each corps. In 258, according to Ya'kūbī (ii. 624), an oath of personal allegiance to Ahmad was administered to all the troops; from this time also begins the building of al-Kaṭā'i and the other military works in Egypt. Though the conquest of Syria in 264 added to his army not only new militia forces but also the private troops of the former Turkish governors, it imposed on him a greater strain in maintaining his authority intact over such heterogeneous forces, bound to him by only the weakest of ties. The revolt of his son al-'Abbās (265—268) — in reality a rebellion of a number of his own officers — followed by the defection of Lu'lu', constituted a serious menace to the stability of his position, from which he had hardly recovered at the time of his death. By the personal courage of Khumārāwāh, after an inauspicious beginning, the danger of disruption was averted for the time being, and the numbers of the standing army even increased by fresh purchases in Central Asia. Nevertheless, it was mainly by lavish expenditure, and some relaxation of Ahmad's iron rule, that Khumārāwāh succeeded in holding the army together; the annual cost of its upkeep in his reign amounted to 900,000 dinārs. Owing to his extravagance, moreover, the treasury was exhausted, and already on the accession of Djaish a section of the army refused to acknowledge him owing to his lack of funds. The gross incapacity of Djaish further alienated the principal Turkish generals, who escaped to Baghdād, and were received with princely honours by the Caliph Mu'tadid. During the reign of Hārūn the central government lost almost all direct control of the army, in which the Greek element now predominated. The principal commanders in Egypt, Badr, Šaṭṭ, and Faṭṭ,

each obtained control of a portion of the troops, and drew on the revenues of the State for their upkeep; in Syria, the general Taghālī b. Dja'f (the father of the future Ikhshīd) was practically independent at Damascus. The mutual rivalries of the generals go far to explain the disasters suffered by the Egyptian armies in Syria during the Karmatian outbreak, which in turn further weakened the resources of the Tulunids. The disintegration was accentuated by rivalries among the members of the dynasty and by the growing estrangement between Hārūn and his amirs. On the appearance of Muhammad b. Sulaimān at Damascus, he was joined not only by Taghālī, but also by Badr and Fāṭṭ with all their troops. Of the remainder of the army, the greater part deserted during the operations which led up to the capture of Fustāt, largely owing to Hārūn's inability to pay them.

In addition to creating an army, Ahmad b. Tulūn also gave his attention to the strengthening of the fleet, and to the provision of naval defences and stations, partly in order to maintain his hold on Syria, where he created a naval base at 'Akka (see also Yāqūt, *Mu'jam*, iii, 707-708). The fleet was kept up by his successors, but was destroyed at Tinnis by naval forces from Tarāṣ, commanded by Damiyān, which accompanied the expedition of Muhammad b. Sulaimān.

The details of the reforms which Ahmad b. Tulūn effected in the financial administration of Egypt are rather obscure. All the sources quote the statements that the revenue from *khāṣṣ*, which under his predecessors had yielded only 800,000 dinārs, rose at the end of his reign to 4,300,000 dinārs, and that he left accumulated savings which amounted to ten million dinārs. In addition to the income from *khāṣṣ* (which included the rent paid by the amirs for their estates), the treasury received an annual rent from the royal domains (*al-amlāk*), which were administered in the name of the *hakk* of Egypt, at this time Dja'far al-Mu'awwad, son and heir of the Caliph Mu'tamid (*P. E. R. F.*, No. 836); the supervision of these occupied a separate department of the administration (Ibn Sa'īd, p. 67). The transmission of detailed information by later writers was probably rendered impossible by the destruction of the *diwān* after Muhammad's reconquest (Maqrīzī, i, 315, 11). It is agreed, however, that, so far from laying additional burdens on the country, the increase of revenue was accompanied by the reform of abuses, the suppression of oppressive imposts, and the establishment of a strict supervision over the amirs and the finance officials. These measures, helped by a series of uniformly high floods, together with the fact that the sums which had hitherto been drained away to Baghdad were now spent within the country, resulted in an outburst of great prosperity. A somewhat obscure narrative (Ibn Sa'īd, p. 38) hints at an attempt to create a *tax* monopoly, which was afterwards given up, but it is indicated also by the same authority (p. 67) that in the last years of his reign Ahmad made other experiments of the same sort. It is certain that Egyptian commerce must have expanded greatly, but no data bearing on this appear to have been preserved. During the reign of Khumārawaih the financial administration probably began to deteriorate. Details are again lacking, but the fact of a decline may be inferred from the reckless expenditure characteristic of his reign

and his easygoing attitude to the amirs, which allowed them a free hand in the management of their estates. The loss of Ahmad b. Muhammad al-Walī, who had been Ahmad's right-hand man in financial matters, must also have affected the efficiency of the administration. At the death of Khumārawaih the treasury was completely empty, and the virtual abdication of the central government to the amirs undoubtedly resulted in the reintroduction of the familiar abuses into the financial system. The ruler Hārūn was a mere child (he was only twenty-two years old at his death) and the conduct of affairs was left in the hand of Abū Dja'far b. Abūllī, under whom things went from bad to worse, while the final disaster was aggravated by an exceptionally low Nile in the year 391.

In the general domain of administration Ahmad's reign also marks a considerable advance. The chancery (*diwān al-inshā'*) was organised on the model of the *diwān* at the court of the Caliphs, and the ruler held regular public sessions for the hearing of complaints (*maṣā'il*). A papyrus document (*P. E. R. F.*, No. 805) seems to indicate that a general survey of Egypt was made between 258 and 261. Jews and Christians suffered, on the whole, no molestation, and owing to Ahmad's predilection for native Egyptian officials were probably extensively employed in the administration. On the other hand, the country was frequently disturbed during Ahmad's reign by risings and private wars. The 'Alids in the Sa'īd gave constant trouble, which even Ahmad's wholesale deportations of them to al-Madīna could not stop; the Arabs in the Delta were so turbulent that in order to divert them from their customary brigandage and violence, Khumārawaih (following the example set by the former finance minister Ahmad b. Mudabbir) enrolled a picked body of their young men as his bodyguard, with the name of *al-Muḥabbira*. Arabs from Bulhaira formed, together with Berbers, the forces of Hārūn's rebel uncle Rab'ā. To meet these disorders Ahmad adopted severe measures: in addition to wholesale executions during his lifetime, he is said to have had 18,000 persons lying in his prisons at the time of his death. The difficulties of the Tulunids were increased by a certain tension with the theologian class, in spite of their efforts to conciliate the latter by lavish almsgiving and other marks of respect to religious feeling. During the breach between the Tulunids and the Caliphate, the theologians apparently sided with the latter, and regarded Ahmad and Khumārawaih as usurpers. Ahmad's chief *qādī*, Abū Bakr Bakr, is not above suspicion of having privily abetted his rebel son al-'Abbās, and was imprisoned for refusing to sign the *fatwā* against al-Mawwafq. Among other significant indications of this conflict is the fact that the list of *qādīs* of Egypt contains gaps between 270 and 277, and between 283 and 288.

The majority of the public works erected by the Tulunids were dictated by their military policy and the needs of the new city of al-Qāṭi'. Ibn Tulūn's new mosque was built because of the overcrowding of the mosque of 'Amr by the troops of the vast military camp. Such other works as the aqueduct and the hospital were scarcely less military in purpose. His restoration and endowment of the tomb of Mu'awiya in 270, however, has the obvious air of a political manoeuvre, to enlist the sympathy of the Egyptian anti-Shi'ites and the Syrians on his side against the Caliphate. On the other hand,

Ahmad, who had received an unusually liberal education, showed himself a keen patron of learning and the arts, and there is every reason to suppose that he encouraged the spread of education in Egypt. It is possible that a trace of his activities is preserved in a document relating to the endowments of a mosque school at Ushmūnain (*P.E.R.F.*, No. 773). Khumārāwāh's interest in music, painting, and even sculpture, together with the general luxury of the period, must have contributed to the development of local arts and crafts, to which also Maḥrīzī's account of the bazaars in al-Ḳaṣā' bears indirect witness. Like all enlightened despots, Ahmad and his son took care not only to humour the people by free distribution of food, magnificent spectacles, and lavish generosity, but also, by the alleviation of hardships and by practical measures for the improvement of their economic condition, to secure their interest on behalf of the dynasty and at the same time raise their capacity as revenue-producers. In spite of a foreign domination, therefore, and its militarist basis, the Tulunid period was one of marked material prosperity and progress for the mass of the Egyptian population, and was in afterdays recalled as a golden age: *kānat min ḡharar! 'l-duwall wa-ayūmuhum min maḥāsin! 'l-ayām*, "They were numbered among the most brilliant of dynasties, and their days among the most beneficent of days".

Björkman, *Beiträge zur Geschichte der Staatshandels im islamischen Ägypten* (Hamburg 1928), p. 18. — The relevant sections in the encyclopaedia of Nuwairī (*Nihāyat al-ʿArāb*) have not yet been published. For the mosque and other public works of the Tulunids see now K. A. C. Creswell, *Early Muslim Architecture*, volume I.

(H. A. R. GIBB)

TUMAN, original (Turkish) pronunciation *tūmen*, usually written *tūman*; at first used vaguely for "very many", later the numeral for "ten thousand". The Turkish numeral was first explained by G. Ramstedt (*J. S. F. O.*, xxiv, 22) from the Chinese, later by N. Mironov (*Zap.*, xix, p. xxiii) from the Tokharian (*tūmān* or *tūmān*, "ten thousand"). Mahmūd Kāshgharī (i. 337) still knows the Turkish word only in its indefinite meaning; according to him *tūmān tūrlük* means "very varied", *tūmān ming* not $10,000 \times 1,000 = 10$ millions, but $1,000 \times 1,000 = 1,000,000$. The word seems to be first found with the meaning "ten thousand" in the Mongol period. As an army division, the *tūmān* consisted of 10,000 soldiers (*N. E.*, xiv/l. 280); sometimes the word *tūmān* is also used with the meaning of *ll* (tribe); as a territorial unit, the *tūmān* was said to be the area that produced 10,000 fighting men (e.g. in Ibn ʿArabshāh, *ʿAḡāʾib al-Maʿādīr*, Cairo 1285, p. 17), which can hardly be right as the *tūmān* was the smallest administrative or taxation area. Every province (*wilāyat*) of any size was divided into a number of *tūmān*, e.g. that of Samarḳand into seven; it can hardly be supposed that this *wilāyat* alone could put 70,000 men into the field. With this meaning (the name of the smallest administrative unit) the word *tūmān* was used in the period of Mongol rule in Persia (the Persian *lūk*, for example, was divided into 9 *tūmān*; *G. M. S.*,

xxiii/l. 47) and also in what is now Russian Turkestan with the exception of Farghāna (q.v.). In Turkestan this usage (*tūmān* sometimes also stands for *wilāyat*) survived even in the first two decades of Russian rule, in the kingdom of the Khān of Bukhārā (q.v.), and later even after the revolution of 1920 in the Bukhārā republic. The whole village population liable to pay taxes is sometimes called *tūmān* (*Tārīkh-i Rāshidī*, transl. Ross, p. 301). The dwellers among the mountains, who live under different conditions, are sometimes distinguished from the villagers; for example the *Wāḡ-nāma* distinguishes between the students (*ṭullāb*) from the *tūmān* and the students from the mountains (*ḡhāzīn*) in the madrasah built in Samarḳand by Shāhibān Khān (q.v.).

As a money of account the *tūmān* or *tuman* in the period of Mongol dominion was 10,000 *dirhams*. In all three Muhammadan states that arose out of the Mongol empire — Persia, the Golden Horde and the line of Čaḡhātāi — small (*dirhem* in Persia under Ghāsān Khān (q.v.) 2.15 grammes = 33.1 grains, later smaller) and large silver (*ḡhāzī* = 6 *dirhams*) coins were struck; large sums were calculated in *tumans* of 10,000 *dirhams* or 60,000 *dirhams*; cf. the conversion given by Ḥamad Allāh Karwīnī (*G. M. S.*, xxii/l. p. 29): 128,000,000 *dirhams* = rather more than 2,333 *tumans* (fuller details in W. Barthold, *Persische Handschriften aus der Bibliothek der Kaiserlichen Akademie der Wissenschaften zu St. Petersburg* 1911, p. 15 sqq.). Calculations were also made in the time of Timur and the Timurids in *tumans* of 10,000 *dirhams*; in Turkestan these *dirhams* were called *ḡhāzī* after Kebek Khān (*N. E.*, xiv/l. 74; cf. also under ČAḠHĀTĀI KHĀN). At a later date, for a time, only copper coins were in use in Turkestan and these also were calculated in *dirhams* and *tumans*; for example according to Bābūr (fac. ed. Beveridge, p. 56^b), the cost of feeding the troops of the province of Hīnd was estimated at 1,000 *tumans* of copper coins (*ḡhāzī*). According to the *Wāḡ-nāma*, already quoted, 6 copper coins were equal to one *ḡhāzī*; 20 of the *ḡhāzī* were exchanged for one *miḥḡāl* (about 66.3 grains = 4.3 grammes) of silver.

In Persia the word *tuman* in the xviith century meant a much smaller sum than at an earlier date. About 1660 Raphaël du Mans gives the value of the *tuman* as 40 French francs (*P. E. L. O. P.*, ser. II, vol. xx., p. 183). Sir Thomas Herbert (1630) and Fryer (1677) give the value as £ 3.6.8 in English money. The *tuman* as a gold coin was first struck by Fath ʿAlī Shāh Ḳādjār (q.v.) in 1212 (1797), at first weighing 95 grains (6.16 grammes), later reduced to 70 (4.5) and again to 53 grains (3.4 grammes). Under Nāṣir al-Dīn, who struck a few large gold *tuman* pieces, the *tuman* was worth ten *krāns* or 10,000 *dirhams*, the *ḡhāzī*, now of course, being not a coin but a very small money of account. The *tuman* continued to be the standard gold coin down to the reign of Ahmad Shāh but was abolished by the new dynasty, its place being taken by a *ḡhāzī* of 29 grains (1.88 grammes).

Bibliography: In addition to the literature quoted in the article, cf. the dictionaries (Freytag, Vullers, Radloff) s.v., which are however very defective in this connection.

(W. BARTHOLD)

TUMANBAI II, AL-MALIK AL-AḤRAF (mīn Ḳaṣḡh al-Ḡhūr) was the last of the Mamlūk

Sultān. He reigned from 14th Ramadān 922 (15th October, 1516) to 21st Rabi' I 923 (15th September, 1517). He was bought as a slave by the emir Kānūh, afterwards the Sultān Kānūh al-Ghūrī [q.v.] to whom he was related, and given to Sultān Ka'itbey [q.v.]. The latter had him trained in the class of clerical Mamlūks (*al-ḥishāṭiyya*). He was manumitted by Sultān Muḥammad al-Nāṣir II probably in the beginning of the year 902 (1496) and promoted to be *ḥamadār* [q.v.]; a little later he entered the Sultān's bodyguard. There he remained till the accession of his relative, Sultān Kānūh al-Ghūrī, who made him an emir of 10; in 910 (1504) on the death of the heir to the throne, he became *emir jahāghān* and chief butler; in 913 he became *dawūdār khatir* [q.v.] and, as was usual in the last period of the Mamlūk dynasty, Major-domo (*ustādār*) and Superintendent of the domains (*kāshif al-kush-shuf*); he thus had attained the highest civilian post. He became deputy in the absence of the Sultān (*na'ib al-ghayb*) when the latter went to Syria against Sultān Selīm. On the defeat and death of Sultān Ghūrī he checked the rout among the retreating troops and emirs and restored order as far as possible so that the emirs and people had confidence in him. He was unanimously elected Sultān and with much reluctance finally accepted the choice although he well understood the difficulties of the position; the want of money in the first place was serious, for the Turks had captured several million dinārs from Sultān Ghūrī, some of which he had with him in camp and some in his fortresses. Besides this the army was exhausted and the great emirs could not be trusted. The question was decided for him by a learned *shaykh* Abū Sa'ūd al-Djirīḥī (a quarter near old Cairo still bears his name) who made the emirs swear fealty to him. The caliph was a prisoner with Sultān Selīm, but his father wrote the diploma of appointment and paid homage to the new Sultān. Tūmānbāi granted the highest offices to the emirs returning from Syria. An appeal for assistance came from Ghazza and troops were very soon sent thither. About this time Selīm sent an offer of peace. Tūmānbāi was to recognise him as sultan. The Sultān was ready to make peace but the emirs were disinclined to do so and managed to get the envoys put to death, which made the continuation of the war inevitable. The troops sent by the Sultān under the emir Djanberdi were defeated at Ghazza by Sinān Pāshā [q.v.] and returned to Cairo. Selīm thereupon crossed the desert and although harassed by the Beduins reached Egypt with his forces in good order. Tūmānbāi wished to attack him at Sāhiṭya immediately on his arrival there but the emirs decided to await him before Cairo between Matariya and Iḥṣāl Aḥmar at Raḍāntya. The guns were put in position in the sand to bar the Turkish advance. The plan was betrayed however to the Ottomans and a portion of the army went round the Egyptian position and attacked it on the flank. In an hour the mobile, cleverly placed artillery of the Turks mowed down the greater part of the Mamlūk army. The valiant Sultān Tūmānbāi at the head of a small body fought his way to Sultān Selīm's tent and cut down the emirs there in the belief that Selīm was among them. Returning safely he saw the flight of the Egyptians and followed them to the Nile where

he rallied the scanty remnants of his army. The Turks took and plundered Cairo and slew all the Mamlūks who fell into their hands. Tūmānbāi once more succeeded in taking the city and held out there for two days. He then had to take to flight across the Nile to Upper Egypt. From there he negotiated with Selīm, who promised to retire if his name was put on the coins and mentioned in the Friday service. Tūmānbāi was ready to accede but his emirs prevented him and slew the Sultān's envoys. Selīm therefore put to death the emirs and Mamlūks taken in Cairo and ordered troops to be sent across the Nile, but as they landed in small bodies they were cut down by Tūmānbāi's superior forces. Selīm therefore decided to bring his artillery into action. He placed guns on the bank of the Nile and bombarded the enemy who suffered terribly and took to flight. The Turkish forces could now cross undisturbed. Tūmānbāi again collected an army whereupon Selīm sent an envoy to negotiate with him. The latter, a former Mamlūk of Tūmānbāi's, however began to use insulting language and was wounded during the parley and sent back. In the night indecisive fighting took place. On the next day Tūmānbāi challenged his former follower Djanberdi to a single combat which ended in the Sultān's victory. But in spite of the bravery displayed by the Mamlūks, they were routed by the superior forces of the Turks and the Beduins who had joined them. Tūmānbāi fled to a Beduin chief, who was under a bond of gratitude to him, but he was compelled by his people to betray his hiding place. Selīm had him taken prisoner and brought to his camp where he overwhelmed him with reproaches for the murder of his ambassadors. Tūmānbāi's noble bearing made a good impression on the Sultān; he was inclined to give him his life but on the advice of the emirs, who had gone over to him, he had him hanged a week later at Bāb Zuwayla. Thus died the last Mamlūk Sultān. The causes of his defeat were the corrupt state of Egypt, the eternal feuds among the Mamlūks, the lack of funds, but the main reason, as must again be emphasised, was the superiority of the Turkish artillery. The brave Mamlūks did not care to use firearms and did not realise their full importance as they believed that the deciding factor should be personal valor.

TUNIS (in Arabic Tūnus or Tānis), in 36° 47' 39" North Lat. and 10° 10' East Long. (Greenw.), capital of the regency of the same name. Tunis at the present day consists of two adjoining, but very different cities, with two quite distinct forms of town life: a native but not exclusively Muslim town, an almost unchanged survival from past

centuries, and a European town of recent origin and completely modern appearance, still steadily and rapidly growing; the old town is about three quarters of a mile from the end of the lagoon called the Lake of Tunis or Bahira (*al-Bahira*); this town rises gradually from east to west till it overlooks the shallow, generally dry salt lagoon known as the *Sabkhat al-Sidjumi*; on this side however, the highest point of the Manubiya, which has extensive views, lies outside the ramparts. To the southeast and close at hand rise the heights of Sidi Belhassen and of the Djabal Ljallud, farther away the hills of Bir Kassa; to the north the heights of the Belvédère and of Ras-Tabia and beyond them the Djabal Ahmar and the Djabal Nabeli. These slight undulations do not prevent Tunis from communicating easily with the plain of Mornag and the valley of the *wād* Miliane on the one hand, and on the other with the plain of the Manūba and the valley of the Medjerda, also by the north bank of the lagoon with Goulette and Carthage. The natural defences are good without being excellent (Tunis has been taken frequently without much difficulty); except for cisterns, all drinking-water has to be led in from a distance. But from the economic point of view, the position is very advantageous, at the exits from Central Tunisia, in a fairly fertile region, and sufficiently near the sea to give rapid connection with the nearest European coasts.

We need not spend time over the attempts of Arab writers to explain the name Tunis from an Arabic root. They claim with equal fatuity, following one another, to identify the original town with the Biblical Tarshish. A plausible etymology has yet to be found; but the name is said, like the town itself, to go back to Punic times, if not beyond them. Tynes is mentioned by Diodorus and Polybius as a considerable town built behind fortifications, no doubt concentrated around the present Kasba at some distance from the lagoon, then perfectly navigable. It was besieged and taken successively by the Libyans, who rebelled at the beginning of the fourth century B.C., by Agathocles, and by Regulus. The headquarters of the notorious mercenaries, it later fell into the hands of Scipio Africanus. It was perhaps destroyed by Scipio Emilianus (cf. Gsell, *Hist. anc. de l'Afr. du Nord*, vol. I, ii, iii, passim).

Was Tynes — the future Tunis — which is not to be confounded with another Tynes (called the "White", on Cape Bon), as Tissot has said "one of the principal centres of the aboriginal race... the Libyan city par excellence, in contrast to the Phœnician colony" which was Carthage?

In any case it was for long eclipsed by its illustrious rival and was only much later that it became a city of the first rank. It was of no particular note in the Roman, Vandal and Byzantine periods. A Roman road connected it with Carthage; a few references in geographical or ecclesiastical works alone remind us from time to time of its existence. Are we to take as history or legend the life of St. Olive, of the Vandal period, who is said to have given her name to the great mosque (*Djami al-Zaitūna*), and whose remains were officially claimed in 1402 by King Martin of Aragon?

With the Muslim conquest, Tunis suddenly emerges from the shadow; and it comes into history as a Muslim city, the heir to some extent of Carthage and soon to rival Kairawan. When Hassan b. al-

Ne'mān in 698 had taken and destroyed Carthage, the old capital, his first care was to turn the little town at the end of the lagoon into a naval base, from which fleets could set out on more distant expeditions, but where on the other hand he was sheltered from the possibility of a sudden attack by the Byzantine navy. He gave Tunis an arsenal (*dār al-ḥirā'a*) and he probably brought from Egypt a thousand Copt families to supply this new naval dockyard with experienced workmen. Of the town itself we do not yet learn anything very definite; we can only venture a vague surmise as to the nature of various elements that migrated thither: at first undoubtedly, Christian merchants and officials, but very soon increasing numbers of native converts to Islam, with Arab soldiers, arrogant, greedy and turbulent. The first great truly Muslim foundation of a religious nature, the Great Mosque, for centuries the spiritual centre of the city, is attributed by tradition to the Umayyad governor Ibn al-Habbāb (built in 114 = 732) who also rebuilt the arsenal. But we do not know who built the ramparts, of which al-Ya'qūbi tells us they were of clay (*ṭin*) and unbaked brick (*ḥiṣ*), except in the part near the lake which was built of dressed stone (*ḥiṣār*). To sum up there was not in the case of Tunis, as at Kairawan, a regular creation but rather a sudden development, a political and religious transformation, of great importance, an adaptation, — perhaps more gradual than one thinks at first — to the new role assigned to it by circumstances and the far-seeing will of the conqueror.

During the eighth and ninth centuries, Tunis begins to develop its commercial possibilities, but it is still particularly renowned as a centre of legal and religious teaching. Before the fame of Kairawan was definitely established, Tunis already possessed celebrated teachers who by their teaching contributed to the Islamisation of the whole country: e.g. the traditionists 'Alī b. Ziyād and 'Abbās b. al-Walīd al-Fārisī. At the beginning of the Fatimid period, Abu 'l-'Arab al-Tamīmī compiled a useful account of these early generations of Tunisian savants (*Kirā'at Tabakāt 'Ulamā' Tunus*, ed. and transl. by Muḥ. Ben Cheneb with the "List of Savants of Ifrikiya"). The Great Mosque now had a number of necessary additions made to it and was embellished in various ways. Some important alterations were no doubt due to the Aghlabid Ahmad, the great builder; an inscription in the name of the 'Abbāsid caliph dates to 250 (864) the dome which is in front of the mihrāb. Stone and marble were in any case easy to procure here for all buildings, civil or religious. Carthage is near at hand and its ruins were ready to be plundered and to provide in abundance building material, columns and capitals.

In politics, Tunis seems to be the focus of opposition, the centre of resistance to the central authority exercised from Kairawan; the Tamīmī *ḡund* quartered within its walls was an element of disorder and a source of strife. The town took part in most of the risings, which were put down by the Umayyad, and 'Abbāsid governors and later by the Aghlabid emirs. It was implicated in the great rebellion of Ma'nūr al-Tunbūghī, and the troops of Ziyād al-Aḥḥād I took it by assault and destroyed its ramparts in 218 (833). After one of these risings, Ibrāhīm II punished it severely and thought to control it by transferring his court

and seat of government there in 281 (894); for these he had erected a number of buildings, including the Kasbah (*al-Qasaba*). But two years later, he went back to Rakkāda and when his son 'Abdallah II made a second attempt to settle in Tunis he was killed in 290 (903) in a palace which he had just built for himself. His two assassins were put to death, one at the al-Djazeera Gate (of the Peninsula, i.e. Cape Bon), the other at the Kairawan Gate. Tunis was not yet ready to become the capital of Ifrīkiya.

The Fātimids and their Sanhādja successors, whose capital was at Kairawān or Mahdiyya, founded by them, deliberately neglected Tunis which seems to have remained faithful to orthodoxy. It is a fact of no little significance that the greatest of its saints, its patron saint, still greatly venerated, lived in the first half of the tenth century, just in a period when official Shī'a and rebel Khirīdijism were fiercely contesting the domination of Ifrīkiya: Sidi Mahriz (Mahriz b. Khalaf) who was the inspirer and the recipient of the famous *Kisāla* of Ibn Abi Zaid (in 347 = 959), the classic précis of the Mālikīan of North Africa (cf. Ibn Nāḍī, *Ma'ālim al-Imān*, iii, 138). It was he who after the short but disastrous occupation of the town by Abū Yazid in 332 (944) restored the courage of the inhabitants, urged them to build a solid wall around the town and stimulated them to take up commerce on better organised lines. The old court of the silk-merchants (*Fundūḡ al-Horḡiriyā*) almost opposite his *ṣūṭiya*, a little beyond one of the main gates of the city, may go back to him and the same is probably true of the little market, which has given its name to this gate: Bāb Souika (*Bāb al-Sawīka*). Unanimous tradition further attributes to Sidi Mahriz the foundation of the Jewish quarter, the *Hārā*, at some distance from his *ṣūṭiya* in the direction of the Great Mosque; a measure evidently intended to retain there a people particularly skilled in commerce, which was a source of prosperity for the town.

The flourishing situation of Tunis is attested in the tenth century by Ibn Hawkal, who extols the abundance of its products, the pleasantness of its situation and the wealth of its citizens. He mentions especially the potteries, and the system of irrigating the gardens around the towns by water-wheels. Further details are given in the next century by al-Bakrī: the ramparts and ditch; the five gates namely: *Bāb al-Djazeera* in the south, the gate which opened on the harbour (*Bāb al-Bahr*) and *Bāb Karḡūdjannu* (of Carthage) on the east, *Bāb al-Saḡḡūn* (Gate of the water-carriers; evidently the same as Bāb Souika) in the north and *Bāb Arja* in the west. The harbour, the entrance to which could be closed by a chain, was defended on the north by a wall and in the south by a stone castle: the Castle of the Chain (*Qasr al-Silsila*). Al-Bakrī admires the Great Mosque, the entrance staircase of which (east side) had, as at the present day, twelve flights, the many and well filled *sūks*, the hammam of which there were fifteen, and the abundance of provisions (fruit and fish); he too mentions the potteries. Passing to another sphere he notes the success of the teaching of *fiqh* among the Tunisians.

Tunis therefore seems to have enjoyed peace and prosperity for about a hundred years, until the terrible event in the middle of the eleventh

century which upset completely the economic and political conditions of the whole country: the invasion by the Hilālī Arabs. While the helpless Zirids, overwhelmed by the new conquerors, shut themselves up in Mahdiyya, Tunis fell for a time into the hands of the Rīyāhid chief 'Abd b. Abi 'l-Ghaith in 446 (1054). But to secure protection, it placed itself a little later under al-Nāḡir, the Hammādid of al-Kāfā, who sent it a governor in 451 (1059), the Sanhādja 'Abd al-Hakk b. Khurāsān. The latter soon declared himself independent and in this way was founded the first dynasty of Tunis, which except for an interruption of 20 years (1128—1148) maintained itself till the Almohad conquest, exactly a century later.

At first oppressed by the Rīyāhid Banū 'Alī, who were established in Carthage in the *Ma'alaga* (La Malga), Tunis came to terms with them to secure herself from their raids; in return for an annual tribute, they promised to spare the district and its inhabitants; they even very soon began to attend the markets of Tunis, both as buyers and sellers. The town survived the attempts made on it by the Zirids of Mahdiyya, and by the Normans of Sicily; but it was disturbed by civil troubles, rival political parties, riots and fighting among the *sūfs*, rivalry between the different quarters. It was nevertheless in this most disturbed period that its sea-trade began to develop on a large scale; trade with Italy was organised and developed; the business relations which were increasingly entertained with the Christians offered unexpected prospects. The Banū Khurāsān themselves did a great deal to promote the prosperity of Tunis. The greatest of them, Ahmad, fortified it in the first half of the xth century; he built the earthworks mentioned by al-Idrīsī. It was he also who built the citadel (*al-Qasr*) to which the present mosque of El-Ksar may originally have been attached. It is in this quarter, near the street of Sidi Bou Krissan, which seems to preserve their name in a corrupt form, that there still exists the cemetery of the Banū Khurāsān, which was probably originally joined up with that of *al-Silsila* (on the site of the Sadiki Hospital). The principal door of the Great Mosque dates from the same dynasty. With the two great suburbs of Bāb Souika and Bāb al-Djazeera, which are already extending to the north and to the south of the city proper (*al-Madina*), Tunis has now a fairly definitive configuration. Its now considerably increased importance made it henceforth the capital of Ifrīkiya. It was to be so from the time of 'Abd al-Mu'min (554 = 1159) to the present day, and its political history is henceforth merged in that of Tunisia.

After the terrible alarms caused by the unsuccessful attacks of Ibn 'Abd al-Karīm al-Raghīrighī in 595 (1199), then by the ephemeral rule in 1203-1204 of the last Almoravid Yahyā b. Ghāniya, it was reserved for the Hafsids to restore to Tunis the feeling of security and to add to its monuments and make it a capital worthy of the name. Abū Muhammad b. Abi Hafs, who was still ruling in the name of the caliphs of Marrākeḡh, built in the Bāb Souika quarter (in the street El-Halfouine) a *Djāmi'*, which bears his name, corrupted, it is true, into *Ḥay-Muhammad*. But it was the first independent ruler of this dynasty, the devout Abū Zakariyā, whose buildings mark most clearly that a new era had begun in the town. In 1230 he built outside the town, towards the southwest, the

fortified *muṣallā* (*Djāmī al-Sultān*) which Ibn Baṭṭūṭa notes in the next century; he then proceeded to rebuild the Kaṣaba or Kasbah completely and flanked it by a mosque for his private use: the Mosque of the Almohads or of the Kaṣaba or Kasbah, the minaret of which, in pure Almohad style, is dated Ramaḍān 630 (March 1233) in a beautiful inscription outside it (cf. O. Houdas and R. Basset, *Mission scientifique en Tunisie*, Algiers 1882, p. 5-9). He formed a fine library, which was scattered by one of his successors, Ibn al-Lihyānī. He introduced to Tunis the *madrasa* of the east: the *Shammā'iyya*, near the old *Sūq al-Shammā'iyya* (now *Sūq El-Blaḡdīn*), later completely restored, was the first medersa in North Africa. It was he also who sheltered the three daughters of Yahyā b. Ghāniya in the palace thereafter known as *Kaṣr al-Banāt*. Lastly it was he who organised the quarter of the *sūks* immediately around the Great Mosque and built the *Sūq al-Aṭṭārīn* (of the merchants of oils and perfumes) and perhaps also the *Sūq al-Kumāsh* (*Sūq* for textiles).

In place of this interest in commercial and religious matters his son al-Mustansir bi'llāh, a caliph fond of display, had a taste for luxury and splendour. He built a hall of audience, *Ḥabla Aṭṭarā*, in 1253 in the court of the Kaṣaba or Kasbah, pleasure gardens in the adjoining suburb at *Ra's al-Ṭābiya* (Ras-Tabia) on the road to Bardo and at *Abū Fihir* (site uncertain in spite of the identification with al-Buṭṭūm proposed by Ibn Abī Dīnār; H. Abdulwahab places it in the *Djabal al-Aḥmar*, near al-Ariana, ed. of Ibn Faḍlallāh, p. 12, n. 1) of which Ibn Khaldūn gives a glowing account, both connected with the Kaṣaba or Kasbah by a private road to enable the ladies to go there without being seen. In 665 (1267) al-Mustansir completed the restoration, celebrated in verse by Ibn Ḥāzim, of the old aqueduct of Carthage (*al-Hanāyā*); he also brought water to the great pond of *Abū Fihir* and thence to the Great Mosque.

His mother 'Aṭf, the worthy widow of a pious ruler, built a second medersa, the *Tawfiṭiyya*, attached to the *Djāmī al-Tawfiṭ* or al-Hawā, which is of the same period. The first century of the Hafsid rule produced two other mosques: the *Djāmī al-Zaitūna al-Barānī* (in 1283) outside the *Bāb al-Bahr*, built by order of the false al-Faḍl to take the place of a funduq, where wine was sold, and the *Djāmī al-Hillak* (of the Kings) in the same quarter as the *Muṣallā*. A third medersa, *Madrasat al-Ma'rif* (of the Remembrance) built by *Abū Zakariyyā*, son of Sultān Abū Ishāq in the *Sūq al-Kutubīyyin* (of the booksellers) — it too was built as an expiatory work on the site of a funduq, frequented by wine-drinkers —, has disappeared without leaving a trace. Finally the ramparts were rebuilt, in parts at least, with the *Bāb Dīdīd* (New Gate), *Bāb al-Manāra* (Gate of the Beacon) and probably also the *Bāb al-Banāt* which no longer exists.

The Tunis of about 1300 is already very like the native town of to-day. The Medina, which stretches from north to south is shut in between the Kaṣaba or Kasbah on the west — the fortified dwelling of the ruler who commands both the town and the plain of La Manouba — and on the east, in the lowest lying part, the *Bāb al-Bahr* which gives access to the arsenal and thence to the lagoon. Halfway up and in the very centre the Great Mosque opens its doors directly on the

new *sūks* which surround it: the name *Bāb al-Bahr* is attested for the northern gate, but was the western one already called *Bāb al-Sūq*? Each *sūq*, by a custom still maintained, closes its doors at nightfall; the *Bāb al-Bāb* near the *sūq* of the same name is, as at the present day, the southern exit to this quarter. Around the Medina and outside the main gates are grouped certain manual trades. Inside the *Bāb al-Djāzira* we have the dyers, at the *Bāb Dīdīd*, the smiths, at the *Bāb al-Manāra*, the saddlers. Close to the *Bāb al-Bahr* there were no doubt several funduqs allotted to Christian merchants but the latter, requiring more space, soon began to build outside the gate a little quarter or suburb of their own, the first sketch of a European quarter. The houses of the city were closely built together; no open spaces were left, no room for markets or assemblies: the *Baḥḥa* of Ibn Mardūm cannot have been anything more than a cross-roads.

In the outer quarters however, more modern and less crowded, large open spaces serve as markets: for pottery and alfa grass (Place des Potiers and El-Halfanline) in the *Bāb Souika* quarter, those for animals (horses: *al-Murḥāq*; for sheep: *Raḥabat al-Qanām*) and perhaps also the corn-market (Place du Marché au Blé) in the *Bāb al-Djāzira* quarter. Each of these quarters is protected by an outer wall which ends at the Kaṣaba or Kasbah; the gates of this first line of fortifications are for the southern quarter (*Raḥat*): *Bāb Khalid* (originally no doubt *Bāb al-Manṣūr*) in the west, *Bāb al-Djurdjān* in the south, *Bāb al-Fallāk* (outside of which is a *Ḥaṣṣiyya*) and *Bāb 'Ilāwa* (*Bāb Alloua*) in the S.E.; for the northern quarter, in the N.E. *Bāb al-Khaḍra'*, in the N.W. *Bāb [Abī] Sa'dūn*, and in the west *Bāb al-Aḥwās* (of the Arcades) perhaps identical with *Bāb al-Uṭāq* (*Bāb El-Allouche*) the first mention of which is later. It is beside the last gate that we should like to locate the *raḥat* of the 'ulūdī called "rabatins", Christian mercenaries in the pay of the sovereigns of Tunis, if Leo Africanus did not expressly locate it outside the *Bāb al-Manāra*. As to the Kaṣaba or Kasbah itself, of its two gates one opened on to the country, *Bāb al-Ghāda* (of Disloyalty), the other into the city, *Bāb Intajīmī* (cf. the *Bāb Imastajīmī* of Tlemcen; cf. *Buḥārāt al-Kawwānīn*, ed. Bel, i. 34).

Between the *Bāb 'Ilāwa* and the *Bāb al-Khaḍra'*, a whole series of open drains (*ḥanāḍa*) into which the gutters ran, flowed eastwards into the lake. The cemeteries lay around the town; in time they were built up to and pushed farther out by the expansion of the suburbs; to the southwest the vast *Djellaz* (*al-Zallāq*), more isolated, preserves the memory of the mystic Abū 'I-Ḥasan al-Shādhilī (Sidi Belhasen), the founder of the *Shādhiliyya* brotherhood, who lived there in the first half of the sixteenth century. Close to the *Bāb al-Djurdjān*, beside a cemetery of the *Hintāta* (*al-Maḥbara al-Hintāṭiyya*), lie the tombs of many "saints" whose *manāḥib* (records of their miraculous powers) for the most part unpublished, contain useful information for Tunisian topography of the Hafsid period, supplementing that given by al-Zarkashī or Ibn al-Shammā. The famous Lalla Mannāḥiyya (cf. *J. A.*, 1899, p. 485-494; and *Kutub Manāḥib al-Sayyida 'Rīḍa al-Mannāḥiyya*, Tunis 1344), d. 1267, has given her name to a village overlooking the town in the S.W. (La

Apurcubia) and women still go there to invoke her to obtain a cure for barrenness.

An even greater source of pride to Tunis than these marabouts, whose political influence however is undeniable, as in the case of Abū Muḥammad al-Murjānī, the tutor of the future caliph Abū 'Aḍā, were its increasing numbers of lawyers, men of letters and students. Religious sciences flourished there, as al-Abdārī notes (in 1289). We may mention for the end of the thirteenth century the chief *ḳāḍī* Ibn Zaitūn. To this development in the study of belles-lettres and of Mālikī law, the Muslim refugees from Spain made valuable contributions: Ibn al-Abbār and the chief *ḳāḍī* Ibn al-Ḥammām came from Valencia; from Seville came the Banū 'Asfūr and also the Banū Khaldūn, ancestors of the most celebrated historian of North Africa (born in 1332).

The fourteenth century, to the great admiration of the traveller Khallid al-Balawī (in 1335-1340), is the golden age of legists and commentators; among these may be mentioned the chief *ḳāḍī* Ibn 'Abd al-Raḥīm, Ibn 'Abd al-Salām, 'Isā al-Ghubrīnī, the *ḳāḍī* Ibn Raḥīm al-Gaḥḥī, the mufti Ibn Ḥārūn and particularly the illustrious imām Ibn 'Arāfa. But in the field of politics we have nothing but weakness in the rulers, unrest and insecurity. The nomad Arabs threatened the capital without difficulty; the Marinids twice occupied Tunis. The development of the city to the west and south-west, so vigorous in the preceding century, was succeeded by a period of stagnation, not to say decline. We may however note the foundation of two madrasas, one in 1341-1342 by the sister of the caliph Abū Yahyā Abū Bakr, the 'Unḍiya (restored later; rue Onk el-Djemal), the other now in ruins, by the chamberlain Ibn Tafrāḡīn (rue Sidi Ibrāhīm). But it was a sign of the times that military demands had first claim on the architect: the Marinid Abū 'l-Ḥassān after his defeat at Kairawān in 1348, restored the ramparts of Tunis and dug a ditch around them; Ibn Tafrāḡīn considerably strengthened the outside walls and formed considerable *ḥabūs* for their future maintenance.

We have to come down to 1400 and the xvth century to find, with a more stable political situation, a marked revival in building activity; but nothing on a really grand scale. During their long reigns, Abū Fāris and his grandson Abū 'Amr 'Uḥmān only founded two libraries and a few madrasas; their interests lay more in charitable works; these are the earliest Muḥammadian hospital (*ṣaḥrīyān*) of Tunisia, finished in 823 (1420) and in the suburbs numerous *ṣāwīyas* offering shelter by day or night; or in water-works, inspired also by a sense of religious duty: a great cistern (*ma'ḍal*) in the Musallā, a hall for ablutions (*maḍā'a*) in the Suk al-'Aṭṭārīn in 854 (1450), drinking-troughs (*ṣifḥa*) and the kind of public fountain at which one drinks by sucking a narrow pipe called "sucker" (*maḥḥa*). The whole reflects a somewhat anaemic piety, incapable of great energy, a religion gradually passing more and more under the control of marabouts and brotherhoods. The families of *Ḳalḍjānī* and Banū al-Raṣṣā' are mentioned in this period as jurists of standing; in 1451 Tunis had an eighth al-*ḫayḍa* in the faubourg of Bab Souika; but the dominating figures of the period were Sidi b. 'Arūs (cf. his *Manāḥib*, Tunis 1303) who came from Morocco, and was buried in his *ṣāwīya* in 1463, the founder of the brotherhood of the 'Arūṣiyya;

Sidi Ḳāsim al-Djālī from Spain (d. in 1497) whose tomb-*ṣāwīya* near the Bab Khallid henceforth called Bab Sidi Ḳāsim has a tiled roof in the Spanish style; and Sidi Maḥmūd b. Djirdīn, who died in 1499.

Commerce seems to have been flourishing. Relations with Europe, in spite of many incidents, were maintained and even became closer; the importance of industry and internal trade under Abū Fāris even before he freed them from all taxes (*maḍḥaba*) is seen from the figures for 1420 given in the *Tuhfat al-Arīb* of the converted Catalan Fra Anselm Turmoda, also known as 'Abd Allāh al-Turḡmān, whose tomb still stands inside the Bab al-Manār. We note in the enumeration of the chief business centres, the existence of funduqs for oil, vegetables and charcoal, a *sūq* of the coppersmiths (*Sūq al-Saḡḡariya*), a *sūq* of the basketmakers (*Sūq al-'Aḥḍāḍ*); still exists the rue El-Azafine and the present *Sūq al-Ḳachchāshīn* (vendors of brick à la bric). The number of houses, officially estimated at 7,000 in 1361, according to Ibn al-Shammās, had risen to 10,000 in 1516 (Leo Africanus). The traveller van Ghistele gives for 1485 valuable information on the life led by Christians in Tunis. As to the rulers, emphasizing the tradition begun by their predecessors, they tended to live outside the town, very often on their estate of *Bardo*: This Tunisian "Prado", mentioned as early as 1410 and frequently altered, soon became a vast collection of buildings. The 'Abdallīya palace at the Marina, as well as the library of the same name attached to the Great Mosque, are attributed to the last independent Ḥafṣid Abū 'Abd Allāh (in 1500).

The troublous xvth century made the unfortunate town one of the principal objectives of the Spaniards and Turks in the course of their long wars. Sacked in 1534 by Khair al-Dīn's (q. v.) forces, it was plundered the next year by the victorious army of Charles V. The inhabitants had fled in a body before the Christians through the Bab al-Fallāk, the name of which was in consequence changed to *Bab al-Falla* (of the Rout). The conditions in which the Ḥafṣid restoration was brought about and maintained were evidently not very favourable for the development of the town. The attention of the rulers was wholly occupied with the fortifications, supplemented by those of la Goulette, and even they do not seem to have been finished till after the autumn of 1573 when Don John of Austria had driven out of Tunis the Ḳā'id Ramaḍān, who for four years had been governor there for Eulḡ 'Alī. The *Ḳaṣaba* or Kasbah was greatly strengthened; in particular on the site of the arsenal, which had been demolished, perhaps some time previously (cf. Grandchamp, *R. T.*, 1914, p. 9-10), there arose on the shore of the lagoon a fortress in the shape of a star joined to the ramparts of the city by two entrenchments. This was the *Bastion* of Ibn Abī Dīnār, the *Nova Arx* of a plan published in 1575 (cf. Monchicourt, *Essai hist. sur les plans imprimés de Tunis-Goulette au XVI^e siècle*, *R. Afr.*, 1925, p. 31). But the labour was in vain. The inhabitants abandoned the town to the ravages of the Spanish garrison (cf. *R. T.*, 1914, p. 12), and in September 1574 the Turks took the Bastion and razed it to the ground. Sīna Paṣha established a sufficiently stable rule in Tunis to allow an architectural revival to begin shortly after.

The influx from Spain, which had been going

on for several centuries, suddenly assumed vast proportions when in 1609 the dey Ōghuša welcomed the Moriscos expelled by Philip III. Those who had been used to a town life settled at Tunis in two localised groups: in the street of the Spaniards (S.W. of the Medina) and in the Quarters of the Spaniards (*Hammam al-Andalus*, near the Place Halfaouine). To these Muslims from Spain is due the industry of making red caps or *shashiyas*, which according to Peyssonnel in 1724 produced 40,000 dozen per annum and engaged over 15,000 people. These Spanish Muslims, with the Hanafi Turks from the east and the important part played by renegades of European origin and the corsairs, combined to give Tunis its peculiar character in the xviii century. The dey Yūsuf I was the first to make a name by public works, a list of which is given by Ibn Abi Dīnār: the creation of a commercial quarter around the Bāb al-Banāt and the restoration in the same neighbourhood of a *sūq* for woollen yarn (*al-ghut*); the building of a *sūq* for merchants from Djerba, and improvement of several other *sūqs*, and the continuation of the Hafsid *sūqs* to the north: *Sūq al-Bashmīkiya* (makers of Turkish trousers, street of Sidi B. Ziyād), *Sūq al-Birka* for the sale of black slaves and *Sūq al-Turk* (El-Trouk) for Turkish tailors; the installation of a café; water conduits to various points in the town, such as the Great Mosque and above the *Sūq al-Turk*. There his favourite 'Alī Thābit built the pretty *mīḥra* (in 1620) which at present adorns the Belvedere; the latter also restored the old mosque of the faubourg of Bāb al-Djazīra. Probably the rebuilding of the eastern door of the Great Mosque ought to be dated to the same time (*Bāb al-Djāzira*, Gate of the Interments). Yūsuf built in the street of Sidi B. Ziyād a Hanafi medersa (in 1622) and a mosque of the same rite with an octagonal minaret, beside which is his tomb. After his time the power of the deys began to weaken: they no longer undertook great works. Ahmad Khōdja (1640–1647) was content to rebuild the al-Shammāsīya and al-Ūnkiya medersas; Muhammad Iḥsān to build in 1649 the curious minaret of the mosque of al-Kaṣr or El-Kaṣr; at his death in 1653 a mausoleum (*turba*) for himself and his family was built in the square of the Kaṣaba or Kaṣbah.

The Murādīl deys built a great deal; in the same style as the mosque of Yūsuf Dey and in a street quite near it, Hammūda built the Hanafi mosque of Sidi b. 'Arūs (finished in 1654) with a family mausoleum beside it. He also rebuilt the minaret of the Great Mosque; he built a *māristān* in the street El-Azafine and began to rebuild the Aqueduct. His son Murād built the Medersa al-Murādīya (in 1673), in the *Sūq* for Textiles and while his second son Muḥammad al-Hafṣ founded the *Sūq* of the *Shashiyas*, his grandson Muḥammad gave the town the original mosque of Sidi Maḥris (after 1675). The French architect Daviler is said to have supplied the plan for the domes. About 1666 we have an excellent description of Tunis in the memoirs of the Chevalier d'Arvieux (Paris, vol. iv., 1735). The Kaṣaba or Kaṣbah, at first the residence of the pashas before the collapse of their authority, comprised two main buildings: the first housed the dey's guards, officers and their families; the other behind it contained a long hall (*al-jāḥiḥ*) in which the dey gave audience to the soldiery and in the remotest part were his private

apartments. The *Diwān*, where the Aghā presided over the council of the soldiery, was a large oblong court (cf. also a detailed description by La Condamine in 1731, *R. T.*, 1898, p. 86): the religious tribunal of the Charḥa (*al-Shar'*) still sits here. The district west and northwest of the medina (especially the Rue du Pacha) formed the aristocratic quarter, the real Turkish quarter. The sumptuous houses of the deys and the other high personages were adorned with marbles; the central court, which was, a regular feature, was ornamented sometimes with a kiosk or a little pool of water; the furniture and the decoration already showed an unfortunate tendency to imitate Italian work of poor quality.

With the extraordinary development of the activities of the corsairs the number of Christian slaves increased (6,000 in 1654; on their life cf. Pignou, *R. T.*, 1930, p. 18 *sq.*); whence the multiplication of those strange prisons called by the name of the Saint to whom was dedicated the chapel contained in them. Father Dan gives 9 in 1635; there were very soon 13. If we must, with P. Grandchamp (*La France en Tunisie au XVII^e siècle, Avant-propos des t. VI et VII*, Tunis 1928–1929) regard as a legend the story of St. Vincent de Paul's captivity at Tunis from 1605–1607, special importance on the other hand should be attached to the mission of the Lazarist Julien Guériu (1645 to 1648) who succeeded in converting Muḥammad Shalabi, the celebrated Don Phillip, son of the dey Ahmad Khōdja, and to the work of another missionary, Jean le Vacher, consul of France for 1648 to 1653 and 1657 to 1666 (cf. R. Gleizes, *Jean le Vacher*, Paris 1914 and in *Revue des questions histor.*, July 1928). It was in his time that the first public chapel was built at the consulate and dedicated to St. Louis; it was he who raised from its ruins the church of St. Antony, in the centre of the Roman Catholic cemetery around which he built high walls, outside the Bāb al-Bahr (on the site of the present Cathedral); it was he who organised worship in the chapels of the prisons; it was he again who obtained from the Diwān a site and permission to build a new French consulate or "funduk of the French" finished in 1661 (rus de l'Ancienne-Douane; Grandchamp, *op. cit.*, vi., p. xxii.—xxiii.). From 1672 the Italian Capucins were in charge of the mission: their house is described about 1730 by St. Gervais (*Mémoires historiques*, Paris 1736, p. 86) as well as the Greek Church and the richly endowed Hospital of the Trinitarians. Protestants were buried outside the Bāb Kartājanna in the cemetery of St. George where the English church now stands. In spite of consular protection, the Christian merchants never seem to have been very numerous. The French "nation" for long numbered only six merchants. Foreign trade was mainly in the hands of the Jews, among whom the fugitives from Spain or Portugal (expelled in 1492 and 1496), who had come either directly or through Italy, were distinguished from the Tunisians of old stock (*Zuḥāna*); the "Portuguese" or "Livornese" (*Grāna*) ultimately formed a separate community; they gave their name to the *Sūq* el-Grāna. The Jewish cemetery was outside the walls, to the east of the Bāb Souika quarter in the vicinity of the present Rue Sidi Sifiane; then it expanded southwards.

In the political troubles which mark the end of the xviii century and the beginning of the xviii, Tunis was twice occupied by the Algerians (in

1686 and 1694) with bloody disorders. The ramparts could not resist a serious attack; they followed "no rule of fortification, for one cannot consider as fortifications the square towers attached to the walls at intervals". Again, even under the Husainids, Tunis was at the mercy of the Algerians; pillaged by the latter in 1735, it was in vain that in 1756 the Tunisians tried to withstand them with the help of defensive works hurriedly thrown up by 'Alī Pasha and his son Muḥammad: an entrenchment with loopholes and a ditch between the two recently built forts on the Djabal Djellaz and the Mannūbiya, a fortified redoubt behind the Kaṣaba or Kasbah. At this period two other forts are mentioned crowning the slight eminences on the N. W. These are no doubt the *Burj al-Samīra* or *Tahūnat al-Riṣ* (of the Windmill; it is the fort of the Spaniards) and the *Burj al-Rubīa* (of the siloes [of the Bey]; this is the Rabta), itself flanked at a little distance by the little *Burj Filfil* (cf. Piantet, *Corresp. ... Tunis*, II, 501; and for the year 1829: Monchicouri, *Relations inédites ... Filippi* ..., p. 47 and 91).

In the intervals of peace the town was also enriched with other buildings. It was in the reign of the founder of the new dynasty, Husain b. 'Alī, that the princess 'Aṣṣa 'Uṭmāna, great granddaughter of the Dey 'Uṭmān, died in 1710 and was buried near the Medersa al-Shammā'īya. Many charitable and pious institutions benefited from her bountiful gifts. Husain, himself a great builder, built in Tunis (cf. *al-Maḥra' al-Malakī*, R. T., 1895, p. 328—329) in the southern quarter of the Medina, the *Djāmi' al-Djādīd* or "Mosque of the Dyers" with an octagonal minaret. He planned out the streets and buildings which adjoin the *Sūq al-Sakkāṣīya* (of the harness-makers); it was in his reign that the Mausoleum of the Dey Kara Muṣṭafā was built beside the mosque of el-Kṣar; it was he who moved the seat of the government to the Bardo. In spite of the decline in religious teaching acknowledged in the preceding century by Ibn Abī Dīnār (p. 399; transl. p. 506), he showed a real interest in building medersas: *Madrasat al-Nakhla* (of the palm-tree), the *Medersa al-Husayniya* and *al-Djādīd*. His immediate successor 'Alī Pasha, following his example, built four: *al-Būdiyya*, in the Sūq of the booksellers, *al-Sulaimāniya*, in memory of his dead son Sulaimān, *Madr. Bīr al-Hijār*, *Madr. Hawānūt 'Aḥḥar*; and a little later 'Alī Bēy founded another *Djādīd*. It is to this name 'Alī Bēy that we owe the mausoleum of the Husainids (*Turbat al-Bēy*) not far from the Mosque of the Dyers, and (built in 1775) the home for aged poor called *al-Takya* (the Tekia). About the year 1800 the famous minister Yūsuf Ṣaḥīb al-Tiba', keeper of the privy seal, built in the Halfawīn square the mosque that bears his name, probably, as the raised outer gallery shows, on the site of the *Masjid al-Mu'allaḥ 'ala 'l-Halfawīya*, which Ibn Nāḍī mentions in the sixth century (iv. 149); in the same quarter he set up the Halfawīn fountain (in 1804), inside the *Bāb Sīdī 'Aḥd al-Salām* and at the other end of the town a large watering-trough inside the Bāb Allawa.

His sovereign Hammūda Pasha, who finished the *Dār al-Bēy* (Caroline of Brunswick stayed there in 1816) a little above the Kaṣaba or Kasbah, devoted all his energies to military works and to barracks. To defend Tunis, particularly against the

Algerians, he had the outer ramparts rebuilt by a Dutch engineer. This work, which took from 1797 to 1804 according to the inscriptions on the bastions adjoining the gates, was never completed on the south side (cf. H. Hugon, R. T., 1905, p. 373; and G. Dolot, R. T., 1908, p. 298). On this side they were satisfied with the advanced entrenchment made by 'Alī Pasha and the outer walls of the houses which formed an almost continuous line of defence. Hammūda built barracks (in 1798) alongside of his magnificent villa at al-Manouba, and others in 1814 at the close of his life, in the middle of the Sūq al-Aḥḥar (it now houses the Bibliothèque Publique and the Direction des Antiquités; cf. M. Houdas, *Notre sur trois inscriptions de Tunis*, in *Bull. Archéol.*, 1911). In the same period many other barracks were built in the Medina: Rue de la Caserne (*al-Kaṣba*; now the Société Française de Bienfaisance), Rue de l'Église (now the Administration of the Hāḥās), Rue des Moniquettes, Rue Sīdī B. Ziyād; but by far the largest, that of the "First Regiment" (*Birindīl Alāy*; now the Caserne Saussier), was built near the Murkād, on the site of the former masallā, by the Bey Husain b. Maḥmūd, then by his brother Muṣṭafā (in 1835—1836). An artillery depot (now the Caserne Forgemol) was built outside the town in 1839 by Aḥmad Bēy, the creator of the "Tunisian army". While 'Alī Pasha had been content to send on two occasions (1743 and 1744) for a founder from Toulon, who repaired several cannon in an emergency workshop, under Hammūda Pasha a regular foundry was established under the permanent charge of some Frenchmen in a wing of the *Ḥafṣiya* palace (the Hafsia; street of the same name). Lastly Aḥmad Bēy organised the *Dabḍaba* (cf. R. T., 1922, p. 276), where the bread and oil required for the army was made (Rue Dabḍaba, a little north of the Dār al-Bēy and Rue des Teinturiers).

Just when these military undertakings seemed to be going to transform Tunis into a garrison town, the European colony, which was developing with greater freedom every day as a result of the French occupation of Algiers (in 1830) and the reforms made by the bey, gained a footing in the Medina. Shops were opened by the Christians. Religious edifices sprang up in addition to the old Church of the Holy Cross (Rue de la Kasbah; moved in 1833 to the old Hospital of the Trinitarians, Rue de l'Église), the registers of which are valuable for the history of Roman Catholicism in Tunisia. In 1831 the Italian school was opened at Sulema, the Jewish in 1840 at Morpurgo, in 1841 the Bourgade College in the *Zanakaḥ al-Būḥār* (Impasse du Missionnaire). The whole of the quarter of the Place de la Bourse (recently renamed Place du Cardinal Lavergerie) with the present Rue de l'Ancienne-Douane, des Glacières and de la Commission became completely European. Outside the ramparts, the modern town began to spread towards the lake; thus the Consulat de France was moved in 1861 to the building which is now the Résidence Générale. Other consulates however are still within the city; those of Spain (rue Sīdī el-Bānī), Great Britain (place du Cardinal Lavergerie), Italy (rue Zarkoun; this is soon to be moved).

European influence became so strong that the administration of the town itself was at length affected. Under the Hāfids each of the two fau-

hours had its *shaikh*, probably under the *ashikh al-madina*; these three officials survived under the Turks; assisted by patrols of citizens taken in rotation (*lawadiga*) they saw that the town was policed at night after the closing of the gates. Below them the *muharrir* were heads of the quarters. The day police, under the Husainids, was the business of the *dawlati*, this destitute dey, who had under him 50 *hawal* and 55 *shabigi* (cf. E. Pellissier, *Deux. de la régence de Tunis*, Paris 1853, p. 52-53) and acted as police magistrate in the long hall called *Driba* in the street of Sidi B. 'Arūs. The *Kaṣaba* was administered separately under an *aghā*. In 1858, however, a municipal council was formed (a president, a vice-president, a secretary, and a dozen notables) the budget for which was provided by a tax on wines and spirits. In 1860 the *dawlati* was replaced by a general of division (*farik*) who had under him "captives" (*ghabitiya*). Vigorous steps were taken to bring the city up to date: a telegraph line was laid to Algiers and a railway to La Goulette; a drainage system was laid out and water brought from Zaghouan by the French engineer Colin. The water-tower took the place of the covered reservoir (*khazna*) which stood in the preceding century beside the gate of the outer ramparts, Bab Sidi 'Abd Allah, adjoining the *Kaṣaba* or *Kashah*.

Preoccupation with such modern works left little time for any great religious buildings; one may however mention the imposing *rāwīya* of Sidi Ilarāhim al-Riyāhi (d. 1850; cf. *R.T.*, 1918, p. 124, and on the jurists of the Husainid period: al-Sanūsī, *Muṣṣamarāt al-Zarīf*, Tunis n.d.) who enjoyed a veneration which shows no signs of decreasing. In 1875 the *Ṣādiqī* College was founded (in the barracks of the rue de l'Église) called after the bey Muhammad al-Ṣādiq. In 1880, the *Ṣādiqī* Hospital was built. Among the mansions, the Zarrūk palace (rue des Juges) was at first the residence of the deys. The Dār Husain (now the Palais de la Division) built in the xviiith century by a minister of the bey, was restored in 1876; the Khair al-Din palace, an enlargement of the old Hafsīya, was the court of justice for a time at the beginning of the protectorate (rue du Tribunal); the Palace of Muṣṭafā b. Ismā'īl was in the rue du Pāhā; that of the Khaznadār (Place Halfkwin, rue du Palais) became the Jewish Hospital, but has not been used for some time now. It may be noted that after the rising of the sons of Husain b. 'Alī against 'Alī Pāshā in the middle of the preceding century, the Halfkwin quarter, inhabited by faithful "Husainiya", enjoyed the favour of the bey to the detriment of the quarter of Bab al-Djazira, the stronghold of the *jeff* opposed to the "Bashiya" (cf. *R.T.*, 1918, p. 314).

The French occupation (from 1881) has produced tremendous developments in Tunis which are still going on. The European town stretches from the Porte de France (the old Bab al-Bahr) to the lagoon, where the quays are; it stretches from the Belvedere to the Djellāz, then, in the south of the southern quarter, within and without the walls, it covers the heights of "Montfleury". The outer wall is still standing. That of the Madina has almost completely disappeared except for a few gates. The *Kaṣaba* or *Kashah*, entirely rebuilt, is used as barracks. The Dār al-Bāy houses the Direction de l'Intérieur; the other offices with the new *Ṣādiqī* College (1897) and the Palais de Justice are modern buildings stretching

along the Boulevard Bāb Benāt from the Place de la Kashah. An electric tramway runs round the Madina but does not enter it. An attempt has been made to retain the oriental character of the city itself. A number of buildings are now used for other than their original purpose but the general appearance of the city is just what it was fifty years ago. Religious instruction remains centralised in the Great Mosque, the minaret of which was entirely rebuilt in 1894; in 1896 the resident Millet founded the Khaldūniya in the Suq al-'Aṭṭārin, to instruct young Muslims in the elements of modern sciences. The Sūks continue to group the native trades in guilds each under an *amīn*; some of them are visited by large numbers of tourists and a busy trade is done with them in "Oriental" articles, perfumes, carpets and leather goods; public criers offer for sale books and jewellery in the Suq of the Booksellers and Suq al-Berka. The wretched Jewish quarter, abandoned by those of its inhabitants who have acquired sufficient to enable them to live beside the Place des Potiers or in the European town, will shortly be replaced by modern buildings and broad streets. The Muslims on the other hand live in the native town, except a few rich families who have villas at the end of the Avenue de Paris and the few amirs of the houses in the new village of el-Omrane (S. W. of the Belvedere). Finally we must mention the growing population of the remoter suburbs (Rades and Hammam-Lif, or Carthage La Marsa) European, Muslim and Jewish, which really now form one with Tunis.

The Municipal Council was reorganized by decree of Oct. 31, 1883, supplemented by the decrees of 1888 and 1914 relating to the communes of the Regency. It consists of a President, two Vice-Presidents (French) and 17 members appointed by decree (8 European, 8 Muslim and 1 Tunisian Jew). At the last census (1926) the population of Tunis had risen to 185,996 divided as follows: French 27,922, other Europeans 51,214, native Muslims 82,729, Tunisian Jews 24,131.

Bibliography: Saladin, *Tunis et Kairouan*, Paris 1908 (statements should be verified); Desort (in collaboration), *Histoire de la ville de Tunis*, Algiers 1924 (the only useful chapter is that which deals with Europeans in Tunis in the sixteenth century before the occupation); G. Marçais, *Manuel d'art musulman, L'Architecture*, vol. 2, Paris 1926-1927 (excellent descriptions of the principal monuments; a. p. 871-875, a study of the architecture of the Muslim palaces of Tunis). — Cf. also the references in the text, and in the article TUNISIA.

(ROBERT BRUNSCHVIG)

AL-TUNISI, MUHAMMAD b. 'OMAR b. SULAIMĀN, an Arabic author of the sixth century. He belonged to a Tunisian family devoted to learning, especially to theological studies. His grandfather Sulaimān was a copyist of books and, when he set out on a pilgrimage to Mecca, left his three sons behind under the guardianship of his maternal uncle Ahmad b. Sulaimān al-Azhari, a learned theologian. On completing his pilgrimage, Sulaimān, as he had lost all his property, did not return to Tunis, but stayed first of all in Djidda where he made a living by copying books. There he became acquainted with some people from Sennār and on their advice went to their land. The ruler gave him a hearty welcome, assigned

him a house and other property and allotted him a regular income. Salāmān then married a woman of Sennār who bore him a son (Aḥmad Zarṛūḳ) and a daughter.

When 'Omar, the second son of Salāmān by his first marriage in Tūnis, had grown up, he went with his grand-uncle on the pilgrimage to Mecca and on the way met by accident his father Salāmān, who was on his way to Cairo on business with a caravan from Sennār. From Mecca, where his grand-uncle died, 'Omar returned to Cairo in order to study at al-Azhar. Later he visited his father in Sennār, resumed his studies at al-Azhar and in 1201 (1786) married. Two years later he returned to his native city of Tūnis where a son Muḥammad (al-Tūnisī) was born in 1204 (1789). 'Omar stayed only three years in Tūnis and then went with his family back to Cairo to devote himself once more to study at al-Azhar. There he soon obtained the office of *naṣīb al-risāṣ* [cf. I., p. 535^b], being appointed warden of the fraternity of Maghribī students. In 1211 (1797) 'Omar learned of the death of his father from his step-brother in Sennār and of their poor circumstances. He at once went there and never again returned to his own family. Fortunately for the latter, in the same year Ṭāhir, 'Omar's younger brother, came to Cairo on business, intending afterwards to go on the pilgrimage to Mecca. He adopted his brother's family and sent the young Muḥammad, who at the age of 7 had already read the *Qur'ān* through, to study at al-Azhar. When, after Ṭāhir's departure for Mecca, Muḥammad's means of subsistence gradually came to an end, he decided to seek his father in the Sūdān as news had reached Cairo that soon after his arrival in Sennār he had gone on to Dār Fūr. Among the members of a caravan which had reached Cairo from Dār Fūr he met a friend of his father, who at his request took him back with him to Dār Fūr. This must have been in 1218 (1803). In Dār Fūr he met first his father's step-brother Aḥmad Zarṛūḳ who took him to Djuḥā (in the district of Abū l-Djūdū), where his father 'Omar lived. The latter had attained a position of great prestige at the court, become wealthy and prosperous and had also founded a new family. By order of the king 'Abd al-Rahmān b. Aḥmad (d. 1214 = 1799; cf. the list of kings of Dār Fūr, I., p. 917^a) 'Omar had composed commentaries on two theological and legal works (cf. *Voyage au Dar-Four*, p. 107; on the other literary activities of 'Omar, see p. 424). When Muḥammad arrived in Dār-Fūr, a certain Muḥammad Kurā (Nachtigal, *Sakāra and Sūdān*, iii., Berlin 1879, p. 387, calls him Abū Shaikh Kurā) was acting as regent for the infant ruler Muḥammad al-Faṣl; he later met his death in a rebellion. Muḥammad received a kindly welcome from Kurā to whom he was introduced by Aḥmad Zarṛūḳ. Kurā also enabled 'Omar to make a journey to Tūnis to visit his relations on his promising to return. For the period of his absence 'Omar left his estate at Djuḥā in the hands of his son Muḥammad.

'Omar went first to Wadā'i where he stayed some years; for he managed to attain a very high position at the court of the local Sābūn sūḷṭān, being appointed a vizier and getting land in the village of Abālī. But after awaiting his son there in vain, he decided to go on to Tūnis.

Muḥammad stayed some seven and a half years in Dār Fūr after the departure of his father and became thoroughly acquainted with the land and its people. It was only after the conclusion of a war between Dār Fūr and Wadā'i that he was able to go to the latter country on an embassy from the sūḷṭān of Dār Fūr. He came first to Wāra, the then residence of Sūḷṭān Sābūn who showed him much kindness, as he had done to his father. Muḥammad was thus likewise detained a considerable period in Wadā'i. But his position became more and more difficult, in the first place because his uncle Aḥmad Zarṛūḳ who had followed 'Omar to Wadā'i and on the latter's departure had been entrusted with the care of his children and house in Abālī took full possession of 'Omar's property and only gave his son the minimum necessities of life. A second difficulty was the ill-feeling that developed with Aḥmad al-Faṣl (on him cf. *Voyage au Ouadāy*, p. 66 sq., 497 sqq., 508) who had been appointed 'Omar's successor in the vizierate on his suggestion. He slandered Muḥammad to Sābūn so that the latter became suspicious and ceased to show him favour. 'Omar, who came to Wadā'i at his son's request, was able, it is true, to get Aḥmad al-Faṣl dismissed, but on his ('Omar's) departure he regained his old rank. In these circumstances Muḥammad readily took advantage of the Sūḷṭān's permission to leave Wadā'i after eighteen months there. He joined a caravan going to Fezzān with which he travelled through the land of the Tūba (Tibesti) to Murzuk, the capital of Fezzān. Here he stayed three months, during which the ruler there, Muntāṣir, died. From Murzuk he continued his journey to Tripoli and finally reached Tūnis via Sfax (Sfax) about 1228 (1813) about ten years after leaving Cairo for the Sūdān.

Muḥammad at first settled in Tūnis; later however, he moved to Cairo and there entered the service of the viceroy Muḥammad 'Alī. When in 1824 the latter sent an army to the Morea under his stepson Ibrāhīm Pāshā, Muḥammad went through the campaign as chaplain (*waḥīḡ*) to an infantry regiment (cf. *Voyage au Darfour*, p. 6). An incident of the siege of Missolonghi (1825-1826) is related by him in his *Voyage au Ouadāy*, p. 634-635.

At the end of the war, Muḥammad acted as reviser of the Arabic translation of European medical, especially pharmacological, works in the veterinary college founded by Muḥammad 'Alī in Abū Za'īl (N. E. of Cairo). There Dr. Perron became acquainted with him after his arrival in Egypt, took Arabic lessons from him and induced him to write down his memoirs of his travels in the Sūdān, primarily for Arabic reading lessons. When in 1839 Perron became director of the Kaḡr al-'Alī medical school in Cairo, on his recommendation Muḥammad was appointed chief reviser there. A. v. Kremer, who came to Egypt for the first time in 1850, mentions Muḥammad as one of his teachers whom he esteemed highly (cf. A. v. Kremer, *op. cit.*; cf. *Bibl.*). As he further tells us, Muḥammad also devoted himself to the editing of important works of the earlier Arabic literature, for example the *Maḥāṣin* of al-Ḥarīrī [q. v.] and the *Muṣṭafā* of Iḥṣābī [q. v.]; this is probably the Bulāḳ edition of 1272 = 1856. According to Jomard (cf. *Voyage au Darfour*, p. x.), Muḥammad was also appointed to undertake, for an edition of the Arabic lexicon *al-Ḥamūs*

of Firāshādī (q.v.), a revision of the Calcutta edition of 1230 (1817) for which purpose he corrected the text of the latter with the help of seven or eight manuscripts. The new edition was printed at Bulāq in 1274 (1857). In his later years Shaikh Muhammad used to lecture every Friday on Ḥadīth in the Zaiṅah mosque. He died in Cairo in 1274 (1857) (so v. Krenet, *op. cit.*).

The many observations and enquiries made by Muhammad al-Tūnī in his long sojourn in the Sūdān about the ways and people of the districts visited by him were written down, with his own experiences, at Perron's instigation in two comprehensive works, which Perron translated into French. They are:

1. *Voyage au Darfour par le Cheikh Mohammed Ebn Omar el-Tounsi* [Tūnī, popular nisha for Tūnī; cf. Stumme, *Gramm. des tunesisch. Arabisch*, Leipzig 1896, p. 66], *Révisé en Chef à l'École de Médecine du Caire, traduit de l'Arabe par Dr. Perron, Directeur de l'École de Médecine du Caire*, Paris 1845 (lxxxviii. 492 pp. in 8°, with map). The *Préface* to this book by Jomard (p. i.—lxxi.) also appeared separately under the title *Observations sur le Voyage au Darfour, suivies d'un Vocabulaire de la Langue des Habitants et de Remarques sur le Nil-Blanc supérieur*, Paris 1845. Perron had previously published information about this book and specimens of his translation in *J.A.*, ser. iii., vol. viii., 1839, p. 177—206 (Letter to J. Mohl) and in the *Bibliothèque universelle de Genève*, N. S., 5th year, vol. xxviii. (Nº. 56), 1840, p. 325 sq. A very full review of Perron's publication was given by Sédillot in *J.A.*, ser. iv., vol. vi., 1846, p. 522—543.

Perron published the Arabic text of the Dār Fūr journey under the title: *Tashkīl al-Aḥḥād bi-Sirat Bilād al-ʿArab wa'l-Sūdān* (= *L'Agrégement de l'Esprit par le Voyage au Soudan et parmi les Arabes*) in 1850 in Paris in autograph (310 pp. in 4°, with 4 pp. in French of introduction, emendations and additions to the translation).

2. *Voyage au Ouadai, par le Cheikh Mohammed Ebn Omar al-Tounsi, traduit de l'Arabe par Dr. Perron*, Paris 1851 (lxxv. 756 pp. in 8°, with map and 9 plates with pictures). Jomard added to this book also a long preface (p. i.—lxxv.) with historical and geographical observations. Perron himself in the introduction (p. 1—35) deals particularly with the divisions of the Sūdān.

The Arabic text of the second work, which Perron (*loc. cit.*, p. 34) intended to publish, never appeared. The manuscript was probably in his possession but where it went after Perron's death in 1876 in Paris, to which he returned in 1850, I do not know.

Muhammad al-Tūnī is the first to give us full and reliable information about important parts of the Sūdān. On Dār Fūr, we had before his time only the scanty notes of the explorer W. G. Browne and on Wadā'i a little information gleaned by Burckhardt. It was not until several decades later that H. Barth and S. Nachtigal were able to visit these lands and describe them in more detail in their books. There is no reason to doubt al-Tūnī's reliability; Perron checked his statements with the help of a number of people from Dār Fūr and Wadā'i settled in Cairo and obtained complete confirmation of them. It cannot however be denied that there are certain defects in the Shaikh's description. A certain lack of order in the arrangement of the material, the lack of any approach to a regular system, a

fondness for digression and a disposition to believe much too readily statements about the popular Islam of the country (e.g. especially about magic) are not such serious defects as the fact that he gives no exact geographical, topographical, statistical and meteorological data (cf. thereon the criticisms by Barth, in *Reisen und Entdeckungen in Nord- und Centralafrika*, iii., Berlin 1859, p. 525 sqq. and Nachtigal, in *Petermanns Geogr. Mitteil.*, xxi., 1875, p. 176 and in *Sabara und Sudān*, iii., p. viii.). Nevertheless Tūnī's two works form an important and still too little appreciated source for the ethnographical, cultural, and political conditions in the Sūdān lands through which he travelled. In conclusion it should be emphasised that the Shaikh's two books supplement one another; the much larger work on Wadā'i also contains a good deal of information about Dār Fūr.

As an appendix we may give a brief account of a countryman of Muhammad al-Tūnī who resembled him in many ways, the Tunisian Shaikh Zain al-ʿAbidin. The latter, an educated, well-read man, who had studied at al-Ashar and grown up in constant intercourse with Europeans, in 1818 or 1819, when at a mature age, set out for the Sūdān where he (like Tūnī) seems to have spent about ten years, to some extent as a missionary and adventurer learned in religious matters. He went first to Sennār and Kordofān, then stayed a considerable time in Dār Fūr and Wadā'i making his living by teaching. After over three years in Wadā'i he returned via Fezzān to Tūnīa. His experiences and observations there he recorded in an Arabic book of no great length which was printed (when and where?). It was translated into Turkish and printed at Istanbul in 1262 (1846) (cf. *Z.D.M.G.*, ii. 482). This Turkish version was translated by G. Rosen as *Das Buch des Sudan oder Reisen des Scheich Zain el-Abidin in Nigritien*, Leipzig 1847.

The importance of this book lies in the description of the state of civilisation and organisation of society in Dār Fūr and Wadā'i. We are told of the court life, of the soldiers, a campaign, the natives, slaves and negroes, of trade, superstitions, a wedding etc. These interesting notes are an important supplement to the far fuller description of Muhammad al-Tūnī. Noteworthy is an account of excavations made by Zain al-ʿAbidin with the permission of the Sultan of Wadā'i in ruins near the capital (p. 47—49, 61—75). Zain al-ʿAbidin left Wadā'i just as a change on the throne took place; the name ʿAbd al-ʿAzīm given in Rosen's translation to the new ruler (p. 108) should be emended to ʿAbd al-ʿAziz (cf. Nachtigal, *op. cit.* iii. 284, where an ʿAbd al-ʿAziz, grandson of Sābūn, is mentioned).

Bibliography: The main source for the life of Muhammad al-Tūnī and his family are the two books of travel, especially the autobiography in the introductory chapter to the *Voyage au Darfour* (p. 1—25), besides scattered references like *op. cit.*, p. 48—49, and in the *Voyage au Ouadai* p. 37, 39, 50, 62, 66—67, 129, 199, 211 sqq., 215, 497—499, 508, 512 sq., 643—645. The biographical sketch by Jomard (*Voyage au Darfour*, p. viii.—x.) is not free from errors and omissions; cf. also Perron's notes (*Voyage au Darfour*, p. lxxxi.—lxxxii.) and A. v. Krenet's *Aegypten*, Leipzig 1863, ii. 324. Cf. also, in addition to the references

in the article, Wüstenfeld in Lüdde's *Zeitschr. für vergleich. Erdkunde*, I. (Magdeburg 1842), p. 67 and Brockelmann, *G. A. L.*, II. 491 (where the book on Waddi is not given!)

(M. STRACK)

TUNISIA. Tunisia consists of the eastern declivity of Barbary; it corresponds approximately to the Ifrikiya of the middle ages. Since 1881, Tunisia or the Regency of Tunis has been a French protectorate.

I. GEOGRAPHY.

With its present frontiers, Tunisia, which lies between 8° and 11° E. Long. and 32° and 37° N. Lat. has an area of 125,180 sq. km. Along its western frontier it is bounded by Algeria (département of Constantine), on the south by the Sahara and, far to the southeast, by Italian Libya (Tripolitania). The Mediterranean washes its shores, which are usually low-lying, on the north and east. The climate is on the whole moderately warm; but the rainfall varies greatly with districts and even with years, and being influenced by the proximity of the sea and also of the Sahara, it varies very much with latitude and still more with altitude. The relief is very varied although the average height above sea-level is not great; the mountain-ranges, which are the continuation and end of those of Algeria, run generally from S. W. to N. E.

In the northwest, the mountains of Khrumir and of the Mogoda, of chalk and sandstone, rarely exceed 3,000 feet, towards Algeria; subjected to a heavy rainfall, covered with oaks and brushwood, they contain mines of zinc and iron (Duasia). They run along the coast where in turn we have, with the little port of Tabarka, the dunes of Nefra, Cape Nègre and the little peninsula of Cape Serrat. In the east, they gradually diminish in height down to the hills which surround the alluvial plains of Bizerta and of Mateur, both well watered and growing good crops of wheat. The lagoon of Bizerta, which communicates with the sea by a narrow strait, forms an excellent roadstead with deep water opposite Sicily, which is not a great distance away. The plain of Mateur, now almost entirely covered with soil except for a number of marshes still existing, is dominated by the curious massif of the Dj. Achkeul. Farther east, the Ra's Shit 'Alī al-Makki above Porto-Farina (*Ghar al-Arba*) bounds the Gulf of Tunis on the north, which is being filled up by deposit brought down by the Medjerda and the Wād Miliane; Utica, a port in the Roman period, is now 6 miles from the sea; the peninsula of Carthage, formerly an island, is connected to the mainland by an isthmus, which separates the Sebkhā el-Riana from the lagoon of Tunis; the lagoon, at the end of which stands Tunis, the capital, communicates with the sea by the strait of La Goulette (*Haf el-Wād*). The district of Tunis, which has not a great rainfall, is less suited for cereals than for the vine and fruit-trees.

The Medjerda, which runs through northern Tunisia from west to east, is the only real river in Tunisia and its level is very low in summer; from November to April it is flooded and very turbid. Its lower course (Medjer el-Bah, Tébourba) is separated by the gorges of Testar from its middle course, where it drains the great alluvial depression of Dakhla (the region of Suk el-Arba and Suk el-Khemis) as

rich in cereals and pasturage as the adjacent chalk-hills of Beja. Its valley is bordered on the north by the limestone hills of Beja and Teboursak, while to the south the very undulating relief of the centre and west of Tunisia present an alternation of rounded hills of limestone and great plains, the prolongation of the Saharan Atlas of Algeria: this High Tell (districts of Teboursak, of Kef, Sers, Ebbas-Ksar, Thala) covered with natural woods of Aleppo pines, and tall shrubs and great pastures, enables wheat to be cultivated, except in the drier part of the southwest, which has to be content with barley. This, especially towards the Algerian frontier, is the part of Tunisia which is richest in mines (iron at Djerina and Sata, phosphates at Kalia-Djerda and Kalat es-Senam). The rivers, tributaries of the Medjerda (W. Mellegue, W. Tessa, W. Sillana) and W. Miliana (plains of Fahs and Mornag), flow directly into the Gulf of Tunis.

To the south of the High Tell rises the most marked mountain barrier. The "backbone of Tunisia" runs from the neighbourhood of Tebessa to the Dj. Zaghwān (4,300 feet high, 30 miles from Tunis) and to the Dj. Ras and Ba Karnaïn; it includes the highest peaks: Shambi (5,150 feet) and Semama in the Byzantine range, the massif of Mactar, Serdj, Bargou, Kirine and the chain of Zeugitania. But it permits communication to be maintained easily with the south, through several passes or defiles, notably the great corridor of Kaur-Siba. On the other hand, the watercourses on the southern slopes, like the W. Merguellil, Zerud, El-Hatab (which waters the plain of Ganuda) which flow irregularly and even intermittently, lose themselves — when they flow at all — in the saline hollows called Sebkhāt: e.g. S. Kelbia and S. Sidi el-Hani in the plain of Kairawān. These are in the region of the great steppes, the land of the camel, which stretches to Gafsa, only interrupted by a few limestone-hills of no great height; covered in the west with alfa or white artemisia, and jubbe-trees towards the east, where it gradually slopes down to the olive-groves of the hinterland of Sfax, it nevertheless contains extensive agricultural land and areas suitable for cattle rearing. The only towns in it, besides Kairawān, are at the outlet of the passes of the "backbone": Sbeitla, Kasserin, Feriana. But it becomes more and more desert-like in character towards the south as a result of a decrease in rainfall, and ends, beyond Gafsa and the rich deposits of phosphates at Metlawi and Redeyef, in the depression of the Shotts (Sh. el-Gharra, 80 feet below sea-level, Sh. el-Djerid, Sh. el-Fedjed), enclosed by the the Dj. Sherb and Dj. Teboga, in the oasis of Djerid (Tozeur, Nefta) and those of Nefiawa (Kebili, Douz), which produce dates; here the Sahara begins. More to the S. E. the Dj. Dahar (1,300—2,000 feet), of limestone and chalk, with the massif of the Matmata, is only the eastern border of a great basin in the Sahara.

On the N. E. coast of the Regency, where prosperous farms have been established, the important peninsula of Cape Bon, in the prolongations of the "backbone", lies between the gulfs of Tunis and of Hammamet, the coastal plains of which are connected by the passes of Zaghwān (Fum al-Kharrūba) and of Grombalia. Then to the south of the orange-groves of Nabeul and Hammamet, the Sabel of Susa, with its valleys, is still sufficiently well watered to support by its olives and

other crops a dense population which lives in large fortified villages: Kalaa-Khira, Kalaa-Sira, Maaken, Maknine; the regularity of the coastline is interrupted by the little peninsulas of Monastir and Mabdja.

Beginning at Ras Kapadia, roughly on the level of el-Djeir, the coast turns inwards and leaves out in the bay of Sfax the islands of Kerkenna, which are separated by shallows from the shore, and then runs along the Gulf of Gabes (the ancient Little Syrtis) where sponge gathering forms a source of revenue. At the end of the Gulf rise the palms of Gabes. Between them and the oasis of el-Hamma adjoining the Shotts, lies the passage from the central or eastern plains of Tunisia to those on the extreme south coast: Arad, off which lies the large flat green island of Djerba, Djefara bordered by lagoons; a few olive-groves however flourish around Zarzis and Ben-Gardane.

2. HISTORY.

The conquest of what is now Tunisia cost the Arab invaders who came by land from the south-west at least half a century of fierce fighting with the native Berbers and with the Byzantine governors. In North Africa as in the East, Islām was bound to come into conflict with Byzantium, but in the middle of the seventh century the situation in the exarchate of Africa was eminently favourable to the prospects of the ultimate conquerors: religious dissensions, a distant but all too faithful echo of disputes provoked in the east by monothelist doctrines, were rending the Christian community of Carthage and detaching from Byzantium the majority of those who were strictly attached to orthodoxy; the governors, less and less under the control of the Emperor, were aspiring to a state of independence which forced them to rely for support on the chiefs of the great native tribes; and the tribes, taking advantage of this, gradually cast off all Byzantine authority so completely that at the time of the Muslim conquest, all the south

of Byzacene seemed to be practically independent of Carthage.

The two first invasions of the Arabs with an interval of 18 years between them, were only raids, *razzias*; but they prepared the way for better organised expeditions for the methodical conquest of the country. Besides, by a remarkable coincidence, on each occasion the invaders found Byzantine Africa in the throes of a political crisis: in 647, the patricius Gregory had just broken with the Emperor and settled himself in the midst of the Berbers, far from the coast, when 'Abd Allāh b. Sa'd b. Abi Sarb, governor of Egypt, crushed him near Sheitla and proceeded to lay waste the Djerid; in 665, the people of Carthage were most unexpectedly in open revolt against the empire, when Mu'awiya b. Hudayf ravaged Byzacene and took the stronghold of Djallila.

Was the government of the Maghrib added by 667 to that of Egypt? The real occupation only dates from the period 669-775, marked by the victories of 'Uqba b. Nāfi' and the foundation of Kairawān: this was the period of the definite occupation of Byzacene and the beginning of the conversion of the Berber tribes to Islām, but the most important event was the foundation of the new city, a Muslim town, an arsenal, caravanserai and market-place, which henceforth raised its mosque and its ramparts in the plains, facing the heights of central Tunisia which were still defended by a line of Byzantine forts.

After the governorship of Abu 'l-Mahdijir, of which little is known, 'Uqba returned in 681; but two years later on his way back from an imprudent raid which had taken him as far as Tingitania, he fell in the Zāb before Tahāda, killed in a vigorous native rising against the invader. This rising which began in the Awrās, embraced Kairawān: its leader Kusalla, supported by the Byzantines, was for several years the head of a vast Berber state, which offered a desperate resistance to new Arab attacks. He himself fell fighting in 688 in the district of Sbiba, whence Zuhair b. Qais al-Balawi is said to have come. It was however only in 693 when the position of the Umayyads at home permitted a policy of expansion to be resumed, that Ḥassān b. al-Nu'mān was able to lead an army of 40,000 men to the invasion of Byzacene and advance swiftly northwards in an attempt to crush the Byzantines before turning back against the rude Berbers of the Awrās. He took Carthage in 695, but two years later lost it again defeated by the patricius John, and again by the Berbers under the legendary figure of Kāhina [q. v.] in the plain of Baghail. He fell back on Barka and in the following year in a combined offensive by land and sea, he took Carthage finally. In 698, the Arabs had at last taken almost the whole of the modern Tunisia from the Berbers and Byzantines. Ḥassān was able to "found" Tunis and his successor Mūsā b. Nu'ajir to take Zaghwān, then to lead the 'Ifrikiya' Berbers themselves to the conquest of the west.

The greater part of the Byzantine colony had been able to escape by sea, mainly to Sicily and Malta. The majority of the inhabitants who remained in the country seems to have been very quickly converted to Islām, except for a few groups, Christian (*afāriq*) or Jewish. But even after they had entered Islām the Berbers of Ifrikiya, like those of other parts of North Africa,

tried on several occasions to regain their autonomy on the convenient pretext of religious heresies. The whole history of the eighth century is made up of risings, which in the name of socialist Kharijism roused the natives against the Arab rulers, and also of mutinies by the Arab soldiers themselves, who readily broke the bonds of discipline.

Hanzala b. Salfwan was able to put down the rising of the Sufri 'Ukasha, but he had to fly to the east when the rebel 'Abd al-Rahman b. Habib al-Fihri took Kairawan. After the last Umayyads had proved powerless to retake this distant province which was slipping from them, the 'Abbasids, seeing Spain cast off their suzerainty, were anxious at least to retake Ifrikiya from the Ibadhi Abu 'I-Khattab; their general Muhammad b. al-Ash'ath recaptured Kairawan, rebuilt its ramparts and installed himself there as governor, but not for long. The Arab soldiery, dissatisfied with him, forced him to depart in 765. Not even his successor al-Aghlab b. Salim al-Tamimi, an old companion in the east of the 'Abbasid propagandist 'Abd Mu'lim, was able to hold out against the rebel Ma'faris; he fell in the rising in 767 and anarchy prevailed for five years.

From 772 to 794, Ifrikiya was ruled by a regular petty dynasty of officials of the caliphate, the Muhallabids, Yemens by origin, who succeeded for a time in securing some degree of peace and order in the country: Yazid b. Harun, with the help of 40,000 new troops, finally disposed of the Ibadhi Abu 'I-Harith, rebuilt the Great Mosque of Kairawan (774) and organised the gilds of the capital; his son Dawud in 788 at Kef crushed the Berber confederation of the Warfajuma, and his brother Rawh, governor in his turn, concluded with the Ibadhi of Tiarret, Ibn Rustum, an agreement which put an end to the spirit of rebellion among the Berbers in Ifrikiya.

Henceforth it was only the Arab soldiery who constituted a serious danger for the domestic peace of the country. After the death of the last Muhallabid al-Fadl an era of bloodshed and trouble begins again. The aged general Harthama b. A'y'yan sent for the purpose, restored the authority of the caliph of Baghdad and built the *ribat* of Monastir; but his successor Muh. b. Mukallil al-Akkil was driven from his post by the Tamimi soldiery of Tunis whom his tactlessness had roused (Oct. 799). At this moment, Ibrahim b. al-Aghlab, son of the governor killed in 767, suddenly appeared as an 'Abbasid champion in his province of the Zab. He brought Ibn Mukallil back to Kairawan. As a reward and to establish a stable government at last, Harun al-Rashid on the advice of his councillors decided to appoint him tributary "emir" of Ifrikiya. Ibrahim received his diploma of appointment in July 800; the power was to remain for over a century in his family, down to 909, without interruption.

The dynasty of the Aghlabids (q. v.) left its mark deeply upon Tunisia. Under an outward subordination to the caliph of the East, the emirs, practically independent and hereditary, pursued a policy of pacification, organisation and expansion. The hostility of the Tamims, whose centre was Tunis, was always active. Ibrahim, although a Tamimi himself, came into conflict with these warriors of Murjar, who could ill endure the authority whether near or distant of the 'Abbasids, the friends of their ancient Yemeni rivals. He had to rely on

a soldiery which contained many non-Arabs from Khurasan; but he relied mainly for his personal security on a recently formed negro guard and on the fortifications of Kayr al-Qadim (or al-'Abdasiya) which he built in 801 a league to the south of Kairawan. It was probably there that he received the ambassadors of Charlemagne. In 802 he had to deal with a rebellion in Tunisia, in 805 with one in Tripoli, 810-811 with the mutiny of his own general 'Imrin b. Mukhallad who even laid siege to Kairawan. It was in his reign that the frontiers on the east coast began to be covered with the little military posts called *magaris*. When he died in 812, Tripoli was again in full insurrection.

His son Ziyadat Allah (817-838) who has left the reputation of an energetic, but cruel and violent man, had a powerful opponent to deal with. Mansur al-Tunbuhl was within an ace of destroying him, and for several years the whole of the north, including Tunis, was completely lost to the emir; but by a stroke of genius, Ziyadat Allah diverted to a holy war against Sicily the ardour and cupidity of the most turbulent soldiery, who embarked at Susa in 827, full of enthusiasm under the leadership of the illustrious Kadi Asad b. al-Furfi. Palermo was taken in 831; Messina fell 12 years later. Ziyadat Allah, who in 822 had built the *ribat* of Susa, was now able to devote his attention to works of a more peaceful nature, like the building of the Great Mosque of Kairawan. His architectural activity was followed on a great scale by his successor. In 850 the Great Mosques of Sus and Sfax were built; the Emir Ahmad in particular, about 860, erected ramparts around these two cities and built the famous "reservoir of the Aghlabids", a great reservoir to supply Kairawan.

In 874, Ibrahim II, the last great prince of the dynasty, succeeded his brother Muhammad, whose passion for hunting cranes earned him the name *Abu 'I-Gharanif*. Kayr al-Qadim was abandoned for a new residential town with the government offices: Rakha, the site of which is still known 5 miles south of Kairawan; but from 894, after Tunis, which had rebelled, had been taken by assault, the emir frequently moved his court to the reconquered city, on which he wished to keep a close watch. The foreign policy of the reign is marked by important events. At first in the southeast there was the disturbing exploit of al-'Abbas b. Ahmad, the son of the first Tulunid, who, in spite of his father, led a force from Egypt against Tripoli in 880 in an attempt to conquer Ifrikiya. Tripoli was saved by the Nafusa Berbers; Ibrahim arrived in time to seize a treasury of Tulunid dinars, which served to improve the financial condition of his state; the improvement was of a short duration, however, for it was not sufficient to refill the coffers, emptied at the beginning of the century by the civil troubles and later by the heavy expenditure. The terrible rising of 893 was provoked simply by a brutal requisitioning of slaves and horses in the plain of Gamuda for the benefit of a needy government. On the other hand, the conquest of Sicily was completed with the capture of Syracuse in 878 and of Taormina in 901; and when Ibrahim, on the complaint of the always hostile Tunisians, had agreed to abdicate in favour of his son 'Abdallah in obedience to an order sent him by the caliph, it was as a *muftakid* before Cosenza in Calabria that he died on Oct. 25 of the same year.

In the meantime the religious revolution which was to overwhelm Ifrīqiya was preparing in the west. In the ninth century the whole of the Berber south (Hawwāra, Lawāta, Miknāsa) was 'Ibādī from the Awrāsa to Djerba and Tripoli, the Nāfīsa in particular, who to the south of Gabes barred the road to the east, before Ibrāhīm II had massacred them in 896. But Khāridjism had not been able to prevent orthodoxy from gaining the upper hand in the greater part of the country and from producing illustrious men, like the Kādī 'Abd al-Rahmān b. Ziyād, the companion of Ibn al-Agh'ath and the ascetic Buhlūl, popular and very influential, in the eighth century; in the Aghlabid period, the golden age of the discussions on points of law, which were contemporaneous with the foundation of the various schools, and the gathering of the principal collections of traditions, two pupils of the famous Mālikī jurist of Egypt, Ibn al-Kāsim: Asad b. al-Farūṭ, of a Kharrāsān family, d. in Sicily in 828, and his pupil Saḥnūn (Ibn Sa'īd al-Tanākhī), born in Syria and son of a mercenary, who in 850 as Kādī of Kairawān brought about the triumph of Mālikism, which was threatened by the Hanafism of several teachers; his *Mudawwana* is still a classic, and Mālikism, in spite of apparent eclipses, is still the *madhhab* par excellence of Tunisia. The eastern origin of the more notable teachers and doctrines is a remarkable fact; it was also from the east that the propagandist (dā'i) Abū 'Abd Allāh came in 893 to the Kitāma Kabyl of Ikḍjan (Little Kabylia east of Babors) to convert them to the cause of the Shī'ī Mahdī 'Ubaiddallāh.

An Aghlabid expedition sent in 902 against the Kitāma barely reached its objective, and in the reign of Ziyādat Allāh III, who in 903, had murdered his father, the Mu'tasill 'Abd Allāh, the Shī'a danger became pressing; in 905 while the Mahdī was hastening from Syria to North Africa to await at Sijilmāsa the proper moment to appear, his faithful dā'i was cutting the emir's troops to pieces. Events then began to move rapidly: Ziyādat Allāh had in vain had the Shī'a condemned by an assembly of jurists at Tunis and sought the aid of the 'Abbāsids; in the spring of 907, Baghaia fell; in March 909, after the fall of Lorbēus, Ziyādat Allāh fled to Baghād and the dā'i entered Rakkāda, in spite of the mute hostility of the orthodox teachers. Finally in December of the same year, the Mahdī in person received the homage of the people of Kairawān. In this way was founded in Ifrīqiya, solely through the efforts of the Kabyl infantry of the Kitāma, the heretical caliphate of the Fātimids ('Ubaiddids) which was to transform the political conditions of the whole of North Africa, before returning to its original home in the east.

From the first, the new dynasty had its eyes on Egypt, and down to the day when it was able to install itself there definitely, never ceased to send out military expeditions to prepare the way for conquest. In January 911, 'Ubaidd Allāh had Abū 'Abdallāh, to whom he owed the throne, put to death just as the 'Abbāsīd al-Manṣūr had disposed of his own propagandist Abū Muslim. In 913 an army led by his eldest son invaded the Faiyūm while another took Alexandria; and it was only after the check to this first attempt at eastern expansion that the Mahdī decided to found a capital in Ifrīqiya, but on the sea: the strong town of Mahdiyya (q.v.), a starting point for fleets

against the east, and a refuge against the expected attacks of the Berbers of the interior (916-918), but in 919 a second expedition again seized Alexandria and held it for a short time. In the west, the successes were overwhelming: Sicily which had rebelled was brought to obedience, and when 'Abd Allāh died at the beginning of 934, the whole of the Maghrib, where the Ibādī state of Tiarret, the Idrisid of Fas and the Šufri of Sijilmāsa had collapsed, recognised the suzerainty of the Fātimids.

Abū 'I-Kāsim Nizār (al-Kāsim b. Amr Allāh) maintained with difficulty his authority over the vast empire he had inherited. His fleet, it is true, was able to plunder Genoa in 935, but it was a raid of no more importance than that of the Tuscans on Carthage under Boniface of Lucca in 828. On the other hand, he all but succumbed to the formidable rising led by the Nakkārī Abū Yazīd b. Kaḍīd, the Ifranid, the 'man with the ass' (*ṣāḥib al-ḥimūr*) who proclaimed himself *ḥaḥib al-mu'minin* and under the mask of religion led the Hawwāra of the eastern Awrāsa to attack the towns of Ifrīqiya. The Khāridjī Berbers sacked Beja, Lorbēus, Kairawān (in 944) and Sūsā, seized Tunis and with their ranks swollen by volunteers from the Zāb and Nafāsa, invested the caliph in his headquarters at Mahdiyya (in 945). At the most critical moment, Abū 'I-Kāsim died in 946. His son Ismā'īl (al-Manṣūr), supported by the people exasperated by the excesses of the invaders, re-established the situation with the help of the faithful Kitāma. Defeated in a series of bloody battles, Abū Yazīd saw his partisans scattered and he himself fell mortally wounded into the hands of his enemies at a place where in time the Kal'a of the B. Hammād was to be built (947).

This troubled period was succeeded by one of calm and prosperity. Al-Manṣūr at once displayed his power by founding the luxurious town of Šalīra (al-Manṣūriyya) which was to eclipse its neighbour Kairawān (947). Commerce and industry flourished, and at sea the Kaḍīd Raḥḥē was the terror of the Christians. Under al-Mu'izz, who came to the throne in 955, the long awaited hour arrived: in spite of occasional outbursts of rebellion in support of the Omayyads of Cordova, the Maghrib as a whole seemed subdued; the raids of Spanish Muslims on the coasts of Sūsā and Tabarka in 956 were mere reprisals and not indications of a real danger. Hopes of conquering Egypt, weakened by the death of the Ikhshīdīd Kāfir, seemed to be justified. In July 969, the freedman Diawhar at the head of the Kitāma occupied Fustāt on behalf of al-Mu'izz just as Abū 'Abd Allāh had taken Kairawān for his master, the Mahdī. The following year his troops entered Damascus. Then when he had built the town of Cairo for his sovereign, who was still in the west, he urged him to rejoin him, to oppose the threatening progress of the Karmāṭians. After the last Zenāta rebel had been crushed in the Maghrib, the Fātimid, who now wore a crown in the eastern fashion, began his preparations for departure in August 972. On June 10, 973, he reached Cairo, the new capital of his dynasty.

Before leaving Ifrīqiya for ever, al-Mu'izz had entrusted its government (excluding Sicily) to one of his most valued helpers, the Berber emir Bologgīn (Bulukkīn) whose father Zīrī b. Manād, a great enemy of the turbulent Zenāta, had always placed his Ṣanḥādja of the region of Titteri

and Moden at the service of the 'Ubaydids. This plan of ruling the country by a line of Berber princes was a complete success. Under the Zirids (q. v.), who regularly received their investiture from Cairo, Ifrīkiya enjoyed happy days of material prosperity and an abundance of the necessities of life due to the development of agriculture and native industries (carpets, cloth and pottery) and trade with the outer world; there was an extravagant splendour about the great official ceremonies. Law and medicine, which under the Fātimids had already produced such famous men as Ibn Abi Zaid, Ishāq b. Sulaimān al-Iṣṣā'ī and his pupil Ibn al-Djazzār, flourished; literature produced the poet Ibn Rushd. The Jewish colony of Kairawān attracted and produced celebrated Talmudists.

The brilliance of this period had been hardly affected by the defections, more and more serious, of the Zenīta of the west, who proclaimed allegiance to Cordova, nor by the secession of Hammād who, in the reign of his nephew Bādīs b. al-Manṣūr (995–1010), founded an independent dynasty in his famous Kāf'a (in 1007). On the contrary it was under al-Mu'izz b. Bādīs, in the first half of the 11th century that it seems to have reached its zenith. But this al-Mu'izz, ostentatious in excess, held in great honour by the caliphs of Cairo, respected throughout the Maghrib, committed the fatal mistake of awakening the old religious hatreds in the name of which the north Africans used to rebel against their eastern rulers. Rallying around him the Mālikī townsfolk of Kairawān, who under his eyes one day proceeded to a regular massacre of the Shī'īs, he transferred his homage to the 'Abbasid of Baghdad and ended by breaking openly with the Fātimids, through a series of steps covering the period down to 1050.

The revenge of the sultan whom he had cast off was terrible; the Egyptian wazīr al-Yūzūr, who felt personally insulted, sent against the rebel vassal marauding bands of nomad Hilālī Arabs who were quartered in the Ṣa'īd, to the east of the Nile. The year 1051, when the first Hilālī, the B. Riyāh, arrived in Ifrīkiya, marks a turning point in the history of Tunisia. Al-Mu'izz was twice defeated at Kairawān which he vainly hurried to fortify; in 1057, overwhelmed by the nomads who ravaged all the lowlying country, he secretly moved to Mahdiyya under the escort of Arab emirs whom he had been forced to take as sons-in-law. The invaders, hundreds of thousands in number, profoundly altered the appearance of North Africa, economically, ethnographically and politically: the Berbers were driven back, the country arabicised, nomadic life and insecurity introduced, agriculture ruined and central power broken up. The chief towns fell into the hands of the Arabs or rather became autonomous little states under local chiefs or governors who proclaimed themselves independent; some even paid homage to the Hammādids of the Kāf'a, whose protection they desired. In this way were established in Tunis the B. Khurāsān, in Bizerta the B. al-Ward, at Gabes the B. Djamī, at Gafsa the B. al-Rand; in the centre there was anarchy.

In the midst of countless difficulties, the Zirids held out at Mahdiyya, from which they now held only the coast between Sūs and Gabes. Tamīm (1063–1108), son and successor of al-Mu'izz, vainly tried to regain some lost ground; he made peace with the B. Hammād but did not

succeed against Tunis and, shut up in Mahdiyya, had to withstand the attacks of the Arabs and also of a new enemy in the Christians. In 1087 Mahdiyya was taken at the instigation of the Pope by the Pisans and Genoese under Pantaleon of Amalfi; Tamīm had to pay an indemnity and admit the merchandise of the victors without duties. Yahyā b. Tamīm, who died, probably murdered, in 1116, then his son 'Alī, who died in 1121, had recognised the suzerainty of the caliphs of Cairo, obtained the support of the Arab tribes, and won some successes by land and sea, when an unexpected adversary overwhelmed them. The Normans, who had already conquered Sicily and Malta, now intervened in the affairs of Ifrīkiya; in 1118, a rupture occurred with the Zirid, who appealed to the Almoravids of the distant west. Al-Ḥasan b. 'Alī, at first forced to make terms and accept the protection of Roger of Sicily against the threat from the Hammādids of Bougie, could not prevent the Sicilian admiral George of Antioch from driving him out of Mahdiyya in 1148. Roger II, then William I, lords of Djerba and the coast towns from Sūs to Tripoli, organised a kind of tolerant protectorate there, the objects of which were mainly commercial. But this was of short duration; the inhabitants, rising against the Christians, very soon regained their freedom; Sūs and Mahdiyya alone had to wait till 1159–1160 before being delivered from the infidels by the Almohad 'Abd al-Mu'min who coming from the extreme Maghrib defeated at Setif in 1151 the Arabs of Ifrīkiya, united under the Rīyahid emir Muḥris b. Ziyād, crushed all opposition, seized the fortresses, massacred Jews and Christians and restored for more than fifty years the political unity of North Africa.

In spite of the prestige of its new masters, the caliphs of Marrakesh, Ifrīkiya did not yet know peace. Almohad authority was not felt directly but through the intermediary of a governor settled in Tunis; this representative of the ruling power, usually a near relative of the sovereign, very soon proved incapable of restoring order to the province, where to the continual threat from the Arabs there was added from 1185 onwards the trouble caused by the Turkoman bands of the Armenian adventurer Karākush and by the final attempt of the B. Ghāniya Almoravids, 'Alī (d. in 1188) and his brother Yahyā. The coming of the caliphs in person, Yūsuf in 1180 and Ya'qūb al-Manṣūr in 1187, at the head of their armies, was not enough to improve the situation. Yahyā was favoured by fortune: in 1200 he had disposed of his former ally Karākush, suppressed his rival Ibn 'Abd al-Karīm al-Bagrāgī, the "caliph" of Mahdiyya, and from his base of operations in the Djerid extended his rule over the whole of the modern Tunisia. It required the expedition of the caliph al-Nāṣir in 1205–1207 to put an end to the Almoravids by reducing Yahyā to a precarious position and to install a powerful provincial government, entrusted at first to the "Shaikh" 'Abd al-Wahid b. Abi Ḥafṣ (1207–1221), the hero of Alarcos. Thus the Hafsids got their first grip on power.

This family of the Hafsids (q. v.), of which another member had been since 1184 governor in Tunis, was descended from a chief of the Hintāta Berbers (a Maṣmūda tribe of the Moroccan Atlas) who had played a very prominent part in the im-

mediate entourage of the Mahdi Ibn Tumart. They established themselves definitely in Ifrīkiya in 1226 with the appointment as governor of Abū Maḥammad 'Abd Allāh who was supplanted two years later by his brother Abū Zakariyā' (1228-1249). The latter, while gradually becoming independent, contented himself however with the title of emir and was the true founder of the great Tunisian dynasty which with various vicissitudes of fortune occupied the throne for three and a half centuries. In spite of their repudiation of Mu'minid suzerainty and the return to Malikiism, the Hafsids always proclaimed an unswerving fidelity to the Almohad tradition of which they liked to consider themselves the authentic representatives. The organisation of their government with a few slight changes reminds one of the early Almohad constitution. Even when the second independent emir, the son of Abū Zakariyā', known as al-Mustansir, had been proclaimed caliph by Mecca about 1250, the sovereign remained surrounded by an important body of Almohads, the corner stone of the political edifice and of the army, and the coins retained their Almohad character in type and weight. The government departments were collected into three great branches: the army, the treasury (*al-azīghā*) and the chancellery. The governors of provinces were for long chosen preferably, indeed almost exclusively, from among the nearest relatives of the monarch. But it would be wrong to deny the part played in the higher administration, as in the intellectual life of the country, by the numerous Muslim refugees from Spain, "Andalus" expelled at the "reconquest" of the thirteenth century.

The Hafsids in their desire to pacify Ifrīkiya came continuously up against the Arab problem. The nomad B. Sulaim having driven back the B. Riyāh were masters of the interior; their factions, hostile to one another, subjected the country districts to regular contributions. Among them, the Kū'ub, who were a Makhzan tribe, frequently interfered in the dynastic disputes, threatening Tunis, supporting pretenders of their own choice, and driving the people of the towns to desperation. In 1284 they obtained from a sovereign who owed his throne to them, a charter of *ḥifā* granting them the revenues of several cities; the rivalry of their two branches, Aḥlād Aḥl 'Lail and Aḥlād Muḥalhal, was to have immediate repercussions on the central power in the course of the fourteenth century.

Down to the death of al-Mustansir in 1277, the dynasty had its brilliant periods. In spite of sporadic rebellions, its rule extended from Tripoli right into Algeria and was solidly established in the principal towns, Tunis, Constantine and Bougie. Its prestige extended beyond the limits of North Africa, attracting the attention of Spain and Christian Europe. This is the period when commercial relations were established on a regular basis with Barcelona, Marseilles, Genoa, Pisa, Sicily and Venice: treaties of commerce and navigation, Christian consulates at Tunis, the importance of the customs duties, which justified the tribute paid by Tunis to Sicily and later to Aragon. A body of Christian mercenaries was gathered round the Hafsid, who was however seriously threatened by the attack on Carthage by St. Louis's Crusaders in 1270.

To sum up, Ifrīkiya enjoyed a more stable and more prosperous régime than in the preceding two centuries: the renaissance of legal studies and of architecture [cf. *tunis*] is evidence of this. Unfor-

tunately the successive revolutions provoked by the claims to the throne of princes of the blood true or alleged — as in the case of Ibn Abī 'Umara in 1283 — rapidly weakened the authority of the Caliph and diminished, to the advantage of the Arabs, the by no means too secure cohesion of the subject peoples. The direct line of al-Mustansir, after the forced abdication of his son al-Wāḥid (in 1279), only produced one further ruler, Abū 'Asīda (1295-1309), and died with him. It was the descendants of another son of Abū Zakariyā', Abū Ishāq Ibrāhīm (1279-1283), who — after the reign of a third son, Abū Hafs (1284-1295), then that of a cousin, Abū Yahyā b. al-Lihyānī (1311-1317) — finally held the power, beginning with Abū Yahyā Abū Bakr (1318-1346).

Hafsid unity, destroyed for a period by the secession of Bougie, which made itself an independent state, was reconstituted, Djerba, in the hands of the Christians since its conquest by Roger of Loria in 1284, was taken from them in 1337; the 'Abd al-Wāḥid threat was averted by the alliance with the now powerful Marmuda. But this alliance itself concealed a danger, since, profiting by the internal disorders, the ambitious Marinid sultan Abū 'I-Hasan, already lord of Tlemcen, did not hesitate in 1347 to invade Ifrīkiya and to install himself in Tunis with his jurists and his court. It required a victorious rising of the Arabs to bring about a Hafsid restoration in 1350, and about seven years later the troops of the Marinid Abū 'Inān were able to occupy Tunis again, although only for a brief period.

It was at this period, in the reign of Abū Ishāq Ibrāhīm (1350-1369), that the personality of the intriguing chamberlain Ibn Tufayr (d. 1364) began to make itself felt; his efforts, however, did not succeed entirely in consolidating again all the lands of the empire. The south in particular gradually slipped away from the caliph; local dynasties established themselves there: the B. Yamīnī at Tozeur, B. al-Khalaf at Nefta, B. Makki at Gabes and the B. Thābit at Tripoli. But Abū 'I-Hāsā (1370-1394) who had begun his career at Constantine, restored the glory of the dynasty; by his continued expeditions he reduced the rebels to obedience, in his reign, a Franco-Genoese crusade, a reprisal against the excesses of the pirates, failed before Mahdiyya (in 1390).

His son Abū Fāris (1394-1434) encouraged the development of the navy, and even despatched a fleet against Malta in 1428; but he had on the other hand to defend himself from the Catalans and Sicilians of Alfonso the Magnanimous who had taken the Kerkennas islands in 1424 and in 1432 made a great attack on Djerba. He built the forts of Ras Adar, Raḥraf and Hammamet against them. In 1424 he took Tlemcen and established his suzerainty there.

The Hafsid fifteenth century, marked by the increasing importance of the freedmen employed under the name of "ḥā'id" as governors and generals, is dominated by the figure of Abū 'Amr 'Uthmān, the last great sovereign, who reigned from 1435 to 1488. Abroad, in spite of the activity of the Tunisian corsairs, there were friendly relations with Europe. Catalans and Genoese were given concessions of the coral fishing at Taharka and of the tunny fishing at Cape Bon. At home, maraboutism, coming from the west, extended its hold and agriculture developed as the result of a period of comparative quiet, in spite of the eternal source of disorders, the nomad Arabs.

On the death of 'Uthmān, things became rapidly worse; three caliphs succeeded one another in the space of a few years; then in the reign of Abū 'Abdallāh (1494—1526) the empire, torn within by the rebelliousness of the tribes, began to collapse before the blows of the Spaniards who pursued the Turkish corsairs in these regions. In 1510 Pedro Navarro deprived it of Bougie and Tripoli, in 1520 Hughes de Moncade temporarily occupied Djerba. Finally in August 1534, the unfortunate al-Hasan, son and successor of Abū 'Abdallāh, found himself driven from Tunis by the celebrated Khair al-Dīn Barbarossa.

He did not return till July 1535, when the town was taken by Charles V, whose vassal he became; and he surrendered to the Spaniards the fortress of La Goulette in perpetuity. The conditions of the protectorate became still harsher in 1540 when Andrea Doria had taken Sfax, Sūsa and Monastir. In 1542, after great Spanish reverses and the defection of his own troops in the struggle against the Kairawān rebel Sūdī 'Arāfa and against the redoubtable marabout confederation of the Shābbīya, which held the whole of Central Tunisia, al-Hasan went to Europe to seek support but in his absence he was dethroned by his son Ahmad (Hamida).

The "cruel and brave" Hamida endeavoured in vain to reconquer the kingdom of his fathers. A new champion, the Turkish corsair Darghūth, who had only been delivered out of the hands of the Genoese in return for the surrender of the island of Tabarka, was driven from Mahdiyya by the Spaniards in 1550; but in the following April he was able to escape cleverly from Andrea Doria in the passes of Djerba, then from his base at Tripoli he occupied Gafsa at the end of 1556 and Kairawān at the beginning of 1558, where he left troops under the command of Haidar Pāshā. In 1560 he inflicted a disastrous defeat on the expedition led against Djerba by the viceroy of Sicily, the Duke of Medina-Celi; but he fell at the siege of Malta in 1565.

The continual fighting between Hamida and the Spanish governor of La Goulette, in spite of several treaties made between them, facilitated the occupation of Tunis at the end of 1569 by the lord of Algiers, 'Alī Pāshā ('Euldī-'Alī), who put a garrison in it. In the autumn of 1573, when Don John of Austria, the victor of Lepanto, had recaptured Tunis from the Turks, he restored Hafsid power for the last time in the person of Muhammad b. al-Hasan, to whom Serbelloni was appointed as adviser. In Aug.—Sept. 1574, Ottoman troops brought from Constantinople on Sinān Pāshā's fleet seized La Goulette and Tunis, putting an end to the Spanish occupation, which had always been limited and precarious, and also to the old Hafsid dynasty, the "national" one so to speak, which after periods of glory had gradually sunk into helpless impotence; its last outburst of vitality was the return of Hamida (in 1581), who held the Tunisian steppes and the Djerid for several years.

Before returning to Constantinople, Sinān made Tunisia a Turkish province under the rule of a Pāshā, at first under Algiers, from 1587 directly under the Porte. An *Aspāh* was in command of the army of occupation of 4,000 men, each hundred of whom was under a *dāy* (*dā'i*). But in 1591 the tyranny of the *dāimān*, the governing body consisting of the higher officers, provoked a bloody

revolution, at the end of which one of the 40 *dāys* was given supreme power. Under the rule of the *dāys* elected by the Janissaries, the Pāshā, the representative of the Sultān, had now only an honorary position. The *Dīwān* on the other hand was remodelled and enjoyed great influence, as did the corporation of the corsairs (*ḥā'ifa* of the *raïs*). From the religious point of view, Hanafism enjoyed official precedence.

The regency owed its final organisation to the third *dāy*, 'Uthmān (1594—1610), who evolved under the name of *miṣnā* a code of laws and maintained order in the country with the support of a *bāy* whose task it was to collect the taxes in two annual circuits with armed forces (*maḥalla*). Through the intermediary of the *kapūdān rā'is* the state controlled piracy on the high seas and shared largely in its profits, which became considerable after a number of renegades — notably Ward, an Englishman — had developed its technique. Moriscos expelled from Spain (in 1609) and settled in Tunis and Cape Bon (Soliman, Grombala) and in other localities (e.g. Tebourba, Medjex el-Bāh, Testour, Guellat el-Andleus) gave a great stimulus to market-gardening and to industry (hosiery and dyeing). Subordination to Turkey had relaxed to such an extent that France, who thanks to the Ottoman capitulations, enjoyed a privileged position throughout the Turkish empire and had established a consulate at Tunis in 1577, had in 1606 to send an ambassador S. de Brèves, to deal directly with the "Powers" of Tunis.

Under the son-in-law and successor of 'Uthmān, Ynsaf (1610—1637), the Regency regained Djerba from the Pāshā of Tripoli and, what was something quite new, delimited its frontiers with Algeria as a result of Algerian attacks in 1614 and 1628. The next *Dāy*, Usta Murād (1637—1640), a Genoese renegade and old corsair, fortified Porto Farina which he peopled with Spanish Moors. But already the authority of the *Dāys* was declining and there is no interest in detailing the 24 *Dāys* (Khodja, Lāls and others) who ruled from 1640 to 1702, generally as puppets in the hands of the *Bāys*, who had succeeded in supplanting them.

The *Bāy* Murād (1612—1631), originally a Corsican called Pāshā, had in his lifetime handed over his office to his son Muhammad (Hamida), thus creating a precedent which secured his family hereditary power. Hamida (1631—1663) made Pāshā in his turn in 1659, relying on a corps of *spahis* (q.v. *ḥā'ifa*) which he distributed between Tunis, Kairawān, Le Kef and Beja, became the real master of the country. He was the founder of the line of the Murādidis — his sons Murād and Muhammad al-Hafāf, his grandsons Muhammad, 'Alī and Ramadān — whose power was constantly threatened by civil troubles (e.g. the rising of Muhammad b. Shukr) which culminated in the assassination of his great-grandson Murād Bū Bala in 1702.

The first half of the xviiith century is marked by a resumption of trade with Europe, particularly with Marseilles and Livorno, for which Christian and Jewish merchants from Spain and Italy were largely responsible. The Marseilles companies established at Cape Negro or Bizerta competed with the Genoese of Tabarka for the trade in coral and gained profits from the exportation of leather and cereals. The foreign relations of the Regency were extended, including for example

Great Britain and the Low Countries; in the second half of the century, as a reprisal for piracy, in addition to the traditional expeditions of the Knights of Malta, European squadrons several times bombarded the coast and demanded reparation.

The position at home, at first fairly flourishing, as is seen from the public works and religious buildings erected throughout the country (medersas, mosques at Tunis, Beja, Kairawān, including those of Sidi Sāhib) gradually became worse under the later Murāḍids, until in 1685–1686 and 1694 Algerian invasions were possible. The tribes, among whom were the dreaded Awlād Sa'īd, became insubordinate; for a long time Le Kef was in the hands of the B. Shannuf and Kalat es-Senam in those of the Hanāgha. The Dī. Ouselat was a hotbed of sedition. Frequent epidemics of plague decimated the people.

After the bloody reign of Ibrāhīm al-Sharrif (1702–1705) who combined for the first time the titles of Bāy, Dāy, Pāshā and Aghā of the soldiers, Husain b. 'Alī Turki was proclaimed Bāy on July 10, 1705 in the middle of a new Algerian invasion; the Husainid dynasty which still rules was founded. Husain restored peace and did a great deal of building (e.g. at Kairawān); but having tried to establish a regular order of succession for the benefit of his direct descendants, he was dethroned by his nephew, 'Alī Pāshā (1735–1756), supported by the Algerians; thus arose new troubles, aggravated by the revolt of Yūnus, son of 'Alī, in 1752. Finally after further intervention by Algeria, Husain's son Muḥammad ascended the throne (1756–59), and the reigns of 'Alī Bāy (1759–1782), Muḥammad's brother, and of his son Hammūda (1782–1814) did much to heal the wounds of the state and to restore real prosperity to Tunisia.

Like agriculture, foreign trade made progress. Although the Bāy had in 1741 destroyed the factories at Cape Negro and Tabarka, his relations with Christian powers became more numerous: many treaties were made, now signed in the name of the Regency by the Bāy alone, who was a regular monarch. France, although on several occasions at war with Tunis, finally appointed a Consul-General there. A war with Venice lasted 8 years (1784–1792). 'Alī Bāy, who had subdued and scattered the rebels of the Dī. Ouselat in 1762, could not dispose of the Algerians, who still gave a great deal of trouble to Hammūda. The latter, aided by the *Ṣāḥib al-Taba'* Yūsof, massacred the mutinous Janissaries in 1811 and reorganised the government.

The sixteenth century was to bring marked changes into the political situation of the Regency. First of all there was the suppression of the corsairs and piracy — one of the principal sources of the revenues of the state — forced upon Mahmūd (1814–1824) by the European powers, as a result of the congresses of Vienna and Aix-La-Chapelle; there were further the incalculable consequences of the taking of Algiers by France in 1830, in the time of the Bāy Husain (1824–35). For half a century Tunisia made vain efforts to adapt herself to the new conditions by a domestic reorganisation and to steer between a slack and intermittent Ottoman suzerainty and the interference of the Christian nations in her affairs through their consuls.

The suzerainty of the Porte, encouraged by Great Britain, disputed by France, was only

manifested in a few firmans of investiture and in the sending of Tunisian troops to the Crimea (in 1855) against Russia (a Tunisian squadron had also cooperated with the Turkish fleet at Navarino in 1827). French, English and Italian influence on the other hand continued to increase steadily. It is true that the French plans for establishing Tunisian princes in Algeria did not succeed. On the other hand, Tunisia no longer levied the tribute which Christian states had formerly paid in return for the right of trading with her. The Bāy Ahmad (1837–1855), a kind of "enlightened despot", abolished slavery, granted liberties to the Jews, organised the "Tunisian army" on the European model with French instructors, and visited Louis Philippe in Paris in 1846. But his vast expenditure, further increased by the building of the arsenal of Porto Farina and the palaces of Muḥammadia, emptied the coffers of the state, already very poorly supplied; new taxes had to be raised: *maḥḥūlāt*, *kānūn* on the olive-trees, monopolies.

His cousin Muḥammad (1855–1859) introduced the *maḥḥūlāt*, a poll-tax of 36 piastres, from which the towns of Tunis, Sūsa, Monastir, Sfax and Kairawān were exempted; but the most important event of his reign was that under pressure from the consuls in the "fundamental agreement" (*ahd al-amān*; Sept. 9, 1857) which reproduced the *ahd al-sharīf* [q.v.] of Galkhane of 1839, he proclaimed the equality of all the inhabitants of Tunisia before the law and taxes, liberty of conscience, liberty to trade and to work, and the right of foreigners to acquire landed property. His brother Muḥammad al-Sādīk (1859–1882) on April 26, 1861 promulgated a constitution, which he had approved by Napoleon III; executive power remained in the hands of the hereditary but responsible Bāy (the throne passing to the eldest of the princes of the Husainid family), assisted by ministers chosen by him; legislative power was divided between the Bāy and Grand Council of 60 nominated members. The judicial power was independent; the tribunals followed a civil and penal Tunisian code; provincial administration was in the hands of the "kā'id", assisted by elected "shāikhs"; the Bāy had only a civil list and the farming out of taxes etc. was abolished.

In spite of these reforms, the situation became rapidly worse; the disastrous financial policy of Muḥammad Khaznadār (appointed minister in the reign of Ahmad Bāy) which had recourse to loans and to the raising of the *maḥḥūlāt* taxes, provoked a rebellion of the tribes under 'Alī b. Ghadthum in 1864 and the institution of an International Financial Commission (Tunisians, French, Italians, Maltese) in July 1869. In 1864 the constitution had been suspended. In Oct. 1873, the general Khair al-Dīn succeeded to Khaznadār, who was dismissed; during his ministry, which lasted till July 1877 and was marked by intelligent reforms, there was a slight improvement. But the regular resources of the country were so small and the debts so great that the Financial Commission came to nothing; the bad administration of Muḥammad b. Ismā'īl (Sept. 1878) proved the last straw, while a bitter struggle for influence was going on between the French and Italian consuls, Roustan and Maccio, regarding the concession of public services.

France, encouraged since the Congress of Berlin in 1878 by Great Britain and Germany, then inter-

ferred. As a result of raids by Khumirs into Algeria and various other incidents, the minister Jules-Ferry sent 30,000 men to invade Tunisia in April 1881. On May 12, in spite of Turkish protests, General Bréart, without having struck a blow, forced Sidi to sign the treaty of Kasar-Said (known as that of Bardo), which practically handed over to France the control of the military, foreign and financial affairs of the Regency. A French "resident Minister", in the first place Roustan, was appointed, through whom all dealings of the Bâi with the French government had to be conducted. Thus, although the word was not used, were laid the foundations of the "Protectorate", which became effective and final when, after the rising in the centre and south (under 'Ali b. Khalifa) and its rapid suppression by a second French expedition, the Bâi agreed by the convention of La Marsa of June 8, 1883, to "proceed with such administrative, judicial and financial reforms as the French government" should consider useful.

The establishment of the Protectorate marks the beginning of a new era in the history of Tunisia. Never since the Muslim conquest had any political event had such a profound effect on the organisation of the country and the life of its inhabitants. The original feature of the rule, which in spite of criticism has now lasted for half a century, lay essentially in the outward maintenance of the old machinery of government, upon which a new framework and new institutions were merely superimposed.

H. H. the Bâi remains in theory the sovereign of the Regency, the "lord" (*qāḍī*) of the kingdom of Tunis; but the Resident Minister, since June 23, 1885 called the Resident-General, under the French Foreign Minister, and the plenipotentiary of the Republic in the Regency, is in practice the real ruler. Being both Minister of Foreign Affairs of the Bâi (who can correspond with Paris only through him) and President of his Council, he countersigns the beylical decrees, the promulgation of which was made compulsory by a decree of Jan. 1885; he has also under his orders the commanders of all the forces on land and sea and all the administrative services. The military guard left to the Bâi is exceedingly small (600 men); his subjects, forced to serve in the Tunisian army (beylical decree of Jan. 12, 1893 on recruiting), form in a way a part of the French army; over 10,000 fell for France in the war of 1914-1918.

On the council of ministers, alongside of two, later three, native ministers, sit the "Directeurs" or French heads of departments, the number of whom has grown rapidly, as well as the general commanding the division of occupation and the naval commander of Bizerta who act as ministers of war and of the admiralty. Each of these high officials issues by-laws. The "Caidats" into which the tribes are divided have become territorial divisions; above the "caid" there is placed a French "contrôleur civil".

Tunisian legislation, which applies to Tunisia alone, is often quite original. Only questions relating to the Resident-General, to the contrôleurs civils and to French justice have been settled by decree of the President of the Republic. The actual position in politics and administration and a juristic system which has gradually taken root seem to justify the recent view, which sees in

Tunisia the existence of a "double sovereignty", that of the Bâi, traditional, and that of France, more recent and progressive.

The first great task of the protecting nation has been to eliminate as much as possible foreign interference in its two forms, financial and judicial. France having guaranteed the Tunisian debt, Great Britain and Italy agreed to the suppression of the Financial Commission, which was carried out in Oct. 1884.

Tunisia, given a regular system of financial administration and a normal budget, regained its economic stability. The Bâi was given a civil list, for the upkeep of his family and his court. The French government still puts down officially in the budget certain expenses like an important subvention to the archbishopric of Carthage. Through the decree of July 1, 1891 the monetary unit is no longer the piastre but the franc.

The French law of April 10, 1883 having created French tribunals in the Regency, and the beylical decree of May 5 1883 having agreed that all those who formerly had the benefit of capitulations were amenable to the new courts, the foreign powers, one after the other, renounced (1883-1884) their consular jurisdictions, just as in 1896-1897 they had to abandon the customs privileges which they also held under the capitulations. Italy alone made reservations; and if at the expiration of her treaty of 1868 with Tunisia and immediately after her defeat at Adowa in Ethiopia, she had to recognise the fact of the Protectorate — which Turkey declined to recognise officially until the treaty of Sévres in 1920 — she has nevertheless retained an advantageous position in the Regency which she does not cease to covet. Her subjects are entering it in larger numbers than the French; she is developing her influence through the press (the daily *Union*), banking and especially cultural institutions (schools, societies) which by virtue of her agreements are not under French control; she complains however of certain steps which put her subjects at a disadvantage. In 1919, France recognised her ownership of the oases of Ghat and of Ghadames (the frontier with Tripolitania had been delimited in 1910) by an agreement, which is far from having put an end to the disturbing "Italian question" in Tunisia.

The Protectorate has enabled France to carry out in the Regency a remarkable work in the way of utilising natural resources, and in supplying intellectual and social needs (hospitals, dispensaries, medical men, benevolent societies, various scientific and learned institutions). Modern implements and more rational knowledge and methods have produced encouraging economic results. Primarily a land of agriculture — cereals, the vine, olive, vegetables, dates, to which may be added cork and alfalfa — and cattle-rearing, Tunisia is becoming more and more an exporter of iron, lead and zinc but especially of phosphates (since the discoveries of Ph. Thomas in 1885). It imports fuel, tropical products and a quantity of manufactured objects.

Its foreign trade is about 3 milliards of francs. For a number of years, it is true, its balance of trade has shown a deficit; the revenue from tourists is not sufficient to balance this.

To facilitate European colonization and to modernise the administration of lands, Tunisia by decree of July 1, 1885 was given an important *loi foncière* based on the Acte Torrens: optional registration

of lands, on a favourable decision by a "Tribunal mixte" instituted for this purpose (at Tunis 7 French and 3 Muslim magistrates, at Sîma 4 French and 2 Muslim); a decree of March 1924 also foreshadowed the establishment of a survey. In the early period of the occupation, colonisation by French agriculturalists was left almost entirely to individual initiative. An official policy of settling French citizens on the land has only been actively pursued since about 1900. The Domain purchases lands to sell them later on a system of very easy payments to Frenchmen, e.g. former students of the *École Coloniale d'Agriculture* in Tunis. The Italians compete with the French, less by the size of their farms, than by the number of their farmers.

In default of a great immigration of French citizens, France has begun in Tunisia a policy of naturalisation by the decrees (the one presidential and the other beylical) of Nov. 8, 1921; but as a result of litigation begun in this connection by Great Britain before the Court of the Hague, they have been replaced by the French law of Dec. 20, 1923; naturalisation, considerably facilitated to foreigners and strangers who request it, becomes automatic (with however the power to decline it) in the second generation, obligatory in the third, for foreigners settled in the Regency. Great Britain has accepted in the main these regulations which concern chiefly her Maltese subjects. The Italians however by their agreements escape any forced naturalisation; but some of them become naturalised voluntarily. The "néo-français", among whom the Muslims do not number 2,000, while they include about 5,000 Jews, form over a quarter of the present French population.

The Jews, of whom several thousands of European origin have retained Italian nationality, remain for the most part subjects of the Bâi under native authority and jurisdiction, except in personal matters in which they are dealt with by a "Tribunal Rabbîque" of Tunis (reorganised by decrees of Nov. 1898 and Nov. 1929) and by "notaires Israélites" (decrees of Febr. 1918 and Apr. 1927). The Tunisian Jews do not perform military service and in general cannot become government officials. Their rapid development in European civilisation raises the problem of their obtaining in large numbers or en bloc French citizenship. The decree of Aug. 30, 1921 established, for all the Jews in the contrôle civile of Tunis, without distinction of nationality, a "Conseil de la Communauté" of 12 members elected for four years by suffrage of the second degree, with authority to deal with matters of relief and worship. The government appoints the administrators of the other Jewish communities; it also appoints the Chief Rabbi of Tunisia. The practice of religion is declining, but Zionism on the other hand enjoys undeniable favour.

The government of the Protectorate has always tried to improve, without offending religious beliefs, the native administration and the economic and religious conditions of the Muslims (cf. above). If there are many problems to be solved, some of which are being studied, the work done so far is however quite appreciable. In spite of its resistance to the adoption of western ways of living, the Muslim world of Tunisia is undergoing a radical transformation, of which it would be rash to predict the results. The *Dawîr* movement (Tunisian constitutional party, desiring autonomy), which made progress in the years following the

war, was skillfully checked by the Resident-General Lucien Saint. It looks at present as if the native population are satisfied with the nature of the reforms towards which, during the last ten years (1920-1930), the domestic policy of the Protectorate has been directed.

The liberal measures already taken, notably in 1922 and 1928 the creation of and reorganisation of the Grand Conseil, follow two fundamental principles: an appeal to the more and more direct collaboration of the natives, and an extension of the powers of the elected assemblies. New rights are being given in the French colony: elected municipal councils, a greater liberty of the press and of combination.

At the time of writing, Tunisia is preparing to celebrate in tranquillity the jubilee of the Protectorate.

List of Bâys since the French Occupation:

- Muh. al-Sâdik 'Alî (1882-1902)
- Muh. al-Hâdi (1902-1906)
- Muh. al-Nâsir (1906-1922)
- Muh. al-Habîb (1922-1929)
- Ahmad (1929-)

List of Resident-Generals:

- Roestan
- Paul Cambon (appointed in March 1882)
- Massicault (Nov. 1886)
- Rouvier (Nov. 1892)
- Millet (Nov. 1894)
- Stéphen Pichon (March 1901)
- Alapetite (Dec. 1906)
- Flandin (Oct. 1918)
- Lucien Saint (Jan. 1921)
- Manceron (Jan. 1929)

Bibliography: If we except the general histories of Islâm (Müller, Caetani, etc.) and of North Africa (Mercier, Faure-Biguet, etc.), the histories of Tunisia are very poor. Cf. however a good scholarly résumé: 'Abd al-Wahhâb, *Khawâṣṣ Ta'rikh Tunus*, Tunis 1344.

1. For the middle ages:

- a. The Arab geographers and travellers, among whom are Yâqūt, Abu 'l-Fida', Ibn Battûta, but more particularly: al-Yâ'qûbî, *Descriptio al-maghribi*, ed. and transl. de Goeje, Leyden 1860; Ibn Hawkal, *S. G. A.*, ii., transl. *J. A.*, 1842; al-Bakrî, *Description de l'Afrique septentrionale*, transl. Algiers 1911-1913; al-Idrîsî, *Nuṣṣat al-Maghrib*, ed. and transl. Leyden 1866; *Kitâb al-Iṭṭihâr*, Vienna 1852, transl. Rec. Constantine 1899; al-'Abdârî, *Rihla*, transl. *J. A.*, 1854; al-Tijânî, *Rihla*, ed. in the press Tunis, transl. *J. A.*, 1852-1853; Ibn Faḥl Allâh al-'Umârî, *Muṣṣab al-Aḥbâr*, ed. fragm. 'Abd al-Wahhâb, Tunis n.d., transl. Gaudfroy-Demombynes, Paris 1927;

- b. the Muslim historians: Ibn 'Abd al-Hakam, *Kitâb Futuh Miṣr*, ed. Torrey, New Haven 1922, transl. do., in *Bibl. and Semitic Studies*, New-York 1901; Ibn Hammâd, *Histoire des rois Ouladides*, ed. and transl. Vonderheyden, Algiers 1927; Ibn al-Athîr, *Annales du Maghreb et de l'Espagne*, transl. Fagnan, Algiers 1901; Ibn 'Idhârî, *al-Bayân al-maghrib*, 2 vol., ed. Dozy, Leyden 1848-1851, vol. 3, ed. Lévi-Provençal, Paris 1930, transl. Fagnan, 2 vol., Algiers 1901-1904; al-Nuwairî, *Historia de los musulmanes de España y Africa*, ed. and transl.

Gaspar Remiro, Granada 1917-1919; Abū Zakariyā, *Chroniques*, transl. Algiers 1878; Ibn al-Khatīb, *Raḥm al-Hudā*, Tunis 1316; do., *Amāl al-ʿAlam*, ed. ʿAbd al-Wahhāb (in *Cent. Amari*), Palermo 1910; Ibn Khaldūn, *Kitāb al-ʿIbar* 2, Būlak 1289; do., *al-Muḥaddith*, frequently ed. pr. Bairūt and Cairo, transl. de Slane, Paris 1862-1868; do., *Histoire des Berbères*, transl. de Slane, Algiers 1852-1856 2, Paris (in course of publication); Ibn Kāfūdh, *al-Furūsiya*, ed. and transl. Iragmā, J. A., 1848-1852; lith. Paris 1263, ed. in the press Tunis; Abū l-Maḥsin, *Extraits relatifs au Maghreb*, transl. Fagnan, Rec. Constantine 1906; al-Zarkashī, *Taʾrīkh al-Dawlatayn*, Tunis 1289, transl. Fagnan, Constantine 1895; *Extraits inédits relatifs au Maghreb*, transl. Fagnan, Algiers 1924;

c. Biographical collections: Abū l-ʿArab, *Tabaḥāt ʿUlamāʾ Ifriqiya*, ed. and transl. Ben Cheneb, Paris-Algiers 1915-1920; Ibn Naḍī, *Muʾallim al-Imān*, Tunis 1320; and also: Ibn al-Abbār, Ibn Khallikān, Ibn Farḥūn, Ahmad Bāliḥ;

d. Numerous passages in European chronicles like the historians of the Crusade of St. Louis (cf. Sternfeld, *Ludwigs des Heiligen Kreuzzug nach Tunis*, Berlin 1896) and Munatier, Villani (cf. Schiaparelli, *Dichiarazione... Glov. Villani relativi alla storia dei Beni Hafs in Tunisia*, Rome 1892), Cabaret d'Orreville, Froissart;

e. The documents edited by: Amari, *I diplomi arabi del v. archivio fiorentino*, Florence 1863-1867; Mas-Latrie, *Traité de paix et de commerce... de l'Afrique septentrionale au moyen-âge*, Paris 1866-1872; Marengo, *Genova e Tunisia (1288-1215)*, Rome 1901; Giménez Soler, *Epistolas... relaciones entre la corona de Aragón y Túnez*, Inst. Est. Catalana Amari 1908, Barcelona; do., *Documentos de Túnez*, ib., 1909-1910; Cerone, *Alcuni documenti sulla seconda spedizione di Alfonso V contro l'isola Gerba*, ib.; Ribera, *Tratado de paz... entre Fernando I... de Nápoles y Abuamer Otman rey de Túnez*, in *Cent. Amari*, Palermo 1910;

Special monographs: a. on the Muslim conquest: Fournel, *Les Berbères*, Paris 1875-1881; Diehl, *L'Afrique byzantine*, Paris 1896; Caudel, *Les premières invasions arabes dans l'Afrique du Nord*, Paris 1900;

b. on the middle ages: E. F. Gautier, *Les siècles obscurs du Maghreb*, Paris 1927; Vonderheyden, *La Berbérie orientale sous la dynastie des Beniou 'l-Aghlab*, Paris 1927; ʿAbd al-Wahhāb, *Bizāʾ al-ʿAḥl fī ḥaḍarat al-Kairawān*, Tunis 1330; Chalandon, *Histoire de la domination normande en Italie et en Sicile (passim)*, Paris 1907; G. Marçais, *Les Arabes en Berbérie du XI^{ème} au XIV^{ème} siècle*, Constantine-Paris 1913; van Berchem, *Titres califaux d'Occident*, J. A., 1907; Schaub, *Handelsgeschichte der roman. Völker des Mittelmeergebiets bis zum Ende der Kreuzzüge (passim)*, Munich 1906; Giménez Soler, *El comercio en tierra de infieles durante la edad media*, Bol. R. Acad. Buenas Letras, Barcelona 1909-1910; La Mantia, *La Sicilia ed il suo dominio nullo Africa settentrionale, dal sec. XI al XV*, Arch. Stor. Sicil., 1922; Sayous, *La commerce des Européens à Tunis depuis le XI^{ème} siècle jusqu'à la fin du XV^{ème}*, Paris 1929; Boissoumieu, *Les relations commerciales de la France méridionale*

avec l'Afrique du Nord du XI^{ème} au XV^{ème} siècle, Bull. géogr. du Comité des tr. hist., 1929; Alemany, *Milicias cristianas... del Almagreb*, in *Homenajes a Cordera*, Saragossa 1904; Delaville De Roulx, *La France en Orient au XIV^{ème} siècle*, Paris 1886 (p. 166-200); Cerone, *Alfonso il Magnanimo ed Abu Omar Otman*, Arch. Stor. Sicil. orient., 1912-1913.

2. The later Hafsiids and the Spanish occupation:

a. Travellers and geographers: van Ghisele, *Travels... in lande... Barbarien* (1485), Goud 1557; Leo Africanus, *Della descrizione dell' Africa*, ed. Ramusio, Venice 1550, transl. Temporal, Paris 1830, 2nd ed. Schefer, Paris 1896; Marmol, *Description general de l'Africa*, Granada 1573, transl. Perrot d'Ablancourt, Paris 1667;

b. Documents publ. by: Bégouen, *Notes et documents... histoire de la Tunisie*, Paris-Toulouse 1901; Foucard, *Relazioni dei duchi di Ferrara e di Modena coi re di Tunisi*, Modena 1881; Odorici e Amari, *Lettere di Muley Hassan a Ferrante Gonzaga*, Modena 1865; La Primaudaye, *Documents inédits sur l'histoire de l'occupation espagnole en Afrique*, R. A., 1875-1877; Grandchamp, *Documents relatifs à la fin de l'occupation espagnole en Tunisie*, R. T., 1914; Monchicourt, *La Tunisie et l'Europe. Quelques documents relatifs aux XVI^{ème}, XVII^{ème} et XVIII^{ème} siècles*, R. T., 1905; and also, *passim* the rich *Col. de doc. ined. para la hist. de España*, Madrid;

c. Studies by: Motylinski, *Expédition... contre Djerba (1510)*, in *Actes XIV^{ème} Congrès Orient.*, Algiers 1905; Mnoñl, *Tunisi e la spedizione di Carlo V*, Milan 1876; Cat. *De Caroli V in Africa rebus gestis*, Paris 1891; Medina, *L'expédition de Charles-Quint à Tunis*, R. 3. ADMINISTRATION.

a. French administration. At the beginning of the Protectorate and by virtue of the beylical decree of Feb. 4, 1883, the Resident-General was immediately assisted by a "Secretary General of the government of Tunisia", who had control of all the official correspondence and held the same position with the Prime Minister as the Resident did with the Bey. This office was abolished on July 14, 1922 and to some extent replaced by a "Delegato to the Residence General", whose powers, fixed by presidential decree of Feb. 10, 1923, are very different and in practice not so considerable, although he is vice-president of the Council of Ministers, inspecteur des contrôles civils, and takes the place of the Resident when away or prevented from appearing. By virtue of a residential resolution of Nov. 10, 1926, the Resident is assisted by a civil cabinet and a military one.

This same resolution of 1926, supported by a number of beylical decrees of the same day, remodels the main government offices of the Regency and defines the activities of the principal services organised and directed by the French since the occupation: the "Direction Générale des Travaux Publics" created on Sept. 3, 1882, the "Direction Générale des Finances" on Nov. 4 of the same year, the "Direction Générale de l'Instruction publique et des Beaux-Arts" on May 6, 1883, the "Direction Générale de l'Agriculture, du Commerce et de la Colonisation" on Nov. 3, 1890, the "Direction Générale de l'Intérieur" (which includes the departments of public health and public assistance) and the "Direction de la Justice Tunisienne" of July 14, 1922 (the two latter were created as a result of the suppression of the office of Secretary General). We may add the "Office des Postes et Télégraphes", which was created on June 11, 1888, and became an autonomous "Direction" by the decree of Nov. 18, 1927.

If we except the southern part, which is held to be a military zone (capital Médénine) and governed by a "Service des Affaires indigènes" (2 officers of higher rank, 20 captains or lieutenants, 11 military interpreters, paid out of the French budget), Tunisia is divided for administrative purposes since 1922 into 5 "regions" (Bizerta, Tunis, Le Kef, Sfax and Sfax) each of which is sub-divided into a certain number of "contrôles civils", in all 19: Beja, Bizerta, Tabarka, Suk el-Arba, Tunis, Zaghouan, Gromballa, Téboursak, Le Kef, Maklar, Medjez el-Bab, Sfax, Kairawan, Thala, Sfax, Gabes, Gafsa, Tozeur, Djerba. The "contrôleurs civils", French officials instituted by presidential decree of Oct. 4, 1884, are appointed by presidential decree on the nomination of the Minister of Foreign Affairs; their duties, defined by the residential circular of July 22, 1887, consists mainly in supervising the native administration and aiding in French colonisation; they have the title of vice-consuls and perform the duties of French consular agents. Their status was regulated by residential resolution of April 25, 1922.

French law is administered in the Regency by two tribunals of first instance, one at Tunis (4 chambers), the other at Sfax, and by 14 regular "justices de paix" to whom are to be added the justices "forains", whose courts are itinerant. The tribunals are amenable to the Court of Appeal in Algiers. Penal law is administered, for offences and misdemeanours, by correctional tribunals, and in the same cases as in Algeria by "juges de paix". Crimes are judged by criminal tribunals sitting at Tunis and Sfax, composed of 3 French professional judges and 6 assessors, whose appointment is regulated by the presidential decree of Nov. 29, 1893; their nationality depends on that of the accused; there is no jury. All the French magistrates, who are in every respect the same as in Algeria, are appointed by presidential decree on the nomination of the "Garde des Sceaux".

France is responsible for the budget for the army and the navy. Bizerta is the headquarters of a naval prefecture which covers the whole of the shores of North Africa. The general commanding the "Division d'Occupation" assumed in 1926 the title of "Commandant supérieur des troupes de Tunisie".

To complete the list of the principal public services of Tunisia, mention must be made of the two companies which have concessions for the most important ports: that of Bizerta, founded in 1886, that of Tunis, Sfax and Sfax founded in 1894; and the 3 railway companies: a. the Company Bône-Guelma, called Compagnie Ferrière as a result of the convention of July 22, 1922 (almost all the Tunisian system, which consists primarily of a long line following the coast, two lines Tunis-Algeria through the valley of the Medjerda and by the High Tell, a line from Sfax to the phosphate mines west of Gafsa through the steppes of Sbeitla and Feriana); b. the Compagnie des phosphates de Gafsa (narrow gauge lines connecting Sfax with Gabes, Redeyef and Tonerre); c. the Tramway Company of Tunis (electric system in the suburbs: 2 lines Tunis-La Marsa, one via La Goulette and Carthage).

Besides the government departments, Tunisia has a certain number of deliberative assemblies, nominated or elected. The French alone are electors to the chambers of commerce and agriculture, elected for 6 years, one third retiring every two years: the chamber of commerce of Tunis, chamber of agriculture of Tunis, chamber of commerce and agriculture of Sfax, chamber of commerce and agriculture of Bizerta, instituted in 1895, chamber of commerce of Sfax, all four instituted in 1902. Women have the right of voting but cannot themselves be members. The chamber of mining interests which meets in Tunis, created by residential resolution of July 15, 1922, represents indiscriminately French or Tunisian owners, directors, managers or engineers of mines in Tunisia; its 12 members are elected for 6 years and half retire every 3 years.

60 places have been created municipalities. By virtue of the decrees of Jan. 14, 1914 and Jan. 1, 1924, the municipal councils appointed by decree for 3 years, one third only elected each year, consist of a native president, one or more French vice-presidents and a varying number of native or European councillors. Their deliberations, which are public, are subject to the approval of the prime minister.

The decree of July 13, 1922, replaced by that of March 27, 1928, instituted "regional councils"

whose members, elected for 6 years, were at first representatives on the one hand of the native municipal councillors and of the (native) councils of the *khâdime*, and on the other of a slight majority of Frenchmen representing French municipal councillors or chambers of commerce and agriculture; they now also include a vice-president of the municipality of each capital of a region, the delegates to the Grand Council elected by universal suffrage, representatives of the chamber of mining interests and native chambers of commerce. The regional council, a consultative body on economic and financial questions, meets twice a year, for 6 days at most at each session, in the capital of the region under the presidency of a *contrôleur civil*, appointed by the Resident General, who has however no vote. The French members elect a vice-president and a secretary, another vice-president and another secretary are appointed by the native members.

The principal representative assembly, the "Grand Conseil", replaced on July 13, 1922 the "Conférence Consultative" of 1896, which had in the meanwhile been several times remodelled. A number of decrees and resolutions of March 1928 regulate its composition and powers. It consists of a French and a native section which in principle deliberate separately. The French section, presided over by the Resident General, numbers 52-22 representatives of economic interests, 6 elected by the chamber of agriculture of Tunis, 2 by the chamber of commerce of Bizerta, 4 by that of Tunis, 4 by the mixed chamber of Sfax, 4 by that of Sfax, 2 by the chamber of mining interests, and 30 representatives of the French colony, elected regionally by all French inhabitants over 21 years of age and domiciled in Tunisia for at least two years, 6 for Bizerta, 10 for Tunis 4 for Le Kef, 5 for Sfax, 5 for Sfax and all the "territoires militaires". The members of the Grand Council, aged at least 25, are elected for 6 years, half being elected every 3 years. The Council examines and votes the budget. It can also express its wishes, except on political or constitutional questions, give its opinion on questions submitted to it by the government, and itself put questions to the government. France reserves the right to approve a decree dissolving the Grand Council or to overrule its decisions even on budget questions. The Grand Council meets once a year in ordinary session for a maximum period of 20 days; it may also be convoked for an extraordinary session. Each section elects its own officers and appoints two grand commissioners: financial commission and commission for economic machinery. The French section sends 5 representatives of economic interests and 7 of the French colony. The plenary sittings of the Grand Council are not public. A "Commission Arbitrale", presided over by the Resident-General deliberates on all proposals, votes or motions, on which the two sections have held different opinions. Its 14 members are appointed half by the French section and half by the native section: in case of persistent disagreement, the Resident General takes part in the voting, as well as the ministers or directors present, i.e. the government has a casting vote between the two disputing sections.

A. Finance. The fiscal resources of Tunisia are composed, in decreasing proportion, of direct taxes: 1. the "taxe personnelle" (*istifâ*) which has replaced the old *madjâ* (cf. Barthès, *Les impôts arabes en Tunisie*, Algiers 1923) and is levied on every male inhabitant of Tunisia over 20 years of

age; 2. ground taxes (*khann* on the date-palms, *khann* on the olive-trees, *uqar* or tithe on cereals, from which lands newly brought under cultivation are exempted for five years, *maradji* on orchards and irrigated lands except those of Djerba, *khadar*, "special tax on the cultivated lands of Djerba", tax on cattle instituted in 1918, tax on the vine instituted in 1919, tax on undeveloped land instituted in 1927, tax on the rentable value and on the rentals of urban and suburban estates levied mainly for the benefit of the communes); 3. taxes on commercial and industrial profits (licence instituted in 1927 and mining dues); 4. tax on the income from personal property, mortgages etc., created in 1918; and a few taxes called "assimilées".

Indirect taxes, which are increasing in importance, are: a. stamp and registration duties, b. customs duties, calculated in such a way as to favour French products, c. a series of duties on the manufacture and sale of various products, which in 1920 replaced the old *makhlalat*, under the name of "indirect contributions". In addition there are d. the revenues from monopolies (tobacco, salt, matches, playing-cards), e. the profit from the Post Office, f. from various industrial enterprises and g. from the state lands.

c. Native administration. The native ministers number 3: the "prime minister" (*al-wazir al-akbar*), assisted by the "minister of the Pen" (*wazir al-kalam*), with the Director General of the Interior at his side; the Minister of Justice (*wazir al-adliya*) whose office was instituted on April 26, 1921 and who is advised by a French "Directeur de la Justice Tunisienne".

The basis of the territorial organisation of Tunisia is the division into *kaidates*, at present numbering 37: Beja, Bizerta, Mateur, Ain-Draham, Suk el-Arba, Suk el-Khemis, Tunis-ville, Tunis-banlieue, Zaghouan, Soliman, Nabeul, Téboursouk, Le Kef, Tajerouine, Ouled-Ayar, Ouled-Aun, Medjes el-Bab, Susa, Monastir, Mahdia, Souassi, Kairawan, Djelass, Fraichich, Madjeur, Sfax, Djebeiana, La Skira, Arad, Gafsa, Hammama, Djerid, Djerba, Matmata, Nefzaoua, Ouerghemma, Tatahouine. In Tunis-ville, the *kaid* keeps the old name of *shahid al-madina*. The *kaid* (*khay*), appointed by decree, has retained functions which are administrative, judicial and financial: he acts as intermediary between the government and the people, has to see that the public peace is maintained, deals without appeal with civil or penal affairs of slight importance and collects taxes. He has at his disposal a native gendarmerie (*mijaz*) composed of "spahis" (*shahis*) who collect the fines (*khidma*) from defaulting taxpayers. There is a tendency to replace by a fixed salary the taxes which he used to collect for himself from those under him; some steps have already been taken in this direction.

The *kaid*s are assisted or supplemented by *khalfas* appointed by decree since Nov. 28, 1889; they now number 67 divided into 2 grades, of which 20 are in the upper grade. Since June 4, 1912, there has been a group of "*kaid stagiaires*" (*khafiya*) or "probationers" and of *khalfas* of an exceptional class, now numbering 16, who represent the *kaid* in certain spheres of his duties.

Each *kaidate* is subdivided into a certain number of *shaikhates*, in all 604, placed under the authority of a *shaikh* appointed by the government on the nomination of the *kaid*. The *shaikh* is responsible for public order and aids in the collection of taxes.

A number of decrees and resolutions of 1922, modified in 1928, have instituted and organised (except in military territory) "councils of *kaidates*", whose purpose is to discuss the economic needs of the *kaidates* and to reply to government enquiries and elect representatives to the regional councils. Each *shaikhate* sends 4 delegates, 1 or 2 principals, the others subsidiary, of at least 30 years of age, chosen from among themselves, subject to ministerial approval, by the notables, i.e. by the most distinguished taxpayers, over 25 years of age, living in or owning land in the *shaikhate* outside the communes. The lists of notables drawn up by the *kaid* are revised by a commission on which sit along with him the civil comptroller and the *khdt*. Solicitors, officials or policemen cannot be delegates to the council. The sittings, which last 2 days, are quarterly. The elections take place every 6 years.

Native chambers of commerce and agriculture were created in 1920, reorganised in 1924 and 1928: the "*chambre d'agriculture indigène du nord*" which includes an agricultural section (1 member for each *kaidate*, chosen by the government from two candidates presented by the delegates of the *shaikhates*) and a section for rural economy (2 members, matriculants or agricultural engineers, chosen by the government from 4 candidates presented by the delegates from the *shaikhates*); the "*Chambre de Commerce indigène du nord*" which includes a commercial section (12 elected Muslims and 5 Jews) and a section for general economics (2 Muslim or Jewish members, chosen by the government from 4 candidates presented by the electors). The electors must be at least 25 years of age and the candidates 30.

Since 1928 it has been provided that these two assemblies should have joint meetings with the similar French bodies. There has also been founded, inside each "*chambre mixte*" of Susa and Sfax, a native section of 7 members.

We have already seen what share the natives take in the municipal councils and regional councils. In the Grand Council they form a distinct section of 26 members, 10 of whom represent the 5 regions (2 each), 3 the territories of the south, 4 the native chamber of commerce of the north, 4 the native chamber of agriculture of the north, 2 each of the native sections of the mixed chambers, 1 the Jewish community of Tunisia. This section of the Grand Council is usually presided over by the Delegate to the Residence General or a high French official of the protectorate nominated by the Resident, exceptionally by the Resident-general. The two sections may agree to deliberate in common; the votes are then considered as having been given by a single assembly.

Tunisian law, the statutes of which were settled by decree of Jan. 1928, carefully preserves the distinction between lay and religious jurisdiction. At the head of the first category, the tribunal of the "*Ouzara*" (*Uzara*) at Tunis has comprised since 1921: a. a kind of court of appeal for all Tunisia, the two courts of which (civil and penal) each sit with 3 magistrates; b. a criminal court which judges cases of first instance and without appeal; c. a court of arraignment; d. a commission des requêtes, a kind of court of appeal. The Ouzara is completed by regional tribunals with 3 magistrates created at Sfax, Gabes and Gafsa in 1896, at Susa and Kairawan in 1897, at Kef in

1898, at Beja in 1926. In 1906 "commissaires du gouvernement" were attached to them, i.e. French lawyers speaking Arabic. Parties can be represented by "oukils" (*wakīl*, pl. *ukalā*). In conclusion it may be noted that the regional tribunal of Tunis is still called *Drība*, and that Tunis has also the tribunal of the "Oul" (*ʿUḷ*), a kind of tribunal for trade and commerce on which sit the *Shāikh al-Madīna* and ten assessors.

Girault, *Principes de colonisation et de législation coloniale* (vol. v., *La Tunisie et le Maroc*), 5th ed., Paris 1928.

4. MUSLIM RELIGION.

With the exception of the island of Djérba, $\frac{2}{3}$ of the inhabitants of which are Shāridjīs, Tunisia has for long adopted Malikiite sunnism. The descendants of the Turks or those who claim to be such profess to be Hanafīs; they are a small, but aristocratic, minority, and privileged from the fact that they include the beylical family.

a. Institutions. — *Shariʿ*. Under the Hafṣids (q.v.) the highest religious functions were performed in Tunis by the "Kādi of the community" (*ḥāfiʿ l-ʿjamāʿa*) and the "Kādi for marriages" (*ḥāfiʿ l-tanhiḥa*) appointed, like the chief mufti (q.v.) or *khatib* (q.v.), by the sovereign. Below them again there was a *ḥāfiʿ l-muʿamalat* and a *ḥāfiʿ l-ahilla*. The "Kādi of the camp" (*ḥāfiʿ l-maḥalla*) accompanied the government troops in the field.

Ibn Abi Dīnār (p. 276; transl., p. 470) has pointed out how the Kādi gradually allowed himself to come under the domination of the mufti to such an extent that they are associated in the tribunal of the "Charḥa" (*Shariʿ*; cf. Saint Gervais, p. 93—95), and that under the Turks the Hanafī chief mufti (*ḥāfiʿ mufti*) took the title of *Shāikh al-Islām* (q.v.), which he still retains; the Maliki *ḥāfiʿ mufti*, who occupies a position which is officially not so high, has sometimes been honoured with the same title.

The "Charḥa", exclusively applied in personal law (civil law, marriage, divorce, trusteeship, guardianship, inheritance), is formed in each town of the interior by a Maliki *awḥḥ*: one *ḥāfiʿ* with one or more muftis. In Tunis, a Hanafī *madjlīs* sits in the "Dīwān" alongside of a Maliki one; both take cognisance of cases submitted to them by litigants from the interior or remitted to them by other *ḥāfiʿs*.

The operation of these courts, formerly regulated by decrees of 1856 and 1875, is now fixed by that of Dec. 15, 1896, which defined the procedure of the *muḥtadals* by insisting that they should be recorded in a register kept by notaries. The decree of March 6, 1926 installed a system of legal assistance, which frees the natives from a tax of enrolment created on March 3 of the same year. In conclusion, registrars were appointed by decree of January 28, 1930.

Notariate. The native "notaries" (*ʿadl*, pl. *ʿudāl*) are appointed by beylical decree. Their recruitment and method of practice have long been regulated by the decree of 30th Dhu l-Kaʿda 1291 (Jan. 8, 1875); appointments were made on the nomination of the *ḥāfiʿs*; former students who had received the diploma of the Great Mosque were almost automatically appointed notaries without

necessarily practising. The decree of May 8, 1928 made appreciable modifications to the earlier statute; new regulations were again made by the decree of July 1, 1929, which came into operation on Jan. 1, 1931. In future, Muslim notaries must be at least 24 years of age, have spent two or three years in a notary's office, and — most remarkable innovation — have passed an examination which demands a knowledge of Tunisian legislation. The diploma of the Great Mosque confers the right to present oneself for the notariate examination of the "first category", which enables the recipient to practise in a large town; the notaries of the "second category", after a slightly different examination, can only practise in towns of less importance. The registers (daybook and minute-book), supplied and checked by the ministry of Justice, are subject to a regular and serious system of inspection.

Habūs. The *waḥf* (q.v.) properties in Tunisia are called "habūs" (*ḥabūs*). The public habūs have been managed since Khair al-Dīn's time in 1874 by a central office (*djāmʿiya*) reorganised by decree of March 19, 1924; at its head are a director and an administrative committee: it is divided into a certain number of offices, and has a representative (*nāʾib*) in each of the principal centres of the Regency who delegates the actual managing agents (*wakīl*). The decree of July 17, 1908 has placed the *djāmʿiya* under the control of a "conseil supérieur des habūs" directed by the Minister of the Pen and the Director-General of the Interior. The *djāmʿiya* has the right to supervise the management of private habūs.

The legislation relating to the habūs has been cleverly got round with the help of the three following processes (cf. H. de Montety, *Une loi agraire en Tunisie*, Cahors 1927): a. the contract of "enzel" (*imzāl*) or transference of habūs on payment of a rent in perpetuity (decree of May 26, 1886, frequently modified and supplemented; since 1905, the enzelist debtor has been able to redeem the rent; the sale of land is by public auction except that the rights of the occupants of rural estates are safeguarded); b. exchange in kind or money (decrees of Jan. 11 and Nov. 13, 1898); c. long-term leases (Jan. 31, 1898).

The *Bait al-Māl* is under the *djāmʿiya*. It gives grants for charitable purposes and receives estates for which there are no heirs.

Brotherhoods. It would be very risky to give definite figures about the Muslim religious brotherhoods of Tunisia (cf. Depont and Coppolani, *Les confréries religieuses musulmanes*, Algiers 1897, *passim*). We cannot adopt without reserve those given in the *Annuaire du Monde Musulman*. The total number of adherents is certainly much greater than the figure of 58,143 given there. According to an unpublished official enquiry made in 1924 by the Résidence Générale, the administrative district of La Kef alone has 18,000 *kāḥḥ* or *ṣuḥarāʿ*, while the members of the brotherhoods form a third of the population in the district of Beja, which includes in all 66,000 Muslims. There are over 13,000 in the annexe of Tatahouine alone. The four orders most widely spread are: the *Kāḥḥiya* and the *Rahmāniya*, then the *Ṣūfiya* and the *Tajidiya* (q.v.); the *ʿArabiya* are also quite numerous. Further, in addition to local groups like the *Bāʿiyya* of Nefta, there are scattered groups of *Madaniya*, *Shādhiliya* and *Taiyibiya*. The administrative officials of Tabarka

and Thala agree in estimating in their areas the proportion of Rahnāniya and Kādriya respectively at 50% and 40% of the total number of members; but this proportion is of course smaller elsewhere, where rival orders have had more success. We may note the spread of the recently-formed sect of the *Alawiya*, which originated in Mostaganem in Algeria, and seems to have its Tunisian centre at the Zāwiya [q.v.] of Kaibet el-Medjouni near Monastir. While Tunis, Menzel bou-Zelfa, and the Djerid are centres of important brotherhoods, Le Kef contains the most influential mother-zāwiya. It is true that the political role of these organisations is practically nil and that even their religious influence is gradually declining.

The right of asylum of the zāwiya was abolished on Feb. 6, 1883.

6. Education: The Qur'anic schools are called *buttab*. At the top, the "medersas", directed by certificated former students of the Great Mosque, maintained by the Djam'ia under the supervision of the Director of Public Instruction, are now practically nothing more than hostels for the students at the Great Mosque; at the very most a few tutorial lectures are given there. Only the medersa *al-Aḥḥadīya* trains *mu'addib* or teachers for the *buttab*.

The Great Mosque. Under the Turks, the Great Mosque gradually became the centre of all religious teaching; in our day, it has secured a monopoly of it and is attended by some 2,000 students, from Tunisia, Tripolitania, Algeria and even sometimes Morocco. The organisation of its courses, in what may be called the modern period, goes back to the edict (*manḥūr*) of Ahmad Bāy of Rasmajā 27, 1258 (Nov. 1, 1842) known as *al-Muḥalla*, because it was affixed to the Bāb al-Shifa' gate of the Great Mosque. The principal arrangements were: 30 teachers (*ālim*, pl. *ulamā'*) of whom 15 are Mālikī and 15 Hanafī, were each to give 2 lectures a day, except on Thursday and Friday, the days of the Two Feasts and the month of Ramaḍān; their pay was to be 2 piastres a day, except when absent without regular cause. The two *Shaykhs al-Islām*, Mālikī and Hanafī, were appointed inspectors (*muḥṣṣir*) and were to receive 100 piastres a month; they were to be assisted in their task by the two *kāḍis*, one of each rite, who drew 3 piastres a day. These four also audited the accounts of the administrators of the Bait al-Māl, from which the above salaries were paid. If the funds of the Bait al-Māl showed a substantial surplus, it was to be divided under certain conditions among the most diligent students. The appointments of teachers were to be made by beylical decree (*ṣakir*) on the advice of the inspectors and the two *kāḍis*.

But it is only from Khair al-Din's time that a more detailed organisation dates: the decree (*amr 'alī*) which he made Ṣādiq Bāy issue on 28th Dhū l-Ka'da 1292 (Dec. 26, 1875) lays down in 67 articles the subjects to be taught, the list of authors to be expounded, the privileges and duties of the students, teachers and supervisors, and regulations for the library. — The number of partial modifications afterwards made caused this decree to be replaced by that of Sept. 16, 1912, of which the 82 articles with a few additions still govern the institution. In it we find, somewhat mixed up, alongside of pedagogical provisions of an old-fashioned type, strong recommendations in favour of correctness and good behaviour and, in article

19, the prohibition to doubt principles traditionally admitted by the *ulamā'*.

The subjects taught, more numerous and more varied than the "eleven branches of learning" provided for at the Azhar by the regulation of 1872 are, in the order in which they are given in article 1: Qur'anic exegesis (*tafsīr*), traditions relating to the Prophet (*ḥadīth*), biographies (*siyar*), dogmatic theology (*tawḥīd*), the reading and proper recitation of the Qur'ān (*ḥirā'at*, *taḥṣīn*), technology (*muṣṭalaḥ*), judicial methodology (*uṣūl al-fihh*), jurisprudence (*fihh*), the law of inheritance (*far'ī'at*), mysticism (*taṣawwuf*), the determination of the hours of prayer (*niḥāz*), syntax (*naḥw*), grammatical morphology (*ṣarf*), elocution and rhetoric (*ma'ānī*, *bayān*), style, composition, literature (*lugha*, *luḡa*, *adab*), history and geography (*ta'rīkh*, *ḡurrahāya*), drawing and calligraphy (*raṣm*, *ḥaṭṭ*), versification (*'arūḍ*), logic (*manṭiq*), dialectic (*adab al-baḥth*), arithmetic (*ḥisāb*), geometry (*ḥandaia*), astronomy (*ḥul'a*), mensuration (*miṣāha*). Of these subjects the latter are somewhat neglected. The rigidly traditionalist spirit and the archaic methods of instruction used in the Great Mosque are obstacles to all progress in profane sciences, and to any liberalism in religious matters. Under history and geography the programme, in addition to a brief résumé of Muslim history, gives only two books to be studied: the *Raḥm al-Ḥalāl* of Ibn al-Khaṭīb and the *Muḥaddima* of Ibn Khaldūn, both of the xivth century. The geometry is still Euclid, whose propositions are read in al-Tūsī's version (xiiith century).

The courses, which are free, are divided into three stages, and there are examinations to pass from one to the other. The following is a list of the works on religion and language expounded in the highest course (art. 4):

<i>tafsīr</i>	the <i>Asrār al-Tamīl</i> of al-Balḡawī, the commentary of the two Djalāis; the <i>Mawāḍi'at</i> with commentary of al-Zarkānī, the <i>Ṣaḥīḥ</i> of al-Bukhārī with commentary of al-Kastallānī,
<i>ḥadīth</i>	the <i>Ṣaḥīḥ</i> of Muslim with commentary of al-Ubbī, the <i>Ṣiḥīḥ</i> of the Kaḍī 'Iyāḍ with commentary of al-Shihāb al-Khaḍḍjī; the <i>Mawāḥib al-Iḍā'iyat</i> of al-Kastallānī with commentary of al-Zarkānī,
<i>siyar</i>	the <i>Sira al-kilā'iyat</i> ; the commentary of al-Iḥḍjānī on the <i>Mawāḍi'at</i> of 'Aḥmad al-Dīn al-Idrīsī,
<i>tawḥīd</i>	the commentary of al-Taḥṣīnī on the <i>'Alf'id</i> of 'Umar al-Nasafī, the <i>Kubrā</i> of the Shaykh al-Sanūsī; the <i>Tawḥīd</i> of Ṣadr al-Sharī' 'Uḥaid Allāh al-Maḥbābī, the commentary of 'Aḥmad al-Dīn al-Idrīsī on the <i>Muḥṭaṭar</i> of Ibn al-Hādḍjib,
<i>uṣūl al-fihh</i>	the commentary of al-Maḥallī on the <i>Djam' al-Djawāmi'</i> of 'Abd al-Waḥḥāb al-Subkī; the <i>Taḥyīm al-Haḍī'at</i> of 'Uḥmān al-Zallā'ī (commentary on the <i>Kaṣṣ al-Daḥī'at</i> of 'Abd Allāh al-Nasafī), the <i>Durar</i> (commentary of the <i>Ghaurar</i>), the commentary of Sidi 'Abd al-Bāḥī on the <i>Muḥṭaṭar</i> of Khallī, the commentary of Sidi Muḥammad al-Khirāḥī on the same;
<i>fihh</i>	

- taḥṣīn*: the *ḥiṣṣ* of al-Ḥaṣṣī;
naḥṣ: the *Mughni al-labib* of Ibn al-Hishām;

Ḥumāna,
 the *Muḥṣir al-nūr* of Ibn al-Aṭhir.

The thirty original teachers along with a teacher of *taḥṣīn* take the title of "teachers" (*muḥarrir*) of the first class; they are qualified for the higher course. For the middle course there are 12 teachers of the second class, half *Mālikī* and half *Ḥanafī*, and also a teacher for *taḥṣīn*. The elementary course is conducted by "voluntary" teachers (*mutaḥṣin*), certificated former pupils, who are unpaid (art. 9). The teachers have two months' leave a year, from the middle of July to the middle of September, and the month of Ramiḥān in addition; there is also a holiday every Friday, the days of the two feasts and the four days that follow each of them, the day of 'Arafa and the two preceding days, the 10th Muḥarram, the 11th, 12th, 13th Rabi' I (art. 29); Thursday is expressly restored as a working day (art. 28). — Each student carries a roll book which the teachers endorse once a month (art. 32), and in which they certify that the course has been attended by the person concerned (art. 33). — Supervisors appointed by the inspectors secure that discipline is maintained (art. 40). The duties of these inspectors are carefully laid down in accordance with the regulations of the *Mu'allama* (art. 44 *seq.*).

A complementary decree of the same date, in 11 articles, settles the conditions of the final examination which gives the right to the diploma of the *taḥṣīn*. Success in a written examination on *fiḥ* admits to classes for two consecutive sessions (art. 6). The oral examination allows six hours of preparation with the assistance of the books in the library (art. 7). A special *taḥṣīn* is provided for the reading and recitation of the *Kur'ān* (art. 9).

Since 1928, 50 "auxiliary" teachers (*muḥawwin 'ala 'l-taḥṣīn*) have been appointed by competition from among the *mutaḥṣin* in; they draw a fixed salary of 500 francs a month. From Jan. 1, 1931 the annual emoluments of the teachers of the second class are fixed at 13,000 francs, those of the first class at 16,000 francs. The budget of the Tunisian state has since 1924 included a subvention for the Great Mosque; being continually increased, it rose from 50,000 francs the first year to 350,000 in 1927 and to 770,000 in 1930.

The recent reorganisation of the Muslim notariate has provoked vigorous protests on the part of the students who can no longer pass straight into their profession and whose studies at the Great Mosque do not enable them to pass without further preparation the new examination required of future notaries. The whole question of the reform of religious instruction has thus been raised, or at least that of the introduction of modern legal teaching into the Great Mosque. A commission appointed by the government in December 1929 is studying the possibilities of reform and painfully endeavouring to draw up a programme.

The Catalogue of the Library, which is in course of publication in Arabic, was published incompletely in French by B. Roy and Bel-Khodja (Tunis 1900).

Modern Education. In addition to the Sāḥkī College (417 pupils in 1928—1929) where the double system of teaching French and Arabic prepares for administrative careers, the young Muslims are attending in increasing numbers the French schools: primary establishments (among which are Franco-Arab schools and special schools for Muslim girls, cf. *R. M. M.*, vi, 123—126) and secondary (open to all). In Dec. 31, 1928 (cf. *Statistique générale de la Tunisie*, année 1928) the Muslim population was sending to the French primary schools of the Regency 25,876 boys and 2,930 girls (in addition to 67 boys and 617 girls in the private schools), to the Lycée Carnot of Tunis 359 pupils out of a total of 2,000, but only 28 at the girls' Lycée out of over 1,200, and lastly 461 pupils in three other institutions in Tunis (Collège Alsoufi, École normale d'instituteurs, École professionnelle E. Loubet).

An "École supérieure de langue et littérature arabes" in Tunis gives after examination a certificate in spoken Arabic to its European students, and a certificate in written Arabic and a higher diploma in Arabic to its pupils, whether Muslims or not.

Inaugurated under the influence of the Residency, the Muslim Society *al-Ḥabshūniya* organises for nearly 200 young members popular courses in Arabic on all kinds of subjects.

Finally the Department of Justice in Tunisia has courses of law given in Arabic to prepare natives for legal careers.

5. POPULATION.

4. *Ethnography*. The population of the Regency includes, in addition to the native Muslims and Jews, an increasing number of Europeans, the result of a considerable immigration of Italians and of the French Protectorate. The census of 1926 gives a total of 2,159,708 (density 17.3 to the square kilometre) of whom 1,932,184 are Muslims and 54,243 Tunisian Jews (not including the Jews who have acquired a European nationality). The 173,281 Europeans were distributed as follows: 71,020 French (41%), 89,216 Italians (51.5%), 8,396 Maltese (English subjects) (4.8%), 4,649 of various other nationalities (2.7%). The Italians, who come mainly from Sicily and Sardinia, are masons, miners (Le Kef), agricultural labourers and vine-growers on a small scale (Beja, Medja el-Bah, Gromballia, Zaghouan). The French are principally officials, merchants or colonists.

The bulk of the Europeans are in the Tunis area (103,000 or 60%) and in some of the towns of the coast: about 6,700 in Bizerta, 4,150 at Ferryville, 6,900 at Sūsa and as many at Sfax. The Tunisian Jews, of whom 28,141 (more than half) are in the Tunis area, are over 3,700 in Sūsa and nearly 3,300 in Sfax. They are also fairly numerous in Bizerta, Beja and Nabeul, and there are very few in the interior (a few called *Bāghūj* live in tents towards Sers), but there are groups of some size in the south, nearly 2,500 in Gabes, nearly 3,800 in Hout-Sak (Djerba) out of 4,645 inhabitants, and over 2,300 in the military territories.

Excluding Tunis the capital with 185,466 inhabitants, 12 other towns have over 10,000; these are

Sfax	27,723
Sūsa	21,298
Bizerta	20,593
Kairawān	19,426
Msaken	16,620
Gabes	15,119
Nefis	13,250
Moknine	12,191
Kal'a Kabira	11,830
Tozeur	11,056
Beja	10,468

We may note that Msaken and Kal'a Kabira, both in the Sahel, are inhabited exclusively by Muslims.

4. Tribes. In the present state of our knowledge we cannot sketch with certainty the evolution of the present divisions of the Muslim population of Tunisia. Even if we set aside the urban centres and the more thickly populated areas (districts of Bizerta, Beja, Tunis and Sūsa) where very varied elements are found together and intermingled, the constitution of the great tribes, clearly individualised at different periods in the history of the country, is far from being clear. We do not know the origin of many of them; even their disappearance is not always free from mystery.

For a long period the Arab soldiers were numerically insufficient to produce a real change in the old Berber bloc. But the great new factor was the invasion in the middle of the xth century of the Hilali Arabs, followed in the xlii and xliii centuries by the Sulaim; they drove up into the highlands the greater part of the native Berbers, occupied the plains and completed the arabisation of the country; it is true that, frequently fusing with bodies of natives, they completely subjected them to their influence, so that it is impossible to-day to discriminate at all between "Arab tribes" and "Berber tribes". We can only say that of all North Africa, Tunisia is on the whole the most arabised region.

In the sixth century Ibn Khaldūn gives us some information about the surviving Berbers. One group lived on the island of Djerba (Khāridjī Djarba) and in the mountains of the south: Lawāta (*Hist. des Berbères*, transl. i. 235) to the south of Gabes in the Djabal which bears their name, Maṣnāṣa (*ibid.*, i. 246) in the district they still inhabit, Zanāta driven from Tripolitania, who had taken refuge in the Djabal Demmer, where the most important body was the confederation of the Warghamma (*ibid.*, iii. 288). Other Zanāta, the B. Wartādja (*ibid.*, iii. 204), maintained their independence in the oasis of al-Hamma, while the Marādja Ifrānīda (*ibid.*, iii. 225-226), half agriculturalists, half cattle-rearers, between Tunis and Kairawān were exposed to the exactions of the Ku'ub Arabs. A remnant of the Sumāta (*ibid.*, i. 231) still exists near Kairawān. But the most compact Berber group, formed of Hawwāra (*ibid.*, i. 278-279) in part nomads, occupied the region of the High Tell: Wanifa of Tebessa at Marmādja (no doubt the present Dermādja), Kaijar between Ebba-Kur and Lorbeus, Bazwa of Tebusutk on the Djougar. The Bazwa had, however, already incorporated a body of Riyāh Arabs who were

neighbours of their relatives, the B. Hābiḥ; and in the same way in the mountains of the north, Arabs of Muḍar, the B. Hudhail, had become fused with the Hawwārid tribe of the B. Sulaim.

Among the Arab invaders, the Hilāl, pushing further west, only left in Ifriqiya a few of the B. Zughba near Tunis. The B. 'Awf of the Sulaim, on the other hand, as is shown by the *Riḥla* of al-Tijjānī (in 1306-1309), occupied the whole of the eastern coast district: from Nabeul to Sūsa were the Dallādī, then up to el-Djem the Hākim, who were later joined by the Turūd (these latter were later moved on towards Wargla), then up to al-Mubāraka the B. 'Alī of the Hīq. The hinterland was dominated by their Ku'ub relatives and masters, of whom the two rival gangs, Awlād Muḥalhal and Awlād Abi 'l-Lail, played in Hāfīd politics that considerable role which has been well brought out by G. Margais. During spring and summer, the Mirdās b. 'Awf, of whom a detached branch arrived near Beja, regularly replaced the Ku'ub in their winter quarters, the Djerid. Finally, starting from al-Mubāraka, the southern plains were occupied by other Sulaim, the Dabbāb: these were, in the interior, the Awlād Ahmad, reinforced by the confederation of the B. Yazid (Sahba, Hamāma, Khārdja, Aslī'a), the Sharīd and Zughb; on the coast, the Nawā'il, as far as Gabes, and the Maḥmūd of the confederation of the Washāh, up to the present frontier of Tripolitania.

Some of these names reappear in the memoir published in 1536 by B. de Mendoza, in *Les Arabes du royaume de Tunis* (publ. by La Primaudaye). The B. 'Alī, the most powerful of all, mentioned by Leo Africanus, were at that time scattered along the coast from Bizerta to Djerba; the Awlād Abi 'l-Lail in the district of Mateur and Beja; the Awlād Muḥalhal who swallowed up the Awlād 'Awn, between Kairawān and Beja. But alongside of these appear the dreaded Awlād Sa'īd of obscure origin, who extended from Monastir to the interior of Cape Bon; the Awlād Yahyā in the region of Tebusutk; and near Tebessa, probably of Hawwārid stock, the Hanānsha whose chiefs long exercised political influence from their citadel of Kal'at al-Sinān (cf. Féraud, *Les Harde* . . . , R. Afr., 1874).

In spite of the considerable adulteration and wastage of the tribes, their old names have frequently survived. In the south, where the Berber element is flourishing, we still have the troglodyte Maṣnāṣa and the Warghamma, the tribes of which have reconquered the plains: 'Akkāra of Zarzis who live in tents from February to June to harvest the barley and pasture their flocks and herds, Twāzin, who, formerly nomads, now tend to settle in the gardening country of Medenine and Ben-Gardane, the Djābaliya who inhabit villages in the highlands of the sunnec of the Tatahouine, and the Wādarna, partly settled and partly nomad. Two shāikhates bear the name of the Lawāta, in the kaidates of W. 'Awn and Bizerta. In the High Tell towards Algeria, the Wanifa group comprises several tribes among whom are the Wargha (cf. this name in the *Hist. des Berbères*, transl. i. 275). The Washāta, now in the country round Beja and Suk el-Arba, are not unknown to Ibn Khaldūn (*ibid.*), like the Nafra (i. 182 and 290) settled in our days on the northern coast.

The names of the mediaeval tribes of Arab origin are fairly well preserved in the south; the Nawā'il

and the Maḥmūd, it is true, were driven into Tripolitania by the counter-offensive of the Warghamma, but the berberised Dablah form a *shaiḥate* in the annexe of Tatahouine, and the important B. Zid (= Yaid), a section of whom still call themselves *Kharja*, still lead a nomadic life with the Hamāra near Gabes. We also find scattered and in diminished numbers giving names to *shaiḥates* the Hedil or B. Hadhal (kaidate of Ain-Draham), the Turūd (Bizerta), the Hākim (Suk el-Arba), the Awlād Muḥalbal (O. Ayar), the Ka'ib Awlād al-Ḥādīdī (Djellaz; cf. *Hist. des Berb.*, transl. i. 143). Several of the O. Bellil or Awlād Abi 'Lail survive in the plain of Beja, and of the Riyāh near Zagħwan. It was only in the xvth century that the Khumra or Khumaira settled in the mountains of the northwest, not far from the Mogods or Muḥ'id, whose name at least has an Arab sound, and in the Sera and around it, as a Maḥsen tribe, the Drid or Duraid, a branch of the B. Athbadj b. Hilal, who were for a period across the Algerian frontier. The Naḥḥū in the hinterland of Sfax are mentioned as Arabs by Ibn Khaldūn (*Hist. des Berb.*, transl. ii. 101 and 290).

Among the groups mentioned under the later Hafūda, some Awlād Yahyā survive in the kaidate of Tebarusk, the Awlād Sa'ūd are very scattered but their chief centre is the domain of Enfida, the O. Awn or Awlād 'Awn form a whole kaidate around Siliana, N. E. of Maktar.

Finally, in the present mosaic of the tribes of Tunisia, some of quite uncertain origin, if it is not maraboutic, are of sufficient importance to be mentioned: not far from the coast, to the south of el-Djem up to the north of Gabes, the Maḥlūth, 'Agarba and Maḥādḥba; in the interior, occupying the steppes, the Swāsi, Djlās, Frāshūsh, Mādḥir and Hamāma, who form the same number of kaidates; in the High Tell, the Wartān, the O. Ayar or Awlād 'Aiyar, the Gwātin; in the Nefrawa and Tunisian Sahara, the Gharib, Mraṅg, the Adāra, and the Awlād Ya'kūh.

c. Native Life. Nomadism is clearly dying in Tunisia; there are no longer migrations of considerable extent nor in large bodies ("amahas") except in very bad years. Usually the tribe remains stationary and a few herdsmen take the flocks away. It is the flocks only which move: the cattle pass the winter in the steppes and the summer in the Tell; the route most frequently traversed is the *colloir* Sbiha-La Kef; the migrants like to spend some time in the plain of Gamouda. The Maḥlūth alone go in summer as far as Bizerta and the Djlās and Swāsi as far as the neighbourhood of Beja. The Nefrawa and the Tunisian Sahara are of course still peopled by nomads.

The government of the Protectorate actively pursues a policy of leading the natives to adopt a settled life by making it easy for them to acquire land and directing their energies towards agriculture. Alongside of the old contract of *ḥammāna*, regulated by the *Ḥunūn al-Filāḥa* of Khair al-Din in 1291 A. H. (cf. *Bibl.* in W. Marçais, *Telremus*, p. 252), the sale on credit by the Domains of the "terres salines" (around Sfax for a radius of about 50 miles), and of the *hanshr* of Sherahil (near Kairawān) suitable for growing olives (decrees of 1892 and 1905), has been the occasion of putting into practice the contract known as *Mughāra*: the native farmer, who contracts to plant with olive-trees the whole extent of a piece of ground granted to him, becomes

the owner of half the ground when the trees begin to bear. The new legislation dealing with *habūs* estates has made it possible to settle on the land a number of native families, by establishing their rights as "occupants" in a legal and definite form (most recent decree: that of July 17, 1926). In the military territories of the south, the "terres collectives" of the tribes are under special regulation laid down by the decree of Dec. 23, 1918, modified in 1926; each collectivité or group of lands forms a unit and is represented by a council of notables; in the capital of each kaidate sits a council (*conseil de tutelle locale*) which has local authority and whose decisions can be revised by a central council in Tunis. The authority of one of these bodies being always required when land changes hands, or is let on a long lease, or similar occasions, the native ownership is safeguarded. Finally, besides the technical progress made since the occupation, the Tunisian agriculturist owes to the Protectorate his powers to form irrigation companies (decree of May 25, 1920), the distribution of lands for cultivation to native farmers, the creation of the native chambers for agriculture and the institution of an "Office public de crédit agricole" for the natives (decrees of June 10, 1925).

In 1928, the number of animals belonging to natives and Europeans respectively was as follows: horses 77,000 and 10,500, asses 157,000 and 2,500, mules 28,500 and 11,500, cattle 430,000 and 55,000, sheep 2,000,000 and 103,500, goats 1,360,000 and 30,500, pigs 6,000 and 13,000, camels 151,500 and 300. — The natives own about 9,000,000 *taxel* olive-trees (the Europeans 878,000) and 4,800,000 *untaxed* (the Europeans 1,100,000). We may note that several thousand natives live by fishing.

Throughout the Regency the tent is disappearing before the *gourbi*, a sure sign that the people are becoming settled, or even before the house. In the south we find two peculiar types of habitation: the subterranean dwellings of the troglodytes, over 7,500 in the districts of the Maḥmāta, Medenine and Tatahouine, and the *ghurfa* "kasura" (*kuṣūr*) (keel-shaped buildings with curved sides, long, narrow and low used as storehouses) of which the most remarkable are Medenine and Metameur. The number of town-dwellers is relatively large among the natives, for it reaches 18%; Tunisia has always been remarkable for the development of its urban life. In Tunis, the foreign Muslim elements (*āmmāniyye*) are grouped in several separate communities.

Native commerce is becoming more and more modernised; one of its most striking achievements is the organisation of co-operative buying by the Djerbiin grocers who are established in large numbers in Tunis. As to the local industries, they have been suffering for a considerable time from the fierce competition of European produce; it is true that the government does its best to support it, especially as regards native works of artistic interest; regular training courses have been instituted for the purpose, and attention is being devoted to the improvement of technical or artistic methods in manufacture. Besides milling, the manufacture of oil and soap, the main old-established industries of the Regency are dyeing, now threatened by the aniline dyes imported from Europe, the manufacture of wool (in various districts: blankets at Djerba, Gafsa and in the Djerid), of cotton (at Tunis), of silk (at Tunis and Ksar-Hellal), of goat and camel-hair (in the south), the weaving of carpets (by

women, especially at Kairawān), and of "shaiya" (at Tunis with a fulling-mill at El-Bathan) and of ceramics (at Nabeul). We may also mention the manufacture of sieves (at Tunis, Kairawān and Sūsa), of mats, baskets and esparto (at Nabeul), tannery and shoemaking (at Tunis, Kairawān and Nabeul), saddlery (at Tunis), cutlery, metal-work, stone- and woodwork. The tinmiths are all Jews, as are some shoemakers, many tailors and almost all the jewellers.

The trade-gilds, of which the most important in Tunis is that of the manufacturers of shashiyas (*shashīya*) of Spanish origin, are regulated by beylical decrees; they may admit Jews but the *amīn* is always a Muslim. The *shawāshī* have a common reserve fund; their trade mark (*ashāsh*) has to be approved by beylical decree. In spite of the competition of importations (from France, Austria and Czechoslovakia) and the disappearance of the Turkish market, the production of shashiyas is still much the same as it was 25 or 30 years ago, i.e. about 50,000 kg. of which about the half are exported.

According to statistics, not yet published, compiled by the Direction de l'Agriculture, the gilds of Tunis are constituted as follows:

	Masters	Workmen
Makers of shashiyas	200	600
Tailors	60	100
Makers of burnous	120	150
Millers	10	40
Silkweavers	300	1,200
Cotton spinners	100	300
Dyers	30	45
Shoemakers	200	300
Saddlers and leatherworkers	20	70
Jewellers and goldsmiths	45	70
Carpenters	90	125
Smiths	20	35
Painters and decorators	100	230
Tanners	25	45

Masters and workmen combined only number about 4,630.

6. LANGUAGE.

a. Berber. Berber dialects have almost entirely disappeared from Tunisia. Berber speakers are now only found in the region of Sened (kaldate of Gafsa), the dialect of which has been studied by Provostelle, at Tamest among the Matnāya and in the island of Djerba, where the women in particular preserve the old idiom.

b. Spoken Arabic. The linguistic arabicisation

of Tunis is thus practically complete but it has proceeded along lines of which we do not know the details. W. Marçais would allow, at least for the Sāhil, that it has been more rapid than is usually thought. Since before the coming of the Hīlāl and Sulaim (xth—xiii centuries), the "urban centres, those permanent foci of arabicisation", Sūsa, Monastir and Mahdia, have been disseminating among the peasants of the surrounding country their own town-language which, gradually transformed by a rural population, has given birth to various rustic dialects. In their consonant system and their grammar the Beduin dialects differ, as Ibn Khaldūn noted, from the Arabic of the towns and therefore from that of the Sāhil.

Von Maltzan has pointed out (*Z.D.M.G.*, xxiii. 655—656) that the Arabic spoken in Tunis has retained the classical consonant system more perfectly than any in the Maghrib. We need only note the fusion of the *q* and *g*, both pronounced like an emphatic sonant interdental spirant; the *f* is pronounced as a postpalatal sonant (*g*) in borrowed words (e.g. *qidra*, *gūmrug*) or influenced by Beduin dialects (e.g. *bāgra*, *nāga*); *dh*, sonant palatal (French *j*), is treated after the article as a solar letter and has a tendency to pass into *t* in words which already contain this sound (e.g. *dhaw* > *tā*). The confusion which appears in the use of the liquids *l*, *r* and *n* affects borrowed words almost exclusively.

The "nunation" has disappeared except in some rare formulae; it has left traces in certain adverbial accusatives where the vowel of the old termination has survived, sometimes even lengthened (e.g. *dhāim* > *dīma*, *dīnā*).

The careful observations of W. Marçais for the dialect spoken at Takrīna still constitute the only satisfactory record of the Tunisian vowel sounds. Although the dropping and weakening of vowels is far from being so serious as in the extreme Maghrib, it is a broken down vowel system. Sometimes to facilitate pronunciation, transitional sounds are developed, secondary ultra-short vowels, notably before a laryngeal preceded by *i* or *u* (cf. the *ḥāḥ* *ḥāḥ* of Hebrew). It will be remembered that in Tunis the women have preserved the old diphthongs *ai* and *au* while the men have reduced them to *i* and *u*; the Beduin dialects in general bring them back to *i* and to *u*, but some of them make a false diphthong with an ultra-short second element: *ie*, *ue*. With some nomads the *ināla* *ā* > *z* open is forced in certain positions into a very much closed *z*. Educated people read the *ḥarra* of the classical language as *i* in an open syllable, but almost like the French *e* in a closed syllable.

H. Stumme, to whom we owe a detailed morphology of Tunisian Arabic, has laid down the following rules for accentuation: If the word ends in two consonants or with a consonant preceded by a long vowel, the accent is on the last syllable; in the other cases, it falls on the penultimate syllable, if the latter is long or closed, if not it goes back to the first syllable of the word; exceptions: the verbal form *yāfa'lu* (for *yāfa'la*) and *fā'il* (for *fā'il*) a type at once verbal and nominal. The accent goes back from the last syllable to the penultimate when the first syllable of the following word is accented.

The conjugation naturally reveals the essential features of all the Maghribi dialects: the alternation sg. *naf'al*, pl. *naf'alū* in the first persons of the

norist. A few notes on the syntax have been made by Th. Nöldeke.

The vocabulary has made borrowings from Turkish and Italian; it is every day taking more from the French. But French is affecting Judæo-Arabic much more, and it will perhaps die out without being studied.

c. The native press. For a long time the publication of newspapers was forbidden in Tunisia; even printing and book-selling were not unrestricted but subject to an administrative control regulated in 1875 by the decree relating to teaching in the Great Mosque. From 1859 the "Journal Officiel" (*al-Kā'id [al-rasmi] al-Tūnisi*) gave a certain amount of information, mainly relating to administration, but it also accepted other articles. The press decree of Oct. 14, 1884 and particularly the more liberal one of Aug. 16, 1887, modified however several times later, permitted the establishment in the Regency of a press in French, Italian and Arabic.

In 1888-1889 the daily papers *al-Hādīra* belonging to Bū Shūḥa and *al-Zuhra* belonging to Shūḥlī appeared in Arabic. The *Zuhra* still exists and is now regarded as conservative although in its early days it was thought to be very advanced. Alongside of it, the principal newspaper is *al-Nahḍa*, which appears every day except Monday. The majority of the present Arabic journals are weekly: *al-Zamān* (liberal), *Līdān al-Shar'* and *al-Sawāb* (both nationalist in tendency, especially the former), *al-Nadīm* (literary, satirical, much appreciated); also the humorous *al-Zakā*, which admits to its columns the popular dialect. *Al-Waṣīf* is in theory a monthly as is *al-Manāṣir* which is very irregular. Recently an illustrated monthly magazine has appeared dealing with history and literature: *al-Ālam al-adabī*; but the most widely circulated Arabic magazines in Tunisia come from Egypt, notably *al-Sayāra*. The "Journal Officiel" which has also had a French edition since 1883, confines itself to publishing twice a week documents of an official nature. Lastly a kind of almanac, *al-Ruḥāma al-Tūnisiya*, which appeared from 1899 to 1921, has been replaced by an annual, almost exclusively administrative: *Taḡmīn al-Tūnisi*.

It is interesting to note the unsuccessful attempts to create a local Arabic press, which have been made at Sfax with *al-Aḥd al-ḡadīd* or at Kairawān with *al-Kairawān*. On the other hand, a little weekly in French edited by Muslims has been a success in Sfax: the *Tunisite Nouvelle* belonging to Zuhair 'Aiyādī; in Tunis also where Bāsh Hānba's *Le Tunisien* was already established about 1910, Shūḥlī Khair Allāh edits the *Voix du Tunisien*, which has taken the place of the *Etendard Tunisien*, which in turn succeeded the *Libéral*; since August 1930, 'Abd al-'Azīz Laroui has been publishing the *Crépuscule*. Those organs show a Tunisian nationalist spirit, which is exclusively Muslim.

The Jews, who used to have a fairly abundant literature and press in Judæo-Arabic (in Hebrew characters), of which E. Vassal wrote a history down to 1907 (*La Littérature populaire des Israélites tunisiens*, 1905-1907), no longer publish in this dialect, which is disappearing before French, except the intermittent and poor *al-Sukūḥ*. Their three weeklies are in French: the conservative *Égalité*, the *Justice* ("assimilationist") and the best

known, the *Réveil Juif* (Zionist) founded in 1924 at Sfax by Félix Allouche and recently transferred to Tunis.

AL-TŪR, 1. DJARAL AL-TŪR, more rarely TŪR SIKK, Mount Sinai. The Arab geographers (Abu 'l-Fida', ed. Reinand, p. 69; al-Kalkashandī, transl. Wüstenfeld, in *Abh. G. W. Gott.*, xxv, 100; Makrizi, *Geogr. d. Kopten*, transl. Wüstenfeld, *op. cit.*, iii, 113; Yāqūt, *Mu'jam*, ed. Wüstenfeld, iii, 557) explain the name as of Hebrew origin; it occurs once in the Qur'an as *Tūr Sīnā* (xcv, 2, emended in Ibn al-Fakḥ, *B. G. A.*, v, 104 to *Tūr Sīnā*). The mountain which lay not far from the Red Sea (*Baḥr al-Kulūm*) was climbed from al-Amn (Elim?), where the children of Israel once encamped. In the vicinity was the Wādī Tuwā, where Moses spoke with Allāh before he was sent to Pharaoh (Qur'an, xx, 12; lxxix, 16; Yāqūt, *op. cit.*, iii, 553; Saḥī al-Dīn, *Marāqīd al-Iḥḥāṣ*, ed. Juyḥoll, ii, 213).

On the north side of the mountain (now Djabal Mūsā) in what is now called the Wādī Shu'āib (valley of Jethro) at a height of 5,000 feet is the monastery of Catherine, on the site of the castle built by Justinian I probably between 548 and 562 A. D. (Grégoire, *Bull. de Corr. Hellén.*, 1907, p. 327-334) to protect the monks of Sinai (Procopius, *expl. arripadras*, v, 8, ed. Haury, III, i, p. 168 sq.; Eutychios, *Annals*, in *Corp. Script. Christ. Orient.*, series III, vol. vi, p. 202-204). According to the Book of Churches (*Kitāb al-Diyārāt*) of Shāluḡḡī (quoted by Yāqūt, *op. cit.*, ii, 675; Saḥī al-Dīn, *op. cit.*, i, 434), the "Church (hundra for which Yāqūt, *loc. cit.*, writes *dār*) al-Tūr" was on the top of the mountain, built of black stone and strongly fortified; there was a spring outside and another inside the building. The monastery was inhabited by monks and much visited on account of the miracles wrought there (Sochau, *Abh. Pr. Ak. W.*, 1919, fig. x, p. 21). In this description the Christian church of the Mother of God (*Isōrōtes*), which was built also by Justinian on the slope of the mountain, probably on the site of the present Chapel of Elijah (see below), is confused with the monastery at its foot.

The monks of the monastery possess a copy of an alleged letter from Muḥammad granting protection (Pococke, *Description of the East*, i, 268-270; Moritz, *Abh. Pr. Ak. W.*, 1918, Abh. iv, p. 6-8; cf. a similar letter of protection for Coptic Christians, publ. by G. Graf, *M. V. A. G.*, xxii, 181-193; Moritz, *op. cit.*, p. 21-23) and a number of genuine documents of the time of the

Sulṭān Isḥāq, Khushkadam and Kā'itbey (Moritz, *op. cit.*, p. 25 *seq.*). They mainly deal with the protection of the Christian monks from the raids of the marauding Beduins of the country round, but seem to have been regarded by the latter as empty threats, as their frequent renewal shows (Kā'itbey issued no fewer than 22 firmāns for the monastery during the 30 years of his reign). The monastery was frequently stormed, set on fire, its gardens robbed and pilgrims and merchants plundered; sometimes the monks even had to seek refuge in the monastery of the village of al-Tūr (see below) (Moritz, *op. cit.*, p. 28).

Within the monastery "between the church and the dwellings on the northern part of the buildings" there is still a mosque, the pulpit of which was, according to an inscription, presented by Abū 'Alī al-Manṣūr Anṣhaktān al-ʿAmir in Rabi' I 500 (Nov. 1106) in the reign of the caliph ʿAmir bi-ʾAḥkām Allāh (Moritz, p. 50-52). The monastery of Sināi in this inscription is called the "upper monastery" (*dair al-ʿalā*) to distinguish it from monasteries in al-Tūr (*Ṭaṣṣū*) and Fārān. According to another inscription, this same Anṣhaktān founded three maṣṣidj (places for prayer) on the Munḍijāt Mūsā, a mosque on the hill of the monastery of Fārān and another below Fārān al-Djādida, and a light-house on the shore of the coast (al-Sāhil). By Munḍijāt Mūsā is certainly meant the traditional Sināi, now Djabal Mūsā (Moritz, *op. cit.*, p. 54); it was only in the xivth century that the name was transferred to a smaller hill east of the monastery of St. Catherine, which is now called (like a hill near Fārān) Djabal Munḍijāt. Of the three Maṣṣidj only two could have been on the top of Djabal al-Tūr, namely the Christian church built in 364 A.D. by St. Julian and a small mosque, also mentioned by al-Idrīsī; the third place of prayer no doubt lay on a small plateau 500 feet below the summit on which now stands a chapel of Elijah erected at a later date. The mosque on the "hill of the monastery of Fārān" is perhaps to be sought on the Djabal al-Muharrat, that of new Fārān in the oasis of Fārān, in the gardens of which the inhabitants of the "city of the Amalekites" Fārān later settled (Maḥrisī, *Kāḥṭat*, Bulāq, i. 188; Moritz, *op. cit.*, p. 36). Moritz supposes the lighthouse (*op. cit.*, p. 57) to have stood at that point on the coast where the Wādī Fārān enters the sea and there is a poor anchorage.

In a Syrian description of the seven climes of the xiiith century A.D. the mount of Sināi (*Ṭūrā ʿal-Sināi*) forms the centre of the crescent shaped map in the second clime (Chabot, *Notice sur une mappemonde syrienne*, in *Bulletin de géogr. hist. et descript.*, 1897, p. 104 and pl. iv.).

The tradition that Selim I visited Sināi on his Egyptian expedition is an invention; neither his journal nor Ibn Iyās make any mention of it (Moritz, *op. cit.*, p. 5, note 1).

The little town of al-Tūr lies S.W. of the Djabal Mūsā on the Gulf of Suez, about 50 miles from Rās Muḥammad, the most southern point of the Sināi peninsula. It is in regular caravan communication with the monastery of St. Catherine, some of the monks of which usually stay there (Weill, *La presqu'île du Sināi*, 1908, p. 82). It lies at the only spot on the west coast of the peninsula which is completely free from coral reefs and has therefore an anchorage. As al-Tūr is further excellently supplied with water, and has

large palm-groves in the vicinity, it has always been the most important harbour in the peninsula. In ancient times it was called *Πορταία* (Agatharchides in Strabo, xvi. 776 and Diodorus, iii. 42) and later (from the Arab tribe of the *Ṭaṣṣū*) *Ṭaṣṣū* (*Ṭaṣṣū* in Suidas); probably the monastery there dated from the pre-Arab period.

Kalkashandī already knows al-Tūr as the most important Egyptian harbour for the ships of the pilgrims to Mecca, until about 450 (1047) 'Aidhāb [q.v.] took its place. It was not till 780 (1378-1379) that the harbour of al-Tūr was restored and the pilgrims henceforth again took the northern route (Weill, *op. cit.*, p. 92-94). After the discovery of the sea-route to India by the Portuguese al-Tūr gradually lost its importance and sank to be a mere fishing-village, until in the second half of the xviiith century a quarantine station was put there for pilgrims returning from Mecca and the place began to flourish once more. Sulṭān Murād built the fort of Kaṣrat al-Tūr near the old monastery but both are now completely in ruins.

A. O., xxxvi.), p. 122, s.v. AL-TŪR and TŪR SINĀ'.
2. TŪR ZAITĀ of DJABAL ZAITĀ, the Mount of Olives, east of Jerusalem (see AL-GUDS, ii. 1094 *seq.*) still called DJABAL AL-TŪR. According to tradition, 70,000 prophets died there of starvation and are buried there. The Ascension of Jesus, according to an old tradition, took place from the Mount of Olives. Between it and the town ran the Wādī Djahannam (vale of Cedron, now Wādī Sitt Maryam with the well of Siloam, Arabic 'Ain Sulwān) over which ran the bridge of al-Sirā'. The village of Kaṣr al-Tūr now stands on the hill.

Bibliography: Yāqūt, *Muḍjam*, ed. Wüstenfeld, iii. 558; Saḥī al-Dīn, *Murāyid al-ḥitā'*, ed. Juynboll, ii. 215; Ibn al-Fakīh, *B.G.A.*, v. 101; Abū 'l-Fidā', ed. Reinand, p. 69; al-Idrīsī, ed. 3. AL-TŪR, the hill of Tabor (still called Djabal al-Tūr). At the spot where Jesus revealed himself to his disciples, the monastery of Dair al-Tūr or Dair al-Tadjiālā' stood on the hill. In the crusading period there was a fortress on the top, which Saladin captured and al-Malik al-ʿAdil had restored in 608 (1212). The Crusaders tried

in vain to recapture it in 614 (1217). Bathers in Djamāla II 661 (1263) used the fortress as a base of operations for his raids against 'Akka.

Reinaud, p. 69; Weil, *Geschichte der Chalifen*, iii. 438, 440; iv. 46 sq.; Le Strange, *Palestine under the Moslems*, p. 75, 434 sq.; Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, p. 124, note 4.

4. AL-TŪR, the hill of Gerizim (3,000 feet) above Nābulus, the sacred mountain of the Samaritans. Jewish tradition makes it the scene of the sacrifice of Isaac. The hill is still called Djabal al-Tūr or Djabal al-Kibit to distinguish it from the Djabal al-Shamālī or Isfāmīya (Ebal) to the north of the town.

Bibliography: Yāqūt, *Mu'djam*, ed. Wüstenfeld, iii. 557; Sa'ī al-Dīn, *Marā'id al-Ippā'*, ed. Juynboll, ii. 214; Le Strange, *Palestine under the Moslems*, p. 74.

5. TŪR HĀRĪN, the hill of HŪR (5,600 feet) west of Petra, called after Aaron, who according to an old tradition, is buried there (Josephus, *Archael.*, iv. 4, 7). When the children of Israel accused Moses of having slain him, he showed them on the top of the hill the bier on which Aaron lay. In al-Mas'ūdī the hill is called Djabal Ma'rib in the district of al-Sharḥ; he also mentions the caves in the mountain. On the eastern peak (3,200 feet) of the Djabal al-Nabī Hārūn is Aaron's grave (Qabr Hārūn) which is still a place of pilgrimage for the Beduins.

Bibliography: Yāqūt, *Mu'djam*, ed. Wüstenfeld, iii. 559; Sa'ī al-Dīn, *Marā'id al-Ippā'*, ed. Juynboll, ii. 215; al-Mas'ūdī, *Murū'if al-Dihād*, ed. TŪR 'ABDĪN, the name of a mountainous plateau in northern Mesopotamia. It stretches roughly from Mārdīn in the west to Djaṣira: b. 'Omar (called briefly Djaṣira; q. v.) in the east. The Tigris forms the eastern and northern boundary, from Djaṣira up to the point where it is joined by the Batman-an from the north. A line drawn from the confluence of the two rivers to Mārdīn would roughly mark the western boundary of the area known as TŪR 'ABDĪN, while the Koros-Dagh which lies in the northern part of this western boundary is also to be regarded as belonging entirely to TŪR 'ABDĪN, as an outlying portion of it. In the south the frontier is very well marked, for there the rocks of the tableland slope steeply, often precipitously, to the Mesopotamian plain and seen from the latter look like a strong well-built wall. The road, in constant use from the earliest times, which goes from Mārdīn via Naṣībīn to Djaṣira, runs a short distance from the southern edge of TŪR 'ABDĪN. With the latter are usually included the mountains in the centre of which is the town of Mārdīn (hence sometimes called after it; cf. also the Turkish name Mārdīn-dagh-ları; see Schäffli, *op. cit.*, p. 48). It stretches — west of Mārdīn part of it is called Djabal al-'Aṣṣ — roughly up to 40° 15' east long. (Greenw.) and is separated by a very marked depression from the

gigantic basaltic ridge of the Karadja-Dagh.

The average height of TŪR 'ABDĪN is in its central portion about 3,000—3,500 feet above sea-level. In the district between Midyāt and Hīn Kaifā on the Tigris (cf. ii., p. 320) and in the mountains of Mārdīn, individual peaks reach 4,300 feet. In general however, TŪR 'ABDĪN lacks any marked heights and looks everywhere like an undulating plain which is cut by deep and broad wadis. The largest is the Wādī Khaliṣa, which flows into the Tigris at Finik (N. W. of Djaṣira).

TŪR 'ABDĪN consists almost entirely of limestone, often with beds of marl. In places however we find angular basalt blocks scattered, which are of volcanic origin. Such outcrops of basalt are found especially in the east, towards Djaṣira, where the basaltic Ellim-dagh rises as a continuation of the southern wall of limestone of TŪR 'ABDĪN, and also west of Mārdīn where the lava from the Karadja-Dagh flowed out. To the nature of the rock composing it, TŪR 'ABDĪN owes its many caves, which are often, as in ancient times, used as dwellings. Such caves are numerous, for example in the region of Midyāt (mentioned as early as the Assyrian inscriptions), and notably at Hīn Kaifā, which is the regular troglodyte capital. Cf. thereon Lehmann-Haupt, *op. cit.* (see *Bibl.*) p. 370 sq.; Streck, in *Z.D.M.G.*, lxxi. 310 and in Pauly-Wissowa, *Realencykl. d. class. Altertumswiss.*, viii. 2457 (art. HOKKEN); see also above ii., p. 320.

The eastern and western part of TŪR 'ABDĪN is in general characterised by an absence of trees, but in its centre east of Midyāt, a strip of forest runs from north to south. Here we have many small hills overgrown with stunted trees (dwarf oaks) and shrubs. As a result of the scarcity of forests and the fact that most of the rainfall sinks into the porous limestone, there is a serious scarcity of water in a large part of TŪR 'ABDĪN. For watering the cattle, water is collected in cisterns, often very old, and large ponds. The south has the most plentiful supply of water; there we find numerous springs and countless little streams running southwards through the hills, usually to disappear in the sands of the Mesopotamian plain at no great distance from the foot of the mountains. The streams that flow from the southern side of TŪR 'ABDĪN enter the river Djaḡh djaḡh, which divides into two arms above Naṣībīn. The southern slopes of the Karadja-Dagh, as well as the Mārdīn mountains, are drained by the Khābār [q. v.] which receives the waters of the Djaḡh djaḡh at Hesaka (36° 25' N. lat.).

In spite of many barren patches and the generally unfavourable irrigation conditions, there are many stretches of ground which grow cereals well and excellent pastures, especially in the hollows which hold the fertile reddish-brown earth, and on the slopes of the little hills, which are preferably used for the vine. At all the monasteries we find well cared for vineyards. Terraces to which the soil has been carried have also been built to grow the vine and fruits. The people are exceedingly skilled in irrigating their fields. In addition to cereals (usually barley) and the vine, cotton and all kinds of fruits (especially very fine apricots) are grown. In the wooded portions of TŪR 'ABDĪN gull-apples and manna resin are gathered, and are found in large quantities. A ridge west of Mārdīn, the already mentioned Djabal al-'Aṣṣ, takes its name from the plentifulness of gull-apples there (*uṣṣ*). On the wines and other products of the

soil of Tūr 'Abdin, see Prym and Socin, *Die neu-assyrische Dialekt des Tūr 'Abdin*, Göttingen 1881, i, p. viii. and Cuinet, *op. cit.*, p. 429. On the manna of Tūr 'Abdin cf. Flüchiger, in *Archiv der Pharmazie*, vol. cc., Halle 1875, p. 159—164.

Tūr 'Abdin was already known to the Assyrians. They call it the Kashiari mountains; it is found under this name as early as the inscriptions of the early Assyrian King Adadnirāri I (c. 1300—1270 A.D.) and Salmannassar I (c. 1270—1240); see the pertinent texts in *Alt-oriental. Bibliothek*, vol. i. (= Ebeling-Meissner-Weidner, *Die Inschrift. der altassyrischen Könige*), Leipzig 1926, p. 58 sq., p. 118 sq. The Kashiari are still mentioned in the documents of the later kings of Assyria. Tūr 'Abdin-Kashiari corresponds fairly well to *rā Mārin šar* (Masius), a term found in the later Greek writers (Arrian, Ptolemy); cf. Delitzsch, *Wo lag das Paradies?*, Leipzig 1881, p. 259; Streck, in *Z.A.*, xiii, 82—87; xiv, 169; Streck, *Assurbanipal etc.* (= *Vorderasiat. Biblioth.*, vol. vii.), p. 790; R. Kleper, in *Ferret orbis antiqui*, Heft v. (*Mesopotamia etc.*), 1909, p. 8. The view put forward by Lehmann-Haupt (s. *Z.A.*, xiv, 371; *Klio*, ix, 1909, p. 409 and *Armenien einst und jetzt*, vol. i, Berlin 1910, p. 368 sq., 510, 513) hardly seems to me tenable, that Kashiari and Masius represent a wider geographical conception than that of Tūr 'Abdin and mean the whole eastern or southern part of the Taurus of the ancients i.e. include the Karadja Dag and the Harz Daghlari to the north of Malayārikin (Farkın).

In the cuneiform inscriptions we find besides Kashiari two other names which apparently refer to parts only of Tūr 'Abdin: *Nirā*, probably used for the centre of this plateau (see Streck, in *Z.A.*, xiii, 82; xiv, 169) and *Isala*, to all appearance a special name for the southern strip of Tūr 'Abdin and particularly for the district of Mardin (probably including the Mardin Hills). In the Babil-Assyr. texts mention is made of the wine of Isala. In Achaemenid documents also there is probably a reference to Isala (see *Z.D.M.G.*, lxi, 726); it occurs twice in late classical sources and is common in Syriac literature in the name of the mountain Isā (Arabic Djabal al-Isal); cf. thereon Streck, in *Z.A.*, xiii, 104—105; xiv, 171; Weissbach in Pauly-Wissowa, *op. cit.*, x, 1390; Socin, in *Z.D.M.G.*, xxv, 238 and G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, Leipzig 1880, p. 167 sq.

As to the Aramaic name Tūr 'Abdin = "Mount of the Servants" (of God) — cf. the analogous place-name Kaphar 'Abdin in Wright's *Catalogue of the Syriac Manuscripts in the British Museum*, London 1871, No. 950, 20^e —, it is of course of Christian origin and belongs to the period when the region had through the number of its monasteries become a great centre of eastern monachism. The earliest attestation of the name Tūr 'Abdin is in a Syriac Lives of Saints of the time of the emperor Julian, i.e. about the middle of the fourth century; see Wright, *op. cit.*, No. 960, p. 1136 and Socin, in *Z.D.M.G.*, xxv, 239.

Of great topographical importance for the Tūr 'Abdin region is the *Descriptio orbis Romani* of Georgius Cyprinus of the first decade of the seventh century, because it gives a whole list of forts in this area; see the edition by Gelzer, Leipzig 1890, p. 46, l. 913—938. There we find *Kārrap Mārdin* (= Mardin) followed immediately by *Kārrap Tōpādīn*

(l. 914); it is very natural to amend this name with Hoffmann in Gelzer (p. 158—159) to *Tōpādīn* = Tūr 'Abdin. Here we may point out that of the Roman forts of Mesopotamia one group were near the Tigris and the others on Tūr 'Abdin; cf. V. Chapot, *La frontière de l'Euphrate*, Paris 1907, p. 322. In the Syriac Lives of Saints above mentioned of the time of Julian there is a reference to the building of two large fortresses in the region of Tūr 'Abdin.

In the chronicle of Pseudo-Moses of Chorene, which at the earliest was compiled at the end of the seventh century, we also find the name Tūr 'Abdin (see Marquart, *Erzählung = Nachr. d. Gott. Ges. der Wissensch.*, Berlin 1901, p. 141, 158); but here it apparently denotes a smaller area, the southern border (= Isal!).

In the Arab authors of the middle ages we also find the term Tūr 'Abdin. For the pre-Islamic period we have it in verses of the poet Abū Du'ād al-Iyādī, which tell us that the legendary founder of the kingdom of al-Hadr (q. v.), Šāḥrūn, also ruled the land of Tūr 'Abdin (see *B.G.A.*, ed. de Goeje, vi, 95, 11—12 = Yāqūt, *Mu'jam*, ed. Wüstenfeld, iii, 559, 5 and cf. also Yāqūt, ii, 284, 19 sq.). Tūr 'Abdin is also mentioned in a poem the subject of which is Khosraw and Šīrīn: see *B.G.A.*, v, 159, 19 sq. Mas'ūdī (*B.G.A.*, viii, 34, 1) mentions that in Tūr 'Abdin remnants of the Aramaeans still survive. Ibn Rosta (*B.G.A.*, vii, 90, 2) and Balādhuri (ed. de Goeje, p. 175, 12) point out that the Hirmās (the modern, already mentioned, Djaḥdjaḥ), a tributary of the Khābūr (q. v.), rises in Tūr 'Abdin. We may also mention that the Arab geographers (see *B.G.A.*, ii, 73, 3 and Abū 'l-Fidā', *Taqwīm al-Bulād*, ed. Paris, p. 282) also have the special name Djabal Mārdin = Mardin Hills (cf. above) for the southern borders of Tūr 'Abdin, the district of Naḡbīn and Dārā. The modern Syriac pronunciation of Tūr 'Abdin (one also hears Tūr al-'Abdin) is *Tūr da 'Abdī*. The name Tūr 'Abdin is locally not unknown, especially in Christian circles, but belongs to the literary rather than to the spoken language. At the present day in Syriac, this hill-country is called usually *Tūr* or in Arabic *al-Tūr*, also *al-Djabal* and *Djabal Tūr*, or *Djabal al-Tūr*; cf. Prym and Socin, *op. cit.*, i, p. i, ii and Sachau, *Reise etc.*, p. 387. As Schäffl, *op. cit.*, p. 49 tells us, the Turks use the term *Kara-Dagh*, the Kurds *Maw-Dagh* or *Ča-rāz* = "Black Mountain".

The district of Tūr 'Abdin passed with the rest of Mesopotamia (al-Djazīra) into the hands of the Arabs in the years 18—19 (639—640); see Balādhuri, p. 176, 3—5 = Yāqūt, iv, 390, 15—16 and Caetani, *Anali dell'Islām*, iv, 36, 156. The Tūr belonged to the Mesopotamian province of Dīyār Rabi'a under the caliphs.

As regards its political history after the conquest, Tūr 'Abdin generally shared the fortunes of the adjoining districts forming the rest of Mesopotamia. On the interior, Tūr 'Abdin proper, there is comparatively little in the Arabic sources. On the other hand, important towns on its borders like Mardin, Djaḥrāt b. 'Omar, Hīn Kaifā and Naḡbīn are frequently mentioned. There is important material for local history in Syriac literature, particularly in chronicles and hagiographic texts, but it has still to be collected and sifted (cf. especially J. S. Assemani, *Bibliotheca orientalis*, 3 parts, Rome 1719—1728). Valuable information for

the history of Tūr 'Abdin in the xvth century, especially for the period of Timār's campaigns, is contained in a continuation of the *Chronicon Syriacum* (of profane history) of Barhebraeus (Abn 'l-Faraj) by anonymous monks (one of whom belonged to a monastery in Bāshehrin); see the edition by O. Behnisch, in *Revue sacerdotale quinziesme de Mesopotamie gasterone*, ed. . . O. Behnisch, Neeslau 1838; cf. also Baumstark, *Geich. der syrisch. Literatur*, Bonn 1922, p. 328. In the middle ages and down to the present day the history of the Kurd tribes in Tūr 'Abdin and the country round it is of importance. The history of the Kurd dynasties of Džarist b. 'Omar and Hiṣn Kaifā is of special importance in this connection; cf. the account based on the Kurdish chronicle *Sharaf-nāma* by Bart, in *S.B. Ak. Wien*, vol. xxx. (1859), p. 217 *sp.*; see also the article KURDS.

In the redistribution of territory which followed the War, Tūr 'Abdin was left to the Turks. In the administrative division of the Turkish empire as it existed down to the War, Tūr 'Abdin belonged to the wilāyet of Diyarbakir and to the sanjak of Mardin, which was divided into five kads: Mardin, Džarira, Midyāt, 'Awne, and Naṣlān; see Cuinet, *op. cit.*, p. 412, 496 *sq.* For the administrative division since 1921 and 1927 cf. 'Abd al-Kādir Sa'idi, *Yeni Türkiye Mülkiyet Džihāz-ı-ıyāt*, Stambul 1927, p. 174.

In the early middle ages and the first centuries of Islam, Tūr 'Abdin was probably inhabited almost entirely by Christian Aramaeans. Later, more and more Muslims (mainly Kurds) settled there, so that with the gradual decline in the numbers of Christians, the result of frequent persecutions by the Muslims, the proportion altered more and more in favour of the latter down to the War. According to Cuinet's statistics, not however too reliable (*op. cit.*, p. 412, 496 *sq.*), the sanjak of Mardin which in area at least is larger than Tūr 'Abdin in the wider sense, had in 1890 in all 194,072 inhabitants, viz. 122,522 Muslims, 67,970 Christians, 1,500 Yezidis, 1,500 gypsies and 580 Jews: the Christians were thus a third of the whole population. In the two kads which are almost entirely within Tūr 'Abdin, the kads of Midyāt and that of 'Awne, Cuinet (*op. cit.*, p. 513, 517 *sq.*) gives the population in 1890 as 31,920 Christians and 37,712 Muslims. In the central kads of Midyāt the numbers were about equally balanced: 22,632 Muslims and 22,126 Christians. The present distribution of nationalities and creeds within Tūr 'Abdin is not known. Muhammadans are however certainly in an overwhelming majority, since the Christians suffered severely during and after the War; in particular many Armenians had to leave the country. When in a new persecution in 1924, the Patriarch of the Jacobites, Ignatius Elias III, was driven from his residence in Dair Zafarān (east of Mardin), the bulk of his followers (3—4,000) migrated with him to Syria; cf. H. C. Lake, *Mosul and its Minarets*, London 1925, p. 113.

Christianity spread in Tūr 'Abdin at a very early date from Edessa, which is quite near. At the Council of Chalcedon (451) among the six Mesopotamian bishops we find one of Hiṣn Kaifā, but not one of Isala as Noldeke assumed (*Z.D.M.G.*, xxxv., 219, note 2) on the authority of Mansi's statements in *Council . . . collectio*, vii. 403; here *Isalas* = Isala is, as the new edition in Schnit-

hess, *Die syrisch. Kämpfe des Synodus von Nicaea bei Chalcedon* (= *Abh. d. Gott. Geolisch. d. Wiss.*, N. Folge, vol. x., N. 2), p. 135, shows, a wrong reading. Since the time of the Christological quarrels, Tūr 'Abdin has been the citadel of the Jacobites; nowhere do or did they exist in such solid masses as in these highlands and in Mardin and its vicinity. Tūr 'Abdin proper originally seems to have been a single Jacobite bishopric; about 1089 it was divided into two dioceses, the bishops of which lived in Kartamin and Hāh respectively. Later, in the xiiith century, other sees were created in the chief towns of the district. In the middle of the xvth century differences between the patriarch of Mardin and the Bishop of Sālāḥ (2 hours journey north of Midyāt) led to a schism, in the course of which the bishops of Tūr 'Abdin cast off the authority of the patriarch and chose the bishop of Sālāḥ as patriarch of Tūr 'Abdin and Hiṣn Kaifā. This split lasted for over a century. Cf. thereon Pognon, *op. cit.*, p. 45, 62—63, 75. Lists of the bishops of Hāh, Hiṣn Kaifā and Kartamin may be found e.g. in Wright, *op. cit.* (see *Bibl.*), p. 1350—1351.

In addition to Jacobites there were in Tūr 'Abdin in the middle ages, and even later, communities of Nestorians. The oldest monastery there, that of Mār Awgen, was for long in their possession (see Pognon, *op. cit.*, p. 109). These Nestorians were won over to Rome in the xvth and xviiith century and henceforth called themselves Chaldaeans (Kaldāi), as a religious community with their own ritual. The members of this so-called Chaldaean church settled in Tūr 'Abdin have at their head two bishops (in Mardin and Džarira); according to a native Chaldaean cleric, they numbered in 1914: 8,070 souls; cf. *Annuaire Pontificale Catholique*, xvii. (1914), p. 502—511 and based on it Lubeck, in *Histor.-polit. Blätter für das kathed. Deutschland*, vol. 154, Munich 1914, p. 92, 101—102. According to Cuinet, there were in 1890 in Tūr 'Abdin about 4,000 Syrians (Suriyāni), i.e. Jacobites in union with Rome, who were under a Patriarch of Mardin and a bishop of Džarira. According to Cuinet there were in the administrative district of Mardin also 28,666 Armenians, of whom the one half professed to belong to the Orthodox Church, the other in fairly equal portions to the Roman Catholic and to the Protestant churches. The Armenian Protestant community is a creation of the activity of American missions. The prosperity caused by the civilising influence of the American missionaries, who had their main centres in Mardin and Midyāt, spread practically over the whole of Tūr 'Abdin but has ceased since the War; cf. on this American mission: Sachau, *Reise etc.*, p. 404, 410, 413, 422—423. Finally Cuinet gives from about 1890 as further Christian inhabitants of the sanjak of Mardin 6,730 Greeks (who had to leave Turkish territory after the War) and 580 Jews.

We may assume with certainty that before the War the Jacobites were the largest in numbers of the Christian communities in Tūr 'Abdin proper, but we have not the material available to enable us to make an approximately reliable estimate of their numbers. Cuinet's estimate (for the sanjak of Mardin!) which puts the Jacobites at 13,754, only half that of the settled Armenians, is obviously based on incorrect premises and seems unreliable. In 1838 Southgate (see *op. cit.*, ii. 268, 275) estimated the number of Jacobites (from information given him by the Patriarch of the day) at 6,000 families

or 60-70 villages with populations of 50-60 families. In the mountains, i.e. in Tūr 'Abdin proper, according to him there were 30,000 Jacobites, to which were to be added 5,000 settlers in the vicinity of the monasteries; in Mārdin there were 2,000, Jacobite Christians in the immediate neighbourhood of Mārdin and in the plain of Sūdūr 6,000. Badger who visited Tūr 'Abdin in 1850 put the number of Jacobite villages there at 150 (see Badger, *The Nestorians* etc., i. 63). That the number of Jacobites of Tūr 'Abdin from the time of Badger and Southgate till the beginning of the War steadily if slowly decreased there is no reason to doubt.

The Muslim part of the population of Tūr 'Abdin consists mainly of Kurds. They have spread more and more widely in the heart of Tūr 'Abdin in recent centuries and the Christian peasants with whom they are constantly warring are being driven more and more from the southern slopes of the mountains towards the plains. On the constant state of civil war among the people of the villages of Tūr 'Abdin see Pognon's observations, *op. cit.*, p. 108-111. For Kurdish tribes or families settling within the region of Tūr 'Abdin cf. Niebuhr, *op. cit.*, ii. 388; Lerch, *Forschungen über die Kurden und iranischen Nordkhalasien*, St. Petersburg 1837-1858, vol. ii. (Glossary); Schlaff, *op. cit.*, p. 49-51. Lists of tribes in Prym and Socin, *Der neuarameische Dialekt des Tūr 'Abdin*, ii. 416-418 and Prym and Socin, *Kurdische Sammlungen*, ii. 275-284; Sachau, *Reise*, p. 387; Sykes, *op. cit.*, p. 378 (under No. 15); see also above, vol. ii. 1132, 1141, 1144. The followers of the Yazidi religion in Tūr 'Abdin are also Kurds but their numbers are insignificant. The most important Yazidi tribe there is called Džilki (Tshelki); see Niebuhr, *op. cit.*; Prym and Socin, *Dial. des Tūr 'Abdin*, ii. 379; Sachau, *Reise* etc., p. 387; Menzel in Gothe, *Meine Vordrasiens Expedition*, Leipzig 1911, I, p. cxvi.

Arab Beduins also encamp occasionally in Tūr 'Abdin especially on its southern outliers; for the names of some of them see Taylor, *op. cit.* p. 54-55 and M. v. Oppenheim, *op. cit.*, ii. 68. A special position is occupied by the large tribe of the Mehallemti (Mahallemtiya) whom we find as early as the already mentioned anonymous continuation of the *Chronicle of Barhebraeus* (year 1407; see Behnisch's edition, p. 6, 7-10). They are the result of the intermarriage of Arabs and Kurds (with Arab influence predominant) and are said to have renounced Christianity over 300 years ago. They dwell mainly in the *kaḍa* of Awaie, the part of Tūr 'Abdin running west of Mārdin to the Tigris; on this tribe see Niebuhr, *loc. cit.*; *Z.D.M.G.*, i. 59; Sachau, *Reise*, p. 421; Sykes, *op. cit.*, p. 356, 378.

Three languages are spoken in Tūr 'Abdin: Kurdish, Syriac and Arabic. They have all strongly influenced each other. The most widely disseminated is Kurdish, which all the Christians also understand and speak in addition to Syriac. The Kurdish dialect here spoken is the northern and western branch of the Karmāndjī dialect, which is now better known from the investigations of Lerch, Prym and Socin, and Makas (see above ii, p. 1152). See especially Prym and Socin, *Kurdische Forschungen, Erzählungen und Lieder in Dialekten des Tūr 'Abdin und des Buhān*, 2 parts (text and transl.), St. Petersburg 1887-1890.

The Jacobites, like most of the other Christians

of Tūr 'Abdin (especially the Kaldāni), use among themselves a peculiar Syriac dialect, usually called briefly Tōrāni, 'The language of Tūr'. It differs very much from the modern Syriac idiom spoken in the east (in the district of Urmia and Mōḡul and in Eastern Kurdistan) by the Nestorians and Chaldeans (Kaldāni). The Jacobite modern Syriac (or modern Jacobite) is much closer than this dialect to Edessene, i.e. to the Syriac literary language. It cannot however be said to be derived from this without further enquiry, but is to be traced to an older form of the language which was closely related to Edessene. Tōrāni texts of importance for our knowledge of the language have been collected by Prym and Socin and also by Sachau. On texts taken down by Prym and Socin in 1869 from the mouth of a Mīdyāt man see Prym and Socin, *Der neuarameische Dialekt des Tūr 'Abdin*, 2 parts (text and transl.), Göttingen 1881; cf. thereon the important review by Nöldeke, in *Z.D.M.G.*, xxxv. 218-235. Sachau through the intermediary of the American mission got specimens taken down in Tōrāni by a Syrian priest; this MSS. material is now in the Berlin State Library, see Sachau, *Katalog der syrisch. Handschriften*, p. 812-816 (No. 278-292). Of these so far only one text (No. 290, the story of the wise Halkār) has been published, namely by Lidbarski, in *Die neuarameischen Handschriften der Kgl. Bibliothek zu Berlin*, Leipzig 1896, vol. i, p. 1-77 (text) and vol. ii, p. 1-41 (transl.). The Aramaic texts collected by Parisot in 1897 from Tūr 'Abdin (s. *Contribution à l'étude du dialecte néo-syriaque du Tour 'Abdin*, in *Act. du XI^{ème} Congrès Intern. des Orientalistes*, Paris 1897, vol. iv, p. 179-198) differ in language considerably from those collected by Sachau and Prym and Socin. Do we perhaps have here another modern Syriac local dialect? A. Siegel has prepared an excellent *Lauf- und Formeltre des neuarame. Dialekts des Tūr 'Abdin*, Hannover 1923, based mainly on the texts published by Prym and Socin; cf. thereon Littmann's review in *O.L.Z.*, xxix, 1926, col. 1003-1008. Of other works, the grammatical and lexicographical sketch of Tōrāni given by Nöldeke, in *Z.D.M.G.*, xxxv. 218 sq., should also be noted; cf. also Gindl's observations, *op. cit.*, xxxvii. 294-301. On the boundaries within which the modern Jacobite dialect is spoken cf. Prym and Socin, *Der neuarame. Dial. des Tūr 'Abdin*, vol. i, p. vi-viii; *ibid.*, p. vii. (repeated in *Z.D.M.G.*, xxxv. 255), and in Sachau, *Reise*, p. 412-413 a list is given of the localities in which at the present day (or rather 1870 and 1880) Tōrāni is still spoken. There are also Syrian villages in Tūr 'Abdin where Aramaic is no longer spoken but only Kurdish.

Arabic is understood by the majority of the inhabitants of the larger villages. It is more frequently spoken in the south towards the Mesopotamian plains and particularly in the region of Mārdin. The dialect of Mārdin, which shows many peculiarities, belongs to the Tigris groups of the dialects of Mesopotamia (cf. above i, p. 339). It is closely related to the Arabic spoken around Mōḡul. Cf. Socin, *Der arab. Dial. von Mōḡul und Mārdin* (a collection of texts), in *Z.D.M.G.*, xxxvi, 1882, p. 1-53, 238-277; xxxvii, 1883, p. 188-222 (also separately, Leipzig 1904).

The number of villages in the sandjak of Mārdin, which however includes territory not in Tūr 'Abdin, is given by Cuinet (p. 412, 496) as

1,062; of these 410 are in the *ḥadā* of Midyāt and 97 in that of 'Awīn. A manuscript Syriac chronicle (according to Prym and Socin, *Der neuarab. Dial.* etc., i., p. iii.) estimates the number of villages in Tūr 'Abdin at 243. In *Z. D. M. G.*, xxxv, 258—269, Socin gives a list of 168 names; cf. also the list of places in Prym and Socin, *op. cit.*, ii, 416—418 and in Prym and Socin, *Kurdische Sammlungen*, ii, 275—284. One should also consult the geographical indices to the catalogues of Syriac manuscripts, especially Wright, *Catal. of the Syriac Manuscr. in the British Museum*, London 1870, p. 1239 sq.; Sachau, *Verzeichnis der syriach. Hss. der Kgl. Bibliothek in Berlin*, Berlin 1899, p. 923 sq.; Payne Smith, *Catal. codic. mss. bibloth. Bodleiana*, vol. vi., Oxford 1864, p. 664 sq. and Zotenberg, *Catal. des mss. syriaques... de la Bibliothèque nationale*, Paris 1874, p. 230 sq. The number of Syrian villages in Tūr 'Abdin has already been mentioned; most places have a mixture of nationalities and religions, i.e. have Muslim (Kurd) as well as Christian (Jacobite, Armenian etc.) elements in their population. In earlier times Tūr 'Abdin must have been better cultivated and more thickly populated; this is shown by the numerous ruins that exist.

For the larger towns on the edge of Tūr 'Abdin like Mārdin (Maridin), Ḥiḡn Kaifā, Dījzārā b. 'Omar and Naḡbīn see the special articles. The capital of (inner) Tūr 'Abdin proper is Midyāt (Syriac: Midyād) which lies practically in the centre in a beautiful plain surrounded by hills (3,400 feet above sea-level) in about 41° 25' E. Long. and 37° 25' N. Lat. This very old place, already mentioned in the early Assyrian inscriptions (as Matīāte; see Streck, *Z. A.*, xiii, 95; xiv, 169; xix, 249) lies at the intersection of two great roads which cross Tūr 'Abdin from North to South (Naḡbīn-Ḥiḡn Kaifā) and from east to west (Dījzārā-Mārdin). Before the War, Midyāt is said to have had an exclusively Christian (mainly Jacobite) population of about 5,000.

Of the other larger places in Tūr 'Abdin may be mentioned: Sawr (15 miles N.E. of Mārdin), the capital of the *ḥadā* of 'Awīn (see above). East of it lies the village of Kīlīlīh and somewhat S.E. of the latter Erbil (Kardīsh; Hahliḡ: cf. above ii, p. 523 and Prym and Socin, *Kurdische Sammlungen*, ii, 206, 238). North of Midyāt, halfway between it and Ḥiḡn Kaifā, is Kofr Dīz (Kurdish: Kardīsh), a fairly large Kurd village, in the neighbourhood of which is the Muslim place of pilgrimage Tell 'Abād ('Abāde), which Rawlinson wished to identify with the old Armenian royal city of Tigranocerta (cf. Sachau, *Reise*, p. 415 sq.; Lehmann-Haupt, *op. cit.*, i, 372—373, 539). Twelve miles north of Midyāt is the village of Ḥāh with many ruins, which testify to its former importance. We may also mention Zāz and 'Arnās, both N. W. of Ḥāh, one and a half and three hours' journey distant respectively, and twelve miles S.E. of Ḥāh the large village of Midāḡ. Two hours west of the latter is the large Christian village of Bāzabrtina (Old Syriac: Bēth-Sabrtina) which plays an important part in the ecclesiastical history of Tūr 'Abdin. 20 miles S.E. of Mārdin on the S.W. spurs of Tūr 'Abdin lie the great and impressive ruins of the town of Dīrā built by Anastasius I (491—518) and later refortified by Justinian I (527—565) (also called from its founder Anastasiopolis); its name is still borne by an adjoining

village. On the ruins of Dīrā cf. Sachau, *Reise*, p. 294—398, and especially Preusser, *op. cit.*, p. 44—49 (with plates 53—61).

Tūr 'Abdin plays a very important part in the history of eastern monachism. According to a tradition in Nestorian circles, St. Eugenius came from Egypt in the fourth century and founded a monastery in the southern part of Tūr 'Abdin, and thus laid the foundation of the monastic system which developed to such an extent in Mesopotamia. St. Eugenius, who had many followers, is said after his death in 363 to have been buried in the monastery built by him. This is not the place to go into the question of the truth of the Syriac legend of St. Eugenius; it may be sufficient to refer to the serious objections raised to it by Labourt, in *Le Christianisme dans l'empire perse sous la dynastie Sassanide*, Paris 1904, p. 302 sq.; cf. also Baumstark, *Geogr. d. syriach. Litt.*, Bonn 1922, p. 235—236. In any case, it is certain that in the middle ages Tūr 'Abdin became a regular monks' citadel like an eastern Mount Athos. When Niebuhr (*loc. cit.*) is told that there are over 70 ruined monasteries in this mountain land, one need not think this is an exaggeration. At the present day, Tūr 'Abdin is still full of remains of old monasteries. Only a few are in good repair and still inhabited by monks. Great churches, for the most part of the 5th—12th centuries, are still to be seen. These monuments of the mediaeval ecclesiastical architecture of the east are of considerable importance for the history of Christian art. They have been studied recently by different investigators, notably Pognon, G. L. Bell, Preusser and Guyer; for the literature see the *Bibl.* Pognon has earned special praise for collecting the numerous Syriac inscriptions on the churches and monasteries visited by him.

Strzygowski, Guyer and Herzfeld have devoted special attention to the dates and appreciation as documents of the history of art of the buildings of Tūr 'Abdin; cf. M. v. Borchers and Strzygowski, *Amida*, Heidelberg 1910, p. 269—273, 293; Guyer, in *Repert. f. Kunstwissenschaft*, xxxviii, 1916, p. 215—237 and in Sarre-Hersfeld, *op. cit.* (i, *Bibl.*), ii, 45, 336; Herzfeld, in *O. L. Z.*, xiv, 1911, p. 402 sq., 413 and in Sarre-Hersfeld, *op. cit.*, ii, 277, 296, 298—299, 336, 345. Strzygowski's thesis that the art of the Mesopotamian monasteries is older than that of Syria and that Mesopotamia, especially Tūr 'Abdin, and not Egypt, is the cradle of monasticism, has been rejected, in my view on good grounds, by Guyer and Herzfeld, who champion the later date of the Mesopotamian buildings compared with the older Syrian; cf. also Becker's remarks (*ibid.*, ii, 396) against the assumption of priority for Mesopotamian monachism.

The mother-house of all the Mesopotamian monasteries of Tūr 'Abdin, the already mentioned Mār Awgen (Kurd.: Marōke), is 13 miles N.E. of Mārdin (41° 30' E. Long. and 30° 7' N. Lat.) clinging to the cliffs of the southern declivities of the plateau. In the middle ages it was the headquarters of the western Nestorians and is now inhabited by Jacobite monks. Half-an-hour's journey from Mār Awgen is another old monastery, Mār Yuhannā, founded by a disciple of St. Eugenius and bearing his name (on him cf. the work by Veshūdēnah, No. 2 quoted above ii, p. 801a).

In the middle ages one of the most important monasteries of Tūr 'Abdin was the Monastery of

Abraham, frequently referred to in Syrian literature briefly as 'the great monastery (on mount Ila')'; cf. e.g. the indices to Chabot's edition of Yeshu'dnah's work just mentioned. Its founder was the celebrated creator of definitely Nestorian monachism, Abraham of Kaskar (d. 588); on him see vol. II, p. 801. G. Hoffmann (*op. cit.*, p. 170 sq.) wished to identify this monastery with the monastery in ruins at Mār Bawāl (= Mār Bāb, 3 miles S.W. of Mār Awgen) mentioned by Taylor. This is not possible: we must rather identify the monastery of Abraham with Dēr Mār Ibrahīm, visited by Hinrichs on his journey in 1911; see his notes in *Bell, Churches and Monasteries of Tur 'Abdin*, Heidelberg 1913, p. 49—50 or p. 105—106.

At the present day the principal monastery of Tur 'Abdin and the greatest centre of pilgrimage for the Jacobites is now the monastery of Kartmin (Old Syr.: Kartamin), about twelve miles S.E. of Midyat. This coenobium, perhaps the most celebrated of the Jacobites in Asia, was in the middle ages one of the richest and most venerated in the whole of the East. In its greatest days it held 300 monks, while at the present day there are only about a dozen there. It is said to have been founded in 399 under Arcadius; its founders are said to have been St. Samuel (d. c. 406) and Simeon (d. 433). It is still usually called among Syrians Mār Gabriel after its great Abbot, St. Gabriel (d. 667). The Muslims and Greeks usually call it Dēr 'Amr (in travellers also we find Der Amar and quite wrongly Der el-Amr) = Dair 'Umar, the monastery of 'Umar. The caliph 'Umar at the time of the Arab invasion is said to have given the Abbot rights of jurisdiction over all Christians in the country. In Kartmin are three churches, i.e. two, in addition to the principal called after St. Gabriel, which are dedicated to the Virgin and to the forty Martyrs. The structure of the church of St. Gabriel, perhaps the oldest in the country, is typical of the monastic churches of Tur 'Abdin. The village of Kartmin is built among the ruins of another monastery, that of St. Simeon. For the history of Kartmin cf. the essay by Nau, in *Act. du XIV^{ème} Congrès Internat. des Orient. à Alger*, vol. II, Paris 1906, p. 76 sq. and the Syriac chronicle discussed by Baumstark, *op. cit.*, p. 273 sq.

Among the oldest churches in Tur 'Abdin is that of Mār Kyriakos in Arnāa and that of Mār 'Azariel in Keṣr Zeh (1½ hours S.E. of Arnāa); stylistically they are closely connected. According to Guyer, the village of Hāh is the archaeological centre of Tur 'Abdin. In it are two very interesting old churches: Mār Sōwā (Sāwā) and that of the Virgin, the al-'Adhūwā, which is very rich in ornament, and has come down to us practically uninjured from the time it was built. Among the latest of the mediaeval churches is that of Mār Yaḥyā in Sālāh; this monastery became one of the most important in the country when it became the residence of a separate patriarch for Tur 'Abdin.

We may further mention that ruins of monasteries and churches — Pognon, *op. cit.*, p. 116 mentions twenty — are particularly numerous in Bāsehrina (cf. above); but they are mainly of more recent origin. In conclusion we may just mention the famous monastery of Dēr al-Znāṣ-farān (one hour east of Mārdin) which till 1924 was the residence of the Jacobite patriarch; he now lives in Aleppo; cf. on it especially Peter-

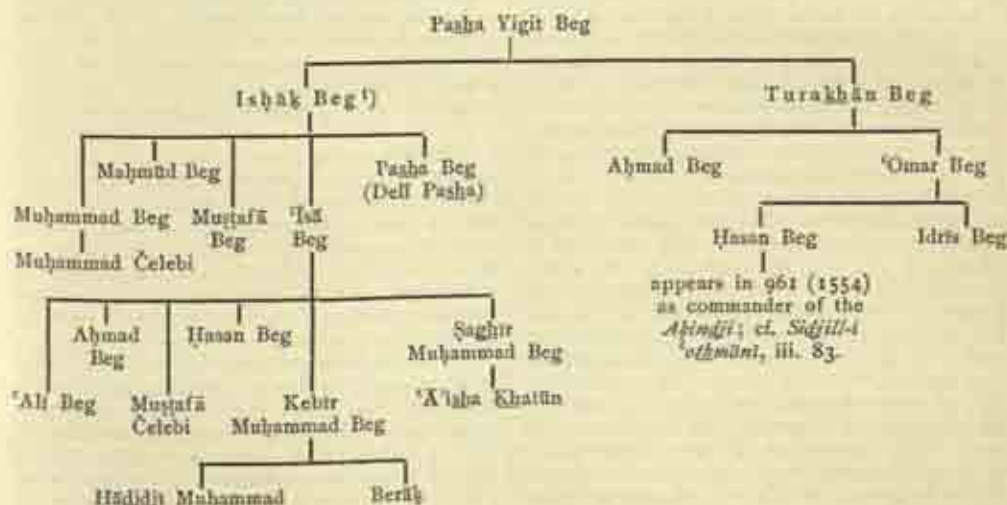

mann, *op. cit.*, II, 343 sq.; Sachau, *Reise*, p. 405 sq.; Parry (who stayed six months in it), *op. cit.*, p. 103—140 and Freusser, *op. cit.*, p. 49—53 (with plates 62—65).

As already mentioned, there was in the area of Tur 'Abdin in Roman-Byzantine times a large number of forts which were mainly intended to defend the Roman frontier from Persia. Ruins of such citadels may be seen in several places, for example the *Paḥḥā* of Byzantine writers is probably identical with the modern Kal'at Hāṭim Tayyī (about three hours' journey south of Bāsehrina); cf. Weissbach in Pauly-Wissowa, *op. cit.*, 2nd ser., I, 13. Another citadel frequently mentioned in the classics, Sarbane (the forms Sisara and Sinaarana also handed down are probably corruptions), is probably to be located on the site of the modern Sērwan (cf. Weissbach, *op. cit.*, 2nd ser., I, 2433). On other celebrated citadels, like the 'new citadel' (Arab. al-Kal'a al-Djadida), apparently the modern Kal'at Djadid (two and a half hours' S.W. of Kal'at Hāṭim Tayyī), and the citadel of Hāṭim (Syr. Hēnā de Hāṭim), often mentioned in Syriac or Arabic sources, which must have stood near Bāsehrina, see Guyer in Petermann's *Mitt.*, vol. 62 (1916), p. 297. On the citadel of Finik on the north bank of the Tigris (above Djastra) which is mentioned as early as late classical writers (as *Phasa*, Phoenice) and has played a notable part in the history of the Kurds (cf. above II, p. 1139b) see Tuch, in *Z.D.M.G.*, I, 57—61; M. Hartmann, *op. cit.* (see *Bibl.*), index (s.v.).

Nothing is known of the early career of Turakhân Beg. His name is found for the first time in May 1423, when he appeared in command of the cavalry in the Peloponnesus, broke through the ruined trenches of the Isthmus at Hexamilia, took most of the defences recently restored by Emperor Emmanuel on this tongue of land and, meeting no resistance, ravaged the interior of the country. He attacked a number of Byzantine towns like Mistra, Leonidari, Gardhiki, Dabia (cf. *Chronicon breve*, in the Bonn edition of Ducas, p. 199) and subdued the Peloponnesus for the Ottomans as far as the lands held by the Venetians. This whole campaign (cf. Phrantzes, p. 117; Chalcocondyles, p. 238) was most probably intended as a reconnaissance against Venice. Soon afterwards Turakhân appeared, if Ducas reports correctly, with his cavalry on the Black Sea (p. 50, 1). He also took the field against the Albanians and inflicted a decisive defeat on them (cf. Chalcocondyles, p. 239, 1, 252, 1) and reappeared in the Peloponnesus, where from Naupaktos he prevented the despot Constantine from taking the town of Patras (Phrantzes, p. 150, 18). At the end of 1431 he again destroyed the walls of the Isthmus of Corinth, besieged Thebes in the summer of 1435 and conquered it in a few days (cf. Phrantzes, p. 157, 18 and 159, 17). At this time the Byzantine historian Georgios Phrantzes made his acquaintance in Thebes (p. 160, 3 sq.). In the beginning of Nov. 1443, Turakhân Beg commanded one of the Ottoman corps in the battle against John Hunyadi. His peculiar conduct in the battle of Islâhi (cf. *Altunian, Chron.*, ed. Giese, p. 58, transl. p. 90) was held to be responsible for the defeat (cf. Katona, xiii. 253: *Turakhanbeg*; Chalcocondyles, p. 315) and he was sent in custody to the state prison of Hedewi Çardak at Tokat. Nothing is recorded of the next ten years of his life. In the early days of October 1453, Sultan Muhammad II sent Turakhân with his two sons

Ahmad and 'Omar with a large force to the Peloponnesus, where he again took the outer defences of the Isthmus, invaded Arcadia plundering and burning, and ravaged and burned the whole Gulf of Messene passing via Ithome (i.e. Messene). When the difficulties of communication made it necessary to divide his army, his son Ahmad was captured in the pass of Dervenaki between Mycenae and Corinth by the brother-in-law of Matthew Azanes, the despot Demetrius of Sparta (cf. Phrantzes, p. 235 and W. Miller, *The Latins in the Levant*, London 1908, p. 426), but was liberated in December 1454 by his brother 'Omar (*ibid.*, p. 383, 11 sq.). In October 1455 Turakhân appeared with his sons in Adrianople (Phrantzes, p. 385, 1 sq.). He died in the middle of 1456, probably at a great age (Phrantzes, p. 386, 1). His official residence as governor was at Larisa in Thessaly (Turkish: Yenishehr-i Fanâr; q.v.), the lands of which he held as a fief. There he built a mosque and numerous other buildings for charitable purposes; even a Christian church, in Tirnovo (Greek Tyrnawos) not far from Larisa, which is still standing, was built by him. His tomb, a chapel-like *türbe*, is in Larisa on the north east edge of the town. The cemetery around it with a monastery has now disappeared. Turakhân Beg had two sons, Ahmad and 'Omar, who accompanied their father on his campaigns. 'Omar, who appears as Ottoman warden of the marches in the Peloponnesus, while his brother Ahmad succeeded his father in Thessaly, was left in 1456 by Muhammad II on the Peloponnesus with an army (Phrantzes, p. 388, 11 sq.), in 1463 acquired the country round Naupaktos and in 1467 after an initial reverse inflicted a defeat on the Venetians (Phrantzes, p. 425, 2); a fuller account of 'Omar, 'Omarbeg (Phrantzes always writes 'Amâbeg, is given by Chalcocondyles, cf. the Index s.v. Omars). On the further life of the two brothers, of whom Ahmad, like his father, had made the pilgrimage,

1) The left part of the genealogical table is taken from the book by Cl. Elerović, *loc. cit.*, p. 121. It requires to be checked, as there might be confusion with the descendants of an Evrenos-oghlu, among the sons of Isâ Beg at least. Cf. also C. J. Jireček, *Staat und Gesellschaft*, iv. 8, note 1, where attention is called to such possible confusions.

not much is known. 'Omar seems to have been the more active of the two. In 1477 he fought on the Iskonzo against the Venetians (cf. J. von Hammer, *G. O. R.*, ii. 151), next year defeated the Albanians (*ibid.*, ii. 157) and was still alive in 1484, as his will dated Muharram 889 (February 1484), shows (cf. E. G. Pharmakidis, *op. cit.*, p. 287—303 or 307—310). 'Omar Beg had two sons, one of whom, called Hasan Beg, is known from his will written in Shawwâl 937 (May 1554; cf. Pharmakidis, p. 310 *seq.*), while the other, Idris Beg, made a name in his day as a poet and excellent translator of Hâfiz's *Shorru u-Shirîn* and *Lailâ u-Madînu* into Turkish (cf. Sehi, *Tedkîr*, p. 36 *seq.*). The family of Turakhân-oghla, which was established around Larisa and owned extensive estates until quite modern times, later played no important part in history. A certain Fakî Pasha, recorded as a late descendant of Turakhân Beg, by his extortions as governor of Rûm-eli made his name hated; he was beheaded in the court of the Serai in Istanbul at the age of 70 in March 1643 (cf. J. von Hammer, *G. O. R.*, p. 322 from Na'imâ, and Zinkeisen, *G. O. R.*, iv. 535). J. Ph. Fallmerayer in 1842 saw "at the chief mosque [of Larisa] a biography of Tarchan-Beg preserved there" (cf. *Fragments aus dem Orient*, 1877, p. 381 *seq.*) but this seems to have since disappeared (like the MS. biography of the Everenos-oghla [q.v.] mentioned by Beaujour, *Tableau du commerce de la Grèce*, i. 117). The genealogical table on p. 877 gives a conspectus of the descendants of Pasha Vigit Beg, the real founder of this Ottoman noble family.

Bibliography: D. Urquhart, *Spirit of the East*, London 1838, vol. i.; cf. the German transl. by F. G. Buck, Stuttgart and Tübingen 1839, i. 226 *seq.*, from an Arabic biography of T. and his family preserved in the public library at Thessaly. (F. BAERGER)

TURÂN (or Tawrân), the old name of a district in Baluchistan.

According to Tabari, i. 820, the kings of Turân and of Makurân (Mukrân) submitted to the Sasanian Ardashir (224—241). The Palkuli inscription only mentions the Makurân-ghâh. Herzfeld, *Palkuli*, p. 38, thinks that these princes at first owned the suzerainty of the Sakas and their submission to Ardashir was the result of the conquest of Sakastân (= Sistan) by this monarch.

Baladhuri does not mention al-Turân. According to one of his sources, Hadîdjîdî [q.v.] appointed Sa'îd b. Aslam to Mukrân and "(all) that frontier". Isakhri, p. 171, and Ibn Hawqal, p. 226, among the inhabited places in Turân mention Mhâlî (?), Kizkânân, Sûra (Shûra) and Kuzdâr (or Kuzdâr). Ibn Hawqal, p. 232, says that Turân is a valley with a fortified town (*qapâh*) also called al-Turân and in its centre is a fortress (*qish*) commanded by an ignorant Râsrian. Ibn Hawqal, p. 232—233, mentions Kuzdâr separately from the *qapâh* of the same name. Kuzdâr was the town (commercial?) of Turân possessing "a district and several towns". A certain Mughîr (or Ma'n b. Ahmad) had seized Kuzdâr and only recognised the direct authority of the 'Abbâsîd caliph.

The statements in Idrizi, i. 166, 177, confuse the situation, for he gives the name al-Turân to the station in Makurân which Ibn Khuridhbih, p. 55, calls al-Tawrân [ten farsakhs S.E. of Fakhrij, on the river which is now called Sarbâr and flows

into the sea near Gwattar], but then associates Kuzdâr and Kizkânân (towns in the district of Turân) with this Turân. On the other hand, he places Turân 4 days' journey from Kuzdâr, in the direction of Mastudj, i.e. to the north. At the site of Kuzdâr [q.v.] is known (85 miles S. of Kalât at a height of 4,050 feet: cf. the article BALUCHISTÂN), Turân (the town) must be located at Kalât.

The town of Kandâbil, five farsakhs (more accurately 5 *marhal*) from Kuzdâr, is outside of Turân and is the capital of the district of the Budhas (Baladhuri, p. 436: Zuhî al-Budha). Kandâbil, lying in the plain, is identified with Gandâwa (75 English miles N.E. of Khordar, to the north of the Indus, at a height of 314 feet above sea-level).

The position of Kizkânân, the residence of the already mentioned Ma'n b. Ahmad (chief of Turân according to Isakhri, or of Kuzdâr, according to Ibn Hawqal), is unknown. Marquart, *op. cit.*, p. 192, 275—276, connects Kizkânân with Kikân (cf. Baladhuri, p. 432) and seeks it at Kalât. In this case, Kizkânân = the *qapâh* al-Turân. The land between Kizkânân and Kandâbil, inhabited by Budhas and possessing vines, bore the name of its chief Ayl (or Uil [?]).

Yaqût, iii. 557, reckons Turân (the *qapâh* of which is Kuzdâr and which has several *rustâq*) among the *nahiyas* of Sind. He also mentions a *nahiya* of Turân in Madâ'in and a village of Turân belonging to Harât.

The Arabs write Turân with *t* which may represent some local aspiration of *t*. In principle there is nothing to object to in the connection of Turân with Turân but it would be unwise to go beyond stating the similarity of the names. The connection is still weaker if we connect Turân with Tabarân and Tabarân.

Bibliography: Tomaschek, *Zur hist. Topogr. Persiens*, i. 56, thinks the name Turân may come from the Iranian term Tûra, which means "enemy, non-Iranian countries"; Marquart, *Erânshahr*, p. 31—33, 187, 190; Le Strange, *The Lands of the Eastern Caliphate*, p. 332; Hünning, *Völkerlichter in Iran, Mitt. d. Anthropol. Gesell. Wien*, xxxvi., 1916, p. 200, seeks the real Turân not in Turkestan but in Turân of Kuzdâr (inhabited by the ancestors of the Brahûi of our day!). (V. MINORSKY)

TURÂN, an Iranian term applied to the country to the north-east of Iran. The form of the name is not earlier than the Middle Persian period. The suffix *-ân* is used to form both patronymics (Fâpâkân) and the names of countries (Gêlân, Dailamân) (cf. *Grundr. d. iran. Phil.*, i/ii., p. 176; Salemann, *ibid.*, i/ii., p. 280 expresses doubts as to whether *-ân* is from the genitive plural *-ânâm*).

Three questions are raised by the name Turân: 1. its origin, 2. its later acceptance, which identifies Turân with "the land of the Turks", 3. its modern geographical, linguistic and political applications.

The Tûra in the Iranian sphere, the element Tûr of Tûrân has analogies in the Avestan Tûra- (Tura-). In the parts preserved of the Avesta, we have 1. Tûra, the father of two pious individuals, who bear the Iranian names of Arvâhant and Frânti but of whom nothing more is known (*Yast*, xiii. 113—123); 2. the people called Tûra or Tura, probably nomads (*Yast*, xvii. 55: *âru-aspa* "having swift steeds"); [The adjective from Tûra, with epenthesis, is *âsrya*].

The Turyans are several times represented as enemies of the Iranians and of the true religion (cf. *Yasht*, xvii. 55 where they pursue *Ashī wazuhī*). A subdivision(?) of the Turyans is called *Dānu* (*Yasht*, xvii. 55-56), which may be connected with the Sanskrit *dānava* "demons". A particularly hateful figure is that of the "Turyan brigand" *Frangrasyan* (= *Afrāsiyāh*), whose fruitless attempts to seize the royal power (**aryana*) are related at length in *Yasht*, xix. 56-64. But the same *Yasht*, xix. 93, admits that the **aryana* had once been in the possession of *Frangrasyan*, when he played the part of defender of Iran against the tyrant *Zainigav*. The hostility to *Frangrasyan* might therefore have political roots.

Quite a number of passages reveal that there were pious people among the Tūra. The family of the Turyan *Fryāna* is particularly praised in a very early passage in the *Gāthās* (*Yasna*, xvi. 12). The passage in *Yasht*, xiii. 143 is very well known: "we sacrifice to the *fravashī* of the pious men and the pious women of the Aryan (Iranian), Turyan, Sairinyan, Sāinyan and Dāhyān lands".

An indirect indication of the abode of the Tūra is given in *Yasht*, v. 57, where the descendants of **Vāisaka*, lieutenant of *Frangrasyan* (*Shāh-nāma*, ed. Vullers, I. 248, 264; *Wēss*), are located at the pass of *Nāshirō-saka*, situated "very high" in *Kapāha* (= *Bakharā*?; cf. Marquart, *Komanen*, p. 196; in Chinese: *K'ang* = *Samarqand*). On the other hand, the name of the caucian Tur, which the Armenian translator of Ptolemy mentions in *Khwarizm* (ed. Soukry, § 34; cf. below), is very significant.

Several hypotheses have been put forward regarding the ethnical character of the Tūra. Geiger, *Ostir. Kultur*, p. 194, thought that this term referred to all the peoples of the steppes without distinction of race ("ein Kollektivbegriff... der keine ethnographische Trennung bezeichnet, sondern die Steppenvölker der Ebenen vom Kaspische bis an den Sir und darüber hinaus umfaßt"). Geiger thought it possible that there were Tatar elements among the Tūra ("Überreste einer tatarischen Urbewölkerung"?). It should however be noted that Geiger's attempt (p. 198) to find the Huns among the Tūra is now rejected (*Annuaire*, "son, descendant"; Bartholomae, *Altir. Wörterb.*, col. 1831).

The term *dānu* (cf. above) may also have a non-ethnical significance and mean the non-Mazdācan Tūra ("demons") [Christensen (1928) has revived Geiger's thesis; he supposes that Tūra was "originally the designation of the nomad peoples, whether they were of Iranian race or not"].

On the other hand, Blochet, in his article "Le nom des Turcs dans l'Avesta" supports the popular etymology Tūra = Turk and seeks to explain the names of the Turyan *Dānu*, *Kam* *Asabana* and *Vara* *Asabana*, by the Turkish words *bara* "black" and *gür* (?) "clever": "the name Turk, or at least the root from which it comes [sic!], was in existence at a date long before the sixth century". In this connection it may be recalled that whatever may be the etymology of the name Turk (cf. *Arch-türk*, "force, power": F. W. K. Müller, *Uigurica*, II. 10; *türküm*, "family": Kāshghari, I. 368), the name Tūra is readily explained in Iranian as "courageous", "brave"; cf. *tūr* in Persian and in Kurdish and the significant allusion of Firdawsī to the character of Tūr, son of Faridūn. It is true that the etymology of *Tūr* and *Vara* is still obscure and that, ac-

cording to Firdawsī, a member of the *Vēsa* family bears the name of *Kurākhān* (?) (ed. Vullers, I. 261), but alongside these names one could place other Turyan names of clearly Iranian appearance, including that of the third companion of *Kara* and of *Vara*, *Uhrānkašta* "whose wish goes far". (This argument would lose its value if we could prove that the princes of Tūra were of foreign origin, but at the same time, one would lose all means of identifying the people).

The most elaborate hypothesis concerning the Tūra is that of Marquart, *Erānshahr*, p. 155-157. According to him, the celebrated ancestral home of the Iranians *Airyanem waejō* was in *Khwarizm*. The legendary wars of Iran and Tūrān reflect the struggles between the settled Iranians (who, proud of their superior culture, had monopolised the name *airyana*) with the nomad *Massagetai* "fish-eaters" (cf. *Avesta marya* "fish" and the Scythian plural suffix *-ān*). It is these Scythian *Massagetai*, living at first to the east of the Oxus and the sea of Aral, who must have taken the name of Tūra. The district of Tūr which the Armenian translator of Ptolemy (Annius of Shirak?) mentions in *Khwarizm* must be a memory of the Tūra people. [The connection of the district of Tūr with the Bactrian satrapy of *Tropisōa* (Strabo, II. 517) has still to be settled (cf. Oberhammer, *op. cit.*, p. 194, 202)]. The later migrations of peoples have completely changed the ethnical map of Asia and gradually the term Tūra was transferred to the new enemies of the Iranians, the *Sacraucacae*, the *Tokharians*, the *Yü-ei*, the *Küshāns*, the *Khionites*, the *Hephthalites* and the *Turks*.

The Sanskrit translation of the *Avesta* renders Tūra by *Turushka*. This last word seems usually to refer to the Turks, but as the Sanskrit translation is very late (*Grundr. d. iran. Phil.*, II, p. 50), its interpretation of ethnical terms has no value.

The influence of the *Shāh-nāma*. The connection between the Tūrān and the Tūra was found quite late (cf. Spiegel, *Iranische Altertumskunde*, 1871, I. 553 and especially Geiger, *op. cit.*, 1822, p. 193). The Middle Persian sources which might retain traces of the evolution of Tūrān from Tūra have had no direct influence on the formation of the current connotation of Tūrān. We can therefore say that the principal source of oriental and European views on this subject has been the *Shāh-nāma*. The parallel Persian and Arabic sources, also based on the Middle Persian *Kāwāday-nāmah*, have served only as a supplement to Firdawsī's poem.

Tūrān is mentioned in the chapter of the *Shāh-nāma* relating to the tripartition of the world by Faridūn (*Thraētaona*, *Frēdhōn*), the last universal monarch (ruler of the climate *Xvāntara*; cf. Macan's edition p. 58; Mohl, I. 138; Vullers, I. 77-78).

Tūrān and its eponym. *Yasht*, xiii. 143 (cf. above), which is very early, reflects the idea that the world is made up of five nations. On the other hand from the Pahlavi *Dinkart* we know that an Avestan book, now lost, spoke of the tripartition of the world among the sons of Faridūn (*Thraētaona*, *Frēdhōn*); Sarm, Tūc and Erēc (Pahlavi forms). We have evidently a case of two sets of traditions being amalgamated by giving the ancient peoples Iranian eponyms. But as the changes had taken place in the world as known to the Iranians, the two eldest sons of Faridūn had to be given, one in the west the

other in the east, apomages in conformity with the political divisions of the period (Sasanian?). The west was thus identified with Rūm (Byzantine empire) and the east with the Turks, neighbours of the Persians since the defeat of the Hephthalites under Khusrāw I (ca. 557).

The ancient legend of the tripartition of the world among the sons of Thraētaona symbolised the relationship of the ancient peoples of whom they were the eponyms. In the time of Firdawsi, the legend was totally deprived of ethnical foundation and the contradictions had to be concealed by playing upon words. In the *Šāh-nāma*, Farīdūn gives his sons the name of Salm, Tūr and Irāji only after subjecting them to a test to reveal their characters. The eldest, who has escaped the danger without scathe (*salāmāt*) receives the lands in the west (*Rūm mo-xāwar*) with the title *Xāwar-khudāy*. To the dashing second son (*tūr* = courageous) is given Tūrān and he becomes Tūrān-šāh, or Shah-i Chin, "lord of the Turks and Chinese" (Türk wa-Chin; cf. ed. Vulliamy, reign of Farīdūn, verses 460 and 295). The youngest, as brave as he is prudent, receives *Irān and the plain of the heroes (or perhaps of the Kuris; cf. *ibid.*, verses 291, 300 and 321) with the title *Irān-khudāy*.

In the Arabic writers (cf. Tabari, i. 226) the name of the eldest son still has the form Sarm < Sairima. But as the Pahlavi alphabet does not distinguish *r* and *l*, Firdawsi (as well as the *Muḥḥal al-Tawārīkh*) preferred the variant Salm which lent itself to a play on the Arabic root *s-l-m*. [Modi's attempt: *Adabic Papers*, Bombay 1905, p. 244, and Blochet's: *Rev. de l'Or. Chrétien*, 1925, xxv, p. 431, to connect Sairima directly with Rome (**Rim*, cf. Armen. *hRōm*) is wild in every respect]. That the connection of Salm with the west is still very slight is evident from the fact that the two brothers Salm and Tūr fight east of the Caspian Sea (Tha'alibi moves the scene of war to Adharbāydjān) and hold there jointly a naval stronghold Alānān-dī (Dihistānān Šār, on the Cape of Hasan-kuli? on which see Barthold, *K. istoriia vostochnykh Turkestana*, St. Petersburg 1914, p. 33). The name of the Alāna (ancestors of the Ossetes and descendants of the Sauromates = Sairima?) in these regions can relate only to a period about the first century B.C., when the Iranians still ruled around the Caspian (Marquart, *Komanen*, p. 108).

The name Tūr (Firdawsi and *Muḥḥal al-Tawārīkh*) appears in the *Denkārī*, viii. 13 as Tūr and this form predominates in the Arabic sources: Ibn Khurdašbih, p. 15; Tūdj or Tū; Dīnawarī, p. 11 (the sons of Nimrūd: Irāji, Salm and Tū); Tabari, i. 226; *Pikrist*, p. 12; Mas'ūdī, *Murūū*, ii. 116; Birūnī, *al-Āthār al-bāhiya*, p. 102; Tha'alibi, ed. Zotenberg, p. 41 (Tūr, Tūr). In any case the form Tūr chosen by Firdawsi to explain Tūrān as the apomage of the bearer of this name differs from the forms found in the Pahlavi and Arabic sources. According to Marquart, *Bilrāge*, Z.D.M.G., 1895, p. 664–7, Tūr < Taurī (from Tūr); according to Christensen, Tūr is from Tūr + ē = "of Tūryan origin".

Tūrān as a geographical term. The term Tūrān, formed from the name of the people Tūr, which is derived from that of its eponym Tūr/Tūr, and ultimately applied to the country of the Turks, ought to be found in the Sasanian *Khāwāz-nāma*, the source used by the Arab

historians and by Firdawsi. It is true that the *Bundahish*, iii. 13, 39, etc. uses only the term Turkestān [while Salmān, "land of Salm" *ibid.* xx. 12, there designates the country from which the Tugra comes] but we find Tūrān in the *Denkārī* viii, and in the fragments from Tārān (F. W. K. Müller, ii. 87).

For Firdawsi, Tūrān, land of the Turks and of the Chinese, is separated from Irān by the Oxus (*Šāh-nāma*, ed. Vulliamy, reign of Farīdūn, verses 295, 309, 322, 456, 459, 542, 792, reign of Nawdhar verse 133; ed. Mohl, v. 680, reign of Bahrām Gūr). On the other hand in the account of the defeat of Afrāsiyāh, the beginning of his domains seems to be extended to "Kibchāq". Marquart, *Komanen*, p. 110, from the manuscripts, emends this name to Kockāe (*Kōckā*) and identifies it with the encampment of the Karlukh [q. v.] 5 fursakh beyond Tārān [q. v.]; cf. Ibn Khurdašbih, p. 24: *Kiry kūr*. In the same way the capital of Afrāsiyāh, Kang-diz, is located by Firdawsi somewhere near China, without any connection with the country of Kang (*Bukhārā*) (ed. Vulliamy, verse 1381; cf. Bartholomae, col. 437; Marquart, *Komanen*, p. 109). These details may record the early stages in the western movements of the Turks. As to the Chinese, subjects of the kings of Tūrān, Firdawsi may have substituted their name for that of the old Avestan people Sūnāv, already assimilated to the Chinese in the *Bundahish* (Darwesteter, *Le Zend Avesta*, ii. 554).

The Muslim writers, Arabic, Persian and Turkish, have not been logical in the use of the term Tūrān. But since for the Arab geographers, the land of the Turks began only to the east of the Str Daryā and did not include Transoxiana (cf. Barthold, *Turkestan, Gikh. Mem. Ser.*, p. 64), it seems that there was a tendency to identify Tūrān with Transoxiana, i. e. with the lands between the Amū-Daryā and the Str Daryā. According to Khwārizmī, *Mafatih al-'Ulūm*, p. 114, the Persians call the land beside the Oxus, Marz-i Tūrān. For Yāqūt, i. 892, Tūrān is the country of Mā warā' al-Nahr (Transoxiana); after the tripartition of the world by Afrīdūn, the Turks called their land Tūrān after their king Tūdj (Yāqūt also mentions a village of Tūrān near Hātrān). Very curious is the archaïcising reference in Dimishki, *Cosmographie* (ca. 1320), ed. St. Petersburg, p. 114, according to which the Sayhūn (Str-Daryā) forms the frontier between Transoxiana, i. e. "the land of the Hayūtila called Tūlān (= Tūrān)" and the land of Turkestān which is called Farghāna (on Hāitā = Transoxiana, cf. also *Erānshāh*, p. 307). Much more vague is the use of the term in the *Masālik al-Abyār* (xivth century) where the Volga is called Nahr-Tūrān and the summer camps of the old kings of Tūrān (the former Khāns of Kiptāk; Marquart, *Komanen*, p. 138) are located at Arč-tagh (?), identified by Quatremère and Marquart with the Ural Mountains.

In the *Zafar-nāma* (xvth century), Tūrān is only used for poetical comparisons (i. 34, 624: "the heroes of Tūrān in Iran"). Abū l-Qhāz (xvth century) sometimes uses it as a mythological term (ed. Desmaisons, p. 2, 129, 140), sometimes identifies it with western Siberia (p. 177), sometimes seems vaguely to regard the lands of Muḥammad Khwārizmshāh as situated between Iran and Tūrān (*Irān hīlūn Tūrān arast*; p. 96).

The term Tūrān became known in Europe from Herbelot's *Bibliothèque Orientale*, Paris 1697,

p. 63, where we are told that Afrāsiyāb, a Turk by birth but a descendant of Tūr, son of Faridūn, was king "of all the country which lies beyond the river Oxus... to the east and north this country used to be called Tūran but it has since received the name of Turkestan". This last term is already found in the maps of Ortelius and Mercator in the xvth century (Oberhummer). The term Tūran became naturalised in Europe only in the xixth century. Its vague character has earned it a certain degree of popularity as applied to ideas where accuracy of definition is out of the question.

Turanian languages. The inventor of this term seems to have been the historian Bunsen (1854) who applied it to those languages of Asia and Europe, which are neither Indo-European nor Semitic. The real populariser of the term was Max Müller, *The Languages of the Seat of War in the East, with a Survey of Three Families of Languages, Semitic, Arian and Turanian*, London 1855, who includes in this group (for he avoids the term "family") of agglutinative languages not only Finno-Ugrian and Altaic but also Siamese, Tibetan, Malay etc. Lenormant, *La Magie chez les Chaldéens et les origines acadiennes*, Paris 1874, extended the term to include Sumerian. J. Oppert, in *Les Peuples et la Langue des Mèdes*, Paris 1889, wrongly taking the language of the second column of the Achaemenian inscriptions (the Neo-Elamite) for Median concluded that the Medes were "Turanian". Turanian became a regular dumping ground for languages awaiting classification. But already Castrén (1862) pointed out the proper line of criticism. He first of all isolated the quintuple group of "Ural-Altaic" languages with its branches, Finno-Ugrian, Samoyed, Turko-Tatar, Mongol and Tungus. Later researches have brought further restrictions by separating the first two of these from the last three, which form the Altaic group. G. Ramstedt, the founder of the comparative gram-

mar of this group, has, after some hesitation, solidly established the relationship of Turkish with Mongol and their connection with Tungus is also admitted. On the other hand, the connection of Altaic with Finno-Ugrian and Samoyed still lacks decisive proof. As to the term Turanian, it has been completely banished from modern linguistics. Cf. Dony, *Langues turques, mongoles et toungouses*, in *Les langues du Monde*, Paris 1924; Poppe, *La parenté des langues altaïques, Histoire et état actuel de la question* (in Russian), Baku 1926; Sauvageot, *Recherches sur le vocabulaire des langues ouralo-altaïques*, Paris 1929.

Pan-Turanianism. This political term is used on the one hand as synonymous with the Pan-Turkic movement (*Türk-çülük* "Turkism") and on the other is applied to something much more vague, the tendency to a rapprochement among the "Turanian peoples".

In the latter meaning, it has been particularly employed in Hungary where the first appearance of the term Tūran, in the ideal sense of the distant fatherland, dates from 1839 (according to Count Teleki: "eine gewisse Schwärmerei für Stammland und Stammverwandte"). The review *Turan* founded at Budapest during the World War by the *Turanische Gesellschaft*, to judge from the Bulgar and Turkish prospectuses, was intended to study the history and civilisation "of the peoples who are related to us" (in Turkish: *bizimle karabelli olan milletler*). The editor however (1918, No. 1, p. 5) took up quite a distinct attitude in the following pronouncement: "Our Tūran is geographical; it is neither the Tūran of Max Müller, the subject of lively controversy, nor the Tūran of political aspirations". Count Teleki and Prof. Cholnoky (*Turan, ein Landeskulturbegriff*, *ibid.*, No. 1, p. 85) conceived this region as lying between the following boundaries: the Caspian Sea, the Iranian plateau, the mountains at the sources of the Sirdaryā and the Irish and the plateau of Akmolinsk. Setting aside the value of the ideas of these authors on the uniformity of this geographical milieu and on the influence it has exerted upon the peoples who have lived there, it must be recognised that from the point of view of geographical terminology (cf. above) such a use of the word Tūran is quite new and personal. Broadly speaking, this Tūran is a useless term substituted for Turkestan, which has at least the merit of being a definite conception.

In Russia also we can find tendencies parallel to those of the Hungarian "Turanians". The group called "Eurasian" has interested itself in geo-politics and the cultural influences of the Eurasian peoples; cf. I. R., *L'héritage de Čingis-khan* (in Russian), Berlin 1925; Prince N. Troubetzkoy, *Sur l'élément touranien de la culture russe* (in Russian), Paris 1927. Much clearer in principle are the tendencies of the Pan-Turanian movement comprised in the narrower sense of "Pan-Turkish" but in the absence of a complete study of this cultural and political movement we can only give a summary account of its stages of development and programme.

The Ottoman empire at the period of its greatest expansion was quite without any tendencies to Turkism. The highest offices were filled by non-Turks, whose conversion to Islam was often of recent date. The levies of Christian children [cf. *newittians*] provided the state with the most capable civil and military officers (cf. Lybyer, *The Govern-*

ment... of *Suleiman the Magnificent*, Cambridge Mass. 1913, p. 51—56). The theory of the *sulphur* excluded the possibility of preferring the Turkish elements to the other Muslim subjects of the empire. Even in the 19th century the word *türk* had in the Ottoman empire the definite meaning of "peasant, rustic, yokel" (cf. the popular proverbs). In this connection the poem by Mehmed Emin Bey, written during the war with Greece in 1897, marks the date of the complete change of meaning of the word: *Ben bir türk-üm, dinim dînim ulu-dur*: "I am a Turk, my religion and my race are exalted ones".

Several factors have determined the development of the "Turkist" movement, sometimes called Türianism.

a. The formation in the 19th century of numerous national movements (Greek, German, Italian, Slav, Armenian, Arab) several of which were directed against the Ottoman empire.

b. The reverses suffered by the Ottoman empire, which deprived it of its possessions in the Balkans, in Africa and finally in Asia also (Syria, Arabia, Mesopotamia, Mawjil). With each diminution of Ottoman territory the Turkish element of Anatolia gained in importance, not only as regards numerical proportion but also from the point of view of the only sure and stable basis upon which the state could be established.

c. The progress made by Turcology, which has drawn up an inventory of the Turkish peoples, established the affinity of their languages and thrown light upon the early history of the Turks. [More direct has been the influence of the romantic work by L. Cahun, *Introduction à l'histoire de l'Asie*, Paris 1896 (Turkish adaptation by Neğib 'Asım). Among the earlier works which have exerted an influence on these lines Ziya Gökalp mentions de Guignes, *Histoire générale des Turcs, des Mongols et des Huns*, Paris 1756—1758 and Lamley Davids, *Turkish Grammar*, London 1832 and 1836. Here also we should mention the sketches of national movements published by the R. M. M. and the work of R. Hartmann tending to establish a bond of union among Turkish peoples].

d. The formation in Russia of a Muslim *intelligentsia*, primarily Turco-Tatar, and the impetus given to the Turkish press in Russia by the events of 1905. The emigrés from Russia, like 'Ali Hüsnî-zâde (Bakkî), Yusuf Ak-çura (Kazan) and Ahmad Agha-oghlu (Kharabagh) have been the driving forces in the movement and even had to overcome considerable opposition emanating from the Turks of Turkey.

At the beginning of the 20th century, three political theses were to the front in Turkey: Pan-Islamism, Ottomanism and Pan-Turkism. An open discussion of these was instituted (in 1902—1903) in the journal *Türk* published in Cairo. The Pan-Turkish point of view was championed by Yusuf Ak-çura-oghlu whose article *Üç tavaiz* (reprinted at Stambul in 1327) has played an important part in the elaboration of the programme of the movement. Ak-çura criticised Ottomanism as tending to diminish the privileges of the Turks and contrary to Islam which recognises equal rights for all believers. On the other hand, Pan-Islamism would exacerbate the non-Muslims and meet resistance from certain European powers. The author then declared for Pan-Turkism, thinking it would overcome the greatest obstacle, represented

by Russia, with the help of other governments (R. M. M., xiii, p. 179—221).

In the same journal *Türk*, Ak-çura's thesis was criticised by the liberal 'Ali Kemal, in the name of Ottomanism, and by Ahmad Ferid on grounds of possibility, for pan-Islamism seemed to him unrealisable and pan-Turkism so far non-existent.

In the early days of the revolution of July 1908, Ottomanism (= equal Ottoman citizenship for all ethnic elements) triumphed officially but before a year had passed the Committee of Union and Progress had reluctantly to recognise there were irreconcilable tendencies among the nations that composed the Ottoman empire. The Turkist movement was growing rapidly.

On Dec. 24, 1908, the Turkish Assembly (*Türk Dîniyeti*) was founded at Stambul with the object of studying the situation and the activities (*ahvâl ve-âfâl*) of all Turkish peoples. In practice, the interest of this body has been confined to questions of language, which have been discussed in the reviews *Yeni-lâhân*, *Günâzî pâlemler* etc. In 1911 the Türian Society for the propagation of knowledge (*Türân nish-i m'ârifî cem'iyyeti*) was created and in December appeared No. 1 of the periodical *Türk-yurdu* edited by Y. Ak-çura. On May 25, 1912, the *Türk ocakları* (Turkish Hearths) were founded, circles for the study of Turkish culture.

At the same time the great theorist of Turkism, Ziya Gökalp [q.v.], elected in 1910 a member of the Central Committee of Union and Progress, began his activity first at Salonica (1909) and later at Stambul (1912). In a series of poetical works he aroused the memories dormant in the blood of the Turks and sang the Turkish ideal as personified in the mysterious land of Türian: "The children of Oghuz-khân will never forget this country which is called Türian" (*Türkçük*, 1911). This land is associated with Attila, Fârahî, Uluğ Beg, İbn Sinî (the Turkish origins of the latter [q.v.] are not by any means proved). "The fatherland of the Turks is neither Turkey, nor Turkestan, their fatherland is the great eternal land of Türian" (*Türân*, 1914).

The teaching of Ziya Gökalp was summed up in the formula "Turkicise yourself (from the point of view of culture, *parth*), Islamicise yourself, modernise yourself (from the point of view of civilisation, *mediniyet*)". The systematic exposition of the theories of this writer will be found in *Türkîlâhân esâsîleri*, "The foundations of Turkism", published at Angora in 1339 (1923) a year before the author's death. In this work, the idea of Türian is a little more practical. Ziya Gökalp defines the nation as a group of individuals connected by language, religion, ethics and aesthetics. Türian is not a mixture of Turks, Mongols, Tungus, Finns and Hungarians. "The word Türian is a name covering the Turk tribes exclusively". The reunion of the Turks can only be brought about by stages. The immediate ideal of Turkism is the cultural union of the Oghuz-Turks, i.e. the Turks of Turkey and the Turkomans of Adharbâidjân, of Persia and Khâvarizm. Their political union is not at present envisaged but one cannot foretell the future. On the other hand, if the Tatars, the Özbeks and the Kirghiz succeed in creating civilisations of their own and in forming separate nations, they will retain their respective names, but in that case "Türian" will serve as a common term

for all the peoples enumerated, forming an ethnical union (*dünya*).

Turanian romanticism has had various repercussions in the purely literary field in the works of Ahmad Hikmat (*Alfin orin*), Khâlid Edib Khânîm (*Yeni Tûrân*, 1913), Aka Gündüz (*Muhterem kâit*, a drama produced in 1914 whose subject is a Turkish rising in the Caucasus), Müfide Ferid Ehanîm (*Ay Demir*, a Turkish rising in Central Asia). On literary Turanism during the War, cf. M. Hartmann, *M.S.O.S.*, 1918, xxi., p. 19-22.

During the War of 1914, the Young Turks (Committee of Union and Progress) governing the Ottoman empire officially professed Ottomanism, at least so far as Muslims were concerned, but in fact the deportations of Armenians in 1915 were realising the programme of the Turkicisation of Turkey.

Expansion towards the East. The war of 1914 had drawn a curtain between the Turks of Turkey and their kinsmen. The Russian revolution of 1917 entirely modified the situation. By the clause added at the last minute to the treaty of Brest-Litowsk, Turkey obtained the return to the frontier of 1877 in Transcaucasia (surrender by Russia of Batum, Kars and Ardahan). The refusal of the Turks of Adharbâidjân to resist the Ottomans put an end to the Transcaucasian confederation (April 22, 1918), which was replaced by three independent republics (Adharbâidjân, Georgia and Armenia). Under the command of Enver Pâshâ's brother, the Turks advanced as far as Petrowsk on the Caspian Sea but the armistice of Madros (Oct. 30, 1918) forced them to turn back. The English then occupied and later withdrew from Transcaucasia. While in the capital, occupied by the Allies, Dâmîd Ferîd Pâshâ's government in *extremis* was making a last attempt to unfold a programme of Ottomanism, the nationalist government was formed in Asia Minor (summer of 1919) and by energetic measures was able to retain the ground gained by the Young Turks at Brest-Litowsk. The republic of Armenia was conquered (Peace of Alexandropol of Dec. 3, 1920). Georgia declared its neutrality and submitted to the ultimatum (of Feb. 23, 1921) which demanded the evacuation of Artwin and Ardahan. On March 16, 1921, the Turkish-Soviet treaty was signed at Moscow and on Oct. 13 confirmed at Kars, with the participation of the three Caucasian republics (now Soviets). Turkey withdrew her claim to Batum but, what was not in the Brest-Litowsk treaty, received the district of Igdir on the Araxes (which Persia had ceded to Russia in 1828) and thus enabled her territory to be contiguous to that of Nakhicewân, which had been created as a dependency of the Soviet republic of Adharbâidjân.

The government of Angora thus secured concrete gains in Transcaucasia but publicly disowned Enver Pâshâ's achievements, who had at first allied himself with the Soviet government but finally raised the standard of revolt in Turkestan where he dreamed of founding a Turkish empire. He fell in a skirmish in eastern Bukhârâ on Aug. 4, 1922 ("as a martyr to Turkism" as his colleague Dr. Nazim said at the trial of the Young Turks in August 1926); cf. Castagné, *Les barmatchis*, Paris 1927.

Cultural Movement. The old leaders of the Turanian movement had early rallied to the government of Angora. (The poet Mehmed Emin

and Ak-çura Oghlu arrived at Angora in April 1921). From April 23, 1924 the Turkish Hearths (*Türk ocakları*) resumed their activity in Angora under the leadership of Hamdullah-Subhî. Their first *kurultai* met at Angora on March 28, 1926. In 1928 Yûsuf Ak-çura produced at Stambul the annual *Türk Yılı* (The Turkish Year) with summaries of the doings of Turks abroad. As a result of the Russian revolution of 1917 a new wave of emigration swept over Turkey. The supporters of the old nationalist governments overthrown by the Soviets established the review *Yeni Kafkasiya* (1924) which was succeeded in March 1929 by the *Odlu Yurt* "Land of Fire" (= Adharbâidjân). These organs of Turkish solidarity have not however linked up with the local Turkish press.

As regards the Turks in what was the Russian empire, since the revolution of 1917, they have realised and even gone beyond their old programme of establishing their own civilisation and autonomy. But alongside of this natural evolution, the Turks of the U. R. S. S. have actively and passively taken part in all the phases of the Soviet revolution. For the moment (1930) it is impossible to separate the results of the particular and general factors and to say to what point the tendencies of all the peoples of Turkish origin are converging.

The communications and discussions at the first Turcological congress at Bâkû from Feb. 26 to March 6, 1926 (131 delegates, Soviet and foreign, including two from Turkey) were of great interest (see the shorthand reports published in Russian, Bâkû 1926, and Menzel's detailed analysis in *Der Islam*, 1918). The decision of the congress regarding the optional adoption of the Roman alphabet (compulsory since 1928) had a great influence on the introduction of the new alphabet into Turkey (1928) (cf. H. Dada, *Die neue Lateinschrift in d. Türkei*, O.L.Z., June 1929, col. 441-453; E. Rossi, *Il nuovo alfabeto*, *Oriente Moderno*, Jan. 1929, p. 33-48).

It is difficult to foretell the future of the Pan-Turkish movement. The cultural attraction of Angora, this great centre of Turkism, is legitimate and inevitable. But Angora is now a lay capital entirely free from the Islamic prestige of the old Stambul. The intensity of its influence will therefore depend primarily on the worth of the Turkish culture (*harâth*) which will be developed there. Even the bringing of all Turks "descended from Oghuz" under one culture according to Ziya Gökalp's idea would not be easy, because, for example, the Persian Turks, the immediate neighbours of Turkey, are very much under the influence of Persian culture, the persistence of which is a historical fact. As to the political union of the Turkish peoples, account must be taken of the very different conditions under which they live. Their lands are very scattered. They are separated by the Caspian Sea and the desert. In Transcaucasia the corridor between Georgia and Armenia on the one side and Persia on the other is very narrow and is of no importance, unless a complete reversal of the situation in Transcaucasia and in Persia should take place simultaneously, which is quite beyond the programme of Turkism pure and simple.

(V. MINORSKY)

TURANSHAH b. AIYUB AL-MALIK AL-MU'AZZAM SHAMS AL-DAWLA FAKHR AL-DIN, founder of the Aiyubid dynasty of the Yemen.

He was born at the beginning of Raddj 569 (February 1174); two years before the death of the last Fātimid 'Adil [q.v.] had formally made Saladin lord of Egypt; the relationship of vassal and overlord between him and the Zangid Atabeg Nūr al-Dīn Mahmūd had now become unnatural and threatened to end in war; King Amalrich of Jerusalem, with whom Saladin had been fighting, was still unsubdued; the Crusaders of Kerak and Shawbak [q.v.] were harassing the roads to Egypt. That Saladin should choose such a time for the conquest of Yemen is remarkable and is not completely explained by the religious grounds which induced him to wage this war, namely the expulsion of the Kharijī Mahdī [q.v.] from Zabīd and of the Sufī Hanū Karam [q.v.] who were formally incorporated in the Fātimid hierarchy from 'Aden. It is characteristic of Saladin's foresight that he wished to secure for himself a province to which he could retire on any emergency; the general situation indicated that this could only be found in the south, where alone his troops could be employed; for if he wanted to avoid an open breach with Nūr al-Dīn, it was best to leave Frankish power in Palestine as a bulwark between them for the time. Only a year before, he had sent to Nubia one of his five brothers, an elder one, Tūrānshāh, whose name popular rumour had connected with the death of the last Fātimid; but Tūrānshāh did not think the country worth the difficulty and expense of taking it. The old-established relations between the holy cities and Egypt now attracted his attention to the Arabian

peninsula at the northern approach to which the port of Aden [q.v.] had already been occupied in 566 (1171). Tūrānshāh was therefore sent to Yemen, took Zabīd in Shawwāl of the year 569 (May 1174), 'Aden in the same year and in the following year drove from San'ā' the Hamdānīd 'Alī b. Hātim al-Wahīd, whose power to resist had been weakened by the continual attacks of the Zaidī Imam Aḥmad b. Sulaimān of Sa'da. Tūrānshāh however did not feel comfortable in a country where snow never fell and he could not obtain his favourite fruits. As a result of urgent representations to his brother, he obtained a transfer to Syria in 571, which had in the meanwhile passed to Saladin on the death of Nūr al-Dīn. After spending three years in Damascus as governor of Syria, his brother transferred him to Alexandria where he died on 1st Šafar 576 (June 27, 1180).

The career of Tūrānshāh is not unimportant but the initiative was always Saladin's; Tūrānshāh was more a man who enjoyed life. Even while still in Egypt he had acquired considerable wealth; from the Nubian campaign he brought back many slaves, including the Christian metropolitan; before the Yemen campaign he had been given large old family fiefs in Baalbek; in Yemen itself his brother gave him rich estates as his personal property. On leaving there, his main anxiety was that his representative should send him the revenues promptly. This man with all these estates nevertheless left behind him 200,000 dinars of debts which his brother paid. The body of Tūrānshāh, always homesick for Syria, was taken by his sister Sitt al-Shām Zamarrud and buried beside the medresa built by her in Damascus.

The Aiyubid conquest was of considerable significance for the Yemen. The three small states there were combined and united to a great power. The occupation was very thoroughly carried through. It is true that the last Hamdānīd was able to escape to the highlands, but the last Mahdī 'Abd al-Nabī and his two brothers and the last real ruler of the Karam, the major domo Yūsuf, were put to death some time after their surrender by Tūrānshāh's orders. The latter's departure so soon after the conquest was not calculated to keep the conquered territory together. Dangerous risings at once broke out. It was only when Saladin sent his other brother Tuḡtigin Saif al-Islām who stayed there from 578—593 (1182—1196) that Aiyubid rule became more of a reality. He was followed by his sons Mu'izz al-Dīn Ismā'īl till 598 (1201) and al-Nāṣir Aiyūb till 611 (1214); both were assassinated. In 612 (1215) the head of the family, Saladin's brother al-'Adil Saif al-Islām Abū Bakr, sent his young grandson al-Mas'ūd Yūsuf there. The gradual breakdown in family discipline however had resulted shortly before this in a great-grandson of Saladin's brother, Nūr al-Dīn Shihānshāh called al-Muẓaffar Sulaimān, on the appeal of Nāṣir's brother, establishing himself in Yemen, posing as a Sufī with a retinue of Sufīs. Along with Tūrānshāh, five brothers of the family of the Hanū Rasūl had come into the country and soon attained great importance as indispensable councillors and wealthy owners of land. In the fight between Sulaimān and Yūsuf, 'Alī b. Rasūl brought about the success of the latter, conquered the Hūdjar in his name and was appointed wālī of Mecca in 619 (1222). His son 'Omar, after the death of the weak Yūsuf in 626 (1228), assuming

the name al-Mansūr, founded the dynasty of the Rāshidīda, which ruled the land for over two centuries as a native Yemen dynasty, after the foreign rule of the Aiyūbids had prevailed for only half a century.

S., iii), iv. 26 sqq.; Lane-Poole, *The Mohammedan Dynasties*, 1894, p. 98; von Zambaur, *Manuel de généalogie et de chronologie*, Hanover 1927, p. 98.

(R. STROTHMANN)

TURBAN, the headdress of males in the Muslim east, consisting of a cap with a length of cloth wound round it. The name turban is found in this form in European languages only (English turban, turbant; French turban, tulban; German Turban; Italian, Spanish and Portuguese, turbante; Dutch tulband; Rumanian tulipan; all going back to older forms with *o*: *tol(l)iban*, *tolipan*, *tolopan*, *tourbant*, *tourban*, *torbant*) and is usually traced to the Persian *dulband*, from which is also said to be derived the word tulip (cf. Meyer-Lübke, *Romanisches etymologisches Wörterbuch*, Heidelberg 1911, p. 682, where also is cited from the *Reine des Langues Romanes*, iii. 54 the Spanish name of the hammer-headed shark, *torbandalo*). It should be remembered however that the word *dulband* is by no means so widely disseminated in the east as one would have expected from the general use of the word turban in Europe, but is limited to the Persian (and to a smaller extent Turkish) speaking area and even here is not the only name in use. The commonest word in Arabic is *ʿimāma*, which properly means only the cloth wound round the cap and then comes to be used for the whole headdress, and in Turkish *şarף* is the usual name for the turban. Besides these however, there are a large number of other names for what we often loosely call turban and for its parts in different Muslim countries; these are given in a preliminary list at the end of the article.

The origin of this form of headdress ought probably to be sought in the ancient east; a turban-like cap seems to be found represented on certain Assyrian and Egyptian monuments (cf. Reimpell, *Geschichte der babylonischen und assyrischen Kleidung*, p. 40; Josef von Karabacek, *Abendländische Künstler zu Konstantinopel*, Denkschr. Ak. Wien, lxii, 1918, p. 87 sq. and von Hammer, *G. O. R.*, vii. 268 and *Statuenfassung*, p. 441). In Arabia the pre-Muhammadan Beduins are said to have worn turbans, and it has been supposed that the high cap is the Persian and the cloth wound round it the true Arab element of the turban (Jacob, *Altarabisches Beduinenleben*, p. 44. 237).

In Islam in course of time the turban has developed a threefold significance, a national for the Arabs, a religious for the Muslims and a professional for civil professions (later divided into religious and administrative offices *waṣāʾif dīniya wa-dawliya*) in contrast to the military.

Many details about the Prophet's turban have been handed down by tradition but most of these hadiths bear obvious traces of a late date. They therefore prove nothing for the time of the Prophet but only show what later ages wanted to believe. To the latter the turban, as succinctly expressed in a hadith, signified "dignity for the believer and strength for the Arab", *waṣār li 'l-Muslim wa-*

izz li 'l-'Arab and the Prophet to them is the owner of the turban par excellence (*ṣāhib al-'imāma*). The makers of turbans in Turkey (*dulbandgīān*) have actually chosen the Prophet as their patron saint, for he is said to have traded in turbans in Syria before his call and to have exported them from Mecca to Bosra (Ewliya, i. 590). The only reliable hadith is negative: the *muhrim* is not allowed to wear the turban, nor *ḥamī*, *ṣayḍ* etc. This hadith is also found in Buhārī in the *Bāb al-'Awā'im* (Libā, bāb 15) contrasted with the following, mostly weak, hadiths. According to one, for example, Adam is said to have worn a turban which Gabriel wound round his head on his expulsion from Paradise; previously he wore a crown (*taḡ*). The next was Alexander Dhu 'l-Qarnain who wore a turban to conceal his horns. A much quoted hadith runs "turbans are the crowns of the Arabs" (*al-'amā'im taḡān al-'Arab*), which is variously explained to mean, either that turbans are as rare among the Arabs as crowns among other peoples for most Beduins only wear caps (*ḡalānis*) or no headdress at all, or that the Arabs wear turbans as the Persians crowns, so that the turban would be a national badge of the Arabs as the crown of the Persians. A similar hadith runs "wear turbans and thus be different from earlier peoples" (*ṣtamū ḡalānis 'l-umam ḡabīlukum*).

Still more numerous are the hadiths which describe the turban as a badge of Muslims to distinguish them from the unbelievers; turbans are a mark of Islam (*al-'amā'im imā al-Islām*); the turban divides the believers from the unbelievers (*al-'imāma ḡalānis bain al-kufr wa 'l-'imān or bain al-Muslimin wa 'l-muḡrīkīn*); the distinction between us and the unbelievers is the turban on the cap (*farḡ mā bainunā wa-bain al-muḡrīkīn al-'amā'im 'ala 'l-ḡalānis*); or the prophecy: my community will never decay so long as they wear turbans over their caps (*lā taḡala ummatī 'ala 'l-ḡalānis wa labīn 'l-'amā'im 'ala 'l-ḡalānis*); and on the day of judgment a man will receive light for every winding of the turban (*kaḡura*) round his head or round his cap. Thus "to put on the turban" means "to adopt Islam". Nevertheless the stage was never reached where it was a religious duty (*farḡ*) to wear the turban; it is however recommended (*muṣtaḡabb, sunna, mandūb*) and a general recommendation runs: "wear turbans and increase your nobility" (*ṣtamū ḡalānis ḡilman*).

Especially at the *ḡalāt* and on going to the mosque or tomb is the wearing of the turban recommended and it is said: two rak'as (or one rak'a, or the ḡalāt) with a turban are better than seventy without; for it is not proper to appear before one's king with head uncovered. Or: God and the angels bless him who wears a turban on Fridays. In great heat and after the prayer however, it is permitted to take off the turban, but not during the prayer itself, on the other hand the want of a turban is no reason for absenting oneself from prayer. At other times also — in great heat or at home or while washing — the turban may be removed, and as a rule the Arabs always wore the turban "until the ascension of the Pleiades", i.e. until the beginning of the great heat. Even in later times the turban played an important rôle in the spreading of Islam, e.g. in the Sudan (cf. A. Brass, in *Isl.*, x. 22, 27, 30, 33; *M. S. O. S. Ar.*, vi. 191 sq.).

It has not always been the custom in Islam for

none but Muslims to wear turbans. The later regulations for dress demand, it is true, that only believers may wear turbans while unbelievers are only to wear a cap (*ḥalimma*). But in earlier times unbelievers were only to wear turbans of another colour or with some distinguishing mark. Rulers who were not generally well disposed to members of other faiths were always distinguished by strict regulations about dress; but with a change of attitude the observation of the prescriptions became slack until it again became necessary to enforce them more strictly. In later days appeal was frequently made to an alleged dress regulation by 'Omar I. which is however probably a later invention and was probably transferred from 'Omar II to 'Omar I. The latter is said to have been the first to forbid Christians to wear the turban or dress resembling that of the Muslim (cf. now Tritton, *Islam and the protected Religions*, *J.R.A.S.*, 1927, p. 479-484). Further laws about dress are attributed to Hārūn al-Rashid who, like 'Omar II, is said to have issued a general order forbidding Christians to wear the same dress as Muslims. Mutawakkil is said to have prescribed yellow for the unbelievers, including the turbans if they wore any, and the Fātimid Ḥakim black because this was the colour of the hated 'Abbāsids. At one time Christians were forbidden to wear red, at another any one who wore white was to be punished by death. In Egypt and Syria in the eighth century A. D. Christians wore blue, Jews yellow and the Sāmīra red and they might also wear silk turbans, and neck-veil (*ḥarīr*, *imāma*, *ḥallāṣa*) of these colours (Kalkasbandi, *Ṣūḥ al-ʿAḥd*, xiii, 364).

Turkey has had a whole series of dress regulations of its own: the earliest was enforced by 'Alā' al-Dīn Paṣṣa (d. 732 = 1331) in the reign of Orkhan (cf. above i., p. 247^b). He introduced a cone-shaped cap of white felt but only for officials in the Sultan's service; other subjects apparently had freedom of choice in their dress. In the reign of Meḥmed the Conqueror (*Fātiḥ*), further laws about rank, titles and dress of the officials were issued. Under Sulaimān the Legislator, ranks and professions were carefully graded as described in the *Shumū'īnāma-i Alī 'Othmān* of Luḳmān b. Saiyid Husain about 1580 (v. Hammer, *G. O. R.*, lii, 17; Karabacek, p. 4). Sulaimān also regulated the use of the turban, hitherto apparently quite arbitrary, and issued regulations about the trade of turban-makers, *ḥatībīllar* (v. Hammer, *Staatsverfassung*, i, 443). Unbelievers were given red, yellow and black, while white was restricted to the Ottomans. About 1683 in the reign of Murād IV, only the Stambul Turks wore white turbans, the Arabs in Egypt various colours, the people of Barbary, white with gold. Jews and Christians in the east in those days wore blue (*Voyage d'Hercule Vernet en Orient*, ed. M. Goupil Fesquet, Paris 1839-1840) and according to Niebuhr, *Reisebeschreibung nach Arabien und andern umliegenden Ländern* (Copenhagen 1774), Christians wore a blue stripe on their caps so that the tax-collector could at once readily recognise them.

In other countries also the colour of the turban was not at all uniform and for every colour authority was given from alleged ḥadīṭh of the life of the Prophet, which of course are all weak. A pious Muslim like Kāṭṭānī deduces from the contradictory description of the shape and colours of the Prophet's turban that he allowed himself considerable liberty

and sometimes wore the turban without the cap and sometimes the cap without the turban, and sometimes both together; in the house or when visiting the sick he put off both, but never when addressing the community, when he wished to make an impression on the people.

The commonest colour for the turban is white. The Prophet is said to have been fond of this colour and it is considered the colour of Paradise. There is not actually a ḥadīṭh telling us that the Prophet's turban was white, but probably only because white was the normal colour. The angels who helped the believers at Badr are said to have worn white turbans.

If now the following references speak of turbans of other colours, they are not in direct contradiction with white, for the colours in question are connected with the events and have therefore a special reason. For example another tradition says that at Badr the angels wore yellow turbans with the object of encouraging the fighting Muslims. According to another story, only Gabriel had a yellow turban of light, the other angels white, and others again reconcile the various statements about the angels at Badr by ascribing to some white, others green, black, red etc. turbans. The Prophet is said to have at first liked the colour yellow but later forbade it.

The Prophet is said to have worn a black cloak and a black turban on entering Mecca and at the address at the gate of the Ka'ba, also on other occasions at addresses from the minbar, on the day of Hudaybiya and during his illness. In black there is said to be a subtle allusion to sovereignty (*ṣulṭa*) and besides black is the foundation of all colours. The 'Abbāsids claimed that the black turban of the Prophet worn at the entry to Mecca had been handed down to them, and in a tendentious ḥadīṭh in which Gabriel prophesies the coming of the 'Abbāsids, he of course wears a black turban. Turbans of black silk (*ḥaṣṣ*) are said to have been at first permitted but later forbidden by the Prophet; the so-called *ḥarḥāniya* turbans are black (the derivation of the word is uncertain, according to Suyūṭī from *ḥ-r-ḥ*, to burn) and the Prophet is said to have worn them on his campaigns. Many great men in Islam are also said to have worn black turbans, such as Ḥasan al-Baṣrī, Ibn al-Zubair, Mu'āwīya etc. and Suyūṭī wrote a whole book on black dress (*Ṭhalab al-Fa'ād fī Lubā al-Sawād*). Later writers often claim the black turban as the special headdress of the *ḥafīṭh* and the *imām*.

The Prophet is said to have at first liked to wear blue but then forbade it because the unbelievers wore it. On behalf of red, it is urged that the angels at Uhud (or also at Hunain) wore red turbans. According to others, Gabriel wore red at Badr and on one occasion appeared to 'A'isha in a red turban. The so-called *ḥirriya* turban which the Prophet wore is also said to have been red. Sometimes also striped material has been used as turban cloth, e.g. yellow and red or green and red (Fesquet).

In the history of religion the green turban is important, as the well known badge of the descendants of Muḥammad. Tradition is unanimous that the Prophet never wore a green turban, and there is no support for the colour green in law or tradition. But green is the colour of Paradise and it is also said to have been the Prophet's

favourite colour and some say that the angels at Hunain (or also at Badr) had green turbans. The green turban as a badge of the sharifs is however of much later origin: the 'Abbāsīd al-Ma'mūn in Ramaḍān 201 is said to have clothed the eighth Shī'ī Imām 'Alī al-Riḍā in green, when he designated him his successor; the latter died before he could succeed, the 'Abbāsīds went back to black and there were even persecutions to compel the 'Alids to wear black (cf. Ibn 'Abdūn, *K. al-Wuzarā'*, ed. Mark, p. 395 ff.). They seem however for a period at least to have worn a piece of green cloth in the turban as a special badge (*shatfa*) and to have been fond of wearing green, especially in times of liberty of conscience. In 773 A.H. the Mamlūk Sulṭān Ashraf Sha'hān ordered that the turban cloths (*al-aḡā'ib 'ala l-'amā'im*) of the 'Alids should be green and from 1004 A.H. the whole turban became green by order of the Ottoman governor of Egypt al-Saiyid Muḥammad al-Sharīf. This fashion spread from Egypt to other Muslim countries, at first regarded as a late innovation and sometimes disputed, but has now become generally approved. It is now regarded as a law that no non-'Alid should wear the green turban nor strictly anyone who is only connected with the Prophet on the mother's side but this last point is frequently disregarded. A short essay has recently appeared on the green turban in the Baghdad monthly *al-Murhīd*, ii. 6 (July 1927) *Tarīkh Aḡwār al-'Amā'im*, p. 229-232; cf. also *al-Khawḍra Shī'ar 'Al Muḥammad* by al-Saiyid Hibat al-Dīn al-Shahrastānī, i. 4 (March 1926), p. 106-108.

Not only the colour but other *ādāb* of the turban are regulated by religion: 1. When should a boy be first given a turban? When his beard begins to grow, when he reaches maturity or at the age of say 7 to 10 years. One should go by the practice of the country; but in any case it shows shamelessness to wear a turban before one's beard begins to grow. 2. How should a turban be wound? Here again the answer is given by stories of how the Prophet wound his. It should be wound standing (trousers on the other hand are put on sitting), with the right hand, twisted to the right around the head and not simply laid upon it and in doing this, one should act according to the sunna, as regards pulling under the chin (*taḡnīk*) the loose end (*'adhaba*) and the size of the turban. As in putting on any other garment, one should utter a *basmala* while the *ḥamḍala* is only used for new articles of clothing. A new turban should if possible be put on for the first time on a Friday. It should be carefully done before a looking-glass but one should not spend too much time over it. People of position may have their turban wound by two servants. There are countless ways in which a turban may be wound; 66 are mentioned but these are not all. 3. The question whether gold and silver ornaments may be worn in the turban is usually answered in the negative. In the course of the development of the headdress, it was the women in particular who adorned their turban-like headdress in this way. Silk on the other hand is allowed with certain restrictions. 4. The turban has acquired considerable religious significance as a symbol of investiture, since there is no crown or coronation proper as symbols of sovereignty in the Muslim east. The prototype is again an act of Muḥammad's; he

is said to have put a turban on 'Alī at the pond of Khumm and again when in Ramaḍān of the year 10 he appointed him governor of the Yemen; he is next said to have wound the turban on every governor in order to teach him fine manners (*taḡammul*) and to give him dignity. Following this example, the caliphs, the successors of the Prophet, put the turban on their viziers and later on sulṭāns. For example Kaḷkaḡhandī, iii. 280 *sq.* describes the investiture of the Egyptian Mamlūk Sulṭān Abū Bakr b. al-Nāṣir in 742 by the Egyptian 'Abbāsīd caliph Ḥakīm II. The caliph wore a black neck-veil (*farḡa*) with white stripes (*marḡūma bi l-bayḡd*) and placed on the head of the sulṭān a black turban (*'imāma sawḍā'*) with white stripes round the edge (*marḡūmat al-farḡa bi l-bayḡd*). Then we have a description of the investiture of Nāṣir Faraj by Mutawakkil in 801 A.H. where we are told *'imāma sawḍā' marḡūma, farḡahā farḡa sawḍā' marḡūma*. The turban is also an essential feature of the robe of honour (*khī'a*) which Muslim rulers used to bestow upon their viziers and emirs (there is a poetical description of a turban, for example, in Miḡyār al-Dallāmī [d. 428=1037], *Diwān*, i. 242; a description of a robe of honour of the Mamlūk period: Kaḷkaḡhandī, iv. 52 *sq.*) and this is the origin of the differences in the turbans of the different classes, which were such that the initiated could at once tell an individual's profession by his turban. In general it may be said that the largest turbans belonged to the highest and most respected ranks, especially of the clerical profession, and the differences in sizes of the turban are, according to some, more important than those of colour. With this is connected the endeavour to give oneself as large a turban as possible and against this religion has had to fight: a warning is uttered against wearing too large a turban as it is an extravagance — but not among learned men; on the contrary, they ought to be recognisable at once by some external feature to attain success in their labours. Hence the dress of the scholar is not a censurable innovation (*bid'a*), although earlier men of learning did not wear it. All other statements about the sizes of turbans, including definite lengths like seven or ten ells, are again defended from the example of the Prophet.

To mention a few isolated examples, we have in Kaḷkaḡhandī, iii. 280 the description of the turban of the 'Abbāsīd caliph Mu'ta'īn, who in 815 was for a period independent Sulṭān of Egypt; his turban was round, of pleasing appearance (*ḡaffa*), with a tail hanging behind (*raḡraf*) $\frac{1}{2} \times \frac{1}{2}$ ells in length. (The Christian patriarch also had a larger and more regular shaped turban than the other priests). The dress of the Sulṭān of Morocco is described for example in the published portion of the *Masālik al-Aḡḡār* of Ibn Faḡl Allāh al-'Omārī (*Waf' Ifrīḡiya wa l-'Andalus*, ed. Hasan Husnī 'Abd al-Waḡḡib, Tunis about 1923), p. 31, as not too large with *ḡaḡnamak* and *'adhaba*; cf. Kaḷkaḡhandī, v. 203: with a long narrow turban. The head-dress of the Ottoman Sulṭāns is frequently described. The turbans of dead Sulṭāns were kept in their tombs, e.g. in the mausoleum in Brussa (v. Hammer, *Staatserfassung*, i. 446) and in other places we find them modelled in stone on the tombs.

The turban, generally speaking, has, as we have said, become the badge of the civilian profes-

sions. Turban-wearer (*ṣāhib al-'imāma*: Ibn Shūh, *Mo'ālim al-Kutub*, p. 34 or *raḥib al-'imāma*) is synonymous with civilian and there is the expression: he abandoned the turban of men of the law and assumed in its stead the cap (*ṭharīḥ*) and the dress of the emirs (Makrizi-Bloch, p. 335, note). Kalkashandi often uses *al-muḥammimūn* in this sense, e.g. xi. 114: *al-m. waṣn ar-rāḥ al-waḥīf al-dīniya wa 'l-dīnīya* and *al-m. dūna ar-rāḥ al-waḥīf*. To distinguish the various officers, the officials in Turkey under the old régime had different badges on their turbans, clusters of feathers and egrettes (*ṣūṣūr* and *ḥalḥāl*), and soldiers wore on them decorations awarded for bravery (*ṣaḥāb* and *ṭalṭal*; v. Hammer, *Staatsverfassung*, i. 446). Fouquet says that secretaries and scholars wore the turban high with many windings, merchants and artificers loose and broad and slaves very small.

It is on this point that we find the differences in the various countries and especially between the east (Syria, the 'Irāk, Egypt, Persia) and the west (Spain, North Africa). This is noticeable in the description of western dress in Kalkashandi and in the *Maṣālik al-Aḥqār*, and vice-versa in the accounts of eastern customs as given by the Moroccan Kattāni. In Muslim Spain very few turbans were worn at all; the neck-veil (*ṭalṭal*; *Maṣālik*, p. 42; Kalkashandi, v. 271) was rather worn instead; the loose end (*ṣaḥāb*) and the chin-strap (*ṭaḥnīk*) are, originally at least, apparently western fashions. In 1596 we find the Turks being struck by the narrow turban of striped silk worn by the Persian ambassador (*G. O. R.*, iv. 275).

In modern times there has arisen a movement against the turban, which is more or less apparent through the whole of the east. Men are reluctant to wear a turban and the young people and the women laugh at it and say *al-dafṣa ḥayr min al-lafṣa*, "the board for washing the dead is better than winding a turban". But the conservative classes vigorously attack the *bid'a* implied in this and declare that contempt for the turban is heresy and unbelief. Associated with this we often find abandonment of the old Muslim style of hair-dressing with clean upper lip and a beard on the chin. These two things are essential features of emancipation and are regarded by many as signs of the Day of Judgment (*ṣaḥāb al-ṣā'a*). This modern development is attacked in a number of special treatises on the turban mentioned below, notably the last one by Kattāni, and according to them, any one who succeeds in restoring the turban to a country, acquires the merit of reviving a good tradition (*ḥayr al-sunna*). The modern development however can hardly be checked, and in Turkey a hundred years ago the turban was officially replaced by the fez, which in its turn had to give way in 1925 to the modern European hat (*ṣapka*) (cf. *Oriente Moderno*, v. 630 sq.), just as in modern Persia the turban has been driven out by the *kulāh*.

The turban could also be used for many purposes other than that for which it was primarily intended. We give a few examples: in Sa'di, *Būstān*, p. 156, a man in the desert giving a dog dying of thirst water uses his cap (*kulāh*) to get water out of the well and his turban-cloth (*ḥalṭal* or *maṭar*) as a rope. The turban was often used as a pocket, also as a rope to tie up criminals, or to the firmly in the saddle or to strangle. In 1623 the rebel Turkish 'ulamā chose the

turban of Shaikh Aḥ Shams al-Dīn as their standard (*G. O. R.*, iv. 390). In Mamlūk coats of arms *ṭalṭal* means the cross or long bar, in European heraldry a turban is the sign of a Crusader (*Papyrus-Erkerung Kaiser, Führer*, p. 272). Some mussels of the genera *turbo* and *clanculus* are called turban; Persian turban = *turbo cidaris*; Pharaoh's turban = *clanculus Pharaonis*; Turkish turban = *balanus tintinnabulum* (Grande Encyclopédie), and Turkish loans used to be known as "turban stock", and "turban lotteries" the shares of the Banque Ottomane, which were of very uncertain value.

As a survey of the many names for the turban and its parts we give below an alphabetical list with short notes. The merit of first making a classification possible is due to Dozy, who in his *Dictionnaire des Vêtements* and in his *Supplément* has collected ample material, which should generally be consulted. There are also the more recent works by Karabacek, Brunot, and Kattāni.

Alḥaba is the end of the turban-cloth which usually hangs behind from the turban "between the shoulders". When this form of turban first came into use cannot be ascertained exactly; it is of course said to have been worn by the Prophet and by the angels at Badr and according to Ibn Taimiyya, Muhammad had a dream in this connection in which God pointed to the place between the shoulders; but many orthodox people regard this dream as anthropomorphism. The leaving of one end hanging down is recommended and a turban without tails and *ṭaḥnīk* is said to be *bid'a*. On the position and length of the tail there are differences of opinion; the most usual is four fingers long between the shoulders. The Sūfīs wear the tail on the left because the heart is on that side; wearing the tail behind the right ear was a privilege of the Ḥafṣid sūfīs; the legists of the Imāmiyya are said to have left two tails hanging down, one before and one behind, and the so-called Baghdad turban had two tails. *ḥab* VIII means: "to wind the turban leaving a tail hanging".

Aḥḥal, a coil of brown camel hair, which the Anṣari wear instead of a turban cloth wound two or three times round their head-dress, which is called *ḥaḥḥa*.

Amāma, turban, another form of *'imāma*. According to the dictionaries, the pronunciation with *a* is wrong but according to Brunot, p. 121, this is the pronunciation in Algiers. It is there an unwound turban, and is also given as a present to the wali of the woman one wishes to marry.

Araḥṭiya, perspiration-cap, a little cap of some light material which is worn below the turban-cap, to collect the perspiration, and which often peeks out below it. The Turks say *ṣarḥ araḥṭiyah*. The name *ma'raba* is also found; some write *'araḥṭiya* and would connect the word with the 'Irāk (Brunot, p. 120; Kattāni, p. 33). In everyday language the word is said to mean ordinary cap (*ḥalṭarwa*) and in earlier times in Syria it was a square-shaped cap adorned with pearls worn by women.

Aḥḥa = *ṭalṭal*, bandeau. Rukhārī (*Lihāz*, bāb 16) says that the Prophet once wore a black *ṭalṭal*. Among the Mamlūks, *ṭalṭal* was the double camel-hump-like erection on the *ṭarṭar* worn by men and women (Karabacek, p. 71), and in modern times it is a square black silk kerchief worn by women (Lane, *Manners and Customs*, p. 50 sq.).

Alḥaba (another form of *ṭalṭal*) seems to be

a headdress with pearls and gold worn in Morocco and Egypt.

Baida is properly an iron helmet but, according to Kattāni, p. 3, may also mean a turban.

Bughlā or *Bughlā* or *Bukhlā* or *Bughlā-rā* etc. may mean turban and especially the high head-dress worn by Mongol princesses and ladies of rank, adorned with gold and pearls.

Burnus, *burnūs* was in earlier times not a cloak but a high cap and in this sense it is used in Bukhārī, *Liḥā*, bāb 13. Of later writers, for example, Kalkashandī, v. 204 still uses it in this sense: the Sultān of Morocco wears a high white burnus. The corresponding verb is *taharnata*.

Burūf [or], a high cap, with the pronunciation *burūfa* a low skull-cap; in modern language it means the *rāḡ* of a bishop. The Persian has *perete* from it.

Danniya (perhaps from *daniya*), the "pot-hat" of the *kādīs* called *urf* in Turkish.

Deṭār (Pers.), turban-cloth; *deṭār bendū*, the "turban-wearers", are learned men, dervishes etc.

Dhū'aba, the tail = *aghāba*. This word seems to occur usually in Egyptian writers. In the dress of the Fatimid caliph and officials an end of the turban cloth is left hanging down with or without a *ṭaḥnīk* (cf. Ibn al-Sayrāfi, *Kānūn*, ed. Bahgat, introduction). According to Kalkashandī, iv. 43, the Sūfi Shaikh has a small *dhū'aba* at the left ear. According to Suyūṭī, *Ḥusn al-Muḥādara*, ii. 226, scholars and *ḥafṣa* wear a *ḥūlīh* with ends hanging down between the shoulders.

Dulband (Pers.) is perhaps the original of our worn turban; cf. von Hammer, *Staatsverfassung*, p. 442; *G. O. R.*, iii. 17. *Dulband-dārān* are the turban-wearers, Turkish *dulband aghā*, the keeper of the sultān's turbans.

Farḥiyya, a square kerchief worn by women who make a kind of *raḥya* with this and the *ṣāḥiya* and *farḥūh*. Two or three pieces of cloth used to be used, which formed a kind of small turban but quite distinct from that worn by men. The turban proper is distinctly a man's head-dress but the women have occasionally had similar fashions. The vigour with which theologians attack women who wear turbans or otherwise ape men's dress, quoting hadiths to support their strictures, shows only too clearly the existence of such practices (cf. Kattāni, p. 42, 112 sq.).

Fes [q. v.], the red cap originally belonging to Fes in Morocco, which was replaced in Turkey in 1925 by the European hat (*ṭaḥṭa*), while it is still commonly in use for example in Egypt.

Fidān, turban, also a mouth-veil worn by the Persians and a kind of muzzle for camels and oxen.

Fimṣān seems to have been a head-dress worn by women in Cairo and Syria, gilt below and decked with pieces of silver.

Ghifāra in early times was a kind of *ṣāḥiya* for women, a red cloth with which they protected their veil from the oil on the hair. In Muslim Spain it was the name of a similar cap for men, who usually wore not turbans but *ghafā'ir* of red or green wool, and Jews a yellow one. It would therefore perhaps correspond to the cap often called *ghāḥiya* in the Maghrib which was worn under the turban.

Gulṭa (Pers. pronunciation of the Arabic *kallawta*), a cap worn by women and children.

Hen(n)in (French), a high head-dress worn by women in France and Burgundy, a xvth century

fashion influenced by the east, which still survived in Germany in the xvth century. The form changed and was sometimes shaped like a sugar loaf or dome, sometimes like a roller or a truncated cone; sometimes it had two peaks, like the double headdress worn by Queen Isabella of Portugal (Karabacek, p. 11, 67 sqq., 84; there it is explained from the Arabic *ḥanīn* "tinkling" [from the metal pendants on it?]) which occurs once in the *Arabian Nights*).

Harfīya is a name for the cap of the turban; cf. Brunot, p. 105.

Hunfā is a head-dress worn by women in Morocco, triangular in shape, made of linen, three inches long and broad and a span high, with silk and silver, the whole looking something like a camel's hump; cf. Kattāni, p. 112 sq.

Imāma, the most general Arabic word for the turban cloth and also for the whole turban; other forms are *amāma*, *imma*, plur. *amām* and *imām*. The verb is *imma*, II, V, VIII, X. Details and variations according to colours, profession, and countries are mentioned above. Among special kinds may be mentioned *imāma Yūsuf* [q. v.], *imāma Sūfi* from Sūs in Morocco.

Imma is properly the style or form of winding the turban, then the turban itself. Kattāni, p. 4: *ḥasan al-imma* = *ḥasan al-timīm*.

Ṭaba, turban-cloth like *aḥa*, in modern times also a head-dress for women, as in the *Arabian Nights*: *aḥāb mawarḥa* of women and an *isḥat al-ḥusn*. The *aḥāb sultāniya* under the Aiyūbids and Mamlūks in Egypt (Kalkashandī, iv. 46; Suyūṭī, ii. 110) were the flags of the Sultān in the public processions (*mawāhib*), for the flags envelop the head of the lance like a turban (Kalkashandī, ii. 128; cf. Kattāni, p. 12 sq., 36).

Kalanṣuma [q. v.], a high head-dress.

Kalewī or *kalewī* in old Turkey was a state turban which was worn in Stambul by the Grand Vizier, the High Admiral (*Kapudan Paṣha*) and the chief eunuch (*ḥiṣār aghā*) and in the provinces by the *paṣhas* of three tails; cf. v. Hammer, *Staatsverfassung*, i. 440, 444; *do.*, *G. O. R.*, iii. 17; vii. 268; viii. 191.

Kalṣa, plur. *kalfatāt*, a high cap, another form of *kallawta*.

Kallawta, *kalūta*, plur. *kalūwāt*, a cap. The word is perhaps connected with the French *calotte*, Pers. *gullūta* and perhaps even with the Latin *calantica*, *calantica*, *calantica*; in Syriac, *kalwā* is found with the meaning of tiara, mitre. This name was particularly common under the Turkish dynasties of Egypt; under the Aiyūbids, the sultān, the emirs and the soldiers wore yellow *kalfatāt* without turbans (*amām*) with *ghawā'ib* hanging down behind (Kalkashandī, iv. 39; Makrizi, ii. 98). In the reign of Ashraf Khalīl b. Kalā'ūn caps embroidered with gold were introduced (*kalfatāt al-sarkāsh*; Makrizi, *op. cit.*); according to another source (Kalkashandī, *op. cit.*), they were red with *amām*; from the time of Ashraf Shāhūn they were worn larger. The emir Velbaghā al-'Omārī introduced a special form, the so-called *kalūwāt yelbaghāniya* which were large, but under Zāhir Barḳūk still larger *kalfatāt terkeshiya* appeared (Makrizi, *op. cit.*). In those days a set of robes of honour included a *kalfatāt sarkāsh* (Kalkashandī, iv. 52 sq.).

Kalṣāḥ [q. v.].

Kamfa, a red cloth, adorned with pearls, which the Egyptian women twisted round their *farḥūh*.

Kawuk (cf. the article *KAUKUKU*).

Keffiyé, *kéfe*, popular pronunciation of *küfiya*, *Kelle puhi*, a small white or red cloth cap, around which the turban can be twisted.

Kürdün in old Turkey was the round turban worn by viziers and other officials, who were no longer in active service and therefore did not wear the *mudjerrawa* (v. Hammer, *Staatverfassung*, I. 444). According to d'Ohason, II. 135, 'Othman I is said to have worn a cap of a red material, which was called *kürdün* and was worn by the Tatars and the Çaghtai.

Kind, plur. *akn'a*, also *mikna'a* was a cloth, which men and women wound on the head, like the *iqāba* and the *küfiya*. Sometimes also it seems to mean a woman's veil of silk embroidered with gold, then again to be the same as *fallān* (Kattāni, p. 12, 106). From *al-kind* came the Spanish *al-quinal*. Buhārī has a *ḥab al-Takannū*.

Kiā, properly a general word for garment, is a piece of flannel worn by learned men in North Africa, around the body and head. In earlier times every one wore it and called it *ḥak*, which was the name for a woman's veil (cf. Brunot).

Kenfil, a cap worn by women in Algiers and Tunis.

Kub, plur. *akbā*, was in Egypt the name for the innermost cap of the turban, which could be kept on, even when sleeping, while the turban proper was taken off and put on a special turban stand, *kursi al-imlūma*; the *kub* thus corresponds in a way to the modern *fūfiya* and *'arāfiya*. The Egyptian texts of the *Arabian Nights* have *kub* for *fūfiya*. *Kub ḥalālī atrāk* is a similar cap of blue Chinese silk. According to Makrīfī, II. 105, there was a market called *sūḥ al-akbāfiyā* in Cairo. *Kubba'a* = Chald. *ḥōbā*, Syr. *ḥōbā*, Hebr. *ḥōbā* is also said to have been a kind of cap or turban, but it also means the capital of a column.

Kūfiya, popularly *kefiya*, plur. *kanūfi*, is in Arabic probably a loanword from the Italian (*cuffia*, Lat. vith century *coffa*, Span. *cufia*, Port. *coifa*, Fr. *ciffe*, Engl. *coif*, to which the Turkish *uñkūfiya*) is also said to be traced. It is a rectangular piece of cloth worn by the Bedouins and their women in Egypt, Arabia, and the 'Irāk on their heads, of linen or silk in various colours, almost a yard square. The cloth is folded diagonally, the ends hang down or are tied below the chin and above it the Bedouins sometimes, and townsmen usually, wind a turban. This form, which was already known in Egypt in the Mamlūk period and is mentioned in the *Arabian Nights*, has in modern times come into prominence again as part of dress of the Wahhābīs.

Kūfi is a head-dress worn by women, along with an *iqāba*. The word is perhaps a corruption of *serāḥūdi*, *serāḥūdi*, which is said to mean a Tatar cap.

Kūfa, a Persian word, is applied in Turkish to the plumed head-dress worn by the princes of Moldavia and Wallachia and by the Aghas of the Janissaries (cf. v. Hammer, *Staatverfassung*, I. 444).

Kulūb is the general Persian word for the cap, which replaced the turban in Persia. In old Turkey it meant more particularly the sugar-loaf-shaped head-dress of the cooks, confectioners and woodcutters of the Serail, and also a white felt head-dress worn by the Janissaries = *kāle* and one of red cloth worn by the *kushangīs* = *baretta*. *Surḥ*

bulūbān is the Persian name for the Shī'ī Persians corresponding to the Turkish *ḥatībān*; cf. Babinger, *Islam*, II. 81).

Kulūta (cf. *kallawta*) means in Persian a veil worn by women or a child's cap = *gūlān*.

Kumma, *ḥumma*, plur. *ḥumām* is a little tight-fitting cap; cf. Abu 'l-Fidā', IV. 232, 5; Kattāni, p. 40 14.

Kursiya, *karziya*, *kursiya*. The word seems to be a loanword in Arabic and Berber and to come from the Persian; it is found mainly in the Maghrib and Spain and was there applied to a man's head-dress of white wool or strips of wool which the Berbers wound round their heads like a turban cloth. But now it seems to mean a cloak; cf. Brunot.

Lāḥa (supply *ḥalānwāwa*) means a small tight-fitting (*ḥāḥa*) cap, but is probably not a proper name for it; cf. Kattāni, p. 37, 40, 43.

Lihā, *luhāda*, a small cap of brown or white felt (*liḥ*) which the common people in Egypt wear under the *ḥatībān*. The very poor wear it alone, without *ḥatībān* and turban.

Lithām, a mouth-veil for men [q. v.].

Mandil, *mindil*, a loanword from the Latin *mantile*, is applied to cloths generally, but may also mean the turban, especially in Turkish and Persian. It is found in this sense also in Arabic authors, like Tha'ālībī and Makrīfī, but they probably get it from the Persian.

Mūsar means in Persia the turban, probably derived from *mī'sar*, which however means a veil.

Ma'rāḥa, a parallel form for *'arāfiya*, perspiration-cap.

Mighfar, also pronounced *wighfar*, the helmet, is a network of iron worn to protect the head in battle under the cap (*ḥalānwāwa*); the Prophet is said to have worn one at the entry into Mecca. Soldiers wore a turban around the helmet, not only when fighting, but also in times of peace (Fries, *Das Haremwesen der Araber*, p. 59). Thus the Turkish sultan Murād IV, who was continually in the field, used to wind his turban cloth around his helmet (v. Hammer, *Staatverfassung*, I. 443). Hence the phrase "to slacken the turban" = to live in peace and security (Kattāni, p. 4) while "the turban on the neck" (*fi 'unḥīhi mindil* or *'imlūma*) is a sign of submission.

Mikna'a is the same as *kind*, a head-cloth but the former is usually smaller. The *mikna'a* of women is also called *ghifāra*.

Mikwar(a), *mikwāra* is a word for turban and *mukawwir* thus came to mean the same as *mar'ammīn*, i. e. theologian, man of learning, and in Muslim Spain, the officials and jurists, because these alone wore the turban there.

Mishmash, *mishwāsh*, *mishwāsh*, *mishwāsh* are rarer words for turban.

Mudjerrawa, Arabic, but apparently only found in Turkish, a barrel- or cylindrical-shaped cap, which was worn with the turban cloth from the time of Soliman's dress edict, as the proper court and state head-dress. Soliman is said to have been the first sultan to wear it himself (v. Hammer, *Staatverfassung*, I. 442; Pečewi, I. 4; *M. turkī*) the *mudjerrawa* was previously the military cap, the red top of which peeped out from the turban cloth. The conqueror (*Fatih*) Mehemmed II is said to have worn his turban over a spiral *ḥāḥ*, like the *mudjerrawa* of scholars, and the turban of his son Bayazid II, like his father's, resembled the type worn by learned men (Karabacek, p. 15;

Hammet, *G. O. R.*, iii. 17; vii. 268; viii. 191).

Muḥḥā, a large turban worn by learned men of unvarying shape, but also the head-dress of Copt priests with a long narrow band.

Nuḥḥ ra's = "half the head", is a small helmet or cap worn by seamen in the Maghrib; the name is also found in Egypt. In Morocco the *ṣarḥūḥ* is also called "*nuḥḥ al-ra's*" because it covers half the head, tightly fitting; cf. Brunot.

Pirḥānī, the "untidy turban", was the name of the turban worn by the common people in the reign of Soliman; *G. O. R.*, iii. 17.

Pertele, Pers. pronunciation of *bartulla*.

Raḥḥa of women consists of the *ṣāḥiyya*, *ṣarḥūḥ* and *ṣarḥūḥiyya*; together they make a kind of woman's turban, but it is very different from that worn by men.

Ruḥḥa is a small turban for young people in Morocco (cf. Brunot).

Sādī is a green or black *ṣallān*; cf. Kattānī, p. 106.

Salmī, a special variety of the kind of turban called *Yāsuḥī*, called after Sulṭān Selīm I, who is said to have preferred it, as did Selīm II also; *G. O. R.*, iii. 17; vii. 268.

Sharḥūḥ, *ṣharḥūḥ* pl. *ṣharḥūḥ*, *ṣharḥūḥ*, probably from the Persian *ṣarḥūḥ*, but the latter is a woman's head-dress. In Syriac we find *ṣarḥūḥ* in Bas Hebraeus. The *ṣharḥūḥ* was the head-dress of the emirs under the Mamlūks in Egypt; according to Makrīzī, ii. 99, it resembled the *ṣādī*, was three-cornered, worn without a turban, and one formed part of a set of robes of honour. It had a markedly military character and the *ṣharḥūḥ* of the emirs is contrasted to the turban of the jurists (Makrīzī-Bloch, p. 335). In Cairo in those days, there was a special market for sellers of *ṣharḥūḥ*, in which however in Makrīzī's time only robes of honour were sold, and in Damascus there was a madrasa called *al-Madrasa al-Malikīyya al-ṣharḥūḥiyya*. Under the Circassian Mamlūks, the *ṣharḥūḥ* fell into disuse (and was replaced by the *ḥalḥāl al-ṣharḥūḥiyya*).

Ṣarḥ also *ṣarḥī*, a bandage, is the usual Turkish name for the turban. *Ṣarḥīl* = turban-wearer e.g. *ṣarḥīl ḥodja* = cleric with the turban, *ṣarḥīl* = turban-maker; *ṣarḥīl ḥodja*, the sultan's turban-keeper. The first gold regulation of the turban-makers dates from Soliman's time, when their shops were first opened, and regulations about the wearing of turbans were drawn up (v. Hammer, *Staatsverfassung*, i. 443).

Ṣāḥḥ [q. v.], the turban-cloth, then the whole turban, a name used particularly in North Africa and Egypt. The Egyptian texts of the *Arabian Nights* have *ṣāḥḥ* for *imāma*. Sometimes *ṣāḥḥ* was particularly the white and blue striped turban of the Copts, while that of the Muslims was called *ṣāḥḥ*; the *ṣāḥḥ al-ḥalḥāl* was particularly well-known. The *ṣāḥḥ ṣādī al-ḥalḥāl* at the court of the Fāṭimids was the office of the turban-winder to the Fāṭimid caliph; Kaḥḥāndī, iii. 484.

Ṣāḥ. The word has passed into the languages of Europe, "shawl" etc., and means the turban-cloth or whole turban, especially in Egypt, sometimes also kerchiefs worn by women e.g. in Arabia and North Africa.

Ṣāḥḥa is the Turkish word for the modern European hat, which was introduced into Turkey by law in 1925. Only clerics already wearing turbans (*ṣarḥīl ḥodja*) were allowed to retain

their turbans. A number of publications appeared at the time on the hat question (*ṣāḥḥa mar'etī*).

Ṣāḥḥ, from which we get the English word "shawl", meant the turban-cloth in Egypt, Syria, Arabia and Persia. Under the Aiyūbids the *ṣāḥḥ* and learned men wore turbans with large *ṣāḥḥ*, some let a tail (*ḥuḥḥa*) hang down between the shoulders or wore the neck-veil in addition (*ṣallān*; Kaḥḥāndī, iv. 42; cf. Makrīzī, ii. 98 and Suyūṭī, ii. 226). The *ṣāḥḥ* however also meant a cap (= *ṣāḥḥiyya*) and formed part of a set of robes of honour; e.g. Kaḥḥāndī, iv. 52 sq.: *ṣāḥḥ raḥḥ*, *maḥḥal bihi ṣarḥūḥ min ḥarir abyāḥ*. From 780 we also find the *ṣāḥḥ* as part of a woman's dress; it is the cloth embroidered with gold and pearls, thrown over the double *ṣarḥ*; cf. Karabacek, p. 67 sqq.

Ṣāḥḥiyya in Egypt was a cap, around which the turban-cloth was wound; it was of silk and might be trimmed with pearls and gold. On the other hand, however, it was the name given to the paper cap, put upon criminals, and also to iron helmetlike caps. To put on the *ṣāḥḥiyya* = to adopt Islam. In modern Morocco, it is a black cap for young people in the form of the *ṣarḥūḥ*, also a head-dress in the form of a sugar-loaf, which the Derḡāwa dervishes wear, in Algiers a woman's cap (Brunot), in the oasis of Siwa it is pronounced *ṣāḥḥa*. *Ṣāḥḥiyya* seems originally to have been the turban-cloth made of *ṣāḥḥ* muslin; cf. Z. D. M. G., xxii. 161.

Ṣāḥḥ was in Turkey in the reign of Soliman a carelessly wound turban-cloth, worn by the common people (*G. O. R.*, iii. 17). In North Africa it is a cloth, still sometimes wound over the turban (*imāma*); cf. Brunot.

Ṣāḥḥ = Span. *sombrero* is the name given in Morocco to the European hat, sometimes also called *ṣarḥ*; cf. Brunot.

Ṣāḥḥ is a skull-cap like the *ṣāḥḥiyya* worn under the *mikna'a* and *ḥijāba*.

Ṣāḥḥ, the name for the Turkish dervish cap; cf. Jacob, *Bektāshīyya*, p. 40.

Ṣāḥḥ, *ṣāḥḥ* is a green *ṣallān* worn by women, especially in winter time as a protection from cold.

Ṣāḥḥ [q. v.], "Crown", also turban.

Taḥḥik (*al-imāma*) is a special adjustment, in which the turban-cloth is brought under the chin as a protection against heat and cold or its two ends tied under the chin. This form is found particularly in the Maghrib and those who use it defend it intemperately and describe all other forms of the turban as innovation (*bid'a*), as the dress of the devil or of the Copts, or as a survival of the turbans of the followers of Iḥḥ (Kattānī, p. 70). The opposite of *taḥḥik* is *ḥāḥḥ* or *ṣāḥḥ* (even letting the ends hang down is also wrong in contrast to it) while other rare synonyms for the *taḥḥik* are *ṣāḥḥ* or *ḥijāba*. From the Maghrib, the Fāṭimids seem to have brought the *taḥḥik* to Egypt, and the *ustādḥūn muḥammakūn* were the chief emirs (eunuchs) at the Fāṭimid court who held the highest offices in the personal service of the Fāṭimid caliph (Kaḥḥāndī, iii. 484; Ibn al-Ṣāḥḥi, *ḥāḥḥ*, ed. Bahgat, Introduction). Farther east also the *taḥḥik* was occasionally found; for example even al-Ṣāḥḥ is said to have recommended it. But it is not *sunna* with the *Shāḥḥ*s, while, for example, Ibn Ḥayyim recommends it.

Ṣāḥḥ [q. v.], neck-veil of the *ḥāḥḥ*.

Tāb, a green *tailān*, a name of very rare occurrence.

Tāhiya, plur. *ṭawāhi*, is originally a Persian word and in Persia was the turban or a high cap. French *toque* and Spanish *teca* are perhaps connected with it. The name seems to be first found in Mamlūk Egypt in the sixth century, when it was a round cap with flat top in various colours, worn without the turban-cloth. Under Nāṣir Faraj it was extended in height from $\frac{1}{2}$ to $\frac{3}{4}$ ells and swollen out like a cupola (perhaps under the influence of old Egyptian models) and called the Circassian *ṭāhiya*. Egyptian women are said to have imitated this for erotic or other reasons and this form then made its way to the east. The *ṭāhiya* was stiffened with paper and in a Fātimid cap, similar in shape, of the xth century have been found fragments of papyrus with writing upon them. These headresses were quilted and had a rippled appearance. Other forms were evolved from them, such as the bottles, barrels, cones and the so-called unicorns (Makrizi, ii. 104; Karabacek, p. 73; cf. *ṭurṭur*). In modern times *ṭāhiya* is used as a synonym for *ʿaraḥiya*; cf. Brunot; Kattāni, p. 98.

Tāḥ, parallel form for *tailān*.

Tarbūḥ, probably, like *ṭarbūḥ*, going back to the Persian *urpūḥ*, only found in Arabic from the xvth century, was a tight-fitting cap, in Egypt usually of red wool, with a tassel of black or blue silk. Around this cap, men of rank wore the turban-cloth and under it the small *ṭāhiya* or *ʿaraḥiya*. In Syria and in the 'Irāk the *tarbūḥ* has sometimes a peak, which hangs behind or at the side and is kept in position by a piece of cloth. In Egypt this cap used to be called *ṭāḥiya* (in Morocco we still find both terms in use side by side), in Spain *güfara*. *Trāḥiḥ* is a name given in Morocco to a young man, who does not yet wear the turban (Brunot). The *tarbūḥ* there is always imported from Europe; the *ṭāḥiya* on the other hand is made in the country itself.

Tarḥa = *tailān*.

Tawāḥin is also a kind of *tailān*.

Turṭur, *ṭurṭur* (s), *ṭurṭura*, *ṭurṭura*, in Arabic a loanword of unknown origin (the Latin *turrita*, tower-shaped, has been compared), a high cap round which the turban can be wound. *Turṭura* seems to be found as early as a papyrus of the viith century A. D. (Karabacek, p. 67), and in the fourth century A. H. it was a popular head-dress in Kairawān (Karabacek, p. 68). The *ṭurṭur* at a later date seems to have been a head-dress of the Bedouins (they swore by it, *wa-baḥḥi ṭurṭur*); there is a saying, "he fell at the first blow like the *ṭurṭur* of a Bedouin") and to have gone out of fashion with the denizens of the towns. A *ṭurṭur* of paper used to be put on the heads of criminals and prisoners captured from the enemy, and it was worn also by the "prince of the New Year" (*naṭurū*) at a popular festival in Cairo, which was prohibited in the reign of Barkūk. The pointed *ṭurṭur* was in the xivth century, with or without the turban, the head-dress of the common people in Egypt and the countries adjoining it (Karabacek, p. 68); at a later date dervishes in Egypt wore sugar-loaf-shaped *ṭurṭur* with trimmings (Lane, *Manners* etc.); in Turkey it was worn by the volunteer corps of the Delis, in Algiers by the Dey's *ṭawḥes*, in Morocco by the negro soldiery. The name is found wherever

Arabic is spoken and *ṭurṭur* in Arabic seems to correspond to *ṭurṭur* in Turkish and Persian. About 780 A. H. the double *ṭurṭur* with two peaks like a camel's hump, and the *ṭāḥ* above them, appears as a lady's fashion in Egypt and was taken to Europe (Karabacek, p. 71), and in modern times we find among the Druse and Maronite women of the Lebanon a *ṭurṭur* plated with gold or covered with horn like the horn of a unicorn. In Fās, Algiers and Tunis also, the name is given to certain forms of women's head-dress (cf. Brunot, p. 119; Karabacek, p. 80).

Uḥṭāf, *uḥṭāf*, a high cap common in the Maghrib, which could be made either quite simply or of valuable material.

Urf was in old Turkey a large globe-or pad-shaped turban worn by learned men, corresponding to the Arabic *ḍunniya* and the Persian *ḥuṭhi-ḥādī*. Sulṭān Meḥammed II was fond of wearing the *urf* embroidered with gold; cf. von Hammer, *Staatverfassung*, i. 444; do. *G.O.R.*, vii. 268; viii. 191.

Urṭūḥ, *arṭūḥ*, *urṭūḥ* is said to be a melon-shaped hat.

Uṭṭāf also *uṭṭāfiya*, from the Italian *scuffa* = Arabic *ḥuṭfiya*, was a peaked cap embroidered with gold, which the officers of the Janissaries and some officials of the Serail like the Balladjis wore, also called *ḥuṭḥa*. Sulaimān Paṣhā, son of Orkhan, is said to have invented it; he is said to have introduced it out of affection for Djalāl al-Dīn Rūmī and even to have worn it. It came into general use in the reign of Murād I and became a kind of ruler's crown; cf. v. Hammer, *Staatverfassung*, i. 444 sq.; do. *G.O.R.*, iii. 17.

Yāruṣī, *imāma-i Yāruṣī* is an old name for the Turkish turban; it is said to have been originally invented by Joseph and to be called after him. Selīm I and II wore these *Yāruṣī*, which were then called *Selīmī* after them; cf. v. Hammer, *Staatverfassung*, i. 442 sq.; do. *G.O.R.*, iii. 17.

No. 14 is the most detailed monograph on the turban and has been much used for the above article. Of other writings he mentions No. 1, 2, 3, 8, 10, 12, 13, but has himself only seen and used No. 8. In addition to No. 14 we have used No. 2 for some points.

Of European literature in addition to the works of Dory, Karabacek and Brunot cited above we may mention a few general works on costume: Rosenberg, *Geschichte des Kostüms*, 5 vols., plates with brief descriptions, pl. 297 on the turban; J. v. Falke, *Kostümgeschichte der Kulturvölker*; Alb. Kretschmer, *Die Trachten der Völker*; *Katalog der Lipperheidenischen Kostüm-Bibliothek*, — 16 forms of turban are illustrated by Fesquet, 44 different ones by Niebuhr, and no less than 286 are given by Michael Thalman, *Elenchus librorum or. max.*, Vienna 1702, vi. 29 sq. on Cod. turc., vii. Bologna (according to E.L., ii. 751); cf. Victor Rosen, *Remarques sur les mœurs orientales de la Collection Maragli à Bologne (Atti della Real Acc. dei Lincei)*, 281, 1883—1884, p. 182. (W. BJÖRKMAN)

TURBAT-I HAIDARI. [See ZAWA.]

TURBAT-I SHAIKH-I DJAM, a place in the north-east of Persia (province of Khurasan), not far from the Afghan frontier; its position is approximately 61° East Long. and 35° N. Lat. It is a stage on the Mashhad-Herat road (the distance from Turbat-i Shaikh-i Djam to Mashhad is about 96 miles, roughly half the distance between Mashhad and Herat) and lies on a tributary of the Harirud. In the first half of the 19th century the number of houses was given at about 200 (Canolly, about 1830); towards the end of the century (1894) Yate put the number at about 250. The last named traveller observed that the place was called Djam by the inhabitants; the inhabitants themselves are called Djami. In 1894 there were about 4,000 families, all agriculturists; they used to have a chief of their own; when Yate visited the little town, however, the Djami were under the direct authority of the district governor. Turbat-i Shaikh-i Djam has also a primitive citadel built of clay; east of the village is the tomb of the saint to which the village owes its name. He was the mystic Shaikh Ahmad-i Djam (d. 536 = 1142; cf. the article AHMAD DJAM). According to Ibn Battuta (ed. Paris, iii. 75 sq.), he was called Shihab al-Din Ahmad and the place belonged to his descendants, quite free from the authority of the state. What Ibn Battuta further tells about the Shaikh is obviously local tradition without any great historical value. The tomb was visited by Timur and at a later date by Hamayun.

The mediaeval name of Turbat-i Shaikh-i Djam was Būrdjān (also Pūrkān; Yāqūt, iii. 890 sq., gives a further variant: Fuzā or Fazz, while some scholars have the nisba al-Fazzī; the nisba,

al-Būrdjānī, of course, is also found). It was the capital of the district of Djam (also written Zām) in the N.E. of Kūhistan. According to Yāqūt, Būrdjān lies 4 days' journey from Nisābūr and 6 from Herat, while al-Iṣṣāḥrī (p. 282) gives four days' journey as the distance from Būrdjān to Būghandj. The town, on which no fewer than 180 villages were dependent, lay in a fertile and well-watered neighbourhood. According to Ibn Rusla (p. 181), Djam belonged to the 19 *wasā'il* dependent on Nisābūr. Al-Muḥadḍaf (at least according to the text quoted in de Goeje, p. 319, note 4) says that the name Būrdjān is only applied to the town (*ḥaṣr*) proper, not to the whole district which included the villages depending on it [cf. the article ḤAṬṬIK]. We have the less doubt about this notice as the not very clear passage, p. 321, note 6, again seems to identify *al-ḥaṣr* with *al-madīna*.

Bibliography: G. Le Strange, *The Lands of the Eastern Caliphate*, p. 356 sq.; E. Yate, *Khurasan and Sistan*, p. 35 sq.; C. Ritter, *Erdkunde*, viii. 264 sq., 278, 286 sq.; C. Barbier de Meynard, *Dictionnaire... de la Perse*, p. 121, 149 sq. (V. F. BUCHNER)

TURFAN, usually written Turfan, locally pronounced *Turfan*, a town in Chinese Turkistan. The oasis, fertile although suffering from a scarcity of water, between the depression of Lukčun, which lies below the sea-level, and the ranges of the Thian-shan, has been of importance from ancient times not only for trade between China and the west but also politically; the settlements mentioned in ancient times and the early middle ages were however not on the site of the modern Turfan but west and east of it. In the second century A.C. the principality of Ku-shi was here; in the year 60 A.C. it was destroyed by the Chinese and eight small principalities took its place, including anterior Ku-shi in the region of Turfan; the capital of this was the little town called Kiaoh by the Chinese, the site of which is marked by the ruins about 4 miles west of Turfan called Yarkhoto by Klements (*Nachrichten über die von der Kais. Akad. der Wiss. zu St. Petersburg im Jahre 1898 ausgerüstete Expedition nach Turfan*, St. Petersburg 1899, p. 24 sq.). Considerable importance was later attained by the Chinese settlement Kao-tang, called in Turki first Khoṭo (Mahmūd Kashghari, l. 103; Kudjā), later Kara-Khodja, now the ruins of Idikut-shahrī, 20—25 miles east of Turfan. Immediately south of the modern Turfan lie the ruins called Old Turfan by Klements (*op. cit.*, p. 28); according to S. Franke (*Eine chinesische Tempelschrift aus Idikutshahr bei Turfan, Anhang zu Abh. Preuss. Akad.*, 1907, p. 36) these ruins "must date from ancient times and have been an unimportant place"; but they occupy a rather larger area (3 square kilometres) than Idikut-shahrī.

Turfan is not mentioned in the Mongol period and not on the Chinese map of 1331 (E. Bretschneider, *Mediaeval Researches from Eastern Asiatic Sources*, vol. ii.). The only suggestion that there was perhaps a town of Turfan in ancient times also, is found in a Saka document found in Tun-Huang and published by Sten Konow (*Orlo Etnografike Muzeuma Skriften: Publications of the India Institute*, iii. 3, Oslo 1929, p. 137 and 148) where a town called Turpaṣini is mentioned. The first Chinese (in the Ming-shi) reference to Turfan (Chinese T'u-lu-fan) is in the year 1377; some foreign em-

hassies on the way to China were robbed at Turfan and a Chinese army was sent against the king of Turfan as a reprisal (*Med. Res.*, ii. 193). To a somewhat later date belongs the first Muslim account of Turfan; according to the *Ta'rikh-i Rashidi*, Khidr Khodja, Khan of Moghulistan (c. 1389–1399), undertook a campaign against "Kara Khodja and Turfan, two very important towns on the frontiers of China"; the inhabitants were forced to adopt Islam and the two towns were henceforth regarded as within the territory of Islam (*Dar al-Islam*) (*Ta'rikh-i Rashidi*, transl. Ross, p. 52). When the celebrated embassy of the Timurid Shahrukh [q.v.] passed through the country in 823 (1420) the inhabitants were, however, for the most part still idolaters; there was a large temple of idols there and a great statue of Buddha Sakyamuni (*Shakamuni*) and many other idols, some old, some of recent erection (*N. E.*, xiv, p. 310 and the original text of Hsüeh-i Abrü [q.v.] in Barthold, *al-Muṣaf-fariya*, p. 27). The present inhabitants of Turfan (Turfanliq) know that Uighurs used to live there, but these Uighurs are now considered to have been Muslims; all Buddhist relics are ascribed to the Kalmucks (Klementz, *op. cit.*, p. 29) or to king Däkyänüs [see *ASHKAR AL-KAHIR*].

Turfan suffered in those days from want of water even more than it does now. In the reign of Wais-Khän (1418–1428) agriculture was conducted in a very primitive and laborious fashion; the Khän had a deep well dug and out of this he himself and his slaves drew water for their fields in earthen vessels (*küna*) (*Ta'rikh-i Rashidi*, p. 67). Conditions seem to have improved later; towards the end of the xvth century the land of *Çalış* (the modern *Karashahr*) obtained its corn from Turfan (*Zap.*, xv, 251; quoted by M. Hartmann, *Der islamische Orient*, i. 302). The present underground irrigation channels are said not to have been made till the xvth century (Sir A. Stein, in *Geogr. Journ.*, 1916, Sept., p. 47).

Under the princes claiming descent from Çaghatay Khän in the modern Chinese Turkistan (xvth–xvith century) Turfan is frequently mentioned as the residence of various Khäns; at a later date it was, like the rest of the country, subjected first to the Kalmucks, then after the destruction of the Kalmuck empire in 1758 to the Chinese. In 1765 the town of Üe (west of Ak-su, q.v.), which had rebelled against the Chinese, was destroyed and its population completely wiped out; in order to restore the town, inhabitants were imported from other towns, especially from Turfan. Üe was henceforth known as Üe-Turfan or Üeh-Turfan; to distinguish the two, Turfan proper was called Old Turfan (*Köhne Turfan*). In the time of Ya'küb Beg (1866–1877) Turfan was the frontier town of his dominions in the east; in 1876 it was visited by a famine and in 1877 occupied by the Chinese without resistance. Turfan now belongs to the territory of the "king" (*wang*) of Lukün. The first European to visit Turfan was Dr. A. Regel (see below) in 1879. The modern fort of Turfan is said by Regel to have been built by Ya'küb Beg; east of it is the Chinese fort, which, according to Gram-Griffiths (*Opisanie putestvoia v Zapadny Kitai*, i, St. Petersburg 1856, p. 275), was not built till 1886; but it is already mentioned by Regel. Still farther to the east, according to Regel, lay the "ruins of the Turfan of the last centuries" with "numerous fine tomb-mosques and a

beautiful minaret". The minaret and the mosque, to which it belongs, have been several times illustrated (Klementz, *op. cit.*, p. 49; O. Donner, *Russ i Zentralasien 1898*, Helsingfors 1901, p. 120; A. v. le Coq, *Auf Hellas Spuren in Ostturkistan*, Leipzig 1926, pl. 2). The minaret was not, as has been asserted, a Christian help, but was only built in 1760 by a *wang* of Lukün. These ruins are probably identical with the Old Turfan of Klementz, which in this case would belong to a later date than Franke (see above) and Grünwedel ("a terribly ruined old town of the Uighur period") have assumed; Klementz also (*op. cit.*, p. 28) seeks "to identify the Tu-lu-fan of the Ming geographers with the present Old Turfan, which lies S.E. of the modern Chinese Turfan". The ruins of most of the buildings of the old town seem to have been destroyed between 1879 and 1898, but, as Oldenburg established in 1909, more has survived than one would suppose from Klementz's description. The modern town is of some importance as a commercial centre, the highest estimate of the number of inhabitants is about 20,000.

Oldenburg, *Russkaya Turkestanskaya Ekspeditsiya 1909–1910*, St. Petersburg 1914, p. 25.

(W. BARTHOLO)

TURGAI, the name of a river system and of a small town in the steppes of Central Asia. The main river Turgai is formed of the Karin-said Turgai, which receives the Tsai Turgai, and the Kara Turgai, and flows into Lake Durakka; north of it runs the Sari Turgai, which is called Ukun-tamd in its upper course and receives from the west the Mailai-Turgai and the Sari-bui Turgai. The Sari Turgai flows into Lake Sari-Kopa. In Turkish *turghai* or *terghai* means "little bird" (*Radloff, Wörterbuch*, iii. 1184, 1457); *Kari Turghai* is a name of the starling. The fortifications of Orenburg are called *Torghai Kala*.

The modern town of Turgai on the river of the same name was built in 1845 by Major Tomilin as a fortress and one of the centres of Russian power among the Kirgiz [q.v.] under the name of the Orenburg fortress (*Orenburgskoe Ukreplenie*). In 1865 the territory of the Orenburg Kirgiz was divided into two provinces (*oblasti*), the Ural and the Turgai. When the Turgai province in 1868 was divided into districts (*uезд*), the fortress was made the capital of the district and called Turgai. As there was no suitable centre in the province itself, the Turgai province was administered from Orenburg. The governor lived there and in it was published from 1881 the official gazette, *Turgaiskiya Oblastniya Vedomosti*. Among the four capitals of district in this province, the town of Turgai only takes the third place and has never been important; the number of inhabitants according to the census of 1897 was only 896, to that of 1911, 1,657. The southern part of the province with the town of Turgai is less suitable for agriculture and Russian

colonisation than the north, on account of the scarcity of fertile areas, although in the sixties about 1,300 hectares were cultivated on the river Turgai alone. From Turgai, trade routes lead northwards to Orsk and Kustanai, and southwards to Irgiz and Perowsk (now called Kizil-Orda).

Before Russian rule the present Turgai territory was inhabited only by nomads and hardly mentioned in political history. An exception is Nisawi's account (ed. Hodas, p. 999) of the campaign of the Khwarizm-shah [q.v.] Muhammad in the year 612 (1215—1216) against the Kipchak and his encounter with the Mongols; cf. Barthold, *Turkestan* etc. = G. M. S., N. S. v., p. 370 199; J. Marquart, *Osttürkische Dialektstudien*, Berlin 1914, p. 128 199, where on p. 133 a later date (midsummer 1219) is assumed.

Turgai now belongs to the autonomous republic of Kazakstan. Instead of the earlier division into provinces and districts, the land is now divided into administrative areas (*okrug*); the town of Turgai now belongs to the area Aktyubinsk, the most southerly part of the former Turgai province to the area of Kizil-Orda.

(1902); *Asiaticheskaya Rossiia*, i., Petersburg 1914, p. 347 and 351. — On modern conditions I have been informed by word of mouth.

(W. BARTHOLD)

TURKISTAN or TURKESTAN, a Persian word meaning the "land of the Turks". To the Persians of course only the southern frontier of the land of the Turks, the frontier against Iran, was of importance and this frontier naturally depended on political conditions. On their very first appearance in Central Asia in the sixth century A. D., the Turks reached the Oxus (cf. AMU-DARYA). In the time of the Sasanians therefore the land of the Turks began immediately north of the Oxus; according to the story given in Tabari (i. 435 19.) the Oxus was settled by an arrow-shot of Irgh as the frontier between the Turks and the "territory" (*amāl*) of the Persians. According to the Armenian Sebōos (seventh century A. D.) the Vohrot, i.e. the Oxus, rises in the land of Turk'astan (*Histoire d'Hiradiz par l'évêque Sebōos*, transl. by Fr. Macler, Paris, 1904, p. 49; J. Marquart, *Erānshahr*, p. 48); in another passage in the same work (p. 43; Marquart, p. 73) Turk'astan is associated with Delhastan i.e. Dehistan (in the neighbourhood of the Caspian Sea, north of the Atrak [q.v.]).

By the victories of the Arabs, the Turks were driven far back to the north; for the Arab geographers of the third (ninth) and fourth (tenth) centuries, Turkistan therefore began, not immediately north of the Oxus, but only north of the area of Arab culture known as "the lands beyond the river" Mā warā' al-Nahr [q.v.]. Turkistan, the land of the Turks, was then regarded as the regions north and east of Mā warā' al-Nahr. The town of Kāsān in Farghāna [q.v.] north of the Str-Daryā [q.v.] was "where the land of Turkistan begins" (Yāqūt, iv. 227). The towns of Djand and Shahr-kand on the lower course of the same river were in Turkistan (*op. cit.*, ii. 127; iii. 344); in Turkistan lay the town of Shōtan (*op. cit.*, ii. 403). From this use of the name it has been held (especially

by M. Hartmann, *Chinesisch-Turkestan*, Halle 1908, p. 1) that the name "Turkestan" was first applied by the Russian conquerors of Central Asia quite arbitrarily to the land of Mā warā' al-Nahr. As a matter of fact, the name Turkistan had long regained its earlier significance as a result of the Turkish conquests, perhaps less in literature than in everyday usage. To the people of Persia and Afghanistan the "Turks in Turkistan" were their immediate neighbours on the north; thus in a lullaby taken down in Shirāz in 1886 we are told "Two Turks came from Turkistan, brought me to Hindustan" (V. Žukovskiy, *Obrasci persidskago narodnogo tvorstva*, St. Petersburg, 1902, p. 169 19.). Through the Ozbeg conquests of the xvth century a new Turkistan arose south of the Amu-Daryā. The corresponding province of Afghanistan still bears the name of Turkistan; as the southern frontiers of this Turkestan some travellers (R. Burnes, *A Peep in Turkistan*, London, 1846, p. 57 19.) give the pass of Ak Rahat north of Hāmīyān [q.v.]; others (J. Wood, *A Journey to the Source of the River Oxus*, new edition, London 1872, p. 130) the pass of Hadjikak, a little farther south, where the watershed between the basins of the Helmand [q.v.] and the Amu Daryā is; farther west, in the region between the Murghāb and the Ab-i Maiman, the frontier of Turkistan is given as the range of Band (or Tirkand)-i Turkistan. The name Turkistan was introduced into the scientific terminology of the xixth century, not by the Russians but by the English, probably under the influence of the Persian and Afghan usage.

In literature, especially in travellers' records, a distinction has usually been made between Russian, Chinese and Afghan Turkestan, although the word Turkestan (or Turkistan) had an administrative significance only in Russia and Afghanistan. Sometimes instead of these we find the terms West and East Turkestan. The governor-generalship of Turkestan was founded in 1867 by the Russians with Tashkent [q.v.] as its capital. The frontiers of this governor-generalship were sometimes contracted, sometimes extended. From 1882 to 1898 the province of Semirychye, at one time included in Turkestan, belonged to the governor-generalship of the Steppes with Omak as its capital. In 1898 Semirychye and the Transcaspian province (Turcomania) were incorporated in Turkestan.

In 1886 Prof. I. Mughketow attempted to give the name "Turkestan" a definite geographical significance, independent of administrative conditions. Under the influence of A. Petzhold's book *Umschau im Russischen Turkestan mit einer allgemeinen Schilderung des Turkestanischen Beckens*, Leipzig 1877, he proposed to give the name Turkestan or the Turkestan basin to the lands between the central mountains of Central Asia and the basin of the Caspian Sea, the Iranian plateau and the sea of ice; Mughketow had no doubt that the frontier between Russia and England in the not distant future would be established on the Hindū-Kush [q.v.]. He proposed to replace the term "Chinese Turkestan" by the Chinese Han-hai (interpreted by European scholars since Richthofen as the "dry sea"). Mughketow deals only with geographical facts and hypotheses, without regarding the etymological significance of the words or any ethnographical considerations.

Mainly on ethnographical grounds the word Turkestan has gradually dropped out of use

in Soviet Russia. After the revolution, a "Turkestan republic" lasted a few years with the old capital Tashkent. In comparison with the earlier governor-generalship the area of this republic was much smaller; in the north isolated parts were attached to the Kirgiz republic [cf. KNEZT]. After the principle of nationality had been finally carried through in 1924, the common name of the land had to give way to terms formed of the names of the various peoples like Uzbekistan, Turkmenistan and Tadzhikistan. Only a few, mainly economic questions, are still settled in Tashkent for all the lands in question; for Turkestan in such cases the expression Central Asia (*Srednaya Azia*) is used.

Turkestan was also the name in use under the Özbeks for a town on the middle course of the Syr Darya. From the accounts of the Arab geographers it may be assumed that in the fourth (tenth) century the town of Shāwghar (in Le Strange, *Lands of the Eastern Caliphate*, Cambridge 1905, p. 485; Shāwghar) must have stood there; unfortunately no trace of it has been found. In the sixth century and probably as early as the sixth, the later Turkestan was called Yast and is mentioned as late as the history of Timur (*Zafar-Nāma*, Ind. ed., II. 9) as a village (*karya*). The importance of the town increased from the cult — first known in the Mongol period — of the saint Ahmad Yessawi [q. v.], regarded as the converter of the Turks to Islam (on his period see also Barthold, in *Der Islam*, xiv. 112), and especially after the splendid tomb had been erected there by Timur. The saint was regarded as the patron of the land of the Turks and was called Hadrat-i Turkistan, which probably explains the new name of the town. At the time of the Russian conquest the circumference of the town was about 2 miles, the population about 5,000 and in 1908 it had risen to 15,000.

(W. BARTHOLD)

TURKMĀN-ČAI (better T-čay), a village in the district of Garmārud in the province of Adharbājdžān. Turkmān-čai, "the river of the Turkomans", is really the name of the stream on which the village stands; it comes down from the Člakli pass (between Turkmān-čai and Sarāb). It is one of the northern tributaries of the river of Miyāna (Shāhār-čay) which flows into the Kizil-uzān (cf. the article SAYD-RUD). The village of Turkmān-čai marks a stage on the great Tabriz-Zandjān-Kazwin-Tihān-Khurasān road. The distances are Tabriz-Turkmān-čai c. 60 miles; Turkmān-čai-Zandjān c. 80 miles. Hāmdallāh in the *Nuhat al-Kullūb*, *G.M.S.*, xlii. 183, puts these distances at 16 and 25 farsakhs respectively. He calls the village Turkmān-kāndi; the word *kand* = village, only used in Adharbājdžān and unknown elsewhere in Persia, is certainly of eastern Iranian origin (cf. Sogdian, *kandā*, town; cf. Barthold,

Ittiriya Kultur. Žizni Turkestana, Leningrad 1927, p. 38); the word must have been brought into Adharbājdžān by Turkish invaders. Hāmdallāh also says that at one time the village was a town, the Iranian name of which, Dih Kharrān (several variants), he gives.

Clavijo, ed. Srenowski (St. Petersburg 1881, p. 172 and 354), calls Turkmān-čai *Tucllar* and *Tunglar* (evidently a corruption of Türk-lār) and says that it is inhabited by Turkomans.

Turkmān-čai is known in history from the treaty signed there between Russia and Persia on Feb. 10/22, 1828. This diplomatic document consists of two parts. 1. By virtue of the political treaty, which was to take the place of the treaty of 1813, Russia annexed the khanates of Eriwān and Nakhitewān and received from Persia a contribution of 5,000,000 *timāns* = 20,000,000 roubles, but this was later reduced. 2. A special agreement fixed at 5% *ad valorem* the customs duties between the two countries and regulated the personal status of Russian subjects; in criminal cases they were to be tried by Russian courts, civil cases concerning both nationalities were dealt with by Russo-Persian tribunals with the participation of the Russian consular representatives etc. This particular agreement of 1828 is the historical origin of the Persian capitulations. By the most favoured nation clause, all the states of Europe in time secured similar rights. On its accession to power in 1917 the Soviet government renounced *in sponte* all the old political and judicial privileges in Persia and this renunciation was sealed by the Persian-Soviet treaty of Feb. 28, 1921. Since 1918 Persia has shown a desire to abrogate capitulations generally, but not till May 10, 1927 did she address a circular note to this effect to the powers, several of whom, from May 10, 1928, have made new treaties on a basis of equality.

The frontiers of 1828 between Russia and Persia (Little Ararat-Caspian Sea) still remained unchanged even after 1921.

Bibliography: Turkmān-čai is mentioned by all the travellers who have gone from Tabriz-Kazwin, cf. Hommaire de Hell, *Voyage*, Paris 1854-1860, iii. 83-84 (the village has 200 houses) and the atlas pl. lvi. (room where the treaty was signed); Brugsch, *Reise*, Leipzig 1862-1864, I. 181; Lycklama a Nijeholt, *Voyage*, II. 85; H. Schindler, *Reisen*, *Zeitschr. Geogr. Ethn.*, 1883, p. 333 (100 houses, altitude 5,285 feet).

MINORSKY)

TURKOMANS, a Turkish people in Central Asia. The name has been used since the fifth (sixth) century, first in the Persian plural form *Turkmānān*, by the Persian historians Gardizī [q. v.] (cf. also now the printed edition by Muḥ. Nazim, *E. G. Browne Mem.*, vol. 1, Berlin 1928) and Abu'l-Faḍl Baihaqi [q. v.] in the same sense as the Turkish Oghuz, Arah, Ghuzz [q. v.]. The Oghuz of course used to live in Mongolia, where they are mentioned as early as the Orkhon

inscriptions of the eighth century. These Oghuz are, so far as we know, only called Turks, not Turkomans; the Turkomans are mentioned only in the west, first (in the transcription T'o-kü-mong) in the Chinese Encyclopaedia of the eighth century A.D., *T'ung-tien*, chap. 193 (F. Hirth in *S. B. Bayer, Abad.*, II, 1899, p. 263 sq.). According to *T'ung-tien* T'o-kü-mong was another name for the land of Suk-tak i.e. the land of the Aians (see *ALIAN* and *SUKTAK*) which in the beginning of our era stretched as far east as the lower course of the Sîr Daryâ [q. v.], which in the fourth (tenth) century was the main centre of the Oghuz.

In the Arabic geographical literature the Turkomans (al-Turkman or al-Turkmanîyûn) are only mentioned by al-Mukaddasi (or al-Makdisî, *B. G. A.*, III, 274 sq.) in the description of a number of towns N.W. and N.E. of Arbiljâh or Sairin, the situation of which cannot be exactly defined. By the fifth (xith) century the origin of the word Turkoman had already been forgotten; the popular (Persian) etymology *Türk mânand* "like Turks" is found as early as Mahmûd Kâshghari (III, 307). From his time onwards we often find "Turks and Turkomans" opposed to one another. The language and particularly the type of the Turkomans was influenced by their migration to the west so that only a "similarity" was allowed to exist between them and the rest of the Turks. The Turkomans living in Central Asia at the present day are particularly easy to recognise by their long heads (dolichocephalic); this formation of skull is partly produced by artificial deformation in the cradle, but is also explained by intermixture with Iranian nomadic peoples of Central Asia. Mahmûd Kâshghari (i. 80 and 393) calls the *Karluq* [q. v.] Turkomans as well as the Oghuz.

On the wide dissemination of Turkomans in western Asia as a result of the political events of the fifth (xith) century, see *GHUZZ* and *SALJUQS*. As a result of the political importance of the Seljûk dynasty, we possess fuller notices of their people, the Turkomans, than of the all other Turkish peoples of the middle ages. Rashîd al-Dîn (text in *Trudi Vost. stud. Arkh. Obsh.*, VII, 32 sq.) for example gives the names of the individual "Oghuz tribes". In a linguistically older form (e.g. *Salghur* for *Salur*, *Yaghtr* for *Yazir*) we find these names in Mahmûd Kâshghari (I, 56 sq.). Of the 24 names given by Rashîd al-Dîn, 21 agree with the list in Mahmûd Kâshghari. Three names (*Yayirîl*, *Karîk* and *Karîkî*) are found only in Rashîd al-Dîn and one (*Djarukluq* or *Carukluq*) only in Mahmûd. The total number of tribes according to Rashîd al-Dîn was 24 (the same number occurs in many Turkish and Turkoman legends), according to Mahmûd 22; but the latter also knows (III, 307) that the original number was 24; two tribes are said to have separated in the pre-Islamic period from the rest and formed the people of the *Khaladj* [q. v.].

The name Oghuz was not ousted by that of Turkomans till the Mongol period; in the sixth (xith) century the word *Ghuz* is found even in official documents (text in Barthold, *Turkistan*, I, 28 sq.). On the place of abode of the separate tribes nothing is said either by Rashîd al-Dîn or by Mahmûd Kâshghari. In the historical references (e.g. *Zaf.*, IX, 303; Newswi, ed. Houdas, p. 39; *G. M. S.*, XVI, 120 and 122, where *Tâk* should be read for *Yâk*) the *Yaghtr* or *Yazir* are the

earliest (end of the fifth = xith and beginning of the sixth = xith century) to be associated with a definite region — east of Balkhân [q. v.] where the fortress of *Tâk*, later the town of *Durûn*, now a ruined site near the railway station of Boharden, once stood. According to Hamîd Allâh Kâsimî (*G. M. S.*, XXIII, 159 supra; there and in the transl. II, 155, wrongly *Dâzar*) there was much corn there; the *Yazir* seem therefore to have taken to agriculture. At a later date the *Yazir* are called *Karataghîl* or *Karadaghîl*; it was only towards the end of the eighth and beginning of the ninth century that they were driven out of *Âkhal* (see *ÂKHAL*, *TAKKA*) by the tribe of *Tekke*.

Among the Turkomans who migrated into western Asia the ethnic Turkoman gradually disappeared and has survived only in a few districts. Ibn Battûta [q. v.] still calls even the Ottoman Turkomans (*Voyages*, II, 321). In the ninth (xvth) century *Khalîl al-Zahîrî* (*G. A. L.*, II, 135) gives a list of the Turkoman tribes living in the empire of the Mamlûks [q. v.] from *Ghazna* [q. v.] to *Diâr Bakr* [q. v.] (*P. E. L. O. F.*, VII, s. v. XVI, 105). Of the tribes mentioned there only that of *Dulghadîr* (see *DUU*, *U-KADIR*), attained any political importance. The only really important Turkoman states in western Asia were the kingdoms of the dynasties of the *Kara-Koyunlu* [q. v.] and the *Ak-Koyunlu* [q. v.]. The still celebrated Turkoman carpets are first mentioned in the west (Abu 'l-Fidâ, ed. Reinaud, p. 379, from Ibn Sa'îd). The carpets were made by women, mainly by girls.

The Turkomans were among the few Turkish peoples of Central Asia, who retained their old ethnic even after the Mongol period. But very few of the old tribal names survived; the names of the most important and largest tribes of the present day (the *Tekke*, *Göklen*, *Yomut*, *Ersari*, *Sark* etc.) are not mentioned before the Mongol period. As with other nomads or semi-nomads, new formations were produced by the activity of single individuals; thus a clan of the *Sark* still calls itself *Bairat*, after a leader who fell in 1051 (year of the hare) (Abu 'l-Ghâzi, ed. Desmasez, p. 324 sq.). The most information about the Turkomans in the sixth and seventh centuries is given by Abu 'l-Ghâzi [q. v.] in his larger work and also in his history of the Turkomans, *Shajara-i Tarâkima* (not mentioned in the *Encyclopaedia*), which so far is only accessible in a Russian translation (Arkhabad 1897).

As the Turkomans were unable to form a state of their own, they dwelt in various kingdoms (Persia, *Khwarizm*, *Bukhârâ*, and in the eighth century *Afghanistan* also). As a matter of fact, the Turkomans usually succeeded in practice in maintaining their independence against these kingdoms; they frequently inflicted disastrous defeats on armies sent against them. The separate tribes were also frequently at war with one another. In the sixth century the *Tekke* tribe especially distinguished itself by its victories over other Turkoman tribes. It was only in poetic literature that the Turkoman people felt itself united; they all regarded Mahmûd Kullî of the tribe of *Göklen*, who flourished in the second half of the eighth and first half of the ninth century, as their common national poet (his father *Dawlat Mamal* was writing in 1167 [1755—1754]) (*Zaf.*, XVII, 146). Towards the end of the eighth century a section of the Turkomans migrated from *Mangishlak* [q. v.] and went north-

wards from the Caspian Sea into Russian territory, where they still dwell in the basin of the Kura and of the Maniç: the number of these Turkomans in 1912 was 15,534, less than in 1906 (15,990). Even for these Turkomans, completely separated from their kinmen, Makhdûm Kâlî was still the national poet.

The Russian conquests in Central Asia, especially the occupation of Krasnowodsk (1869) and the campaign against Khiva (1873) made inevitable the subjection of the Turkomans, and was concluded by the storming of Gök-tepe [q. v.] in 1881 and the "voluntary" surrender of Merw in 1884 and of the lands south of it in 1885. The treaties determining the frontier in the following years settled the present distribution of the Turkoman lands in Russia, Persia and Afghanistan. Russian Turkomania was at first administered as a separate (Transcaspian) district, but in 1898 it was incorporated in the governor-generalship of Turkestan [q. v.]. After the Revolution and the settlement of the problem of nationalities Turkomania was organised in 1924 as a Socialist Soviet Republic. According to the census of 1926-1927 the population of this republic was 1,030,641, of whom 719,792 were Turkomans; in the towns and larger villages there were 136,982, of whom only 8,790 were Turkomans. On the number of Turkomans in Persia and Afghanistan we have of course no accurate statistics. According to Aristow's estimates (1896) the figure was only 80,000, 50,000 in Afghanistan and 20,000 in Persia.

(W. BARTHOLD)

TURKOMAN LITERATURE.

The literature of the Transcaspian Turkomans until quite recent times was confined to a popular unwritten literature consisting mainly of poems by *shayhs*. This backward condition of the written literature is due to the fact that these Turkomans have never formed a state and that they have retained a nomadic mode of life and never adopted the settled habits of town life. Although there is a great resemblance between the popular literature of the Turkomans (consisting of proverbs, riddles, tales, songs, lullabies, etc.) and that of the Oghuz living farther west, i. e. the Turks of Persia, the Caucasus and Anatolia, we find among the Turkomans very many more traces of the pre-Islamic period.

The written literature of the Turkomans consists of lyric poems and epics, poetry of a religious and didactic nature as well as popular romances, which were recited among the Turkomans by *shayhs* [q. v.], i. e. wandering musicians. In form and subject, these poems differ very little from those popularised in Adharbaidjan and in Anatolia by the *shayhs*. They are written in the syllabic metre and in the quatrains called *ghazals* [cf. ГОЗМА]. Among the Turkomans this word is used in the general sense of poem. The popular anonymous romances deal with the same subjects as those of Adharbaidjan and Anatolia, like the *Fisher and his Companion* (*Sahid de Hemrah*), *Abd al-Gharib*, *Ak Oguz*, *Tahir and Zuhra*, *Yusuf and Ahmad*, motives which belong originally to the Oghuz. We may also note the close relation between the popular music of the Turkomans and Adheri music. These links between the different Oghuz Turk groups may be explained partly as a continuation of their common ancient culture and partly as a result of mutual influences of later date. Thus there are obvious connections between the famous romance *Yusuf and Ahmad* (which has also been adopted by the Osbeqs) and the book of *Dide Korkut* which is a remnant of the ancient Oghuz epic. In addition the intercourse of the Turkomans with the centres of Turkish culture in Khurasan, Khazaria and Turkestan have caused the Turkish literature of Central Asia to influence Turkoman literature. Among the Turkomans the Oghuz-Adheri poets like Nesimi and Fuzuli and the poems of the great Chaghatai poet 'Ali Shir Nava'i are also studied and the memory of the last, as well as of his patron Sultan Husain Baikara is still alive among the people. The influence of Ahmed Vesewi and of his pupils is visible in the work of the best known Turkoman poet, Makhdûm Kâlî (cf. *ib. Mutajawwifler*, p. 199).

We have as yet very little information about the early works of the Turkoman literature composed in the what is now Turkmenistan. Abu 'l-Qhasi in his *Shajjara-i tarikhina* mentions a poetical work called *Mu'in al-Murid* which, according to him, had been popular among the Turkomans down to his own time. But this work, written in 1313, although containing some references to nomad life, in reality originates among the Turks of Khazaria and has no connection with the Turkomans. Next comes the *methnawi*: *Kaw-nak al-Islam*, attributed by tradition to Shaikh Sharaf of Khazaria, but Zeki Velidi has shown that the work was composed in 889 (1484) by a poet named Wafa'i. This book is still studied among the Turkomans; it is written in the 'aruz metre but has no literary value. Perhaps this Wafa'i was one of the poets in the entourage of the Turkoman princes of Khurasan of the time of Shah Isma'il Safawi. We know however that as late as the Timurid period, poems in the Turkoman-Chaghatai style were recited in Khurasan, and from the *Tadhkirah* of Sam Mirza [q. v.] and from the *Tadhkirah* in Chaghatai of Sadqi, called *Majma' al-Khawass*, we know the poems of several Turkoman poets belonging to the 15th century (for the *Majma' al-Khawass* see: W. Peruch, *Die türk. HSS. in Göttingen*, No. 169). These poems however were intended for town-dwellers and were not known among the nomads. A work which was known to the Turkomans is the *Shajjara-i tarikhina* of Abu 'l-Qhasi (not mentioned in the article

ABU 'L-GHANI). This book was published in 1897 by Tumanaki at Ashkhabad (a sixth manuscript was recently discovered by Samoilovitch; cf. *Comptes Rendus de l'Académie des Sciences de l'U. R. S. S.*, 1927, No. 2, p. 39-42). Although this work contains some borrowings from the historical books of the Oghuz, it also includes ancient popular traditions of the Turkomans. As the language of the known manuscripts has been much altered by copyists, it has not the value it might have had as a specimen of the old Turkoman dialect.

The literary traditions of the Turkomans of the present day and the other sources available only help us for the xviiith and xixth centuries. Samoilovitch, the best authority, has been able to collect the names of about 20 poets belonging to Turkoman tribes. Their poems celebrate the battles and rivalries between the different tribes and are read, without exception, by all the Turkomans. The tribe of the Göklen, probably because it adopted a settled life before the others, produced most poets in the xviiith and xixth centuries: in the first place the greatest poet Makhdüm Kuli, his father Dewlet Muhammad Molla Asadi, then his son-in-law and pupil Dhalili, and lastly Saiyidi, the poet of the Ersari, who sought refuge among the Göklen. Dewlet Muhammad Molla Asadi in 1167 (1753) composed a *metnevi* entitled *Wa'z-i Asadi* in the 'arud metre, a moralising poem showing the influence of Caghatay literature. The same poet also wrote poems in the style of the 'ashks. Among the poets of the xviiith century may also be mentioned Ma'rufi and Sheidkyl. Another poet, a product like Asadi of the *medrese*, of the xixth century is 'Abd al-Sattar Kadi of the tribe of the Teke, whose *Qit'atnâme* was published by Samoilovitch in 1914. This *metnevi*, written in the metre ---/---/---, is a historical poem describing an episode of a struggle between the Sunni Teke and the Shi'i Persians. The work is not, however, a pure specimen of the popular language of the Turkomans.

Makhdüm Kuli received his education in the *medrese* of Shtr 'Ali Khan in Khwārizm but his real life has been much obscured by legends. His popularity has been so great that the works of many other poets have also been attributed to him, even although the *mukhammas* of these poets are given at the end of the poems. Among the Turkomans of Khotan and even among the Osbeqs, the expression "to read Makhdüm Kuli" means "to read didactic poems in Turkoman". We do not know which of the 279 poems attributed to him are really his. Among them we find pieces of a religious and didactic nature as well as of warlike poems inspired by the struggle with the Persians. These poems are our most important source for our knowledge of the Turkoman conception of life. The *ghazals* of Dhalili and Saiyidi also reflect this popular wisdom and are written in the 'arud metre and in the form of *mukhammas*, *muraddas* etc.

Since the Russian revolution of 1905, there have been signs of a revival among the Turkomans but it is only since 1917 that the movement has been a steady one. The centre of this renewed intellectual activity is Ashkhabad. School-books, periodicals and newspapers are published in the Turkoman dialect and an in-

stitute for Turkoman culture has been founded. Ethnography, music and popular literature are being studied and the foundations laid for a marxist literature just as in the other lands belonging to the Union of Soviets. Although the products of this new literature are not yet of much literary value, several important works have been published, like the collected works of Saiyidi and Dhalili and the *Saiyid il-Hemrah Hikayasi* (by scholars like Geldiyeff and Kulmehmedoff). These researches by learned Turkomans assisted by Russian orientalisks will probably in the near future throw much light on unknown periods of this literature.

Bibliography: The earliest account of Turkoman poets and of Makhdüm Kuli is found in A. Chodsko, *Specimens of the Popular Poetry of Persia*, 1842. After him Berzin published several Turkoman poems in his *Chrastomathie*. H. Vámbéry in his *Travels*, London 1864 gives some information about Makhdüm Kuli; in 1879 the same author published in *Z. D. M. G.*, xxxiii, 31 fragments of his poems. This article, however, as well as that of Ostroumof, publ. in 1907, contains many errors. The most important researches have been those of Samoilovitch in the following articles: 1. *Turkmenkij poet-derjakh Kär Mulla i jego pesnja o Rusikh* (*zhiznja Sharina*, serija XVI, St. Petersburg 1907, p. 215-23); 2. *Pojezdka v Turkistan v 1906-1907 g.* (*Zap. Vost. Otd. Imp. Russk. Akad. Obsh.*, xviii, p. xviii-xix.); 3. *Po povodu isdanija N. P. Ostroumova "Svetlo Islama"* (*Zap.*, xviii, 158-166); 4. *Materialy po Sredniasiaticheskij literature* (*Zap.*, xix, 1-30); 5. *Ukavatel k pesnyam Makhdum-Kuli* (*Zap.*, xix.); 6. *Ulebihi Turkmenkij narechiya* (*Zap.*, xviii.); 7. *Kitabat "Ukavatel k pesnyam Makhdum-Kuli"* (*Zap.*, xix, p. 125); 8. *Abdu-Sattar Gazy, Kniga razskazov o bitvakh i zhizni Turkmenikaya istorikskaya poema XIX veka*, St. Petersburg 1924.

H. Vámbéry, *Yusuf und Ahmed*, Budapest 1911; this story has also been printed at Kazan in 1904; some sections have already been published by Vámbéry in *Cagatäische Sprachstudien*, Leipzig 1867, p. 95-114. On the *Mu'in al-Marid* cf.: Zeki Walidi, *Khawarizmiye yastilish ishi turkiki Esheler*, in *Turkiyat Medenisat*, ii, 313-45. The various manuscripts of the *Kawnah al-Islam* have been described by Samoilovitch (a new manuscript of the xixth century is in my private library); the work was printed for the first time at Kazan in 1850; in 1905 it was again published at Tashkent by Ostroumof. The *Divan* of Makhdüm Kuli publ. at Constantinople in 1340 by Sheikh Muhsin Fani contains more mistakes than Vámbéry's edition. For a critical bibliography of the publication relating to Makhdüm Kuli see: Zeki Walidi, *Turkiyat Medenisat*, ii, 465-474; Kul-Mehmedof, *Seydi ghazallari*, Ashkhabad 1926; do., *Dhalili ghazallari*, Ashkhabad 1926; do., *Saiyid il-Hemrah*, Ashkhabad 1927. The last and most complete publication on Turkoman literature is the article by Samoilovitch, *Oterki po istorii turkmenkij literature*, in the periodical *Turkmeniya*, vol. i, 1929, publ. by the Academy of Sciences of the Union of Soviets.

A. — I. HISTORICAL AND ETHNOGRAPHICAL SURVEY.

The word Turk (Chin. Tu-kue, Greek Τούρκοι) first appears as the name of a nomad people in the sixth century A.D. In this century a powerful nomad empire was founded by the Turks, which stretched from Mongolia and the northern frontier of China to the Black Sea. The founder of the empire, called Tu-men by the Chinese (in the Turkish inscriptions: Bo-mün) died in 552; his brother Istämi (Chin. She-tie-mi, Greek Σιρτιέμις, Δαλτίβουλος; in al-Tabari, I. 895 and 896: Sindjibü Khākan) by whom the conquests in the west were made, seems to have lived till 576. The two brothers seem to have been quite independent of each other. The Turkish empires in question were distinguished by the Chinese as the empires of the Northern Turks and of the Western Turks. In 581 under the influence of the Chinese dynasty of Sui, which had now risen to power, a final breach was made between the two kingdoms. In the next century both had to submit to the nominal suzerainty of the Tang dynasty (618—907), the Northern Turks about 630, the Western in 659. In 682, after 50 years of foreign rule, the Northern Turks succeeded in regaining their independence and former power. To this new empire, which lasted till 744, belong the "Orkhon inscriptions" (called after the river Orkhon in Mongolia), the oldest monument of the Turkish language. From time to time, especially in 699 and 721, these rulers succeeded in bringing the Western Turks under their rule but could not subdue them permanently. Of the Western Turkish tribes the Türgesh were the most distinguished, whose chiefs in the last years of the ninth century assumed the powers of Khāns. The kingdom of the Türgesh was ended by the Arabs under Naṣr b. Sayār in 121 (739) (Tabari, II. 1593 sqq., 1613, 1689 sqq.).

Various views have been expressed regarding the relations of these, the oldest Turks, to their predecessors, the nomad peoples in the east and west. The attempt has been made to prove that in earlier centuries also there were Turkish languages, of course under other names, and to explain from the Turkish isolated words that have survived from the pre-Christian period. In the west it has been often assumed that the ancient nomad people par excellence, the Scythians, or at least a section of them, were related to the Turks. In Curtius VII. 7. 1, in the history of Alexander the Great, Caribasis, a brother of the king of the Scythians who dwelt beyond the Vaxartes (cf. Strabo, II. 116), is mentioned. Th. Nöldede pointed out to A. Gutschmid that this might be the Turkish Kar-

daghl "his brother" so that we have here "perhaps the first reference in history to a Turkish people" (A. Gutschmid, *Geschichte Irans und seiner Nachbarländer von Alexander dem Grossen bis zum Untergang der Sassaniden*, Tübingen 1888, p. 2, note 1). Nöldede himself, as he observes in his preface to Gutschmid's work, "no longer wished seriously to support this suggestion casually thrown out by him".

To an even earlier period belong the references in Herodotus, IV. 23 to the people of the Agripacans or Argimpacans and to the sap of a tree called *ἄργυ* which was drunk mixed with milk. The word *ἄργυ* (according to Müllenhol, *Deutsche Altertumskunde*, III. 15: Turk. *ağı* or *alı* "bitter"; Tomaschek, *S.B. Ak. Wien*, cxvii. 60 equates it with a hypothetical *argā* in the meaning of "food"; cf. also F. Braun, *Rosikuniya v oblasti getokul'-anskikh stepeney*, St. Petersburg 1899, p. 88) has been sometimes held to be the oldest Turkish word that has come down to us. The Turks are described by the Chinese as descendants of the Hsiang-nu (Hans). In the *T'ien-shu-shu* in the account of a treaty concluded in 47 B.C. between the Emperor of China and the ruler of the Huns, a Hun word (in Chinese transcription *king-lu*, old sound *king-luk*) is mentioned as meaning "ceremonial sword of the Huns". This word is connected by Fr. Hirth (*Bulletin de l'Acad. etc.*, 1900 p. 222) with the Teut. *flingraf* "a two-edged knife" (Radloff, *Wörterbuch*, II. 709) and the eastern Turkistan *flingraf* "a broad knife" (R. Shaw, *A Sketch of the Turk Language*, II. 183). In still older Chinese sources, the same Hun word is mentioned in the account of an event of the year 1022 A.C., which makes Hirth consider it "the oldest Turkish word on record" (*The Ancient History of China*, New York 1911, p. 67). K. Shiratori (*Bulletin de l'Acad. etc.*, 1902, xvii. N° 2, p. 1 sqq.) has made an attempt to explain a large number of Hun words preserved in Chinese sources from the Turkish; but at a later date the same scholar (*J. A.*, ccii. 1923, p. 71 sq.) attempted to show that the language of the Huns was a Mongol language with an admixture of Tungust elements.

As eastern neighbours of the Huns the Sien-pi are mentioned in Chinese sources, by whom the Huns were driven out of Mongolia towards the end of the first century A.D.; at a later date several dynasties were founded by the Huns and also by the Sien-pi in China; among the Sien-pi dynasties, that of the Northern Wei (386—534) was of special note. The Sien-pi are usually regarded as a Tungust people (e.g. E. Chavannes, *Documents sur les Tou-kue [Turcs] occidentaux*, St. Petersburg 1903, p. 155, note 5); but, as P. Pelliot announced at a lecture given in St. Petersburg in autumn 1925, a Sien-pi glossary has survived in Chinese, from which it is evident that the Sien-pi were a Turkish-speaking people. So far as I know, nothing has so far appeared in print about this glossary; and so long as a source like this is not accessible to us, the question of the origin of the peoples concerned cannot of course be decided. If it should be definitely proved that the Huns were Mongols, and the Sien-pi Turks, it would follow that in these days, unlike later times, the Turks lived to the east of the Mongols. How the name of the people, which survives only in Chinese transcription, was really pronounced,

we do not know. E. Blocher (*G.M.S.*, xii. 201) connects Sien-pi with Sibir. In Byzantine and Armenian sources we find a people called Sabirs mentioned for the first time in 463 and the last in 558 (cf. J. Marquart, *Ostergeschichte und estnaische Strifzüge*, Leipzig 1903, index), but of migrations of the Sien-pi to the west nothing is known.

N. Poppe has recently dealt with the question of the origin and early history of the Turks from another standpoint, the linguistic. An Altaic primitive language (*Ursprache*) is presupposed, to which the primitive Turkish, the primitive Mongol and the primitive Tungus go back. The primitive Turkish was on the same level of development as the language of the Orkhon inscriptions; "the phonetic system of the Orkhon Turkish is completely in keeping with our ideas of the primitive Turkish phonetic system" (*Ungerische Jahrbücher*, vi. 98).

The writer of course does not assert that all modern Turkish languages are descended from the language of the Orkhon inscriptions; this would be impossible, if only because the inscriptions themselves mention several tribes of Turks; it was only an "archaic dialect". "The period of primitive Turkish" must be placed "at the latest in the centuries just before the Christian era" (*op. cit.*). In general the Turkish languages are on a higher level than the Mongol ones; even "the modern Mongol of any district one likes to choose" in the Mongol world "is much more archaic than the oldest Turkish languages known to us". "The Mongol of literature, not however the living dialects", is phonetically "almost at the same stage of development as the Altaic primitive language" (*op. cit.*, p. 117).

Special attention is devoted by the author (*op. cit.*; cf. also *Bulletin de l'Acad. etc.*, 1924, p. 289 sqq.; *Asia Major*, i. 775 sqq.; *Körsi Csoma-Archiv*, ii. 65 sqq.; *Ungerische Jahrbücher*, vii. 151 sqq.) to the relation of the "Cuwassisch" (his form) to the other Turkish languages. Cuwass does not go back to the primitive Turkish language but the latter and the oldest form of Cuwass both go back to a "Cuwass-Turkish primitive language" and these with the primitive Mongol go back to an "Altaic primitive language". The division in the Cuwass-Turkish original language is with caution brought into connection with the migrations of Hun tribes to the west. The Cuwass are descendants of the Western Huns; the Cuwass-Turkish primitive language was then the language of the Huns. The change characteristic of the Turkish language (unlike the Cuwass) of $r > z$ and $l > \lambda$ did not take place as Ramstedt thought (*J. S. F. O.*, xxxviii/1, 31) between the fourth and sixth century, but much earlier, perhaps about the beginning of the Christian era.

V. Thomsen (*Z.D.M.G.*, lxxviii. 122) supposes the word "Turk" means "strength, power" (cf. also F. W. K. Müller, *Uguria*, ii. 97: *ürk türk*, "might and power"); it is said to have been "at first probably the name of a single tribe or more probably rather of a ruling family". In the inscriptions, the word *türk* seems to have a political rather than an ethnographic significance; the expression "my Turks, my people" (in Thomsen, l. E. 18; ii. E. 16; ii. S. 10) points in this direction. Alongside of the Turks, the Oghuz or Tokuz ("nine"; from the number of their separate tribes or families) Oghuz are frequently mentioned, sometimes as

enemies of the Turks and their rulers, sometimes as the Khān's own people, esp. l. N. 4; ii. E. 30, where the Khān calls the Tokuz Oghuz his "own people" and regards their rising against his rule as the dissolution of all order in heaven and earth. The Khān and his followers had probably belonged originally to the people of the Oghuz; the Oghuz hostile to the Khān dwelt to the north of his residence, which was near the mountains of Ötüken (on this word see now also B. Vladimircov, in *Comptes rendus de l'Acad. etc.*, 1929, p. 133 sq.), according to Thomsen (*Z.D.M.G.*, lxxviii. 123) "probably a part of the present range of Hangai near the river-system of the Orkhon in northern Mongolia". The people of the Uighur are also mentioned in northern Mongolia, on the Selenga river, although only in one passage (ii. E. 37). The Oghuz enemies of the Turks had about 680 a Kaghān of their own, a vassal of the Chinese emperor; in the eighth century he is no longer mentioned. The leader of the Uighur bore the more modest title of an *altābir* (e.g. ii. E. 38); in the inscriptions the expressions *qaghanlīgh budun* "people under a Kaghān" (e.g. i. E. 9; ii. E. 9) and *altābir-līgh budun* "people under an altābir" (e.g. ii. E. 38) are contrasted. In addition to the Turkish Kaghān in the east (according to the Chinese view in the north), there was also a Turkish Kaghān, the Kaghān of the Türgish (or Turgesh) in the west. From Arabic (Tabari, ii. 1593, where the town of Nawāket is mentioned; on its situation: *B. G.A.*, vi. text, p. 29 and 206) and Chinese sources we know that his royal residence was on the river Ču [q. v.]. His people is called *en shē* "ten arrows" town the number of their tribes. There was a third Turkish Kaghān, the Kaghān of the Kirgiz [q. v.] on the Yenisei; the Khān of the inscriptions claims to have himself given the ruler of the Kirgiz the title of a Kaghān (ii. E. 20; ii. E. 17). The opinion that to become a Khān (Kaghān) the title had to be received from another Khān is also found in Muslim sources (Awfi in Barthold, *Turkistan v. epokhu mongol'skago nashestviya*, l. 96).

*East of the western Turks and into their territory between the Altai and the upper course of the Irtysh" (so Thomsen, *Z.D.M.G.*, lxxviii. 172) lived the Karluq, a people of undoubted Turkish origin. In 766 the lands of the Western Turks passed into their possession; their ruler at that time, like the ruler of the Oghuz on the Sfr-Daryā, bore the Turkish (originally Tokhari: cf. Marquart, *Erzählung*, p. 204; W. Bang, in *Ung. Jahrb.*, vi. 102, note 3) title of *yabghu*, which is mentioned in the Orkhon inscriptions as the title of a prince. The only Turkish people at that time already leading a settled life (at least in the east) was the Basmlī in Biḡbalk [q. v.]; their ruler had the title of *idūgh-bat* "holy majesty" (ii. E. 25). The prince of the Uighur in the same region had the same title in the xiith century, when its origin had already been forgotten (hence the attempts to explain it in Rashid al-Dīn and Abu Ṭ-Ḥāzī; cf. the passages given in Radloff, *Kudatku Bilik*, part i., p. xxvii. and xxxix.). A. Grünwedel seems to have heard the pronunciation *idikut* in this very region; hence the name of the ruins of Idikutshari at Turfan (A. Grünwedel, *Bericht über archäologische Arbeiten in Idikutshari und Umgebung*, Munich 1905). Thomsen (*Z.D.M.G.*, lxxviii. 172) describes the Basmlī as only "a tribe related to the Turks". That they were not a pure Turkish

people seems to be clear from the name. Aristow (*Zaměstki k etimologickému rozboru tyurkských jmen*, St. Petersburg 1897, p. 91 sq.) has pointed out that according to Ducange (*Glossarium ad scriptores mediae et infimae aetatis*) the children of a French father and a Greek mother were called Gascones or Gascones in Byzantium. Even in the 13th century, in Mahmūd Kāshgharī (I. 30), the Basmlī are mentioned among the peoples, who have a (non-Turkish) language of their own although they also know Turkish.

The other peoples mentioned in the inscriptions were probably not Turks, notably the Tatars, although Turkish numerals like *otuz* (30) and *toqus* (9) are prefixed to their names. As Thomsen (*Z. D. M. G.*, lxxviii. 174) rightly points out, they were "undoubtedly the Mongols".

From the Oghuz ("Turks") rule over Mongolia passed about 745 to the Uighurs, whose ruler henceforth assumed the title of Kāghān. His dynasty ruled till 840. Of this period also we possess inscriptions, including one published by Ramstedt (*J. S. F. O.*, xxx. 3), of the Kāghān who reigned from 746 to 759. The view, also shared by Thomsen (*Z. D. M. G.*, lxxviii. 128 sq.), that the Uighur belonged to the confederation of the Oghuz and that there is only a slight difference of dialect between the forms Oghuz and Uighur is not confirmed by this inscription; the Uighur appear as a separate confederation, distinct from the Oghuz; the Kāghān calls himself ruler over the On (10) Uighur and Tokuz Oghuz, although according to Chinese sources, the Uighur also numbered nine tribes. Some of the Oghuz appear to have remained in Mongolia under the rule of the Uighur, and others to have migrated west and south. Among the latter was the tribe of *Ču* (in Chinese transcription Ču-yue, in Chinese translation Sha-t'o = "sand-desert") which belonged originally to the Western Turks. In the 11th century, the Sha-t'o lived on Lake Barkul (properly Barskul) where they were exposed to the attacks of the Tibetans, and at a later date (since 712) somewhat further west at Bishbalık. After 808 they were driven from there also by the Tibetans and had to go over on to Chinese territory. In the history of China, they are best known in connection with the suppression of the rebellion of Huang-Čao (877-883); in Muslim history this is ascribed to the people of Toguz-ghuz [q. v.]. In the tenth century, three short-lived dynasties were founded in the province of Ho-nan by the Sha-t'o Turks (the Later T'ang 923-936, the Later Tsin 936-947 and the Later Han 947-951).

In the Chinese inscription of Karabalgasun, composed by the Uighur Kāghān who died in 821, the adoption of Manichaeism by the Uighur is recorded. The Uighur had become acquainted with Manichaeism in a campaign against China in 762 in the town of Lo-Yang (near Ho-nan), and four Manichaean missionaries were taken from there back to their land (Mongolia). "The land with barbaric customs and the smell of blood" was to be "changed into a land where men lived on vegetables, the land where men slew one another, to a land where they exhorted to the good" (*J. A.*, xi. 1, 194). Buddhism and Syrian (especially Nestorian) Christianity at this time developed a zealous missionary activity in China and among the Turks. The expeditions to Chinese Turkestan have found many Turkish fragments which testify to this activity; but the inscription of Karabalgasun

seems to be the only record that has survived about the conversion of a Turkish ruler to one of these religions. The Soghdians [cf. SOGHDI] in particular seem to have spread Manichaeism in China and among the Turks; besides the Chinese inscription, there is a short one formerly thought to be Uighur, now recognised as Soghdian by F. W. K. Müller (*Ein iranisches Sprachdenkmal aus der nördlichen Mongolei*, in *S. B. Pr. Ak. W.*, 1909). According to R. Gauthiot (*Essai de Grammaire sogdienne, Première partie, Phonétique*, Paris 1914-1923, xiii.), the language of this inscription is "somme toute, la tradition la plus vieille et la plus constante du sogdien". From the Soghdian script developed the Uighur which later, probably in the same 10th century, was to drive out of use completely the oldest Turkish alphabet, that of the Orkhon inscriptions. The Uighur alphabet was adopted by the Mongols in the 13th century; in the period of the Mongol empire, the Uighur alphabet was used in all countries from Mongolia to South Russia and Persia.

About 840 the Kirgiz put an end to the Uighur empire. Two new kingdoms were founded about the middle of the ninth century by the Uighurs driven out of Mongolia, one in Kan-čou (see KANČOU, better Kan-djou), the other in Bishbalık and Kara-Khodja. Manichaeism are mentioned in both in the tenth century as well as in Khotan (*J. A.*, xi. 1, 265 sq.).

The ruler of Bishbalık and Kara-Khodja undertook the defence of his co-religionists against the Chinese Emperor (Mas'ūdi, *Murūdj*, I. 300 sq.) and the ruler of the Sāmānids (*Fihrist*, p. 337). In Bishbalık and Kara-Khodja, Manichaeism had probably already spread under the predecessors of the Uighur, the Tokuz-Oghuz. Tamim b. Bakr al-Matawwa', who is quoted by Yāqūt (*Ma'ājam*, I. 840, supra) and was certainly utilised by Ibn Khurdadbeh also (*B. G. A.*, vi., text, p. 30 sq.), seems to have visited not the Uighur but the Toghrughuz proper (Tokuz-Oghuz).

At that time Manichaeism predominated, especially in the Kāghān's (Kāghān) capital; in the country west of the capital there were Manichaeism also but the Zoroastrians were more numerous there. Whether, as Chavannes and Pelliot (*J. A.*, xi. 1, 269) suppose, the turkification of what is now Chinese Turkestan was for the most part ("en grande partie") first carried through by the Uighur, is doubtful. This process may already have made considerable progress under the predecessors of the Uighur. Kāshghar and all the lands east of it are from the very beginning regarded by the Arabs as purely Turkish areas.

Of the two Uighur kingdoms, one (in Kan-čou) was conquered by the Tanguts in 1028 and the second was still in existence in the Mongol period. In the year 924 the proposal was made to the Uighur in Kan-čou by the founder of the kingdom of the Kitai [cf. KARA-KITAI] Apaoki, who had shortly before driven the Kirgiz out of Mongolia, that they should return to their original homes on the Orkhon, but the Uighur had already settled down to the conditions of their new home and did not wish to become nomads again (E. Bretschneider, *Medieval Researches from Eastern Asiatic Sources*, I. 214; J. Marquart, *Gökalın's Bericht über die Bektürung der Uighuren*, *S. B. Pr. Ak.*, 1912).

The victory of the Kitai over the Kirgiz really marks the end of Turkish and the beginning of

Mongol rule in Mongolia. The Kirgiz were the last Turkish people to live in Mongolia and the only one whose memory has survived there to the present day. All the pre-Mongol tombs in Mongolia, including the Uighur, are called "Kirgiz tombs" (*qirgiz ur*). The hills of Otukin mentioned in the Orkhon inscriptions as Turkish country *xar' k'igiz* were according to Mahmūd Kāshgharī (*Divān Lughat al-Turk*, i. 123) in the Tatar steppes.

Most references to the Turkish peoples are from this time found in Muslim sources. For the older period also the information in the Turkish inscriptions and in the Chinese annals is often supplemented by the western sources. From Byzantine sources we learn that Turks in 576 conquered the Tauric Bosphorus, in 581 they were before the walls of Chersonesus, but their rule over the Tauric Peninsula was not of long duration; by about 590 Byzantine rule had been restored there (A. Vasil'yev, in *Izv. Akad. Mater. Kul'turi*, v. 185 sq.).

There are also Byzantine sources from 568 (Byzantine embassy under Zemarchoz to the Turks) to 598 (letters of the Turkish Kaghān to the Emperor Maurice; cf. the latest study of these sources in E. Chavannes, *Documenti sur les Tou-Kiue [Turcs] occidentaux*, St. Petersburg 1903, p. 233 sq.).

Of the Byzantine envoys only the first, Zemarchoz, crossed the Volga and visited the residence of the Kaghān of the Western Turks which, as Chavannes has shown, at this time was in the Ak Tagh ("White Mountains") north of the town of Kuča. There were often negotiations for joint campaigns against the Sāsānids, but no lasting alliance was made; in a few years the Turks were at war with the Byzantines as well as with the Persians. After the conquest of the Alans (cf. ALLĀN) by the Turks the kingdom of the Sāsānids became bounded by the land of the Turks not only in Central Asia but also west of the Caspian Sea. It was probably against these Turks that the walls of Derbend (q.v.) were built. The tradition of the Turkish nomad empire was continued by the Khazars, who became a great power in the seventh century (see NUTGHĀN and KHAZAR), just as at a later date the Golden Horde carried on the traditions of Čingiz-Khān's [q.v.] empire. The language of the conquerors of the sixth century has left no more traces in Eastern Europe than the Mongol has in the lands of the Golden Horde. The language of the Bulghar and Khazar belonged to the above mentioned older stratum of Turkish now represented only by the Cuman and the Turkish elements in Magyar; Turkish proper was brought to Europe only towards the end of the ninth century A. D. by the Pelenegs.

In the lands east of the Caspian Sea also, defences were erected by the Sāsānids against their Turkish neighbours. A wall of brick was built to defend the province of Djurdjān [q.v.] but it was not able to prevent the victorious invasion of the Turks (Baladhuri, p. 336; *B.G.A.*, vi, text, p. 261 sq.); the remains of this wall on the right bank of the river Gūrghen are called Kifli-Alan at the present day (description e.g. by I. Polzawski, in *Festschrift Turk Krutka Lyub. Arkh.*, v. 185). The loss of the province of Djurdjān probably explains the erection of another wall also of baked bricks on the frontier between Djurdjān and Tabaristān [q.v.] attributed to Khumraw Anūshirwān (*B.G.A.*, vii, 150). During the fighting between the Arabs and

Turks in the year 98 (716—717), the Turks of Djurdjān were led by Šul, the Dihkān of Dihistān (Tabari, ii. 1320). Šul here is certainly a Turkish proper name or title, probably for Turkish *Čur*. In the history of the fighting against the Turks in the Sāsānid period, the word *Šul* appears in one passage in Tabari as the name of a people, and on this J. Marquart (*Erānshahr*, p. 51 and 73) bases his views on the people or tribe *Čul* (see also above under *QURĀNĀN*). But this statement probably does not refer to the Gūrghen region, as the Šul are mentioned along with the Alans (Tabari, i. 895). According to a late source (*Kitāb al-Aghāni*, ix. 21), the Turks on the Gūrghen had adopted the language and religion of the Persians; they must therefore have already conquered this region under the Sāsānids, probably as early as the sixth century, although in the *Kitāb al-Aghāni*, the same persons (Šul and his brother Firās) are mentioned as Turkish conquerors of the land and as fighting against the Arabs.

The fighting in the lands south of the Amū-Daryā [q.v.] generally went in favour of the Turks; as Marquart (*Erānshahr*, p. 53 and elsewhere) and following him Chavannes (*Documenti* etc., p. 252) have shown, the northeastern boundary of the Sāsānid empire at this time was the Murghāb. The Turks and with them their protégés, the last Sāsānids, were less successful later in the same area, during their struggle with the Arabs. In the accounts of this fighting only the "Turks" are mentioned, not separate Turkish peoples; an exception is the mention of the *Qabghā* of the Kariuk (the name of this people is written *Kharlukh* in Arabic and *Khallukh* in Persian) in the year 119 = 737 (cf. Tabari, ii. 1612 *infra*); more frequently the same prince is called "Qabghā of Tukhristān" [q.v.]. A portion of the Kariuk had therefore by this date reached the lands south of the Amū-Daryā, where they have survived to the present day (now regarded as an isolated family of the Ozbeks). There were also Arab embassies sent on peaceful missions to the Turks: e.g. the caliph Hishām (105—125 = 724—743) is said to have asked the "king of the Turks" to adopt Islam. Unfortunately in the only record we have of this mission (Yāqūt, *Mu'jam*, i. 839; the source of Yāqūt is Ibn al-Fakih; cf. *Bulletin de l'Acad.* etc., 1924, p. 241) we are not told where this king's capital was.

We get more detailed accounts of the separate Turkish peoples and their habits only from the Arab geographers of the third (ninth) and especially the fourth (tenth) century. In this geographical literature the word "Turk" is used only as the name of a group of peoples and branch of languages, not as in the Orkhon inscriptions and the Chinese Annals of a single people or kingdom. Five peoples in particular are mentioned (*B.G.A.*, i. 9) who spoke one language and could understand one another: the Toguzghuz [q.v.], the Khirithiz (Kirgiz, q.v.), the Kimak (cf. KIMAK), the Ghuzz (q.v.), i.e. the Oghuz, and the Kharlukh, i.e. the Kariuk [q.v.]. As at the present day, the lands on the Upper Yenisei were even then the extreme limits in the northeast of the land inhabited by Turks; they also marked the limits of the world as known to the Arabs; according to the Arab view, the lands of the Kirgiz, then the extreme northeasterly of Turkish peoples, stretched to the Ocean. The Oghuz and Kariuk were the immediate neighbours

of the Muslim lands in Central Asia. The land of the Oghuz adjoined the Muslim lands of Djurdjan in the west as far as Farkh [q. v.] and Ashidjib (the modern Sairam near Chinkent [q. v.]); in the east, still farther to the east, lived the Karluk. To go to China one had to travel through the lands of the Karluk and the Toghrughuz: over 30 days from the eastern frontier of Farghana [q. v.] through the land of the Karluk to the frontier of the land of the Toghrughuz; thence about two months through the land of the Toghrughuz and through China to the shore of the Ocean (*B.G.A.*, II, 11; other descriptions vary). Two other names of peoples are mentioned by Ibn Khurdādhbih (*B.G.A.*, VI, p. 28 sq.); not far from the winter quarters of the Karluk east of Tarāz (at the modern Awliya-Ata, q. v.) were the winter quarters of the Khaladj (q. v., where only the southern branch of this people are dealt with; for the Khaladj who migrated to Persia, see *SAWA*); between the rivers Talas and Chir, nearer to the latter, was the town of the "Khajān of the Türgesh". Further notices are given in the Persian sources in the *Ḥudūd al-'Alam* and in Gardizi [q. v.]. The Türgesh according to these were divided into the Tukhsi (so vocalised in Mahmūd Kāshghari) and the Az; the Tukhsi lived on the Chir [q. v.]; the town of Snyāb was in their territory. East of them on the Isfīk-Kul [q. v.] lived the Čigil (the pronunciation is established by a story giving a popular etymology in Mahmūd Kāshghari, I, 330). South of the river Narīn [see *SA-DARYĀ*] lived the Yaghmā, a branch of the Toghrughuz; their king was a descendant of the royal family of this people. The town of Kāshghar was in their territory. According to Mahmūd Kāshghari (I, 85), the Yaghmā and the Tukhsi lived on the river Ilī [q. v.], as did a part of the Čigil. The term Tukhsi-Čigil (I, 354) is also found. The Čigil were divided into three parts: in addition to the Čigil on the Ilī there were Čigil in villages near Kāshghar and in a little town or stronghold called Čigil near Tarāz; this latter was near the land of the Oghuz and was frequently besieged by them. The Oghuz therefore called all the Turks from the *Amū-Daryā* to China Čigil. In this sense the word Čigil is sometimes used by Kāshghari himself; it is recorded that the word *Yarīlgā* "edict", which implies a certain degree of culture, was unknown in the language of the Čigil and of the Oghuz (III, 31). The Yaghmā were also called *Ḥarā Yaghmā* ("black Y."); there was also a village of this name near Tarāz (III, 25 sq.). The name Turkoman first occurs in the geographical literature in Muḥaddasi in two passages (*B.G.A.*, III, 274 sq.) with a not quite certain significance.

On the *SA-DARYĀ* below Sawrān, that is in the land of the Oghuz, are mentioned the towns of Baladj and Barūkat "frontier forts against the Turkomans", who had by that time already adopted Islām "out of fear". In another passage, in this region between the Talas and the Chir, i.e. in the land of the Karluk, is mentioned a king of the Turkomans, from whom the lord of Ashidjib regularly received gifts. Kāshghari also says that not only the Oghuz (I, 27 and 56; III, 304) but also the Karluk (I, 393) were called Turkomans; the well known popular etymology in Kāshgharī al-Dīn (*Ṭurūd Vost. Oid. Arh. Osh.*, VII, 26, *infra*: *Türk mülkündü* "resembling the Turks") is found as early as Kāshghari (III, 307). As F.

Hirth (*S.B. Bayr. Akad.*, 1899, II, 263 sqq.) has told us, the word Turkoman, in Chinese transcription To-ku-mang, appears much earlier, in the eighth century A.D., in the T'ung-tien Encyclopaedia; there also it refers to the west, to the land of the Alans. It is possible that the Oghuz or Turkomans (as early as the eleventh century we find the names used promiscuously) are descended from nomad Iranians who had become Turkicised and this explains their peculiar craniology (*dolichocephalic*).

Whether non-Turkish, perhaps Mongol, peoples wandered westwards with the Turks has still to be investigated. As one of the seven tribes of the Kimik are mentioned the Tatars (Gardizi in Barthold, *Orlet* etc., p. 82), also called a tribe of the Toghrughuz (*op. cit.*, p. 34). A full account of the Turkish peoples, their lands, their language and dialects including also the not purely Turkish elements, is first given by Mahmūd Kāshghari, but he does not seem to be always reliable, even apart from the fact that the name Turk, as frequently elsewhere in Muslim literature, is sometimes given to non-Turkish peoples of Eastern Asia.

According to one passage (I, 27 sq.) there were twenty Turkish peoples, who fell into two groups, a northern and a southern one, each of ten, as follows, from east to west as the author tells us. The ten peoples of the northern group were the Bedjenek, Kildjik, Oghuz, Yamak, Bashghrut, Basml, Kay, Yabaku, Tatar, Kirgis; the ten peoples of the southern group were the Dikil, Tukhsi, Yaghma, Ighrak, Djaruk, Djumul, Uighur, Tankut, Khitai, Tafigha. This order for the northern group obviously cannot be the right one. As in *Ishtakhi* (see above) the Kirgis (the Kirgis on the Yenisei) are moved to the extreme northeast, although according to another passage (I, 123), the Tatars lived in Utikan (Otukan on the Orkhon), i.e. much farther east. The Yamak (Yemek, originally a tribe of the Kimik [q. v.], not mentioned by Kāshghari) lived on the Irish (I, 273). The Bashghrut (the Bashkirs, see *NAZGAT*) obviously could never have lived so far to the east (to what was already known of them, it may be added that in *Farjān* [q. v.] in 922 [309-310] met the first Bashkirs to the south of the Euba, much farther south than any other mention of them; see *Bull. de l'Acad.*, etc., 1924, p. 246). Of the northern peoples the Kay, Yabaku, Tatar and Basml had their own languages, although they could also speak good Turkish (on the Kay cf. J. Marquart in *Osttürk. Dialektstudien*, p. 55, where there is an erroneous association with the name of the Oghuz family Kayi, in Mahmūd Kāshghari: Kayigh; cf. thereon Köprülü Zade, in *Türk. Dil. Mecmuası*, I, 187 sqq.). The Yabaku lived on the great river Yamar (III, 21), on the situation of which the author does not seem to have had any very clear idea; it was probably the Ob (still called by the Tatars Omar or Umor). The Yamar was crossed in the 9th (10th) century (the author had spoken with participants in the campaign) by a Muslim army under Arslan Tegis in the war against the Yabaku under Bukā Budradj and their allies the Basml (on the war see especially III, 173 sq.; on various episodes other passages; on the crossing II, 5; cf. C. Brockelmann, in *Hirth Anniversary Volume*, p. 11 sq.).

Of the ten peoples Dikil, Tukhsi, Yaghma, Ighrak, Djaruk, Djumul (in other passages like I, 382: Djumul), Uighur, Tankut, Khitai, i.e. Sin,

Tawghād, i. e. Mān) of the southern group the Djumul were one of the non-Turkish speaking peoples, who nevertheless knew Turkish quite well. We are told even of the Uighurs that they had another language, in addition to their "pure Turkish", in which they communicated with one another. The Tankut (Tangut), like the inhabitants of Khotan and Tabut (Tibet), were people with a foreign language, who had settled in the land of the Turks. Khotan had its own language and alphabet; they did not speak good Turkish there. In Šin and Mān the inhabitants had a language of their own but the people in the towns could also speak Turkish well. Their letters to the Turks were written in the Turkish alphabet. A wide meaning is given to the word Šin in one passage (i. 378); there were three Šins, the upper or Tawghād (Mān), the central or Khitai (Šin), and the lower or Barkhān; this was also the name of a fortress on a high hill near Kāshghar; there were rich gold-mines there.

Of these peoples the Djaruk (probably to be pronounced Čaruk) lived in the town of Barčuk (Barčuk), the modern Maral-başı (i. 318; on the site of Barčuk cf. especially Valiḡhanow, *Selimiye*, p. 85 sq.). This enables us to define roughly the habitation of the not originally Turkish Djumul (east of Barčuk and west of the Uighur). During the fighting on the Yamā, the Djumul were the allies of the Yabāq and had therefore presumably not yet adopted Islām. In the land of the Uighur there were five towns, among them Bishballik and Kōdja, i. e. Kōso or Kārā-Khōdja near Turfan. The Uighur were Buddhists and worshippers of *Burkhān* (idols). The only evidence that there was also Christianity among the Turks is the translation of the word *bağdāq* (*bağāq*) known also from Manichaean texts (e.g. *Chavastuonise*, App. to *Abh. Preuss. Ak.*, 1910, p. 39) by "Christian fast" (i. 345).

In other passages Mahmūd Kāshghari mentions other Turkish tribes, who are not included in the list of the twenty Turkish peoples; e.g. the Adhkish (i. 89), known from the geographical literature also (e.g. *B. G. A.*, vi. 31) and the Kudjat (i. 298) settled in Kh'arizm and known also to Baihaqi (ed. Morley, p. 91). Of the peoples of Eastern Europe, in addition to those already mentioned, the Bulghar and Suwār are called Turks; the Khazar are not mentioned; they had probably ceased by then to have a separate political existence. In contrast to Istakhri (*B. G. A.*, i. 222 and 225) who says the Khazar and Bulghar had a common language distinct from Turkish, Kāshghari includes the dialects of the Bulghār, Suwār and Pečenegs in one group.

The dialects of the Kirgiz, Kipčak, Oghuz, Tukhsi, Yaghma, Čigil, Ighrak and Čaruk were pure Turkish. The dialects of the Yamek and Bakhirs were closely allied to this language. The language of the nomads from the Iul to the Yamā were generally purer than the language of the (originally probably not Turkish) settled peoples, such as the Arghū from Sairām to Balāsaghūn (in the towns there Soghdian had survived alongside of Turkish) and the Kendjak (Kendjek) in the villages near Kāshghar. Various phonetic peculiarities of the different dialects are discussed, including several which are still of significance in Turkish, like the interchange of *y* and *ğ*, *š* and *ž* etc. In the vocabulary Oghuz (Turkoman) had already the form still characteristic of the south Turkish

dialects. Turkoman was already so different from the other Turkish languages in vocabulary that Turkoman and Turk were contrasted like Oghuz and Čigil (i. 3; ii. 253 *infra*).

Although in the first centuries of the Hidsra campaigns were undertaken into Turkish territory, in addition to the defensive fighting against Turkish raiders, the successes of the Muslim arms had little influence on the conversion of the Turks. The principle laid down by the Prophet for the Abyssinians was applied to the Turks: "Leave them in peace so long as they leave you in peace" (see Goldziher, *Mus. Studien*, i. 270; ii. 127; in the first passage translated: "Leave the Turks alone as they have left thee"; in another sense and in somewhat different form the ḥadīth is quoted in *B. G. A.*, v. 316; vi. 262; Yāqūt, *Muḡam*, i. 838 *infra*). Islām was adopted by the Turks in the 10th (10th) century of their own free will. In 904 (904) the last great inroad of heathen Turks into the frontier lands of Islām, the Sāmānīd kingdom, was driven back (Tabari, iii. 2249); in 381 (992) Muslim Turks entered Bokhārā victoriously for the first time. Of even greater importance was the conquest of Asia Minor by the Muslim Seldjūks in the fifth (eleventh) century. Other sayings about the Turks are now ascribed to the Prophet. He is said to have remarked: "Learn the language of the Turks, for they are destined to long rule" (Kāshghari, i. 3). Allāh said to the Prophet: "I have a host which I have called 'Turk' and settled in the east; if any people shall arouse my wrath, I shall give them into the power of this host" (*op. cit.*, p. 294). On the story of the adoption of Islām by a numerous (300,000 tents) Turkish people see Kāshghari, where also is the suggestion that this story is connected with the rise of the dynasty of the Ilk-khāns [q. v.] or the "race of Afrāsiyāb". No source tells us from what people this dynasty came; they and their people are always simply called "Turks". In Kāshghari also these rulers are simply called "Khānā kings" (*al-mulūk al-khānāniya*, i. 30 *infra*, or simply *khānāniya*, e.g. i. 347 *infra*). Khotan was conquered in the early decades of the fifth (eleventh) century by the Muslim rulers of Kāshghar but nothing is known of the exact date or any details of the campaign. According to Kāshghari, an emir named Djenkshi was the cause of the conquest of Khotan (iii. 279). This shows that there was a story then known of the conquest which has not come down to us. In Kāshghari's time, the frontier towns of Islām in the modern Chinese Turkestan were Kusen or Kuč (i. 336) and east of it "between Kuč and Uighur" on the hill-fortress of Būgūr (i. 301) in the north, Čerden (in Kāshghari, i. 364: Djurdjān) in the south. At a later date the Turks living farther west were converted to Islām. According to Ibn al-Athīr (ix. 355 sq.), a Turkish people which had its winter home near Balāsaghūn and its summer pastures in the vicinity of the land of the Bulghār i. e. probably in the Ural, adopted Islām in Šafar 435 (Sept.-Oct. 1043). Their name is not given; in spite of the great area covered by them, they were less numerous than the Turks in Central Asia converted in 960. According to Ibn al-Athīr, they had only 10,000 tents, according to Abu 'l-Fida' (*Muḡam*, ed. Reiske-Adler, iii. 120) only 5,000.

Some alterations in the ethnographic conditions of the Turks were produced by the advance of

the Kıpçak [q. v.] from the Irtysh to the southwest as far as the Sır-Daryā and in another direction towards Eastern Europe. Just as the migrations of the Oghuz explain the formation of the present group of South Turks, so probably the migrations of the Kıpçak explain the formation of the group of Western Turks. On the Sır-Daryā in the xth (xiith) century we find the Kıpçak mentioned along with the Kaŋghī, and the distinction between the two is left very vague (cf. also J. Marquart, *Osttürk. Dialektstud.*, p. 78 and 172). In the time of Mahmūd Kašghari there was not yet a people called Kaŋghī; the word Kaŋghī is there quoted (iii, 280) only as the "name of a great man among the Kıpçak". In the second half of the sixth (twelfth) century the Kıpçak had not yet adopted Islām, even when living close to the Muslim lands on the Sır-Daryā; in a document in which the arrival of a prince of the Kıpçak in Dījān [see SİR-DARYĀ] is recorded, the wish is expressed that God may convert him to Islām (*ruszakaku Allāh'ın ul-Islām*: cf. W. Barthold, *Turkestan*, etc., i, 79).

Most information about the Kıpçak in Eastern Europe and about their predecessors, the Pečenegs and Oghuz (Greek Οὔζοι, probably the Russian Torki; the Russian annals also mention the Berēndeī, probably the Oghuz family of Bayundur; cf. Mahmūd Kašghari, i, 56), is found in the Greek and Russian sources. From the middle of the xth century in the Russian annals all Turkish peoples of Eastern Europe with the exception of the Kıpçak (Polowci) are included under the name Černī Klobuki ("black caps") (cf. on this: D. Ruzowsky, in *Seminarium Kondakovianum*, Prag 1927, i, 95 sq.). Whether, as might be thought from the identity of the names, the Kara-kaipak are descended from the Černī Klobuki cannot yet be decided. It would also be in favour of the western origin of the Kara-kaipak (first mentioned in the xvith century) that, unlike the people of Central Asia, they lived mainly by cattle-rearing. Although Islām had already conducted "successful propaganda" among the Pečenegs (J. Marquart, *Ostturkische und ostasiatische Streifzüge*, p. 73), it made little progress among the Turks of Eastern Europe before the Mongol period.

In Central Asia, the spread of Islām was not checked by the foundation of the empire of the non-Muslim Kara Khitai [q. v.] nor by the persecution of Islām in the beginning of the vith (xiiith) century. At the time of the foundation of the empire of the Kara Khitai (soon after 1130), the principality of the Khān of Balasaghūn was still the most northerly Muslim country in this region; when the empire broke up there were Muslim kingdoms north of the Il also, namely that of the Karluk [q. v.] in Kayālghī, and that founded by a member of the same stock in Almālghī near the modern Kulja [q. v.]. In the time of the Chinese traveller Čang Č'un (1221), the town of Čang-ba-la, i.e. the Uighur capital Djanbalīk already mentioned by Kašghari (i, 103), was the frontier town of the non-Muslim lands to the west (E. Bretschneider, *Medieval Researches*, i, 67 sq.); according to the Armenian Hethum (journey in 1254), "Djambalekh" was immediately east of "Khotapai", the Khotukhai of the modern maps, immediately east of Manas (*op. cit.*, i, 169). The region of the modern Manas was therefore the limit of the spread of Islām in Central Asia at this date.

In contrast to the lands of the modern Chinese Turkestan which had long been under Turkish

influence, the turkicisation of MŠ wār³ al-Nahr and Kh-wārim only seems to have made appreciable progress after the Mongol conquest; this is suggested by the appearance of geographical names of Turkish origin like Karā Kōl on the lower course of the Zarafshān (Narshakht, ed. Schefer, p. 17) and Karā Sā (*Tubqāt-i Nāṣiri*, transl. Raverty, p. 474) or Sā Karā (Ibn al-Aṣḥr, xii, 122) in Kh-wārim. Turkish culture was brought to Asia Minor and Adharbāidjān by the Seldjūks. The Turks were probably settled here at first to guard the frontier and to fight against the Byzantines and the growing power of the Georgian kingdom [cf. GEORGIA]. Nothing is known of the gradual progress of Turkish culture in these countries now completely Turkish (in Southern Persia the Turks have for the most part remained nomads, by the ninth (xvth) century the process had been completed. Saladin brought bodies of Turkish troops to Egypt whence some of them found their way to North Africa and Spain; on the Turks in Spain see especially 'Abd al-Wahid al-Marrakushi, ed. Dory, p. 210. These soldiers were of no importance for the spread of Turkish culture.

The foundation of the Mongol empire was of much greater significance for the Turks than for the Mongols themselves. In spite of all attempts by later writers to prove the contrary, the view of Abel-Rémusat (*Recherches sur les langues tartares*, p. 240) must be upheld that the area inhabited by the Mongols had the same western frontiers at the time of the rise of Čingiz Khān as it has to-day (with the exception of the much later migrations of the Kalmūks [q. v.]). Of the descendants of the Mongols who came westwards in the time of Čingiz Khān and his successors only the Moghol in Afghanistan, whose dialect has been investigated by G. Ramstedt (*Mogholia*, in *J. S. On.*, xxiii, [1905], 4), have retained their Mongol speech to the present day. Their habitats have not yet been exactly defined. Dr. Emil Trinkler (*Afghanistan*, Gotha, 1928 = *Peterm. Mitt.*, supplement 196, p. 53 sq.) in spite of all his enquiries found no Mongol speaking people in Afghanistan. Most of the Mongols have been merged in the Turks and thus strengthened the latter numerically and especially politically. Of special importance in the political history of the Turks, since their conversion to Islām in the xivth century, was the kingdom of the Golden Horde. By the end of this century, this kingdom had become completely turkicised; its documents were written in Turkish, and Čawass, which had earlier been spoken on the Volga, had given way to a pure Turkish language. After the break up of this empire, three new "Tatar" kingdoms were formed in Karān [q. v.], Astrakhān and in the peninsula of Krim [q. v.], which only came under Islām and Turkish influences in the Mongol period. A new "Tatar" kingdom also arose on the Irtysh [q. v.] in Siberia, at the modern Tobolsk; this land now became instead of Bulghār the outpost of Islām in the north. The word Tatar, originally applied to the Mongols, now became the name of a Turkish people and, especially in the Crimea, was used by themselves. In Russia the word "Tatar" was given a very wide meaning, although not quite so extensive as in China and in European Sinology (cf. the preface to Abel-Rémusat, *Recherches sur les langues tartares*). Down to the second half of the xivth century (W. Radloff, *Aus Sibirien*,

vol. I, Contents, has still the same usage), all not-Ottoman Turks were called Tatars by Russian scholars and under their influence by Europeans generally; thus arose the term "Turco-Tatar", which has not yet entirely disappeared. In the lands of the Golden Horde arose the peoples of the Orbeg and Noghai, called after princes of the house of Djuchi [q.v.]. The Orbeg migrated in the xvth century to Mä warä al-Nahr, where in the xvth century they put an end to the power of the Čaghatai and founded the kingdoms of Bukhārā and Khīwa [q.v.], to which towards the end of the xviiith century a third Orbeg kingdom was added, that of the Khāns of Khokand. The people called "Noghai" by the Russians are always called Manghit in Oriental sources in the xvth century and later. Under Russian suzerainty, the Manghit or Noghai formed an imperfectly unified nomad state east of the lower course of the Volga; the native Turkish element in Astrakhān still belongs to people of the Noghai. In the xvth century the Noghai were driven out of the lands east of the Volga by the Kalmūcks. The term Noghai has now been extended by the Orbegs to the Turkish inhabitants of the Volga area, called by the Russians "Tatar" (now also by themselves). The Kazaĥ [see KAZAK] had separated from the Orbeg as early as the xvth century; down to the xixth century they had their own Khāns, some of whom had considerable forces at their disposal.

The last Turkish kingdom to arise out of the Mongol empire in the east was the kingdom of the Moghol from Kāshghar to the Chinese frontier, which arose after the fall of the kingdom of the Čaghatai [see ČAGHATAI-KHĀN (at the end), and MOGHOL]. In spite of their name, these Moghol, at least in the xvth century, spoke Turkish. They had adopted Islām only about the middle of the xivth century. Muhammad Khān (1408—1416) is given special credit for the spread of Islām among them; if a Moghol did not wear a turban a nail was driven into his head (*Tārīkh-i Rashīdī*, transl. Ross, p. 58). Nevertheless in 823 (1420) Buddhist statues are still mentioned in Turan, including some "newly made" (*N.E.*, xiv. 310; *al-Mufaṣṣarīya*, p. 27). In the same century the Buddhist culture of the Uighur had to give way to Islām. Uighur as the name of a people gradually fell into disuse, probably with their conversion to Islām, and the name Moghol also began to disappear after the conquest of Eastern Turkestan by the Kalmūcks in 1682. The "yellow Uighur" (*Sarīgh Uighur*) also mentioned in the *Tārīkh-i Rashīdī* (see index) at Tuen-huang, Su-djōu and Kan-djōu have alone retained their own name and the Buddhist religion down to the present day; they dropped the Uighur script only in the xviiith century and adopted the Tibetan in its place (*Bibl. Buddhica*, xvii., preface). In the province of Kan-su, in addition to the Chinese speaking Dungan, Islām is also professed by the Turkish speaking Salar already mentioned in the *Tārīkh-i Rashīdī*, p. 404 [see CHINA, KAN-SU and SALAR].

In the west the Turkomans have been most prominent in political history, in addition to the Ottomans (also of a Turkoman stock) or Anatolian Turks [see TURKEY]; the kingdoms of the Turkomans of the Black Sheep (Kara-Köyünlu, q.v.) and of the White Sheep (Ak-Köyünlu, q.v.) were a considerable political power, especially in the xvth century. There were also many Turkoman tribes

in the empire of the Mamlūks [q.v.] from Diyār Bakr [q.v.] to Ghazna [q.v.]; a list of them is given by Khali al-Zāhiri (*Zubdat Naṣṣ al-Mamlūk*, ed. Ravaisse, Paris 1894, p. 105). Only the family of Dulğadir (Turkish pronunciation from Dhu 'l-Qadr, q.v.) attained some importance; in the xvth century they founded a little kingdom of their own, as vassals of the Mamlūks.

In Central Asia, the Turkomans were not merged, like so many of the Turkish peoples mentioned in the early Mongol period, into the new formations of the Mongol period, although among the Turkomans there were migrants from the kingdom of the Golden Horde; this is indicated in the xvth century by the name of the tribe Sayin-Khān (on the epithet Sayin-Khān see KAITU-KHĀN) S.E. of the Caspian Sea (*Turkmeniya*, vol. I, Leningrad 1929, p. 47 sq.). The Turkomans were never able to form a state of their own in Central Asia, but it was only in 1884 that an end was put to their independence by the advance of the Russians from the north and the Afghāns from the south.

In the xvth and xviiith centuries, the Turkomans, like other Turkish peoples of Central Asia, notably the Kazaĥ and Kīrghīz, suffered a great deal from the attacks of the Kalmūcks, the founders of the last great nomad empire in Central Asia. The Kazaĥ and Kīrghīz were driven out of a part of their lands by the Kalmūcks; it was only after the destruction of the Kalmūck empire that the conditions that had previously existed there were restored. A section of the Turkomans still live in the government of Stavropol, into which they had been driven by the Kalmūcks towards the end of the xvth century from their earlier habitations on the peninsula of Mangīshlak [q.v.]. At an earlier period, the Turkomans fought unsuccessfully for this peninsula with the Noghai and later with the Kazaĥ. In contrast to the Kazaĥ, the Kīrghīz had not their own Khāns, either on the Yenisei or in Semirečye [cf. KIRGIZ]. The Kīrghīz on the Yenisei, where they lived down to the beginning of the xviiith century, have remained quite unaffected by Islām, as have the Turkish peoples living in the Yenisei area at the present day, who after the Russian revolution took the name of "Khakas" (in its origin a mistaken reading of the Chinese transcription for Kīrghīz). The mountain peoples in the Altai on the upper Ob are also non-Muslim Turks. The Altai people (*Altai Kīth*) were called "mountain Kalmūcks" by the Russians, but after the Russian revolution took the name of "Oirat", which properly belongs to the Kalmūcks; their land is now the "autonomous Oirat territory". Completely distinct, even in language, from the other Turks are the Yakuts (who call themselves Saka or Sakha, probably connected with the ethnic Sagai in the Yenisei area) who were driven out of the Yenisei territory, probably not before the xiiith century, into the valley of the Lena. The language of the Yakuts shows, in vocabulary and grammatical structure many divergences from Turkish, although this language, unlike Čuwass, is directly descended from the primitive Turkish language.

In the first half of the xvth century, all the lands from the Balkan Peninsula and north shore of the Black Sea to the Chinese frontier were under the rule of Muslim Turks. The economic life of almost all these countries at this period

showed a considerable setback compared with earlier periods; nomadic life had developed at the expense of agriculture and especially of the towns; the future of these lands had also been undermined by the fact that world trade had taken other routes. The Turks were neither economically or intellectually fit to cope with the rising power of Russia. Through the conquest of the Volga territory by the Russians (Kazan 1552, Astrakhan 1554), the connection between the Turks of Central Asia and their relatives in the west was broken; it was restored by another route but only for a short period during the rule of the Turks on the western shore of the Caspian Sea (1578—1603). As early as the 17th century, Russia had laid down the principle that all the lands of Northern Asia should be divided between Russia and China; but this process of settlement was only completed by the Treaty of St. Petersburg of Feb. 12—24, 1881.

Islam as a religion [cf. e.g. BARADA] and Turkish as a language have made new progress under Russian rule; in the Caucasus, as well as in Central Asia, Turkish as a *lingua franca* is much more widely disseminated than before; the level of civilization has also been raised by the influence of European culture introduced by Russia. After the Revolution of 1917, and especially after the principle of nationality had been put into practice in 1924, republics were formed in Soviet Russia among the Turkish peoples also on a national basis under their own government and following their own lines of development. The Özbek and the Turkomen Republics form separate parts of the Union of Socialist Soviet Republics (U.S.S.R.), and the Aşkerbajdjan Republic is a part of the Transcaucasian alliance. Seven autonomous republics (the Krim-Tatar, Çuvasş, Başkırt, Tatar, Kazak, Kirgiz and Yakut republics) are members of the Russian Socialist Federative Soviet Republic (R.S.F.S.R.), as are four autonomous territories (the Karadai, Balkar-Kabardin, Karakalpak and Öirat region) with preponderatingly Turkish populations.

With the carrying through of the principle of nationality the names of certain peoples have received meanings which they did not possess before. At one time, many Turks in Central Asia, especially the town-dwellers, were content to describe themselves as Turkish-speaking Muslims and inhabitants of a particular town; the question with what Turkish people they should be numbered was a matter of indifference; names which originally did not refer to nationality, like the word Sart [q.v.], were also used. This word has now been driven out of use, and the term Özbek is now used in a much wider meaning than formerly; those who used to call themselves Sari are now called Özbeks. Names have also been invented (on the word Khakas see above): the Tarançi [q.v.], who belong to Kāshgharia, and the Kāshgharlık now call themselves Uighur, a name which does not belong to them historically. Uighurs never came so far west. Most of the Turkish peoples in Soviet Russia have joined the movement to introduce the Roman alphabet; the Çuvasş, Khakas and Öirat refuse to join it and adhere to the Russian alphabet.

An attempt to estimate the total number of Turks was made by N. Aristov, *Zametki ob etnikoskoy sostavke turkikh plamen i narodnostei v sovetskoye i kh. vostochnoye plamen i narodnostei* (q.v.), p. 170. According to Aristov, in 1885 there were about 26,000,000 Turks, but even he thought the

figure should be higher. At the present day, the number of Turks living in Soviet Russia alone is about 16,000,000; the total therefore is probably over 30,000,000. Much higher figures have been given by Turkish publicists and statesmen: Ahmed Agoev, 70—80,000,000 (A. Samoylovich, in *At. I.*, 1912, p. 490); Mustafa Kemal Paşa, 100,000,000.

II. THE TURKISH LANGUAGES.

1. The Classification of the Turkish Languages and their geographical Distribution.

The Turkish languages are divided according to their general phonetic character into two main unequal groups: the R-languages (*tekkār* = nine) and the Z-languages (*teke* = nine). Among the old languages, Bulghār or one of its dialects belonged to the first group; among modern languages, the Çuvasş alone; but we find sporadic cases of *r* corresponding to *z* in all the Turkish languages. To the second group, the Z-group, belong all the other Turkish languages, ancient and modern, including Yakut. The question of the ethnic and linguistic origin of the predominating nationality in the nomad union of the Huns as well as those of other ancient peoples of Central Asia and eastern Europe (Siangpi, Avars, Khazars) is still uncertain or insufficiently elucidated. The languages of the Z-group were formerly dispersed over the territory corresponding to modern Mongolia, southern Siberia and the steppes of the Altai and later gradually occupied all the modern habitats of the Turkish peoples, from the Sea of Okhotsk to the Mediterranean, except the Çuvasş region.

The Z-group is again divided into two groups: the D-languages (*adaş* or *adaş* = foot) and the Y-languages (*ayaş* = foot). This division is attested as early as the 11th century by Mahmūd Kāshghari, but is much older. To the D-division belonged the following ancient languages; the Kırkiz, Turkish in the strict sense and Uighur. This group is at the present day represented by a limited number of languages and dialects in Eastern Siberia, Mongolia and China proper and is divided into three sections: the T-section or Yakut (*ataş* = foot), the D-section or the Tsam-tuwin dialect, or Soyote or Uriankhay, and the Karaghas dialect, related to the latter (*adaş* = foot), and the Z-section composed of the Kamasine, Koybal, Saghay, Kachine, Beltir, Khil, Cullm-küerik, Shor and Sarigh-Uighur (*ayaş* = foot). The dialects of the Z-section of the D-division which at the present day are found in the northeast part of the Turkish world, existed, according to Mahmūd Kāshghari, in Eastern Europe in the 11th century. The philologists of the middle ages writing in Arabic included Bulghar in the Z-section. A trace of one of the Z-dialects is still to be found in eastern Europe in the name of the Sea of Azov (*ayaş* = the "foot", i.e. estuary of the Don).

According to Mahmūd Kāshghari, the Kırkiz

and Oghuz languages, spoken in the west of Central Asia and in Eastern Europe, belonged in the 11th century to the Y-division of the second great group of Turkish languages (*ayub* = foot). At the present day this Y-division is the largest, for it is found over large areas in Asia and Europe, from western Siberia and the Altai to the Mediterranean (excluding the Ćuwash). Mahmūd Kāshghar in the 11th century noted a criterion for the establishment of two sections in this Y-division: *balghān* and *balan* (remained). The latter section includes the Oghuz of the 11th century and their modern descendants, pure or mixed: the Turkomans, the Aĥar-bāidjāns and the other Turks of Persia, Anatolia and the Balkans, the Gagauz of Bessarabia and the Tatars of the Southern Crimea, i.e. the S.W. part of the Turkish world. The Oghuz section of the Turkish language is distinguished by this criterion, *balan* not only from the first section of the Y-division (*balghān*) but also from all the other Turkish languages except Ćuwash. The first section — *balghān* of the Y-division — is much larger than the second, and the peoples of all the central part of the Turkish world from Tobolsk to Baghĉiseraĉ and from Kaĉimow (q.v., in the province of Kizan) to Turfan speak its dialects. The *balghān* section can be further divided. It includes two sub-sections: *tawil* and *taghlil* (highlander). The criterion *il* connects the *tawil* sub-section with the *balan* section (in both *awil* = yellow, in place of *arilgh* of the northeastern division and the *aril* of the *taghlil* sub-section) and with the Ćuwash, whereas the criterion *taw* connects it with the Ćuwash (*ta*) and Yakut (*ta*). Kersch considered the correspondence of *aw* and *ag* to be very old and thought that the Turkish languages were originally divisible into two groups, the northern (*aw*) and the southern (*ag*). But this correspondence has not yet been attested by any ancient document.

The dialects of the *tawil* sub-section are represented in the N.W. part of the Turkish world by the Teleut-Altai-Teleng group and the Kumandl and Lebed dialects in Altai, by the Kĉirghĉs (q.v.), Karaĉ and Karaĉalpĉk (q.v.) dialects, by some of the purest Oĉbeg dialects, by the dialects of the Tatars of Tobol-Tumena and of Kazan, of the Mishars, Bashkirs, Noghais (of Astrakhan q.v.), of Stavropol, etc.), of the Kumĉks of Daghestan (q.v.), of the Balkars and Karaĉays of the Northern Caucasus, of the Tatars of the Crimean steppes, of the Karaites (except those that have been osmanised) and the Kĉintaks (the Turkish-speaking Jews of the Crimea). The dialects that form a transition between the *tawil* sub-section of the Y-division to the D, are represented in Siberia by the Ćulm, Aba, Ćernĉ (yĉsh) which have *y* instead of *a*, but *agh* in place of *aw* and *lgh* in place of *il* (*ayub*, *taghlilgh*).

The *taghlil* sub-section of the *balghān* section of the Y-division, which we have just mentioned, is represented in the southeastern part of the Turkish world by the dialects of the settled populations of Western and Eastern (Chinese) and in part of Afghan Turkistān, by the Oĉbeg dialects (except the Kĉhwan and those of the *tawil* type), the Taranĉi and those of the Turks of the oases of Kāshghar (q.v.), Khotan (q.v.), Aĉam, Turfan (q.v.) etc. This sub-section sometimes called, not very happily, Ćaghatai shows a mixture of the northwest *tawil* sub-section with the northeast D-

division. The Oĉbeg and Sart (of the turkicised Iranians; cf. SART) dialects of the former Khānate of Kĉhwa (Kh-wārim, q.v.) form a transition between the dialects of the southwest and northwest; their criteria are *balghān*, *taghlil*.

2. General Sketch of the Turkish Languages.

The syntax of the Turkish languages is based on the following principle: the governing parts of a grammatical statement or of a group of statements follow the parts governed. This is why the principal part of a statement — the attribute — is usually placed at the end, the completed parts follow the complement, the qualified parts are placed after their qualification, the principal statements follow incidental ones. In keeping with this principle, the auxiliary morphological elements, which can historically be traced back to governing roots, follow the stems of the words to which they refer and cannot precede them. The auxiliary morphological elements represent a series of links starting from the post-positions which remain phonetically unchanged, to the formative and modificative suffixes, which unite with the preceding word to form a unit as regards accent and vowel harmony, which we shall discuss later.

It is thought that the accent in Turkish languages originally fell on the first syllable, as is still the case in the Mongol languages. In modern Turkish languages, the principal accent usually falls on the last syllable but even now the first syllable still, particularly one with a broad vowel (*a*, *e*, *o*, *ö*), retains a trace of the old accent in the form of a secondary accent, stronger in some and weaker in other dialects. By the existence at one time of an accent on the first syllable we can explain the fact of progressive vowel harmony which is of two kinds. First, by the law of assimilation, the posterior vowels (*a*, *ä*, *o* and *u*) are followed only by posterior vowels and the anterior vowels (*e*, *i*, *ö*, *ü*) always by anterior; this assimilation was also extended to consonants, especially to *h*, *g*, *l*: *bal* stop, *balghān*, stopped; *äil*, come!, *hülgem*, come (p.p.). In some dialects we see more or less weakening in this fundamental vowel harmony as a result of the influence of other languages, particularly Iranian (some Turkoman and Aĥar-bāidjān dialects, the Turkish of Anatolia, and the Iranicised Oĉbeg dialects). The harmony of the second kind is much less consistent than the harmony of the first kind: the assimilation between rounded vowels (*a*, *u*, *ö*, *ü*) or unrounded (*e*, *i*, *e*, *ï*). The rounded vowels are ordinarily followed by the narrow rounded vowels (*u*, *ü*) in the nearest and by preference closed syllables, while the broad vowels (*a*, *e*) remain unrounded. The non-rounded vowels are followed usually by non-rounded broad or narrow vowels: *bil*: know, *bil + dim*: I knew; *äil*: die, *äil + düm*: I died; *beĉ*: five, *beĉ + ten*: of five; *öl*: lake, *öl + den*: of lake.

It is only in some dialects (e.g. the Kura-Kirghiz) that the vowel harmony of the second class is extended to all the broad vowels, while in others (e.g. in Kirghiz-Kazak) to the anterior broad vowels (*e, i*) only: *köl* = lake, *köl + der* = the lakes (in both dialects) but *kol* = hand, *kol + der* (Kirghiz-Kazak) and *kol + der* (Kara-Kirghiz). Harmony of this kind has attained its greatest development with regard to the narrow vowels in the Turkish of Stambul, in which, however, it does not affect the broad vowels.

In the Turkish language there are nine fundamental vowels: *a, ä* (open), *e* (closed), *ə, ɛ, ɪ, i, u, ü*. There used to be long vowels, which did not attract sufficient attention except in Yakut and Turkoman. In some languages (e.g. the Kazan-Tatar) the number of vowels is over nine and the series has undergone modifications (*ə > a, ɛ > ä, e > i, i > ü*). The Turkish consonant system has not yet been sufficiently studied either, and sufficient attention has not been paid to the existence, in addition to mute and sonant consonants, of middle consonants (e.g. in Turkoman and Adharbaidjani). The progressive assimilation of the sonant vowels with mutes and vice-versa is widespread: *yaz + di*, he has written; *tut + ti*, he has seized; *köz + dü*, in the eye; *baş + ta*, on the head.

There are other kinds of progressive assimilation of consonants. Cases of progressive dissimilation are features of certain dialects only (e.g. Kazak, Kirghiz, Altai): *ata + lar*, the fathers; *köl + der*, the lakes. A very distinctive feature of the Yakut language is the regressive assimilation of consonants: *at + lar*, my horse; *at + lar*, thy horse; but *ap + par*, to my horse; *ak + kitta*, from thy horse.

In the majority of the dialects the only initial sonant consonants are *b, m* and exceptionally *n* and *d*; the sonants *d, w, g* are found initially in Turkoman, Adharbaidjani and in Anatolian Turkish and were found in the Oghuz of the 11th century. Words cannot begin with the consonants *r, l, ʃ, z* (the latter, except in loanwords, is only found initially in a few onomatopoeic words) nor with two consonants. Two consonants at the end of a word are only admissible in cases where the first of them is *r, l* or *z*. This is why we find supplementary vowels in loanwords: *arabjāh < rādjāh* (Arab.), *istāp < steppe* (Russ.), *šibir < šib* (Arab.). Morphological formations or modifications are, as we have already said, produced by the addition of one or more formative or modificative suffixes to the verbal or nominal roots and to stems, which, even without this accretion, have a certain definite meaning: the verbal stem, the 2nd pers. sg. with imperative meaning (*tap* = find!), and the nominal stem — that of the nominative, genitive, accusative and some other cases of the sing. or plur. (*alma*, apple, of apple, the apples). Cases of formation by analogy are also found: *bir* = one, *bir + ar* = by one, and by analogy: *iki* = two, *iki + ar* = by two (Caghatai); or *besh* = five, *besh + ar* = by five, and by analogy: *altı* = six, *altı + ar* = by six.

There are two fundamental grammatical categories: the noun and the verb. Nouns are divided into pronouns, numerals, and nouns in general; there are no special morphological features for the adjective. Nor can one make a sharp distinction between nouns and adjectives, e.g. *temir* = iron and of iron, *taş* = stone and of stone, *su* =

water and pertaining to water. The adjective forms with the noun it qualifies a grammatical whole; thus the suffixes of the plural and of the declension are added only to a qualified noun while the adjective is undeclined. The verbal forms are divided into: 1. finite verbs, very limited in number, 2. verbal nouns having the meaning of nouns of action or of agency and 3. verbal adverbs (gerundives). The adverbs of nominal or verbal origin are very few in number and like the postpositions and interjections form a secondary grammatical category, in addition to the noun and verb.

The possessive suffixes in the nouns correspond to the possessive pronouns of the Indo-European languages: *at + lar* = my horse, *at + lar* = thy horse, *at + lar* = his horse, *ata + m* = my father, *ata + a* = thy father, *ata + lar* = his father, *at + lar* = our horse, *at + lar* = your horse, *ata + m* = our father, *ata + lar* = your father. The same suffixes in certain verbal forms are used as personal endings: *köl + gū + m*, I shall come, *köl + gū + a* = thou wilt come, *köl + gū + ti* = he will come (Caghatai); *köl + di + m* = I came, *köl + di + a* = thou didst come, *köl + di* (*köl + d + i*) = he came.

The predicative (enclitic) demi-suffixes, derived from personal pronouns and, in certain dialects, having been influenced by the possessive suffixes, correspond in the nouns to the substantive verbs of the Indo-European languages while the verbs take the most used personal endings: 1st pers. *ben, men, bin, min, in, im*; 2nd pers. *sen, sin, iñ*; pl. 1st pers. *biz, us, iza, mis*; 2nd pers. *siz, iñiz*. Examples: *adgu-ben* (*bin, men, min*) > *ay-yim* I am good; *yazar-ben* (*bin, men, min*) > *yazar-iz* (*iz*) I write. In the old language the demonstrative pronoun *ol* was used in the third person of the substantive verb: *adgu + ol*, he is good; in the modern languages — the predicative demi-suffix *dir* (*di*), from the verbal form *turur* = he is erect.

The suffix of the plural *lar*, *lar* is used with nouns as well as with verbs: *at + lar* (*at + lar*) — the horses, *at + lar + lar* — they have thrown.

The personal verbal forms are formed as follows: in the imperative from the pure verbal stem; in the other cases from the stems of one or other mood or tense. In addition to the possessive and predicative suffixes, special suffixes are also used as personal endings, e.g. *su, suu, sun, sunl* for the 3rd person of the imperative, *ş, şe*, for the first pers. of the plural of the preterite and conditional in the modern dialects (*köl + di + ş*, we have come, *köl + şe + ş* if we had come). The latter suffix (*ş, şe*) is used in the Adharbaidjani dialects, in some Anatolian dialects and in the Gokleng dialect of Turkoman, instead of the predicative enclitic of the first pers. plur. of nouns and verbs.

In the majority of the modern Turkish languages there are five cases in declension with special terminations: genitive (*ın, ınn, ın, ni, in*), accusative (*i, ul, old is*), dative (*sa, a, ya, şar, şan*), locative (*da*), ablative (*dan, dan, din*), but in the old languages and in some modern ones there were also affixes for the directive, instrumental and other cases.

Grammatical gender does not exist; there are only two numbers.

The differences in phonetics and vocabulary are more marked in the Turkish languages than those of morphology. Cuvash and Yakut occupy

a position apart; all the other Turkish languages may be regarded as dialects and variants of a single language.

The Turkish languages show considerable conservatism in the whole extent of their known history (from the viiith century). The comparative historical study of the Turkish languages is still in its initial stages (the works of Radloff, Grönbeck, Thomsen, Melioranski, Bang, Brockelmann, Deny). As a result of the researches of Ramstedt, Gombocz, Németh and Poppe, it may be regarded as more or less proved that the Turkish languages are related to the Mongol and Čuwaš; is closely allied to both. A new light has been thrown on the past history of the Turkish by N. Marr, who has examined Čuwaš from the point of view of the Japhetic theory and places the Turkish languages in a group not any larger than that proposed by the earlier theories of the Turanists.

3. Literary Scripts and Languages.

The oldest dated monuments of Turkish writing date from the eighth century. These are the inscriptions on the steles erected in honour of princes of the Turkish dynasty of the sixth–eighth centuries, Kul-Tegin and Bilge-Khān, found in 1889 by Iadrincev in the valley of the Orkhon in Mongolia. Other inscriptions in the same script, large and small, are known in Mongolia, Siberia and Western Turkestan. The Siberian monuments were discovered in 1721 by Messerschmidt in the valley of the Yenisei. Manuscripts in the same hand, approximately of the ninth century, have recently been found in excavations in Chinese Turkestan. This script, deciphered in 1893 by the eminent Danish linguist V. Thomsen, was given by him the name of Turkish runes. Others

have called it the Orkhon alphabet. The name "Kök-Türkisch" proposed by W. Bang for the Orkhon inscriptions has been rejected by Thomsen, Radloff and others. The Turkish runes are derived from the Aramaic alphabet through the intermediary of the Old Soghdian alphabet; but some of them have an independent origin and are ideographic in character, e. g. 𐰽 (𐰽) = arrow, 𐰺 (𐰺) = moon, 𐰻 (𐰻) = house. Some documents in Turkish runes may be dated to the seventh or even the sixth century A. D.

The language of the Turkish runes, whether on stone or in manuscripts, is distinguished by a certain archaism in its phonetics (the sounds 𐰽 , 𐰺), in morphology (by the directive and instrumental cases, genitive in -𐰽 , ablative in -𐰺 , verbal forms in -sar , -𐰽𐰺) and in vocabulary (𐰽 = father, 𐰺 = mother).

The Uighür alphabet, which came into general use in the viiith–ixth centuries among the Turkish people of the Uighürs, is derived from one of the northern Semitic alphabets, also through the intermediary of the Soghdian; it has been wrongly suggested that it is derived from the Estranghelo. The Uighür literary language belongs to the same group as the Turkish of the Mongolic monuments but with certain dialectic differences (genitive in -𐰽 , ablative in -𐰺). The Uighür xylographic and manuscript literature, found by the English, Russian, French, German and Japanese expeditions, is very vast. In addition to the Uighür alphabet, the ancient Turks of Chinese Turkestan used Turkish runes, Manichaean, Syriac and Brahmi alphabets. Among the Turks of China, who did not adopt Islām, the Uighür alphabet remained in use down to the beginning of the xviiith century. After the conversion to Islām of the Turks of Central Asia followed by the adoption of the Arabic alphabet (tenth–eleventh centuries), the Uighür alphabet remained in use as the court script. It was used in the xiiith–xvth centuries among the Golden Horde and among the Timūrids for the Kiptak and Čaghatai languages (Yarlıks, works in prose and verse). At the beginning of the xvth century, there were still at Stambul experts in writing Uighür ("Abd al-Raziq Baksh"). In Western Europe, Klaproth, Rémusat and Jansert began to read the Uighür script in the first half of the xixth century.

Founded on the literary Uighür of the pre-Islamic period, there developed in the lands of the Ilek-Khāns [q. v.] or Karakhānids, converts to Islām, the Turkish literary language of Central Asia of the Muslim period written in the Arabic alphabet. It may be supposed that Arabic was the script of the original of the oldest document of this language known to us, the *Kudat-gu-bilig* ("the science of giving happiness"), a didactic poem of the eleventh century, composed by Yūsuf Khān Hādīb [q. v.] at Balasaghūn and Kāshghar. The language of this work, which has come down to us in two later copies in Arabic and one in Uighür script made at Herāt in the xvth century, cannot be considered as pure Uighür. M. Köprülü-zāde regards the language of the *Kudat-gu-bilig* as Karluk but it would be safer to call it Karakhānid.

Data are lacking to enable us to decide if there was a literature in the Bulghār language in the Bulghār kingdom on the Kama where Islām was established in the tenth century. In any case Bul-

ghār elements are found in the sepulchral inscriptions of the xivth century in the Volga region. The development of the literary Turkish of Central Asia went on without interruption from the eleventh century but its centre changed from time to time.

We may date to the xiiith century the didactic work in quatrains by Edib Ahmed entitled *‘Almet ul-fakhlīq*, the language of which is closely related to that of the *Kutadghu-bilig*, without being identical with it. The absence of early manuscripts prevents us giving a definite name to the language of the *‘Ikmet* of Ahmed Lessewi (xiiith century), the founder of Turkish mysticism, whom M. Köprülü takes to have been a Karlak also. Literary activity in the different parts of the Djüdid kingdom or “*Deşhiklîpçak*”, in Khwarizm which included the mouth of the Sir-Darya [q. v.], in the capital Sarai [q. v.] and in the Crimea, had attained a considerable development by the beginning of the xivth century. A uniform literary language did not come into use in the Djüdid state; in all the literary materials of this epoch which we possess, the elements of the literary language of the Karakhânid period are combined with those of local dialects still living, Kiptak and Oghuz (Turkoman). The copy of the romance in verse of the xivth century in the Bibliothèque Nationale in Paris, the *‘Ashraw u-Sairis* of the poet Kutb, an imitation of the corresponding work of Nizami, dedicated to Tenebek and his wife of the White Horde, is in a language very close to that of the *Kutadghu-bilig* but showing also Kiptak (*saia* = village etc.) and Oghuz elements. Khwarizm’s poem *Mahabbet-nâme*, written in the xivth century on the Sir-Darya and preserved in two copies of the xvth and xvith centuries in the British Museum, reveals far more Kiptak and Oghuz than Karakhânid linguistic elements.

In the xiiith century in the Turkish Muslim world the different literary languages were not yet clearly separated from one another. The formation of the Mongol empire which embraced almost the whole Turkish world of the period created for a time an atmosphere favourable to the development of a uniform literary language for a considerable part of the Muslim Turkish peoples. In its beginning literary activity in Turkish in the lands of the Saldjûqs of Asia Minor was no doubt to some degree bound up with that of Central Asia and Eastern Europe. It would be very difficult to determine exactly where the romance in quatrains of the xiiith century by a certain ‘Ali entitled *Kiyya-i Yûsuf* was written; its language has much in common with the literature of the xivth century of the Golden Horde, in which the Oghuz-Turkomans shared, and it later became very popular in the region of the Volga. Differing from Brockelmann, who connects the *Kiyya-i Yûsuf* with the literary products of Anatolia, Merdjani, a Kazan scholar, thinks it is Balghar. The language of the prose work of the xivth century with passages in verse called *Kiyya ul-Kabiya*, written by Rabat-i Oghuz, is closely related to the Karakhânid language. It would not be correct to call its language Caghatai. The Syriac Christian Turkish inscriptions on the tombs of Semiriedie of the xiiith-xivth centuries are in a language closely resembling the Karakhânid (*ad* = bull, *pond* = horse, *yertünü* = this world, *ata* = father, *ana* = mother).

We may date in the xivth and xvth centuries the beginning of the development — starting from

the Central Asiatic Turkish literature which we may suppose to have been the only literature of the period — of the different literary languages of different parts of the Muslim Turkish world. The greatest development was that of the Ottoman Turkish and Caghatai Turkish literary languages. The first goes back to Central Asiatic Turkish literature through the Anatolian Turkish literature of the Saldjûk period. Caghatai Turkish represents the third, longest (xvth—xxth centuries), and most brilliant phase of the development of Central Asiatic Turkish literature and takes its rise directly out of the second phase, the Djüdid. The Caghatai language developed in the lands of the Timurids, which consisted of the domain of the second son of Čingis-Khân, Caghatai [q. v.]. The Kiptak and Turkoman elements of the preceding phase of development of the literary Turkish of Central Asia were replaced in Caghatai by living elements from the predominant Turkish dialects of the Caghatai country. The emperor Bâbur says that the language of the most distinguished figure in Caghatai literature, Mir ‘Ali Shir Nawa’i, is identical with that of the dialect of the town of Andijân. The Caghatai poetical language was distinguished from that of prose by its morphology and its vocabulary.

Until lately some scholars have used the term Caghatai cf. [CAGHATAI LITERATURE] wrongly by applying it to the language of the literary monuments of the xivth century as well as to the living Turkish dialects of Western and Eastern Turkistan. A renaissance in Caghatai literature, prose and poetry, was observable in the xixth and early xxth century in the khânates of Khokhand and Khiva. At the present day in Uzbekistan Caghatai is giving way to the Özbek literary language, the fourth phase of the development of Turkish Central Asiatic literature, the sphere of which has been considerably restricted by the coming into use in the xxth century of new literary languages by the peoples of Central Asia. Even in the xvth century, the historian Abu ‘l-Ghâsi Khân wrote in Khiva in Özbek and not in Caghatai, contrary to the tradition of the time.

The Turkomans of Central Asia, who took part in the foundation of the literary language of Khwarizm in the time of the empire of Djüdi, had in the centuries following their own literary language, especially for poetry, which after the xvth century came under Caghatai influence and did not develop further. In our own day there is growing up in Turkmenistan a new literary language based purely on living Turkoman dialects (particularly Tekke and Yomut).

Afharbâidjâni (*Azeri*) developed among the Turks of Persia from the same stock as the language of the Saldjûqs of Anatolia; after a flourishing period in the xvth century under the patronage of the early Safawids [q. v.], it continued in existence in the following centuries, without being able to make progress against the influence on the one hand of Persian culture and on the other of Ottoman Turkish. The rehabilitation of Afharbâidjâni, which is closely related to the spoken dialect, began in the middle of the xixth century in Transcaucasia (Mirzâ Fath ‘Alt Akhândow). It became strongly influenced by Ottoman Turkish at the beginning of the xxth century and the result has been two rival currents which still exist at the present day.

In spite of the division of the Golden Horde into different khânates in the xvth century, the

Crimea retained a literary language based on Kıpçak and known to the Ottomans as Crimean or Deşt (ateppe), but the influence of Ottoman culture, felt especially in the historical literature and belles-lettres, interfered with its further development. The official language of the Khān's chancelleries in the Crimea retained down to the eighteenth century the Djüdid tradition to a great degree. At the end of the sixteenth and beginning of the seventeenth century Mirzā Gasprinskii tried to establish a Pan-Turkish literary language in the Crimea, based on a simplified Ottoman and closely resembling the living dialect of the south of the Crimea. Gasprinskii's paper, the *Tarjümān*, circulated as far as Kāshghar. In the Crimea at the present day as in Adharbūdjan the struggle between two rival influences, Ottoman and local, still goes on in the literary language, and the situation is complicated by the fact that the living dialects of the Crimea belong to two different groups, southwest and northwest.

The Djüdid literary language was also inherited by the khānate of Kazan where it was influenced by Čaghatai and old Ottoman and in the sixteenth century by modern Ottoman. In the second half of the sixteenth century, since Kayūm Naşiri, there began among the Tatars of Kazan a movement to link up the literary language with the local dialect. The movement, in spite of the opposition of followers of Gasprinskii, has attained complete success. A barrier has now also been set up against infiltration of Russian influence into the Tatar literary language, which used to be very marked in certain authors, not only in vocabulary but also in syntax. The Tatar of Kazan is used not only among the Tatars but also among the Mishars and the Noghais of Astrakhan; before the foundation of the Bashkir republic, it was also used by the Bashkirs and Tepters (cf. ТЕРТЕР). The Bashkirs at the present moment are creating for themselves a literary language of their own, but without completely avoiding the struggle between various tendencies of which the most powerful is one which takes a middle course and refuses to base the literary language on dialects having too pronounced peculiarities in phonetics and vocabulary. The Kazan-Tatar literary language is the most developed and most stabilised, next to the Turkish of Anatolia, and like it enjoys a popularity which reaches far beyond the boundaries of the Volga region.

Literary Turkish languages began to increase in number especially after the Russian Revolution of 1905 and still more after that of October 1917, with the awakening of national sentiment and the consciousness among the different nations of the Turkish world of possessing a culture of their own. The literary (Kırghız-Kazak) language, young, but rich and flexible, developed considerably at the beginning of the twentieth century. It is comparatively free from Arabic and Persian borrowings and, in close touch with the popular dialect, uses the Arabic alphabet ingeniously reformed by Baytursan. With the foundation of the Kırghız republic, the (Kara-)Kırghız have undertaken to create a literary language of their own, distinct from (Kırghız-Kazak).

In the northern Caucasus is being formed the Karachai-Balkarian literary language, the development of which is hampered by the scanty population and the proximity of more developed languages, Crimean and Adharbūdjan. The latter

shows its influence still more in Daghestān, where it is on the point of being recognised officially and is offering serious competition to the young local literary language, the Kumik, which began to develop in the sixteenth century by ousting Arabic, which was the language in every day use in Daghestān.

As to the alphabet, two forces are at present at work against one another in the Turkish Muslim world. One advocates the Arabic alphabet reformed to fit the Turkish phonetic system and has succeeded in giving new Arabic alphabets to the Kazan-Tatar, (Kırghız-Kazak), (Kara-)Kırghız, Özbek, Turkoman and Crimean languages. The other is in favour of a Latin alphabet with additional letters for all the Turkish languages; it has been well received in Turkey itself, has gained a decisive victory in Adharbūdjan, where the movement started in the middle of the sixteenth century, and it is still making progress among the other Turkish peoples. The new Turkish uniform alphabet based on the Latin was formally adopted in 1927 by the Turkish Muslim peoples of the Soviet Republics.

The oldest Turkish writing found in the Runic alphabet had Semitic features and in many cases did not indicate the vowels (*eghn* = *ezghan*, *yghz* = *yaghiz*, *ghlmsh* = *ghlmlsh*), the sound *a* being indicated in the first syllable only when it was long (*t* = *at*, horse; *at* = *är*, name). In the Uighur alphabet, the vowels were marked more frequently than in the Runic and more precisely than in the Arabic alphabet used later: to distinguish the sounds *a*, *ä* from the *e* and *u*, to the latter was added the letter *i*; *wa* = *wa*. Under the influence of the Arabic alphabet, this practice was dropped from the Uighur writing of the Muslim period. The notation of consonants in the older Uighur writing was more precise than in the later alphabet, which used the letters *t* and *d* indiscriminately and introduced other simplifications, which led Radloff to defend the erroneous Uighur consonant system, later corrected by Thomsen. Uighur orthography as regards vowels, with the exception of the special notations for *ö* and *ü*, was adopted in Central Asia at the time of the adoption of the Arabic alphabet and henceforth a distinction was made between Čaghatai and Ottoman orthographies. In Asia Minor under the immediate influence of Arabic orthography a special Turkish orthography became established which was very characteristic of the old Ottoman writing (no indication of vowels, use of Arabic *harakāt's* etc.). In later centuries, some of these Arabic orthographical peculiarities were, it is true, abandoned but to the present day Ottoman orthography is distinguished from Čaghatai by a considerable restriction in the indication of vowels (Ott. *el* = Čagh. *hl*; Ott. *ör* = Čagh. *ör*) and the use of the Arabic characters *z* and *ṣ* to mark the sounds *e* and *i* in words of Turkish origin, in combination with posterior vowels (*su* = water = Čagh. *su*; *tağ* = mountain = Čagh. *tağ*). The old Kazan-Tatar orthography was based on that of Central Asia but in some cases also it showed the influence of old Ottoman.

The movement for the reform of orthography in the form of the adoption of a phonetic script began to make itself felt in the Turkish Muslim world from the end of the sixteenth century. It has had most results, not in Turkey but among the Turkish peoples of Russia, and particularly among the (Kırghız-Kazak). The Turcological congress
